NOTICE TO RESPONDENTS
ITB AP 35-20
CONSTRUCTION OF SATELLITE CONCOURSE "C" AT VPS
at
DESTIN-FORT WALTON BEACH AIRPORT
OKALOOSA COUNTY, FLORIDA

Notice is hereby given that the Board of County Commissioners of Okaloosa County will receive sealed bids until **18 March, 2020 at 3:00 P.M.** (Central Standard Time) for the Destin-Fort Walton Beach Airport – Construction of Satellite Concourse "C" at VPS project. Interested respondents desiring consideration shall provide an original and two (2) copies (total three (3)) and one (1) thumb drive of their Invitation to Bid (ITB) response with the respondent's area of expertise identified. Submissions shall be portrait oriented, unbound, and 8 ½"x 11" where practical. **All originals must have original signatures in blue ink.**

Okaloosa County (COUNTY) and the airport staff (AIRPORT) desire to construct SATELLITE CONCOURSE "C", on the west side of the airport. The project will CONSTRUCT SATELLITE CONCOURSE "C" WITH TERMINAL HOLD ROOMS, GATES, PUBLIC RESTROOMS, SHELL CONCESSIONS, SUPPORT SPACES AND PUBLIC SECURITY CHECKPOINT. Impacts to existing airport facilities that will be incurred include: connection to water, sewer, lift stations, underground electrical, landscaping, covered walkway and adjacent credit card parking lot, West apron and other airport facilities.

Beginning on **Monday 17 January, 2020** digital copies of the above documents may be downloaded by accessing the following sites:
http://www.myokaloosa.com/purchasing/home then accessing the link "View Current Solicitations"
https://www.bidnetdirect.com/florida
https://www.demandstar.com/supplier/bids/agency_inc/bid_list.asp?f=search&mi=2442519

Funding for this project is being provided by Okaloosa County the FDOT, and Allegiant Air and will be subject to all applicable County, State and Federal requirements as determined applicable.

A non-mandatory Pre-Bid Conference will be conducted at the Destin-Fort Walton Beach Airport, Conference Room No. 1, 1701 State Road 85 N., Eglin AFB, Florida 32542, on **25 February, 2020 at 11:00 A.M. (C.S.T.).** Okaloosa County will transmit to all plan holders of record an Addenda in response to written questions received no later than seven (7) days prior to Bid Opening date. Oral statements may not be relied upon and will not be binding or legally effective.
On **18 March, 2020 at 3:00 P.M** (Central Standard Time), all bids will be opened and read aloud. All bids must be in sealed envelopes reflecting on the outside thereof the Respondent's name and "ITB AP 35-20 CONSTRUCTION OF SATELLITE CONCOURSE "C" AT THE DESTIN – FORT WALTON BEACH AIRPORT (VPS)". The Board of County Commissioners will consider all bids properly submitted at its scheduled bid opening in the Okaloosa County Courthouse located at 101 E James Lee Boulevard, Room 282, Crestview, FL 32536. Bids may be submitted in the Crestview

Courthouse prior to bid opening or delivered to the Okaloosa County Courthouse, 101 James Lee Boulevard, Room 282, Crestview, FL 32536. ****NOTE: MUST RING DOORBELL TO GAIN ENTRANCE INTO ROOM 282. THE CLERK WILL COME ACCEPT YOUR PACKAGE OR SHOW YOU TO THE CONFERENCE ROOM FOR THE SCHEDULED BID OPENING****

NOTE: THE NEW CRESTVIEW COURTHOUSE HAS SECURITY AT ENTRY POINT- PLEASE ALLOW FOR TIME TO GET THROUGH SECURITY WHEN ARRIVING FOR THE BID OPENING.

NOTE: Crestview, FL is not a next day guaranteed delivery location by most delivery services. Respondents using mail or delivery services assume all risks of late or non-delivery.

All originals must have original signatures in blue pen ink.

All bids should be addressed as follows:

ITB AP 35-20 CONSTRUCTION OF SATELLITE CONCOURSE "C" AT VPS

b) Owner:

OKALOOSA COUNTY BOARD OF COUNTY COMMISSIONERS

c) Architect:

MLM-Martin Architects, Inc.

INDEX

1. Defined Terms

Certain additional terms used in the Instruction to Contractors have the meanings indicated below which are applicable to both the singular and plural thereof.

1.1 Contractor – one who submits a Bid directly to Owner as distinct from sub-contractor, who submits a bid to a Contractor

1.2 Issuing Office/Purchasing Department – the office from which the Project Documents are to be issued and where the bid procedures are to be administered.

1.3 Successful Contractor – the lowest, responsible and responsive Contractor to whom Owner (on the basis of Owner's evaluation as hereinafter provided) makes an award.

2. Copies of Project Documents

2.1 Complete sets of the Project Documents may be obtained from BidNet and the Okaloosa County website.

2.2 Complete sets of Project Documents must be used in preparing Bids; neither Owner nor Architect/Engineer assume any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Project Documents.

2.3 Owner and Architect/Engineer in making copies of Project Documents available on the above terms do so only for the purpose of obtaining Bids for the Work and do not confer a license or grant for any other use.

3. Qualifications of Contractors

To demonstrate qualifications to perform the Work, each Contractor must upon Owner's request, provide detailed written evidence such as financial data, previous experience, present commitments and other such data as may be called for below. Each Bid must contain evidence of Contractors qualification to do business in the state where the Project is located or covenant to obtain such qualification prior to award of the contract.

4. Examination of Documents and Site

4.1 It is the responsibility of each contractor before submitting a Bid:

4.1.1 To examine thoroughly these documents and other related data identified (including "technical data" referred to below);

4.1.2 To visit the site to become familiar with and satisfy Contractor as to the general, local and site conditions that may affect cost, progress, performance, or furnishing of the Work;

4.1.3 To consider federal, state, and local Laws and Regulations that may affect cost, progress, performance or furnishing of the Work;

4.1.4 To study and carefully correlate Contractor's knowledge and observations with these Project Documents and such other related data; and

4.1.5 To promptly notify Architect/Engineer of all conflicts, errors, ambiguities or discrepancies which Contractor has discovered in or between these Project Documents and such other related documents.

4.2 thru 4.5 (Omitted-Supplementary Conditions Not Applicable)

4.6 Upon request to the Purchasing Department, Owner will provide each Contractor access to the site to conduct such examinations, investigations, explorations, tests, and studies as each Contractor deems necessary for submission of a Bid. Contractor must fill all holes and clean up and restore the site to its former conditions upon completion of such explorations, investigations, tests, and studies.

4.7 Reference is made to the Bid documents for the identification of the general nature of work that is to be performed at the site by Owner or others (such as utilities and other prime contractors) that relates to the work for which a Bid is to be submitted. On request to the Purchasing Department, Owner will provide to each Contractor for examination access to or copies of appropriate documents (other than portions thereof related to price) for such work.

4.8 The submission of a Bid will constitute and incontrovertible representation by Contractor that Contractor has complied with every requirement of this Article 4, that without exception of the Bid is premised upon performing and furnishing the Work required by these Project Documents and applying the specific means, methods, techniques, sequences, or procedures for construction (if any) that may be shown or indicated or expressly required by these Project Documents, the Contractor has given Architect/Engineer written notice of all conflicts, errors, ambiguities and discrepancies that Contractor has discovered in these Project Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performing and furnishing the Work.

4.9 The provisions of 4.1 through 4.8, inclusive, do not apply to Asbestos, Polychlorinated biphenyls (PCBs), Petroleum, Hazardous Waste, or Radioactive Material by paragraph 4.5 of the General Conditions.

5. Availability of Lands for Work, etc.

The lands upon which the Work is to be performed, rights-of-way and easements for access thereto and other lands designated for use by the successful Contractor in performing the Work are identified in these Project Documents. All additional land and access thereto required for temporary construction facilities, construction equipment, or storage of materials and equipment to be incorporated in the Work are to be obtained and paid for by the Successful Contractor.

Easements for permanent structures or permanent changes in existing facilities are to be obtained and paid for by Owner unless otherwise provided in these Project Documents.

6. Interpretations and Addenda

6.1 All questions about the meaning or intent of these Project Documents are to be directed to Issuing Office. Interpretations or clarifications considered necessary by Issuing Office in response to such questions will be issued by Addenda on the Purchasing website and bid net as mentioned above. Questions received after the question deadline may not be answered. Only questions answered by formal written Addenda will be binding. Oral and other interpretations or clarifications will be without legal effect.

Addenda may also be issued to modify these Project Documents as deemed advisable by Owner or Architect/Engineer.

7. Bid Security

7.1 Each Bid must be accompanied by Bid security made payable to Owner in an amount of five percent (5%) of Contractors maximum Bid Price in the form of a certified or bank check or a Bid Bond on form attached, issued by a surety meeting the requirements of Paragraph 5.1 of the General Conditions.

7.2 The Bid security of Successful Contractor will be retained until such Contractor has executed the Agreement, furnished the required contract security, and met the other conditions of the Notice of Award, whereupon the Bid security will be returned. If the Successful Contractor fails to execute and deliver the Agreement and furnishes the required contract security within fifteen days after the Notice of Award, Owner may annul the Notice of Award and the Bid security of that Contractor will be forfeited. The Bid security of other Contractors whom Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of:

the seventh (7th) day after the Effective Date of the Agreement

or

the sixtieth (60th) day after the Bid opening,

whereupon Bid security furnished by such Contractors will be returned. Bid security with Bids which are not competitive will be returned within seven (7) days after the Bid Opening.

8. Contract Times

The Contract Time in calendar days, from the Issuance of the Notice to Proceed to Final Project Completion is defined in Section 5 of BID FORMS (BF-3).

9. Substitute and "Or-Equal" Items

The Contract, if awarded, will be on the basis of materials and equipment described in the Drawings or specified in the Specifications. Whenever it is indicated in the Drawings or specified in the Specifications that a substitute or "or-equal" item of material or equipment may be furnished or used by Contractor if acceptable to the County, acceptance of the substitution "or equal" to material or equipment, will typically be considered by the County after the contract is awarded. However, any proposed substitution that represents a deviation from the design intent, must be approved prior to submission of the bid responses. A determination as to whether a design deviation or particular item that changes the design intent of the plans or specification is acceptable as a substitute or "equal" will be made by the County and Architect/Engineer. Design deviations approved prior to bid submittals will be made known to other contractors through an addendum.

10. Subcontractors, Suppliers, and Others

10.1 If the Bid documents require the identity of certain Subcontractors, Suppliers and other persons and organizations (including those who are to furnished the principal items of material and equipment) are to be submitted to Owner in advance of a specified date prior to the Effective Date of the Agreement. Apparent Successful Contractor, and any other Contractor so requested, shall with Bid documents submit to Owner a list of all such Subcontractors, Suppliers, and other persons and organizations proposed for those portions of the Work for which such identification is required. Such list shall be accompanied by an experience statement with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor Supplier, person, or organization if requested by Owner. An Owner or Architect/Engineer who after due investigation has reasonable objection to any proposed Subcontractor, Supplier, other person, or organization, may before the Notice of Award is given request apparent Successful Contractor to submit an acceptable substitute without an increase in Bid Price.

If apparent Successful Contractor declines to make any such substitution, Owner may award the contract to the next lowest Contractor that proposes to use acceptable Subcontractors, Suppliers, and other persons and organizations. The declining to make requested substitutions will not constitute grounds for sacrificing the Bid security of any Contractor. Any subcontractor, Supplier, other person or organization listed and to whom Owner or Architect/Engineer does not make written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner and Architect/Engineer subject to revocation of such acceptance after the Effective Date of the Agreement as provided in Paragraph 6.8.2 of the General Conditions.

11. Pre-Bid Activity

Except as provided in this section, contractors are prohibited from contacting or lobbying the County, County Administrator, Commissioners, County staff, and Review Committee members, or any other person authorized on behalf of the County related or involved with the solicitation. All inquiries on the scope of work, specifications, additional requirements, attachments, terms and general conditions or instructions, or any issue must be directed in writing, by US mail or email to:

Okaloosa County Purchasing Department
5479A Old Bethel Road
Crestview, FL 32536
Email: jdarr@myokaloosa.com
(850) 689-5960

All questions or inquiries must be received no later than the last day for questions (reference ITB & Respondent's Acknowledgement form). Any addenda or other modification to the bid documents will be issued by the County five (5) days prior to the date and time of bid closing, as written addenda, and will be posted to and the Okaloosa County website at http://www.myokaloosa.com/purchasing/current-solicitations and the Bidnet website at https://www.bidnetdirect.com/florida.

Such written addenda or modification shall be part of the bid documents and shall be binding upon each contractor. Each contractor is required to acknowledge receipt of any and all addenda in writing and submit with their bid. No contractor may rely upon any verbal modification or interpretation.

12. Preparation of Bid – The bid form is included with the bid documents. Additional copies may be obtained from the County. The contractor shall submit bids in accordance with the public notice.

All blanks in the bid documents shall be completed by printing in ink or typed in both words and numbers with the amounts extended, totaled and the bid signed. A bid price shall be indicated for each section, bid item, alternative, adjustment unit price item, and unit price item listed therein, or the words "No Bid", "No Change", or "Not Applicable" entered. No changes shall be made to the phraseology of the form or in the items mentioned therein. In case of any discrepancy between the written amount and the numerical figures, the written amount shall govern. Any bid which contains any omissions, erasures, alterations, additions, irregularities of any kind, or items not called for which shall in any manner fail to conform to the conditions of public notice inviting bids may be rejected.

A bid submitted by a partnership shall be executed in the partnership name and signed by a partner (whose title must appear under the signature). The official address of the partnership shall be shown below the signature.

A bid submitted by a limited liability company shall be executed in the name of the firm by a member and accompanied by evidence of authority to sign. The state of formation of the firm and the official address of the firm must be shown below the signature.

A bid submitted by an individual shall show the contractor's name and official address.

A bid submitted by a joint venture shall be executed by each joint venture in the manner indicated on the bid form. The official address of the joint venture must be shown below the signature.

It is preferred that all signatures be in blue ink with the names typed or printed below the signature. Okaloosa County does not accept electronic signatures.

The bid shall contain an acknowledgment of receipt of all Addenda, the numbers of which shall be filled in on the form. The address and telephone # for communications regarding the bid shall be shown.

If the contractor is an out-of-state corporation, the bid shall contain evidence of contractor's authority and qualification to do business as an out-of-state corporation in the State of Florida. A state contractor license # for the State of Florida shall also be included on the bid form. Contractor shall be licensed in accordance with the requirements of Chapter 489, Florida Statutes.

13. Integrity of Bid Documents - Contractors shall use the original Bid documents provided by the Purchasing Department and enter information only in the spaces where a response is requested. Contractors may use an attachment as an addendum to the Bid documents if sufficient space is not available. Any modifications or alterations to the original bid documents by the contractor, whether intentional or otherwise, will constitute grounds for rejection of a bid. Any such modification or alteration that a contractor wish to propose must be clearly stated in the contractor's response in the form of an addendum to the original bid documents.

14. Submittal of Bid – A bid shall be submitted no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid and shall be enclosed in an opaque sealed envelope plainly marked with the project title (and, if applicable, the designated portion of the project for which the bid is submitted), the name and address of the contractor, and shall be accompanied by the bid security and other required documents. It is the contractor's responsibility to assure that its bid is delivered at the proper time and place. Offers by email, facsimile, or telephone will **NOT** be accepted.

Contractor shall submit the original plus two (2) copies of their bid to the place indicated in the Advertisement of Notice to Contractor.

Note: Crestview is not a next day delivery site for overnight carriers.

15. Modification & Withdrawal of Bid - A bid may be modified or withdrawn by an appropriate document duly executed in the manner that a bid must be executed and delivered to the place where bids are to be submitted prior to the date and time for the opening of bids.

If within 24 hours after bids are opened any contractor files a duly signed written notice with the County and promptly thereafter demonstrates to the reasonable satisfaction of the County that there was a material substantial mistake in the preparation of its bid, that contractor may withdraw its bid, and the bid security may be returned. Thereafter, if the work is rebid, that contractor will be disqualified from 1) further bidding on the work, and 2) doing any work on the contract, either as a subcontractor or in any other capacity.

16. Bids to Remain Subject to Acceptance – All bids will remain subject to acceptance or rejection for sixty (60) calendar days after the day of the bid opening, but the County may, in its sole discretion, release any bid and return the bid security prior to the end of this period.

17. Identical Tie Bids – In cases of identical procurement responses, the award shall be determined either by lot or on the basis of factors deemed to serve the best interest of the County. In the case of the latter, there must be adequate documentation to support such a decision.

18. Conditional & Incomplete Bids – Okaloosa County specifically reserves the right to reject any conditional bid and bids which make it impossible to determine the true amount of the bid.

19. Applicable Laws & Regulations – All applicable Federal and State laws, County and municipal ordinances, orders, rules and regulations of all authorities having jurisdiction over the project shall apply to the bid throughout, and they will be deemed to be included in the contract the same as though they were written in full therein.

20. Disqualification of Contractors – Any of the following reasons may be considered as sufficient for the disqualification of a contractor and the rejection of its bid:

a. Submission of more than one proposal for the same work from an individual, firm or corporation under the same or different name.

b. Evidence that the contractor has a financial interest in the firm of another contractor for the same work.

c. Evidence of collusion among contractors. Participants in such collusion will receive no recognition as contractors for any future work of the County until such participant has been reinstated as a qualified contractor.

d. Uncompleted work which in the judgment of the County might hinder or prevent the prompt completion of additional work if awarded.

e. Failure to pay or satisfactorily settle all bills due for labor and material on former contracts in force at the time of advertisement of proposals.

f. Default under previous contract.

g. Listing of the contractor by any Local, State or Federal Government on its barred/suspended vendor list.

h. Violation of the Cone of Silence.

21. Award of Bid

a. **Okaloosa County Review** - Okaloosa County Designated Staff, to include design consultant, will review all bids and will participate in the Recommendation to Award.

b. The County will award the bid to the responsive and responsible vendor(s) with the lowest responsive bid(s), Base Bid plus any combination of Additive Alternates, and the County reserves the right to award the bid to the contractor submitting a responsive bid with a resulting negotiated agreement which is most advantageous and in the best interest of the County, and to reject any and all bids or to waive any irregularity or technicality in bids received. Okaloosa County shall be the sole judge of the bid and the resulting negotiated agreement that is in its best interest and its decision shall be final.

c. Okaloosa County reserves the right to waive any informalities or reject any and all bids, in whole or part, to utilize any applicable state contracts in lieu of or in addition to this bid and to accept the bid that in its judgment will best serve the interest of the County.

d. Okaloosa County specifically reserves the right to reject any conditional bids and will normally reject those which made it impossible to determine the true amount of the bid. Each item must be bid separately and no attempt is to be made to tie any item or items to any other item or items.

22. Payments – Vendor shall make all firm fixed commission fees payable to the County of Okaloosa and remitted to BCC Finance, Crestview Courthouse located at 101 E James Lee Boulevard, Crestview, FL 32536.

23. Discrimination – An entity or affiliate who has been placed on the discriminatory vendor list may not submit a bid on a contract to provide goods or services to a public entity, may not submit a bid on a contract with a public entity for the construction or repair of a public building or public work, may not submit bids on leases of real property to a public entity, may not award or perform work as a contractor, supplier, subcontractor, or consultant under contract with any public entity, and may not transact business with any public entity.

24. Public Entity Crime Information – Pursuant to Florida Statute 287.133, a contractor may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017 for CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

25. Conflict of Interest – The award hereunder is subject to the provisions of Chapter 112, Florida Statutes. All contractors must disclose with their bids the name of any officer, director, or agent who is also a public officer or an employee of the Okaloosa Board of County Commissioners, or any of its agencies. Furthermore, all contractors must disclose the name of any County officer or employee who owns, directly or indirectly, an interest of five percent (5%) or more in the firm or any of its branches.

Note: For contractor's convenience, this certification form is enclosed and is made a part of the bid package.

26. Reorganization or Bankruptcy Proceedings – Bids will not be considered from contractors who are currently involved in official financial reorganization or bankruptcy proceedings.

27. Investigation of Contractor – The County may make such investigations, as it deems necessary to determine the stability of the contractor to perform the work and that there is no conflict of interest as it relates to the project. The contractor shall furnish to the Owner any additional information and financial data for this purpose as the County may request.

28. Cone of Silence Clause - The Okaloosa County Board of County Commissioners has established a solicitation silence policy **(Cone of Silence Clause)** that prohibits oral and written communication regarding all formal solicitations for goods and services (formal bids, Request for Proposals, Requests for Qualifications) issued by the Board through the County Purchasing Department. The period commences from the date of advertisement until award of contract.

All communications shall be directed to the Purchasing Department.

Note: For contractor's convenience, this certification form is enclosed and is made a part of the bid package.

29. Review of Procurement Documents – Per Florida Statute 119.071(1)(b) 2 sealed bids, proposals, or replies received by the County pursuant to a competitive solicitation are exempt from public disclosure until such time as the County provides notice of an intended decision or until 30 days after opening the bids, proposals, or final replies, whichever is earlier.

30. Compliance with Florida Statute 119.0701 – The Contractor shall comply with all the provisions of section 119.0701, Florida Statutes relating to the public records which requires, among other things, that the Contractor: (a) Keep and maintain public records; (b) Provide the public with access to public records on the same terms and conditions that the public agency would provide the records; (c) ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law; and (d) Meet all requirements for retaining public records and transfer, at no cost, to the public agency all public records in possession of the contractor upon termination of the contract.

31. Protection of Resident Workers – The Okaloosa County Board of County Commissioners actively supports the Immigration and Nationality Act (INA) which includes provisions addressing employment eligibility, employment verifications, and nondiscrimination. Under the (INA), which employers may hire only persons who may legally work in the United States (i.e., citizens and nationals of the U.S.) and aliens authorized to work in the U.S. The employer must verify the identity and employment eligibility of anyone to be hired, which includes completing the Employment Eligibility Verifications. The contractor shall establish appropriate

procedures and controls so no services or products under the Contract Documents will be performed or manufactured by any worker who is not legally eligible to perform such services or employment. Okaloosa County reserves the right to request documentation showing compliance with the requirements.

Contractors doing construction business with Okaloosa County are required to use the Federal Government Department of Homeland Security's website and use the E-Verify Employment Eligibility Verifications System to confirm eligibility of all employees to work in the United States.

32. Suspension or Termination for Convenience – The County may, at any time, without cause, order Contractor in writing to suspend, delay or interrupt the work in whole or in part for such period of time as the County may determine, or to terminate all or a portion of the Contract for the County's convenience. Upon such termination, the Contract Price earned to the date of termination shall be paid to Contractor, but Contractor waives any claim for damages, including loss of profits arising out of or related to the early termination. Those Contract provisions which by their nature survive final acceptance shall remain in full force and effect. If the County orders a suspension, the Contract price and Contract time may be adjusted for increases in the cost and time caused by suspension, delay or interruption. No adjustment shall be made to the extent that performance is, was or would have been so suspended, delayed or interrupted by reason for which Contractor is responsible; or that an equitable adjustment is made or denied under another provision of this Contract.

33. Failure of Performance/Delivery – In case of default by the contractor, the County after due notice (oral or written) may procure the necessary supplies or services from other sources and hold the contractor responsible for difference in cost incurred. Continuous instances of default shall result in cancellation of the award and removal of the contractor from the bid list for duration of one (1) year, at the option of the County.

34. Audit – If requested, contractor shall permit the County or an authorized, independent audit agency to inspect all data and records of contractor relating to its performance and its subcontracts under this bid from the date of the award through three (3) years after the expiration of contract.

35. Equal Employment Opportunity; Non Discrimination – Contractor will not discriminate against any employee or an applicant for employment because of race, color, religion, gender, sexual orientation, national origin, age, familial status or handicap.

36. Non-Collusion – Contact or certifies that it has entered into no agreement to commit a fraudulent, deceitful, unlawful or wrongful act, or any act which may result in an unfair advantage over other contractors. See Florida Statute 838.22.

37. Unauthorized Aliens/Patriot's Act – The knowing employment by contractor or its subcontractors of any alien not authorized to work by the immigration laws is prohibited and shall be a default of the contract. In the event that the contractor is notified or becomes aware of such default, the contractor shall take steps as are necessary to terminate said employment with 24 hours

of notification or actual knowledge that an alien is being employed. Contractor's failure to take such steps as are necessary to terminate the employment of any said alien within 24 hours of notification or actual knowledge that an alien is being employed shall be grounds for immediate termination of the contract. Contractor shall take all commercially reasonable precautions to ensure that it and its subcontractors do not employ persons who are not authorized to work by the immigration laws.

38. Acceptance – Delivery of material to Okaloosa Board of County Commissioners does not constitute acceptance for the purpose of payment. Final acceptance and authorization of payment shall be given only after a thorough inspection indicates that the material meets contract specifications and conditions as listed. Should the delivered material differ in any respect from specifications, payment will be withheld until such time as the supplier takes necessary corrective action. The Purchasing Department shall be notified of the deviation in writing within 10 days and the provisions of the delivery paragraph shall prevail. If the proposed corrective action is not acceptable to Okaloosa County, the final acceptance of the material shall remain the property of the supplier and the county shall not be liable for payment for any portion thereof.

39. Pre-Bid Conference

A Pre-Bid Conference will be conducted at the time and place stated in the Notice to Contractors. The County's Purchasing Department, will transmit via the County website and BidNet such Addenda as Architect/Engineer and Owner consider necessary in response to written questions received no later than the question deadline specified in the Invitation to Bid. Oral statements may not be relied upon and will not be binding or legally effective.

40. Sales and Use Taxes

Work under this Bid is subject to the provisions of Chapter 212, Florida Statutes, Tax on state, Use and Other Transactions. Other state, local, or federal taxes may be applicable. The contractor is responsible to remit to the appropriate governmental entity all applicable taxes. Any applicable tax shall be included in the total Bid price by the contractor.

END OF INSTRUCTION TO RESPONDENTS

OKALOOSA COUNTY STANDARD CLAUSES

INDEMNIFICATION AND HOLD HARMLESS

CONTRACTOR shall indemnify and hold harmless **COUNTY**, its officers and employees from liabilities, damages, losses, and costs including but not limited to reasonable attorney fees, to the extent caused by the negligence, recklessness, or intentional wrongful conduct of the **CONTRACTOR** and other persons employed or utilized by the **CONTRACTOR** in the performance of this Agreement.

NOTE: For Contractor's convenience, this certification form is enclosed and is made a part of the bid package.

TRENCH SAFETY ACT

Each contractor must submit with his bid an executed sworn certification that he will comply with the Trench Safety Act, Chapter 90-96, Florida Statutes, on trench safety.

NOTE: For Contractor's convenience, a certification form is enclosed and is made a part of the bid package.

PUBLIC ENTITY CRIME INFORMATION

A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a bid on a contract to provide any goods or services to a public entity, may not submit a bid on a contract with a public entity for the construction or repair of a public building or public work, may not submit bids on leases of real property to a public entity, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with any public entity in excess of the threshold amount provided in Section 287.107, for CATEGORY TWO for a period of 36 months from the date of being placed on the convicted vendor list.

BONDING REQUIREMENTS

A Bid Bond is required with the Contractor's submittal for 5% of the Bid price, in the form of a cashier's check, certified check or bond. A performance and payment bond will be required in the amount of 100% of the estimated contract value. The performance bond and payment bond can be a total of 100% combined.

GENERAL SERVICES INSURANCE REQUIREMENTS

REVISED: 08/01/2018

CONTRACTORS INSURANCE

1. The Contractor shall not commence any work in connection with this Agreement until he has obtained all required insurance and such insurance has been approved by the Okaloosa County Risk Manager or designee.

2. All insurance policies shall be with insurers authorized to do business in the State of Florida.

3. All insurance shall include the interest of all entities named and their respective officials, employees & volunteers of each and all other interests as may be reasonably required by Okaloosa County. The coverage afforded the Additional Insured under this policy shall be primary insurance. If the Additional Insured have other insurance that is applicable to the loss, such other insurance shall be on an excess or contingent basis. The amount of the company's liability under this policy shall not be reduced by the existence of such other insurance.

4. The County shall be shown as an Additional Insured with a Waiver of Subrogation on the Certificate of Insurance.

5. The County shall retain the right to reject all insurance policies that do not meet the requirement of this Agreement. Further, the County reserves the right to change these insurance requirements with 60-day notice to the Contractor.

6. The County reserves the right at any time to require the Contractor to provide copies (redacted if necessary) of any insurance policies to document the insurance coverage specified in this Agreement.

7. The designation of Contractor shall include any associated or subsidiary company which is involved and is a part of the contract and such, if any associated or subsidiary company involved in the project must be named in the Workers' Compensation coverage.

8. Any exclusions or provisions in the insurance maintained by the Contractor that excludes coverage for work contemplated in this agreement shall be deemed unacceptable and shall be considered breach of contract.

WORKERS' COMPENSATION INSURANCE

1. The Contractor shall secure and maintain during the life of this Agreement Workers' Compensation insurance for all of his employees employed for the project or any site connected with the work, including supervision, administration or management, of this project and in case any work is sublet, with the approval of the County, the Contractor shall require the Subcontractor similarly to provide Workers' Compensation insurance for all employees employed at the site of the project, and such evidence of insurance shall be furnished to the County not less than ten (10) days prior to the commencement of any and all sub-contractual Agreements which have been approved by the County.

2. Contractor must be in compliance with all applicable State and Federal workers' compensation laws, including the U.S. Longshore Harbor Workers' Act or Jones Act, if applicable.

3. No class of employee, including the Contractor himself, shall be excluded from the Workers' Compensation insurance coverage. The Workers' Compensation insurance shall also include Employer's Liability coverage.

BUSINESS AUTOMOBILE LIABILITY

Coverage must be afforded for all Owned, Hired, Scheduled, and Non-Owned vehicles for Bodily Injury and Property Damage in an amount not less than $15,000,000 combined single limit each accident. If the contractor does not own vehicles, the contractor shall maintain coverage for Hired & Non-Owned Auto Liability, which may be satisfied by way of endorsement to the Commercial General Liability policy or separate Business Auto Policy. Contractor must maintain this insurance coverage throughout the life of this Agreement.

COMMERCIAL GENERAL LIABILITY INSURANCE

1. The Contractor shall carry other Commercial General Liability insurance against all other Bodily Injury, Property Damage and Personal and Advertising Injury exposures.

2. All liability insurance (other than Professional Liability) shall be written on an occurrence basis and shall not be written on a claims-made basis. If the insurance is issued with an aggregate limit of liability, the aggregate limit of liability shall apply only to the locations included in this Agreement. If, as the result of any claims or other reasons, the available limits of insurance reduce to less than those stated in the Limits of Liability, the Contractor shall notify the County representative in writing. The Contractor shall purchase additional liability insurance to maintain the requirements established in this Agreement. Umbrella or Excess Liability insurance can be purchased to meet the Limits of Liability specified in this Agreement.

3. Commercial General Liability coverage shall include the following:

    1.) Premises & Operations Liability
    2.) Bodily Injury and Property Damage Liability
    3.) Independent Contractors Liability
    4.) Contractual Liability
    5.) Products and Completed Operations Liability

4. Contractor shall agree to keep in continuous force Commercial General Liability coverage for the length of the contract.

LIMITS OF LIABILITY

The insurance required shall be written for not less than the following, or greater if required by law and shall include Employer's liability with limits as prescribed in this contract:

		LIMIT
1.	Worker's Compensation	
	1.) State	Statutory
	2.) Employer's Liability	$500,000 each accident
2.	Business Automobile	$15,000,000.00 each accident (A combined single limit)
3.	Commercial General Liability	$15,000,000.00 each occurrence for Bodily Injury & Property Damage
		$15,000,000.00 each occurrence Products and completed operations
4.	Personal and Advertising Injury	$15,000,000.00 each occurrence

NOTICE OF CLAIMS OR LITIGATION

The Contractor agrees to report any incident or claim that results from performance of this Agreement. The County representative shall receive written notice in the form of a detailed written report describing the incident or claim within ten (10) days of the Contractor's knowledge. In the event such incident or claim involves injury and/or property damage to a third party, verbal notification shall be given the same day the Contractor becomes aware of the incident or claim followed by a written detailed report within ten (10) days of verbal notification.

INDEMNIFICATION & HOLD HARMLESS

Contractor shall indemnify and hold harmless the County, its officers and employees from liabilities, damages, losses, and costs including but not limited to reasonable attorney fees, to the extent caused by the negligence, recklessness, or wrongful conduct of the Contractor and other persons employed or utilized by the Contractor in the performance of this contract.

Note: For Contractor's convenience, this certification form is enclosed and is made a part of the bid package.

CERTIFICATE OF INSURANCE

1. Certificates of insurance indicating the job site and evidencing all required coverage must be submitted not less than 10 days prior to the commencement of any of the work. The certificate holder(s) shall be as follows: Okaloosa County, 5479A Old Bethel Road, Crestview, Florida, 32536.

2. The contractor shall provide a Certificate of Insurance to the County with a thirty (30) day notice of cancellation; ten (10) days' notice if cancellation is for nonpayment of premium.

3. In the event that the insurer is unable to accommodate the cancellation notice requirement, it shall be the responsibility of the contractor to provide the proper notice. Such notification shall be in writing by registered mail, return receipt requested, and addressed to the Okaloosa County Purchasing Department at 5479-A Old Bethel Road, Crestview, FL 32536.

4. In the event the contract term goes beyond the expiration date of the insurance policy, the contractor shall provide the County with an updated Certificate of insurance no later than ten (10) days prior to the expiration of the insurance currently in effect. The County reserves the right to suspend the contract until this requirement is met.

5. The certificate shall indicate if coverage is provided under a claims-made or occurrence form. If any coverage is provided on a claims-made form, the certificate will show a retroactive date, which should be the same date of the initial contract or prior.

6. All certificates shall be subject to Okaloosa County's approval of adequacy of protection and the satisfactory character of the Insurer.

7. All deductibles or SIRs, whether approved by Okaloosa County or not, shall be the Contractor's full responsibility. In particular, the Contractor shall afford full coverage as specified herein to entities listed as Additional Insured.

8. In no way will the entities listed as Additional Insured be responsible for, pay for, be damaged by, or limited to coverage required by this schedule due to the existence of a deductible or SIR.

GENERAL TERMS

Any type of insurance or increase of limits of liability not described above which, the Contractor required for its own protection or on account of statute shall be its own responsibility and at its own expense.

Any exclusions or provisions in the insurance maintained by the contractor that excludes coverage for work contemplated in this contract shall be deemed unacceptable and shall be considered breach of contract.

The carrying of the insurance described shall in no way be interpreted as relieving the Contractor of any responsibility under this contract.

Should the Contractor engage a subcontractor or sub-subcontractor, the same conditions will apply under this Agreement to each subcontractor and sub-subcontractor.

The Contractor hereby waives all rights of subrogation against Okaloosa County and its consultants and other indemnities of the Contractor under all the foregoing policies of insurance.

UMBRELLA INSURANCE

The Contractor shall have the right to meet the liability insurance requirements with the purchase of an umbrella insurance policy. In all instances, the combination of primary and umbrella liability coverage must equal or exceed the minimum liability insurance limits stated in this Agreement.

DELIVERY OF BIDS

Bid Opening shall be public, on the date and time specified on the NOTICE TO CONTRACTORS. It is the contractor's responsibility to assure that his bid is delivered at the proper time and place. Offers by telegram, facsimile, or telephone are NOT acceptable. NOTE: Crestview, Florida is "not a next-day-guaranteed delivery location" by delivery services.

Liquidated Damages:

In case of failure on the part of the Contractor to complete the work within the time(s) specified in the contract, or within such additional time(s) as may be granted by Okaloosa County, the County will suffer damage, the amount of which is difficult, if not impossible, to ascertain. Therefore, the Contractor shall pay to the County, as liquidated damages, the amount established in the schedule below for each calendar day of delay that actual completion extends beyond the time limit specified until such reasonable time as may be required for final completion of the work. In no way shall costs for liquidated damages be construed as penalty on the contractor.

Daily Charge

Original Contract Amount	**Per Calendar Day**
$50,000 and under	**$ 311**
Over $50,000 but less than $250,000	**$ 972**
$250,000 but less than $500,000	**$1584**
$500,000 but less than $2,500,000	**$1924**
$2,500,000 but less than $5,000,000	**$2694**
$5,000,000 but less than $10,000,000	**$3902**
$10,000,000 but less than $15,000,000	**$6102**
$15,000,000 but less than $20,000,000	**$7022**
$20,000,000 and over	**$7022**

Determination of Number of Days of Default: For all contracts, regardless of whether the contract time is stipulated in calendar days or working days, the default days shall be counted in calendar days. Construction Time is stipulated in Section 5 of the BID FORMS.

Conditions under which Liquidated Damages are Imposed: Should the Contractor or, in case of his default, the Surety, fail to complete the work within the time stipulated in the contract, or within such extra time as may have been granted by the County, the Contractor or, in case of his default, the Surety, shall pay to the County, not as a penalty, but as liquidated damages, the amount so due as determined by the Daily Charge requirements, as provided above.

Right of Collection: The County shall have the right to apply as payment on such liquidated damages any money which is due to the Contractor by the County.

Permitting Contractor to Finish Work: Permitting the Contractor to continue and to finish the work, or any part of it, after the expiration of the contract time allowed, including extensions of time granted to the Contractor, shall in no way act as a waiver on the part of the County the liquidated damages due under the contract.

Completion of Work by County: In case of default of the contract and the completion of the work by the County, the Contractor and his Surety shall be liable for the liquidated damages under the contract, but no liquidated damages shall be chargeable for any delay in the final completion of the work by the County due to any unreasonable action or delay on the part of the County.

END OF OKALOOSA COUNTY STANDARD CLAUSES

BID FORM

PROJECT IDENTIFICATION:

CONSTRUCTION OF SATTELLITE, CONCOURSE "C" AT VPS

CONTRACT IDENTIFICATION AND NUMBER:

Okaloosa County Bid No.: **ITB AP 35-20**

THIS BID IS SUBMITTED TO:

OKALOOSA COUNTY BOARD OF COUNTY COMMISSIONERS

1. The undersigned Contractor proposes and agrees, if this Bid is accepted, to enter into an agreement with Owner in the form included in these documents to perform and furnish all Work as specified or indicated in these documents for the Bid Price and within the Bid Times indicated in this Bid and in accordance with the other terms and conditions of these documents.

2. Contractor accepts all of the terms and conditions of the Invitation to Bid and Instructions to Contractors, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for sixty (60) days after the day of Bid opening. Contractor will sign and deliver the required number of counterparts of the Agreement with the Bonds and other documents required by the Project Requirements within fifteen (15) days after the date of Owner's Notice of Award.

3. In submitting this Bid, Contractor represents as more fully set forth in the Agreement, that:

(a) Contractor has examined and carefully studied the Project Documents and the following Addenda receipt of all which is hereby acknowledged: (List Addenda by Addendum Number and Date)

Addendum No. _____ Date _____

Addendum No. _____ Date _____

Addendum No. _____ Date _____

Addendum No. _____ Date _____

(b) Contractor has visited the site and become familiar with and is satisfied as to the general, local, and site conditions that may affect cost, progress, performance, and furnishing of the Work.

(c) Contractor is familiar with and is satisfied as to all federal, state, and local Laws and Regulations that may affect cost, progress, performance, and furnishing of the Work.

Contractor has carefully studied all reports of explorations and tests of subsurface conditions at or contiguous to the site and all drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the site (except underground facilities) which have been identified in the Bid Documents. Contractor acknowledges that such reports and drawings are not Contract Documents and may not be complete for Contractor's purposes. Contractor acknowledges that Owner and Architect/Engineer do not assume responsibility for the accuracy or completeness of information and data shown or indicted in the Project Documents with respect to underground facilities at or contiguous to the site. Contractor has obtained and carefully studied (or assumes responsibility for having done so) all such additional or supplementary examinations, investigations, explorations, tests, studies, and data concerning conditions (surface, subsurface, and underground facilities) at or contiguous to the site or otherwise which may affect cost progress, performance or furnishing of the Work or which relate to any aspect of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto. Contractor does not consider that any additional examinations, investigations, explorations, tests, studies or data are necessary for the determination of this Bid for performance and furnishing of the Work in accordance with the times, price, and other terms and conditions of these Documents.

(e) Contractor is aware of the general nature of Work to be performed by Owner and others at the site that relates to Work for which this Bid is submitted as indicated in these documents.

(f) Contractor has correlated the information known to Contractor, information and observation obtained from visits to the site, reports and drawings identified in these documents and all additional examinations, investigations, explorations, tests, studies, and data with these documents.

(g) Contractor has given Architect/Engineer written notice of all conflicts, errors, ambiguities or discrepancies that Contractor has discovered in these documents and the written resolution thereof by Architect/Engineer is acceptable to Contractor, and these documents are generally sufficient to indicate and convey understanding of all terms and conditions for performing and furnishing the Work for which this Bid is submitted.

(h) This Bid is genuine and not made in the interest of or on behalf of any undisclosed person, firm, or corporation and is not submitted in conformity with any agreement or rules of any group, association, organization, or corporation; Contractor has not directly or indirectly induced or solicited any other Contractor to submit a false or sham Bid; Contractor has not solicited or induced any person, firm or corporation to refrain from Project; and Contractor has not sought by collusion to obtain for itself any advantage over any other Contractor or over Owner.

4. Contractor will complete the Work in accordance with these documents for the price found in the Bid Schedule:

5. **Contract Time**: Contractor agrees that Work will be substantially complete **290** calendar days

after the date when the (NTP) Contract Time commences to run, and will be completed and ready for final inspection and final payment within **320** calendar days after the date when the (NTP) Contract Time commences to run. Further, the contractor agrees that the concession shell spaces will be substantially complete by December 1st, 2020, as a phase 1 completion of work

Liquidated Damages: Contractor accepts the provisions of the Agreement as to liquidated damages identified in the Okaloosa County Standard Clauses, in the event of failure to achieve substantial completion of the Work and the Concession Shell spaces within the Substantial Completion time and achieve final completion of the work within the Final Completion time as specified in the Agreement.

EJCDC NO. 1910-28-C (1990 Edition)

1. Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to pay to OWNER upon default of Contractor the penal sum set forth on the face of this Bond.

2. Default of Contractor shall occur upon the failure of Contractor to deliver within the time required by the Project Documents the executed Agreement required by the Project Documents and any performance and payment bonds required by the Project Documents and Contract Documents.

3. This obligation shall be null and void if:

3.1. OWNER accepts Contractor's Bid and Contractor delivers within the time required by the Project Documents (or any extension thereof agreed to in writing by OWNER) the executed Agreement required by the Project Documents and any performance and payment bonds required by the Project Documents and Contract Documents, or

3.2 All Bids are rejected by OWNER, or

3.3 OWNER fails to issue a notice of award to Contractor within the time specified in the Project Documents (or any extension thereof agreed to in writing by Contractor and, if applicable, consented to by Surety when required by paragraph 5 hereof).

4. Payment under this Bond will be due and payable upon default of Contractor and within 30 calendar days after receipt by Contractor and Surety of written notice of default from OWNER, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.

5. Surety waives notice of and any and all defenses based on or arising out of any time extension to issue notice of award agreed to in writing by OWNER and Contractor, provided that the time for issuing notice of award including extensions shall not in the aggregate exceed 60 days from Bid Due Date without Surety's written consent.

6. No suit or action shall commenced under this Bond prior to 30 calendar days after the notice of default required in paragraph 4 above is received by Contractor and Surety, and in no case later than one year after Bid Due Date.

7. Any suit or action under this Bond shall be commenced only in a court of competent jurisdiction located in the state in which the Project is located.

8. Notice required hereunder shall be in writing and sent to Contractor and Surety at their respective addresses shown on the face of this Bond. such notices may be sent by personal delivery, commercial courier or by United States Registered or Certified Mail, return receipt requested, postage pre-paid, and shall be deemed to be effective upon receipt by the party concerned.

9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent or representative who executed this Bond on behalf of Surety to execute, seal and deliver such Bond and bind the Surety thereby.

10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond shall be deemed to be included herein as if set forth at length. If any provision of any Bond conflicts with any applicable provision of any applicable statute, then the provision of said statute shall govern and the remainder of this Bond that is not in conflict therewith shall continue in full force and effect.

11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

CONTRACTOR'S QUALIFICATION QUESTIONNAIRE

The undersigned guarantees the accuracy of all statements and answers herein contained. (Please print in ink).

1. How many years has your firm been in business as a Contractor?

2. List up to three (3) projects of this nature that you have completed in the last three (3) years, and give the name, address and telephone number of a reference from each. Also give the completion date, the original contract bid price and the completed cost of each project listed.

3. List projects presently under construction by your firm the dollar volume of the contract and the percentage completion of the contract.

4. Have you ever failed to complete work awarded to you; if so, state where and why.

5. Do you plan to sublet any part of this work? If so, give details.

6. What equipment do you own that is available for this work?

7. What equipment do you plan to rent or purchase for this work?

8. Have you ever performed work under the direction of a Professional Architect/Engineer or Registered Architect? If so, list up to three (3) such firms giving the name of the firm, its address, telephone number and the name of the project. (List most recent projects).

9. Give the name, address and telephone number of an individual who represents each of the following and whom the Owner may contact to investigate your financial responsibility: a surety, a bank, and a major material supplier.

10. Provide a financial statement for your company. This should include a balance and income statement for your most recent fiscal year. A certified audit is preferred but not required. Use an insert sheet, if needed. Only three (3) lowest contractors shall submit this information (if requested by Owner) to the Owner within two (2) business days of the opening of the Bids.

11. State the true, exact, correct and complete name of the partnership, corporation or trade name under which you do business, and the address of the place of business. (If a corporation, state the name of all partners. If a trade name, state the names of the individuals who do business under the trade name.) It is absolutely necessary that information be furnished.

CERTIFICATION OF NON-SEGREGATED FACILITIES

(Must be completed and submitted with the Bid)

The Contractor certifies that it does not maintain or provide for its employee any segregated facilities at any segregated facilities at any of its establishments, and that it does not permit its employees to perform their services at any location under its control where segregated facilities are maintained. The Contractor certifies further that it will not maintain or provide for its employees segregated facilities at any of its establishments, and that it will not permit its employees to perform their services at any location under its control where segregated facilities are maintained. The Contractor agrees that a breach of this certification is a violation of the equal opportunity clause in this contract. As used in this certification, the term "segregated facilities" means any waiting room, work areas, restrooms and washrooms, restaurants and other eating areas, parking lots, drinking fountains, recreation or entertainment areas, transportation and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on basis of race, color, religion, or national origin, because of habit, local custom, or any other reason. The Contractor agrees that (except where it has obtained identical certification from proposed subcontractors for the specific time period) it will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the equal opportunity clause, and that it will retain such certification in its files.

SWORN STATEMENT UNDER SECTION 287.133 (3) (a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED AND SWORN IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICIAL AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted to_____
[print name of public entity]

by_____
[print individuals name and title]

for_____
[print name of entity submitting sworn statement]

whose business is_____and (if applicable) its Federal Employer Identification Number (FEIN) is_____(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement:_____.)

2. I understand that a "public entity crime" as defined in Section 287.133 (1) (g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or of the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.

3. I understand that "convicted" or "conviction" as defined in Section 287.133 (1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

4. I understand that an "affiliate" as defined in Section 287.133 (1) (a), Florida Statutes, means:

   A. A predecessor or successor of a person convicted of a public entity crime; or

   B. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding 36 months shall be considered an affiliate.

5. I understand that a “person" as defined in Section 287.133 (1) (e) Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, and employees, members, and agents who are active in management of an entity.

6. Based on information and belief, the statement which I have marked below is true and in relation to the entity submitting this sworn statement. [Indicate which statement applies.]

___ Neither the entity submitting this sworn statement, nor any of its officers, directors, executives, partners, shareholders, employees, members, or agents who are active in the management of the entity, nor any affiliate of the entity has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members, or agents who are active in the management of the entity, or an affiliate of the entity has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members, or agents who are active in the management of the entity, or an affiliate of the entity has been charged with and convicted of a public entity crime subsequent to July 1, 1989. However, there has been a subsequent proceeding before a Hearing Officer of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Hearing Officer determined that it was not in the public interest to place the submitting this sworn statement on the convicted vendor list. [attach a copy of the final order]

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CONTRACTING OFFICER FOR THE PUBLIC ENTITY IDENTIFIED IN PARAGRAPH 1 (ONE) ABOVE IS FOR THAT PUBLIC ENTITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31 OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE PUBLIC ENTITY PRIOR TO ENTERING INTO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.107, FLORIDA STATUTES FOR CATEGORY TWO ON ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

DRUG-FREE WORKPLACE CERTIFICATION

THE BELOW SIGNED CONTRACTOR CERTIFIES that it has implemented a drug-free workplace program. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection 1.

4. In the statement specified in subsection 1, notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, to any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

As the person authorized to sign this statement, I certify that this firm complies fully with the above requirements.

DISADVANTAGED BUSINESS ENTERPRISE PROGRAM

The following bid condition applies to this Department of Transportation (DOT) assisted contract. Submission of a bid/proposal by a prospective contractor shall constitute full acceptance of these bid conditions.

1. **DEFINITION -** Disadvantaged Business Enterprise (DBE) as used in this contract shall have the same meaning as defined in 49 CFR Part 26.

2. **POLICY -** It is the policy of DOT that DBE's as: defined in 49 CFR Part 26 shall have the maximum opportunity to participate in the performance of contracts and subcontracts financed in whole or in part with Federal funds. Consequently, the DBE requirements of 49 CFR Part 26 apply to this contract.

3. **OBLIGATION -** The contractor agrees to ensure that DBE's as defined In 49 CFR Part 26 have the maximum opportunity to participate in the performance of contracts and subcontracts financed in whole or in part with Federal funds. In this regard, all contractors shall take all necessary and reasonable steps in accordance with 49 CFR Part 26 to ensure that DBE's have the maximum opportunity to compete for and perform contracts. Contractors shall not discriminate on the basis of race, color, national origin, or sex in the award and performance of DOT assisted contracts.

4. **COMPLIANCE -** Allcontractors, potential contractors, or subcontractors for this DOT assisted contract are hereby notified that failure to carry out the DOT policy and the DBE obligation, as set forth above, shall constitute a breach of contract which may result in termination of the contract or such other remedy as deemed appropriate by the owner.

5. **CONTRACT CLAUSE -** All contractors and potential contractors hereby assure that they will include the above clauses in all subcontracts, which offer further subcontracting opportunities.

6. **CONTRACT AWARD -** Contractors are hereby advised that meeting the DBE subcontract goal (if applicable) or making an acceptable good faith effort to meet said goal are conditions of being awarded this DOT assigned contract.

   The owner proposes to award the contract to the lowest responsive and responsible contractor submitting a reasonable bid provided he has met the goal for DBE participation or, if failing to meet the goal, he has made an acceptable good faith effort to meet the established goal for DBE participation. Contractor is advised that the owner reserves the right to reject any or all bids submitted.

7. **DBE PARTICIPATION GOAL –** *No specific DBE goal has been established for this project*; however, the contractor should make a good faith effort to include as much DBE participation as possible.

8. **AVAILABLE DBE'S –** The FDOT maintains an online searchable database of DBE

firms at https://www3.dot.state.fl.us/equalopportunityoffice/biznet. This program contains listing of DBE's (certified and noncertified). Contractors are encouraged to inspect this list to assist in locating DBEs for the work. Other DBEs may be added to the list in accordance with the owner's approved DBE program. Credit toward the DBE goal will not be counted unless the DBE to be used can be certified by the owner.

9. **CONTRACTOR'S REQUIRED SUBMISSION -** The owner requires the submission of the following information with the bid:

(DBE percentage should reflect price plus any alternates)

(CONTRACTOR/FIRM NAME)_____

The undersigned, hereinafter called "Contractor", lists below the names of the DBE subcontractors who will perform the indicated scope of work for the amounts listed.

Name, Address, and Telephone Number of DBE Subcontractor	Scope of Work	Dollar Amount of Subcontract
1. _____	_____	_____
2. _____	_____	_____
3. _____	_____	_____
4. _____	_____	_____

Only 60% of the dollars spent with a DBE Supplier will be counted toward participation in any category, and this amount can only satisfy 60% of the total needed to fulfill any goal.

Total DBE Dollars: $_____

Total Project Bid (includes alternates): $_____

DBE Percentage of Total Bid: _____%

If the Contractor fails to meet the contract goal established in Section 7 above, the following information must be submitted with the bid to assist the owner in determining whether or not the contractor made acceptable good faith efforts to meet the contract goal. This information (when applicable), as well as the DBE information, should be submitted as specified in Section 9 above. Use the "Statement of Good Faith Efforts" form provided herein.

Suggested guidance for use in determining if good faith efforts were made by a contractor are included in 49 CFR Part 26.

A list of the efforts that a contractor may make and the owner may use in making a determination as to the acceptability of a contractor's efforts to meet the goal as included in 49 CFR Part 26 are as follows:

a. Whether the contractor attended any pre-solicitation or pre-bid meetings that were scheduled by the recipient to inform DBE's of contracting and subcontracting opportunities;

b. Whether the contractor advertised in general circulation, trade association, and minority-focus media concerning the subcontracting opportunities;

c. Whether the contractor provided written notice to a reasonable number of specific DBE's that their interest in the contract was being solicited in sufficient time to allow the DBE's to participate effectively;

d. Whether the contractor followed up initial solicitations of interest by contacting DBE's to determine with certainty whether the DBE's were interested;

e. Whether the contractor selected portions of work to be performed by DBE's in order to increase the likelihood of meeting the DBE goal (including, where appropriate, breaking down contracts into economically feasible units to facilitate DBE participation);

f. Whether the contractor provided interested DBE's with adequate information about the plans, specifications, and requirements of the contract;

g. Whether the contractor negotiated in good faith with interested DBE's, not rejecting DBE's as unqualified without sound reasons based on a thorough investigation of their capabilities.

h. Whether the contractor made efforts to assist interested DBE's in obtaining bonding, lines of credit, or insurance required by the recipient or contractor; and

i. Whether the contractor effectively used the services of available minority community organizations; minority contractors' groups; local and state Federal Minority Business Assistance Offices; and other organizations that provide assistance in the recruitment and placement of DBE's.

NOTE: The nine items set forth above are merely suggested criteria and the owner may specify that you submit information on certain other actions a contractor took to secure DBE participation in an effort to meet the goals. A contractor may also submit to the owner other information on efforts to meet the goals.

10. CONTRACTOR ASSURANCE - The contractor hereby assures that he will meet one of the following as appropriate:

a. The DBE participation goal as established on page BF-45.

b. The DBE participation percentage as shown in BF-49, which was submitted as a condition of contract award.

Agreements between contractor/proposer and a DBE in which the DBE promises not to provide subcontracting quotations to other contractors/proposers are prohibited. The contractor shall make a good faith effort to replace a DBE subcontract that is unable to perform successfully with another DBE subcontractor. Substitution must be coordinated and approved by the owner.

The contractor shall establish and maintain records and submit regular reports, as required, which will identify and assess progress in achieving DBE subcontract goals and other DBE affirmative action efforts.

11. PROMPT PAYMENT - The prime contractor agrees to pay each subcontractor under this prime contract for satisfactory performance of its contract no later than **10** days from the receipt of each payment the prime contractor receives from the owner. The prime contractor agrees further to return retainage payments to each subcontractor within **10** days after the subcontractor's work is satisfactorily completed. Any delay or postponement of payment from the above referenced time frame may occur only for good cause following written approval of the owner. This clause applies to both DBE and non-DBE subcontractors.

DBE CERTIFICATE OF COMPLIANCE FORM

The Florida Department of Transportation maintains an online searchable database of DBE firms at (https://www3.dot.state.fl.us/equalopportunityoffice/biznet).

Okaloosa County intends to utilize and implement this program in the awarding of this contract.

This is to certify that I have reviewed the plan, bid evaluation procedure, and DBE directory and will make all reasonable efforts to include DBE Contractors as outlined in this document.

CONE OF SILENCE

The Board of County Commissioners have established a solicitation silence policy **(Cone of Silence)** that prohibits oral and written communication regarding all formal solicitations for goods and services (ITB, RFP, ITQ, ITN, and RFQ) or other competitive solicitation between the contractor (or its agents or representatives) or other entity with the potential for a financial interest in the award (or their respective agents or representatives) regarding such competitive solicitation, and any County Commissioner or County employee, selection committee member or other persons authorized to act on behalf of the Board including the County's Architect, Architect/Engineer or their sub consultants, or anyone designated to provide a recommendation to award a particular contract, other than the Purchasing Department Staff.

The period commences from the time of advertisement until all parties have signed the contract.

Any information thought to affect the committee or staff recommendation submitted after bids are due, should be directed to the Purchasing Manager or an appointed representative. It shall be the Purchasing Manager's decision whether to consider this information in the decision process.

Any violation of this policy shall be grounds to disqualify the contractor from consideration during the selection process.

All contractors must agree to comply with this policy by signing the following statement and including it with their submittal.

I_____(Signature) representing_____
(Company Name) on this _____ day of_____, 20____hereby agree to abide by the County's "Cone of Silence Clause" and understand violation of this policy shall result in disqualification of my proposal/submittal.

LOBBYING- 31 U.S.C. 1352, 49 CFR PART 19, 49 CFR PART 20

APPENDIX A, 49 CFR PART 20—CERTIFICATION REGARDING LOBBYING
Certification for Contracts, Grants, Loans, and Cooperative Agreements
The undersigned (Contractor) certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for making the lobbying contacts to an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form—LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions [as amended by "Government wide Guidance for New Restrictions on Lobbying," 61 Fed. Reg. 1413 (1/19/96). Note: Language in paragraph (2) herein has been modified in accordance with Section 10 of the Lobbying Disclosure Act of 1995 (P.L. 104-65, to be codified at 2 U.S.C. 1601, et seq.)

3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31, U.S.C. 1352 (as amended by the Lobbying Disclosure Act of 1995). Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Note: Pursuant to 31 U.S.C. 1352(c)(1)-(2)(A), any person who makes a prohibited expenditure or fails to file or amend a required certification or disclosure form shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such expenditure or failure.

The Contractor,_____, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. A 3801, *et seq, apply* to this certification and disclosure, if any.

EQUAL EMPLOYMENT OPPORTUNITY REPORT STATEMENT

Section 60-1.7(b) of the Regulations of the Secretary of Labor requires each contractor or prospective prime Contractor and proposed Subcontractor, where appropriate, to state in the bid or at the outset of negotiations for the Contract whether it has participated in any previous Contract or Subcontract subject to the equal opportunity clause; and if so, whether it has filed with the Joint Reporting Committee, the Director, an agency, or the former President's Committee on Equal Employment Opportunity all reports due under the applicable filing requirements. In any case in which a contractor or prospective prime Contractor or proposed Subcontractor which participated in a previous Contract subject to Executive Order 10925, 11114 or 111246 has not filed a report due under the applicable filing documents, no Contract or Subcontract shall be awarded unless such Contractor submits a report covering the delinquent period or such other period specified by the FAA or the Director, OFCCP.

The Proposer shall complete the following statement by checking the appropriate boxes. Failure to complete these blanks may be grounds for rejection of bid.

1. The Proposer has ( ) has not ( ) developed and has on file at each establishment Affirmative Action Programs pursuant to 41 CFR 60-1.4 and 41 CFR 60-2.

2. The Proposer has ( ) has not ( ) participated in any previous Contract or Subcontract subject to the Equal Opportunity Clause prescribed by Executive Order 10925, or Executive Order 111114, or Executive Order 11246.

3. The Proposer has ( ) has not ( ) filed with the Joint Reporting Committee the annual compliance report on Standard Form 100 (EEO-1 Report).

4. The Proposer has (_) has not (_) submitted all compliance reports in connection with any such Contract due under the application filing requirements; and that representations indicating submission of required compliance reports signed by proposed Subcontractors will be obtained prior to award of Subcontractors.

5. The Proposer does ( ) does not ( ) employ fifty (50) or more employees.

If the Proposer has participated in a previous Contract subject to the equal opportunity clause and has not submitted compliance reports due under applicable filing requirements, the Contractor Proposer shall submit a compliance report on Standard Form 100. "Employee Information EEO-1" prior to the award of Contract.
Standard Form 100 is normally furnished to Contractors annually, based on a mailing list currently maintained by the Joint Reporting Committee. In the event a Contractor has not received the form, he may obtain it by writing to the following address: Joint Reporting Committee, 1800 G Street, Washington, D.C. 20506.

*Must be the same Signature on Bid Proposal

VENDORS ON SCRUTINIZED COMPANIES LISTS

By executing this Certificate_____, the bid proposer, certifies that it is not: (1) listed on the Scrutinized Companies that Boycott Israel List, created pursuant to section 215.4725, Florida Statutes, (2) engaged in a boycott of Israel, (3) listed on the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List, created pursuant to section 215.473, Florida Statutes, or (4) engaged in business operations in Cuba or Syria. Pursuant to section 287.135(5), Florida Statutes, the County may disqualify the bid proper immediately or immediately terminate any agreement entered into for cause if the bid proposer is found to have submitted a false certification as to the above or if the Contractor is placed on the Scrutinized Companies that Boycott Israel List, is engaged in a boycott of Israel, has been placed on the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List, or has been engaged in business operations in Cuba or Syria, during the term of the Agreement. If the County determines that the bid proposer has submitted a false certification, the County will provide written notice to the bid proposer. Unless the bid proposer demonstrates in writing, within 90 calendar days of receipt of the notice, that the County's determination of false certification was made in error, the County shall bring a civil action against the bid proposer. If the County's determination is upheld, a civil penalty shall apply, and the bid proposer will be ineligible to bid on any Agreement with a Florida agency or local governmental entity for three years after the date of County's determination of false certification by bid proposer.

As the person authorized to sign this statement, I certify that this firm complies fully with the above requirements.

SYSTEM FOR AWARD MANAGEMENT (OCT 2016)

(a) Definitions. As used in this provision.

"Electronic Funds Transfer (EFT) indicator" means a four-character suffix to the unique entity identifier. The suffix is assigned at the discretion of the commercial, nonprofit, or Government entity to establish additional System for Award Management records for identifying alternative EFT accounts (see subpart 32.11) for the same entity.

"Registered in the System for Award Management (SAM) database" means that.

(1) The Offeror has entered all mandatory information, including the unique entity identifier and the EFT indicator, if applicable, the Commercial and Government Entity (CAGE) code, as well as data required by the Federal Funding Accountability and Transparency Act of 2006 (see subpart 4.14) into the SAM database;

(2) The offeror has completed the Core, Assertions, and Representations and Certifications, and Points of Contact sections of the registration in the SAM database;

(3) The Government has validated all mandatory data fields, to include validation of the Taxpayer Identification Number (TIN) with the Internal Revenue Service (IRS). The offeror will be required to provide consent for TIN validation to the Government as a part of the SAM registration process; and

(4) The Government has marked the record "Active". "Unique entity identifier" means a number or other identifier used to identify a specific commercial, nonprofit, or Government entity. See www.sam.gov for the designated entity for establishing unique entity identifiers.

(b)

(1) By submission of an offer, the offeror acknowledges the requirement that a prospective awardee shall be registered in the SAM database prior to award, during performance, and through final payment of any contract, basic agreement, basic ordering agreement, or blanket purchasing agreement resulting from this solicitation.

(2) The Offeror shall enter, in the block with its name and address on the cover page of its offer, the annotation "Unique Entity Identifier" followed by the unique entity identifier that identifies the Offeror's name and address exactly as stated in the offer. The Offeror also shall enter its EFT indicator, if applicable. The unique entity identifier will be used by the Contracting Officer to verify that the Offeror is registered in the SAM database.

(c) If the Offeror does not have a unique entity identifier, it should contact the entity designated at www.sam.gov for establishment of the unique entity identifier directly to obtain one. The

Offeror should be prepared to provide the following information:

(1) Company legal business name.

(2) Tradestyle, doing business, or other name by which your entity is commonly recognized.

(3) Company Physical Street Address, City, State, and Zip Code.

(4) Company Mailing Address, City, State and Zip Code (if separate from physical).

(5) Company telephone number.
(6) Date the company was started.
(7) Number of employees at your location.
(8) Chief executive officer/key manager.
(9) Line of business (industry).
(10) Company Headquarters name and address (reporting relationship within your entity).

(d) If the Offeror does not become registered in the SAM database in the time prescribed by the Contracting Officer, the Contracting Officer will proceed to award to the next otherwise successful registered Offeror.

(e) Processing time, which normally takes 48 hours, should be taken into consideration when registering. Offerors who are not registered should consider applying for registration immediately upon receipt of this solicitation.

(f) Offerors may obtain information on registration at https://www.acquisition.gov .

CERTIFICATION OF OFFERER/CONTRACTOR REGARDING TAX DELINQUENCY AND FELONY CONVICTIONS

The applicant must complete the following two certification statements. The applicant must indicate its current status as it relates to tax delinquency and felony conviction by inserting a checkmark (✓) in the space following the applicable response. The applicant agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification in all lower tier subcontracts.

Certifications

1) The applicant represents that it is ( ) is not ( ) a corporation that has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

2) The applicant represents that it is ( ) is not ( ) is not a corporation that was convicted of a criminal violation under any Federal law within the preceding 24 months.

Note

If an applicant responds in the affirmative to either of the above representations, the applicant is ineligible to receive an award unless the sponsor has received notification from the agency suspension and debarment official (SDO) that the SDO has considered suspension or debarment and determined that further action is not required to protect the Government's interests. The applicant therefore must provide information to the owner about its tax liability or conviction to the Owner, who will then notify the FAA Airports District Office, which will then notify the agency's SDO to facilitate completion of the required considerations before award decisions are made.

Term Definitions

Felony conviction: Felony conviction means a conviction within the preceding twenty-four
(24) months of a felony criminal violation under any Federal law and includes conviction of an offense defined in a section of the U.S. code that specifically classifies the offense as a felony and conviction of an offense that is classified as a felony under 18 U.S.C. § 3559.

Tax Delinquency: A tax delinquency is any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted, or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

Government Debarment & Suspension

Instructions

1. By signing and submitting this form, the prospective lower tier participant is providing the certification set out in accordance with these instructions.
2. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension or debarment.
3. The prospective lower tier participant shall provide immediate written notice to the person(s) to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
4. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Orders 12549, at Subpart C of OMB 2 C.F.R. Part 180 and 3000.332. You may contact the department or agency to which this proposal is being submitted for assistance in obtaining a copy of those regulations.
5. The prospective lower tier participant agrees by submitting this form that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.
6. The prospective lower tier participant further agrees by submitting this form that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.
7. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the eligibility of its principals. Each participant may, but is not required to, check the System for Award Management (SAM) database.
8. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
9. Except for transactions authorized under paragraph (5) of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the

department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

Certification Regarding Debarment, Suspension,
Ineligibility and Voluntary Exclusion
Lower Tier Covered Transactions

The following statement is made in accordance with the Privacy Act of 1974 (5 U.S.C. § 552(a), as amended). This certification is required by the regulations implementing Executive Orders 12549, Debarment and Suspension, and OMB 2 C.F.R.
Part 180, Participants' responsibilities. The regulations were amended and published on August 31, 2005, in 70 Fed. Reg. 51865-51880.

[READ INSTRUCTIONS ON PREVIOUS PAGE BEFORE COMPLETING CERTIFICATION]

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal or State department or agency;
2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal

Draft Contract
Please note: this contract is a draft for contractor to view and understand the County's standard terms and conditions, it is subject to revisions. By submitting a bid/proposal contractor/contractor understands and acknowledges that the draft contract is not an offer. Contractors/contractors are not to sign this draft contract.

AGREEMENT BETWEEN OKALOOSA COUNTY, FLORIDA AND CONTRACT ID

THIS AGREEMENT (hereinafter referred to as the "Agreement") is made this_____, day of_____, 20_____, by and between Okaloosa County, a political subdivision of the state of Florida, (hereinafter referred to as the "County"), with a mailing address of 1250 N. Eglin Parkway, Suite 100, Shalimar, Florida, 32579, and_____, a _____ authorized to do business in the State of Florida (hereinafter referred to as "Contractor") whose Federal I.D. # is_____.

RECITALS

WHEREAS, the County is in need of a contractor to provide_____ ("Services"); and

WHEREAS, pursuant to the Okaloosa County Purchasing Manual, the County issued an _____ to competitively procure the Services and received responses to perform these Services. A copy of the procurement and Contractor's responsive to the procurement is included as Attachment "A"; and

WHEREAS, Contractor is a certified and insured entity with the necessary experience to provide the desired Services; and

WHEREAS, the County wishes to enter into this Agreement with Contractor to provide the Services to the County for an amount of_____Dollars ($ _____), as further detailed below.

NOW THEREFORE, in consideration of the promises and the mutual covenants herein, the parties agree as follows:

1. **Recitals and Attachments.** The Recitals set forth above are hereby incorporated into this Agreement and made part hereof for reference. The following documents are attached to this Agreement and are incorporated herein.

Attachment "A" – Procurement_____and Contractor's Response;
Attachment "B" – Insurance Requirements;

Attachment "C" – Title VI list of pertinent nondiscrimination acts and authorities;
Attachment "D" – Scrutinized Companies Certification;

2. Services. Contractor agrees to perform the following services, _____. The Services to be provided are further detailed in the Contractor's proposal attached as Attachment "A" and incorporated herein by reference. The Services shall be performed by Contractor to the full satisfaction of the County. Contractor agrees to have a qualified representative to audit and inspect the Services provided on a regular basis to ensure all Services are being performed in accordance with the County's needs and pursuant to the terms of this Agreement and shall report to the County accordingly. Contractor agrees to immediately inform the County via telephone and in writing of any problems that could cause damage to the County. Contractor will require its employees to perform their work in a manner befitting the type and scope of work to be performed.

3. Term and Renewal. The term of this Agreement shall begin _____, and shall continue for a period of_____( ) _____ from the date of full execution of this Agreement, subject to the County's ability to terminate in accordance with Section 7 of this Agreement. The terms of Section 20 entitled "Indemnification and Waiver of Liability" shall survive termination of this Agreement.

☐ This agreement may not be renewed; or

☐ This agreement may be renewed upon mutual written agreement of the parties for a period of up to_____,_____renewals.

4. Compensation. The Contractor agrees to provide the Services to the County, including materials and labor, in a total amount of_____ Dollars ($_____).

a. Contractor shall submit an invoice to the County upon_____. The invoice shall indicate that all services have been completed for that invoice period. In addition, Contractor agrees to provide the County with any additional documentation requested to process the invoices.

b. Disbursement. Check one:

☐ There are no reimbursable expenses associated with this Agreement.

☐ The following are reimbursable expenses associated with this Agreement:

c. Payment Schedule. Invoices received from the Contractor pursuant to this Agreement will be reviewed by the initiating County Department. Payment will be disbursed as set forth above. If services have been rendered in conformity with the Agreement, the invoice will be sent to the Finance Department for payment. Invoices must reference the contract number assigned by the County after execution of this Agreement. Invoices will be paid in accordance with the State of Florida Local Government Prompt Payment Act.

d. Availability of Funds. The County's performance and obligation to pay under this Agreement is contingent upon annual appropriation for its purpose by the County Commission.

Contractor shall make no other charges to the County for supplies, labor, taxes, licenses, permits, overhead or any other expenses or costs unless any such expenses or cost is incurred by Contractor with the prior written approval of the County. If the County disputes any charges on the invoices, it may make payment of the uncontested amounts and withhold payment on the contested amounts until they are resolved by agreement with the Contractor. Contractor shall not pledge the County's credit or make it a guarantor of payment or surety for any contract, debt, obligation, judgment, lien, or any form of indebtedness. The Contractor further warrants and represents that it has no obligation or indebtedness that would impair its ability to fulfill the terms of this Agreement.

5. Ownership of Documents and Equipment. All documents prepared by the Contractor pursuant to this Agreement and related Services to this Agreement are intended and represented for the ownership of the County only. Any other use by Contractor or other parties shall be approved in writing by the County. If requested, Contractor shall deliver the documents to the County within fifteen (15) calendar days.

6. Insurance. Contractor shall, at its sole cost and expense, during the period of any work being performed under this Agreement, procure and maintain the minimum insurance coverage required as set forth in Attachment "B" attached hereto and incorporated herein, to protect the County and Contractor against all loss, claims, damages and liabilities caused by Contractor, its agents, or employees.

7. Termination and Remedies for Breach.

a. If, through any cause within its reasonable control, the Contractor shall fail to fulfill in a timely manner or otherwise violate any of the covenants, agreements or stipulations material to this Agreement, the County shall have the right to terminate the Services then remaining to be performed. Prior to the exercise of its option to terminate for cause, the County shall notify the Contractor of its violation of the particular terms of the Agreement and grant Contractor ( ) days to cure such default. If the default remains uncured after_____(_____) days the County may terminate this Agreement, and the County shall receive a refund from the Contractor in an amount equal to the

actual cost of a third party to cure such failure. If Contractor fails, refuses or is unable to perform any term of this Agreement, County shall pay for services rendered as of the date of termination.

i. In the event of termination, all finished and unfinished documents, data and other work product prepared by Contractor (and sub-Contractor (s)) shall be delivered to the County and the County shall compensate the Contractor for all Services satisfactorily performed prior to the date of termination, as provided in Section 4 herein.

ii. Notwithstanding the foregoing, the Contractor shall not be relieved of liability to the County for damages sustained by it by virtue of a breach of the Agreement by Contractor and the County may reasonably withhold payment to Contractor for the purposes of set-off until such time as the exact amount of damages due the County from the Contractor is determined.

b. Termination for Convenience of County. The County may, for its convenience and without cause immediately terminate the Services then remaining to be performed at any time by giving written notice. The terms of Section 7 Paragraphs a(i) and a(ii) above shall be applicable hereunder.

c. Termination for Insolvency. The County also reserves the right to terminate the remaining Services to be performed in the event the Contractor is placed either in voluntary or involuntary bankruptcy or makes any assignment for the benefit of creditors.

d. Termination for failure to adhere to the Public Records Law. Failure of the Contractor to adhere to the requirements of Chapter 119 of the Florida Statutes and Section 9 below, may result in immediate termination of this Agreement.

8. Governing Law, Venue and Waiver of Jury Trial. This Agreement shall be interpreted and construed in accordance with and governed by the laws of the State of Florida. All parties agree and accept that jurisdiction of any dispute or controversy arising out of this Agreement, and any action involving the enforcement or interpretation of any rights hereunder shall be brought exclusively in the First Judicial Circuit in and for Okaloosa County, Florida, and venue for litigation arising out of this Agreement shall be exclusively in such state courts, forsaking any other jurisdiction which either party may claim by virtue of its residency or other jurisdictional device. In the event it becomes necessary for the County to file a lawsuit to enforce any term or provision under this Agreement, then the County shall be entitled to its costs and attorney's fees at the pretrial, trial and appellate levels. BY ENTERING INTO THIS AGREEMENT, CONTRACTOR AND COUNTY HEREBY EXPRESSLY WAIVE ANY RIGHTS EITHER PARTY MAY HAVE TO A TRIAL BY JURY OF ANY CIVIL LITIGATION RELATED TO THIS AGREEMENT.

Nothing in this Agreement is intended to serve as a waiver of sovereign immunity, or of any other immunity, defense, or privilege enjoyed by the County pursuant to Section 768.28, Florida Statutes.

9. Public Records. Any record created by either party in accordance with this Contract shall be retained and maintained in accordance with the public records law, Florida Statutes, Chapter 119. Contractor must comply with the public records laws, Florida Statute chapter 119, specifically Contractor must:

a. Keep and maintain public records required by the County to perform the service.

b. Upon request from the County's custodian of public records, provide the County with a copy of the requested records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provided in chapter 119 Florida Statutes or as otherwise provided by law.

c. Ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the contract term and following completion of the contract if the contractor does not transfer the records to the County.

d. Upon completion of the contract, transfer, at no cost, to the County all public records in possession of the contractor or keep and maintain public records required by the County to perform the service. If the contractor transfers all public records to the public agency upon completion of the contract, the contractor shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If the contractor keeps and maintains public records upon completion of the contract, the contractor shall meet all applicable requirements for retaining the public records. All records stored electronically must be provided to the public agency, upon the request from the public agency's custodian of public records, in a format that is compatible with the information technology systems of the public agency.

IF THE CONTRACTOR HAS QUESTIONS REGARDING THE APPLICATION OF CHAPTER 119, FLORIDA STATUTES, TO THE CONTRACTOR'S DUTY TO PROVIDE PUBLIC RECORDS RELATING TO THIS CONTRACT, CONTACT THE CUSTODIAN OF PUBLIC RECORDS AT OKALOOSA COUNTY RISK MANAGEMENT DEPARTMENT 5479 OLD BETHEL ROAD CRESTVIEW, FL 32536
PHONE: (850) 689-5977 riskinfo@myokaloosa.com.

10. Audit. The County and/or its designee shall have the right from time to time at its sole expense to audit the compliance by the Contractor with the terms, conditions, obligations, limitations, restrictions, and requirements of this Contract and such right shall extend for a period

of three (3) years after termination of this Contract.

11. Notices. All notices and other communications required or permitted to be given under this Agreement by either party to the other shall be in writing and shall be sent (except as otherwise provided herein) (i) by certified mail, first class postage prepaid, return receipt requested, (ii) by guaranteed overnight delivery by a nationally recognized courier service, or (iii) by facsimile with confirmation receipt (with a copy simultaneously sent by certified mail, first class postage prepaid, return receipt requested or by overnight delivery by traditionally recognized courier service), addressed to such party as follows:

If to the County:		**With a copy to:** County Attorney Office 1250 N. Eglin Pkwy, Suite 100 Shalimar, FL 32579 (850) 224-4070
If to the Contractor:		

12. Assignment. Contractor shall not assign this Agreement or any part thereof, without the prior consent in writing of the County. If Contractor does, with approval, assign this Agreement or any part thereof, it shall require that its assignee be bound to it and to assume toward Contractor all of the obligations and responsibilities that Contractor has assumed toward the County.

13. Subcontracting. Contractor shall not subcontract any services or work to be provided to County without the prior written approval of the County's Representative. The County reserves the right to accept the use of a subcontractor or to reject the selection of a particular subcontractor and to inspect all facilities of any subcontractors in order to make a determination as to the capability of the subcontractor to perform properly under this Agreement. The County's acceptance of a subcontractor shall not be unreasonably withheld. The Contractor is encouraged to seek minority and women business enterprises for participation in subcontracting opportunities. Additionally, any subcontract entered into between the Contractor and subcontractor will need to be approved by the County prior to it being entered into and said agreement shall incorporate in all required terms in accordance with local, state and Federal regulations.

14. Civil Rights. The Contractor agrees to comply with pertinent statutes, Executive Orders and such rules as are promulgated to ensure that no person shall, on the grounds of race, creed, color, national origin, sex, age, or disability be excluded from participating in any activity conducted with or benefiting from Federal assistance. This provision binds the Contractor and subcontractors from the bid solicitation period through the completion of the contract. This provision is in addition to that required by Title VI of the Civil Rights Act of 1964.

15. Compliance with Nondiscrimination Requirements. During the performance of this Agreement, the Contractor, for itself, its assignees, and successors in interest, agrees as follows:

a. Compliance with Regulations: The Contractor will comply with the Title VI List of Pertinent Nondiscrimination Acts and Authorities, as they may be amended from time to time, which are herein incorporated and attached hereto as Attachment "C".

b. Nondiscrimination: The Contractor, with regard to the work performed by it during the Agreement, will not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The Contractor will not participate directly or indirectly in the discrimination prohibited by the Nondiscrimination Acts and Authorities, including employment practices when the contract covers any activity, project, or program set forth in Appendix B of 49 CFR part 21.

c. Solicitations for Subcontracts, including Procurements of Materials and Equipment: In all solicitations, either by competitive bidding or negotiation made by the Contractor for work to be performed under a subcontract, including procurements of materials, or leases of equipment, each potential subcontractor or supplier will be notified by the Contractor of the contractor's obligations under this contract and the Nondiscrimination Acts and Authorities on the grounds of race, color, or national origin.

d. Information and Reports: The Contractor will provide all information and reports required by the Acts, the Regulations, and directives issued pursuant thereto and will permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the County or other governmental entity to be pertinent to ascertain compliance with such Nondiscrimination Acts and Authorities and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish the information, the Contractor will so certify to the County or the other governmental entity, as appropriate, and will set forth what efforts it has made to obtain the information.

e. Sanctions for Noncompliance: In the event of a Contractor's noncompliance with

the non-discrimination provisions of this contract, the County will impose such contract sanctions as it or another applicable state or federal governmental entity may determine to be appropriate, including, but not limited to:

1. Withholding payments to the Contractor under the Agreement until the Contractor complies; and/or

2. Canceling, terminating, or suspending the Agreement, in whole or in part.

f. Incorporation of Provisions: The Contractor will include the provisions of paragraphs one through six in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Acts, the Regulations, and directives issued pursuant thereto. The Contractor will take action with respect to any subcontract or procurement as the County may direct as a means of enforcing such provisions including sanctions for noncompliance. Provided, that if the Contractor becomes involved in, or is threatened with litigation by a subcontractor, or supplier because of such direction, the Contractor may request the County to enter into any litigation to protect the interests of the County. In addition, the Contractor may request the United States to enter into the litigation to protect the interests of the United States.

16. Compliance with Laws. Contractor shall secure any and all permits, licenses and approvals that may be required in order to perform the Services, shall exercise full and complete authority over Contractor's personnel, shall comply with all workers' compensation, employer's liability and all other federal, state, county, and municipal laws, ordinances, rules and regulations required of an employer performing services such as the Services, and shall make all reports and remit all withholdings or other deductions from the compensation paid to Contractor's personnel as may be required by any federal, state, county, or municipal law, ordinance, rule, or regulation.

17. Conflict of Interest. The Contractor covenants that it presently has no interest and shall not acquire any interest, directly or indirectly which could conflict in any manner or degree with the performance of the Services. The Contractor further covenants that in the performance of this Agreement, no person having any such interest shall knowingly be employed by the Contractor. The Contractor guarantees that he/she has not offered or given to any member of, delegate to the Congress of the United States, any or part of this contract or to any benefit arising therefrom.

18. Independent Contractor. Contractor enters into this Agreement as, and shall continue to be, an independent contractor. All services shall be performed only by Contractor and Contractor's employees. Under no circumstances shall Contractor or any of Contractor's employees look to the County as his/her employer, or as partner, agent or principal. Neither Contractor, nor any of Contractor's employees, shall be entitled to any benefits accorded to the County's employees, including without limitation worker's compensation, disability insurance, vacation or sick pay. Contractor shall be responsible for providing, at Contractor's expense, and in Contractor's name,

unemployment, disability, worker's compensation and other insurance as well as licenses and permits usual and necessary for conducting the services to be provided under this Agreement.

19. Third Party Beneficiaries. It is specifically agreed between the parties executing this Agreement that it is not intended by any of the provisions of any part of the Agreement to create in the public or any member thereof, a third party beneficiary under this Agreement, or to authorize anyone not a party to this Agreement to maintain a suit for personal injuries or property damage pursuant to the terms or provisions of this Agreement.

20. Indemnification and Waiver of Liability. The Contractor agrees, to the fullest extent permitted by law, to defend, indemnify and hold harmless the County, its agents, representatives, officers, directors, officials and employees from and against claims, damages, losses and expenses (including but not limited to attorney's fees, court costs and costs of appellate proceedings) relating to, arising out of or resulting from the Contractor's negligent acts, errors, mistakes or omissions relating to professional Services performed under this Agreement. The Contractor's duty to defend, hold harmless and indemnify the County its agents, representatives, officers, directors, officials and employees shall arise in connection with any claim, damage, loss or expense that is attributable to bodily injury; sickness; disease; death; or injury to impairment, or destruction of tangible property including loss of use resulting therefrom, caused by any negligent acts, errors, mistakes or omissions related to Services in the performance of this Agreement including any person for whose acts, errors, mistakes or omissions the Contractor may be legally liable. The parties agree that TEN DOLLARS ($10.00) represents specific consideration to the Contractor for the indemnification set forth herein.

The waiver by a party of any breach or default in performance shall not be deemed to constitute a waiver of any other or succeeding breach or default. The failure of the County to enforce any of the provisions hereof shall not be construed to be a waiver of the right of the County thereafter to enforce such provisions.

21. Taxes and Assessments. Contractor agrees to pay all sales, use, or other taxes, assessments and other similar charges when due now or in the future, required by any local, state or federal law, including but not limited to such taxes and assessments as may from time to time be imposed by the County in accordance with this Agreement. Contractor further agrees that it shall protect, reimburse and indemnify County from and assume all liability for its tax and assessment obligations under the terms of the Agreement.

The County is exempt from payment of Florida state sales and use taxes. The Contractor shall not be exempted from paying sales tax to its suppliers for materials used to fulfill contractual obligations with the County, nor is the Contractor authorized to use the County's tax exemption number in securing such materials.

The Contractor shall be responsible for payment of its own and its share of its employees' payroll,

payroll taxes, and benefits with respect to this Agreement.

22. Prohibition Against Contracting with Scrutinized Companies. Pursuant to Florida Statutes Section 215.4725, contracting with any entity that is listed on the Scrutinized Companies that Boycott Israel List or that is engaged in the boycott of Israel is prohibited. Contractors must certify that the company is not participating in a boycott of Israel. Any contract for goods or services of One Million Dollars ($1,000,000) or more shall be terminated at the County's option if it is discovered that the entity submitted false documents of certification, is listed on the Scrutinized Companies with Activities in Sudan List, the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List, or has been engaged in business operations in Cuba or Syria after July 1, 2018.

Any contract entered into or renewed after July 1, 2018 shall be terminated at the County's option if the company is listed on the Scrutinized Companies that Boycott Israel List or engaged in the boycott of Israel. Contractors must submit the certification that is attached to this agreement as Attachment "D". Submitting a false certification shall be deemed a material breach of contract. The County shall provide notice, in writing, to the Contractor of the County's determination concerning the false certification. The Contractor shall have ninety (90) days following receipt of the notice to respond in writing and demonstrate that the determination was in error. If the Contractor does not demonstrate that the County's determination of false certification was made in error, then the County shall have the right to terminate the contract and seek civil remedies pursuant to Florida Statute Section 215.4725.

23. Inconsistencies and Entire Agreement. If there is a conflict or inconsistency between any term, statement, requirement, or provision of any attachment attached hereto, any document or events referred to herein, or any document incorporated into this Agreement, the term, statement, requirement, or provision contained in this Agreement shall prevail and be given superior effect and priority over any conflicting or inconsistent term, statement, requirement or provision contained in any other document or attachment, including but not limited to Attachments listed in Section 1.

24. Severability. If any term or condition of this Contract shall be deemed, by a court having appropriate jurisdiction, invalid or unenforceable, the remainder of the terms and conditions of this Contract shall remain in full force and effect. This Contract shall not be more strictly construed against either party hereto by reason of the fact that one party may have drafted or prepared any or all the terms and provisions hereof.

25. Entire Agreement. This Agreement contains the entire agreement of the parties, and may be amended, waived, changed, modified, extended or rescinded only by in writing signed by the party against whom any such amendment, waiver, change, modification, extension and/or rescission is sought.

26. <u>Representation of Authority to Contractor/Signatory</u>. The individual signing this Agreement on behalf of Contractor represents and warrants that he or she is duly authorized and has legal capacity to execute and deliver this Agreement. The signatory represents and warrants to the County that the execution and delivery of this Agreement and the performance of the Services and obligations hereunder have been duly authorized and that the Agreement is a valid and legal agreement binding on the Contractor and enforceable in accordance with its terms.

Attachment "C"

Title VI List of Pertinent Nondiscrimination Acts and Authorities

During the performance of this Agreement, the Contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "Contractor"), as applicable, agrees to comply with the following non-discrimination statutes and authorities; including but not limited to:

- Title VI of the Civil Rights Act of 1964 (42 USC § 2000d *et seq*., 78 stat. 252) (prohibits discrimination on the basis of race, color, national origin);
- 49 CFR part 21 (Non-discrimination in Federally-assisted programs of the Department of Transportation—Effectuation of Title VI of the Civil Rights Act of 1964);
- The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 USC § 4601) (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);
- Section 504 of the Rehabilitation Act of 1973 (29 USC § 794 *et seq*.), as amended (prohibits discrimination on the basis of disability); and 49 CFR part 27;
- The Age Discrimination Act of 1975, as amended (42 USC § 6101 *et seq*.) (prohibits discrimination on the basis of age);
- Airport and Airway Improvement Act of 1982 (49 USC § 471, Section 47123), as amended (prohibits discrimination based on race, creed, color, national origin, or sex);
- The Civil Rights Restoration Act of 1987 (PL 100-209) (broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, the Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms "programs or activities" to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);
- Titles II and III of the Americans with Disabilities Act of 1990, which prohibit discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities (42 USC §§ 12131 – 12189) as implemented by U.S. Department of Transportation regulations at 49 CFR parts 37 and 38;
- The Federal Aviation Administration's Nondiscrimination statute (49 USC § 47123) (prohibits discrimination on the basis of race, color, national origin, and sex);
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, which ensures nondiscrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations;
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of limited English proficiency (LEP). To ensure

compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs (70 Fed. Reg. at 74087 to 74100);

- Title IX of the Education Amendments of 1972, as amended, which prohibits you from discriminating because of sex in education programs or activities (20 USC 1681 et seq).

Standard Additional Contract Clauses

Title VI Clauses for Compliance with Nondiscrimination Requirements

Compliance with Nondiscrimination Requirements

During the performance of this contract, the contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "contractor") agrees as follows:

1. **Compliance with Regulations:** The contractor (hereinafter includes consultants) will comply with the Title VI List of Pertinent Nondiscrimination Acts And Authorities, as they may be amended from time to time, which are herein incorporated by reference and made a part of this contract.

2. **Non-discrimination:** The contractor, with regard to the work performed by it during the contract, will not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The contractor will not participate directly or indirectly in the discrimination prohibited by the Nondiscrimination Acts and Authorities, including employment practices when the contract covers any activity, project, or program set forth in Appendix B of 49 CFR part 21.

3. **Solicitations for Subcontracts, Including Procurements of Materials and Equipment:** In all solicitations, either by competitive bidding, or negotiation made by the contractor for work to be performed under a subcontract, including procurements of materials, or leases of equipment, each potential subcontractor or supplier will be notified by the contractor of the contractor's obligations under this contract and the Nondiscrimination Acts And Authorities on the grounds of race, color, or national origin.

4. **Information and Reports:** The contractor will provide all information and reports required by the Acts, the Regulations, and directives issued pursuant thereto and will permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the sponsor or the Federal Aviation Administration to be pertinent to ascertain compliance with such Nondiscrimination Acts And Authorities and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish the information, the contractor will so certify to the sponsor or the Federal Aviation Administration, as appropriate, and will set forth what efforts it has made to obtain the information.

5. **Sanctions for Noncompliance:** In the event of a contractor's noncompliance with the Non-discrimination provisions of this contract, the sponsor will impose such contract sanctions as it or the Federal Aviation Administration may determine to be appropriate, including, but not limited to:

a. Withholding payments to the contractor under the contract until the contractor complies; and/or

b. Canceling, terminating, or suspending a contract, in whole or in part.

6. **Incorporation of Provisions:** The contractor will include the provisions of paragraphs one through six in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Acts, the Regulations and directives issued pursuant thereto. The contractor will take action with respect to any subcontract or procurement as the sponsor or the Federal Aviation Administration may direct as a means of enforcing such provisions including sanctions for noncompliance. Provided, that if the contractor becomes involved in, or is threatened with litigation by a subcontractor, or supplier because of such direction, the contractor may request the sponsor to enter into any litigation to protect the interests of the sponsor. In addition, the contractor may request the United States to enter into the litigation to protect the interests of the United States.

Title VI List of Pertinent Nondiscrimination Acts and Authorities

Title VI List of Pertinent Nondiscrimination Acts and Authorities

During the performance of this contract, the contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "contractor") agrees to comply with the following non-discrimination statutes and authorities; including but not limited to:

- Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000d *et seq*., 78 stat. 252), (prohibits discrimination on the basis of race, color, national origin);
- 49 CFR part 21 (Non-discrimination In Federally-Assisted Programs of The Department of Transportation—Effectuation of Title VI of The Civil Rights Act of 1964);
- The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 U.S.C. § 4601), (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);
- Section 504 of the Rehabilitation Act of 1973, (29 U.S.C. § 794 *et seq*.), as amended, (prohibits discrimination on the basis of disability); and 49 CFR part 27;
- The Age Discrimination Act of 1975, as amended, (42 U.S.C. § 6101 *et seq*.), (prohibits discrimination on the basis of age);
- Airport and Airway Improvement Act of 1982, (49 USC § 471, Section 47123), as amended, (prohibits discrimination based on race, creed, color, national origin, or sex);
- The Civil Rights Restoration Act of 1987, (PL 100-209), (Broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, The Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of

the terms "programs or activities" to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);

- Titles II and III of the Americans with Disabilities Act of 1990, which prohibit discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities (42 U.S.C. §§ 12131 – 12189) as implemented by Department of Transportation regulations at 49 CFR parts 37 and 38;
- The Federal Aviation Administration's Non-discrimination statute (49 U.S.C. § 47123) (prohibits discrimination on the basis of race, color, national origin, and sex);
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, which ensures non-discrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations;
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of limited English proficiency (LEP). To ensure compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs (70 Fed. Reg. at 74087 to 74100);
- Title IX of the Education Amendments of 1972, as amended, which prohibits you from discriminating because of sex in education programs or activities (20 U.S.C. 1681 et seq).

FEDERAL FAIR LABOR STANDARDS ACT (FEDERAL MINIMUM WAGE)

All contracts and subcontracts that result from this solicitation incorporate by reference the provisions of 29 CFR part 201, the Federal Fair Labor Standards Act (FLSA), with the same force and effect as if given in full text. The FLSA sets minimum wage, overtime pay, recordkeeping, and child labor standards for full and part time workers.

The *contractor* has full responsibility to monitor compliance to the referenced statute or regulation. The *contractor* must address any claims or disputes that arise from this requirement directly with the U.S. Department of Labor – Wage and Hour Division

OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970

All contracts and subcontracts that result from this solicitation incorporate by reference the requirements of 29 CFR Part 1910 with the same force and effect as if given in full text. Contractor must provide a work environment that is free from recognized hazards that may cause death or serious physical harm to the employee. The Contractor retains full responsibility to monitor its compliance and their subcontractor's compliance with the applicable requirements of

the Occupational Safety and Health Act of 1970 (20 CFR Part 1910). Contractor must address any claims or disputes that pertain to a referenced requirement directly with the U.S. Department of Labor – Occupational Safety and Health Administration.

E-VERIFY

Enrollment and verification requirements.

(1) If the Contractor is not enrolled as a Federal Contractor in E-Verify at time of contract award, the Contractor shall-

a. Enroll. Enroll as a Federal Contractor in the E-Verify Program within thirty (30) calendar days of contract award;

b. Verify all new employees. Within ninety (90) calendar days of enrollment in the E-Verify program, begin to use E-Verify to initiate verification of employment eligibility of all new hires of the Contractor, who are working in the United States, whether or not assigned to the contract, within three (3) business days after the date of hire (but see paragraph (b)(3) of this section); and,

c. Verify employees assigned to the contract. For each employee assigned to the contract, initiate verification within ninety (90) calendar days after date of enrollment or within thirty (30) calendar days of the employee's assignment to the contract, whichever date is later (but see paragraph (b)(4) of this section.)

(2) If the Contractor is enrolled as a Federal Contractor in E-Verify at time of contract award, the Contractor shall use E-Verify to initiate verification of employment eligibility of

a. All new employees.

a. Enrolled ninety (90) calendar days or more. The Contractor shall initiate verification of all new hires of the Contractor, who are working in the United States, whether or not assigned to the contract, within three (3) business days after the date of hire (but see paragraph (b)(3) of this section); or

b. Enrolled less than ninety (90) calendar days. Within ninety (90) calendar days after enrollment as a Federal Contractor in E-Verify, the Contractor shall initiate verification of all new hires of the contractor, who are working in the United States, whether or not assigned to the contract, within three (3) business days after the date of hire (but see paragraph (b)(3) of this section; or

c. Employees assigned to the contract. For each employee assigned to the contract, the Contractor shall initiate verification within ninety (90) calendar

days after date of contract award or within thirty (30) days after assignment to the contract, whichever date is later (but see paragraph (b)(4) of this section.)

(3) If the Contractor is an institution of higher education (as defined at 20 U.S.C. 1001(a)); a State of local government or the government of a Federally recognized Indian tribe, or a surety performing under a takeover agreement entered into with a Federal agency pursuant to a performance bond, the Contractor may choose to verify only employees assigned to the contract, whether existing employees or new hires. The Contractor shall follow the applicable verification requirements of (b)(1) or (b)(2), respectively, except that any requirement for verification of new employees applies only to new employees assigned to the contract.

(4) Option to verify employment eligibility of all employees. The Contractor may elect to verify all existing employees hired after November 6, 1986 (after November 27, 2009, in the Commonwealth of the Northern Mariana Islands), rather than just those employees assigned to the contract. The Contractor shall initiate verification for each existing employee working in the United States who was hired after November 6, 1986 (after November 27, 2009, in the Commonwealth of the Northern Mariana Islands), within one hundred eighty (180) calendar days of-

a. Enrollment in the E-Verify program; or

b. Notification to E-Verify Operations of the Contractor's decision to exercise this option, using the contract information provided in the E-Verify program Memorandum of Understanding (MOU)

(5) The Contractor shall comply, for the period of performance of this contract, with the requirements of the E-Verify program MOU.

a. The Department of Homeland Security (DHS) or the Social Security Administration (SSA) may terminate the Contractor's MOU and deny access to the E-Verify system in accordance with the terms of the MOU. In such case, the Contractor, will be referred to a suspension or debarment official.

b. During the period between termination of the MOU and a decision by the suspension or debarment official whether to suspend or debar, the contractor is excused from its obligations under paragraph (b) of this clause. If the suspension or debarment official determines not to suspend or debar the Contractor, then the Contractor must reenroll in E-Verify.

c. Web site. Information on registration for and use of the E-Verify program can be obtained via the Internet at the Department of Homeland Security Web site: http://www.dhs.gov/E-Verify.

d. Individuals previously verified. The Contractor is not required by this clause to perform additional employment verification using E-Verify for any employee

i. Whose employment eligibility was previously verified by the Contractor through the E-Verify program;

ii. Who has been granted and holds an active U.S. Government security clearance for access to confidential, secret, or top secret information in accordance with the National Industrial Security Program Operating Manual; or

iii. Who has undergone a completed background investigation and been issued credentials pursuant to Homeland Security Presidential Directive (HSPD)-12. Policy for a Common Identification Standard for Federal Employees and Contractors.

Subcontracts. The Contractor shall include the requirements of this clause, including this paragraph € (appropriately modified for identification of the parties in each subcontract that-

(1) Is for-

i. Commercial and noncommercial services (except for commercial services that are part of the purchase of a COTS item (or an item that would be a COTS item, but for minor modifications), performed by the COTS provider, and are normally provided for that COTS item); or

ii. Construction;

(2) Has a value of more than $3,500; and

(3) Includes work performed in the United States.

GENERAL SERVICES INSURANCE REQUIREMENTS

CONTRACTORS INSURANCE

1. The Contractor shall not commence any work in connection with this Agreement until obtaining all required insurance and the certificate of insurance has been approved by the Okaloosa County Risk Manager or designee.

2. All insurance policies shall be with insurers authorized to do business in the State of Florida and having a minimum rating of A, Class X in the Best Key Rating Guide published by A.M. Best & Co. Inc.

3. All insurance shall include the interest of all entities named and their respective officials, employees & volunteers of each and all other interests as may be reasonably required by Okaloosa County. The coverage afforded the Additional Insured under this policy shall be primary insurance. If the Additional Insured have other insurance that is applicable to the loss, such other insurance shall be on an excess or contingent basis. The amount of the company's liability under this policy shall not be reduced by the existence of such other insurance.

4. Where applicable the County shall be shown as an Additional Insured with a waiver of subrogation on the Certificate of Insurance.

5. The County shall retain the right to reject all insurance policies that do not meet the requirement of this Agreement. Further, the County reserves the right to change these insurance requirements with 60-day prior written notice to the Contractor.

6. The County reserves the right at any time to require the Contractor to provide copies of any insurance policies to document the insurance coverage specified in this Agreement.

7. Any subsidiaries used shall also be required to obtain and maintain the same insurance requirements as are being required herein of the Contractor.

8. Any exclusions or provisions in the insurance maintained by the Contractor that excludes coverage for work contemplated in this agreement shall be deemed unacceptable and shall be considered a breach of contract.

WORKERS' COMPENSATION INSURANCE

4. The Contractor shall secure and maintain during the life of this Agreement Workers' Compensation insurance for all of his employees employed for the project or any site connected with the work, including supervision, administration or management of this project and in case any work is sublet, with the approval of the County, the Contractor shall require the Subcontractor similarly to provide Workers' Compensation insurance for all employees employed at the site of the project, and such evidence of insurance

shall be furnished to the County not less than ten (10) days prior to the commencement of any and all sub-contractual Agreements which have been approved by the County.

5. Contractor must be in compliance with all applicable State and Federal workers' compensation laws, including the U.S. Longshore Harbor Workers' Act or Jones Act, if applicable.

6. No class of employee, including the Contractor himself, shall be excluded from the Workers' Compensation insurance coverage. The Workers' Compensation insurance shall also include Employer's Liability coverage.

7. A Waiver of Subrogation is required to be shown on all Workers Compensation Certificates of Insurance.

BUSINESS AUTOMOBILE LIABILITY

Coverage must be afforded for all Owned, Hired, Scheduled, and Non-Owned vehicles for Bodily Injury and Property Damage in an amount not less than $1,000,000 (One Million Dollars) combined single limit each accident. If the contractor does not own vehicles, the contractor shall maintain coverage for Hired & Non-Owned Auto Liability, which may be satisfied by way of endorsement to the Commercial General Liability policy or separate Business Auto Policy. Contractor must maintain this insurance coverage throughout the life of this Agreement.

COMMERCIAL GENERAL LIABILITY INSURANCE

4. The Contractor shall carry Commercial General Liability insurance against all claims for Bodily Injury, Property Damage and Personal and Advertising Injury caused by the Contractor.

5. Commercial General Liability coverage shall include the following:

    1.) Premises & Operations Liability
    2.) Bodily Injury and Property Damage Liability
    3.) Independent Contractors Liability
    4.) Contractual Liability
    5.) Products and Completed Operations Liability

3. Contractor shall agree to keep in continuous force Commercial General Liability coverage for the length of the contract.

INSURANCE LIMITS OF LIABILITY

The insurance required shall be written for not less than the following, or greater if required by law and shall include Employer's liability with limits as prescribed in this contract:

		LIMIT
1.	Workers' Compensation	
	1.) State	Statutory
	2.) Employer's Liability	$500,000 each accident
2.	Business Automobile	$15,000,000 each accident (A combined single limit)
3.	Commercial General Liability	$15,000,000 each occurrence Bodily Injury & Property Damage $15,000,000 each occurrence Products and completed operations
4.	Personal and Advertising Injury	$15,000,000 each occurrence

NOTICE OF CLAIMS OR LITIGATION

The Contractor agrees to report any incident or claim that results from performance of this Agreement. The County representative shall receive written notice in the form of a detailed written report describing the incident or claim within ten (10) days of the Contractor's knowledge. In the event such incident or claim involves injury and/or property damage to a third party, verbal notification shall be given the same day the Contractor becomes aware of the incident or claim followed by a written detailed report within ten (10) days of verbal notification.

INDEMNIFICATION & HOLD HARMLESS

To the fullest extent permitted by law, Contractor shall indemnify and hold harmless the County, its officers and employees from liabilities, damages, losses, and costs including but not limited to reasonable attorney fees, to the extent caused by the negligence, recklessness, or wrongful conduct of the Contractor and/or other persons employed or utilized by the Contractor in the performance of this contract.

CERTIFICATE OF INSURANCE

9. Certificates of insurance indicating the job site and evidencing all required coverage must be submitted not less than 10 days prior to the commencement of any of the work. The certificate holder(s) shall be as follows: Okaloosa County, 302 N Wilson Street, Crestview, Florida, 32536.

10. The contractor shall provide a Certificate of Insurance to the County with a thirty (30) day prior written notice of cancellation; ten (10) days' prior written notice of cancellation is for nonpayment of premium.

11. In the event that the insurer is unable to accommodate the cancellation notice requirement, it shall be the responsibility of the contractor to provide the proper notice. Such notification shall be in writing by registered mail, return receipt requested, and addressed to the Okaloosa County Purchasing Department at 5479-A Old Bethel Road, Crestview, FL 32536.

12. In the event the contract term goes beyond the expiration date of the insurance policy, the contractor shall provide the County with an updated Certificate of insurance no later than ten (10) days prior to the expiration of the insurance currently in effect. The County reserves the right to suspend the contract until this requirement is met.

13. The certificate shall indicate if coverage is provided under a claims-made or occurrence form. If any coverage is provided on a claims-made form, the certificate will show a retroactive date, which should be the same date of the initial contract or prior.

14. All certificates shall be subject to Okaloosa County's approval of adequacy of protection.

15. All deductibles or self-insured retentions (SIRs), whether approved by Okaloosa County or not, shall be the Contractor's full responsibility.

16. In no way will the entities listed as Additional Insured be responsible for, pay for, be damaged by, or limited to coverage required by this schedule due to the existence of a deductible or SIR.

GENERAL TERMS

Any type of insurance or increase of limits of liability not described above which, the Contractor required for its own protection or on account of statute shall be its own responsibility and at its own expense.

Any exclusions or provisions in the insurance maintained by the contractor that excludes coverage for work contemplated in this contract shall be deemed unacceptable and shall be considered a breach of contract.

The carrying of the insurance described shall in no way be interpreted as relieving the Contractor of any responsibility under this contract.

Should the Contractor engage a subcontractor or sub-subcontractor, the same conditions will apply under this Agreement to each subcontractor and sub-subcontractor.

The Contractor hereby waives all rights of subrogation against Okaloosa County and its employees under all the foregoing policies of insurance.

EXCESS/UMBRELLA INSURANCE

The Contractor shall have the right to meet the liability insurance requirements with the purchase of an EXCESS/UMBRELLA insurance policy. In all instances, the combination of primary and EXCESS/UMBRELLA liability coverage must equal or exceed the minimum liability insurance limits stated in this Agreement. An Excess liability policy must be submitted indicating which policy it applies to.

GENERAL CONDITIONS

ARTICLE 1 – DEFINITIONS

Wherever used in these General Conditions or in the other Contract Documents the following terms have the meanings indicated which are applicable to both the singular and plural thereof:

1.1 . AASHTO – The American Association of State Highway and Transportation Officials, the successor association AASHO.

1.2. Access Road – The right-of-way, the roadway and all improvements constructed thereon connecting the airport to a public highway.

1.3. Addenda – Written or graphic instruments issued prior to the opening of Bids which clarify, correct or change the Project Requirements or the Contract Documents.

1.4. Advertisement – A public announcement, as required by local law, inviting bids for work to be performed and materials to be furnished.

1.5. Agreement – The written contract between Owner and Contractor covering the Work to be performed; other Contract Documents are attached to the Agreement and made a part thereof as provided therein.

1.6. AIP – The Airport Improvement Program, a grant-in-aid program, administered by the Federal Aviation Administration.

1.7. Air Operations Area – For the purpose of these specifications, the term air operations area shall mean any area of the airport used or intended to be used for the landing, takeoff, or surface maneuvering of aircraft. An air operation area shall include such paved or unpaved areas that are used or intended to be used for the unobstructed movement of aircraft in addition to its associated runway, taxiway, or apron.

1.8 Airport – Airport means the area of land or water which is used or intended to be used for the landing and takeoff of aircraft, and includes its buildings and facilities, if any.

1.9. Application for Payment – The form accepted by Architect/Engineer which is to be used by Contractor in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

1.10. Asbestos – Any material that contains more than one percent asbestos and is friable or is releasing asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

1.11. ASTM – The American Society for Testing and Materials.

1.12. Award – The acceptance, by the Owner, of the successful contractor's proposal.

1.13. Bid – The offer or proposal of the contractor submitted on the prescribed form setting forth the prices for the Work to be performed.

1.14. Contractor – Any individual, partnership, firm, or corporation, acting directly or through a duly authorized representative, who submits a proposal for the work contemplated.

1.15. Project Documents – The advertisement or invitation to Bid, instructions to contractors, the Bid Form, and the proposed Contract Documents (including all Addenda issued prior to receipt of Bids).

1.16. Project Requirements – The advertisement or invitation to Bid, instructions to contractors, and the Bid Form.

1.17. Building Area – An area on the airport to be used, considered, or intended to be used for airport buildings, or other facilities or rights-of-way together with all airport buildings and facilities located thereon.

1.18. Bonds – Performance and Payment bonds and other instruments of security.

1.19. Calendar Day – Every day shown on the calendar.

1.20. Certificates of Compliance – Written statements by the manufacturer stating the material furnished is in conformance with the Specifications.

1.21. Change Order – A document recommended by Architect/Engineer, which is signed by Contractor and Owner and authorizes an addition, deletion or revision in the Work, or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Agreement. The work covered by a change order shall be within the scope of the contract.

1.22. Contract Documents – The Agreement, Addenda (which pertain to the Contract Documents), Contractor's Bid (including documentation accompanying the Bid and any post Bid documentation submitted prior to the Notice of Award) when attached as an exhibit to the Agreement, the Notice to Proceed, the Bonds, these General Conditions, the Supplementary Conditions, the Specifications and the Drawings as the same are more specifically identified in the Agreement, together with all Written Amendments, Change Orders, Work Change Directives, Field Orders and Architect/Engineer's written interpretations and clarifications issued pursuant to paragraphs 3.5, 3.6.1, and 3.6.3 on or after the Effective Date of the Agreement. Shop Drawing submittals approved pursuant to paragraphs 6.19 and 6.20 and the reports and drawings referred to in paragraphs 4.2.1.1 and 4.2.2.2 are not Contract Documents.

1.23. Contract Price – The money payable by Owner to Contractor for completion of the Work in accordance with the Contract Documents as stated in the Agreement (subject to the provisions of paragraph 11.9.1 in the case of Unit Price Work).

1.24. Contract Times – The numbers of days or the dates stated in the Agreement: (i) to achieve Substantial Completion, and (ii) to complete the Work so that it is ready for final payment as evidenced by Architect/Engineer's written recommendation of final payment in accordance with paragraph 14.13.

1.25. Contract Item (Pay Item) – A specific unit of work for which a price is provided in the Contract.

1.26. Contractor – The person, firm or corporation with whom Owner has entered into the Agreement.

1.27. Defective – An adjective which when modifying the word Work refers to Work that is unsatisfactory, faulty or deficient, in that it does not conform to the Contract Documents, or does not meet the requirements of any inspection, reference standard, test or approval referred to in the Contract Documents, or has been damaged prior to Architect/Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with paragraph 14.8 or 14.10).

1.28. Drainage System – The system of pipes, ditches, and structures by which surface or subsurface waters are collected and conducted from the airport area.

1.29. Drawings – The drawings which show the scope, extent, and character of the Work to be furnished and performed by Contractor and which have been prepared or approved by Architect/Engineer and are referred to in the Contract Documents. Shop drawings are not Drawings as so defined.

1.30. Effective Date of the Agreement – The date indicated in the Agreement on which it becomes effective, but if no such date is indicated it means the date on which the Agreement is signed and delivered by the last of the two parties to sign and deliver.

1.31. Architect/Engineer – The person, firm, or corporation named as such in the Agreement.

1.32. Architect/Engineer's Consultant – A person, firm, or corporation having a contract with Architect/Engineer to furnish services as Architect/Engineer's independent professional associate or consultant with respect to the Project and who is identified as such in the Supplementary Conditions. The following list of independent professional associates and consultants are considered the Architect/Engineer’s consultant for this Construction Contract: AVCON, Inc.

1.33. Equipment – All machinery, together with the necessary supplies for upkeep and maintenance, and also all tools and apparatus necessary for the proper construction and acceptable completion of the work.

1.34. Extra Work – An item of work not provided for in the awarded contract as previously modified by change order or supplemental agreement, but which if found by the

Architect/Engineer to be necessary to complete the work within the intended scope of the contract as previously modified.

1.35. FAA – The Federal Aviation Administration of the U.S. Department of Transportation. When used to designate a person, FAA shall mean the Administrator or his duly authorized representative.

1.36. Federal Specifications – The Federal Specifications and Standards, and supplements, amendments, and indices thereto are prepared and issued by the General Services Administration of the Federal Government. They may be obtained from the Specifications Activity, Printed Materials Supply Division, Building 197, Naval Weapons Plant, Washington, D.C. 20407.

1.37. Field Order – A written order issued by Architect/Engineer which orders minor changes in the Work in accordance with paragraph 9.5 but which does not involve a change in the Contract Price or the Contract Times.

1.38. General Requirements – Sections of Division 1 of the Specifications.

1.39. Hazardous Waste – The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.

1.40. Inspector – An authorized representative of the Architect/Engineer assigned to make all necessary inspections and/or tests of the work performed or being performed, or of the materials furnished or being furnished by the Contractor.

1.41. Intention of Terms – Whenever, in these specifications or on the plans, the words, "directed," "required," "permitted," "ordered," "designated," "prescribed," or words of the like import are used, it shall be understood that the direction, requirement, permission, order, designation, or prescription of the Architect/Engineer is intended; and similarly, the words "approved," "acceptable," "Satisfactory," or words of like import, shall mean approved by, or acceptable to, or satisfactory to the Architect/Engineer, subject in each case to the final determination of the Owner.

1.42. Laboratory – The official testing laboratories of the Owner or such other laboratories as may be designated by the Architect/Engineer.

1.43. Laws and Regulations; Laws or Regulations – Any and all applicable laws, rules, regulations, ordinances, codes and orders of any and all governmental bodies, agencies, authorities and courts having jurisdiction.

1.44. Liens – Liens, charges, security interests, or encumbrances upon real property or personal property.

1.45. Lighting – A system of fixtures providing or controlling the light sources used on or near the airport or within the airport buildings. The field lighting includes all luminous signals, markers, floodlights, and illuminating devices used on or near the airport or to aid in the operation of aircraft landing at, taking off from, or taxiing on the airport surface.

1.46. Major and Minor Contract Items – A major contract item shall be any item that is listed in the proposal, the total cost of which is equal to or greater than 25 percent of the total amount of the award contract. All other items shall be considered minor contract items.

1.47. Materials – Any substance specified for use in the construction of the Contract work.

1.48. Mil Specifications – The Military Specifications and Standard, and indices thereto, that are prepared and issued by the Department of Defense.

1.49. Milestone – A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

1.50. Notice of Award – The written notice by Owner to the apparent successful contractor stating that upon compliance by the apparent successful contractor with the conditions precedent enumerated therein, within the time specified, Owner will sign and deliver the Agreement.

1.51. Notice to Proceed – A written notice given by Owner to Contractor (with a copy to Architect/Engineer) fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform Contractor's obligations under the Contract Documents.

1.52. FDOT – The Florida State Department of Transportation. When used to designate a person, FDOT shall mean the commissioner or his duly authorized representative.

1.53. Owner – The public body or authority, corporation, association, firm, or person with whom Contractor has entered into the Agreement and for whom the Work is to be provided.

1.54. Partial Utilization – Use by Owner of a substantially completed part of the Work for the purpose for which it is intended (or a related purpose) prior to Substantial Completion of all the Work.

1.55. Pavement – The combined surface course, base course, and subbase course, if any, considered as a single unit.

1.56. Payment Bond – The approved form of security furnished by the Contractor and his/her surety as a guaranty that he will pay in full all bills and accounts for materials and labor used in the construction of the work.

1.57. PCBs – Polychlorinated biphenyls.

1.58. Performance Bond – The approved form of security furnished by the Contractor and his/her surety as a guaranty that the Contractor will complete the work in accordance with the terms of the contract.

1.59. Petroleum – Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Wastes and crude oils.

1.60. Plans – The official drawings or exact reproductions which show the location, character, dimensions, and details of the airport and the work to be done and which are to be considered as a part of the contract, supplementary to the specifications.

1.61. Project – The total construction of which the Work to be provided under the Contract Documents may be the whole, or a part as indicated elsewhere in the Contract Documents.

1.62. Proposal – (See Bid).

1.63. Radioactive Material – Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.

1.64. Resident Project Representative - The authorized representative of Architect/Engineer who may be assigned to the site or any part thereof.

1.65. Runway – The area on the airport prepared for the landing and takeoff of aircraft.

1.66. Samples – Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

1.67. Shop Drawings – All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work.

1.68. Special Provisions – The specific clauses setting forth conditions or requirements peculiar to the project under consideration, covering work or materials involved in the proposal and estimate, which are not thoroughly or satisfactorily stipulated in these specifications.

1.69. Specifications – Those portions of the Contract Documents consisting of written technical descriptions of materials, equipment, construction systems, standards, and workmanship as applied to the Work and certain administrative details applicable thereto.

1.70. Sponsor – For AIP Contracts, the term Sponsor shall have the meaning as the term Owner.

1.71. Structures – Airport facilities such as bridges; culverts; catch basins; inlets; retaining walls; cribbing; storm and sanitary sewer lines; water lines; underdrains; electrical ducts, manholes, handholes, lighting fixtures and bases; transformers; flexible and rigid pavements; navigational aids; buildings; vaults; and, other manmade features of the airport that may be encountered in the work and not otherwise classified herein.

1.72. Subcontractor – An individual, firm, or corporation having a direct contract with Contractor or with any other Subcontractor for performance of a part of the Work at the site.

1.73. Subgrade – The soil which forms the pavement foundation.

1.74. Superintendent – The Contractor's executive representative who is present on the work during progress, authorized to receive and fulfill instruction from the Architect/Engineer, and who shall supervise and direct the construction.

1.75. Substantial Completion – The Work (or a specified part thereof) has progressed to the point where, in the opinion of Architect/Engineer as evidenced by Architect/Engineer's definitive certificate of Substantial Completion, it is sufficiently complete, in accordance with the Contract Documents, so that the Work (or specified part) can be utilized for the purposes for which it is intended; or if no such certificate is issued, when the Work is complete and ready for final payment as evidenced by Architect/Engineer's written recommendation of final payment in accordance with paragraph 14.13. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

1.76. Supplemental Agreement – A written agreement between the Contractor and the Owner covering: (1) work that would increase or decrease the total amount of the awarded contract, or any major contract item, by more than 25 percent, such increased or decreased work being within the scope of the originally awarded contract; or (2) work that is not within the scope of the originally awarded contract.

1.77. Supplementary Conditions – The part of the Contract Documents which amends or supplements these General Conditions.

1.78. Supplier – A manufacturer, fabricator, supplier, distributor, materialman, or vendor having direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or any Subcontractor.

1.79. Surety – The corporation, partnership, or individual, other than the Contractor, executing payment or performance bonds which are furnished to the Owner by the Contractor.

1.80. Taxiway – For the purpose of this document, the term taxiway means the portion of the air operations area of an airport that has been designated by competent airport authority for movement of aircraft to and from the airport's runways or aircraft parking areas.

1.81. Underground Facilities – All pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities which have been installed underground to furnish any of the following services or materials: electricity, gases, steam, liquid petroleum products, telephone, or other communications, cable television, sewage and drainage removal, traffic or other control systems or water.

1.82. Unit Price Work – Work to be paid for on the basis of unit prices.

1.83. Work – The entire completed construction or the various separately identifiable parts thereof required to be furnished under the Contract Documents. Work includes and is the result of performing or furnishing labor and furnishings and incorporating materials and equipment into the construction, and performing or furnishing services and furnishing documents, all as required by the Contract Documents.

1.84 Work Change Directive - A written directive to Contractor, issued on or after the Effective Date of the Agreement and signed by Owner and recommended by Architect/Engineer, ordering an addition, deletion, or revision in the Work, or responding to differing or unforeseen physical conditions under which the Work is to be performed as provided in paragraph 4.2 or 4.3 or to emergencies under paragraph 6.18. A Work Change Directive will not change the Contract Price or the Contract Times, but is evidence that the parties expect that the change directed or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times as provided in Article 10.

1.85. Working Day – A working day shall be any day other than a legal holiday, Saturday, or Sunday on which the normal working forces of the Contractor may proceed with regular work for at least 6 hours toward completion of the Contract. Unless work is suspended for causes beyond the Contractor's control, Saturdays, Sundays and holidays on which the Contractor's forces engage in regular work, requiring the presence of an inspector, will be considered as working days.

1.86. Work Period – A work period shall consist of any designated block of time on which the normal working forces of the Contractor may proceed with regular work for at least 5 hours toward completion of the contract. Unless work is suspended for causes beyond the Contractor's control, work occurring on any day, regardless of it being a weekend or holiday, which requires an Inspector, will be considered a work period. Work periods are limited to between 7:00 a.m. and 5:00 p.m. local time Monday through Friday. Weekend work will not be permitted unless contractor obtains written permission from Owner.

1.87. Written Amendment – A written amendment of the Contract Documents, signed by Owner and Contractor on or after the Effective Date of the Agreement and normally dealing with the non-Architect/Engineering or nontechnical rather than strictly construction-related aspects of the Contract Documents.

ARTICLE 2 – PRELIMINARY MATTERS

Delivery of Bonds:

2.1. When Contractor delivers the executed Agreements to Owner, Contractor shall also deliver to Owner such Bonds as Contractor may be required to furnish in accordance with paragraph 5.1.

Copies of Documents:

2.2. Owner shall furnish to Contractor up to five copies (unless otherwise specified in the Supplementary Conditions) of the Contract Documents as are reasonably necessary for the execution of the Work. Additional copies will be furnished, upon request, at the cost of reproduction.

Commencement of Contract Times; Notice to Proceed:

2.3. The Contract Times will commence to run on the thirtieth day after the Effective Date of the Agreement, or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within thirty days after the Effective Date of the Agreement. In no event will the Contract Time commence to run later than the *one hundred twentieth (120^{th})* day after the day of Bid opening or the *ninetieth (90^{th})* day after the Effective Date of the Agreement, whichever date is earlier.

Starting the Work:

2.4. Contractor shall start to perform the Work on the date when the Contract Times commence to run, but no Work shall be done at the site prior to the date on which the Contract Times commence to run.

Before Starting Construction:

2.5. Before undertaking each part of the Work, Contractor shall carefully study and compare the Contract Documents and check and verify pertinent figures shown thereon and all applicable field measurements. Contractor shall promptly report in writing to Architect/Engineer any conflict, error, ambiguity or discrepancy which Contractor may discover and shall obtain a written interpretation or clarification from Architect/Engineer before proceeding with any Work affected thereby; however, Contractor shall not be liable to Owner or Architect/Engineer for failure to report any conflict, error, ambiguity or discrepancy in the Contract Documents, unless Contractor knew or reasonably should have known thereof.

2.6. Within ten days after the Construction Notice to Proceed contractor shall submit to Architect/Engineer for review:

2.6.1. a preliminary progress schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract Documents;

2.6.2. a preliminary schedule of Shop Drawings and Sample submittals which will list each required submittal and the times for submitting, reviewing and processing such submittal;

2.6.3. a preliminary schedule of values for all of the Work which will include quantities and prices of items aggregating the Contract Price and will subdivide the Work into component parts in sufficient detail to serve as the basis for progress payments during construction. Such prices will include and appropriate amount of overhead and profit applicable to each item of Work.

2.7. Before any Work at the site is started, Contractor and Owner shall each deliver to the other, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance which either of them or any additional insured may reasonably request) which Contractor and Owner respectively are required to purchase and maintain in accordance with paragraphs 5.4 and 5.6.

Preconstruction Conference:

2.8. Within twenty *(20)* days *prior to Construction Notice to Proceed*, but before any Work at the site is started, a conference attended by Contractor, Architect/Engineer and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in paragraph 2.6, procedures for handling Shop Drawings, and other submittals, processing Applications for Payment and maintaining required records.

Initially Acceptable Schedules:

2.9. Unless otherwise provided in the Contract Documents, at least ten days before submission of the first Application for Payment a conference attended by Contractor, Architect/Engineer, and others as appropriate will be held to review for acceptability to Architect/Engineer as provided below the schedules submitted in accordance with paragraph 2.6. Contractor shall have an additional ten days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to Contractor until the schedules are submitted to and acceptable to Architect/Engineer as provided below. The progress schedule will be acceptable to Architect/Engineer as providing an orderly progression of the Work to completion within any specified Milestones and the Contract Times, but such acceptance will neither impose on Architect/Engineer responsibility for the sequencing, scheduling, or progress of Work nor interfere with or relieve Contractor from Contractor's full responsibility therefore, Contractor's schedule of Shop Drawing and Sample submissions will be acceptable to Architect/Engineer as providing a workable arrangement for reviewing and processing the required submittals. Contractor's schedule of values will be acceptable to Architect/Engineer as to form and substance.

ARTICLE 3 – CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

Intent:

3.1. The Contract Documents comprise the entire agreement between Owner and Contractor concerning the Work. The Contract Documents are complementary: what is called for by one is as binding as if called for by all. The Contract Documents will be construed in accordance with the law of the place of the Project.

3.2. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents. Any Work, materials, or equipment that may reasonably be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the intended result will be furnished and performed whether or not specifically called for. When words or phrases, which have a well-known technical or construction industry or trade meaning are used to describe Work, materials, or equipment, such words or phrases shall be interpreted in accordance with the meaning. Clarifications and interpretations of the Contract Documents shall be issued by Architect/Engineer as provided in paragraph 9.4.

3.3. **Reference to Standards and Specifications of Technical Societies: Reporting and Resolving Discrepancies:**

3.3.1. Reference to standards, specifications, manuals or codes of any technical society, organization, or association, or to the Laws or Regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code or Laws or Regulations in effect at the time of opening of Bids (or, on the Effective Date of the Agreement if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

3.3.2. If, during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents or between the Contract Documents and any provision of any such Law or Regulation applicable to the performance of the Work or of any such standard, specification, manual, or code or of any instruction of any Supplier referred to in paragraph 6.5., Contractor shall report it to Architect/Engineer in writing at once, and, Contractor shall not proceed with the Work affected thereby (except in an emergency as authorized by paragraph 6.18) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in paragraph 3.5 or 3.6; provide, however, that Contractor shall not be liable to Owner or Architect/Engineer for failure to report any such conflict, error, ambiguity or discrepancy unless Contractor knew or reasonably should have known thereof.

3.3.3. Except as otherwise specifically stated in the Contract Documents or as may be provided by amendment or supplement thereto issued by one of the methods indicated in paragraph 3.5 or 3.6, the provisions of the Contract Documents shall take precedence in

resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:

3.3.3.1. the provisions of any such standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Contract Documents): or

3.3.3.2. the provisions of any such Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

No provision of any such standard, specification, manual, code, or instruction shall be effective to change the duties and responsibilities of Owner, Contractor, or Architect/Engineer, or any of their subcontractors, consultants, agents, or employees from those set forth in the Contract Documents, nor shall it be effective to assign to Owner, Architect/Engineer, or any of Architect/Engineer's Consultants, agents, or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of paragraph 9.13 or any other provision of the Contract Documents.

3.3.4. Whenever the plans or specifications are in conflict, resolution of such conflict shall be in the following order of precedence subject to agreement by Architect/Engineer:

Contract Agreement
Addenda, with those of later date having precedence over those of earlier dates
Bid Documents
Supplementary Conditions
General Conditions
Construction Drawings
Technical Specifications
FAA General Provisions
Florida DOT Standard Specifications

In case of our inconsistency within the Contract Drawings, the order of procedure is as follows:

Schedules
Specific Details
Typical Details
Construction Drawings

3.4. Whenever in the Contract Documents the terms "as ordered," "as directed," "as required," "as allowed," "as approved" or terms of like effect or import are used, or the adjectives "reasonable," "suitable," "acceptable," "proper," or "satisfactory" or adjectives of like effect or import are used to describe a requirement, direction, review or judgment of Architect/Engineer as to the Work, it is intended that such requirement, direction, review, or judgment will be solely to evaluate, in general, the completed Work for compliance with the requirements of and information

in the Contract Documents and conformance with the design concept of the completed Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective shall not be effective to assign to Architect/Engineer any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility contrary to the provisions of paragraph 9.13 or any other provision of the Contract Documents.

Amending and Supplementing Contract Documents:

3.5. The Contract Documents may be amended to provide for additions, deletions, and revisions in the Work or to modify the terms and conditions thereof in one or more of the following ways:

3.5.1. a formal Written Amendment.

3.5.2. a Change Order (pursuant to paragraph 10.4) or

3.5.3. a Work Change Directive (pursuant to paragraph 10.1).

3.6. In addition, the requirements of the Contract Documents may be supplemented and minor variations, and deviations of the Work may be authorized, in one or more of the following ways:

3.6.1. a Field Order (pursuant to paragraph 9.5).

3.6.2. Architect/Engineer's approval of a Shop Drawing or Sample (pursuant to paragraphs 6.19 and 6.20), or

3.6.3. Architect/Engineer's written interpretation or clarification (pursuant to paragraph 9.4).

Reuse of Documents:

3.7. Contractor and any Subcontractor or Supplier or other person or organization performing or furnishing any of the Work under a direct or indirect contract with Owner (i) shall not have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Architect/Engineer or Architect/Engineer's Consultant, and (ii) shall not reuse any of such Drawings, Specifications, other documents, or copies on extensions of the Project or any other project without written consent of Owner and Architect/Engineer and specific written verification or adaption by Architect/Engineer.

ARTICLE 4 – AVAILABILITY OF LANDS: SUBSURFACE AND PHYSICAL CONDITIONS; REFERENCE POINTS

4.1 Availability of Lands:

Owner shall furnish, as indicated in the Contract Documents, the lands upon which the Work is to be performed, rights-of-way and easements for access thereto, and such other lands which are designated for the use of Contractor. Upon reasonable written request, Owner shall furnish Contractor with a correct statement of record legal title and legal description of the lands upon which the Work is to be performed and Owner's interest therein as necessary for giving notice of or filing a mechanic's lien against such lands in accordance with applicable Laws and Regulations. Owner shall identify any encumbrances or restrictions not of general application but specifically related to use of lands so furnished with which Contractor will have to comply in performing the Work. Easements for permanent structures or permanent in existing facilities will be obtained and paid for by Owner, unless otherwise provided in the Contract Documents. If Contractor and Owner are unable to agree on entitlement to or the amount or extent of any adjustments in the Contract Price or the Contract Times as a result of any delay in Owner's furnishing these lands, rights-of-way or easements. Contractor may make a claim therefore as provided in Articles 11 and 12. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

4.2. Subsurface and Physical Conditions:

4.2.1. **Reports and Drawings:** Reference is made to the *Information Available to Contractors* for identification of:

4.2.1.1. **Subsurface Conditions:** Those reports of explorations and tests of subsurface conditions at or contiguous to the site that have been utilized by Architect/Engineer in preparing the Contract Documents; and

4.2.1.2. **Physical Conditions:** Those drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the site (except Underground Facilities) that have been utilized by Architect/Engineer in preparing the Contract Documents.

4.2.2. **Limited Reliance by Contractor Authorized; Technical Data:** Contractor may rely upon the general accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the *Information Available to Contractors*. Except for such reliance on such "technical data," Contractor may not rely upon or make any claim against Owner, Architect/Engineer, or any of Architect/Engineer's Consultants with respect to:

4.2.2.1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto, or

4.2.2.2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings, or

4.2.2.3. any Contractor interpretation of or conclusion drawn from any "technical data" or any such data, interpretations, opinions, or information.

4.2.3. **Notice of Differing Subsurface or Physical Conditions:** If Contractor believes that any subsurface or physical condition at or contiguous to the site that is uncovered or revealed either:

4.2.3.1. is of such a nature as to establish that any "technical data" on which Contractor is entitled to rely as provided in paragraphs 4.2.1 and 4.2.2 is materially inaccurate, or

4.2.3.2. is of such a nature as to require a change in the Contract Documents, or

4.2.3.3. differs materially from that shown or indicated in the Contract Documents, or

4.2.3.4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents; then Contractor shall, promptly, but in no event later than fifteen (15) days, after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as permitted by paragraph 6.18), notify Owner and Architect/Engineer in writing about such condition. Contractor shall not further disturb such conditions or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

4.2.4. **Architect/Engineer's Review:** Architect/Engineer will promptly review the pertinent conditions, determine the necessity of Owner's obtaining additional exploration or tests with respect thereto and advise Owner in writing (with a copy to Contractor) of Architect/Engineer's findings and conclusions.

4.2.5. **Possible Contract Documents Change:** If Architect/Engineer concludes that a change in the Contract Documents is required as a result of a condition that meets one or more of the categories in paragraph 4.2.3., a Work Change Directive or a Change Order will be issued as provided in Article 10 to reflect and document the consequences of such change.

4.2.6. **Possible Price and Times Adjustments:** An equitable adjustment in the Contract Price or in the Contract Times, or both, will be allowed to the extent that the existence of such uncovered or revealed condition causes an increase or decrease in Contractor's cost of, or time required for performance of the Work; subject, however, to the following:

4.2.6.1. such condition must meet any one or more of the categories described in paragraphs 4.2.3.1 through 4.2.3.4. inclusive;

4.2.6.2. a change in the Contract Documents pursuant to paragraph 4.2.5 will not be an automatic authorization of nor a condition precedent to entitlement to any such adjustment:

4.2.6.3. with respect to Work that is paid for on a Unit Price Basis, any adjustment in Contract price will be subject to the provisions of Article 10 and Paragraph 11.9; and

4.2.6.4. Contractor shall not be entitled to any adjustment in the Contract Price or Times if;

4.2.6.4.1. Contractor knew of the existence of such conditions at the time Contractor made a final commitment to Owner in respect of Contract Price and Contract Times by the submission of a bid or becoming bound under a contract: or

4.2.6.4.2. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the site and contiguous areas required by the Project Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such final commitment; or

4.2.6.4.3. Contractor failed to give the written notice within the time and as required by paragraph 4.2.3.

If Owner and Contractor are unable to agree on entitlement to or as to the amount or length of any such equitable adjustment in the Contract Price or Contract Times, a claim may be made therefore as provided in Articles 11 and 12. However, Owner, Architect/Engineer, and Architect/Engineer's Consultants shall not be liable to Contractor for any claims, costs, losses, or damages sustained by Contractor on or in connection with any other project or anticipated project.

4.3. Physical Conditions – Underground Facilities:

4.3.1. **Shown or Indicated:** The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the site is based on information and data furnished to Owner or Architect/Engineer by the owners of such Underground Facilities or by others. Unless it is otherwise expressly provided in the *Information Available to Contractors*:

4.3.1.1. Owner and Architect/Engineer shall not be responsible for the accuracy or completeness of any such information or data; and

4.3.1.2. The cost of all of the following will be included in the Contract Price and Contractor shall have full responsibility for: (i) reviewing and checking all such information and data, (ii) locating all Underground Facilities shown or indicated in the Contract Documents, (iii) coordination of the Work with the owners of such Underground Facilities during construction, and (iv) the safety and protection of all such Underground Facilities as provided in paragraph 6.20 and repairing any damage thereto resulting from the Work.

4.3.2. **Not Shown or Indicated:** If an Underground Facility is uncovered or revealed at or contiguous to the site which was not shown or indicated in the Contract Documents. Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by paragraph 6.18), identify the owner of such Underground Facility and give written notice to that owner and to Owner and Architect/Engineer. Architect/Engineer will promptly review the Underground Facility and determine the extent, if any, to which a change is required in the Contract Documents to reflect and document the consequences of the existence of the Underground Facility. If Architect/Engineer concludes that a change in the Contract Documents is required, a Work Change Directive or a Change Order will be issued as provided in Article 10 to reflect and

document such consequences. During such time, Contractor shall be responsible for the safety and protection of such Underground Facility as provided in paragraph 6.15. Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, or both, to the extent that they are attributable to the existence of any Underground Facility that was not shown or indicated in the Contract Documents and that Contractor did not know of and could not reasonably have been expected to be aware of or to have anticipated. If Owner and Contractor are unable to agree on entitlement to or the amount or length of any such adjustment in Contract Price or Contract Times, Contractor may make a claim, therefore, as provided in Articles 11 and 12. However, Owner, Architect/Engineer, and Architect/Engineer's Consultants shall not be liable to Contractor for any claims, costs, losses or damages incurred or sustained by Contractor on or in connection with any other project or anticipated project.

Reference Points:

4.4. Owner shall provide Architect/Engineering surveys to establish reference points for construction which in Architect/Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the established reference points and shall make no changes or relocations without the prior written approval of Owner, Contractor shall report to Architect/Engineer whenever any reference point is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points by professionally qualified personnel.

4.5. Asbestos, PCBs, Petroleum, Hazardous Waste or Radioactive Material:

4.5.1. Owner shall be responsible for any Asbestos, PCBs, Petroleum, Hazardous Waste, or Radioactive Material uncovered or revealed at the site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work and which may present a substantial danger to persons or property exposed thereto in connection with the Work at the site. Owner shall not be responsible for any such materials brought to the site by Contractor, Subcontractor, Suppliers, or anyone else for whom Contractor is responsible.

4.5.2. Contractor shall immediately: (i) stop all Work in connection with such hazardous condition and in any area affected thereby (except in an emergency as required by paragraph 6.18), and (ii) notify Owner and Architect/Engineer (and thereafter confirm such notice in writing). Owner shall promptly consult with Architect/Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such hazardous condition to take corrective action, if any. Contractor shall not be required to resume Work in connection with such hazardous condition or in any such affected area until after Owner has obtained any required permits related thereto and delivered to Contractor special written notice: (i) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (ii) specifying any special conditions under which such Work may be resumed safely. If Owner and Contractor cannot agree as to entitlement to or the amount or extent of an adjustment, if any, in Contract Price or Contract Times as a result of such Work stoppage or such special conditions under which Work is agreed

by Contractor to be resumed, either party may make a claim therefore as provided in Articles 11 and 12.

4.5.3. If after receipt of such special written notice Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then Owner may order such portion of the Work that is in connection with such hazardous condition or in such affected area to be deleted from the Work. If Owner and Contractor cannot agree as to entitlement to or the amount or extent of an adjustment, if any, in Contract Price or Contract Times as a result of deleting such portion of the Work, then either party may make a claim therefore as provided in Articles 11 and 12. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 7.

4.5.4. The provisions of paragraphs 4.2 and 4.3 are not intended to apply to Asbestos, PCBs, Petroleum, Hazardous Waste or Radioactive Material uncovered or revealed at the site.

ARTICLE 5 – BONDS AND INSURANCE

Performance, Payment, and Other Bonds:

5.1. Contractor shall furnish Performance and Payment Bonds, each in an amount at least equal to the Contract Price as security for the faithful performance and payment of all Contractor's obligations under the Contract Documents. These Bonds shall remain in effect at least until one year after the date when final payment becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents. Contractor shall also furnish such other Bonds as are required by the Supplementary Conditions. All Bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in the current list of "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (amended) by the Audit Staff. Bureau of Government Financial Operations, U.S. Treasury Department. All Bonds signed by an agent must be accompanied by a certified copy of such agent's authority to act.

5.2. If the surety on any Bond furnished by Contractor is declared a bankrupt or becomes insolvent or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirements of paragraph 5.1. Contractor shall within ten days thereafter substitute another bond and surety, both of which must be acceptable to Owner.

5.3. Licensed Sureties and Insurers; Certificates of Insurance:

5.3.1. All Bonds and insurance required by the Contract Documents to be purchased and maintained by Owner or Contractor shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue Bonds or insurance policies for the limits and coverages so required. Such surety and insurance

companies shall also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

5.3.2. Contractor shall deliver to Owner, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by Owner or any other additional insured) which Contractor is required to purchase and maintain in accordance with paragraph 5.4.

Contractor's Liability Insurance:

5.4. Contractor shall purchase and maintain such liability and other insurance as is appropriate for the Work being performed and furnished and as will provide protection from claims set forth below which may arise out of or result from Contractor's performance and furnishing of the Work and Contractor's other obligations under the Contract Documents, whether it is to be performed or furnished by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform or furnish any of the Work, or by anyone for whose acts any of them may be liable:

5.4.1. claims under workers' compensation, disability benefits and other similar employee benefit acts;

5.4.2. claims for damages because of bodily injury, occupational sickness or disease, or death of Contractor's employees;

5.4.3. claims for damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees;

5.4.4. claims for damages insured by customary personal injury liability coverage which are sustained: (i) by any person as a result of an offense directly or indirectly related to the employment of such person by Contractor, or by any other person for any other reason;

5.4.5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom; and

5.4.6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

The policies of insurance so required by this paragraph 5.4 to be purchased and maintained shall:

5.4.7. with respect to insurance required by paragraphs 5.4.3 through 5.4.6 inclusive, include as additional insureds (subject to any customary exclusion in respect of professional liability) Owner, Architect/Engineer, Architect/Engineer's Consultants and any other persons or entities identified in the Supplementary Conditions, all of whom shall be listed as additional insureds, and include coverage for the respective officers and employees of all such additional insureds;

5.4.8. include the specific coverages and be written for not less than the limits of liability provided in the Supplementary Conditions or required by Laws or Regulations, whichever is greater;

5.4.8.1 Contractor's Liability Insurance and the Owner's Protective Liability Insurance specified above shall be provided in not less than the following amount:

a. Injury or death to more than one person or single occurrence $15,000,000
b. On and Off Premises Operations Liability $15,000,000
c. Explosion and Collapse Hazard $15,000,000
d. Underground Hazard $15,000,000
e. Completed Operations and Products Liability $15,000,000
f. Property damage in account of all occurrences $15,000,000
g. Independent Contractors Liability $15,000,000
h. Personal Injury Liability Insurance $15,000,000

Contractor's Vehicle Insurance as follows:

1. Injury or death to one person $15,000,000
2. Injury or death to more than one person or a single occurrence $15,000,000
3. Property Damage $15,000,000
4. Business Auto Liability, Including all owned, non owned and hired vehicles $15,000,000

An Umbrella Policy may be used to meet the above limits.

All policies shall be drawn to cover a period of not less than one (1) year from the date of issue.

5.4.9. include contractual liability insurance covering Contractor's indemnity obligations under paragraphs 6.9, 6.13.1, and 6.22.1 through 6.22.2.8;

5.4.10. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed or renewal refused until at least thirty days prior written notice has been given to Owner and Contractor and to each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued (and the certificates of insurance furnished by the Contractor pursuant to paragraph 5.3.2 will so provide);

5.4.11. remain in effect at least until final payment and at all times thereafter when Contractor may be correcting, removing or replacing defective Work in accordance with paragraph 13.12; and

5.4.12. with respect to completed operations insurance, and any insurance coverage written on an occurrence basis, remain in effect for at least two years after final payment (and Contractor shall furnish Owner and each other additional insured identified in the Supplementary

Conditions to whom a certificate of insurance has been issued evidence satisfactory to Owner and any such additional insured of continuation of such insurance at final payment and one year thereafter).

Owner's Liability Insurance:

5.5. In addition to the insurance required to be provided by Contractor under paragraph 5.4, Owner, at Owner's option, may purchase and maintain at Owner's expense Owner's own liability insurance as will protect Owner against claims which may arise from operations under the Contract Documents. Any liability insurance carried by Owner is excess and non-contributory to any and all other coverage whether collectable or not.

Property Insurance:

5.6 Contractor shall purchase and maintain property insurance upon the Work at the site in amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in these Supplementary Conditions or required by Laws and Regulations). This insurance shall:

5.6.1 include the interests of Owner, Contractor, Subcontractors, Architect/Engineer, Architect/Engineer's Consultants and any other persons or entities identified in the Supplementary Conditions each of whom is deemed to have an insurable interest an shall be listed as an insured or additional insured;

5.6.2 include expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of Architect/Engineers and architects);

5.6.3 cover materials and equipment in transit for incorporation in the Work or stored at the site or at another location that was agreed to in writing by Owner prior to being incorporated in the Work, provided that such materials and equipment have been included in an Application for Payment recommended by Architect/Engineer; and

5.6.4 be maintained in effect until final payment is made unless otherwise agreed to in writing by Owner, Contractor, and Architect/Engineer with thirty days written notice to each other additional insured to whom a certificate of insurance has been issued.

5.7. NOT USED

5.8. NOT USED

5.9. Owner shall not be responsible for purchasing and maintaining any property insurance to protect the interests of Contractor, Subcontractors or others in the Work to the extent of any deductible amounts that are identified in the Supplementary Conditions. The risk of loss within such identified deductible amount, will be borne by Contractor, Subcontractor, or others suffering any such loss and if any of them wishes property insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.

5.10. NOT USED

5.11. NOT USED

Receipt and Application of Insurance Proceeds:

5.12. Any insureds loss under the policies of insurance required by paragraphs 5.5 and 5.6 will be adjusted with Owner and made payable to Owner as fiduciary for the insureds, as their interests may appear, subject to the requirements of any applicable mortgage clause and of paragraph 5.13. Owner shall deposit in a separate account any money so received, and shall distribute it in accordance with such agreement as the parties in interest may reach. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the moneys so received applied on account thereof and the Work and the cost thereof covered by an appropriate Change Order or Written Amendment.

5.13. Owner as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object in writing within fifteen days after the occurrence of loss to Owner's exercise of this power. If such objection be made, Owner as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, Owner as fiduciary shall adjust and settle the loss with the insurers and, if required in writing by any party in interest, Owner as fiduciary shall give bond for the proper performance of such duties.

Acceptance of Bonds and Insurance; Option to Replace:

5.14. If either party (Owner or Contractor) has any objection to the coverage afforded by or other provisions of the Bonds or insurance required to be purchased and maintained by the other party in accordance with Article 5 on the basis of non-conformance with the Contract Documents, the objecting party shall so notify the other party in writing within ten days after receipt of the certificates (or other evidence requested) required by paragraph 2.7. Owner and Contractor shall each provide to the other such additional information in respect of insurance provided as the other may reasonably request. If either party does not purchase or maintain all of the Bonds and insurance required of such party by the Contract Documents, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage. Without prejudice to any other right or remedy, the other party may elect to obtain equivalent Bonds or insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and a Change Order shall be issued to adjust the Contract Price accordingly.

Partial Utilization – Property Insurance:

5.15. If Owner finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, such use or occupancy may be accomplished in accordance with paragraph 14.10; provided that no such use or occupancy shall commence before the insurers providing the property insurance have acknowledged notice thereof and in writing

effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 – CONTRACTOR'S RESPONSIBILITIES

Supervision and Superintendence:

6.1. Contractor shall supervise, inspect and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences and procedures of construction, but Contractor shall not be responsible for the negligence of others in the design or specification of a specific means, method, technique, sequence or procedure of construction which is shown or indicated in and expressly required by the Contract Documents. Contractor shall be responsible to see that the completed Work complies accurately with the Contract Documents.

6.2. Contractor shall keep on the Work at all times during its progress a competent resident superintendent, who shall not be replaced without written notice to Owner and Architect/Engineer except under extraordinary circumstances. The superintendent will be Contractor's representative at the site and shall have authority to act on behalf of Contractor. All communications to the superintendent shall be as binding as if given to CONTRACTOR.

Labor, Materials and Equipment:

6.3. Contractor shall provide competent, suitably qualified personnel to survey, lay out and construct the Work as required by the Contract Documents. Contractor shall at all times maintain good discipline and order at the site. Except as otherwise required for the safety or protection of persons or the Work or property at the site or adjacent thereto, and except as otherwise indicated in the Contract Documents, all Work at the site shall be performed during regular working hours and Contractor will not permit overtime work or the performance of Work on Saturday, Sunday or any legal holiday without Owner's written consent given after prior written notice to Architect/Engineer.

6.4. Unless otherwise specified in the General Requirements, Contractor shall furnish and assume full responsibility for all materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities and all other facilities and incidentals necessary for the furnishing, performance, testing, start-up and completion of the Work.

6.5. All materials and equipment shall be of good quality and new, except as otherwise provided in the Contract Documents. All warranties and guarantees specifically called for by the Specifications shall expressly run to the benefit of Owner. If required by Architect/Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the kind and quality of materials and equipment. All materials and equipment shall be applied, installed,

connected, erected, used, cleaned and conditioned in accordance with instructions of the applicable Supplier, except as otherwise provided in the Contract Documents.

Progress Schedule:

6.6. Contractor shall adhere to the progress schedule established in accordance with paragraph 2.9 as it may be adjusted from time to time as provided below:

6.6.1. Contractor shall submit to Architect/Engineer for acceptance (to the extent indicated in paragraph 2.9) proposed adjustments in the progress schedule that will not change the Contract Times (or Milestones). Such adjustments will conform generally to the progress schedule then in effect and additionally will comply with any provisions of the General Requirements applicable thereto.

6.6.2. Proposed adjustments in the progress schedule that will change the Contract Times (or Milestones) shall be submitted in accordance with the requirements of paragraph 12.1. Such adjustments may only be made by a Change Order or Written Amendment in accordance with Article 12.

6.7. Substitutes and "Or-Equal" Items:

6.7.1. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent or "or-equal" item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may be accepted by Architect/Engineer under the following circumstances:

6.7.1.1. "Or-Equal": If in Architect/Engineer's sole discretion an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, it may be considered by Architect/Engineer as an "or-equal" item, in which case review and approval of the proposed item may, in Architect/Engineer's sole discretion, be accomplished without compliance with some or all of the requirements for acceptance of proposed substitute items.

6.7.1.2. Substitute Items: If in Architect/Engineer's sole discretion an item of material or equipment proposed by Contractor does not qualify as an "or-equal" item under subparagraph 6.7.2, it will be considered a proposed substitute item. Contractor shall submit sufficient information as provided below to allow Architect/Engineer to determine that the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefore. The procedure for review by the Architect/Engineer will include the following as supplemented in the General Requirements and as Architect/Engineer may decide is appropriate under the circumstances. Requests for review of proposed substitute items of material or equipment will not be accepted by

Architect/Engineer from anyone other than Contractor. If Contractor wishes to furnish or use a substitute item of material or equipment, Contractor shall first make written application to Architect/Engineer for acceptance thereof, certifying that the proposed substitute will perform adequately the functions and achieve the results called for by the general design, be similar in substance to that specified and be suited to the same use as that specified. The application will state the extent, if any, to which the evaluation and acceptance of the proposed substitute will prejudice Contractor's achievement of Substantial Completion on time, whether or not acceptance of the substitute for use in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for work on the Project) to adapt the design to the proposed substitute and whether or not incorporation or use of the substitute in connection with the Work is subject to payment of any license fee or royalty. All variations of the proposed substitute from that specified will be identified in the application and available maintenance, repair and replacement service will be indicated. The application will also contain an itemized estimate of all costs or credits that will result directly or indirectly from acceptance of such substitute, including costs of redesign and claims of other contractors affected by the resulting change, all of which will be considered by Architect/Engineer in evaluating the proposed substitute. Architect/Engineer may require Contractor to furnish additional data about the proposed substitute.

6.7.1.3. Contractor's Expense: All data to be provided by Contractor in support of any proposed "or-equal" or substitute item will be at Contractor's expense.

6.7.2. Substitute Construction Methods or Procedures: If a specific means, method, technique, sequence or procedure of construction is shown or indicated in an expressly required by the Contract Documents, Contractor may furnish or utilize a substitute means, method, technique, sequence or procedure of construction acceptable to Architect/Engineer. Contractor shall submit sufficient information to allow Architect/Engineer, in Architect/Engineer's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents. The procedure for review by Architect/Engineer will be similar to that provided in subparagraph 6.7.3.

6.7.3. Architect/Engineer's Evaluation: Architect/Engineer will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to paragraphs 6.7.1.1 and 6.7.1.2. Architect/Engineer will be the sole judge of acceptability. No "or-equal" or substitute will be ordered, installed or utilized without Architect/Engineer's prior written acceptance which will be evidenced by either a Change Order or an approved Shop Drawing. Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any "or-equal" or substitute. Architect/Engineer will record time required by Architect/Engineer and Architect/Engineer's Consultants in evaluating substitutes proposed or submitted by Contractor pursuant to paragraphs 6.7.1.1 and 6.7.1.2 and in making changes in the Contract Documents (or in the provisions of any other direct contract with Owner for work on the Project) occasioned thereby. Whether or not Architect/Engineer accepts a substitute item so proposed or submitted by Contractor, Contractor shall reimburse Owner for the changes of Architect/Engineer and Architect/Engineer's Consultants for evaluating each such proposed substitute item.

6.8. Concerning Subcontractors, Suppliers and Others:

The Contractor shall submit a list of Subcontractors and major Material Suppliers for the Owner's approval within (24) hours after Bid Opening. Such list shall be accompanied by an experience statement with pertinent information as to similar projects and other evidence of qualifications from each such Subcontractor, person and organization requested by Owner. If Owner, after due investigation has reasonable objections to any proposed Subcontractor, other person or organization, the Owner may before giving the Notice of Award request the apparent successful Contractor to submit an acceptable Subcontractor without an increase in Bid Price. If the apparent successful Contractor declines to make any such substitution, the Contract shall not be awarded to such Contractor, but his declining to make any such substitution will not constitute grounds for sacrificing his Bid Security. Any Subcontractor, other person or organization so listed and to whom Owner does not make written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner.

6.8.1. Contractor shall not employ any Subcontractor, Supplier or other person or organization (including those acceptable to Owner and Architect/Engineer as indicated in paragraph 6.8.2), whether initially or as a substitute, against whom Owner or Architect/Engineer may have reasonable objection. Contractor shall not be required to employ any subcontractor, Supplier or other person or organization to furnish or perform any of the Work against whom Contractor has reasonable objection.

6.8.2. If the Supplementary Conditions and/or Bid Documents require the identity of certain Subcontractors, Suppliers or other persons or organizations (including those who are to furnish the principal items of materials or equipment) to be submitted to Owner in advance of the specified date prior to the Effective Date of the Agreement for acceptance by Owner and Architect/Engineer, and if Contractor has submitted a list thereof in accordance with the Supplementary Conditions, Owner's or Architect/Engineer's acceptance (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the project documents or the Contract Documents) of any such Subcontractor, Supplier or other person or organization so identified may be revoked on the basis of reasonable objection after due investigation, in which case Contractor shall submit an acceptable substitute, the Contract Price will be adjusted by the difference in the cost occasioned by such substitution and an appropriate Change Order will be issued or Written Amendment signed. No acceptance by Owner or Architect/Engineer of any such Subcontractor, Supplier or other person or organization shall constitute a waiver of any right of Owner or Architect/Engineer to reject defective Work.

6.8.3. Contractor shall be fully responsible to Owner and Architect/Engineer for all acts and omissions of the Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with Contractor just as Contractor is responsible for Contractor's own acts and omissions. Nothing in the Contract Documents shall create for the benefit of any such Subcontractor, Supplier, or other person or organization any contractual relationship between Owner or Architect/Engineer and any such Subcontractor,

Supplier or other person or organization, nor shall it create any obligation on the part of Owner or Architect/Engineer to pay or to see to the payment of any moneys due any such Subcontractor, Supplier or other person or organization except as may otherwise be required by Laws and Regulations.

6.8.4. Contractor shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with Contractor. Contractor shall require all Subcontractors, Suppliers and such other persons and organizations performing or furnishing any of the Work to communicate with the Architect/Engineer through Contractor.

6.8.5. The divisions and sections of the Specifications and the identifications of any drawings shall not control Contractor in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

6.8.6. All Work performed by Contractor by a Subcontractor or Supplier will be pursuant to an appropriate agreement between Contractor and the Subcontractor or Supplier which specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of Owner and Architect/Engineer. Whenever any such agreement is with a Subcontractor or Supplier who is listed as an additional insured on the property insurance provided in paragraph 5.5. or 5.6. the agreement between the Contractor and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against Owner, Contractor, Architect/Engineer, Architect/Engineer's Consultants and all other additional insureds for all losses and damages caused by, arising out of or resulting from any of the perils covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, Contractor will obtain the same.

6.9 Patent Fees and Royalties:

Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product or device is specified in the Contract Documents for use in the performance of the Work and if to the actual knowledge of Owner or Architect/Engineer its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by Owner in the Contract Documents. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner, Architect/Engineer, Architect/Engineer's Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages arising out of or resulting from any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product or device not specified in the Contract Documents.

6.10. Permits:

Unless otherwise provided in the Supplementary Conditions, Contractor shall obtain and pay for all construction permits and licenses. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work, which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Agreement. Contractor shall pay all charges of utility owners for connections to the Work, and Owner shall pay all charges of such utility owners for capital costs related thereto such as plant investment fees.

6.11. Laws and Regulations:

6.11.1. Contractor shall give all notices and comply with all Laws and Regulations applicable to furnishing and performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither Owner nor Architect/Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

6.11.2. If Contractor performs any Work knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all claims, costs, losses and damages caused by, arising out of or resulting therefrom: however, it shall not be Contractor's primary responsibility to make certain that the Specifications and Drawings are in accordance with Laws and Regulations, but this shall not relieve Contractor or Contractor's obligations under paragraph 3.3.2.

6.12. Taxes:

Contractor shall pay all sales, consumer, use and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

6.13. Use of Premises:

6.13.1 Contractor shall confine construction equipment, the storage of materials and equipment and the operations of workers to the site and land and areas identified in and permitted by the Contract Documents, rights-of-way, permits and easements, and shall not unreasonably encumber the premises with construction equipment or other materials or equipment. Contractor shall assume full responsibility for any damage to any such land or area, or to the owner or occupant thereof or of any adjacent land or areas, resulting from the performance of the Work. Should any claim be made by any such owner or occupant because of the performance of the Work, Contractor shall promptly settle with such other party by negotiation or otherwise resolve the claim by dispute resolution proceeding or at law. Contractor shall, to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner, Architect/Engineer, Architect/Engineer's Consultant and anyone directly or indirectly employed by any of them from and against all claims costs, losses and damages arising out of or resulting from any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Architect/Engineer or any other party indemnified hereunder to the extent caused by or based upon Contractor's performance of the Work.

6.13.2. During the progress of the Work, Contractor shall keep the premises free from accumulations of waste materials, rubbish and other debris resulting from the Work. At the completion of the Work Contractor shall remove all waste materials, rubbish and debris from and about the premises as well as all tools, appliances, construction equipment and machinery and surplus materials. Contractor shall leave the site clean and ready for occupancy by Owner at Substantial Completion of the Work. Contractor shall restore to original condition all property not designated for alteration by the Contract Documents.

6.13.3. Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.14. Record Documents:

Contractor shall maintain in a safe place at the site one record copy of all Drawings, Specifications, Addenda, Written Amendments, Change Orders, Work Change Directives, Field Orders and written interpretations and clarifications (issued pursuant to paragraph 9.4) in good order and annotated to show all changes made during construction. These record documents together with all approved Samples and a counterpart of all approved Shop Drawings will be available to Architect/Engineer for reference. Upon completion of the Work, these record documents, Samples and Shop Drawings will be delivered to Architect/Engineer for Owner.

6.15. Safety and Protection:

Contractor shall be responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:

6.15.1. all persons on the Work site or who may be affected by the Work;

6.15.2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the site; and

6.15.3. other property at the site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities and Underground Facilities not designated for removal, relocation or replacement in the course of construction.

Contractor shall comply with all applicable Laws and Regulations of any public body having jurisdiction for safety of persons or property or to protect them from damage, injury of loss; and shall erect and maintain all necessary safeguards for such safety and protection. Contractor shall notify owners of adjacent property and of Underground Facilities and utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation and replacement of their property. All damage, injury or loss to any property referred to in paragraph 6.15.2. or 6.15.3. caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier or any other person or organization directly or indirectly employed by

any of them to perform or furnish any of the Work or anyone for whose acts any of them may be liable, shall be remedied by Contractor (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Architect/Engineer or Architect/Engineer's Consultant or anyone employed by any of them or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier or other person or organization directly or indirectly employed by any of them). Contractor's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and Architect/Engineer has issued a notice to Owner and Contractor in accordance with paragraph 14.13. that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

6.16. Safety Representative:

Contractor shall designate a qualified and experienced safety representative at the site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

6.17. Hazard Communication Programs:

Contractor shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the site in accordance with Laws or Regulations.

6.18. Emergencies:

In emergencies affecting the safety or protection of persons or the Work or property at the site or adjacent thereto, Contractor, without special instruction or authorization from Owner or Architect/Engineer, is obligated to act to prevent threatened damage, injury or loss. Contractor shall give Architect/Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby. If Architect/Engineer determines that a change in the Contract Documents is required because of the action taken by Contractor in response to such an emergency, a Work Change Directive or Change Order will be issued to document the consequences of such action.

6.19. Shop Drawings and Samples:

6.19.1. Contractor shall submit Shop Drawings to Architect/Engineer for review and approval in accordance with the accepted schedule of Shop Drawings and Sample submittals (see paragraph 2.9.). All submittals will be identified as Architect/Engineer may require and in the number of copies specified in the General Requirements. The data shown on the Shop Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials and similar data to shown Architect/Engineer the materials and equipment Contractor proposes to provide and to enable Architect/Engineer to review the information for the limited purposes required by paragraph 6.26.

6.19.2. Contractor shall also submit Samples to Architect/Engineer for review and approval in accordance with said accepted schedule of Shop Drawings and Sample submittals. Each Sample will be identified clearly as to material, Supplier, pertinent data such as catalog numbers and the use for which intended and otherwise as Architect/Engineer may require to enable Architect/Engineer to review the submittal for the limited purposes required by paragraph 6.20. The numbers of each Sample to be submitted will be as specified in the Specifications.

6.20. Submittal Procedures:

6.20.1. Before submitting each Shop Drawing or Sample, Contractor shall have determined and verified:

6.20.1.1 all field measurements, quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar information with respect thereto,

6.20.1.2. all materials with respect to intended use, fabrication, shipping, handling storage, assembly and installation pertaining to the performance of the Work, and

6.20.1.3. all information relative to Contractor's sole responsibilities in respect of means, methods, techniques, sequences and procedures of construction and safety precautions and programs incident thereto.

Contractor shall also have reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents.

6.20.2 Each submittal will bear a stamp or specific written indication that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review and approval of that submittal.

6.20.3. At the time of each submission, Contractor shall give Architect/Engineer specific written notice of such variations, if any, that the Shop Drawing or Sample submitted may have from the requirements of the Contract Documents, such notice to be in a written communication separate from the submittal; and, in addition, shall cause a specific notation to be made on each Shop Drawing and Sample submitted to Architect/Engineer for review and approval of each such variation.

6.20.4. Architect/Engineer will review and approve Shop Drawings and Samples in accordance with the schedule of Shop Drawings and Sample submittals accepted by Architect/Engineer as required by paragraph 2.9. Architect/Engineer's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Architect/Engineer's review and approval will not extend to means, methods, techniques, sequences or procedures of construction (except where a particular means, method, technique,

sequence or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions. Contractor shall make corrections required by Architect/Engineer, and shall return the required number of corrected copies of Shop Drawings and submit as required new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Architect/Engineer on previous submittals.

6.20.5. Architect/Engineer's review and approval of Shop Drawings or Samples shall not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has in writing called Architect/Engineer's attention to each such variation at the time of submission as required by paragraph 6.20.3 and Architect/Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying Shop Drawing or Sample approval; nor will any approval by Architect/Engineer relieve Contractor from responsibility for complying with the requirements of paragraph 6.20.

6.20.6. Where a Shop Drawing or Sample is required by the Contract Documents or the schedule of Shop Drawings and Sample submissions accepted by Architect/Engineer as required by paragraph 2.9, any related Work performed prior to Architect/Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

6.21. Continuing the Work:

Contractor shall carry on the Work and adhere to the progress schedule during all disputes or disagreements with Owner. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by paragraph 15.5 or as Owner and Contractor may otherwise agree in writing.

6.22. Contractor's General Warranty and Guarantee:

6.22.1. Contractor warrants and guarantees to Owner, Architect/Engineer and Architect/Engineer's Consultants that all Work will be in accordance with the Contract Documents and will not be defective. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

6.22.1.1.abuse, modification or improper maintenance or operation by persons other than Contractor, Subcontractors or Suppliers; or

6.22.1.2.normal wear and tear under normal usage.

6.22.2. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of Contractor's obligation to perform the Work in accordance with the Contract Documents:

6.22.2.1.observations by Architect/Engineer;

6.22.2.2. recommendation of any progress or final payment by Architect/Engineer;

6.22.2.3. the issuance of a certificate of Substantial Completion or any payment by Owner to Contractor under the Contract Documents;

6.22.2.4. use or occupancy of the Work or any part thereof by Owner;

6.22.2.5. any acceptance by Owner or any failure to do so;

6.22.2.6. any review and approval of Shop Drawing or Sample submittal or the issuance of a notice of acceptability by Architect/Engineer pursuant to paragraph 14.13;

6.22.2.7. any inspection, test or approval by others; or

6.22.2.8. any correction of defective Work by Owner.

6.23 Indemnification:

6.23.1. To the fullest extent permitted by Laws and Regulations. Contractor shall indemnify and hold harmless Owner, Architect/Engineer, Architect/Engineer's Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages (including but not limited to all fees and charges of Architect/Engineers, architects, attorneys and other professionals and all court or dispute resolution costs) caused by, arising out of or resulting from the performance of the Work, provided that any such claim, cost, loss or damage: (i) is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, and (ii) is caused in whole or in part by any negligent act or omission of Contractor, any Subcontractor, any Supplier, any person or organization directly or indirectly employed by any of them to perform or furnish any of the Work or anyone for whose acts any of them may be liable, regardless of whether or not caused in part by any negligence or omission of a person or entity indemnified hereunder or whether liability is imposed upon such indemnified party by Laws and Regulations regardless of the negligence of any such person or entity.

6.23.2. In any and all claims against Owner or Architect/Engineer or any of their respective consultants, agents, officers, directors or employees by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, any person or organization directly or indirectly employed by any of them to perform or furnish any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under paragraph 6.23.1 shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for Contractor or any such Subcontractor, Supplier or other person or organization under workers' compensation acts, disability benefit acts or other employee benefit acts.

6.23.3. The indemnification obligations of Contractor under paragraph 6.23.1 shall not extend to the liability of Architect/Engineer and Architect/Engineer's Consultants, officers, directors, employees or agents caused by the professional negligence, errors or omissions of any of them.

6.24. Survival of Obligations:

All representations, indemnifications, warranties and guarantees made in, required by or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents, will survive final payment, completion and acceptance of the Work and termination or completion of the Agreement.

ARTICLE 7 – OTHER WORK

Related Work at Site:

7.1. Owner may perform other work related to the Project at the site by Owner's own forces, or let other direct contracts therefore which shall contain General Conditions similar to these, or have other work performed by utility owners. If the fact that such other work is to be performed was not noted in the Contract Documents, then; (i) written notice thereof will be given to Contractor prior to starting any such other work, and (ii) Contractor may make a claim therefore as provided in Articles 11 and 12 if Contractor believes that such performance will involve additional expense to Contractor or requires additional time and the parties are unable to agree as to the amount or extent thereof.

7.2. Contractor shall afford each other contractor who is a party to such a direct contract and each utility owner (and Owner if Owner is performing the additional work with Owner's employees) proper and safe access to the site and a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work and shall properly connect and coordinate the Work with theirs. Unless otherwise provided in the Contract Documents. Contractor shall do all cutting, fitting, and patching of the Work that may be required to make its several parts come together properly and integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating or otherwise altering their work and will only cut or alter their work with the written consent of Architect/Engineer and the others whose work will be affected. The duties and responsibilities of Contractor under this paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of Contractor in said direct contracts between Owner and such utility owners and other contractors.

7.3. If the proper execution or results of any part of Contractor's Work depends upon work performed by others under this Article 7. Contractor shall inspect such other work and promptly report to Architect/Engineer in writing any delays, defects or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure so to report will constitute an acceptance of such other work as fit and proper

for integration with Contractor's Work except for latent or non-apparent defects and deficiencies in such other work.

Coordination:

7.4. If Owner contracts with others for the performance of other work on the Project at the site, the following will be set forth in Supplementary Conditions:

7.4.1. the person, firm or corporation who will have authority and responsibility for coordination of the activities among the various prime contractors will be identified;

7.4.2. the specific matters to be covered by such authority and responsibility will be itemized: and

7.4.3. the extent of such authority and responsibilities will be provided.

Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility in respect of such coordination.

ARTICLE 8 – OWNER'S RESPONSIBILITIES

8.1. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Architect/Engineer.

8.2. In case of termination of the employment of Architect/Engineer, Owner shall appoint an Architect/Engineer, whose status under the Contract Documents shall be that of the former Architect/Engineer.

8.3. Owner shall furnish the data required of Owner under the Contract Documents promptly and shall make payments to Contractor promptly when they are due as provided in paragraphs 14.4 and 14.13.

8.4. Owner's duties in respect of providing lands and easements and providing Architect/Engineering surveys to establish reference points are set forth in paragraphs 4.1 and 4.4. Paragraph 4.2 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of subsurface conditions at the site and drawings of physical conditions in existing structures at or contiguous to the site that have been utilized by Architect/Engineer in preparing the Contract Documents.

8.5. Owner's responsibilities in respect of purchasing and maintaining liability and property insurance are set forth in paragraphs 5.5 through 5.6.

8.6. Owner is obligated to execute Change Orders as indicated in paragraph 10.4.

8.7. Owner's responsibility in respect of certain inspections, tests and approvals is set forth in paragraph 13.4.

8.8. In connection with Owner's right to stop Work or suspend Work, see paragraphs 13.10 and 15.1. Paragraph 15.2 deals with Owner's right to terminate services of Contractor under certain circumstances.

8.9. The Owner shall not supervise, direct or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences or procedures of construction or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the furnishing or performance of the Work. Owner will not be responsible for Contractor's failure to perform or furnish the Work in accordance with the Contract Documents.

8.10. Owner's responsibility in respect of undisclosed Asbestos, PCBs, Petroleum, Hazardous Waste or Radioactive Materials uncovered or revealed at the site is set forth in paragraph 4.5.

8.11. If and to the extent Owner has agreed to furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract Documents, Owner's responsibility in respect thereof will be as set forth in the Supplementary Conditions.

ARTICLE 9 – ARCHITECT/ENGINEER'S STATUS DURING CONSTRUCTION

Owner's Representative:

9.1. Architect/Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Architect/Engineer as Owner's representative during construction are set forth in the Contract Documents and shall not be extended without written consent of Owner and Architect/Engineer.

Visits to Site:

9.2. Architect/Engineer will make visits to the site at intervals appropriate to the various stages of construction as Architect/Engineer deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Architect/Engineer will endeavor for the benefit of Owner to determine, in general, if the Work is proceeding in accordance with the Contract Documents. Architect/Engineer will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. Architect/Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and on-site observations, Architect/Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work. Architect/Engineer's visits and on-site observations are subject to all the limitations on Architect/Engineer's authority and responsibility set forth in paragraph 9.13, and particularly, but

without limitation, during or as a result of Architect/Engineer's on-site visits or observations of Contractor's Work Architect/Engineer will not supervise, direct, control or have authority over or be responsible for Contractor's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the furnishing or performance of the Work.

Project Representative:

9.3. If Owner and Architect/Engineer agree, Architect/Engineer will furnish a Resident Project Representative to assist Architect/Engineer in providing more continuous observation of the Work. The responsibilities and authority and limitations thereon of any such Resident Project Representative and assistants will be as provided in paragraph 9.13 and in the Supplementary Conditions. If Owner designates another representative or agent to represent Owner at the site who is not Architect/Engineer's Consultant, agent or employee, the responsibilities and authority and limitations thereon of such other person will be as provided in the Supplementary Conditions.

9.3.1 Architect/Engineer may furnish a Resident Project Representative, assistants and other field staff as needed, to assist Owner in observing performance of the Work. The Resident Project Representative is to observe and inspect, in the Owner's interest, the materials furnished and the work done as the work progresses in order to ensure full and complete compliance with the contract and to verify quantities of work completed.

9.3.2 Owner may also designate one of its employees to represent Owner for these purposes.

9.3.3 Architect/Engineer, Resident Project Representative, Owner and all such other persons referred to shall have unrestricted access to all parts of the Work. Contractor shall cooperate by supplying necessary facilities and assistance required by above persons to carry out their work of observation and inspection.

9.3.4 It is not the function of the Architect/Engineer, Resident Project Representative or Owner to supervise or direct the manner in which the work to be done under this Contract is carried on or conducted. The Architect/Engineer, Resident Project Representative or Owner is not responsible for construction means, methods, techniques, sequences or procedures, or for safety precautions and programs in connection with the work, and they will not be responsible for the Contractor's failure to carry out the work in accordance with the Contract Documents. Nevertheless, Contractor agrees that any method or procedure, which in the opinion of the Architect/Engineer or Owner does not achieve the required results or quality of the work specified, shall be discontinued immediately upon the order of the Architect/Engineer.

9.3.5 All communications between Contractor and Architect/Engineer or Contractor and Owner are to be through the Resident Project Representative.

9.3.6 Duties and Responsibilities of Resident Project Representative (RPR):

1) RPR will act as directed by and under the supervision of Architect/Engineer and/or Owner, and will confer with Architect/Engineer and Owner regarding RPR's actions. RPR's dealings in matters pertaining to the on-site work shall in general be with Architect/Engineer and Contractor keeping Owner advised as necessary. RPR's dealings with subcontractors shall only be through or with the full knowledge and approval of Contractor.

2) Review progress schedule, schedule of Shop Drawing submittals and schedule of values prepared by Contractor and consult with Architect/Engineer and Owner concerning acceptability.

3) Attend meetings with Contractor, such as pre-construction conferences, progress meetings, job conferences and other project-related meetings, and prepare and circulate copies of minutes thereof.

4) Serve as Architect/Engineer's and Owner's liaison with Contractor, working principally through Contractor's superintendent and assist in understanding the intent of the Contract Documents.

5) Advise Architect/Engineer, Owner and Contractor of the commencement of any Work requiring a Shop Drawing or sample if the submittal has not been approved by Architect/Engineer.

6) Conduct on-site observations of the Work in progress to assist Architect/Engineer and Owner in determining if the Work is in general proceeding in accordance with the Contract Documents. Report to Architect/Engineer and Owner whenever RPR believes that any Work is unsatisfactory, faulty or defective or does not conform to the Contract Documents, or has been damaged, or does not meet the requirements of any inspection, test or approval required to be made; and advise Architect/Engineer and Owner of Work that RPR believes should be corrected or rejected or should be uncovered for observation, or requires special testing, inspection or approval.

7) Report to Architect/Engineer and Owner when clarifications and interpretations of the Contract Documents are needed and transmit to Contractor clarifications and interpretations as issued by Architect/Engineer.

8) Consider and evaluate Contractor's suggestions for modifications in Drawings or Specifications and report with RPR's recommendations to Architect/Engineer and Owner. Transmit to Contractor decisions as issued by Architect/Engineer and/or Owner.

9) Maintain orderly files for correspondence, reports of job conferences, Shop Drawings and samples, reproductions of original Contract Documents including all Work Directive Changes, Addenda, Change Orders, Field Orders, additional Drawings issued subsequent to the execution of the Contract, Architect/Engineer's clarifications

and interpretations of the Contract Documents, progress reports, and other Project related documents.

10) Keep a diary or log book, recording Contractor hours on the job site, weather conditions, data relative to questions of Work Directive Changes, Change Orders or Changed conditions, list of job site visitors, daily activities, decisions, observations in general, and specific observations in more detail as in the case of observing test procedures; and send copies to Architect/Engineer and Owner.

11) Record names, addresses and telephone numbers of all Contractors, subcontractors and major suppliers of materials and equipment.

12) Furnish Architect/Engineer and Owner periodic reports as required of progress of the Work and of Contractor's compliance with the progress schedule and schedule of Shop Drawing and sample submittals.

13) Draft proposed Change Orders and Work Directive Changes, obtaining backup material from Contractor and recommend to Architect/Engineer and Owner Change Orders, Work Directive Changes, and Field Orders.

14) Report immediately to Architect/Engineer and Owner upon the occurrence of any accident.

15) Review applications for payment with Contractor for compliance with the established procedure for their submission and forward with recommendations to Architect/Engineer, noting particularly the relationship of the payment requested to the schedule of values, Work completed and materials and equipment delivered at the site but not incorporated in the Work.

16) During the course of the Work, verify that certificates, maintenance and operation manuals and other data required to be assembled and furnished by Contractor are applicable to the items actually installed and in accordance with the Contract Documents, and have this material delivered to Architect/Engineer for review and forwarding to Owner prior to final payment for the work.

17) Before Architect/Engineer issues a Certificate of Substantial Completion, submit to Contractor a list of observed items requiring completion or correction.

18) Conduct final inspection in the company of Architect/Engineer, Owner and Contractor and prepare a final list of items to be completed or corrected.

19) Observe that all items on final list have been completed or corrected and make recommendations to Architect/Engineer and Owner concerning acceptance.

9.3.7 Limitations of Authority of Resident Project Representative (RPR):

1) Shall not authorize any deviation from the Contract Documents or substitution of materials or equipment, unless authorized by Architect/Engineer or Owner.

2) Shall not exceed limitations of Architect/Engineer's authority as set forth in the Contract Documents.

3) Shall not undertake any of the responsibilities of Contractor, subcontractors or Contractor's superintendent.

4) Shall not advise on, issue directions relative to or assume control over any aspect of the means, methods, techniques, sequences or procedures of construction unless such advice or directions are specifically required by the Contract Documents.

5) Shall not advise on, issue directions regarding or assume control over safety precautions and programs in connection with the Work.

6) Shall not accept Shop Drawing or sample submittals from anyone other than Contractor.

9.3.8 The Architect/Engineer and or Owner shall have the authority to reject any work, or materials, or any part thereof, which does not in his opinion conform to the plans, drawings, specifications and contract, and it shall be permissible for him to do so at any time during the progress of the work and until its acceptance.

No material of any kind shall be used upon the work until it has been inspected and accepted by the Architect/Engineer. All materials rejected shall be removed immediately from the work and not again offered for inspection. Any materials or workmanship found at any time to be defective or not of the quality or character required by the plans and specifications shall be remedied at once regardless of previous inspection.

Such inspection shall not relieve the Contractor from any obligation to perform said work strictly in accordance with the plans and specifications and work not so constructed shall be removed and made good by the Contractor at his own expense, and free from all expense to the Owner whenever so ordered by the Owner without reference to any previous oversight or error in inspection.

9.4. Clarifications and Interpretations:

Architect/Engineer will issue with reasonable promptness such written clarifications or interpretations of the requirements of the Contract Documents (in the form of Drawings or otherwise) as Architect/Engineer may determine necessary, which shall be consistent with the intent of and reasonably inferable from Contract Documents. Such written clarifications and interpretations will be binding on Owner and Contractor. If Owner or Contractor believes that a written clarification or interpretation justifies an adjustment in the Contract Price or the Contract

Times and the parties are unable to agree to the amount or extent thereof, if any, Owner or Contractor may make a written claim therefore as provided in Article 11 or Article 12.

9.5. Authorized Variations in Work:

Architect/Engineer may authorize minor variations in the Work from the requirements of the Contract Documents which do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. These may be accomplished by a Field Order and will be binding on Owner and also on Contractor who shall perform the Work involved promptly. If Owner or Contractor believes that a Field Order justifies an adjustment in the Contract Price or the Contract Times and the parties are unable to agree as to the amount or extent thereof, Owner or Contractor may make a written claim therefore as provided in Article 11 or 12.

9.6. Rejecting Defective Work:

Architect/Engineer will have authority to disapprove or reject Work which Architect/Engineer believes to be defective, or that Architect/Engineer believes will not produce a complete Project that conforms to the Contract Documents or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Architect/Engineer will also have authority to require special inspection or testing of the Work as provided in paragraph 13.9, whether or not the Work is fabricated, installed or completed.

9.7. Shop Drawings, Change Orders and Payments:

9.7.1 In connection with Architect/Engineer's authority as to Shop Drawings and Samples, see paragraphs 6.19 through 6.20.4 inclusive.

9.7.2. In connection with Architect/Engineer's authority as to Change Orders, see Articles 10, 11, and 12.

9.7.3. In connection with Architect/Engineer's authority as to Applications for Payment, see Article 14.

9.8. Determinations for Unit Prices:

Architect/Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Architect/Engineer will review with Contractor the Architect/Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Architect/Engineer's written decision thereon will be final and binding upon Owner and Contractor, unless, within ten days after the date of any such decision, either Owner or Contractor delivers to the other and to Architect/Engineer written notice of intention to appeal from Architect/Engineer's decision and, a formal proceeding is instituted by the appealing party in a forum of competent jurisdiction to exercise such rights or remedies as the appealing party may have with respect to

Architect/Engineer's decision, unless otherwise agreed in writing by Owner and Contractor. Such appeal will not be subject to procedures of paragraph 9.9.

9.9. Decisions on Disputes:

9.9.1. Architect/Engineer will be the initial interpreter of the requirements of the Contract Documents and judge of the acceptability of the Work there under. Claims, disputes and other matters relating to the acceptability of the Work or the interpretation of the requirements of the Contract Documents pertaining to the performance and furnishing of the Work and Claims under Articles 11 and 12 in respect of changes in the Contract Price or Contract Times will be referred initially to Architect/Engineer in writing with a request for a formal decision in accordance with this paragraph. Written notice of each such claim, dispute or other matter will be delivered by the claimant to Architect/Engineer and the other party to the Agreement promptly, but in no event later than fifteen (15) days, after the start of the occurrence or event giving rise thereto, and written supporting data will be submitted to Architect/Engineer and the other party within forty-five (45) days after the start of such occurrence or event unless Architect/Engineer allows an additional period of time for the submission of additional or more accurate data in support of such claim, dispute or other matter. The opposing party shall submit any response to Architect/Engineer and the claimant within thirty days after receipt of the claimant's last submittal (unless Architect/Engineer allows additional time). Architect/Engineer will render a formal decision in writing within thirty days after receipt of the opposing party's submittal, if any, in accordance with this paragraph. Architect/Engineer's written decision on such claim, dispute or other matter will be final and binding upon Owner and Contractor unless: a written notice of intention to appeal from Architect/Engineer's written decision is delivered by Owner or Contractor to the other and to Architect/Engineer within thirty days after the date of such decision and a formal proceeding is instituted by the appealing party in a forum of competent jurisdiction to exercise such rights or remedies as the appealing party may have with respect to such claim, dispute or other matter in accordance with applicable Laws and Regulations within sixty days of the date of such decision, unless otherwise agreed in writing by Owner and Contractor.

9.9.2. When functioning as interpreter and judge under paragraph 9.9.1, Architect/Engineer will not show partiality to Owner or Contractor and will not be liable in connection with any interpretation or decision rendered in good faith in such capacity. The rendering of a decision by Architect/Engineer pursuant to paragraphs 9.8 or 9.9 with respect to any such claim, dispute or other matter (except any which have been waived by the making or acceptance of final payment as provided in paragraph 14.15) will be a condition precedent to any exercise by Owner or Contractor of such rights or remedies as either may otherwise have under the Contract Documents or by Laws or Regulations in respect of any such claim, dispute or other matter.

9.10. Not Used

9.11. Not Used

9.12. Not Used

9.13. Limitations on Architect/Engineer's Authority and Responsibilities:

9.13.1. Neither Architect/Engineer's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by Architect/Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise or performance of any authority or responsibility by Architect/Engineer shall create, impose or give rise to any duty owed by Architect/Engineer to Contractor, any Subcontractor, and Supplier, any other person or organization, or to any surety for employee or agent of any of them.

9.13.2. Architect/Engineer will not supervise, direct, control or have authority over or be responsible for Contractor's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the furnishing or performance of the Work. Architect/Engineer will not be responsible for Contractor's failure to perform or furnish the Work in accordance with the Contract Documents.

9.13.3. Architect/Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other person or organization performing or furnishing any of the Work.

9.13.4. Architect/Engineer's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, bonds and certificates of inspection, tests, and approvals and Other documentation required to be delivered by paragraph 14.12 will only be to determine generally that their content complies with the requirements of, and in the case of, certificates of inspections, tests and approvals that the results certified indicate compliance with the Contracted Documents.

9.13.5. the limitations upon authority and responsibility set forth in this paragraph 9.13 shall also apply to Architect/Engineer's Consultants, Resident Project Representative and assistants.

ARTICLE 10 – CHANGES IN THE WORK

10.1. Without invalidating the Agreement and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions or revisions in the Work. Such additions, deletions or revisions will be authorized by a Written Amendment, a Change Order, or a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved which will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).

10.2. If Owner and Contractor are unable to agree as to the extent, if any, of an adjustment in the Contract Price or an adjustment of the Contract Times that should be allowed as a result of a Work Change Directive, a claim may be made therefore as provided in Article 11 or Article 12.

10.3. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any Work performed that is not required by the Contract Documents as amended, modified and supplemented as provided in paragraphs 3.5 and 3.6 except in the case of an emergency as provided in paragraph 6.23 or in the case of uncovering Work as provided in paragraph 13.9.

10.4. Owner and Contractor shall execute appropriate Change Orders recommended by Architect/Engineer covering:

10.4.1. changes in the Work which are (i) ordered by Owner pursuant to paragraph 10.1, (ii) required because of acceptance of defective Work under paragraph 13.13 or correcting defective Work under paragraph 13.14, or (iii) agreed to by the parties;

10.4.2. changes in the Contract Price or Contract Times which are agreed to by the parties; and

10.4.3. changes in the Contract Price or Contract Times which embody the substance of any written decision rendered by Architect/Engineer pursuant to paragraph 9.9;

Provided that, in lieu of executing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws and Regulations, but during any such appeal, Contractor shall carry on the Work and adhere to the progress schedule as provided in paragraph 6.21.

10.5. If notice of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times) is required by the provisions of any Bond to be given to a surety, the giving of any such notice will be Contractor's responsibility, and the amount of each applicable Bond will be adjusted accordingly.

ARTICLE 11 – CHANGE OF CONTRACT PRICE

11.1. The Contract Price constitutes the total compensation (subject to authorized adjustments) payable to Contractor for performing the Work. All duties, responsibilities and obligations assigned to or undertaken by Contractor shall be at Contractor's expense without change in the Contract Price.

11.2. The Contract Price may only be changed by a Change Order. Any claim for an adjustment in the Contract Price shall be based on written notice delivered by the party making the claim to the other party and to Architect/Engineer promptly (but in no event later than ten days) after the start of the occurrence or event giving rise to the claim and stating the general nature of the claim. Notice of the amount of the claim with supporting data shall be delivered within thirty days after the start of such occurrence or event (unless Architect/Engineer allows additional time for claimant to submit additional or more accurate data in support of the claim) and shall be accompanied by claimant's written statement that the adjustment claimed covers all known amounts to which the claimant is entitled as a result of said occurrence or event. All claims for adjustment in the Contract Price shall be determined by Architect/Engineer in accordance with paragraph 9.8 if Owner and

Contractor cannot otherwise agree on the amount involved. No claim for an adjustment in the Contract Price will be valid if not submitted in accordance with this paragraph 11.2.

11.3 The value of any Work covered by a Change Order or of any claim for an adjustment in the Contract Price will be determined as follows:

11.3.1. where the Work involved is covered by unit prices contained in the Contract Documents, by application of such unit prices to the quantities of the items involved (subject to the provisions of paragraphs 11.9.1. through 11.9.3. inclusive);

11.3.2. where the Work involved is not covered by unit prices contained in the Contract Documents, by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with paragraph 11.6.2):

11.3.3. where the Work involved is not covered by unit prices contained in the Contract Documents and agreement to a lump sum is not reached under paragraph 11.3.2, on the basis of the Cost of the Work (determined as provided in paragraphs 11.4 and 11.5) plus a Contractor's fee for overhead and profit (determined as provided in paragraph 11.6).

Cost of the Work Covered by a Change Order:

11.4. The term Cost of the Work means the sum of all costs necessarily incurred and paid by Contractor in the proper performance of the Work. Except as otherwise may be agreed to in writing by Owner, such costs shall be in amounts no higher than those prevailing in the locality of the Project, shall include only the following items and shall not include any of the costs itemized in paragraph 11.5.

11.4.1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor. Such employees shall include without limitation superintendents, foremen and other personnel employed full-time at the site. Payroll costs for employees not employed full-time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits which shall include social security contributions, unemployment, excise and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing Work after regular working hours, on Saturday, Sunday or legal holidays, shall be included in the above to the extent authorized by Owner.

11.4.2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts shall accrue to Owner. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to Owner, and Contractor shall make provisions so that they may be obtained.

11.4.3. Payments made by Contractor to the Subcontractors for Work performed or furnished by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner who will then determine, with the advice of Architect/Engineer, which bids, if any, will be accepted. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work Plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as Contractor's Cost of the Work and fee as provided in paragraphs 11.4, 11.5, 11.6 and 11.7. All subcontracts shall be subject to the other provisions of the Contract Documents insofar as applicable.

11.4.4. Costs of special consultants (including but not limited to Architect/Engineers, architects, testing laboratories, surveyors, attorneys and accountants) employed for services specifically related to the Work.

11.4.5. Supplemental costs including the following:

11.4.5.1. The proportion of necessary transportation, travel and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.

11.4.5.2. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office and temporary facilities at the site and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost less market value of such items used but not consumed which remain the property of Contractor.

11.4.5.3. Rentals of all construction equipment and machinery and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by Owner with the advice of Architect/Engineer, and the costs of transportation, loading, unloading, installation, dismantling and removal thereof – all in accordance with the terms of said rental agreements. The rental of any such equipment, machinery or parts shall cease when the use thereof is no longer necessary for the Work.

11.4.5.4. Sales, consumer, use or similar taxes related to the work, and for which Contractor is liable, imposed by Laws and Regulations.

11.4.5.5. Deposits lost for causes other than negligence of Contractor, any Subcontractor or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

11.4.5.6. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance and furnishing of the Work (except losses and damages within the deductible amounts of property insurance established by Owner in accordance with paragraph 5.9), provided they have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written

consent and approval of Owner. No such losses, damages and expenses shall be included in the Cost of the Work for the purpose of determining Contractor's fee. If, however, any such loss or damage requires reconstruction and Contractor is placed in charge thereof, Contractor is placed in charge thereof, Contractor shall be paid for services a fee proportionate to that stated in paragraph 11.6.2.

11.4.5.7. The cost of utilities, fuel and sanitary facilities at the site.

11.4.5.8. Minor expenses such as telegrams, long distance telephone calls, telephone service at the site, expressage and similar petty cash items in connection with the Work.

11.4.5.9. Cost of premiums for additional Bonds and insurance required because of changes in the Work.

11.5. The term Cost of the Work Covered by a Change Order shall not include any of the following:

11.5.1. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnership and sole proprietorships), general managers, Architect/Engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks and other personnel employed by Contractor whether at the site or in Contractor's principal or a branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in paragraph 11.4.1 or specifically covered by paragraph 11.4.4 – all of which are to be considered administrative costs covered by the Contractor's fee.

11.5.2. Expenses of Contractor's principal and branch offices other than Contractor's office at the site.

11.5.3. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

11.5.4. Cost of premiums for all Bonds and for all insurance whether or not Contractor is required by the Contract Documents to purchase and maintain the same (except for the cost of premiums covered by subparagraph 11.4.5.9 above).

11.5.5. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied and making good any damage to property.

Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in paragraph 11.4.

11.6. The Contractor's fee allowed to Contractor for overhead and profit shall be determined as follows:

11.6.1. a mutually acceptable fixed fee; or

11.6.2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

11.6.2.1. for costs incurred under paragraphs 11.4.1 and 11.4.2, the Contractor's fee shall be ten percent;

11.6.2.2. for costs incurred under paragraph 11.4.3, the Contractor's fee shall be five percent.

11.6.2.3. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of paragraphs 11.4.1, 11.4.2, 11.4.3 and 11.6.2 is that the Subcontractor who actually performs or furnishes the Work, at whatever tier, will be paid a fee of ten percent of the costs incurred by such Subcontractor under paragraphs 11.4.1 and 11.4.2 and that any higher tier Subcontractor and Contractor will each be paid a fee of five percent of the amount paid to the next lower tier Subcontractor:

11.6.2.4. no fee shall be payable on the basis of costs itemized under paragraphs 11.4.4, 11.4.5 and 11.5;

11.6.2.5. the amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in Contractor's fee by an amount equal to five percent of such net decrease; and

11.6.2.6. when both additions and credits are involved in any one change, the adjustment in Contractor's fee shall be computed on the basis of the net change in accordance with paragraphs 11.6.2.1 through 11.6.2.5, inclusive.

11.7. Whenever the cost of any work is to be determined pursuant to paragraphs 11.4 and 11.5, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in form acceptable to Architect/Engineer an itemized cost breakdown together with supporting data.

11.8. Not Used

11.9. Unit Price Work:

11.9.1. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the established unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by Contractor will be made by Architect/Engineer in accordance with paragraph 9.10.

11.9.2. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

11.9.3. Owner or Contractor may make a claim for an adjustment in the Contract Price in accordance with Article 11 if:

11.9.3.1.the quantity of any item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and

11.9.3.2.there is no corresponding adjustment with respect to any other item of Work; and

11.9.3.3.if Contractor believes that Contractor is entitled to an increase in Contract Price as a result of having incurred additional expense or Owner believes that Owner is entitled to a decrease in Contract Price and the parties are unable to agree as to the amount of any such increase or decrease.

ARTICLE 12 – CHANGE OF CONTRACT TIMES

12.1. The Contract Times (or Milestones) may only be changed by a Change Order or a Written Amendment. Any claim for an adjustment of the Contract Times (or Milestones) shall be based on written notice delivered by the party making the claim to the other party and to Architect/Engineer promptly (but in no event later than thirty days) after the occurrence of the event giving rise to the claim and stating the general nature of the claim. Notice of the extent of the claim with supporting data shall be delivered within sixty days after such occurrence (unless Architect/Engineer allows an additional period of time to ascertain more accurate data in support of the claim) and shall be accompanied by the claimant's written statement that the adjustment claimed is the entire adjustment to which the claimant has reason to believe it is entitled as a result of the occurrence of said event. All claims for adjustment in the Contract Times (or Milestones) shall be determined by Architect/Engineer in accordance with paragraph 9.11 if Owner and Contractor cannot otherwise agree. No claim for an adjustment in the Contract Times (or Milestones) will be valid if not submitted in accordance with the requirements of this paragraph 12.1.

12.2. All time limits stated in the Contract Documents are of the essence of the Agreement.

12.3. Where Contractor is prevented from completing any part of the Work within the Contract Times (or Milestones) due to delay beyond the control of Contractor, the Contract Times (or Milestones) will be extended in an amount equal to the time lost due to such delay if a claim is made therefore as provided in paragraph 12.1. Delays beyond the control of Contractor shall include, but not be limited to, acts or neglect by Owner, acts or neglect of utility owners or other contractors performing other work as contemplated by Article 7, fires, floods, epidemics, abnormal weather conditions or acts of God. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of Contractor.

12.4. Should Contractor be obstructed or delayed in the prosecution of or completion of the Work as a result of unforeseeable causes beyond the control of Contractor, and not due to its fault or neglect, including but not restricted to acts of God or of the public enemy, acts of government, fires, floods, epidemics, quarantine regulation, strikes or lockouts, Contractor shall notify the Owner in writing within forty-eight (48) hours after the commencement of such delay, stating the cause or causes thereof, or be deemed to have waived any right which Contractor may have had to request a time extension.

12.5. No interruption, interference, inefficiency, suspension or delay in the commencement or progress of the Work from any cause whatever, including those for which the Owner may be responsible, in whole or in part, shall relieve Contractor of his duty to perform or give rise to any right to damages or additional compensation from the Owner. Contractor expressly acknowledges and agrees that it shall receive no damages for delay. Contractor's sole remedy, if any, against the Owner will be the right to seek an extension to the Contract Time; provided, however, the granting of any such time extension shall not be a condition precedent to the aforementioned "No Damage For Delay" provision. This paragraph shall expressly apply to claims for early completion, as well as to claims based on late completion.

ARTICLE 13 – TESTS AND INSPECTION: CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

13.1. **Notice of Defects:** Prompt notice of all defective Work of which Owner or Architect/Engineer have actual knowledge will be given to Contractor. All defective Work may be rejected, corrected or accepted as provided in this Article 13.

Access to Work:

13.2. Owner, Architect/Engineer, Architect/Engineer's Consultants, other representatives and personnel of Owner, independent testing laboratories and governmental agencies with jurisdictional interests will have access to the Work at reasonable times for their observation, inspecting and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's site safety procedures and programs so that they may comply therewith as applicable.

Tests and Inspections:

13.3. Contractor shall give Architect/Engineer timely notice of readiness of the Work for all required inspections, tests or approvals, and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.

13.4. Contractor shall employ and pay for services of an independent testing laboratory to perform all Quality Control inspections, test or approvals required by the contract documents. Contractor shall allow the Architect/Engineer access to all work done in the project for Acceptance Testing by the owner. This testing will be in addition to Quality Control Testing required by the Contractor. Owner shall arrange and pay all costs associated with Acceptance Testing done by an independent testing laboratory of the Owners choosing except:

13.4.1. for inspections, tests or approvals covered by paragraph 13.5 below.

13.4.2. that costs incurred in connection with tests or inspections conducted pursuant to paragraph 13.9 below shall be paid as provided in said paragraph 13.9; and

13.4.3. as otherwise specifically provided in the Contract Documents.

13.4.4 Owner shall perform the following test as part of quality assurance / acceptance testing:

All material testing included in the Bidding Documents.

All other required testing is to be completed by the contractor as part of the contractor's quality control procedures and submittals. This section shall take precedence over all other sections that describe testing requirements.

13.5. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests or approvals, pay all costs in connection therewith, and furnish Architect/Engineer the required certificates of inspection, or approval. Contractor shall also be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests or approvals required for Owner's and Architect/Engineer's acceptance of materials or equipment to be incorporated in the Work, or of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work. Quality Control Testing of materials and equipment shall be the responsibility of the Contractor who shall pay all costs associated with the required testing. Contractor shall provide the Architect/Engineer adequate advance notice of intended tests to allow the Architect/Engineer to be present during the Testing.

13.6. If any Work (or the work of others) that is to be inspected, tested or approved is covered by Contractor without written concurrence of Architect/Engineer, it must, if requested by Architect/Engineer, be uncovered for observation.

13.7. Uncovering Work as provided in paragraph 13.6 shall be at Contractor's expense unless Contractor has given Architect/Engineer timely notice of Contractor's intention to cover the same and Architect/Engineer has not acted with reasonable promptness in response to such notice.

Uncovering Work:

13.8. If any Work is covered contrary to the written request of Architect/Engineer, it must, if requested by Architect/Engineer, be uncovered for Architect/Engineer's observation and replaced at Contractor's expense.

13.9. If Architect/Engineer considers it necessary or advisable that covered Work be observed by Architect/Engineer or inspected or tested by others, Contractor, at Architect/Engineer's request,

shall uncover, expose or otherwise make available for observation, inspection or testing as Architect/Engineer may require that portion of the Work in question, furnishing all necessary labor, material and equipment. If it is found that such Work is defective, Contractor shall pay all claims, costs, losses and damages caused by, arising out of or resulting from such uncovering, exposure, observation, inspection and testing and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others; and Owner shall be entitled to an appropriate decrease in the Contract Price, and, if the parties are unable to agree as to the amount thereof, may make a claim therefore as provided in Article 11. If, however, such Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times (or Milestones), or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement and reconstruction; and, if the parties are unable to agree as to the amount or extent therefore, Contractor may make a claim therefore as provided in Articles 11 and 12.

Owner May Stop the Work:

13.10. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to furnish or perform the Work in such a way that the completed Work will conform to the Contract Documents, Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work shall not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor or any surety or other party.

Correction or Removal of Defective Work:

13.11. If required by Architect/Engineer, Contractor shall promptly, as directed, either correct all defective Work, whether or not fabricated, installed or completed, or, if the Work has been rejected by Architect/Engineer, remove it from the site and replace it with Work that is not defective. Contractor shall pay all claims, costs, losses and damages caused by or resulting from such correction or removal (including but not limited to all costs of repair or replacement of work of others).

13.12. Correction Period:

13.12.1. If within one year after the date of Substantial Completion or such longer period of time as may be prescribed by Laws or Regulations or by the terms of any applicable special guarantee required by the Contract Documents or by any specific provision of the Contract Documents, any Work is found to be defective, Contractor shall promptly, without cost to Owner and in accordance with Owner's written instruction: (i) correct such defective Work, or, if it has been rejected by Owner, remove it from the site and replace it with Work that is not defective, and (ii) satisfactorily correct or remove and replace any damage to other Work or the work of others resulting therefrom. If Contractor does not promptly comply with the terms of such instructions, or in any emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or the rejected Work removed and replaced, and all claims, costs, losses and damages caused by or resulting from such removal and replacement

(including but not limited to all costs of repair or replacement of work of others) will be paid by Contractor.

13.12.2. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications or by Written Amendment.

13.12.3. Where defective Work (and damage to other Work resulting therefrom) has been corrected, removed or replaced under this paragraph 13.12, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

13.13. Acceptance of Defective Work:

If, instead of requiring correction or removal and replacement of defective Work, Owner (and, prior to Architect/Engineer's recommendation of final payment, also Architect/Engineer) prefers to accept it, Owner may do so. Contractor shall pay all claims, costs, losses and damages attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Architect/Engineer as to reasonableness). If any such acceptance occurs prior to Architect/Engineer's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work; and Owner shall be entitled to an appropriate decrease in the Contract Price, and, if the parties are unable to agree as to the amount thereof, Owner may make a claim therefore as provided in Article 11. If the acceptance occurs after such recommendation, an appropriate amount will be paid by Contractor to Owner.

13.14. Owner May Correct Defective Work:

If Contractor fails within a reasonable time after written notice from Architect/Engineer to correct defective Work or to remove and replace rejected Work as required by Architect/Engineer in accordance with paragraph 13.11, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to comply with any other provision of the Contract Documents, Owner may, after seven days' written notice to Contractor, correct and remedy any such deficiency. In exercising the rights and remedies under this paragraph Owner shall proceed expeditiously. In connection with such corrective and remedial action, Owner may exclude Contractor from all or part of the site, take possession of all or part of the Work, and suspend Contractor's services related thereto, take possession of Contractor's tools, appliances, construction equipment and machinery at the site and incorporate in the Work all materials and equipment stored at the site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representative, agents and employees, Owner's other contractors and Architect/Engineer and Architect/Engineer's Consultants access to the site to enable Owner to exercise the rights and remedies under this paragraph. All claims, costs, losses and damages incurred or sustained by Owner in exercising such rights and remedies will be charged against Contractor and a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work; and Owner shall be entitled to an appropriate decrease in the Contract Price, and, if the parties are unable to agree as to the amount

thereof, Owner may make a claim therefore as provided in Article 11. Such claims, costs, losses and damages will include but not be limited to all costs of repair or replacement of work of others destroyed or damaged by correction, removal or replacement of Contractor's defective Work. Contractor shall not be allowed an extension of the Contract Times (or Milestones) because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies hereunder.

ARTICLE 14 – PAYMENTS TO CONTRACTOR AND COMPLETION

Schedule of Values:

14.1. The schedule of values established as provided in paragraph 2.9 will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Architect/Engineer. Progress payments on account of Unit Price Work will be based on the number of units completed.

Application for Progress Payment:

14.2. At least ten days before the date established for each progress payment (but not more often than once a month), Contractor shall submit to Architect/Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice or other documentation warranting that Owner has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance and other arrangements to protect Owner's interest therein, all of which will be satisfactory to Owner. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

Contractor's Warranty of Title:

14.3. Contractor warrants and guarantees that title to all Work, materials and equipment covered by any Application for Payment, whether incorporated in the Project or not, will pass to Owner no later than the time of payment free and clear of all Liens.

Review of Applications for Progress Payment:

14.4. Architect/Engineer will, within *fifteen (15)* days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to Owner, or return the Application to Contractor indicating in writing Architect/Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application. ~~Ten~~ *Thirty (30)* days after presentation of the Application for Payment to Owner with Architect/Engineer's recommendation, the amount

recommended will (subject to the provisions of the last sentence of paragraph 14.7) become due and when due will be paid by Owner to Contractor.

14.5. Architect/Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Architect/Engineer to Owner, based on Architect/Engineer's on-site observations of the executed Work as an experienced and qualified design professional and on Architect/Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Architect/Engineer's knowledge, information and belief:

14.5.1. the Work has progressed to the point indicated.

14.5.2. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, to the results of any subsequent tests called for in the Contract Documents, to a final determination of quantities and classifications for Unit Price Work under paragraph 9.8, and to any other qualifications stated in the recommendation), and

14.5.3. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Architect/Engineer's responsibility to observe the Work.

However, by recommending any such payment Architect/Engineer will not thereby be deemed to have represented that: (i) exhaustive or continuous on-site inspections have been made to check the quality or the quantity of the Work beyond the responsibilities specifically assigned to Architect/Engineer in the Contract Documents or (ii) that there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

14.6. Architect/Engineer's recommendation of any payment, including final payment, shall not mean that Architect/Engineer is responsible for Contractor's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the furnishing or performance of Work, or for any failure of Contractor to perform or furnish Work in accordance with the Contract Documents.

14.7. Architect/Engineer may refuse to recommend the whole or any part of any payment if, in Architect/Engineer's opinion, it would be incorrect to make the representations to Owner referred to in paragraph 14.5. Architect/Engineer may also refuse to recommend any such payment, or, because of subsequently discovered evidence or the results of subsequent inspections or tests, nullify any such payment previously recommended, to such extent as may be necessary in Architect/Engineer's opinion to protect Owner from loss because:

14.7.1. the Work is defective, or completed Work has been damaged requiring correction or replacement.

14.7.2. the Contract Price has been reduced by Written Amendment or Change Order.

14.7.3. Owner has been required to correct defective Work or complete Work in accordance with paragraph 13.14. or

14.7.4. Architect/Engineer has actual knowledge of the occurrence of any of the events enumerated in paragraphs 15.2.1 through 15.2.4 inclusive.

Owner may refuse to make payment of the full amount recommended by Architect/Engineer because:

14.7.5. claims have been made against Owner on account of Contractors performance or furnishing of the Work.

14.7.6. Liens have been filed in connection with the Work, except where Contractor has delivered a specific Bond satisfactory to Owner to secure the satisfaction and discharge of such Liens,

14.7.7. there are other items entitling Owner to a set-off against the amount recommended, or

14.7.8. Owner has actual knowledge of the occurrence of any of the events enumerated in paragraphs 14.7.1 through 14.7.3 or paragraphs 15.2.1 through 15.2.4 inclusive;

but Owner must give Contractor immediate written notice (with a copy to Architect/Engineer) stating the reasons for such action and promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, when Contractor corrects to Owner's satisfaction the reasons for such action.

Substantial Completion:

14.8. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Architect/Engineer in writing that the entire Work is substantially complete (except for items specifically listed by Contractor as incomplete) and request that Architect/Engineer issue a certificate of Substantial Completion. Within a reasonable time thereafter, Owner, Contractor and Architect/Engineer shall make an inspection of the Work to determine the status of completion. If Architect/Engineer does not consider the Work substantially complete, Architect/Engineer will notify Contractor in writing giving the reasons therefore. If Architect/Engineer considers the Work substantially complete, Architect/Engineer will prepare and deliver to Owner a tentative certificate of Substantial Completion which shall fix the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. Owner shall have seven days after receipt of the tentative certificate during which to make written objection to Architect/Engineer as to any provisions of the certificate or attached list. If, after considering such objections, Architect/Engineer concludes that the Work is not substantially complete, Architect/Engineer will within fourteen days after submission of the tentative certificate to Owner notify Contractor in writing, stating the reasons therefore. If, after consideration of Owner's objections,

Architect/Engineer considers the Work substantially complete, Architect/Engineer will within said fourteen days execute and deliver to Owner and Contractor a definitive certificate of Substantial Completion (with a revised tentative list of items to be completed or corrected) reflecting such changes from the tentative certificate as Architect/Engineer believes justified after consideration of any objections from Owner. At the time of delivery of the tentative certificate of Substantial Completion Architect/Engineer will deliver to Owner and Contractor a written recommendation as to division of responsibilities pending final payment between Owner and Contractor with respect to security, operation, safety, maintenance, heat, utilities, insurance and warranties and guarantees. Unless Owner and Contractor agree otherwise in writing and so inform Architect/Engineer in writing prior to Architect/Engineer's issuing the definitive certificate of Substantial Completion, Architect/Engineer's aforesaid recommendation will be binding on Owner and Contractor until final payment.

14.9. Owner shall have the right to exclude Contractor from the Work after the date of Substantial Completion, but Owner shall allow Contractor reasonable access to complete or correct items on the tentative list.

Partial Utilization:

14.10. Use by Owner at Owner's option of any substantially completed part of the Work which: (i) has specifically been identified in the Contract Documents, or (ii) Owner, Architect/Engineer and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, may be accomplished prior to Substantial Completion of all the Work subject to the following:

14.10.1. Owner at any time may request Contractor in writing to permit Owner to use any such part of the Work which Owner believes to be ready for its intended use and substantially complete. If Contractor agrees that such part of the Work is substantially complete, Contractor will certify to Owner and Architect/Engineer that such part of the Work is substantially complete and request Architect/Engineer to issue a certificate of Substantial Completion for that part of the Work. Contractor at any time may notify Owner and Architect/Engineer in writing that Contractor considers any such part of the Work ready for its intended use and substantially complete and request Architect/Engineer to issue a certificate of Substantial Completion for that part of the Work. Within a reasonable time after either such request, Owner, Contractor and Architect/Engineer shall make an inspection of that part of the Work to determine its status of completion. If Architect/Engineer does not consider that part of the Work to be substantially complete, Architect/Engineer will notify Owner and Contractor in writing giving the reasons therefore. If Architect/Engineer considers that part of the Work to be substantially complete, the provisions of paragraphs 14.8 and 14.9 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

14.10.2. No occupancy or separate operation of part of the Work will be accomplished prior to compliance with the requirements of paragraph 5.6 in respect of property insurance.

Owner may at any time request Contractor in writing to permit Owner to take over operation of any such part of the work although it is not substantially complete. A copy of such request will be sent to Architect/Engineer and within a reasonable time thereafter Owner, Contractor, and Architect/Engineer shall make an inspection of that part of the Work to determine its status of completion and will prepare a list of the items remaining to be completed or corrected thereon before final payment. If Contractor does not object in writing to Owner and Architect/Engineer that such part of the Work is not ready for separate operation by Owner, Architect/Engineer will finalize the list of items to be completed or corrected and will deliver such lists to Owner and Contractor together with a written recommendation as to the division of responsibilities pending final payment between Owner and Contractor with respect to security, operation, safety, maintenance, utilities, insurance, warranties and guarantees for that part of the Work which will become binding upon Owner and Contractor at the time when Owner takes over such operation (unless they shall have otherwise agreed in writing and so informed Architect/Engineer). During such operation and prior to Substantial Completion of such part of the Work, Owner shall allow Contractor reasonable access to complete or correct items on said list and to complete other related Work.

Final Inspection:

14.11. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Architect/Engineer will make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

Final Application for Payment:

14.12. After Contractor has completed all such corrections to the satisfaction of Architect/Engineer and delivered in accordance with the Contract Documents all maintenance and operating instructions, schedules, guarantees, Bonds, certificates or other evidence of insurance required by paragraph 5.4, certificates of inspection, marked-up record documents (as provided in paragraph 6.14) and other documents, Contractor may make application for final payment following the procedure for progress payments. The final Application for Payment shall be accompanied (except as previously delivered) by:

(i) consent of the surety, if any, to final payment.

(ii) complete and legally effective releases or waivers (satisfactory to Owner) of all Liens arising out of or filed in connection with the Work. In lieu of such releases or waivers of Liens and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (i) the releases and receipts include all labor, services, material and equipment for which a Lien could be filed, and (ii) all payrolls, material and equipment bills and other indebtedness connected with the Work for which Owner or Owner's property might in any way be responsible have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a Bond or other collateral satisfactory to Owner to indemnify Owner against any Lien.

(iii) certification from surety that payment and performance bond shall remain in effect one (1) year following final payment.

(iv) contractor's advertisement of completion – advertisement for a period of four (4) successive weeks in the newspaper or largest circulation published within the county where the work is performed.

(v) certification from insurance company that any insurance coverage written on a claims-made basis, remain in effect for at least two (2) years following final payment.

Final Payment and Acceptance:

14.13. If, on the basis of Architect/Engineer's observation of the Work during construction and final inspection, and Architect/Engineer's review of the final application for Payment and accompanying documentation as required by the Contract Documents, Architect/Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract Documents have been fulfilled, Architect/Engineer will, within ten days after receipt of the final Application for Payment, indicate in writing Architect/Engineer's recommendation of payment and present the Application to Owner for payment. At the same time Architect/Engineer will also give written notice to Owner and Contractor that the Work is acceptable subject to the provisions of paragraph 14.15 Otherwise, Architect/Engineer will return the Application to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application. Thirty days after the presentation to Owner of the Application and accompanying documentation, in appropriate form and substance and with Architect/Engineer's recommendation and notice of acceptability, the amount recommended by Architect/Engineer will become due and will be paid by Owner to Contractor

14.14. If, through no fault of Contractor, final completion of the Work is significantly delayed and if Architect/Engineer so confirms, Owner shall, upon receipt of Contractor's final Application for Payment and recommendation of Architect/Engineer, and without terminating the Agreement, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by Owner for Work not fully completed or corrected is less than the retainage stipulated in the Agreement, and if Bonds have been furnished as required in paragraph 5.1, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by Contractor to Architect/Engineer with the Application for such payment. Such payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of claims.

Waiver of Claims:

14.15. The making and acceptance of final payment will constitute:

14.15.1. a waiver of all claims by Owner against Contractor, except claims arising from unsettled Liens, from defective Work appearing after final inspection pursuant to paragraph

14.11, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from Contractor's continuing obligations under the Contract Documents; and

14.15.12. a waiver of all claims by Contractor against Owner other than those previously made in writing and still unsettled.

ARTICLE 15 – SUSPENSION OF WORK AND TERMINATION

Owner May Suspend Work:

15.1. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than ninety days by notice in writing to Contractor and Architect/Engineer which will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be allowed an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension if Contractor makes an approved claim therefore as provided in Articles 11 and 12.

Owner May Terminate:

15.2. Upon the occurrence of any one or more of the following events:

15.2.1. if Contractor persistently fails to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the progress schedule established under paragraph 2.9 as adjusted from time to time pursuant to paragraph 6.6);

15.2.2. if Contractor disregards Laws or Regulations of any public body having jurisdiction;

15.2.3. if Contractor disregards the authority of Architect/Engineer; or

15.2.4. if Contractor otherwise violates in any substantial way any provisions of the Contract Documents;

15.2.5 if Contractor commences a voluntary case under any chapter of the Bankruptcy Code (Title 11, United States Code), as now or hereafter in effect, or if Contractor takes any equivalent or similar action by filing a petition or otherwise under any other federal or state law in effect at such time relating to the bankruptcy or insolvency;

15.2.5.1 if a petition is filed against Contractor under any chapter of the Bankruptcy Code (Title 11, United States Code), as now or hereafter in effect at the time of filing, or if a petition is filed seeking any such equivalent or similar relief against Contractor under any other federal or state law in effect at the time relating to bankruptcy or insolvency;

15.2.5.2 if Contractor makes a general assignment for the benefit of creditors;

15.2.5.3 if a trustee, receiver, custodian, or agent of Contractor is appointed under applicable law or under contract, whose appointment or authority to take charge of property of Contractor is for the purpose of enforcing a Lien against such property or for the purpose of general administration of such property for the benefit of Contractor's creditors;

15.2.5.4 if Contractor admits in writing an inability to pay its debts generally as they become due.

Owner may, after giving Contractor (and the surety, if any,) seven days' written notice and to the extent permitted by Laws and Regulations, terminate the services of Contractor, exclude Contractor from the site and take possession of the Work and of all Contractor's tools, appliances, construction equipment and machinery at the site and use the same to the full extent they could be used by Contractor (without liability to Contractor for trespass or conversion), incorporate in the Work all materials and equipment stored at the site or for which Owner has paid Contractor but which are stored elsewhere, and finish the Work as Owner may deem expedient. In such case Contractor shall not be entitled to receive any further payment until the Work is finished. If the unpaid balance of the Contract Price exceeds all claims, costs, losses and damages sustained by Owner arising out of or resulting from completing the Work such excess will be paid to Contractor. If such claims, costs, losses and damages exceed such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses and damages incurred by Owner will be reviewed by Architect/Engineer as to their reasonableness and when so approved by Architect/Engineer incorporated in a Change Order, provided that when exercising any rights or remedies under this paragraph Owner shall not be required to obtain the lowest price for the Work performed.

15.3. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue. Any retention or payment of moneys due Contractor by Owner will not release Contractor from liability.

15.4. Upon seven days' written notice to Contractor and Architect/Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, elect to terminate the Agreement. In such case, Contractor shall be paid (without duplication of any items):

15.4.1. for completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

15.4.2. for expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;

15.4.3. for all claims, costs, losses and damages incurred in settlement of terminated contracts with Subcontractors, Suppliers and other; and

15.4.4. for reasonable expenses directly attributable to termination.

Contractor shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

Contractor May Stop Work or Terminate:

15.5. If, through no act or fault of Contractor, the Work is suspended for a period of more than ninety days by Owner or under an order of court or other public authority, or Architect/Engineer fails to act on any Application for Payment within thirty days after it is submitted or Owner fails for thirty days to pay Contractor any sum finally determined to be due, then Contractor may, upon seven days' written notice to Owner and Architect/Engineer, and provided Owner or Architect/Engineer do not remedy such suspension or failure within that time, terminate the Agreement and recover from Owner payment on the same terms as provided in paragraph 15.4. In lieu of terminating the Agreement and without prejudice to any other right or remedy, if Architect/Engineer has failed to act on an Application for Payment within thirty days after it is submitted, or Owner has failed for thirty days to pay Contractor any sum finally determined to be due, Contractor may upon seven day's written notice to Owner and Architect/Engineer stop the Work until payment of all such amounts due Contractor, including interest thereon. The provisions of this paragraph 15.5 are not intended to preclude Contractor from making claim under Articles 11 and 12 for an increase in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping Work as permitted by this paragraph.

ARTICLE 16 – MISCELLANEOUS

16.1 Giving Notice:

Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice.

16.2 Computation of Times:

16.2.1. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

16.2.2. A calendar day of twenty-four hours measured from midnight to the next midnight will constitute a day.

16.3. Notice of Claim:

Should Owner or Contractor suffer injury or damage to person or property because of any error, omission or act of the other part or of any of the other party's employees or agents or others for whose acts the other party is legally liable, claim will be made in writing to the other party promptly, but in no event later than fifteen (15) days of the first observance of such injury or damage. The provisions of this paragraph 16.3 shall not be construed as a substitute for or a waiver of the provisions of any applicable statute of limitations or repose.

16.4. Cumulative Remedies:

The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto, and, in particular but without limitation, the warranties, guarantees and obligations imposed upon Contractor by paragraphs 6.2, 6.13, 6.22, 6.23, 13.1, 13.12, 13.14, 14.3 and 15.2 and all of the rights and remedies available to Owner and Architect/Engineer thereunder, are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee or by other provisions of the Contract Documents, and the provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right and remedy to which they apply.

16.5. Professional Fees and Court Costs Included:

Whenever reference is made to "claims, costs, losses and damages," it shall include in each case, but not be limited to, all fees and charges of Architect/Engineers, architects, attorneys and other professionals and all court or other dispute resolution costs.

16.6. Labor Records and Schedules:

The Department of Jurisdiction on such public work shall require all Contractors and Subcontractors to keep the following records on the site of the public work project on which such Contractors, and Subcontractors are engaged:

16.6.1 Record of hours worked by each worker, laborer, and mechanic on each day.

16.6.2 Record of days worked each week by each worker, laborer, and mechanic.

16.6.3 Schedule of occupation or occupations at which each worker, laborer, and mechanic on the project is employed during each workday and week.

16.6.4 Schedule of hourly wage rates and supplements paid to each worker, laborer, and mechanic for each occupation.

16.7. Wage Schedules:

Pursuant to the Labor Law, each laborer, worker, or mechanic employed by the Contractor, Subcontractor, or other person shall be paid not less than the prevailing rate of wages for a legal day's work and shall be provided supplements not less than the prevailing supplements as determined by the Industrial Commissioner.

The Contractor and every Subcontractor shall post in a prominent and accessible place on the site of the work a legible statement of all wage rates and supplements as specified in the Contract to be paid or provided, as the case may be, for the various classes of mechanics, workers, and laborers employed on the work.

The Owner does not represent or warrant that the accompanying schedule of wage rates and supplements with the classification of workers, mechanics, and laborers, as required the Labor Law, is complete, and it reserves the right to revise such schedule when required. If any occupation is not mentioned in the schedule of wage rates and supplements it shall be requested from the Industrial Commissioner, by the Contractor through the Architect/Engineer and such schedules, shall, upon notice to the Contractor, become and be a part of the wage and supplement schedules embodied in the Contract.

Also included is the Federal Wage Rate Determination. Laborers, workmen, and mechanics employed on the work done in performance of said Contract shall be paid not less than the rate of wages listed thereon for the trade or occupation of such laborer, etc.

SECTION 01 11 00 - SUMMARY OF WORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 PROJECT DESCRIPTION

A. Project/Work Identification:

1. The General overall description of the Work of the Contract for the:

   DESTIN-FORT WALTON BEACH AIRPORT
   ITB AP 35-20 Design OF SATELLITE CONCOURSE “C”
   Eglin AFB, Florida 32542-1498

   can be summarized for purposes of administration and payment in the manner of project segments as follows:

2. The Project consists of One story Satellite Concourse with 5 apron loaded gates with hold room spaces, public restrooms, vanilla box conscessions, Public Security Check point, misc offices for TSA, Airport and tenant. Misc site work associated with the construction of the builiding and utilities, sidewalks and apron as outlined in the drawings and specifications.

3. The contractor is reference to Contract Drawings Sheet G-2.1.1 & G-2.1.2 for project Alternates.

1.3 CONTRACTOR USE OF PREMISES

A. Limit use of the premises to construction activities within areas indicated; allow for any Owner and tenant occupancy, and use by the public.

1. Minimize any disruption to all operating areas, including parking areas.

   a. Existing public services and utility systems shall remain in operation during the construction period, excluding times required for installation of new work unless specifically allowed by the Contract.

   b. Schedule and coordinate outages and interruptions of public service with the VPS. See the specific forms for processes and time constraints. Utilize the following forms:

1) Form #XXX System Interruption/Utility Outage Notification.

2) Form #XXX System Interruption/Utility Outage Notification Procedured.

3) Form #XXX Security System Interruption/Outage Request

2. Provide all temporary directional signage, safety, and barricading required for passenger services.

   a. Submit a plan indicating signage, safety, and barricading for access routes, storage areas and work sites, at the pre-construction meeting.

   b. Directional signing at the access gate and or along the delivery route to the storage area or work site shall be as directed by the VPS.

3. Confine operations to areas within Contract limits indicated. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed.

4. Access to site shall be shown on the plans or as directed by the VPS. Do not permit any unauthorized construction personnel or traffic on the site. Provide for traffic control to and from the various construction areas. Immediately clean-up any debris deposited along the access road as a result of construction traffic.

   a. Keep driveways and entrances serving the premises clear and available to the Owner, Tenant, their employees at all times, and the public. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on site.

5. All material orders for delivery to the site will use as a delivery address the access point at the Contractor's storage site.

   a. Coordinate with the VPS and allow for the least possible disruption of the facilities normal operations for delivery of materials and removal of demolished and discarded materials.

   b. Delivery of materials and removal of demolished and discarded materials shall be scheduled as follows:

      1) Schedule and coordinate all deliveries and removal of debris between the hours of 7:00 A.M. and 6:00 PM each day of the work week.

6. The limits of construction material storage areas, equipment storage areas, and parking areas shall be as indicated in the documents or as directed by the VPS. Erect and maintain secured fencing in compliance with FAA, TSA and VPS requirements, marking and warning devices suitable for both day/night use to

delineate the perimeter of all such areas. Provide secure gates for equipment. Gates shall be manned by TSA and VPS approved personel. 24 hours a day 7 days a week for the project durantion.

B. Use of the Existing Site Improvements: Maintain the improvement in a weathertight condition throughout the construction period. Repair damage caused by construction operations. Take all precautions necessary to protect the site its occupants and public during the construction period.

1.4 OWNER OCCUPANCY

A. Full Owner Occupancy: The Owner, its tenants, and the public will occupy the site and adjacent facilities (outside the limits of the construction area unless specified) during the entire construction period. Cooperate with the Owner during construction operations to minimize conflicts, facilitate occupancy usage, and protect persons and property in the project area during the entire construction period. Perform the Work so as not to interfere with the Owner's operations.

1. Unless otherwise directed by the Owner, work shall be scheduled between the hours of 7:00 AM until 6:00 PM each day.

1.5 LAWS, PERMITS, AND REGULATIONS

A. Comply with all applicable laws, ordinances, regulations, codes, ADA requirements.

B. Obtain and pay for all license and permits, all fees and charges for connection to outside services and parking for Contractor's vehicles.

C. Abide by FAA, TSA and Owner’s safety and security regulations and procedures relative to access to, and work in, Airport Operations Areas and secured facilities.

D. Comply with Owner’s insurance requirements.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01 11 00

SECTION 01 21 00 - ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements governing allowances.

B. All applicable allowances are included in the Total Amount Bid.

1.3 SCOPE, SELECTION AND PRICING

A. For each Work item covered by an allowance, the Contractor shall submit a Request for Change Order (RCO) at the earliest practical date after award of the Contract. The RCO shall include the scope of work, the schedule and the amount of allowance to be used for the Work item. The RPR will process a Contract Modification for the Work item in accordance with the terms of the General Conditions/Provisions and the Owner's policies regarding approval authority. Note that the General Conditions/Provisions outlines the various types of Contract Modifications as well as various methods of payment, including Force Account provisions.

B. At the RPR's request, obtain proposals for each applicable allowance item for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by the RPR. Do not begin Work on an item covered by an allowance until a Contract Modification has been authorized by the Owner.

1.4 SUBMITTALS

A. General: Submit proposals for the work included in allowances, in the form specified for Change Orders.

1. Submit invoices or delivery slips to show the actual quantities of materials delivered to the site for use in fulfillment of each allowance.
2. Submit cut sheet, manufacturer's data, shop drawings and samples for products selected per Sec. 01 33 23 Shop Drawings, Product Data and Samples.

1.5 ALLOWANCES

A. Use the allowance only as directed by the RPR or Owner for the Owner's purposes. The inclusion of allowances in the Contract is not a guarantee that payment will be made for the full amount of the allowance unless the Owner has determined there has been full compliance with the Contract Documents for each allowance.
B. Allowances shall only include the Contractor's direct costs and mark-up in accordance with the Changes in the Work Article of the General Conditions/Provisions.

1.6 UNUSED ALLOWANCES

A. At Project close-out, credit all unused allowance monies to the Owner by Change Order.

PART 2 - PART 2 - PRODUCTS

A.$125,000.00 for Hold Room seating as shown on drawing for Base Bid and Alternate No.1 seating manufacturer and seating system type, color and fabric to be selected by Architect from seating manufacturers catalog.

PART 3 - PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly upon delivery for damage or defects. Report findings and proposed corrective action to the RPR in writing.

3.2 PREPARATION

A. Coordinate all work for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

A.Hold Room seating, Base Bid and Alternate No. 1 in amount $125,000.00

END OF SECTION 01 21 00

SECTION 01 23 00 - ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements governing Alternates.

1.3 DEFINITIONS

A. Definition: An alternate is an amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the Base Bid amount if the Owner decides to accept a corresponding change in either the amount of construction to be completed, or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

1. The cost or credit for each alternate is the net addition to or deduction from the Contract Price to incorporate the Alternate into the Work. No other adjustments are made to the Contract Price.

1.4 PROCEDURES

A. Coordination: Modify or adjust affected adjacent work as necessary to completely and fully integrate that work into the Project.

1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate.

B. Notification: The Owner will notify each party involved, in writing, if alternates have been accepted, rejected, or deferred for later consideration.

C. Schedule: A schedule of alternates is included in the Bid Form. Specification Sections referenced in the Schedule contain requirements for materials necessary to achieve the Work described under each alternate.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

2.1 SCHEDULE OF ALTERNATES:

BASE BID: Construction of:

To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.

Alternate #1 : Construction of:
To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.

Alternate#2: Construction of :
To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.
.

Alternate #3: Construction of :
To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.

Alternate #4: Covered Walkway

To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.

Alternate #5: Outdoor Seating area :

To the extent shown on drawings and specificaitons, see sheets G-2.1.1 & G-2.1.2.

Alternate #6 : Construction of:
To the extent shown on drawings and specificaitons.

Alternate #7 : Construction of:
To the extent shown on drawings and specificaitons.

Alternate #8 : Construction of:
To the extent shown on drawings and specificaitons.

END OF SECTION 01 23 00

SECTION 01 25 00 SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for handling requests for substitutions made after the Project is advertised.

B. Procedural requirements governing the Contractor's selection of products and product options are included under Section "Materials and Equipment."

1.3 DEFINITIONS

A. Definitions used in this Section are not intended to change or modify the meaning of other terms used in the Contract Documents.

B. Substitutions: Requests for changes in products, materials, equipment, and methods of construction required by Contract Documents proposed by the Contractor after the Project is advertised are considered requests for "substitutions.”

1. The following are not considered substitutions:

a. Revisions to Contract Documents requested by the Owner or A/E.

b. Specified options of products and construction methods included in Contract Documents.

c. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

2. Substitutions requested by Bidders during the bidding period, and accepted prior to the bid date of Contract are subject to requirements specified in this Section for substitutions, and will be incorporated into the Contract Documents by addendum.

1.4 SUBMITTALS

A. Substitution Request Submittal: Requests for substitution may be considered per the General Conditions of the Contract. Requests received may be rejected at the discretion of the A/E and County. The A/E will render a decision on a Request for Substitution received after award of Contract within thirty (30) days after the complete Request for

Substitution has been received by the A/E. Each Request for Substitution must be submitted as follows:

1. Submit four (4) copies of each request for substitution for consideration. Submit requests in the form and in accordance with procedures required for Change Order proposals in the General Conditions/Provisions.

2. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:

    a. Product Data, including Drawings and descriptions of products, fabrication and installation procedures.

    b. Samples, where applicable or requested.

    c. A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, code compliance, maintenance requirements, energy usage, and environmental considerations, performance, key components and visual effect.

    d. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by the Owner and separate Contractors that will become necessary to accommodate the proposed substitution.

    e. A statement indicating the substitution's effect on the Contractor's Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.

    f. Cost information, including a proposal of the net change in the Contract Sum.

    g. Certification by the Contractor that the substitution proposed is equal-to or better in every significant respect to that required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately.

    h. A paragraph by paragraph comparison and analysis of the related specification section indicating compliance or variation from specification standard. If specified with a "Basis of Design", provide a comparison and analysis of each component of the manufacturers' detailed specification for the "Basis of Design". Each variation shall be substantiated with necessary submission to validate products compliance with specifications.

i. Failure to include the above requirements in the submittal may be cause for rejection of the submittal in its entirety.

3. State the amount of credit, for cost and time, if any, the Owner will receive as the result of the substitution, if applicable.

4. A/E's Action: Additional information or documentation necessary for evaluation of the request may be requested. Notification of approved substitutions will be made by Addendum prior to bid and by a Change Notice after bid.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Conditions: The substitution request will be received and considered by the A/E when one or more of the following conditions are satisfied, as determined by the A/E; otherwise requests will be returned without action except to record noncompliance with these requirements.

1. Extensive revisions to Contract Documents are not required.

2. Proposed changes are in keeping with the general intent of Contract Documents.

3. The request is timely, fully documented and properly submitted.

4. The request is directly related to an "or approved substitution" clause or similar language in the Contract Documents.

5. The specified product or method of construction cannot be provided within the Contract Time. The request will not be considered if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities properly.

6. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

7. A substantial advantage is offered the County, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the County may be required to bear. Additional responsibilities for the County shall include additional compensation to the A/E for redesign and evaluation services, increased cost of other construction by the Contractor or separate Contractors, and similar considerations.

8. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where certification is provided that the substitution will overcome the incompatibility.

9. The specified product or method of construction cannot be coordinated with other materials, and where certification is provided that the proposed substitution can be coordinated.

10. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where certification is provided that the proposed substitution provides the required warranty.

11. Where a proposed substitution involves more than the Contractor, each subcontractor shall cooperate with the Contractor to coordinate the Work, provide uniformity and consistency, and to assure compatibility of products.

B. The submittal and the A/E's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the Contract Documents does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

C. If the use of a substitute product requires additional work or modifications to new or existing facilities, all such additional work, including utility modifications shall be borne by the Contractor.

2.2 PROCEDURES

A. Selection Procedures: Options in product selection is governed by the Contract Documents and governing regulations, not by previous industry tradition or project experience. Procedures governing product selection include, but are not limited to the following:

1. Proprietary Specification Requirements: Where a single product or manufacturer is named, provide the product indicated. Other products will not be considered by the A/E.

a. Advise the A/E before proceeding when it is discovered that the named product is not a feasible solution.

2. Semi-proprietary Specification Requirements: Where two or more products and manufacturers are named, provide one of the products indicated. No substitutions will be permitted unless the specification indicates consideration of other products.

a. When products are specified by one manufacturer's model numbers or performance criteria with reference to other acceptable manufacturers, products manufactured by the acceptable manufacturers listed must meet minimum performance criteria specified or meet quality of models specified.

b. Advice the A/E before proceeding when it is discovered that the named product is not a feasible solution.

3. Performance Specification Requirements: Where Specifications require compliance with performance requirements, provide products that comply with the requirements and are recommended by the manufacturer for the application indicated. General overall performance of a product is implied where the product is specified for a specific application.

4. Compliance with Standards, Codes, and Regulations: Where the Specifications only require compliance with an imposed code, standard, or regulation, select a product that complies with the standards, codes or regulations specified.

PART 3 - EXECUTION (Not Applicable)

SUBSTITUTION REQUEST FORM

TO:	PROJECT:
MLM-Martin Architects, Inc. 668 N. Orlando Avenue Suite 107 Maitland, FL 32751	Package Name: _____

A/E Project No.: Date: _____

Submitted for consideration is the following product instead of the specified item for the above-noted Project.

Specification Section and Paragraph: _____

Drawings and Details affected: _____

Specified Item/Mfr/Model No.:

Proposed Substitution Description:

It is the General Contractor's responsibility to provide all information to determine pro- posed substitution is equal to or better than the specified item. Complete product description, technical information, drawings, photographs, test data and performance information necessary for evaluation of requested substitution will be attached and marked for comparison purposes. Fill in ALL BLANKS below.

WHY IS SUBSTITUTION BEING SUBMITTED? (Select 1 of the following):

- ☐ Pre-Bid Substitution (Prior Approval): Include detailed analysis comparing proposed substitution against specified product, including redlined Specification Sections showing differences.
- ☐ Specified product is not available. Explain in detail using attached letter.
- ☐ Cost Savings to Owner. Indicate comparative cost analysis as attachment.
- ☐ Other (Explain):

EFFECTS OF PROPOSED SUBSTITUTION (Attach complete explanations and technical data, including laboratory test, If applicable) Include complete information changes to Drawings and/or Specification that proposed substitution would require for its proper Installation. Fill in blanks below:				
A.		☐		☐
B.				
C.	Does the substitution affect dimensions, locations, or configurations shown on Drawings? If "Yes", Explain:	☐	No	☐ Yes
D.	Will changes be required to the building/project or other construction in order to properly install or accommodate the requested substitution? If "Yes", Explain:	☐	No	☐ Yes
E.	What affect does substitution have on other trades? Explain:			
F.	Will the General Contractor pay for any changes to the building design, including re-design, engineering and detailing cost caused by acceptance of the substitution request? If "No", explain:	☐	No	☐ Yes
G.	Does the requested substitution meet all applicable Codes, Ordinances and applicable standards? If "No", explain:	☐	No	☐ Yes

H.	Will the requested substitution affect the construction progress schedule and affect the "Contract Time"? If "Yes", explain:	☐	No	☐	Yes
I.	Has the requested substitution been used in similar applications? Identify:	☐	No	☐	Yes
J.	Does the manufacturer's warranty on the requested substitution differ from the specified item? If "Yes", explain:	☐	No	☐	Yes
K.	State monetary credit (itemized breakdown including overhead and profit) and reduction of Contract Time Owner will realize if this Substitution Request is accepted				

The Architect and Owner will not be required to prove any product is not equal or suitable for the Project.

GENERAL CONTRACTOR'S CERTIFICATION OF EQUAL PERFORMANCE AND ASSUMPTION OF LIABILITY FOR EQUAL PERFORMANCE

The undersigned General Contractor states that the performance, function, quality and durability are equivalent or superior to the specified item. If General Contractor is a corporation, legal name of corporation shall be indicated below, along with signature(s) of the officer or officer's authorized to sign contracts on behalf of the corporation and corporate seal; if General Contractor is a partnership, the true name of the firm and the name(s) of the general partner(s) shall be indicated below with signature(s) of the partner or partners authorized to sign contracts on behalf of the partnership; and if the CM@R/General Contractor is an individual, his/her signature shall be placed below. Failure to provide legally binding signature(s) will result in non-consideration of Substitution Request.

SECTION 01 29 73 - SCHEDULE OF VALUES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes: Schedule of Values.

1. Per General Conditions.
2. When requested by the A/E and or County, support values given with substantiating data.
3. Use Schedule of Values without limitation as a basis for the Applications for Payment.

B. Time Coordination: In coordination of initial submittals and other administrative start-up activities, submit Schedule of Values to the A/E at the earliest feasible date, but in no case later than ten (10) days after NTP for review by A/E and County. Submit Schedule of Values per General Conditions of Contract. The Contractor's Application for Payment cannot be processed for payment until the Contractor has submitted a Schedule of Values acceptable to the A/E and County.

1.3 FORM OF SUBMITTAL

A. Use AIA Document G-703 Continuation Sheet for the submittal format and or provide to the OAR in a MS Excel electronic file.

B. Use Table of Contents of the Project Manual as a basis for format or if a unit price contract use unit price schedule.

C. Identify each line with number and title as listed in Table of Contents of the Project Manual.

1.4 PREPARING AND SUBMITTING SCHEDULE OF VALUES

A. The Schedule of Values shall be used as a basis for determining progress payments on a contract. The Schedule of Values shall be a schedule of cost loaded construction activities equal, in total, to the awarded bid price and shall be in a form and sufficient detail to correctly represent a reasonable apportionment of the Contract price. Prepare Schedule of Values, in coordination with Progress Schedule. Correlate line items with other administrative schedules and forms required for the Work, including progress schedule, payment request form, listing of subcontractors, schedule of alternates, schedule of allowances, listing of products and principal suppliers and fabricators, and schedule of submittals.

B. Provide breakdown of Contract Sum in sufficient detail to facilitate continued evaluation of payment requests and progress reports. Breakdown amounts of major cost items into several line items. Round off to nearest whole dollar, but with total equal to Contract Sum.

C. Submit one (1) copy of the Schedule of Values to the A/E and County**.**

D. Arrange schedule with columns to indicate generic name of item, related Specification Sections; subcontractor, supplier, manufacturer, or fabricator; change orders which have affected value; dollar value of item, and percentage of Contract Sum to nearest one-hundredth percent and adjusted to total 100 percent.

E. Margins of Cost:

1. Show line items of indirect costs, and margins on actual costs, only to extent such items will be individually listed in payment requests.
2. Establish each item in Schedule of Values and in payment requests to be complete with total expenses and proportionate share of general overhead and profit margin.
3. Major cost items, which are not directly cost of actual work-in-place, such as distinct temporary facilities, may be either shown as line items in Schedule of Values or distributed as general overhead expense.

F. Break down installed cost into:

1. Cost of product, delivered and unloaded at Job Site with taxes paid. (List under Column F, G-703)
2. Total installed cost, with overhead and profit. (List under Column C, G-703).

1.5 SUBSCHEDULE OF UNIT MATERIAL VALUE

A. Submit a sub-schedule of unit costs and quantities for products that progress payments will be requested for stored materials.

B. The form of submittal shall parallel that of the Schedule of Values, with each item identified the same as the line item in the Schedule of Values.

C. The unit quantity for bulk materials shall include an allowance for normal waste.

D. The unit values for the materials: the cost of the material including taxes, delivered and unloaded at the Site.

E. The installed unit value multiplied by the quantity listed shall equal the cost of that item in the Schedule of Values.

1.6 REVIEW AND RESUBMITTAL

A. After review by the A/E and County, revise and re-submit Schedule (and Schedule of Material Value) as required.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01 29 73

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 31 13 - PROJECT COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and supervisory requirements necessary for coordinating construction operations including, but not necessarily limited to, the following:

1. General project coordination procedures.
2. Conservation.
3. Coordination Drawings.
4. Administrative and supervisory personnel.
5. Cleaning and protection.

1.3 COORDINATION

A. Coordinate construction operations included in various Sections of these Specifications to assure efficient and orderly installation of each part of the Work. Coordinate construction operations included under different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in the sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.

2. Coordinate installation of different components to assure maximum accessibility for required maintenance, service, and repair.

3. Make provisions to accommodate items scheduled for later installation.

B. Where necessary, prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and attendance at meetings.

1. Prepare similar memoranda for the A/E and separate contractors where coordination of their work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and assure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of schedules.
2. Installation and removal of temporary facilities.
3. Delivery and processing of submittals.
4. Progress meetings.
5. Project closeout activities.

D. Conservation: Coordinate construction operations to assure that operations are carried out with consideration given to conservation of energy, water, and materials.

1. Salvage materials and equipment involved in performance of, but not actually incorporated in, the Work.

1.4 SUBMITTALS

A. Coordination Drawings: Prepare coordination drawings where careful coordination is needed for installation of products and materials fabricated by separate entities. Prepare coordination drawings where limited space availability necessitates maximum utilization of space for efficient installation of different components.

1. Show the relationship of components shown on separate Shop Drawings.
2. Indicate required installation sequences.
3. Comply with the Article “Submittals” contained in each section.

B. Staff Names: At the Pre-Construction meeting, submit a list of the Contractor's principal staff assignments, including the superintendent and other personnel in attendance at the Project Site. Identify individuals and their duties and responsibilities. List their addresses and telephone numbers.

1. Post copies of the list in the Project meeting room, the temporary field office, and each temporary telephone.

PART 2 - PART 2 - PRODUCTS (Not Applicable)

PART 3 - PART 3 - EXECUTION

3.1 GENERAL COORDINATION PROVISIONS

A. Inspection of Conditions: Require the Installer of each major component to inspect both the substrate and conditions under which Work is to be performed. Do not proceed until unsatisfactory conditions have been corrected in an acceptable manner.

B. Coordinate temporary enclosures with required inspections and tests to minimize the necessity of uncovering completed construction for that purpose.

3.2 CLEANING AND PROTECTION

A. General: Refer to the General Conditions of the Contract for Construction.

B. Cleaning: Cleaning shall be performed by the Contractor on a daily basis. The entire Work area shall be left in a broom clean, or equivalent condition.

1. Clean and protect construction in progress and adjoining materials in place, during handling and installation. Apply protective covering where required to assure protection from damage or deterioration until Substantial Completion is accepted.

2. Clean and provide maintenance on completed construction necessary through the remainder of the construction period. Adjust and lubricate operable components to assure operability without damaging effects.

C. Protection - Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

END OF SECTION 01 31 00

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

The Contractor and their subcontractors shall comply with all system interruptions and utility outage notification requirements, procedures and/or forms specified herein.

A. Documents

1. Use the latest version of the UON Procedures for Contractors

1.2. DEFINITIONS

Acronym	Refers to:
UON	Utility Outage Notification
VPN	Destin-Fort Walton Beach Airport
RPR	Resident Project Representative
MSDS	Material Safety Data Sheet
PPE	Personal Protection Equipment
LOTO	Lock-Out Tag-Out (electrical safety procedures)
BHS	Baggage Handling Systems
IT	Information Technology
GPR	Ground Penetrating Radar
SAM	Security Area Monitor
MOT	Maintenance of Traffic
AOC	Airport Operations Center
AOA	Airport Operations Area
AHJ	Authority Having Jurisdiction

1.3. GENERAL INSTRUCTIONS

A. System interruptions and utility outage notifications (UONs) are required during maintenance tasks, renovation work, tenant moves, and new construction work (the Work) in any and all instances where existing systems, utilities, services or operations are understood to be impacted by the Work.

B. The Contractor is required to plan, research, communicate, conduct and close out all utility outage notifications issued as required for the Contractor to effectively and expeditiously conduct the Work.

C. The Contractor is required to ensure that all execution steps, those outlined herein and those implied, and those required to plan, research, communicate, conduct and close out all utility outage notifications, have been followed to minimize interruptions to existing operations while completing the Work.

D. The Contractor is required to submit the completed UONs at least 120 hours (144 hours for a Security UON) in advance of execution of the Work.

E. UONs shall be sent to the Clearinghouse by the RPR for Action; the Clearinghouse has a 48 hour clock to Accept, Reject, or Accept the UON with Modifications. The Owner (Airport Department Sponsor or RPR) will authorize the UON.

F. UONs associated with Security systems require 96-hour advance notification, whereas all other UONs require 72-hour advance notification. Note that advance notification time starts after Owner Authorization of the UON.

G. In cases where there is both a Security UON and another type of UON (2nd UON) needed for the work, the Security UON shall be approved prior to sending the 2nd UON; Both UONs shall be sent together for Clearinghouse Action; the Clearinghouse has a 48 hour clock to Accept, Reject or Accept the UON with Modifications; after the Owner Authorization of the UON, the 72 hour notification clock begins. Holidays and weekends count as 12-hour days.

H. The Contractor is required to follow/make use of the latest revision of the *UON Construction Forms* and associated *UON Procedures for Contractors* and the *UON Checklist*.

PART 2 - PRODUCTS (not applicable)

PART 3 - EXECUTION

3.1. UON PLANNING

A. Research

1. The Contractor is required to research all available information, including review of conformed documents, as-built drawings, previous and associated UONs, and, as required, field installations and conditions, for preparation of a complete UON.

2. The Contractor is required to provide all required permits prior to execution of the Work.

B. Site Installation Crew Conference

1. The Contractor is required to conduct and evidence a site installation UON conference with the trade crew personnel that will be executing the Work outlined in the UON, on location.

C. MOT (where required)

1. The Contractor is required to include MOT information should the UON or any activity to enable the Work as outlined in the UON, impact existing vehicular or pedestrian traffic flow or patterns.

D. UON Which Includes Slab Drilling

1. The Contractor is required to include Ground Penetrating Radar or X-Ray services for all UONs that involve drilling into or through ground or elevated slabs.

E. Site Safety Plan Review and Briefing

1. The Contractor is required to review the site-specific safety plan with the trade crew personnel, and evidence that the review/briefing covered proper requirements and procedures associated with Arc Flash Studies, Personal Protection Equipment (PPE), and Lock-Out/Tag-Out, as required for the Work outlined in the UON.

F. UON Affecting BHS

1. The Contractor is required to coordinate with Airport Operations on all work anticipated to affect the Baggage Handling Systems.

G. UON Affecting IT

1. The Contractor is required to formally request access into Communications Rooms to the RPR who will then coordinate with the Owner. Access into any Communications Room is limited to experienced and certified personnel having Airport photo identification badges, performing the Work and for a limited amount of time. The Owner will most likely limit access to only the firm actually performing the work in the Communications Rooms. The Contractor shall allow sufficient time (a minimum of 72 hours) for the processing of an access request for Communications Rooms.

2. The Contractor is required to coordinate with Airport IT, through the RPR, all work anticipated to affect the infrastructure, telecommunication systems, and/or emergency telephones at the elevators.

H. UON Affecting Life Safety

1. The Contractor is required to research sprinkler valve locations and Fire Alarm Point Numbers affected; this information MUST be included in any UON submitted and must be coordinated with Airport Life Safety, through the PRP.

2. The Contractor MUST be in communication with the COMM Center at every step outlined in the *UON Checklist*

3. The Contractor CANNOT leave a closed valve unattended for ANY reason (or leave property) in the closed position without either restoring the valve to its normal operating condition or establishing an RPR-approved, ongoing fire watch.

I. External Resources to Support UON

1. It is not unusual for UONs to require external resources that enable and support the actual work to be performed as outlined in the UON. The Contractor is required to provide all external resources necessary to successfully execute the UON.

2. The Contractor is required to identify the external resources required to complete the UON.

3. External resources may include, but are not limited to; personnel to direct the public around affected areas (Greeters), Security Area Monitors (SAMs), Off-Duty law enforcement officers, flagmen, certified systems technicians (Life Safety – CSG), and/or temporary signage.

3.2. SITE PERMITS

A. Energized Electrical Work Permit

1. All UON work associated with an energized electrical power source will require an Electrical Work Permit. The Contractor is required to have a qualified and licensed electrician complete all information required on the Energized Electrical Work Permit.

2. The Contractor is required to coordinate, through the RPR, with Airport Safety for its review and authorization of the Work once the appropriate safe work items and tasks have been verified.

3. The Contractor is required to display the completed and signed-off Energized Electrical Work Permit in the area of Work.

B. Hot Work (Burn) Permit

1. All UON work that involves grinding, welding, or dust-generating tasks will require a Hot Work (Burn) Permit. The Contractor is required to have a qualified supervisor complete all information required on the Hot Work (Burn) Permit.

2. The Contractor is required to coordinate with the Airport's Safety Consultant for its review and authorization of the Work once the Hot Work (Burn) Permit information is deemed accurate.

3. The Contractor is required to display the completed and signed-off Hot Work (Burn) Permit in the area of Work.

C. Sunshine 1 Notification for non-Airport Owned Utility Work

1. The Contractor is required to obtain required Sunshine 1 notifications for all non-Airport owned utility work and submit to the RPR prior to start of the UON. The Contractor is required to display notifications at the area of Work.

3.3. PRIOR TO EXECUTION OF UON WORK

A. Prior to the execution of the Work as outlined in the UON, the Contractor is required to;

1. Ensure that all equipment, tools and materials required for the Work is on site

2. Ensure adequate number of qualified personnel required for the Work is on site
3. Reassess and confirm that the timeframe to conduct the Work is adequate
4. Revisit the UON work plan and trade crew logic to complete the Work
5. Ensure the UON has been approved, and that a signed copy is in hand and displayed at the Work areas
6. When applicable, verify transfer switches go to an alternate power source before the start of the outage

B. Should temporary electrical power be required to execute the Work as outlined in the UON, the Contractor is required to:

1. Ensure the temporary electrical power source or generation unit(s) has been adequately sized to handle the load
2. Ensure the temporary electrical power source or generation unit(s) is on site and ready
3. Ensure its location has been approved by the RPR and Owner
4. Ensure proper conductors to connect the temporary electrical power generation unit(s) and transfer switch(es) are on site
5. Ensure the temporary electrical power source or generation unit(s) has been started, and voltage and rotation verified
6. Ensure sufficient fuel for the temporary electrical power generation unit(s)
7. Ensure a refueling source and spill kit have been set up
8. Ensure a dedicated fire extinguisher is available for the temporary electrical power generation unit(s)
9. Ensure a successful test run of the temporary electrical power generation unit(s) and transfer switch(es) through a complete cycle
10. Ensure that emergency contact information is displayed on the temporary electrical power generation unit(s)
11. Ensure that the temporary electrical power generation unit(s) and transfer switch(es) have been left in their proper configuration

3.4. VERBAL NOTIFICATION PRIOR TO EXECUTION OF UON WORK

A. Prior to the execution of the Work outlined in the UON, the Contractor is required to complete all tasks associated with verbally notifying interested or affected parties. The Contractor is required to complete the *UON Checklist* with the entities listed below:

1. Revisit recipients on Call List

2. Briefly describe the UON work to those on the Call List
3. Contact Maintenance Dispatch / Central Plant on ALL UONs: Phone number to be provided at NTP.
4. Contact Airport Operations Center on ALL UONs: Phone to be provided at NTP
    a. Including assessment of late flight departures and arrivals and/or other potential operational impacts to airlines or airlines use of BHS
5. Contact Airport Operations BHS on ALL UONs: Phone number to be provided at NTP.
6. Contact Airfield Operations on UONs where high-mast lighting is involved or if traffic movement on AOA will be affected: Phone number to be provided at NTP.
7. Contact Communications Center on UONs where Fire Alarm and/or Life Safety systems (including fire doors or suppressions systems) are affected: Phone number to be provided at NTP.
8. Coordinate with Life Safety Department to ensure that proposed UON does not interfere with other previously scheduled work

3.5. EXECUTION OF UON WORK

A. The Contractor is required to ensure that only qualified, and where required, licensed personnel will be performing the Work as described in the UON.

B. For Life Safety- Sprinkler Valves

1. Once a valve is closed, verification from the COMM Center/Airport Operations MUST confirm that the management system has flagged that particular valve in a trouble state and it notes that the valve has been closed.
2. A tag must be affixed to the valve, by the Contractor to include the following information:
    a. Company Name
    b. Technician Closing the Valve
    c. Time and Date of Closure
    d. Contact Information of person closing the valve
    e. Project number
    f. Expected duration (or attach a copy of the UON)
    g. Area affected (or attach copy of the UON)

3.6. POST EXECUTION OF UON WORK

A. After completion of the Work as outlined in the UON, the Contractor is required to have its qualified supervisor;

1. For Life Safety – Sprinkler Valves

    a. Once the valve is put back to its normal position, the COMM Center/Airport Operations must be called to reset the valve—give location

    b. Once the valve is confirmed reset and back to normal, only then can the TAG be removed by the Contractor

    c. If for some reason the Contractor finds an issue with the valve and it cannot be opened, tamper switch malfunctions, leaks, or won't reset, a work order must be submitted immediately for Airport to address.

    d. Contractor CANNOT leave the valve unattended for ANY reason (or leave property) in the closed position without either restoring the valve to its normal operating condition or establishing an RPR-approved, ongoing fire watch.

    e. The Contractor's Project Manager (PM)/Superintendent is responsible to confirm that the system is back to normal before shift's end

    f. In the event of a malfunction in the Tamper Switch which causes the valve to remain in trouble (which would "indicate" still closed) but the valve is actually open, the Contractor's PM/Superintendent MUST call the COMM Center to make sure the trouble is annotated **and** written confirmation that the valve **IS** open

    g. In **NO CASE** shall a sprinkler valve **ever** be disabled electronically on the fire alarm system.

2. Ensure that the Work has been in fact completed as planned

3. Ensure that no tools have been left inside electrical gear/equipment

4. Authorize removal of LOTO items, only after confirming completion of the UON Work, and as described in items 1 and 2 above

5. Ensure posted UON is removed as soon as the Work has been completed

6. Verbally notify all recipients on the Call List, as described in section 3.4, that the UON Work has been completed

7. Ensure that a weekly inspection/test plan is in place and communicate inspection dates to the RPR

8. Notify, in writing, to the RPR, of any and all Code compliant items or other anomalies encountered during the UON Work for resolution

9. Update panel schedules with any new information immediately after the completion of the UON work. The Contractor is hereby notified that a typed panel schedule update, per NEC 408.4, must be in place within seven (7) days of the UON work completion

3.7. FAILURE TO COMPLY

1. The Contractor's adherence to the UON process and procedures herein outlined is critical in ensuring minimal impacts to ongoing airport operations during and after the completion of the Work requiring UONs.

2. Adverse impacts to the Contractor's schedule caused by the Contractor's failure to comply with the process and procedures herein outlined, will require the Contractor to recover the time and any and all associated costs will be borne by the Contractor.

3. Should the Contractor's noncompliance turn symptomatic, the Owner will contract the required resources to complete the UON process and procedures, but the associated costs, if any, will be borne by the Contractor.

END OF SECTION 01 3114.13

SECTION 01 31 19 - PROJECT MEETINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Suplemental Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project meetings, including, but not limited to, the following:

1. Job coordination meetings (JCM's).

2. Pre construction/preinstallation conferences.

1.3 PROGRESS MEETINGS

A. General: Conduct Job Coordination Meetings (JCM's) at the Project Site, or at an alternate location designated by the A/E, Owner or RPR on a bi-weekly basis.

1. The Owner may request additional Job Coordination Meetings or may require the Contractor to increase the frequency of JCM's, to once-a-week, depending upon project progress. Additional meetings or changes in meeting frequency, as directed by the RPR, shall not affect the cost of the original Contract.

B. Attendees: In addition to the Contractor, A/E and RPR (Resident Project Representative), each subcontractor, supplier, or other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented. All participants at the conference shall be familiar with the Project and authorized to conclude matters relating to the Work.

C. Agenda: The RPR will record meeting minutes and update the agenda.

1. Contractor's Construction Schedule: Review progress since the last meeting. Determine where each activity is in relation to the Contractor's Construction Schedule, whether on time or ahead or behind schedule. Discuss whether schedule revisions are required to insure that current and subsequent activities will be completed within the Contract Time.

2. Contractors Look Ahead: Contractor shall present and distribute a fourteen (14) day look ahead schedule during the "Schedule" portion of the meeting.

3. Review the present and future needs of each entity present, including such items as:

a. Interface requirements.
b. Status of permits
c. Time/schedule status/look ahead schedule.
d. Sequences.
e. Deliveries.
f. Off-site fabrication issue.
g. Access.
h. Site utilization.
i. Submittals.
j. Requests for information.
k. Non-compliance notices.
l. Temporary facilities and services.
m. Hours of work.
n. Resource allocation.
o. Hazards and risks.
p. Housekeeping.
q. Quality and work standards.
r. Safety issues.
s. Change orders, Field orders
t. Documentation of information for payment requests.
u. Other pertinent Constrution matter.

D. Reporting: Transcript copies of each meeting will be distributed to each attendee and to those parties who were scheduled but unable to attend.

E. Schedule Updating: Refer to Section 01 32 13, Scheduling of Work.

F. As-Built Documents: Review progress of as-built documents for all disciplines of work. The Contractor and RPR shall coordinate a time to review the as-built documents the same day as the JCM.

1.3 PRECONSTRUCTION/ PREINSTALLATION CONFERENCES

A. General: Where required by the RPR, A/E or by individual specification sections, conduct preconstruction conferences at the Project Site before each construction activity that requires coordination with other construction. Preconstruction or preinstallation conferances will be held after review of shopdrawings is completed and returned to the G.C. by the A/E.

B. Attendees: The Installer and representatives of manufacturers and fabricators involved in or affected by the installation, and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the RPR and A/E of scheduled meeting dates.

1. Review the progress of other construction activities and preparations for the particular activity under consideration at each preconstruction conference, including, but not limited to, the following:

a. Contract Documents.
b. Options.
c. Shop Drawings, Product Data, and quality-control samples.
d. Coordination requirements.
e. Time schedules.
f. Weather limitations.
g. Manufacturer's recommendations.
h. Warranty requirements.
i. Governing regulations.
j. Inspecting and testing requirements.
k. Recording requirements.
l. Protection.
m. Related change notices.
n. Purchases.
o. Deliveries.
p. Possible conflicts.
q. Compatibility problems.
r. Acceptability of substrates.
s. Temporary facilities.
t. Space and access limitations.
u. Safety.
v. Required performance results.

2. Record significant discussions of each conference, and the approved schedule. Promptly distribute a typewritten copy of the record of the meeting to all attendees.

PART 2 – PRODUCTS (Not Applicable)

PART 3 – EXECUTION (Not Applicable)

END OF SECTION 01 31 19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 013213 – SCHEDULING OF WORK

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section provides for the comprehensive depiction, measurement, assessment and reporting of project progress and status pursuant to the sub-articles entitled "Contractor's Construction Schedules" of the General Conditions/Provisions. The Contractor's responsibility shall include scheduling of all work within its contractual scope of work, creation of a Preliminary Schedule, a Baseline Schedule, production of reports, narratives, execution of the plan described by the current accepted schedule, participation in meetings with the RPR, and submission of Progress Schedules and revision data, as set forth herein. Conventional Critical Path Method (CPM) techniques must be utilized to satisfy the requirements of this section.

1.3 DEFINTIONS

A. Activity: A discrete entity of a project schedule that when combined relationally with others develop a network that can be used for planning, scheduling and monitoring of a construction project. Activities contain duration derived from applied resources such as cost, manpower, equipment and material.

1. Critical Activity: An activity that must start and finish as planned.
2. Predecessor Activity: An activity preceding another activity in a network.
3. Successor Activity: An activity succeeding another activity in a network.

B. Critical Path Method (CPM): An analytical process of scheduling activities using formalized procedures such as "forward pass" and "backward pass" establishing the optimum sequence and duration of operation inclusive of the interrelation of the effort required for the timely completion of the project. Forward pass calculations provide the earliest time in which a project can complete providing "early" dates. Backward pass calculations provide the latest time in which a project can complete providing "late" dates.

C. Total Float: The difference between the early and late dates and is the amount of time an activity can be delayed without delaying the overall project completion.

1. Float is not intended for the exclusive use or benefit of either the Owner or Contractor. It is considered jointly owned by both parties and is a resource available as needed to meet the Contract Times.

2. Float suppression techniques such as use of discretionary logic, inflated activity duration and/or lag/lead is prohibited.

D. Critical Path: The longest continuous path of interrelated activities with the least amount of total float establishing the minimum overall duration of the project from the data date to completion.

E. Data Date: The date (and time) by which all progress is captured for a given time period.

F. Work Breakdown Structure (WBS): A hierarchical arrangement that defines the project by phases, deliverables and work packages.

1. WBS shall be the Contractor’s primary means to organize the schedule. The RPR may need to dictate the Contractor’s WBS levels to adhere to the overall program organization.
2. Activity Coding at the PROJECT LEVEL can be used by the Contractor as a secondary means of organizing the schedule but GLOBAL Activity Coding is prohibited.

G. Cost Loading: The allocation of the schedule of values necessary for the completion of an activity as planned. The sum of the costs for all activities must equal the total Contract Price unless otherwise approved by the RPR.

1. Cost Loading, at a minimum, must inherently depict the monthly cash flow derived from the CPM Schedule.

H. Resource Loading: The allocation of manpower, material and equipment necessary for the completion of an activity as planned.

1. Manpower loading must be defined utilizing manhours per activity.

I. Relationship Types: Activity dependency or CPM Schedule logic

1. Finish-to-Start (FS) - A relationship between activities in which the start of a successor activity depends on the finish of its predecessor activity.
2. Start-to-start (SS) - A relationship between activities in which the start of a successor activity depends on the start of its predecessor activity.
3. Finish-to-Finish (FF) - A relationship between activities in which the finish of a successor activity depends on the finish of its predecessor activity.
4. Start-to-Finish (SF) - A relationship between activities in which the finish of a successor activity depends on the start of its predecessor activity. (Rarely used)

J. Open-Ends: Activities without predecessor or successor activities.

K. Dangling Activities: Activities with FF or SF predecessor relationship types (open start) or SS or SF successor relationship types (open finish).

1.4 QUALITY ASSURANCE

A. Scheduling Qualifications: The Contractor must employ a designated Project Scheduler or Scheduling Consultant. This specialist must be experienced in CPM Schedule development,

management and reporting and have a minimum of 5 years' experience with Primavera Scheduling Software, preferably P6, on Projects of similar size and complexity.

1. At any time the OAR may order the Contractor to replace the designated scheduler with another if the current scheduler is deemed unacceptable based on qualifications or performance.

B. Required Computerized CPM Scheduling System: For Projects exceeding $2 million in Contract Price, Oracle Primavera P6 Professional Project Management (P6 PPM) or Oracle Primavera P6 Enterprise Project Portfolio Management (P6 EPPM) must be the computer scheduling software system utilized. For Projects less than $2 million, any other planning software may be employed (e.g. Primavera Contractor, Microsoft Project, etc.) providing the Critical Path can be derived.

C. Schedule Alignment Meeting: Conduct a Prescheduling conference at Project Site to ensure compliance with all requirements within this Section as well as related documents as it relates to CPM Schedule development, management and reporting including but not limited to:

1. Review Planning Software.
2. Verify Scheduling Qualifications.
3. CPM Schedule Organization (WBS) and Detail.
4. Owner / Interface Milestones between concurrent or other Projects.
5. Review time required for Owner / OAR activity such as submittal review, testing and inspecting, commissioning, training and closeout.
6. Updating Procedures.
7. Activity ID Coding and File Nomenclature and submission.
8. Coordination and time commitments for subcontractors and all other entities involved.

1.5 SUBMITTALS

A. Submit the following in accordance with the General Conditions of the Contract for Construction (00 72 13).

B. Format: Submit required submittals via email unless directed otherwise by the RPR in the following format:

1. Working P6 electronic (XER) file with the following File Naming Structure indicative of Bid Package Number, Data Date and file extension:

   a. BP-###_DD=dd-mmm-yy.xer(mpp)

2. PDF files for Detailed (All Activities) CPM Schedule and Longest Path with the following Title Block information (use Header and/or Footer):

   a. Contractor's Name
   b. Owner's Bid Package Number & Project Name
   c. Schedule Type (e.g. "Detailed Schedule", "Longest Path", etc.)
   d. Data Date

e. Run Date
f. File Name
g. Symbol Legend
h. P6 Project ID
i. Layout & Filter Name

PART 2 - PRODUCTS

2.1 CONTRACTOR'S PROJECT SCHEDULES

A. Produce the following Construction Schedules in accordance with the General Conditions of the Contract for Construction (00 72 13).

1. Preliminary Schedule
2. Baseline Schedule
3. Progress Schedules

B. Produce the following Schedules as required and in accordance with the General Conditions of the Contract for Construction (00 72 13) as applicable.

1. Recovery Schedules

a. If at any time the Contractor's Progress Schedule indicates the project is two or more weeks (14 calendar days) behind any current contractual completion date(s), the Contractor must first submit both a graphic (Longest Path) and written (narrative) report measuring the extent of the delay regardless of assumed causation and then a separate Recovery Schedule indicating means by which the Contractor intends to regain schedule compliance.

2. Job Coordination Meeting (JCM) Look-Ahead Schedules

a. With each monthly Progress Schedule, the Contractor must develop a Four Week Look-Ahead Schedule derived from the update indicating one week of As-Built progress prior to the Data Date and four weeks of As-Planned progress beyond the Data Date. It is intended that this document shall serve as the working schedule document at the JCM to ascertain incremental weekly progress until the following monthly Progress Schedule is updated. If at the discretion of the RPR this document becomes unusable due to out of sequence progress or for other reasons such that the incremental weekly progress cannot be ascertained, the Contractor must implement weekly updates until the RPR is satisfied that the progress is being accurately depicted.
b. Look-Ahead Schedules must be submitted in colored .pdf format via email to the OAR at least 48 hours prior to the JCM.

3. Delay Claim Entitlement Schedules

a. If at the Contractor's discretion a delay beyond the Contractors control is encountered and after the Contractor has made every effort and reasonable attempt to mitigate the impacts of the delay without additional costs to the Owner or disruption to the project, a request for additional time may be requested. All requests for extensions of time must be submitted within the confines of the Contract and accompanied by a reputable delay analysis technique and narrative. Time extensions shall only be granted if the delay is excusable and impacts the critical path of the project at the time of the delay.

4. As-Built Schedules

a. After all Contract work items are complete, and prior to final payment, the Contractor shall submit the final Progress Schedule that will be called the "As-Built" Schedule, showing actual start and actual finish dates for all schedule activities and milestones.

5. Early Completion Schedules

a. The contract completion date shall not be changed by submission of a schedule that shows an early completion unless specifically authorized by RPR Change Order.

2.2 CONTRACTOR'S SCHEDULE NARRATIVES

A. Any and all Project Schedules (e.g. Preliminary, Baseline, Progress, Recovery and/or Request for Time Extension) shall be submitted with an accompanying narrative explaining the schedule consistent with its purpose.

2.3 MONTHLY REPORTS

A. Summary Level Schedules, Cash Flow Curves and physical percent complete based on manpower analysis derived from the monthly Progress Schedule must accompany the Contractor's Monthly Reports.

PART 3 - EXECUTION

3.1 SCHEDULE REQUIREMENTS

A. Activity Types: In addition to construction activities, the CPM Schedules shall include other individual activities and milestones as applicable:

1. Contractual milestones, such as Notice to Proceed, Substantial Completion, Certificate of Occupancy, Final Completion or any other Contract milestones.
2. Design deliverables and milestones as applicable.
3. Permitting Activities as applicable.

4. Procurement Activities such as: subcontractor scope review and buyout, submittal and shop drawing preparation, submittal approval, release and order of material and equipment, material and equipment fabrication and delivery.
5. Interim Contractor's milestones as applicable.
6. All Utility Outage Notifications (UON's) as required.
7. Owner Activities such as Owner Furnished Contractor Installed (OFCI), Owner Furnished and Owner installed (OFOI), Tenant move-out and occupancy, swing space and Owner required utility payments or any other Owner activity that may affect schedule.
8. Completion Activities such as Commissioning, testing, turnover, training, Contractor and RPR punch and final inspections by system.

B. The RPR may identify additional interfaces during the course of the Work and the Contractor will incorporate these in the Progress Schedule as required. No composite activities allowed. The CPM Schedules must break out all activities into their respective trades. At a minimum, at least one construction activity and one procurement string must be identified in the CPM Schedules for each subcontractor on the project as applicable.

C. Activity ID's: The Contractor's CPM Schedule shall contain an intelligent activity identification coding system that must include the Project Number (C19-2811) as a prefix to all Activity ID's in the schedule. If activities are deleted from the schedule after the Baseline has been accepted, the Contractor must log these occurrences and submit this information to the RPR consistent with the schedule submission inclusive of the activity deletions. It is recommended that the Contractor include this information with the accompanying schedule narrative. Duplication of Activity ID's with differing activity descriptions is prohibited.

D. Activity Duration: With exception to the Preliminary Schedule, the duration for each activity shall be based on manpower assignment and production rates estimated in work days and may not exceed 20 days except for:

1. Procurement Activities such as fabrication or lead time. Procurement activity strings must include separate activities for submittal preparation, approval, release and order, fabricate and delivery. Any procurement activity requiring duration greater than 60 days must be explained by the Contractor before accepted into the CPM Schedules by the RPR relationship types shall be utilized to show activity dependence. At a minimum, each activity shall have one FS or SS predecessor and one FS or FF successor with the exception of the first and last activities in the network such that no other activities shall be open-ended or dangling.

E. Lags and Leads: The use of lags or leads between activities is not encouraged. Instead, it is preferable to use an activity to represent the time lapse between two activities. The use of negative lags is prohibited.

F. Date Constraints: The use of constraints is not encouraged but at times necessary especially considering internal Owner operation and external Owner projects that may be occurring simultaneously with inter-project dependency. Any use of constraints must be explained by the Contractor consistent with the schedule submission inclusive of the constraint(s). Depending on the type of constraint(s) used and where the constraint(s) are applied may lead to suspect

schedule calculations specifically related to total float. It is the responsibility of the Contractor to verify the accuracy of the schedule calculations derived from the use of constraints.

G. Calendars: With the sole exception of the required Global Resource Calendar, all calendars must be represented on the Project Level and shall not inherit holidays or exceptions derived from their originating Global Calendar. Any other use of Global Calendars is prohibited. Any schedule submitted with Global Calendars will be rejected and not accepted until remedied. It is recommended that the Contractor develop the following Project Calendars with the following labels:

1. CXX-XXXX: 5 Day-8hrs/day (with 7 standard holidays) depicting the standard work week (M-F) with Saturday, Sundays and the Standard Holidays represented as non-work days. Standard holidays include: New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving Day and Friday after and Christmas Day.

    a. Assign this calendar to all Contractors' general work activities.
    b. Assign this calendar to all Owner activity.

    CXX-XXXX: 7 Day-8hrs/day (All Days) depicting all days containing no holidays or non-work days.

    a. Assign this calendar to all Summary or Level of Effort Activities.
    b. b. Assign this calendar to Contractual Milestones.

H. Other Project Calendars may be used as needed by the Contractor on a case by case basis but in each case, supporting documentation explaining its use must be submitted to the OAR for acceptance. All Project Calendars detailed work hours by work day must be set to 8:00am-12:00pm and from 1:00pm-5pm with 12:00pm-1:00pm represented as a non-work hour such that each work day is representative of 8 hours unless approved otherwise by the RPR.

I. Activity Coding: The Contractor must utilize WBS to organize the CPM Schedules. Prior to and part of the RPR's Baseline Schedule acceptance, the Contractor must provide the RPR their proposed WBS for OAR approval.

J. Data Dates: The Data Date shall be controlled by the RPR so that all Contractors are using the exact same dates each month consistent with the Owner's overall program. The Owner shall provide the Contractor reporting calendar information where monthly update Data Dates will be specified.

3.2 CONTRACT MODIFICATIONS

A. For each proposed contract modification and concurrent with its submission, the Contractor shall prepare a delay analysis demonstrating the impact of the proposed change on the overall project schedule or interim contract milestone(s) if applicable. If said change is approved by the RPR, the Contractor shall incorporate the contract modification into the Progress Schedules for the period in which the change was issued.

3.3 SCHEDULE CALCULATIONS AND DIAGNOSTICS

A. Multiple Project Schedules will be maintained within the RPR's scheduling system. As such, all schedule data submitted by the Contractor must be submitted on the Project Level. No Global data shall be accepted unless specified otherwise herein.

B. Schedule Calculations and Settings:

1. Maintain open-ended activities as non-critical.
2. All project schedule files shall be updated with actual progress using retained logic prior to submission. Progress override is prohibited.
3. Start-to-Start lag shall be calculated from Early Start.
4. Define critical activities as Longest Path providing it is a continuous path emanating from the Data Date to project completion. Otherwise, use total float less than or equal to zero days.
5. Compute total float as finish float.
6. Relationship Lag shall be calculated based on the Predecessor Activity Calendar.
7. Use Remaining Duration to ascertain activity progress and not percent complete.

C. Schedule Diagnostics: All Project Schedules shall be calculated and analyzed then corrected for all open ended and dangling activities, out of sequence progress and associated schedule corrections as applicable. No activities shall be progressed beyond the Data Date.

3.4 SPECIAL SCHEDULE REPORTS

A. At times and within reason, the RPR may direct the Contractor to develop special reports as needed.

END OF SECTION 01 32 13

SECTION 01 32 23 – FIELD ENGINEERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

B. See Civil specification for additional field engineering requirements.

1.2 SUMMARY

A. General: This Section specifies administrative and procedural requirements for field-engineering services including, but not limited to, the following:

1. Land survey work.
2. Building Layout
3. As-Built documentation

1.3 SUBMITTALS

A. Certificates: Submit a certificate signed by the land surveyor or professional engineer certifying the location and elevation of improvements.

B. Final Property Survey and As-Built documentation Survey: Submit 2 paper copies, 1 mylar and and CD/DVD of AutoCAD & PDF files of the final property survey (42"x30" format).

1.4 QUALITY ASSURANCE

A. Surveyor Qualifications: Engage a land surveyor registered in the State of Florida to perform required land-surveying services.

B. Engineer Qualifications: Engage an engineer of the discipline required, licensed in the State of Florida to perform required engineering services.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Identification: The Contractor will be required to establish its own Project control points.

B. Verify layout information shown on the Drawings, in relation to the property survey and existing benchmarks, before proceeding to lay out the Work. Locate and protect existing benchmarks and control points. Preserve permanent reference points during construction.

1. Do not change or relocate benchmarks or control points without prior written approval of the RPR. Promptly report lost or destroyed reference points or requirements to relocate reference points because of necessary changes in grades or locations.

2. Promptly replace lost or destroyed Project control points utilizing the original survey control points.

C. Establish and maintain a minimum of 2 permanent benchmarks on the site, referenced to data established by survey control points.

1. Record benchmark locations, with horizontal and vertical data, on Project As-Built Documents.

D. Existing Utilities and Equipment: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities and other construction.

1. Prior to construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping. Document the information on the As-Built Documents.

3.2 PERFORMANCE

A. Work from lines and levels established by the contract documents. Establish benchmarks and markers to set lines and levels at each story of construction and elsewhere as needed to locate each element of the Project. Calculate and measure required dimensions within indicated or recognized tolerances. Do not scale Drawings to determine dimensions.

1. Advise entities engaged in construction activities of marked lines and levels provided for their use.

2. As construction proceeds, check every major element for line, level, and plumb.

B. Surveyor's Log: Maintain a surveyor's log of control and other survey work. Make this log available for reference to the RPR and the Designer.

1. Record deviations from required lines and levels, and advise the RPR when deviations that exceed indicated or recognized tolerances are detected. On Project As-Built Drawings, record deviations that are accepted and not corrected.

C. Site Improvements: Locate and lay out site improvements, including pavements, stakes for grading, fill and topsoil placement, utility slopes, and invert elevations.

D. Building Lines and Levels: Locate and lay out batter boards for structures, building foundations, column grids and locations, floor levels, and control lines and levels required for mechanical and electrical work.

E. Existing Utilities: Furnish information necessary to adjust, move, or relocate existing structures, utility poles, lines, services, or other appurtenances located in or affected by construction. Coordinate with the appropriate Utility and the local Authorities Having Jurisdiction.

F. As-Built Documents: All concealed and underground utilities, equipment, foundations or other permanent conditions shall be surveyed and documented on the As-Built Documents. This includes all discovered conditions. All shall be tied to permanent benchmarks showing horizontal and vertical data. GPS coordinates are to be provided for all beginning/end points and changes in direction. See Project Close-out 017800 for all As-built requirements.

1. Recording: At Substantial Completion, have the final property survey recorded by or with local governing authorities as the official "property survey."

END OF SECTION 01 32 23

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 32 33 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes: construction video

1.3 SUBMITTALS

A. Submit two Recordable Discs (CD-R, DVD ± R) of the entire construction site prior to the commencement of any work. Video format shall be compatible with the latest release of Windows Media Player. The discs shall be reviewed and approved by the RPR prior to the commencement of construction activity.

B. Submit two recordable discs (CD-R, DVD+R) of monthly status aerial photo of overall site/construction building

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 PRE-CONSTRUCTION RECORDABLE DISCS

A. Before starting construction, record video of the site and surrounding properties from different points of view as selected by the RPE and A/E.. Record pre-existing conditions of the site and abutting properties obtained from several perspectives. Provide narrative describing the vantage point and area being recorded.

1. Take videos in sufficient number to show existing conditions adjacent to the property before starting work.

2. Take videos of existing improvement adjoining the property in sufficient detail to record accurately the physical conditions at the start of construction.

END OF SECTION 01 32 33

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY:

A. Section includes administrative and procedural requirements for submittal of Shop Drawings, Product Data and Samples to verify that products, materials and systems proposed for use comply with provisions of the Contract Documents.

B. Shop Drawings include, but are not limited to, the following:

1. Fabrication Drawings.
2. Installation Drawings.
3. Setting diagrams.
4. Shop-work manufacturing instructions.
5. Templates and patterns.
6. Schedules.
7. Design mix formulas.
8. Coordination Drawings.

C. Product Data include, but are not limited to, the following:

1. Manufacturer's product Specifications.
2. Manufacturer's installation instructions.
3. Standard color charts.
4. Catalog cuts.
5. Roughing-in diagrams and templates.
6. Standard wiring diagrams.
7. Printed performance curves.
8. Operational range diagrams.
9. Mill reports.
10. Standard product operating and maintenance manuals.
11. Safety Data Sheets (SDS) Previously MSDS.

D. Samples include, but are not limited to, the following:

1. Partial Sections of manufactured or fabricated components.
2. Small cuts or containers of materials.
3. Complete units of repetitively-used materials.
4. Swatches showing color, texture and pattern.
5. Color range sets.
6. Components used for independent inspection and testing.

E. Administrative Submittals: Refer to other Division 1 Sections and other Contract Documents for requirements for administrative submittals. Such submittals include, but are not limited to:

1. Schedule of Submittals
2. Permits.
3. Applications for payment.
4. Performance and payment bonds.
5. Insurance certificates.
6. Listing of subcontractors.
7. Contractor's construction schedule.
8. Progress Schedules
9. Progress reports.

1.3 SUBMITTAL PROCEDURES:

A. Coordination: Coordinate preparation and processing of submittals with performance of the Work.

1. Contractor shall submit Schedule of Submittal to the RPR, ten days after NTP.
2. Contractor shall review submittals before submitting to the RPR (Resident Project Representative). Transmit each submittal to the RPR sufficiently in advance of scheduled performance of related construction activities to avoid delay, but in no case later than thirty (30) days after the Notice to Proceed. If any submittals will be delayed, inform the RPR in writing giving reasons for the delay and a revised submittal schedule. Delays will be subject to RPR's approval. No extension of time will be authorized because of a Contractor's failure to transmit submittals to the RPR sufficiently in advance of the Work to permit processing.
3. The RPR and A/E will review all Administrative Submittals. The RPR will review all other submittals for conformance with the Contract Documents prior forwarding the submittals to the A/E.
4. Request for payment of stored materials will not be considered until submittals have been received and approved by the RPR.
5. Transmit submittals to the RPR to prevent delays. The Contractor is responsible for delays accruing directly or indirectly from submission or resubmission of submittal date.
6. Coordinate each submittal with other submittals and related activities that require sequential activity including:

   a. Testing.
   b. Purchasing.
   c. Fabrication.
   d. Delivery.

7. Coordinate transmittal of different types of submittals for the same element of the Work and different elements of related parts of the Work so that processing will not

be delayed by the RPR's and A/E's need to review submittals concurrently for coordination.

a. The RPR and A/E reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are delivered to the RPR and A/E.

8. Processing: Allow sufficient review time so that installation will not be delayed as a result of the time required to process submittals, including time for re-submittals.

a. Allow Fourteen (14) days for the RPR and A/E's initial review of each submittal. Where processing must be delayed to permit coordination with subsequent submittals, allow additional time. The RPR will advise the Contractor promptly when a submittal being processed must be delayed for coordination.
b. Where necessary to provide an intermediate submittal between the initial and final submittals, process the intermediate submittal in the same manner as the initial submittal. Allow fourteen (14) days for reprocessing each submittal.
c. No extension of time will be authorized because of a Contractor's failure to transmit submittals to the RPR sufficiently in advance of the Work to permit processing.

B. Submittal Preparation - Division 2 through 49: Place a permanent label or title block on each submittal for identification, and submit the information in Submittal Binders. The Contractor has the option to provide Submittals in electronic (PDF) format for the Contractor's own uses, but if hard copies are submitted the specified number of hard copy submittals shall be met. PDF files will be required for all O&M and Close-out documents. The PDF file shall be enabled for Adobe Reader's Comment and Markup functionality. All stamps and markings described herein shall be electronically duplicated or added before scanning. The PDF files shall be transmitted / uploaded to an agreed to Cloud Share file service to the RPR.

1. Binders shall be identified using CSI Divisions and Classification of work, as follows:

a. Architectural- (Divisions 02-15) White
b. Mechanical- (Divisions 21-23) Green or Red
c. Electrical – Power (Divisions 25-26) Black
d. Electrical – Systems (Divisions 27-28) Blue
e. Civil - (Divisions 31-35) Yellow

2. Place a permanent label or title block on each submittal for information.
3. Indicate the name of the firm or entity that prepared each submittal on the label or title block.
4. Provide a space approximately 4 inches by 5 inches on the label or adjacent to the title block to record the Contractor's review and approval markings and the action taken by the RPR and Designer.
5. Include the following information on the label for processing and recording action taken.

a. Project name.
b. Date.
c. Name and address of RPR.
d. Name and address of A/E.
e. Name and address of Contractor.
f. Name and address of subcontractor.
g. Name and address of supplier.
h. Name of manufacturer.
i. Number and title of appropriate Specification Section.
j. Drawing number and detail references, as appropriate.
k. Similar definitive information as necessary.

6. Stamp each page (sheet) of the submittal with the Contractor's certification statement, or other approval statement, as follows:

"I hereby certify that the (equipment) (material) (article) shown and marked in this submittal is that proposed to be incorporated in the work, is in compliance with the Contract Documents, can be installed in the allocated spaces, and is submitted for review by the RPR and A/E.

Certified by Submittal Reviewer_____. Date:_____"

a. Sign the certifying statement or approval statement. The signatures shall be in original ink. Stamped or photocopied signatures are not acceptable.

7. Provide additional tabs (blank sections) in each manual for future submittals.

C. Submittal Transmittal: Package each submittal appropriately for transmittal and handling. Transmit each submittal from Contractor to RPR, as indicated, by use of a transmittal form. Submittals received from sources other than the Contractor will be returned to the sender without action. Electronic transmittals must have descriptive subject lines for ease of retrieval. The transmittal form should be the first page in the attached PDF.

1. Record relevant information and requests for data on the transmittal form. On the form, or an attached separate sheet, call attention to deviations from requirements of the Contract Documents, including minor variations and limitations.
2. Include the Contractor's signed certification stating that information submitted complies with requirements of the Contract Documents.
3. Prepare a draft of a transmittal form and submit it to the OAR review and acceptance. Provide places on the form for the following information:

a. Project name.
b. Date.
c. Destination (To:).
d. Source (From:).

e. Names of subcontractor, manufacturer and supplier.
f. Category and type of submittal.
g. Submittal purpose and description.
h. Submittal and transmittal distribution record.
i. Remarks.
j. Signature of transmitter.

1.4 COST OF HARD COPY SUBMITTALS: IF REQUIRED BY OWNER:

1. The contractor shall pay delivery and return, postage, expedited service delivery FEDX, UPS and or Courier services if Hard copy submittals is the selected method of review of submittals.

1.5 SPECIFIC SUBMITTAL REQUIREMENTS:

A. Shop Drawings: Submit newly prepared information, drawn to accurate scale. **DO NOT REPRODUCE CONTRACT DOCUMENTS OR COPY STANDARD PRINTED INFORMATION AS THE BASIS OF SHOP DRAWINGS. USE OF DRAWINGS WITH THE ARCHITECTS NAME AND OR A/E BORDER SHEET IS PROHIBETED.**

1. Include the following information on Shop Drawings:

   a. Dimensions.
   b. Identification of products and materials included.
   c. Compliance with specified standards.
   d. Notation of coordination requirements.
   e. Notation of dimensions established by field measurement.
2. Submit Coordination Drawings where required for integration of different construction elements. Show construction sequences and relationships of separate components where necessary to avoid conflicts in utilization of the space available.
3. The Contractor shall prepare drawings to LOD 400 or greater Per AIA G202-2013.
4. Encircle, identify with arrow, or otherwise indicate deviations from the Contract Documents on the Shop Drawings.

   a. DO NOT USE COLORED HIGHLIGHTERS TO INDICATE SELECTIONS.

5. Do not allow Shop Drawing copies which do not have an appropriate final stamp or other marking indicating action taken by the General Contractor, RPR and A/E to be used for construction.
6. Except for templates, patterns and similar full-size Drawings, submit Shop Drawings on sheets at least 8-1/2" x 11" but no larger than 30" x 42". Shop drawings submitted as PDF files shall be *generated full size of the original and not scale to fit.*
7. Submittals may be in electronic format or if submitting in paper format, submit a sufficient number of copies to enable the County, A/E and the RPR to retain 4 copies of each required Product Data submittal; submit two (2) additional copies where copies are required for operating and maintenance manuals. The RPR will return the other marked copies with the action taken and corrections or

modifications required. One (1) print of each drawing larger than 11” x 17” for review will be returned to the Contractor.

8. Leave a blank area, approximately 4 inches by 2.5 inches, near the title block for the RPR’s and A/E ’s review stamp in print.

B. Product Data: Collect Product Data into a single submittal for each element of construction or system.

1. Encircle, identify with arrow, each copy to show which choices and options are applicable to the Project.

   a. Do not use colored highlights to indicate selection.

2. Where Product Data has been printed to include information on several similar products, some of which are not required for use on the Project, or are not included in this submittal, mark copies to clearly indicate which information is applicable.

3. Where Product Data must be specially prepared for required products, materials or systems, because standard printed data are not suitable for use, submit as "Shop Drawings" not “Product Data."

4. Include the following information in Product Data:

   a. Manufacturer's printed recommendations.
   b. Compliance with recognized trade association standards.
   c. Compliance with recognized testing agency standards.
   d. Application of testing agency labels and seals.
   e. Notation of dimensions verified by field measurement.
   f. Notation of coordination requirements.

5. Do not submit Product Data until compliance with requirements of the Contract Documents has been confirmed.

6. Submittals may be in electronic format or if submitting in paper format, submit a sufficient number of copies to enable the County and the RPR to retain 4 copies of each required Product Data submittal; submit two (2) additional copies where copies are required for operating and maintenance manuals. The RPR will return the other marked copies with the action taken and corrections or modifications required.

   a. Unless the RPR and or A/E observes noncompliance with provisions of the Contract Documents or requires re-submittal for other reasons, the initial submittal may serve as the final submittal.

7. Furnish copies of final Product Data submittal to manufacturers, subcontractors, suppliers, fabricators, installers, governing authorities and others as required for performance of the construction activities. Show distribution on transmittal forms.

a. Do not proceed with installation of materials, products and systems until a copy of Product Data applicable to the installation is in the installer's possession.
b. Do not permit use of unmarked copies of Product Data in connection with construction.

C. Samples: Submit Samples physically identical with the material or product proposed for use; submit full-size, fully fabricated Samples, cured and finished in the manner specified.

1. Mount, display, or package Samples in the manner specified to facilitate review of qualities indicated. Prepare Samples to match Designers' Sample where so indicated. Include the following information:

a. Generic description of the Sample.
b. Size limitations.
c. Sample source.
d. Product name or name of manufacturer.
e. Compliance with recognized standards.
f. Compliance with governing regulations.
g. Availability.
h. Delivery time.

2. Submit three samples (sets); one set will be returned marked with the action taken. The RPR and A/E will each retain copies.

D. Operating and Maintenance Manuals: Operating and maintenance manuals shall be initially submitted for review at the appropriate 30 percent completion stage of Work under these Sections. The manuals will be reviewed and returned to the Contractor. Corrections shall be made before submittal of the manuals at Project Close-out.

E. In order to facilitate review of product data and shop drawings, they shall be noted, indicating by cross reference the contract drawing sheet number, note, and specification paragraph numbers, where and what item(s) are used for and where item(s) occur in the contract documents.

1.6 RPR AND OR A/E(S) ACTION:

A. Except for submittals for the record, for information and similar purposes, where action and return on submittals is required or requested, the RPR and A/E will review each submittal, mark with appropriate "action," and where possible return within fourteen (14) days of receipt. Where the submittal must be held for coordination the RPR will so advise the Contractor without delay.

1. Compliance with specified characteristics is the Contractor's responsibility, and not considered part of the RPR or A/E review and indication of action taken.

B. The RPR and or A/E will stamp each submittal sheet or page to be returned with a uniform, self explanatory action stamp appropriately marked and executed to indicate whether the submittal returned is for unrestricted use (no exceptions taken), final-but-restricted use (as marked), must be revised and resubmitted (use not permitted), or without action (as explained on the transmittal form), or other similar type wording.

C. The RPR's and or A/E's review of submittals is for design conformity and general conformance of the contract documents only and does not relieve the Contractor from responsibility for any deviations from the requirements of the Contract Documents. The RPR and or A/E's review shall not be construed as a complete check nor shall it relieve the Contractor from responsibility for errors of any sort in shop drawings or schedules, of from the necessity of furnishing any work required by the Contract Documents which may have been omitted on the shop drawings. The RPR and or A/Es' review of a separate item shall not indicate review of the complete assembly in which it functions.

1.7 SUBMITTAL BROCHURE BINDERS: Applicable only to hard copy submittals.

A. Brochure Binders: 3-ring, vinyl covered, with clear view insert type cover and spine.

1. Binder Size: 8.5 x 11.0 inches x size (spine) adequate to easily contain the required submittals. Minimum spine size shall be 1-inch, maximum shall be 3-inches. Provide additional binders if the 3-inch size is not sufficient to properly contain submittals.
2. Binder Cover: Binders shall have a clear view, vinyl pocket on the front cover, adequate to hold an 8.5 inch by 11 inch description sheet. The binder shall have a clear view, vinyl spine pocket adequate to hold an 11 inch long description sheet.

B. Binder Contents: Include the following.

1. Cover sheet; cover sheet shall be white with black letters, minimum 11-inches high and full width of spine pocket. See "EXAMPLES" included at end of this Section.
2. First page shall be a copy of the Specification table of contents.
3. Second page shall be a list of project addresses (see "EXAMPLE").
4. Third page shall be Project information (see "EXAMPLE").
5. Provide reinforced separation sheets tabbed with appropriate specification reference number.
6. Product data sheets.
7. Shop drawings.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 SCHEDULE OF SUBMITTALS DESCRIPTION (SD) AND SUBMITTAL REGISTER

A. General: The following is a description of each submittal type, specified in other Sections, required for the Project. Include each submittal description (SD) in the Submittal Register included as part of this Section.

1. SD-01: Product Data; submittals that provide calculations, descriptions or other documentation regarding the work.
2. SD-02: Manufacturer's Catalog Data (Product Data); data composed of information sheets, brochures, circulars, specifications and product data, and printed information in sufficient detail and scope to verify compliance with requirements of the Contract Documents.
3. SD-03: Manufacturer's Standard Color Charts (Product Data); preprinted illustrations displaying choices of color and finish for a material or product.
4. SD-04: Shop Drawings; graphic representations which illustrate relationship of various components of the work, schematic diagrams of systems, details of fabrications, layout of particular elements, connections, and other relational aspects of the work.
5. SD-05: Design Data (Shop Drawings); design calculations, mix designs, analyses, or other data written and pertaining to a part of the work.
6. SD-06: Instructions (Product Data); preprinted material describing installation of a product, system, or material, including special notices and Material Safety Data Sheets, if any, concerning impedance, hazards, and safety precautions.
7. SD-07: Schedules (Shop Drawings); a tabular list of data or a tabular listing of locations, features, or other pertinent information regarding products, materials, equipment, or components to be used in the work.
8. SD-08: Statements (Shop Drawings); a document, required of the Contractor, or through the Contractor by way of a supplier, installer, manufacturer, or other lower tier contractor, the purpose of which is to further the quality or orderly progression of a portion of the work by documenting procedures, acceptability of methods or personnel, qualifications, or other verification of quality.
9. SD-09: Reports (Product Data); reports of inspection and laboratory tests, including analysis, an interpretation of test results. Each report shall be properly identified. Test methods used and compliance with recognized test standards shall be described.
10. SD-10: Test Reports (Product Data); a report signed by an authorized official of a testing laboratory that a material, product, or system identical to the material, product or system to be provided has been tested in accordance with requirements specified by naming the test method and material. The test report must state the test was performed in accordance with the test requirements; state the test results; and indicate whether the material, product, or system has passed or failed the test. Testing must have been within three years of the date of award of this Contract.
11. SD-11: Factory Test Reports (Shop Drawings); a written report which includes the findings of a test required to be performed by the Contractor or an actual portion of the work or prototype prepared for this project before it is shipped to the job site. The report must be signed by an authorized official of a testing laboratory and must state the test was performed in accordance with the test requirements; state the test results; and indicate whether the material, product, or system has passed or failed the test.

12. SD-12: Field Test Reports (Shop Drawings); a written report which includes the findings of a test made at the job site, in the vicinity of the job site, or on a sample taken from the job site, on a portion of the work, during or after installation. The report must be signed by an authorized official of a testing laboratory or agency and must state the test was performed in accordance with the test requirements; state the test results; and indicate whether the material, product, or system has passed or failed the test.
13. SD-13: Certificates (Shop Drawings); statements signed by responsible officials of a manufacturer of a product, system, or material attesting that the product, system, or material meet specified requirements. The statements must be dated after the award of this contract, name the project, and list the specific requirements which it is intended to address.
14. SD-14: Warranties (Product Data); statements signed by responsible officials of a manufacturer of a product, system, or material attesting that the product, system, or material will perform its specific function over a specified duration of time. The statement must be dated, and include the name of the project, the Owner's name, and other pertinent data relating to the warranty.
15. SD-15: Samples; samples, including both fabricated and non-fabricated physical examples of materials, products, and units of work as complete units or as portions of units of work.
16. SD-16: Color Selection Samples (Samples); samples of the available choice of colors, textures, and finishes of a product or material, presented over substrates identical in texture to that proposed for the work.
17. SD-17: Sample Panels (Samples); an assembly constructed at the project site in a location acceptable to the RPR and using materials and methods to be employed in the work; completely finished; maintained during construction; and removed at the conclusion of the work or when authorized by the RPR. A type of sample.
18. SD-18: Sample Installations (Samples); a portion of an assembly or material constructed where directed and, if approved, retained as a part of the work.
19. SD-19: Records; documentation to ensure compliance with an administrative requirement or to establish an administrative mechanism.
20. SD-20: Operating and Maintenance Manuals (Records); data intended to be incorporated in an Operating and Maintenance Manual
21. SD-21: Test Reports of Existing Conditions; a document describing existing conditions and operations of systems and components prior to the start of any work. Testing shall be held in the presence of the RPR and A/E. Provide copies of the test reports to the RPR and A/E.
22. SD-22: Demonstrations; physical operation of equipment and systems by factory authorized representatives to demonstrate to the Owner's facility personnel proper operation of systems. Provide all required documentation that certified completed demonstration.
23. SD-23: As-Built Drawings; delineated documentation accurately depicting final installation location of components and systems of the building.
24. SD-24: Shop Drawings in Electronic format; when drawings are required all materials shall be provided in AUTOCAD latest release and PDF on a CD/DVD.

25. SD-25: Coordination Drawings; special type of Shop Drawing that show the relationship and integration of different construction elements that require close and careful coordination during fabrication or during installation to fit in the restricted space provided or to function as intended.
26. SD-26: Certification of Approved Disposal of Hazardous Materials; certification signed by the Contractor indicating legal disposal of hazardous materials.
27. SD-27: CD/DVD Training Tape; taped training instructions to be used by the Owner's personnel.
28. SD-28: Spare Parts Memo; a listing of spare parts required; refer to Section 01 70 00 Execution and Closeout Requirements.
29. SD-29: UL Letter of Finding; a document from Underwriters Laboratories Inc., attesting compliance with UL's standard for connection to an existing lightning protection system; a document from Underwriters Laboratories Inc., attesting compliance with UL's standard for UL Master Label.
30. SD-30: Equipment Check-Out Memos; document signed by the manufacturer's authorized representative stating that equipment has been installed and is operating in accordance with the manufacturer's specifications; refer to Section 01 70 00 Execution and Closeout Requirements.

B. Submittal Register: The Contractor is to maintain an accurate updated submittal register and will bring this register to each scheduled JCM with the RPR and the A/E. This register should include the following items:

1. Submittal-Description and Number assigned.
2. Date to RPR
3. Date to A/E.
4. Date returned to RPR from A/E.
5. Date returned to Contractor from A/E.
6. Submittal Status.
7. Date of Re-submittal and Return (as applicable).
8. Date material released (for fabrication).
9. Projected date of fabrication.
10. Projected date of delivery to site.
11. Status of submittal.

END OF SECTION 01 3323

SECTION 01 42 00 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic contract definitions are included in the Conditions of the Contract.

B. "Approved": The term "approved," when used in conjunction with the RPR’s or A/E(s) action on the Contractor's submittals, applications, and requests, is limited to the RPR's or Designer duties and responsibilities as stated in the Conditions of the Contract.

C. "Directed": Terms such as "directed," "requested," "authorized," "selected," "approved," "required," and "permitted" mean directed by the RPR, requested by the RPR, and similar phrases.

D. "Furnish": The term "furnish" means to supply and deliver to the Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

E. "Indicated": The term "indicated" refers to graphic representations, notes, or schedules on the Drawings; or to other paragraphs or schedules in the Specifications and similar requirements in the Contract Documents. Terms such as "shown," "noted", "scheduled," and "specified" are used to help the user locate the reference. Location is not limited.

F. "Install": The term "install" describes operations at the Project site including the actual unloading, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

G. "Installer": An installer is the Contractor or another entity engaged by the Contractor, either as an employee, subcontractor, or contractor of lower tier, who performs a particular activity including installation, erection, application, or similar operations. Installers are required to be experienced in the operations they are engaged to perform.

H. “Manufacturer”: The manufacturer is the individual entity with responsibility for and control of the assembly of the major components.

I. "Project site" is the space available to the Contractor for performing installation activities, either exclusively or in conjunction with others performing work as part of the Project. The extent of the Project site is shown on the Drawings.

J. "Provide": The term "provide" means to furnish and install, complete and ready for the intended use.

K. "Regulations": The term "regulations" includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the industry that control performance of the Work.

1. The term "experienced," when used with the term "installer," means having successfully completed a minimum of 5 previous projects similar in size and scope to this Project; being familiar with the special requirements indicated; and having complied with requirements of authorities having jurisdiction.

L. "Testing Agencies": A testing agency is an independent entity engaged by the Owner, to perform specific inspections or tests, either at the Project site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

1.3 SPECIFICATION FORMAT AND CONTENT EXPLANATION

A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's 48-division "MasterFormat" system.

B. Specification Content: These Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be interpolated as the sense requires. Singular words will be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.

2. Imperative mood and streamlined language are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe responsibilities that must be fulfilled indirectly by the Contractor or by others when so noted.

a. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

1.4 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
B. Publication Dates: Comply with the standards in effect as of the date of the Contract Documents, unless otherwise indicated.

C. Conflicting Requirements: Where compliance with 2 or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different but apparently equal to the OAR for a decision before proceeding.

1. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the RPR for a decision before proceeding.

D. Copies of Standards: Each entity engaged in installation on the Project must be familiar with industry standards applicable to its installation activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required installation activity, the Contractor shall obtain copies directly from the publication source and make them available on request.

E. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where abbreviations and acronyms are used in the Specifications or other Contract Documents, they mean the recognized name of the trade association, standards-generating organization, authorities having jurisdiction, or other entity applicable to the context of the text provision. Refer to Gale Research Inc.'s "Encyclopedia of Associations," which is available in most libraries.

1.5 GOVERNING REGULATIONS AND AUTHORITIES

A. Copies of Regulations: Obtain copies of the current codes and regulations being utilized by the Authority Having Jurisdiction and retain at the Project site to be available for reference by parties who have a reasonable need.

1.6 SUBMITTALS

A. Permits, Licenses, and Certificates: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01 42 00

SECTION 01 43 39 - VISUAL MOCK-UP REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section specifies full size mock-up requirements of building components to verify material selections, demonstrate aesthetic effects and review construction and workmanship.

B. Visual Mock-up shall be completed prior to commencement of in-place construction.

C. Approved mock-up shall establish the standard by which the Work will be judged.

D. Acceptance of mock-up does not constitute approval of deviations from the Contract Documents in mock-up, unless such deviations are specifically approved by Architect in writing.

E. Retain mock-ups during construction and maintain in an undisturbed condition. Do not demolish alter or remove mock-up until approved by Architect.

F. Mock-up shall be used to demonstrate quality of materials, finish and workmanship as well as to show compliance with visual criteria.

G. Submit shop drawings prior to fabrication of visual mock-up, showing plan, elevations and details of mock-up.

PART 2 - PRODUCTS

2.1 MATERIALS

A. As specified in individual Specification Sections.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use the same workers to do work in conjunction with construction of the mock-up as covered by the work of their respective Contracts.

B. Provide a 2-Faced mock-up as indicated complete with the following conditions (All conditions shall be finished with details identical to those proposed for use in the building and as indicated on the drawings).

1. Curtainwall System
2. Exterior curtainwall corner
3. Curtainwall head, Jamb and sill condition
4. Louver Penetration
5. Louver head
6. Roof Edge and Gutter including expansion joints

7. T-flashing transitions
8. Roof section
9. Inside Corner
10. Splice joints
11. Control joints
12. Backer rod/joint installation
13. Building expansion joint
14. Stucco wall panels
15. Restroom wall to floor intersection layout
16. Add additional details as needed based on design
17. Or as noted on specifications and indicated on the drawings

C. Do not use special measures or techniques, which are not representative of those to be used in the building. Finish the various components to show the maximum variation that will exist in the actual building construction between adjacent components.

D. Notify Architect when construction of mock-up begins and when major components are to be installed.

E. Complete the mock-up and obtain Architect's approval of each component of the mock-up prior to fabrication or purchase of products for the Project.

3.2 BUILDING EXTERIOR WALL

A. Fabricate and erect the above described visual mock-up of the typical exterior wall condition with one outside corner returning to the window line.

B. Mock-up size: As indicated on drawings.

C. Provide structural steel frame work for support of visual mock up. Frame work shall be designed by a registered professional or structural engineer licensed in the State where the Project is located.

D. Coordinate with Architect and RPR for location of mock-up on project site. When directed, demolish mock-ups and remove from Project site.

E. Construct mock-up in such a manner that each type of exterior finishes will be demonstrated in a layered fashion from one side to the other. The purpose in the layers is to facilitate the review of the multiple activities that are required to accomplish the final finish.

F. Construct mock-up in phases so that proposed construction methodologies can be observed. Mock-up shall be completely constructed, just as if it were the finished exterior wall section. Wall insulation and interior wall finishes are not required.

G. In addition to specifics in the respective Specification Sections, the mock-up will be reviewed by the RPR and the Architect for the following evaluation purposes:

1. Aesthetic: To review and verify selections made under submittals, as well as to show compliance with visual criteria. Acceptance criteria is for general and specific aesthetic qualities of construction, and includes, but is not limited

to, the following:

a. Tooling of sealants.
b. Color consistency of aluminum window framing.
c. Color and clarity of glass.

2. Installation Execution: To review and verify quality of workmanship, and compliance with Drawings, Specification and submittals. Acceptance criteria is for general and specific erection, installation and application qualities of construction, and includes, but is not limited to, the following:
   a. Cold-formed metal framing fabrication and assemblage.
   b. Glazed aluminum wall system fabrication, anchorage/attachment, and installation quality.
   c. Glazing integrity.
   d. Sealant profile consistency and bonding integrity.
   e. Attachment of aluminum composite material panels.
   f. Dimensional tolerances.

3.3 TYPICAL ROOM MOCK-UP

A. Arrange for the construction of a typical room mock-up located in the building, per mutual agreement between RPR and Contractor.

1. Typical Restrooms: At the first installation of a typical public restroom, complete finishes, fixtures and accessories in one restroom module as a visual mock-up.

B. The materials trades Subcontractors shall do all work in conjunction with construction of the mock-up as covered by the work of their respective Contracts.

C. Typical Room mock-up shall be complete with finishes, fixtures and details identical to those proposed for use in the Project. Do not use special measures or techniques, which are not representative of those to be used in the finish work. Finish the various components to show the quality of material and construction that will exist in the actual construction.

D. Typical room mock-up shall be of adequate size to contain all samples and demonstrate quality of materials, finish and workmanship as well as to show compliance with visual criteria. Submit shop drawings to show layout of room prior to construction. Mock-up room shall be constructed as soon as sufficient structure is available to allow installation.

E. Materials or workmanship not approved shall be removed and replaced with acceptable products or workmanship. Fabrication, purchase or installation of materials for the building shall not begin until approved in the mock-up room. OAR's approval of samples will be required on all visual items prior to any contractor's buy-out.

F. Materials installed in the room mock-up shall include an example of all furnished assemblies, hardware, equipment or accessories required for the Project and shall include, but may not be necessarily limited to the following:

1. Lavatory countertop, complete with sealant, sink, accessories, trim, etc.

2. Hollow Metal Door Frame
3. Door Hardware
4. Porcelain tile floor and wall
5. Ceramic floor and wall material
6. Toilet Compartment complete with partition, side wall, pilaster, door and hardware.
7. Toilet Room Accessories
8. Water closet and trim
9. Urinal and trim
10. Lighting
11. Electrical Devices and Accessories
12. Access Doors or Panels

END OF SECTION 01 43 39

SECTION 01 45 00 - QUALITY CONTROL

PART 1 - GENERAL

1. 1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification sections, apply to this section.

1. 2 SUMMARY

A. Section includes: quality control and quality assurance services.

1. Quality control services: inspections, tests, and related actions including reports, performed by independent agencies, governing authorities, and the Contractor. They do not include Contract enforcement activities performed by the RPR and A/E. Unless otherwise specified in the contract documents, all quality control services, inspections, tests and related actions shall be coordinated and provided by Contractor.
2. Quality assurance services: Inspection and testing services to assist the RPR and A/E in the determination of compliance of the Work with the Contract Documents. These services will be provided by the Owner but do not relieve the Contractor of responsibility for compliance with Contract Document requirements or for quality control services.

B. Requirements of this Section relate to customized fabrication, on site construction and installation procedures, not production of standard products.

1. Inspections, test and related actions specified are not intended to limit the Contractor's quality control procedures that facilitate compliance with Contract Document requirements.
2. Requirements to provide quality control services required by the Owner, RPR, A/E, or Authorities Having Jurisdiction are not limited by provisions of this Section.

1. 3 TESTING BY THE OWNER

A. The Owner may engage the services of an independent agency to perform inspections and tests specified as the Owner's responsibilities. The RPR will inform the Contractor of such services.

1. Where the Owner has engaged a testing agency or other entity for testing and inspection of a part of the Work, and the Contract Documents require the Contractor to engage an entity for the same or related element, the Contractor shall not employ the entity engaged by the Owner, unless otherwise agreed in writing with the Owner.

B. Owner Responsibilities: The Owner may provide inspections, tests and similar quality assurance services to determine whether the Work is in conformance with the requirements of the Contract Documents. Costs for these services are not included in the Contract Price.

1. The Owner may employ and pay for the services of an independent agency, testing laboratory or other qualified firm to perform acceptance and quality assurance testing.
2. The Owner may employ threshold inspection services.

1. 4 CONTRACTOR RESPONSIBILITIES

A. Contractor Responsibilities: Provide inspections, tests and similar quality control services, specified in individual specification sections and required by governing authorities, except where they are specifically indicated to be the Owner's responsibility, or are provided by another identified entity. Costs for these services shall be included in the Contract Price.

1. Testing Agency: Employ and pay an independent agency, to perform specified quality control services.
2. Re-testing: Provide the cost of re-testing where results of required inspections, tests or similar services prove non-compliance with Contract Document requirements.

a. Provide the cost of re-testing construction revised or replaced.

3. Associated Services: Cooperate with the RPR and with agencies performing required inspections, tests and similar services and provide reasonable auxiliary services as requested. Notify the RPR and the agency sufficiently in advance of operations to permit assignment of personnel. Auxiliary services required include but are not limited to the following:

a. Providing access to the Work and furnishing incidental labor and facilities necessary to facilitate inspections and tests.
b. Taking adequate quantities of representative samples of materials that require testing or assisting the agency in taking samples.
c. Providing facilities for storage and curing of test samples, and delivery of samples to testing laboratories.
d. Providing the agency with a preliminary design mix proposed for use for materials mixes that require control by the testing agency.
e. Security and protection of samples and test equipment at the Project site.

B. Duties of the Testing Agency: The independent testing agency engaged by the Contractor to perform inspections, sampling and testing of materials and construction specified in individual Specification Sections shall cooperate with the RPR, A/E and Contractor in performance of its duties, and shall provide qualified personnel to perform required inspections and tests.

1. The agency shall notify the RPR, A/E and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. The agency is not authorized to release, revoke, alter or enlarge requirements of the Contract Documents, or approve or accept any portion of the Work.
3. The agency shall not perform any duties of the Contractor.

C. Coordination: The Contractor and each agency engaged by the Contractor to perform inspections, tests and similar services shall coordinate the sequence of activities to accommodate required services with a minimum of delay. In addition, coordinate activities to avoid the necessity of removing and replacing construction to accommodate inspections and tests.

1. Schedule times for inspections, tests, taking samples, and similar activities. Provide a minimum of one (1) day (excluding weekends and holidays) notification to the RPR and A/E for each inspection, test, sampling, and similar activities.

1. 5 SUBMITTALS

A. The independent testing agency shall submit two (2) certified copies of the written report of each inspection, test or similar service, to the RPR unless the Contractor is responsible for the service. If the Contractor is responsible for the service, submit four (4) certified copies of the written report of each inspection, test or similar service through the Contractor to the RPR.

1. Submit additional copies of each written report directly to the governing authority, when the authority so directs.
2. Report Data: Written reports of each inspection, test or similar service shall include, but not be limited to:

a. Date of issue.
b. Project title and number.
c. Name, address and telephone number of testing agency.
d. Dates and locations of samples, tests, and inspections.
e. Names of individuals making the inspection or test.
f. Designation of the Work and test method.
g. Identification of product and Specification Section.
h. Complete inspection or test data.
i. Test results and interpretations of test results.
j. Ambient conditions at the time of sample-taking and testing.
k. Comments or professional opinion as to whether inspected or tested Work complies with Contract Document requirements.
l. Name and signature of laboratory inspector.
m. Recommendations on re-testing.

1. 6 QUALITY ASSURANCE

A. Qualification for Service Agencies: Engage inspection and testing service agencies, including independent testing laboratories, which are pre-qualified as complying with "Recommended Requirements for Independent Laboratory Qualification" by the American Council of Independent Laboratories, and which specialize in the types of inspections and tests to be performed.

1. Each independent inspection and testing agency engaged on the Project shall be authorized by Authorities Having Jurisdiction to operate in the State of Florida.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 REPAIR AND PROTECTION

A. General: Upon completion of inspection, testing, sample-taking and similar services, repair damaged construction and restore substrates and finishes to eliminate deficiencies, including deficiencies in visual qualities of exposed finishes. Comply with Contract Document requirements for "Cutting and Patching."

1. Remove all deficient Work and replace it with Work of specified quality, or take such other corrective action as the RPR and A/E may direct. No increase will be made in the Contract Sum or in Contract Time as a result of authorizing a change in methods or equipment under this Article.

B. Protect construction exposed for quality control services.

END OF SECTION 01 45 00

SECTION 01 45 16 - FIELD TEST FOR WATER LEAKAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Field test to determine resistance to water leakage in wall systems in accordance with performance requirements indicated including joints in adjacent construction which are designed to remain permanently closed and watertight.

B. Contractor will pay costs of testing laboratory for this test.

1.2 DEFINITIONS

A. Water Leakage: Any uncontrolled water that appears on any normally exposed interior surfaces, that is not contained or drained back to exterior, or that can cause damage to adjacent materials or finishes. Water contained within drained flashings, gutters, and sills is not considered water leakage.

1.3 SUBMITTALS

A. Field Quality Control Reports: Written report of testing and inspection required by “Field Quality Control”.

B. Qualification Data: For testing agency.

1. For firms and persons specified in "Quality Assurance" to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of Architects and OARs, and other information specified.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

B. Field Water Spray Testing: Selective field testing will be conducted in accordance with AAMA Standard 501.2: “Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtainwalls, and Sloped Glazing Systems”.

1. Water Spray Test without Air Pressure Difference: Designated areas shall be tested according to AAMA 501.2 and shall not evidence water penetration.
2. Test shall be performed prior to installation of interior finishes.

C. Field Chamber Testing: Selective field testing will be conducted in accordance with ASTM E 1105 “Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Curtain Walls, and Doors by Uniform or Cyclic Static Air Pressure Difference” and ASTM E 783 “Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors”.

D. Water Penetration Test with Static Air Pressure Difference: Designated areas shall be tested according to ASTM E 1105 at a minimum static air pressure differential

specified for laboratory testing in "Performance Requirements" and shall not evidence water penetration.

E. Test chamber shall include adjacent joints and interior/exterior construction.
F. Section of wall shall include a entire bay section of curtain wall and masonry /stucco finished wall.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Refer to Technical Sections for performance requirements of each system or product to be tested.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:

1. Respective manufacturer’s written installation instructions.
2. Accepted submittals.
3. Contract Documents.

3.3 PREPARATION

A. General: Comply with manufacturer’s instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

B. Exterior wall construction shall be completed, and shall be fully glazed to provide complete wall installation. Work shall be done in strict accord with approved shop drawings and job specifications.

3.4 FIELD QUALITY CONTROL TESTING

A. Testing Services, General: Testing and inspecting of representative areas of exterior walls shall take place as installation proceeds to determine compliance of installed assemblies with specified performance requirements.

B. Testing Agency Field Service: Engage a qualified independent testing agency employed by Contractor and approved by Architect to perform field quality control.

Materials and installation failing to meet specified requirements shall be replaced at Contractor's expense. Retesting of materials and installations failing to meet specified requirements shall be done at Contractor’s expense

C. Architect shall designate test procedure and areas of completed walls to be checked.

1. Field Testing shall be performed at intervals and locations including but not limited to the following:
   a. Field Water Spray Testing per AAMA 501.2: Perform tests at intervals and locations in each test area as directed by Architect; however, not less than 1-percent of total units or 5 units minimum, whichever is greater, shall be tested for each type of glazing system and configuration.
   b. Field Chamber Testing per ASTM E 1105: Perform tests at intervals and locations in each test area as directed by Architect; however, not less than 3 static water test minimum, shall be tested for each type of glazing system and configuration.
2. Systems shall be tested in accordance with definitions and at performance requirements indicated in Technical Sections.
3. Test wall at 15-percent, 50-percent, and 75-percent completion unless directed otherwise.

D. All joints or other conditions within designated areas where leakage may occur will be tested.

E. Indoor side of wall in this area shall be unfinished and left open and unobstructed, permitting full length of joints to be examined from indoor side.

F. If operable joints such as those around doors and operable parts of windows occur within wall area involved, appropriate modifications both of procedure and performance requirements will be made in respect to such joints.

3.5 TEST REPORTS

A. Testing laboratory shall be responsible for conducting and reporting tests, shall state in report whether or not test specimen conforms to requirements of Contract Documents approved drawings, and shall specifically note any deviations.

B. Testing laboratory shall submit its report directly to Contractor and Architect. Necessary corrections shall be performed in presence of Architect. Tests shall be witnessed by Architect/Consultant. Approval of test assembly and test results rests with the Architect.

C. Test Reports: Shall be prepared according to testing standard indicated.

3.6 REMEDIAL WORK BY CONTRACTOR

A. In event of failure to initially meet test requirements called for hereinabove, Contractor and respective subcontractors shall, as required, redesign, rework, and/or re-fabricate, reship and re-erect assemblies until said requirements are met, at no additional cost to RPR.

B. Wherever leakage has occurred, joints shall be made watertight in manner acceptable to Architect.

C. Remedial work involving use of curing-type compounds shall be allowed to set for one week before it is re-checked for leakage.

D. After necessary remedial work has been completed, and required curing time, if any, has elapsed, repaired joints shall be retested.

E. Should leakage still be found, further remedial measures shall be taken and checking shall be repeated until joints in designated area are found to be satisfactory.

F. Re-checking, when required, shall be performed by testing laboratory originally employed by Contractor.

END OF SECTION 01 45 16

SECTION 01 45 29 - STRUCTURAL TESTING AND INSPECTIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes requirements for quality assurance and quality control to be completed by the Testing Laboratory, Contractor, and/or the Geotechnical Engineer for the following structural items:

1. Concrete Reinforcing.
2. Cast-in-Place Concrete.
3. Masonry.
4. Structural Steel.
5. Steel Joists or Steel Joists and Joist Girders.
6. Steel Decking.
8. Cold-Formed Metal Framing.
10. Rough Carpentry – blocking, nailers, etc.
11. Earthwork.

B. Related Requirements:

1. Specification 01 45 00 "Quality Control" for other independent testing agency procedures and administrative requirements.
2. Refer to the drawings for the Threshold Inspection Plan for requirements for additional inspections to be completed by the Threshold Inspector.

1.2 PRICE AND PAYMENT PROCEDURES

A. Unit Prices:

1. Cost Proposal: The Testing Laboratory's proposal shall contain unit price stipulations for specified tests and inspections and on an hourly basis for personnel. A total price shall also be submitted with bid.

B. Measurement and Payment

1. Payment of the Testing Laboratory: The contractor will pay for the Laboratory services for inspection and testing of materials for compliance with the requirements of the Contract Documents.
2. Payment for Substitution Testing: The Contractor shall arrange for and pay for any additional samples and tests above those required by the Contract Documents as requested by the Contractor for his convenience in performing the work.
3. Payment for Retesting: When initial tests indicate work does not comply with the requirements of the Contract Documents, the Contractor shall be liable for the cost for any additional inspections, sampling, testing, and retesting done by the Testing Laboratory.
4. Payment by Contractor: The Contractor shall furnish and pay for the following items if required:

a. Soil survey of the location of borrow soil materials, samples of existing soil materials, and delivery to the Contractor's Testing Laboratory.
b. Samples of concrete aggregates and delivery to the Contractor's Testing Laboratory.
c. Concrete mix designs as prepared by his concrete supplier.
d. Site-situated storage boxes for concrete cylinders
e. Concrete coring, tests of below strength concrete, and load tests, if ordered by the RPR, Architect, or Engineer.
f. Certification of reinforcing steel and prestressing steel mill order.
g. Certification of structural steel mill order.
h. Certification of portland cement, lime, fly ash.
i. Certification of welders and preparation of Welding Procedure Specifications.
j. Tests, samples, and mock-ups of substitute material where the substitution is requested by the Contractor and the tests are necessary in the opinion of the RPR, Architect or Engineer to establish equality with specified items.
k. The making and testing of concrete cylinders for the purpose of evaluating strength at time of form stripping or for post-tensioning or the time spent evaluating the in situ strength of concrete using the Maturity Method.
l. Any other tests when such costs are required by the Contract Documents to be paid by the Contractor.
m. Concrete Testing and sampling.

5. Payment for Tests of Suspected Deficient Work: If, in the opinion of the Building Official, RPR, Architect, or Engineer, any of the work of the Contractor is not satisfactory, the Contractor shall furnish and pay for all tests that the RPR, Architect, or Engineer deem advisable to determine its proper construction. The RPR shall pay all costs if the tests prove the questioned work to be satisfactory.

1.3 ADDITIONAL CONTRACTOR TESTING RESPONSIBILITIES

A. Threshold Inspection: The Contractor shall engage a separate agency to serve as a Threshold Inspector to provide Threshold Inspection services for the items outlined in the Threshold Inspection Plan. The scope of these services is not included in this section and is to be provided separately as outlined in the Threshold Inspection Plan. These inspections are mandatory for conformance to the legal requirements of the Florida Building Code and shall be in addition to the inspections and tests otherwise defined in this specification.

B. The General Contractor shall engage a Geotechnical Engineer to provide inspection services for the foundations as outlined below in Paragraph 3.12.E.

C. The General Contractor shall provide a copy of the project plans and specifications to the Testing Laboratory prior to the start of construction and prior to any pre-installation meetings.

1.4 CONTRACTOR RESPONSIBILITIES

A. Furnishing Samples and Certificates: The Contractor shall provide to the laboratory certificates and representative samples of materials proposed for use in the work in quantities sufficient for accurate testing as specified.

B. Furnishing Casual Labor, Equipment and Facilities: The Contractor shall furnish casual labor, equipment, and facilities as required for sampling and testing by the laboratory and otherwise facilitate the required inspections and tests.

1.5 TESTING LABORATORY RESPONSIBILITIES

A. The Testing Laboratory shall sample and test materials as they are being installed for compliance with specified acceptance criteria. The Testing Laboratory will report and interpret the test results. The Laboratory shall monitor and report on the installation of construction work and shall perform tests on the completed construction as required to indicate Contractor's compliance with the various material specifications governing this work.

B. The Testing Laboratory shall provide inspections on the following items:

1. Welding of reinforcing steel.
2. Inspection of structural steel, bolting, and welding material.
3. Welding of structural steel.
4. High-strength bolting.
5. Compacted earth fill.
6. Concrete Sampling and Lab testing of concrete cylinders.

C. Inspections Required by Government Agencies: The Testing Laboratory shall perform inspections and submit reports and certifications as required by government agencies having jurisdiction over the aspects of the project covered by this specification.

D. Notification of Deficiencies in the Work: The Testing Laboratory shall notify the Architect, Engineer, and Contractor within 24 hours of discovery of observed irregularities and deficiencies of the Work and other conditions not in compliance with the requirements of the Contract Documents. Notification shall be by telephone or e-mail and then in writing. TheTesting Laboratory shall provide reports for all testing and visual inspection of work.

E. Accounting: The Testing Laboratory shall submit all billing costs to the Contractor.

F. Monitoring Product and Material Certifications: The Testing Laboratory shall be responsible for monitoring the submittals of product and material certifications from manufacturers and suppliers as specified in the Specifications and shall report to the RPR, Architect, and Engineer when those submittals are not made in a timely manner.

G. Limitations of Authority: The Testing Laboratory is not authorized to revoke, alter, relax, enlarge upon, or release any requirements of the Specifications or to approve or accept any portion of the work or to perform any duties of the Contractor and his Subcontractors.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Testing Laboratory shall cooperate with the Architect, Engineer, and Contractor and provide qualified personnel promptly on notice.
2. The Contractor shall cooperate with Testing Laboratory personnel and provide access to the work and to manufacturers' operations.
3. Notification of Source Change: The Contractor shall be responsible for notifying the RPR,
4. Architect, Engineer, and Testing Laboratory when the source of any material is changed after the original tests or inspections have been made.

B. Pre-installation Meetings RPR, Architect, Engineer, Contractor, and material suppliers as required to coordinate materials inspection and testing requirements with the planned construction schedule and shall participate in such meetings throughout the course of the project.

C. Scheduling:

1. Advance Notice: The Contractor shall be responsible for notifying the Testing Laboratory sufficiently in advance of operations to allow for assignment of personnel and scheduling of tests. Failure to sufficiently notify may result in additional costs incurred by the Testing Laboratory to the Contractor.

1.7 SUBMITTALS

A. Quality Control Reports:

1. Information on Reports: The Testing Laboratory shall submit copies of reports of inspections and tests promptly. The reports shall contain at least the following information:
   a. Project name.
   b. Date report issued.
   c. Testing Laboratory name and address.
   d. Name and signature of inspector/technician.
   e. Date of inspection and/or sampling.
   f. Date of test.
   g. Identification of product and Specification section.
   h. Location in the project.
   i. Identification of inspection or test.
   j. Record of weather conditions and temperature (if applicable).
   k. Results of test regarding compliance with Contract Documents.
2. Copies: The Laboratory shall send signed electronic (PDF) copies of test and inspection reports to the following parties:
   a. RPR or his/her representative.
   b. Contractor.
   c. Architect.
   d. Engineer of Record.
   e. Threshold Inspector.
3. Discrepancy Log: The Testing Laboratory shall create and maintain a log of all discrepancies throughout the duration of the project.
4. Information on Log: This log shall include, but is not limited to:

a. Discrepancy date.
b. Description of discrepancy.
c. Drawing and/or detail reference.
d. Description of as-built condition.
e. Description of any remedial work performed.
f. Status of discrepancy.

5. Submission Schedule: This log shall be submitted to the Architect/Engineer on a periodic basis for review and comment. Upon completion of the Project, this log shall be submitted in its entirety as an attachment to the final signed report described below under Certifications.

B. Certification: Upon completion of the job, the Laboratory shall furnish to the RPR, Architect, and Engineer of Record, a statement signed by a licensed professional engineer that, to the best of their knowledge, required tests and inspections were made in accordance with the requirements of the Contract Documents.

1.8 QUALITY ASSURANCE

A. Qualifications of Testing Laboratory:

1. The Testing Laboratory shall meet the basic requirements of ASTM E 329 and shall submit to the OAR, Architect, and Engineer evidence of current accreditation from the American Association for Laboratory Accreditation, the AASHTO Accreditation Program or the "NIST" National Voluntary Laboratory Accreditation Program.
2. The Testing Laboratory shall be an Approved Agency by the Building Official to perform Special Inspections and other tests and inspections as outlined in the applicable building code.
3. Tests and inspections shall be conducted in accordance with specified requirements, and if not specified, in accordance with the applicable standards of the American Society for Testing and Materials or other recognized and accepted authorities in the field.
4. Qualifications of Welding Inspectors
   a. Inspectors performing visual weld inspection shall meet the requirements of AWS D1.1 Section 6.1.4. Inspectors shall have current certification as an AWS Certified Welding Inspector (CWI). Assistant inspectors, if any, shall be supervised by an Inspector and shall be qualified by training and experience to perform the specific functions to which they are assigned.
   b. Inspectors performing nondestructive examinations of welds other than visual inspection (MT, PT, UT, and RT) shall meet the requirements of AWS D1.1, Section 6.14.6.

B. The Contractor shall not engage the same testing laboratory for construction services quality assurance testing, unless agreed to by the RPR.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 SCOPE OF WORK

A. The work to be performed by the Testing Laboratory shall be as specified in this Section of the Specification and as determined in meetings with the RPR, Architect, and Engineer.

3.2 CONCRETE REINFORCING

A. Quality Assurance:

1. Review the Welding Procedure Specification (WPS) submitted by the contractor for any reinforcing steel other than ASTM A 706 that is proposed to be welded for consistency with acceptable welding practices and AWS.
2. Review welder qualifications by certification or verify by retesting. Obtain welder certificates.

B. Field Testing: The following tests shall be completed by the Testing Laboratory:

1. Mechanical Tension Splices: The Laboratory shall conduct monotonic tension tests in accordance with ASTM A 1034 of mechanical tension splices of the type as specified on the structural drawings. It is not necessary that the specimens to be tested are production splices, however, the specimens to be tested shall have been made by the Contractor's personnel under field conditions. The rate of testing shall be as follows:
   a. Two specimens for the first 50 splices (or fraction thereof) at the beginning of the job. Splices not meeting tension requirements shall be retested at Contractor's expense until all splices meet the tension requirements.
   b. One specimen for every 100 (or fraction thereof) additional splices occurring on the job. Any splices not meeting tension requirements shall be retested at Contractors expense until all splices have passed the test.
   c. A minimum of one test specimen shall also be selected from transition splices (splices of one bar size to another bar size), if any.

3.3 CAST-IN-PLACE CONCRETE

A. Quality Assurance:

1. Concrete Mix Designs: The Testing Laboratory shall review the submitted mix designs for conformance to the specifications and for suitability for use in the project.
2. Preinstallation Meetings: The Testing Laboratory shall attend the preinstallation meetings as noted in Specification 03 3000 "Cast-in-Place Concrete."

B. Field Testing: The following tests shall be completed by the Testing Laboratory:

1. During Concrete Placement:
   a. Record the amount of water added and note if it exceeds the amount allowed to be added shown in the approved mix design.
   b. Mold concrete test cylinders as specified below in Paragraph 3.a.
   c. Perform tests to determine slump, concrete temperature, unit weight, and air entrainment as specified below.

d. Record information for concrete test reports as specified below.
e. Pick up and transport to Laboratory cylinders cast the previous day.
f. After Concrete Placement:
g. In-situ Concrete Strength Verification for Form Stripping: The Testing Laboratory shall perform the tests necessary to determine the concrete strength prior to form stripping:
    1) If concrete strength for form stripping is to be determined using field-cured cylinders, the cylinder shall be broken at the time of form removal as directed by the Contractor.
    2) If concrete strength for form stripping is to be determined using the Maturity Method, the Testing Laboratory shall verify that the requirements of ASTM C 1074 are being followed and that the proper criteria for determining concrete strength by this method has been established and is being followed.
h. Investigation of Low Strength Concrete Test Results:
    1) Cost of Investigations for Low Strength Concrete: The Contractor shall be responsible for the costs of investigations of low strength concrete, as defined in Part I above.
    2) Scope of Investigations: See Specification Section 03 30 00 "Cast-In-Place Concrete" for the investigations that may be required by the Engineer. The Testing Laboratory will conduct these investigations if required.
i. Post-Installed Anchors in Concrete:
    1) Verify maximum anchor tightening torque for all applicable post-installed anchors.
    2) Provide pull tests on individual anchors as specified in the ICC Evaluation Services Report, on the drawings, or as directed by the Engineer-of-Record.
j. Floor Flatness and Levelness Measuring: Perform tests as defined below.
k. Testing of Concrete Floor Slabs for Acceptability to Receive an Adhesive-Applied, Low-Permeable Floor Covering: Perform tests as defined below.
l. Testing of Non-Shrink Grout for Base Plates, Bearing Plates, and Precast Wall Panels:
    1) Compressive Strength Tests: Compressive strength of grout shall be determined by testing grout cubes according to the requirements of ASTM C 109 - Modified. Test one set of three cubes at one day, and one set of three cubes at 28 days. Testing Laboratory shall discuss with the contractor the addition of a third set of grout cubes if the contractor anticipates the higher strength grouts might not achieve the 28-day strength. These shall be paid by the contractor.
    2) Frequency of Testing: One set of cubes (6 cubes) shall be made for every ten base plates and bearing plates or fraction thereof but not less than one set for each day's operation. One set of cubes shall be made for each day's operation of grouting wall panels.

2. Standards for Concrete Tests:

a. Concrete Test Cylinders: Mold and test concrete cylinders as described below:
   1) Cylinder Molding and Testing: Cylinders for strength tests shall be molded and Laboratory cured in accordance with ASTM C 31 and tested in accordance with ASTM C 39. Cylinders may be either 6" in diameter by 12" or 4" in diameter by 8", however, the diameter of the cylinder shall be at least three times the nominal maximum size of the coarse aggregate in the mix tested. All of the cylinders for each class of concrete shall be of the same dimension for all sets of that class.
   2) Field Samples: Field samples for strength tests shall be taken in accordance with ASTM C 172 at the point of placement.
   3) Quantity of Cylinders: Each set of test cylinders shall consist of a minimum of four standard test cylinders. If concrete strength for form stripping is to be determined using field-cured cylinders, one additional cylinder per set will be required for formed slab for the purpose of evaluating the concrete strength at the time of form stripping. This cylinder shall be stored on the floor where form removal is to occur under the same exposure conditions as the floor concrete. The cylinder shall be cured under field conditions in accordance with ASTM C 31. Field-cured test cylinders shall be molded at the same time and from the same samples as laboratory-cured test specimens. The Contractor shall pay for the cost of making and testing these cylinders.
   4) Frequency of Testing: A set of test cylinders shall be made according to the following minimum frequency guidelines:
      a) One set for each class of concrete taken not less than once a day.
      b) Piles: One set for each 50 cubic yards or fraction thereof.
      c) Spread Footings: One set for each 50 cubic yards or fraction thereof.
      d) Pile Caps: One set for each 50 cubic yards or fraction thereof.
      e) Floors: One set for each 150 cubic yards or fraction thereof but not less than one set for each 5,000 square foot of floor area.
      f) Columns: One set for each 50 cubic yards or fraction thereof with a minimum of two sets per floor.
      g) Shear Walls: One set for each 50 cubic yards but not less than two sets per floor.
      h) Tilt-Up Panels: One set for every 50 cubic yards or fraction thereof.
      i) All Other Concrete: A minimum of one set for each 150 cubic yards or fraction thereof but not less than one set for each 5,000 square foot of area for walls.
      j) No more than one set of cylinders at a time shall be made from any single truck.
      k) If the total volume of concrete is such that the frequency of testing as specified above would provide less than five

strength tests for a given class of concrete, tests shall be made from at least five randomly selected batches or from each batch if fewer than five batches are used.

l) The above frequencies assume that one batch plant will be used for each pour. If more than one batch plant is used, the frequencies cited above shall apply for each plant used.

- The cylinders shall be numbered, dated, and the point of concrete placement in the building recorded.
- For concrete specified on the drawings to reach the required strength at 28 days, break one cylinder of the set at seven days, two 6" by 12" cylinders or three 4" by 8" cylinders at 28 days, and keep one in reserve for testing at the Engineer's direction.
- For concrete specified on the drawings to reach the required strength at 56 days, break one cylinder of the set at seven days, one cylinder at 28 days, two 6" by 12" cylinders or three 4" by 8" cylinders at 56 days, and one kept in reserve for testing at the Engineer's direction.
- Cylinder Storage Box: The Contractor shall be responsible for providing a protected concrete cylinder wooden storage box at a point on the job site mutually agreeable with the Testing Laboratory for the purpose of storing concrete cylinders until they are transported to the Laboratory. The box shall be constructed and equipped to maintain the environment specified for initial curing in ASTM C 31.
- Transporting Cylinders: The Testing Laboratory shall be responsible for transporting the cylinders to the Laboratory in a protected environment such that no damage or ill effect will occur to the concrete cylinders including loss of moisture, freezing temperatures or jarring.
- Information on Concrete Test Reports: The Testing Laboratory shall make and distribute concrete test reports after each job cylinder is broken. Such reports shall contain the following information:

m) Truck number and ticket number.
n) Concrete Batch Plant.
o) Mix design number.
p) Accurate location of pour in the structure.
q) Strength requirement.
r) Date cylinders made and broken.
s) Technician making cylinders.
t) Concrete temperature at placing.
u) Air temperature at point of placement in the structure.
v) Amount of water added to the truck at the batch plant and at the site and whether or not it exceeds the amount allowed by the mix design.
w) Slump.
x) Unit weight.
y) Air content.

z) Cylinder compressive strengths with type of failure if concrete does not meet Specification requirements. Seven day breaks are to be flagged if they are less than 60% of the required 28 day strength. 28 day breaks are to be brought to the attention of the Architect and Engineer in writing if either cylinder fails to meet specification requirements.

b. Slump Tests: Slump Tests (ASTM C 143) shall be completed at the beginning of concrete placement for each batch plant and for each set of test cylinders made. The slump test shall be made from concrete taken from the end of the concrete truck chute. The concrete shall be considered acceptable if the slump is within the slump tolerance noted on the mix design submittal form for that class of concrete.

c. Air Entrainment: Air entrainment tests (ASTM C 231 or C 173, C 173 only for lightweight concrete) shall be made at the same time slump tests are made as cited above. Samples for air entrainment tests shall be taken at the point of placement.

d. Concrete Temperature: Concrete temperature at placement shall be measured (ASTM C 1064) at the same time slump tests are made as cited above.

e. Unit Weight Test: ASTM C 138.

f. Floor Flatness and Levelness Measuring:

1) The Testing Laboratory shall measure the floor for flatness and levelness according to ASTM E 1155.

2) Measurement of the finished concrete surface profile for any test section shall be made when requested by the Representative at his option. Notwithstanding, measurements shall be made within 24 hours after completion of finishing operations. For structural elevated floors measurement shall also be made prior to removal of forms and shores. The Contractor shall be notified immediately after the measurements of any section are complete and a written report of the floor measurement results shall be submitted within 72 hours after finishing operations are complete.

3) The concrete surface profile shall be measured using equipment manufactured for the purpose such as a Dipstick Floor Profiler as manufactured by the Edward W. Face Company in Norfolk, Virginia, F-Meters manufactured by Allen Face & Company in Norfolk, Virginia, optical, or laser means or other method specified in ASTM E 1155.

4) Each floor test section and the overall floor area shall conform to the two-tiered measurement standard as specified herein.

a) Minimum Local Value (MLV). The minimum local FF/FL values represent the absolute minimum surface profile that will be acceptable in any one floor test section.

b) Specified Overall Value (SOV). The specified overall FF/FL values represent the minimum values acceptable for all combined floor test sections representing the overall floor.

5) For purposes of this specification a floor test section is defined as the smaller of the following areas:

a) The area bounded by column and/or wall lines.

b) The area bounded by construction and/or control joint lines.
c) Any combination of column lines and/or control joint lines.
d) Test sample measurement lines within each test section shall be multidirectional along two orthogonal lines as defined by ASTM E 1155.
e) The precise layout of each test section shall be determined by the Testing Laboratory and shall be submitted for Architect/Engineer review and approval.

g. Testing of Concrete Floor Slabs for Acceptability to Receive an Adhesive-Applied, Low-Permeable Floor Covering:
1) The following tests shall be performed by the Testing Laboratory as a part of quality assurance testing to insure that the proper moisture condition and alkalinity of the substrate has been achieved prior to installing adhesive-applied, low-permeability floor coverings such as vinyl composition tile (VCT), linoleum, sheet vinyl, vinyl-backed carpet, rubber, athletic flooring, synthetic turf, wood, acrylic terrazzo, thin-set tile, epoxy overlays and adhesives, waterproofing, et.al.
2) Moisture Vapor Emission Rate: Perform testing according to ASTM F 1869 to determine if the moisture emission rate from the floor is below the flooring manufacturer's maximum recommended value but not greater than five pounds per 1,000 square feet per 24 hours.
3) Relative Humidity Determination Test: As an alternate to the Moisture Vapor Emission Rate Test, and if agreed to by the Contractor, Architect and OAR, perform testing according to ASTM F 2170 to determine if the relative humidity of the concrete slab is below the flooring manufacturer's maximum recommended value but not greater than 75%.
4) Alkalinity Testing: Perform testing in accordance with ASTM F 710, Paragraph 5.3, to determine if the pH level of the concrete slab surface is below the flooring manufacturer's maximum recommended value but not greater than 10. Perform one test per 1,000 square feet with a minimum of three tests within the total area being tested.

3. Evaluation and Acceptance of Concrete:
a. Strength Test: A strength test shall be defined as the average strength of two six-inch cylinder breaks or three four-inch cylinder breaks from each set of cylinders tested at the time indicated above.
b. Quality Control Charts and Logs: The Testing Laboratory shall keep the following quality control logs and charts for each class of concrete containing more than 2,000 cubic yards. The records shall be kept for each batch plant and submitted on a weekly basis with cylinder test reports:
1) Number of strength tests made to date.
2) Strength test results containing the average of all strength tests to date, the high test result, the low test result, the standard deviation, and the coefficient of variation.
3) Number of tests under specified strength.

4) A histogram plotting the number of strength test cylinders versus compressive strength.
5) Quality control chart plotting compressive strength test results for each test.
6) Quality control chart plotting moving average for strength where each point plotted is the average strength of three previous test results.
7) Quality control chart plotting moving average for range where each point plotted is the average of 10 previous ranges.

c. Acceptance Criteria: The strength level of an individual class of concrete shall be considered satisfactory if both of the following requirements are met:
1) The average of all sets of three consecutive strength tests equal or exceed the required f'c.
2) No individual strength test falls below the required f'c by more than the greater of 10% of f'c or 500 PSI.

d. If either of the above Acceptance Criteria requirements is not met, the Testing Laboratory shall immediately notify the Engineer by telephone. Steps shall immediately be taken to increase the average of subsequent strength tests.

C. Causes for Rejection of Concrete: The Contractor shall reject concrete delivered to the site for any of the following reasons:

1. Wrong class of concrete (incorrect mix design number).
2. Environmental Conditions: Environmental condition limits shall be as follows unless appropriate provisions in concreting practices have been made for cold or hot weather:
a. Cold Weather: Air temperature must be 40°F and rising or the average daily temperature cannot have been lower than 40°F for 3 consecutive days unless the temperature rose above 50°F for at least one-half of any of those 24 hour periods.
b. Hot Weather: Environmental conditions must be such that cause an evaporation rate from the concrete surface of 0.2 lb./sq. ft./hr. or less as determined by Figure 2.1.5 in ACI 305R-91.
c. Concrete may be placed at other environmental condition ranges only with approval of the job inspector for the Testing Laboratory or other duly appointed representative.
3. Concrete with temperatures exceeding 95°F shall not be placed in the structure.
4. Air contents outside the limits specified in the mix designs.
5. Slumps outside the limits specified.
6. Excessive Age: Concrete shall be discharged within 90 minutes of plant departure or before it begins to set if sooner than 90 minutes unless approved by the Laboratory job inspector or other duly appointed representative.

D. Concrete Batch Trip Tickets: Concrete batch trip tickets shall be collected and retained by the Contractor. Compressive strength, slump, air, and temperature tests shall be identified by reference to a particular trip ticket. Tickets shall contain the information specified in ASTM C 94. Each ticket shall also show the amount of water that may be added in the field for the entire batch that will not exceed the specified

water cement ratio for the design mix. The Contractor and Testing Laboratory shall immediately notify the Architect/Engineer and each other of tickets not meeting the criteria specified.

3.4 PRECAST STRUCTURAL CONCRETE

A. Scope of Work: The Testing Laboratory shall furnish the necessary technicians and equipment to perform the following tests and inspections. Schedule the time for visits to the precast plant in consultation with the Supplier, Architect, Engineer, and RPR. Submit a proposed unit price for each visit and base the total proposed price on providing three visits. Inspections shall be performed by a qualified technician with a minimum of two years of experience in precast concrete testing and inspection.

B. Quality Assurance:

1. Verify that the fabricator's fabrication and quality control procedures provide a sound basis for inspection control of workmanship and of the ability to conform to construction documents and industry standards. Review the procedures for completeness and adequacy relative to code requirements for the fabricator's finished product.

C. Source Inspection:

1. Preliminary plant inspection prior to the start of fabrication including the following:
   a. Inspection of the batching facilities including aggregate stock piles, material handling facilities, concrete batching and mixing facilities, and in plant concrete handling, placing, and consolidating procedures and equipment.
   b. Inspection of the in-plant testing and curing facilities.
   c. Inspection of the casting beds shall be made to check for cleanliness, alignment, and surface condition of the bed.
   d. Inspection of the stressing blocks and stressing procedures including verification of the calibration of the stressing jacks to be used in the work.
   e. A review of the concrete mix designs proposed for use in the work.
2. Inspection prior to placing concrete including the following:
   a. Inspect formwork for finish condition, dimensions, and dimensional tolerances.
   b. Verify reinforcing steel placement and concrete cover.
   c. Inspect 100% of hardware and embedded items for proper size, location, and finish.
   d. For prestressed members, observe and inspect the stressing operation recording the following information:
      1) Initial and final gauge load reading during tendon stressing.
      2) Tendon elongation measurement.
      3) Obvious irregularities or stress loss during anchoring procedures.
3. Inspection during concrete placement including the following:
   a. Verify that environmental conditions and concrete temperatures are within the limits stipulated.

b. Verify that the proper class of concrete is being used for the members being poured.
c. Inspect plastic concrete to verify proper batching and mix consistency.
d. Verify the molding, curing and testing of concrete cylinders by the Precast Producer are in accordance with the specifications and project requirements.

4. Inspection after concrete placement including the following:
   a. For prestressed members:
      1) Verify minimum concrete strength at time of stress transfer.
      2) Witness transfer of stress to concrete and report procedures used including release sequence of multi-tendon transfer.
   b. After form stripping:
      1) Check dimensions of precast units.
      2) Verify required cambers.
      3) Visually inspect the precast units for proper finish, cracks, and other surface defects and imperfections.

D. Field Testing: Refer to Article 3.4 for testing requirements of cast-in-place concrete elements associated with precast structural concrete, such as topping slabs.

E. Reporting:

1. The Testing Laboratory shall write an inspection report promptly after each plant and site visit for distribution to the parties specified.
2. Any irregularities in the work shall be immediately reported by telephone to the Engineer and Architect.

3.5 MASONRY

A. Quality Assurance:

1. Concrete Masonry Unit: For each type of concrete masonry unit indicated, verify compliance with ASTM C 90 and the strength required by design. Verification may be by reviewing certification from unit producer showing compliance.
2. Review field welder qualifications by certification or verify by retesting. Obtain welder certificates.

B. Field Testing:

1. Masonry Strength Testing:
   a. Verification Testing Frequency: Verification of masonry strength (f'm) will be performed at the beginning of masonry construction.
   b. Mortar:
      1) Throughout construction, verify the proportions of the site-prepared mortar mix comply with the requirements of ASTM C 270 for the type specified.
      2) Verify the proportions of materials in premixed or preblended mortar comply with the requirements of ASTM C 270 for the type specified as delivered to the site.
      3) Mortar Tests: Verify mortar composition with specified requirements according to ASTM C 780, Annex A4; made at following times during Work:

a) First day
b) 5 percent
c) 15 percent
d) 30 percent
e) 60 percent

c. Grout:
1) Prior to grouting, verify the proportions of site-prepared grout mix comply with the requirements of ASTM C 476 for each type of grout used.
2) Verify the proportions of materials in premixed or pre-blended grout comply with the requirements of ASTM C 476 as delivered to the site.
3) For grout pre-mixed at a batch plant or otherwise not prepared on site, grout shall be sampled and tested in accordance with ASTM C 1019. Prepare one set of grout samples for testing at seven days and two sets for testing at 28 days.
4) Test each mix provided, according to ASTM C 1019 for compressive strength. Perform one set of tests for each 5000 sf of wall area or portion thereof unless otherwise indicated.

d. Report test results in writing and in form specified under each test method, to Architect and Contractor, on same day tests are made.
e. Retests: Where prism tests indicate non-compliance with specified requirements, additional testing shall be performed at the frequency of two additional tests for each unsatisfactory test. The cost of such additional testing shall be the responsibility of the Contractor. Where retesting fails to indicate conformance with specified requirements, any masonry construction represented by unsatisfactory tests shall be removed and replaced with acceptable masonry construction.

2. Testing of Non-Shrink Grout for Base Plates and Bearing Plates:
a. Compressive Strength Tests: Compressive strength of grout shall be determined by testing grout cubes according to the requirements of ASTM C 109 - Modified. Test one set of three cubes at one day, and one set of three cubes at 28 days.
b. Frequency of Testing: One set of cubes (6 cubes) shall be made for every ten base plates and bearing plates or fraction thereof but not less than one set for each day's operation. One set of cubes shall be made for each day's operation of grouting wall panels.

C. Field Inspection:

1. Anchors:
a. Verify maximum anchor tightening torque for all post-installed anchors.
b. Provide pull tests on individual anchors as specified on the drawings or as directed by the Engineer-of-Record.
c. Welding of Reinforcing Bars: Observe the welding of reinforcing bars.

3.6 STRUCTURAL STEEL

A. Scope of Work:

1. Contract Obligations:
a. Contractor Responsibility: The contractor shall pay for shop and field

inspections and tests as required during the fabrication and erection of the structural steel.

b. Testing Laboratory Responsibility: The inspection by the Testing Laboratory of the Fabricator's work shall be in sequence, timely, and performed in such a manner so that corrections can be made without delaying the progress of the work. Inspections shall be performed by qualified technicians with a minimum of two years of experience in structural steel testing and inspection. Refer to Paragraph 1.9.4.b for special requirements for welding inspectors. The Testing Laboratory shall provide test reports of inspections. All test reports shall indicate types and locations of defects found during inspection, the measures required and performed to correct such defects, statements of final approval of welding and bolting of shop and field connections, and other fabrication and erection data pertinent to the safe and proper welding and bolting of shop and field connections. Weld inspection reports shall be signed by an inspector with current certification as an AWS Certified Welding Inspector (CWI). In addition to the parties listed in this Specification the Fabricator and Erector shall receive copies of the test reports.

c. Rejection of Material or Workmanship: The OAR, Architect, Engineer, and Testing Laboratory reserve the right to reject any material or workmanship not in conformance with the Contract Documents at any time during the progress of the work. However, this provision does not allow waiving the obligation for timely, in sequence inspections.

B. Quality Assurance:

1. Verify the fabrication shop's certification from AISC.
2. Verify that the fabricator's fabrication and quality control procedures provide a sound basis for inspection control of workmanship and of the ability to conform to construction documents and industry standards. Review the procedures for completeness and adequacy relative to code requirements for the fabricator's finished product.
3. Review field welder qualifications by certification or verify by retesting. Obtain welder certificates.

C. Source Testing: The Testing Laboratory shall provide the following tests at the designated fabrication shops:

1. Test welds completed in the shop according to Paragraph G "Weld Testing" below.
2. Test bolted connections completed in the shop according to Paragraph I "High-Strength Bolt Testing."

D. Source Inspection: The Testing Laboratory shall provide the following inspections at the designated fabrication shops:

1. An initial shop inspection prior to the start of any fabricating work shall be made to accomplish the following:
   a. Perform tasks outlined in Paragraphs G.1, G.2 and G.3 of welding inspection duties described below in Paragraph G "Weld Inspection and Process Monitoring" when shop welding is to be performed.
   b. Perform tasks outlined in paragraph J.1 of bolt inspection duties described below in Paragraph I "High-Strength Bolt Inspection and

Process Monitoring" when shop bolting involves joints that are designated on the plans as Pretensioned or Slip-Critical.

2. Process Monitoring:
   a. Provide continuous or periodic monitoring of welding as described below in Paragraph G "Weld Inspection and Process Monitoring."
   b. Provide continuous or periodic monitoring of bolting as described below in Paragraph J "High-Strength Bolt Inspection and Process Monitoring" of high-strength bolt installation in pre-tensioned or slip-critical joints using turn-of-the-nut without matchmarking or calibrated wrench method of bolt installation.
   c. Provide periodic verification of specified camber of steel beams.

E. Field Testing: The Testing Laboratory shall provide the following tests in the field:

1. Test welds completed in the field according to Paragraph H "Weld Testing:" below.
2. Test bolted connections completed in the field according to Paragraph I "High-Strength Bolt Testing."
3. Perform bend tests on completed shear connectors attached to beams as required according to procedures outlined in AWS D1.1. In addition, perform field bend tests on an additional 2% of completed shear connectors on each beam but not less than one connector per beam.
4. Testing of Non-Shrink Grout for Base Plates, Bearing Plates, and Precast Wall Panels:
   a. Compressive Strength Tests: Compressive strength of grout shall be determined by testing grout cubes according to the requirements of ASTM C 109 - Modified. Test one set of three cubes at one day, and one set of three cubes at 28 days.
   b. Frequency of Testing: One set of cubes (6 cubes) shall be made for every ten base plates and bearing plates or fraction thereof but not less than one set for each day's operation. One set of cubes shall be made for each day's operation of grouting wall panels.

F. Field Inspection: The Testing Laboratory shall provide the following inspections in the field:

1. Inspect galvanized HSS and other cold-worked structural steel members for cracking or other damage resulting from galvanizing process. Endeavor to complete inspections prior to erection of these members. Immediately notify Contractor and Architect/Engineer of any irregularities discovered.
2. Provide continuous or periodic monitoring of field welding as described below in Paragraph G "Weld Inspection and Process Monitoring."
3. Provide continuous or periodic monitoring of field bolting as described below in Paragraph I "High-Strength Bolt Inspection and Process Monitoring" of high-strength bolt installation in pre-tensioned or slip-critical joints using turn-of-the-nut without matchmarking or calibrated wrench method of bolt installation.
4. Inspect welded or bolted connections that were completed, but not inspected, in the shop. Perform inspections according to Paragraph G "Weld Inspection and Process Monitoring" and/or Paragraph I "High-Strength Bolt Inspection and Process Monitoring" as appropriate.
5. Obtain the planned erection procedure, and review with the Erector's supervisory personnel.

6. Check the installation of base plates for proper leveling, grout type, and grout application.
7. Check structural steel as received in the field for possible shipping damage, workmanship, and identification marking to conform to AISC 360 for structural steel and specified ASTM standards for other steel.
8. Verify that surveys are occurring as specified to check plumbness and frame alignment as erection progresses. Review the submitted survey report.
9. Periodically inspect the steel frame for such items as bracing and stiffening details, member locations, and joint details at each connection for compliance with approved construction documents.
10. Inspect 100% of the column compression and base joints for verification that gaps in contact bearing do not exceed 1/16 inch. Gaps greater than 1/16 inch but less than 1/4 inch shall be reported to the OAR and Engineer for assessment. All gaps greater than 1/4 inch shall be shimmed according to Specification 05 12 00 "Structural Steel Framing."
11. Endeavor to guard the RPR against the Contractor cutting, grinding, reaming, or making any other field modification to structural steel without the prior approval of the Engineer. Report any noted unauthorized modifications to the RPR and Engineer.

G. Weld Inspection and Process Monitoring: The Testing Laboratory shall make the following inspections of the welds and welding processes. Welds performed in the fabricating shop may be inspected in the field unless continuous monitoring of the welding process is herein specified or if access in the field due to other work or shop finishes makes field inspection impractical:

1. Approve Welding Procedure Specifications submitted by the Contractor. Approve any changes submitted by the Contractor to any WPS that has already been approved. Obtain the Welding Procedure Qualification Record (WPQR) for each successful WPS qualification.
2. Periodically verify welding electrodes to be used and other welding consumables as the job progresses.
3. Periodically observe joint preparation, assembly practice, welding techniques including preheating and sequence, and the performance of welders with sufficient frequency to assure compliance with code and contract document requirements. Check preheating to assure conformance with AWS D1.1, Section 5.6. Verify procedure for control of distortion and shrinkage stresses.
4. Continuously observe joint preparation and fit up, backing strips, and runout plates for welded moment connections and column splices.
5. Periodically provide visual inspection of the root pass of partial and complete joint penetration welds.
6. Visually inspect 100 % of welds for proper size, length, location, and weld quality in accordance with AWS D1.1 requirements. Unless specifically noted otherwise, all welding shall be considered statically loaded nontubular connections.
7. Visually inspect 100% of completed shear connectors on each beam.
8. Visually inspect 100% of the welds of anchors to embedded plates that are to be cast into concrete elements.
9. In addition to the inspections above, perform the following:
   a. Continuously monitor and observe joint preparation, assembly practice, welding techniques including preheating and sequence, and the

performance of welders for 100% of complete and partial joint penetration welds, plug and slot welds, multiple-pass fillet welds, and single-pass fillet welds greater than 5/16 inch.

b. Check preheating to assure conformance with AWS D1.1, Section 5.6. Verify procedure for control of distortion and shrinkage stresses.
c. Periodically monitor welding of single-pass fillet welds that are less than or equal to 5/16 inch.
d. Periodically monitor the welding of headed studs to floor beams.
e. Periodically monitor the welding of anchors to embedded plates that are to be cast into concrete elements.

H. Weld Testing:

1. Perform nondestructive examination services using a qualified technician with the necessary equipment to perform the following:
   a. Nondestructive examination conducted in accordance with the specific requirements for the item being examined including radiographic (RT), ultrasonic (UT), magnetic particle (MT), or dye-penetrant inspection (PT). Nondestructive inspection procedures shall conform to AWS D1.1.
   b. Interpret, record, and report results of the nondestructive tests.
   c. Mark for repair, any area not meeting Specification requirements. Correction of rejected welds shall be made in accordance with AWS D1.1.
   d. Re-examine repair areas and interpret, record, and report the results of examinations of repair welds.
   e. Verify that quality of welds meet the requirements of AWS D1.1.
2. Fillet Welds: Provide the following:
   a. MT test a minimum of 10% of the length of each fillet weld exceeding 5/16".
   b. Periodic MT testing of representative fillet welds 5/16" and less but need not exceed 10% of all such welds, except as required for high rejection rates as indicated in the following paragraph.
   c. Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.
3. Partial Joint Penetration (PJP) Welds, including Flare-Bevel Groove Welds: Provide the following:
   a. MT test a minimum of 25% of the length of each PJP weld exceeding 5/16" effective throat.
   b. Periodic MT testing of representative PJP welds 5/16” and less but need not exceed 10% of all such welds, except as required for high rejection rates as indicated in the following paragraph.
   c. Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.
4. Complete Joint Penetration (CJP) Welds: Provide the following:
   a. All CJP welds exceeding 5/16" thickness shall be 100% UT tested per AWS D1.1 Clause 6 Part F. The Testing Laboratory shall review the CJP joints to determine where geometry or accessibility precludes the use of standard scanning patterns per AWS D1.1 Clause 6 Part F. At these locations the testing laboratory shall develop and submit for approval a written testing procedure in accordance with AWS D1.1

Annex S.

b. Periodic MT testing of representative CJP welds 5/16” and less not to exceed 10% of all such welds, except as required for high rejection rates as indicated in the following paragraph.
c. Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.

5. Acceptance Criteria:
   a. Visual, MT, PT shall be per AWS D1.1 Table 6.1.
   b. UT testing shall be per AWS D1.1 6.13.1 and Table 6.2.
6. Base metal thicker than 1.5 inches, where subjected to through-thickness weld shrinkage strains, shall be UT tested for discontinuities behind and adjacent to such welds. UT testing shall occur no sooner than 24 hours after the weld has cooled to ambient temperatures. Any material discontinuities shall be recorded on the basis of ASTM A 435 or ASTM A 898 (Level 1 criteria) and reported for Engineer disposition.
7. Welds of Anchors to Embedded Plates:
   a. Headed Studs: Perform field bend tests according to AWS D1.1 on 2% of the studs welded to plates, but not less than one stud per plate.
   b. Deformed Bar Anchors: Perform MT testing on 10% of deformed bar anchors larger than #5 bar.
8. The costs of repairing defective welds and the costs of retesting by the Testing Laboratory shall be borne by the Contractor. If removal of a backing strip is required by the Testing Laboratory to investigate a suspected weld defect, such cost shall be borne by the Contractor.

   a. High-Strength Bolt Inspection and Process Monitoring: The Testing Laboratory shall perform the following inspections for connections joined with high-strength bolts. Bolting performed in the shop may be inspected in the field unless continuous monitoring of the bolting operation is specified herein:
9. Observe pre-installation verification testing of the pretensioning method to be used in accordance with the requirements of the “Specification for Structural Joints Using High-Strength Bolts”.
10. Check daily the calibration of impact wrenches used in field bolted connections.
11. Inspect bolt installation for 100% of high strength bolted connections according to inspection procedures outlined in the "Specification for Structural Joints Using High-Strength Bolts".
12. Monitoring of Bolting Installation:
    a. Continuous Monitoring: The Testing Laboratory shall be continuously present and monitor the bolting installation for compliance with the selected procedure for installation as specified in the “Specification for Structural Joints Using High-Strength Bolts” for joints using high-strength bolts that are designated on the plans as Pretensioned (PT) or Slip-Critical (SC) type joints and that are being installed using the calibrated wrench method or the turn-of-nut without match-marking method of installation.
    b. Periodic Monitoring: All joint types and bolt installation methods shall be monitored on a periodic basis.
    c. High-Strength Bolt Testing: The Testing Laboratory shall perform the

following tests for connections joined with high-strength bolts:

13. Perform Arbitration Testing according to procedures outlined in the "Specification for Structural Joints using High-Strength Bolts" when a disagreement exists between the Testing Laboratory and the Fabricator as to the minimum tension of installed bolts that have been inspected according to paragraph below.

3.7 STEEL JOISTS

A. Scope of Work: The Testing Laboratory shall perform inspection of steel joists as described herein.

B. Quality Assurance:

1. Verify that the fabricator maintains detailed quality control procedures that provide a basis for inspection control of workmanship and of the ability to conform to approved construction documents and industry standards. Verify that these procedures are complete and adequate relative to code requirements for fabricator's scope of work.
2. Verify welding procedures, welder qualifications and weld material prior to the start of work.
3. Review field welder qualifications by certification or verify by retesting. Obtain welder certificates.

C. Source Inspection:

1. Provide periodic inspection of the welding work in progress. Visually inspect 100% of welds prior to shipment of shop welded assemblies.
   a. Verify camber requirements.

D. Field Testing:

1. Perform Magnetic Particle testing (MT) on representative field welds not to exceed 10% of such welds unless rejection rates become high, in which case, frequency of inspection shall be increased to ensure acceptable welding.

E. Field Inspection: The duties of the Testing Laboratory shall be as follows:

1. Inspect joists for damage during shipment.
2. Visually inspect 100% of welded chord splices for compliance with SJI and project specifications.
3. Confirm bolting of joists to supports at column lines as required by OSHA requirements.

3.8 STEEL DECKING

A. Field Inspection:

1. Check steel deck as received in the field for possible shipping damage, workmanship, and identification marking to conform to specified ASTM standards for steel deck.
2. Periodically monitor the method of attaching the steel floor and roof decking to the structural frame.
3. Visually inspect 100% of the welding or other attachment method of steel deck to the structure and at side laps.

3.9 COLD-FORMED METAL FRAMING

A. Field Inspection:

1. Periodically inspect welding of main wind-force-resisting systems.
2. Periodically inspect screwing, bolting, anchoring and other fastening techniques used to attach components of the main wind-force-resisting systems, including shear walls, braces, diaphragms, collectors, and hold downs.

3.10 EARTHWORK

A. Quality Assurance:

1. Welder Qualifications: Verify welder qualifications either by certification and/or by retesting. Obtain welder certificates.

B. Source Inspection:

1. Precast Concrete Piles:
   a. Plant Inspection: Inspect forms, placement of reinforcing steel, and strands, placement and finishing of concrete, and tensioning of strands.

C. Field Testing:

1. Compacted Fill:
   a. Verification of Fill Material: Perform classification and testing to verify that the fill material to be used complies with the project specifications.
   b. Field Density Testing: Perform field density testing as described below:
      1) Field density tests shall be run according to ASTM D 2937 or ASTM D 6938 as applicable.
      2) Acceptance Criteria: The results of field density tests by the Laboratory will be considered satisfactory if the average of any three consecutive tests has a value not less than the required density with no single test falling more than 2 percent below the required density and the moisture content conforms to the requirements of the specification.
      3) Test Frequency for Paved Areas and Building Slab Subgrade:
         a) Make at least one field density test of the natural subgrade for every 2500 square feet of paved area or building slab but in no case less than three tests.
         b) In each compacted fill layer or lift, make one field density test for every 2500 square feet of building slab or paved area but in no case less than three tests.
      4) Test Frequency for Foundation Wall Backfill: Make at least one field density test for each 200 lineal feet of wall with a minimum of 4 tests for the basement walls around the perimeter of each building and a minimum of one test for every other type of foundation wall on the site. Tests shall be performed in random lifts along each wall.
      5) Test Frequency for Compacted Fill beneath Column and Wall Footings and Mat Foundations: Make at least one field density test in each compacted fill layer or lift for each column footing, one for each twenty-five lineal feet of wall and one for each 2,500 square

feet of mat foundation area or fraction thereof.

c. Report Copies: Moisture-density curves and results of field density tests shall be submitted to the parties specified earlier in this section.

d. Additional Testing: If reports by the Laboratory indicate field densities lower than specified, additional tests will be run by the Laboratory with at least the frequencies scheduled above on recompacted fill and/or natural subgrade. The Testing Laboratory shall notify the Contractor on a timely basis for any required retesting so as not to delay the work. The costs of such tests shall be borne by the Contractor.

2. Spread (Excavated) Footings

a. Concrete Cylinders: Make and test concrete cylinders as specified for Cast-in-Place Concrete.

D. Field Inspection by the Testing Laboratory:

1. The Testing Laboratory shall provide inspection of materials used in foundation elements as described below.
2. Compacted Fill:
   a. Subgrade below Compacted Fill: Observe and verify that the subgrade below compacted fill has been properly prepared before compact fill construction begins.
   b. During placement and compaction of fill, determine that the material being used and the maximum lift thickness comply with the specifications.

E. Foundation Inspection by the Geotechnical Engineer: The Geotechnical Engineer of Record shall provide inspection service for the following items before and during foundation installation as appropriate for the foundation type. The Geotechnical Engineer shall submit written field inspection reports promptly after inspection to the parties listed above and report his findings after each inspection by telephone or e-mail to the Engineer.

1. Spread (Excavated) Footing:
   a. Subgrade: Verify that foundation bearing conditions are consistent with soil report tests and that the footing is being installed in the proper soil strata at the proper elevation. Make recommendations regarding adjustment to subgrade or bearing elevation if subgrade is not adequate to support footing.

END OF SECTION 01 45 29

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies requirements for temporary services and facilities, including utilities, construction and support facilities, maintenance of traffic, security and protection.

B. Temporary utilities which may be required include but are not limited to:

1. Temporary electric power and light.
2. Telephone service.
3. Temporary project identification sign - all other signs are prohibited.
4. Drinking water.
5. Sanitary facilities.

C. Temporary construction and support facilities which may be required include but are not limited to:

1. Storage sheds.
2. Dewatering facilities and drains.
3. Temporary enclosures including demising walls.
4. Waste disposal services.
5. Construction aids and miscellaneous services and facilities.
6. Storm and sanitary sewer.
7. Fuel tanks larger than 15 gallons.
8. Temporary Wayfinding Signage.

D. Temporary construction and support facilities, Contractor's option:

1. Field office.

a. Temporary field offices WILL be allowed on the construction site.
b. If a field office is used it shall be located within the secure fence enclosure of the site of project.

E. Security and protection facilities which may be required include but are not limited to:

1. Temporary fire protection.
2. Barricades, warning signs, lights.
3. Sidewalk bridge or enclosure fence for the site.
4. Environmental protection.

1.3 SUBMITTALS

A. Temporary Utilities: Maintain reports of tests, inspections, meter readings and similar procedures performed on temporary utilities for review by the OAR.

B. Implementation and Termination Schedule: Show implementation and termination of temporary utilities in the baseline schedule required by Section 01 32 15 Scheduling of Work.

C. Maintenance of Traffic Plan: Submit a "Maintenance of Traffic Plan" within fourteen (14) days of the date established for commencement of work requiring the maintenance of traffic.

1.4 QUALITY ASSURANCE

A. Regulations: Comply with industry standards and applicable laws and regulations of Authorities Having Jurisdiction, including but not limited to:

1. Building Code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Environmental protection regulations.

B. Standards: Comply with NFPA Code 241, "Building Construction and Demolition Operations,” ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition,” and NECA Electrical Design Library "Temporary Electrical Facilities."

1. Refer to "Guidelines for Bid Conditions for Temporary Job Utilities and Services", prepared jointly by AGC and ASC, for industry recommendations.
2. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70).

C. Inspections: Arrange for authorities having jurisdiction to inspect and test each temporary utility before use. Obtain required certifications and permits.

1.5 PROJECT CONDITIONS

A. Temporary Utilities: Include in the project schedule dates for implementation and termination of each temporary utility. Coordinate with the OAR change over from use of temporary service to use of the permanent service.

B. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Take necessary fire prevention measures. Do not overload facilities, or permit them to interfere with progress. Do not allow hazardous dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Where visible to the public, provide new materials suitable for the use intended. Where not visible to the public, Contractor may provide undamaged previously used materials, suitable for the use intended.

B. Lumber and Plywood: Comply with requirements in Division-6 Section "Rough Carpentry."

C. Tarpaulins: Provide waterproof, fire-resistant, UL labeled tarpaulins with flame-spread rating of 15 or less. For temporary enclosures provide translucent nylon reinforced laminated polyethylene or polyvinyl chloride fire retardant tarpaulins.

D. Water: Provide potable water meeting the requirement of the local health authorities.

2.2 EQUIPMENT

A. General: Provide new equipment or previously used equipment in serviceable condition suitable for use intended.

B. Electrical Outlets: Provide properly configured NEMA polarized outlets to prevent insertion of 110-120 volt plugs into higher voltage outlets. Provide receptacle outlets equipped with ground-fault circuit interrupters, reset button and pilot light, for connection of power tools and equipment.

C. Electrical Power Cords: Provide grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Provide waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas where construction activities are in progress. Eliminate trip hazards.

D. Lamps and Light Fixtures: Provide general service incandescent lamps of wattage required for adequate illumination. Provide guard cages or tempered glass enclosures, where exposed to breakage. Provide exterior fixtures where exposed to moisture.

E. Heating Units: Provide temporary heating units that have been tested and labeled by UL, FM or another recognized trade association related to the type of fuel being consumed.

F. Temporary Toilet Units: Provide self-contained single-occupant toilet units of the chemical type, properly vented and fully enclosed with a glass fiber reinforced polyester 2`shell.

G. First Aid Supplies: Comply with governing regulations.

1. Fire Extinguishers: Provide hand-carried, portable UL-rated, class "A" fire extinguishers for temporary offices and similar spaces. In other locations provide hand-carried, portable, UL-rated, class "ABC" dry chemical extinguishers, or a combination of extinguishers of NFPA recommended classes for the exposures.
2. Comply with NFPA 10 and 241 for classification, extinguishing agent and size required by location and class of fire exposure.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use qualified personnel for installation of temporary facilities. Comply with all applicable codes. Relocate and modify facilities as required.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Engage the appropriate local utility company to install temporary service or connect to existing service. Where the company provides only part of the service, provide the remainder with matching, compatible materials and equipment; comply with the company's recommendations.

1. Arrange with the utility company for a time when service can be interrupted, where necessary, to make connections for temporary services.
2. Provide adequate capacity at each stage of construction. Prior to temporary utility availability, provide trucked-in services.
3. Cost or use charges for temporary facilities are not chargeable to the Owner, RPR or the Designer, and will not be accepted as a basis of claims for a Change Order.

A. Water Service: Install water service and distribution piping of sizes and pressures adequate for construction.

1. Provide a backflow prevention device.

A. Temporary Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period.

B. Temporary Lighting: Whenever overhead floor or roof deck has been installed, provide temporary lighting with local switching.

1. Install and operate temporary lighting that will fulfill security and protection requirements, without operating the entire system, and will provide adequate illumination for construction operations and traffic conditions.

C. Temporary Telephones: Provide temporary telephone service for personnel engaged in construction activities, throughout the construction period.

D. Temporary Communication to the internt via Telephone service provider to temporaty office.

3.3 TEMPORARY CONSTRUCTION AND SUPPORT FACILITIES INSTALLATION

A. General: Locate field offices, storage sheds, sanitary facilities and other temporary construction and support facilities as indicated.

1. Maintain temporary construction and support facilities until near Final Acceptance. Remove prior to Final Acceptance. Personnel remaining after removal will be permitted to use permanent facilities, under conditions acceptable to the OAR.
2. Provide non-combustible construction for offices, shops and sheds located within the construction area, or within 30 feet of building lines. Comply with requirements of NFPA 241.
3. Obtain permits with AHJ for temporaty facilities.

A. Temporary Heat: Provide temporary heat required by construction activities, for curing or drying of completed installations or protection of installed construction from adverse effects of low temperatures or high humidity. Select safe equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.

B. Heating Facilities: Except where use of the permanent system is authorized, provide vented self-contained LP gas with individual space thermostatic control.

C. Use of gasoline-burning space heaters, open flame, or salamander type heating units is prohibited.

D. Storage and Fabrication Sheds: Install storage and fabrication sheds, sized, furnished and equipped to accommodate materials and equipment involved, including temporary utility service. Sheds may be open shelters or fully enclosed spaces within the building or elsewhere on the site.

E. Sanitary Facilities: Sanitary facilities include temporary toilets, wash facilities and drinking water fixtures. Comply with local health authorities for the administration of these facilities.

1. Provide toilet tissue, paper towels, paper cups and similar disposable materials for each facility. Provide covered waste containers for used material.
2. Temporary Toilets shall be self-contained toilet units. Shield toilets to ensure privacy. Use of pit-type privies will not be permitted.
3. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel involved in handling materials that require wash-up for a healthy and sanitary condition. Dispose of drainage properly. Supply cleaning compounds appropriate for each condition.
4. Drinking Water Accommodations: Provide drinking water accommodations as necessary, including paper supply.

F. Dewatering Facilities and Drains: For temporary drainage and dewatering facilities and operations not directly associated with construction activities included under individual Sections, comply with dewatering requirements of applicable Division 2 Sections. Where feasible, utilize the same facilities. Maintain the site, excavations and construction free of water.

G. Temporary Lifts and Hoists: Provide facilities for hoisting materials, if required.

H. Project Identification/Construction Company Identification Sign: Prepare project identification sign of the size indicated; install sign where indicated to inform the public and persons seeking entrance to the Project. Securely attach, as required. Install sign at commencement of construction and remove upon issuance of the Certificate of Occupancy/Certificate of Completion (CofO).

1. Size: Two and one-half feet by five feet with four inch radius corners.
2. Quality Assurance: Engage an experienced sign painter to apply graphics.
3. Location: Locate on demising wall.
4. Graphic Description: Information shall include the Owner, Contractor, and Designer name, project name, and completion date.

    a. Type Style: Frutiger 55 or Helvetica Medium.
    b. Color: Jetport Brown background with white lettering.
    c. Quantity: One sign per project.

I. Pardon our dust sign may be provided via the Owner’s sign shop.

J. Collection and Disposal of Waste: Collect waste from construction areas daily. Comply with requirements of NFPA 241 for removal of combustible waste material and debris. Enforce requirements strictly. Do not hold materials more than seven (7) days during normal weather or three (3) days when the temperature is expected to rise above 80 degrees F (27 degrees C). Handle hazardous, dangerous, or unsanitary waste materials separately from other waste by containerizing properly. Dispose of material in a lawful manner.

1. The Contractor shall not use the Owner’s waste disposal systems.
2. The Owner will not provide waste disposal services.

K. Fuel tanks larger than 15 gallons

1. All Equipment

a. The Contractor will follow the guidance provided with regard to all equipment used on the work site. All equipment with Aboveground Storage Tanks (AST’s) fuel tanks that have a capacity of 15 gallons or more but less than 550 gallons will adhere to the following guidelines. Equipment with tanks that have a capacity of 550 and more gallons will adhere to Florida Administrative Code 62-761.
b. Each piece of equipment with a tank capacity of 15 gallons or more will be required to have secondary containment. The capacity of the secondary containment will be 110% of the tank. As a minimum, five sheets of 10-mil visqueen will be used to line the secondary containment. The visqueen will overlap the outside walls of the secondary containment a minimum of 24 inches. The Owner recommends a single sheet of puncture resistant neoprene of ¼ inch thick as a liner in the secondary containment or concrete containment.
c. The secondary containment will be checked on a periodic basis and the fluid buildup will be disposed accordingly. Visible sheen will indicate contaminated water and will be disposed on in accordance with Florida Administrative Code (FAC) 62-777.
d. Mobile storage tanks that meet the criteria of FAC 62-677 are exempt from these procedures.

L. Temporary Wayfinding Signage

1. Provide temporary signs as required to maintain proper airport operations during all aspects of the Work.
2. Provide temporary signage that duplicates any removed or hidden permanent signs as a result of the Work.
3. Coordinate all temporary signs with the RPR and airport. Develop a temporary sign plan for review by the RPR and airport. At a minimum, the plan shall show where all temporary signs are to be located, the messages that are to appear, when the signs will be installed, how the signs will be installed, when the signs will be installed, when the signs will be removed, the sign face layouts, the sign colors, and the materials to be used.
4. Temporary signs shall be safely and securely installed. Repair any damage to any walls, building surfaces, or building finishes resulting from the installation or the removal of the temporary signs. Once they have been taken down, remove from the site and properly dispose of the temporary signs.
5. Coordinate the installation and removal of the temporary signs with the RPR and Airport. Also coordinate the installation and removal of the temporary signs with the Project phases and construction progress.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. General: Except for use of permanent fire protection as soon as available, do not change over from use of temporary security and protection facilities to permanent facilities until Substantial Completion, or longer as requested by the RPR and Airport.

B. Temporary Fire Protection: Install and maintain temporary fire protection facilities of the types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 10 "Standard for Portable Fire Extinguishers," and NFPA 241 "Standard for Safeguarding Construction, Alterations and Demolition Operations."

1. Locate fire extinguishers where convenient and effective for their intended purpose, but not less than one extinguisher on each floor at or near each usable stairwell.
2. Store combustible materials in containers in fire-safe locations.
3. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire protection facilities, exitways and other access routes for fighting fires.
4. Provide supervision of welding operations, combustion type temporary heating units, and similar sources of fire ignition.

C. Barricades, Warning Signs and Lights: Comply with standards and code requirements for erection of structurally adequate barricades. Paint with appropriate colors, graphics and warning signs to inform personnel and the public of the hazard being protected against. Where appropriate and needed provide lighting, including flashing red or amber lights.

D. Environmental Protection: Provide protection, operate temporary facilities and conduct construction in ways and by methods that comply with environmental regulations, and minimize the possibility that air, waterways and subsoil might be contaminated or polluted, or that other undesirable effects might result. Avoid use of tools and equipment which produce harmful noise. Restrict use of noise making tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.5 OPERATION, TERMINATION AND REMOVAL

A. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage by the elements.

B. Termination and Removal: Unless the RPR requests that it be maintained longer, remove each temporary facility when the need has ended, or when replaced by authorized use of a permanent facility, or no later than Final Acceptance. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility. Repair damaged Work, clean exposed surfaces and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of the Contractor.
2. Prior to Final Acceptance, clean and renovate permanent facilities that have been used during the construction period, including but not limited to:

    a. Repair of any and all damages to existing materials or finishes. Repair shall be complete and made to the satisfaction of the RPR at no additional cost.
    b. Replace air filters and clean inside of ductwork and housings.
    c. Replace existing significantly work parts and parts that have been subject to unusual operating conditions due to the Work.

d. Replace lamps that are burned out or noticeably dimmed by substantial hours of use.

END OF SECTION 01 50 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements governing the Contractor's selection of products for use in the Project.

1.3 DEFINITIONS

A. Definitions used in this Article are not intended to change the meaning of other terms used in the Contract Documents, such as "specialties," "systems," "structure," "finishes," "accessories," and similar terms. Such terms are self-explanatory and have well-recognized meanings in the construction industry.

1. "Products" are items purchased for incorporation in the Work, whether purchased for the Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

a. "Named Products" are items identified by the manufacturer's product name, including make or model number or other designation, shown or listed in the manufacturer's published product literature, that is current as of the date of the Contract Documents.

b. "Foreign Products," as distinguished from "domestic products," are items substantially manufactured (50 percent or more of value) outside the United States and its possessions. Products produced or supplied by entities substantially owned (more than 50 percent) by persons who are not citizens of, nor living within, the United States and its possessions are also considered to be foreign products.

2. "Materials" are products substantially shaped, cut, worked, mixed, finished, refined or otherwise fabricated, processed, or installed to form a part of the Work.

3. "Equipment" is a product with operational parts, whether motorized or manually operated, that requires service connections, such as wiring or piping.

1.4 SUBMITTALS

A. Product List: Prepare a list of specified products. Include the manufacturer's name and proprietary product names for each item listed.

1. Coordinate product list with the Contractor's Construction Schedule and the Schedule of Submittals.
2. Form: Prepare product list with information on each item tabulated under the following column headings:

a. Related Specification Section number.
b. Generic name used in Contract Documents.
c. Proprietary name, model number, and similar designations.
d. Manufacturer's name and address.
e. Supplier's name and address.
f. Installer's name and address.
g. Projected delivery date or time span of delivery period.

3. Submit list following procedures and requirements as outlined in Division 1 Specifications Section Shop Drawings, Product Data, and Samples.

1.5 QUALITY ASSURANCE

A. Source Limitations: To the fullest extent possible, provide products of the same kind from a single source.

1. When specified products are available only from sources that do not, or cannot, produce a quantity adequate to complete project requirements in a timely manner, consult with the OAR to determine the most important product qualities before proceeding. Qualities may include attributes, such as visual appearance, strength, durability, or compatibility. When a determination has been made, select products from sources producing products that possess these qualities, to the fullest extent possible.

B. Compatibility of Options: When the Contractor is given the option of selecting between 2 or more products for use on the Project, the product selected shall be compatible with products previously selected, even if previously selected products were also options.

1. The Contractor is responsible for providing products and construction methods that are compatible with products and construction methods of the subcontractors.

2. If a dispute arises over concurrently selectable, but incompatible products, the OAR will determine which products shall be retained and which are incompatible and must be replaced.

C. Nameplates: Except for required labels and operating data, do not attach or imprint manufacturer's or producer's nameplates or trademarks on exposed surfaces of products that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on concealed surfaces or, where required for observation after installation, on accessible surfaces that are not conspicuous.

2. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate on an easily accessible surface that is inconspicuous in occupied spaces. The nameplate shall contain the following information and other essential operating data:

a. Name of product and manufacturer.
b. Model and serial number.
c. Capacity.
d. Speed.
e. Ratings.
f. UL Listing or other Owner approved listing agency.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products according to the manufacturer's recommendations, using means and methods that will prevent damage, deterioration, and loss, including theft.

1. Schedule delivery to minimize long-term storage at the site and to prevent overcrowding of construction spaces.

2. Coordinate delivery with installation time to assure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

3. Deliver products to the site in an undamaged condition in the manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.

4. Inspect products upon delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.

5. Store products at the site in a manner that will facilitate inspection and measurement of quantity or counting of units.

6. Store heavy materials away from the Project structure in a manner that will not endanger the supporting construction.

7. Store products subject to damage by the elements above ground, under cover in a weathertight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instructions.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, new at the time of installation.

1. Provide products complete with accessories, trim, finish, safety guards, and other devices and details needed for a complete installation and the intended use and effect.

2. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.

B. Product Selection Procedures: The Contract Documents and governing regulations govern product selection. Refer to Section 01 60 00 Product Requirements.

1. Visual Matching: Where Specifications require matching an established Sample, the Designer(s) decision will be final on whether a proposed product matches satisfactorily.

a. Where no product available within the specified category matches satisfactorily and complies with other specified requirements, comply with provisions of the Contract Documents concerning "substitutions" for selection of a matching product in another product category.

2. Visual Selection: Where specified product requirements include the phrase "...as selected from manufacturer's standard colors, patterns, textures..." or a similar phrase, select a product and manufacturer that complies with other specified requirements. The Designer will select the color, pattern, and texture from the product line selected.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRODUCTS

A. Comply with manufacturer's instructions and recommendations for installation of products in the applications indicated. Anchor each product securely in place, accurately located and aligned with other Work.

1. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration.

END OF SECTION 01 60 00

SECTION 01 73 29 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section. Refer to other Specification Sections for specific requirements and limitations applicable to cutting and patching individual parts of the work.

1.2 SUMMARY

A. This Section includes cutting into existing construction to provide for installation or performance of the Work, subsequent fitting, and patching required to restore surfaces to original condition.

1. Execute cutting, fitting, and patching, including excavation and backfill, required to perform Work and to:

a. Make parts fit together properly.

b. Remove and replace defective work.

c. Remove and replace Work not conforming to requirements of Contract Documents.

d. Uncover Work to allow for the RPR's and A/E's observation of covered Work which has been covered prior to required observation of the RPR and A/E.

2. Drilling of holes for the installation of fasteners and similar operations is not considered to be cutting and patching.

1.3 BUILDING MODIFICATIONS

A. General: Modifications to existing facililties and structures shall be provided as indicated and as necessary to accomplish the Work of these Contract Documents.

1. Modifications shall include the removal of existing structure, relocation of materials indicated, termination and relocation of utilities, cutting, patching, cleaning, adjusting, and refinishing, and all incidental work related and required for the installation of new Work.

2. It is intended to maintain daily occupancy functions during the progress of this Work. The Contractor shall closely coordinate his Work to minimize any inconvenience to the Owner or Owner's operations.

3. No Public Services or utility systems shall be interrupted without first notifying the RPR and obtaining concurrence for the interruption as instructed in the Summery of Work.

1.4 SUBMITTALS

A. Cutting and Patching Proposal: Submit a proposal describing procedures well in advance of the time cutting and patching will be performed and request approval to proceed. Include the following information, as applicable:

1. Describe the extent of cutting and patching required and how it is to be performed.

2. Describe anticipated results in terms of changes to existing construction; include changes to structural elements and operating components as well as changes in the building's appearance and other significant visual elements.

3. List products to be used and firms that will perform Work.

4. Indicate dates when cutting and patching is to be performed.

5. List utilities that will be disturbed or affected, including those that will be relocated and those that will be temporarily out-of-service. Indicate how long service will be disrupted.

6. Where cutting and patching involves addition of reinforcement to structural elements, submit details and engineering calculations to show how reinforcement is integrated with the original structure.

7. Approval by the RPR to proceed with cutting and patching does not waive the Owner's right to later require complete removal and replacement of Work found to be cut and patched in an unsatisfactory manner.

B. Hot Work and Dust Hazard - Notify the RPR 48 hours (excluding weekends and holidays) in advance of any welding, cutting, burning, soldering, dust activities or any hot work. Utilize the Owners Hot Work/Dust Hazard Permit Forms.

1.5 QUALITY ASSURANCE

A. Requirements for Structural Work: Do not cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio.

B. Operational and Safety Limitations: Do not cut and patch operating elements or safety related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operational life or safety.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following operating elements or safety related systems:

    a. Water, moisture, or vapor barriers.
    b. Membranes and flashings.
    c. Electrical wiring systems.
    d. Control systems.
    e. Communications systems.
    f. Conveying systems.
    g. Shoring, bracing, and sheeting.
    h. Primary operational systems.
    i. Air or smoke barriers.
    j. Fire protection systems.
    k. Noise and vibration control elements and systems.
    l. Water lines.
    m. Sewer lines.
    n. Other special construction.

C. Visual Requirements: Do not cut and patch construction in a manner that would degrade the building's aesthetics, or result in visual evidence of cutting and patching. Remove and replace Work cut and patched unsatisfactorily.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Use materials that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, obtain the OAR's approval to use substitute materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existing materials.

B. Verify that new materials are compatible with existing materials in all respects where cutting and patching occurs.

PART 3 - EXECUTION

3.1 INSPECTION

A. Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under which cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

1. Before proceeding, meet at the site with all parties involved in cutting and patching. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts with RPR before proceeding.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

1. Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

C. Cutting: Take all precautions necessary to avoid cutting existing pipe or conduit serving the building, but scheduled to be removed or relocated until provisions have been made to bypass them.

3.3 PERFORMANCE

A. General: Employ skilled workmen to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition.

B. Cutting: Cut existing construction using methods least likely to damage elements to be retained or adjoining construction. Where possible review proposed procedures with the original installer; comply with the original installer's recommendations.

1. In general, where cutting is required, use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.

2. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.

3. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.

4. Comply with requirements of applicable sections of Division 2 specifications where cutting and patching requires excavating and backfill.

5. By-pass utility services such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated or abandoned. Cut-off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of

pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

C. Patching: Patch with durable seams that are as invisible as possible. Comply with specified tolerances.

1. Where feasible, inspect and test patched areas to demonstrate integrity of the installation.

2. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

3. Where removal of walls or partitions extends one finished area into another, patch and repair floor and wall surfaces to provide an even surface of uniform color and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary to achieve uniform color and appearance.

a. Where patching occurs in a smooth painted surface, extend final paint coat over entire unbroken surface containing the patch, after the patched area has received primer and second coat.

4. Patch, repair, or rehang existing ceilings as necessary to provide an even plane surface of uniform appearance.

3.4 CLEANING

A. Thoroughly clean areas where cutting and patching is performed or used as access. Remove completely any paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION 01 73 29

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 74 23 - FINAL CLEANING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of the Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes: final cleaning at Substantial Completion.

B. Environmental Requirements: Conduct cleaning and waste-disposal operations in compliance with local laws and ordinances. Comply fully with federal and local environmental and antipollution regulations.

1. Do not dispose of volatile wastes, such as mineral spirits, oil, or paint thinner, in storm or sanitary drains.

2. Burning or burying of debris, rubbish, or other waste material on the premises is not permitted.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by the manufacturer or fabricator of the material to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Provide final-cleaning operations. Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit of Work to the condition expected from a commercial building cleaning and maintenance program. Comply with manufacturer's instructions.

B. Cleaning Operations: Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for the entire Project or a portion of the Project.

1. Clean the Project Site, yard and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and foreign substances.

2. Sweep paved areas broom clean. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.

3. Broom clean concrete floors in unoccupied spaces.

4. Remove petrochemical spills, stains, and other foreign deposits.

5. Remove tools, construction equipment, machinery, and surplus material from the site.

6. Vacuum clean carpet and similar soft surfaces, removing debris and excess nap. Shampoo, if required.

7. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

8. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, and similar spaces.

9. Remove marks, stains, fingerprints, and other soils or other dirt from painted, decorated, and natural finished woodwork and other Work.

10. Clean cabinet work removing stains, paint, dirt and dust.

11. Remove spots, plaster, soil and paint from ceramic tile, marble, and other finished materials, and wash or wipe clean.

12. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other substances that are noticeable vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.

13. Clean flooring materials thoroughly, comply with materials manufacturer's instructions and recommendations.

14. Remove labels that are not permanent labels.

15. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

a. Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.

16. Clean food-service equipment to a sanitary condition, ready and acceptable for its intended use.

17. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

18. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

19. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs and defective and noisy starters in fluorescent and mercury vapor fixtures.

20. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

21. Clean ductwork, blowers, and coils of units that were operated during construction.

22. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

23. Leave the Project clean and ready for occupancy.

C. Pest Control: Engage an experienced, licensed exterminator to make a final inspection and rid the Project of rodents, insects, and other pests. Comply with regulations of local authorities.

D. Removal of Protection: Remove temporary protection and facilities installed during construction to protect previously completed installations during the remainder of the construction period.

E. Compliances: Comply with governing regulations and safety standards for cleaning operations. Remove waste materials from the site and dispose of lawfully.

1. Where extra materials of value remain after completion of associated Work, they become the Owner's property. Dispose of these materials as directed by the OAR.

2. The Contractor shall not dispose of debris or waste materials on the Owner's property without the prior approval of the Owner.

F. Maintenance: Provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to assure operability without damaging effects.

3.2 PROTECTIONS

A. General: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period. Where applicable, such exposures include, but are not limited to, the following:

1. Excessive static or dynamic loading.
2. Excessive internal or external pressures.
3. Excessively high or low temperatures.
4. Thermal shock.
5. Excessively high or low humidity.
6. Air contamination or pollution.
7. Water or ice.
8. Solvents.
9. Chemicals.
10. Light.
11. Radiation.
12. Puncture.
13. Abrasion.
14. Heavy traffic.
15. Soiling, staining, and corrosion.
16. Bacteria.
17. Rodent and insect infestation.
18. Combustion.
19. Electrical current.
20. High-speed operation.
21. Improper lubrication.
22. Unusual wear or other misuse.
23. Contact between incompatible materials.
24. Destructive testing.
25. Misalignment.
26. Excessive weathering.
27. Unprotected storage.
28. Improper shipping or handling.
29. Theft.

END OF SECTION 01 74 23

SECTION 01 78 00 - CLOSEOUT SUBMITTALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section. Refer to other specification sections for requirements and limitations applicable to Project Closeout.

1.2 SUMMARY

A. Closeout is defined to include general requirements near end of Contract Time, in preparation for Substantial Completion, Final Completion and Acceptance, Final Payment, normal termination of Contract, occupancy by Owner and similar actions evidencing completion of the Work. Specific requirements for individual units of Work are specified in other sections.

1.3 SUBSTANTIAL COMPLETION

A. General: Refer to the General Conditions/Provisions of the Contract for Construction.

B. Procedures to achieving Substantial Completion:

1. The Contractor shall, five (5) business days prior to requesting inspection for certification of Substantial Completion, prepare and submit to the OAR the following:

   a. The Contractor's prepared comprehensive punch list of items to be completed or corrected. The punch list shall include all incomplete Work items and the schedule to complete each item.

   b. Draft Operation and Maintenance (O&M) Manuals for review by the RPR for conformance with the Contract documents. These will be returned to the Contractor.

   c. As-Built Documents (from Contractor) for review by the RPR for conformance with the Contract Documents. These will be returned to the Contractor.

2. The Contractor will request a preliminary inspection from the RPR for the determination that the Project is ready for the Substantial Completion Inspection. The Contractor will prior to the request:

   a. Complete its punch list and provide a copy to the RPR.

b. Schedule inspections from the Authorities Having Jurisdiction and provide the time and date to the RPR.

If the RPR's preliminary inspection discloses any item that is not in accordance with the requirements of the Contract Documents, whether or not included on the Contractor's punch list, the RPR shall so notify the Contractor and the Contractor shall add the items to its punch list. The Contractor shall proceed to complete or correct every item on the revised punch list and request re-inspection from the RPR.

3. If the RPR determines that the Work is ready, the Substantial Completion Inspection will be scheduled at a minimum of three (3) business days after the RPR's preliminary inspection.

4. Form #008 Substantial Completion Acceptance (SCA) will be used to: document the time and place of the project closeout inspections, establish the participants to be involved in the inspections, establish the date of Substantial Completion, document the acceptance of the Substantial Completion punch list, document the date all Substantial Completion punch list items were completed and document the date of Final Completion.

5. The following parties will attend the Substantial Completion inspection: the RPR, the Contractor, and the A/E. The following Owner representatives may attend: VPS ARFF, VPS Engineering, VPS Environmental, VPS IT, VPS Maintenance, VPS Operations, VPS Properties, VPS Risk Management, and any involved tenant(s).

6. Following the inspection, the RPR and A/E will determine if the Work is substantially complete. If it is determined to be Substantially Complete, the RPR will use this date in the preparation of Form #007 Certificate of Substantial Completion (CoSC) and the Contractor in the preparation of the written warranties. The following will be used in the determination of the Substantial Completion date:

   a. Certificate of Occupancy/Certificate of Completion (CofO) or Agency Sign Off (as required). The date of the CofO does not establish the date for Substantial Completion.

   b. Recommendation from the RPR and A/E that determine the Project is Substantially Complete.

   c. Acceptance from the Contractor and RPR that the preliminary Substantial Completion punch lists represent most of the items required for completion of the Work. The RPR shall distribute the preliminary Substantial Completion punch lists to the Contractor within a maximum of three (3) business days after the date of Substantial Completion.

   d. Acceptance by the RPR of the draft warranties.

e. Acceptance by the RPR of the draft Operation & Maintenance Manuals.

f. Agreement from the Contractor and RPR that the Owner will have complete use or occupancy and may use, operate, and maintain the Project in all respects, for its intended purpose and without undue interference by the Contractor's Final Completion efforts.

g. If any of the above items are not accepted or incomplete the Contractor shall correct any items found not to be in accordance with the requirements of the Contract Documents and once the items have been corrected, the Contractor shall provide a written request for re-review and or re-inspection.

7. When the Project is determined to be Substantially Complete the RPR will prepare a typed Substantial Completion punch list which includes any items from the preliminary Substantial Completion punch list that have not yet been completed plus all punch list items from the A/E, RPR, Owner and others, and Form #007 Certificate of Substantial Completion (CoSC) within a maximum of fifteen (15) business days from the date of Substantial Completion and will schedule a meeting with the Contractor, A/E, and any Owner's representatives to:

a. Review Form #007 CoSC, all of its requirements and submit to the Contractor for appropriate acceptance and signature.

b. Review the attachments: Form #008 SCA, Substantial Completion punch list and the CofO.

c. Establish the date for the completion of the Substantial Completion punch list items.

d. Establish the responsibilities of the Owner and Contractor for security, maintenance, operations, cleaning and housekeeping, heating and cooling, utilities, damage to the Work and insurance.

e. Review and accept the Contractor's written warranties and guarantees from its Subcontractors and Suppliers bearing the date of Substantial Completion stating the period of warranty as required by the Contract Documents, the Final Operation & Maintenance Manuals, and As-built Documents.

1.4 PARTIAL OCCUPANCY OR USE

A. General: Refer to the General Conditions/Provisions of the Contract for Construction.

B. The Owner may occupy or use any completed or partially completed portion of the Work at any stage and, if the Owner chooses such partial occupancy, the Contractor and

Owner shall designate by an agreement the conditions of such partial occupancy, provided such occupancy or use is consented to by the Owner's insurer and authorized by public authorities having jurisdiction over the Work.

1. Such partial occupancy or use may commence whether or not the portion is Substantially Complete.

C. Procedures to achieving partial occupancy or use:

1. The Owner will request the RPR to coordinate with the Contractor for a partial occupancy or use of a portion of the Work.

2. If the RPR determines that the Work is ready, a partial occupancy or use inspection will be scheduled at a minimum of three (3) business days after the RPR's preliminary inspection.

3. Immediately prior to such partial occupancy or use inspection, the Owner, RPR, Contractor and A/E shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

   a. The following parties will attend the partial occupancy or use inspection: the RPR the Contractor, and the A/E. The following Owner representatives may attend: VPS Engineering, VPS Environmental, VPS Maintenance, VPS Operations, VPS Properties, VPS Risk Management, VPS ARFF, and any involved tenant(s).

4. Following the inspection, the RPR and A/E will determine if the Work is ready for partial occupancy or use. If it is determined to be ready, the RPR will use this date in the preparation of Form #009 Partial Occupancy/Use (POUA) and the Contractor in preparation of any agreed upon written warranties. The following will be used in the determination of the POUA date:

   a. Certificate(s) of Occupancy (CofO) / Agency Sign Off (as required) for the area being occupied.

   b. Recommendation from the RPR and A/E that determine the Project is ready for partial occupancy or use.

   c. Acceptance from the Contractor and RPR that the preliminary punch lists represent most of the items required for completion of the Work. The RPR shall distribute the preliminary punch lists to the Contractor within a maximum of three (3) business days after the date of the POUA.

   d. Acceptance by the RPR of the draft warranties if requested.

e. Acceptance by the RPR of the draft Operation & Maintenance Manuals if requested.

f. Agreement from the Contractor and RPR that the Owner will have complete occupancy or use and may use, operate, and maintain the Project in all respects, for its intended purpose and without undue interference by the Contractor's Final Completion efforts.

g. Agree that partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work which is not in conformance with the requirements of the Contract Documents.

5. When the Project is determined to be ready for partial occupancy or use the RPR will prepare a typed punch list which includes any items from the preliminary Substantial Completion punch list that have not yet been completed plus all punch list items from the Designer, RPR, Owner and others, and Form #009 Partial Occupancy/Use (POUA) within a maximum of fifteen (15) business days of the date of POUA and will schedule a meeting with the Contractor, Designer, and any Owner's representatives to:

a. Review Form #009 POUA, all of its requirements and submit to the Contractor for appropriate acceptance and signature.

b. Review the attachments: punch list and the CofO.

c. Establish the date for the completion of the punch list items.

d. Establish the responsibilities of the Owner and Contractor for security, maintenance, operations, cleaning and housekeeping, heating and cooling, utilities, damage to the Work and insurance.

e. Review and accept the requested Contractor's written warranties and guarantees from its Subcontractors and Suppliers bearing the date of the POUA stating the period of warranty as required by the Contract Documents.

1.5 FINAL COMPLETION

A. General: Refer to the General Conditions/Provisions of the Contract for Construction.

B. Procedures: Complete the following.

6. Before requesting final inspection for certification of Final Completion and final payment, prepare and submit to the RPR the following:

a. Contractor's certified copy of the Substantial Completion punch list of items to be completed or corrected, stating that each item has been completed or

otherwise resolved for acceptance, and the list has been endorsed and dated by the RPR.

b. Final meter readings for utilities, and similar data as of the date of Substantial Completion, or when the Owner took possession of and responsibility for corresponding elements of the Work.

c. Closeout Documentation Manual.

7. If theRPR determines that the Work is ready, the Final Completion Inspection will be scheduled at a minimum of three (3) business days after the RPR's preliminary inspection.

8. The following parties will attend the Final Completion inspection: the RPR, the Contractor, and the A/E. The following Owner representatives may attend: VPS ARFF, VPS Engineering, VPS Environmental, VPS IT, VPS Maintenance, VPS Operations, VPS Properties, VPS Risk Management, and any involved tenant(s).

9. Upon acceptance of the Final Completion Inspection, the A/E, RPR and VPS Maintenance are to sign off on Part IV of Form #008 SCA and provide the final inspection date. The RPR is to provide the Contractor's completed punch list which will be field verified and each item initialed complete by the Designer and the OAR. The RPR is to provide documentation of FAA/FDOT final inspections, as required. Part IV of Form #008 SCA must be completed prior to processing the Contractor's final pay application.

C. If necessary, re-inspection will be repeated at the Contractor's expense. Re-inspection Procedure: The RPR and A/E will re-inspect the Work upon receipt of notice that the Work, including inspection list items from earlier inspections, has been completed, except items whose completion has been delayed because of circumstances acceptable to the RPR and A/E. Repeat Final Completion Procedures above until Final Completion is accepted.

1.5 CLOSEOUT DOCUMENTATION MANUAL

A. Description: Submit the manual in a vinyl covered, 3-ring binder; white, with hard cover, with clear vinyl pockets on front (sized to hold 8-1/2" x 11" sheets) and spine (minimum spine size 1", maximum 3"). Binder shall be "View Binder" as manufactured by Avery Consumer Products, AVE 0560 series, or approved substitution. Each section shall be divided by an 8-1/2" x 11" reinforced, clear ring binder index, 5 tabs, as manufactured by Wilson Jones, Stock No. WJ-54125, or approved substitution.

10. Full size, machine lettered labels shall be inserted into the front, back, and spine pockets. Labels shall be on white paper with black print, and shall clearly identify the following:

Okaloosa County
Destin-Fort Walton Airport
(ITB AP 35-20Design of Satellite , Concourse "C")
(Manual Title)
(Date)

11. Contents of the Manual shall include:

    a. First page shall be a Cover Page, identifying:

Okaloosa County
Destin-Fort Walton Airport
(ITB AP 35-20Design of Satellite , Concourse "C")
(Manual Title)
(Date)

    b. Second page shall be a Table of Contents.

    c. The next section shall list the Names, Addresses, Contacts, and Phone Numbers for the following:

        1) RPR(s)

        2) A/E(s)

        3) Contractor

        4) Subcontractors (first-tier)

    d. Change Order Summary (prepared by VPS)

    e. Summary of Disbursements (prepared by VPS)

    f. Receipt/Acceptance Form for As-Built Documents
        1) Progress and As-Built Drawing Certification(s) for each applicable Subcontractor (Exhibit D; prepared by Contractor)

        2) Construction Form # 011 (prepared by RPR) with Transmittal to VPS ENGINEERING (signed by VPS Engineering)

    g. Receipt Form for O&M Manuals (Construction Form # 012; prepared by RPR) with Transmittal to VPS MAINTENANCE (signed by VPS Maintenance)

    h. Parking Permit Office Release Form (Construction Form # 001; prepared by Contractor) (signed by VPS Ground Transportation)

i. Badge & I.D. Office Release Form (Construction Form # 002; prepared by Contractor) (signed by VPS Access Control)

j. Key Shop Release Form (Construction Form # 003; prepared by Contractor) (signed by VPS Lockshop)

k. Environmental Group Letter of Concurrence for Closeout (if applicable; prepared by VPS)

l. Certificate(s) of Substantial Completion (Construction Form # 007; prepared by RPR)

   1) Substantial Completion Acceptance with Final Substantial Completion Punch list initialed and dated by Contractor (Construction Form # 008; prepared by RPR)

   2) Partial Occupancy / Use Agreement(s), or POUA Construction Form # 009; prepared by PR)

   3) FAA / FDOT Final Inspection(s) (if applicable; if project has FAA and/or FDOT funding, provide documentation of the invitation to FAA / FDOT and/or the appropriate sign off)

m. Certificate(s) of Occupancy / Agency Sign Off (furnished by Contractor)

n. Current Certificate of Insurance: (furnished by Contractor)

   1) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect and will not be canceled or allowed to expire until at least 30 days prior written notice has been given to the Owner: and

   2) a written statement that the Contractor knows no substantial reason that the insurance will not be renewable to cover the period required by the Contract Documents

o. Consent of Surety to Final Payment with Power of Attorney (AIA Form # G707; furnished by Contractor) (original)

p. Final Release Form from General Contractor (prepared by Contractor) (original, notarized with corporate seal)

q. Final Release Form(s) from Subcontractors / Suppliers (prepared by Subcontractor)

r. Final Payment Application (2 originals, signed and notarized by Contractor and signed by RPR (DBE Disbursement Page completed with Subcontractor performance rating and total payment)

s. Executed Originals of Warranties/Guarantees.

1.6 AS-BUILT DOCUMENTS

A. General: Do not use as-built documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to as-built documents for the RPR's reference during normal working hours.

1. Submit all As-Built Documents to the RPR as specified in General Conditions.

2. Include fire alarm and building control system(s) drawings and specifications.

B. As-Built Documents: As-Built Documents include Drawings, Specifications, Addenda, Change Orders, and other Modifications. Maintain a clean, undamaged set of blue or black line white-prints of Contract Drawings and Shop Drawings. Mark the set to show the actual installation where the installation varies substantially from the Work as originally shown. Mark whichever drawing is most capable of showing conditions fully and accurately; where Shop Drawings are used, record a cross-reference at the corresponding location on the Contract Drawings. Give particular attention to concealed elements that would be difficult to measure and record at a later date.

12. Mark As-Built sets with red erasable pencil; use other colors to distinguish between variations in separate categories of the Work.

13. Mark new information that is important to the Owner, but was not shown on Contract Drawings or Shop Drawings.

14. Note related Change Order numbers where applicable.

15. Organize As-Built drawing sheets into manageable sets, bind with durable paper cover sheets, and print suitable titles, dates and other identification on the cover of each set.

16. Mark EVERY PAGE of the Drawings with "As-Built".

C. Accurate as-built documents are very important for the Owner and serve several important functions. The Owner utilizes the as-built documents for operation and maintenance, and future modifications, renovations, and particularly for mechanical, plumbing and electrical systems, which are mostly hidden from view.

1. The working as-built shall show, but shall not be limited to, the following:

a. All concealed and underground utilities, equipment, foundations or other permanent conditions shall be surveyed and documented. This includes all discovered conditions. All shall be tied to permanent benchmarks showing horizontal and vertical data including but not limited to: beginning/end points, changes in direction points, inverts, grades of drainage, depths below the surface, all surface or underground components such as valves, manholes, drop inlets, clean outs, meters, corner points, etc. Each of the above shall also include a description of: actual quantity, size, and material. GPS coordinates are to be provided for all.

b. The location and dimensions of any changes within the building structure and architectural components. The dimensions shall be actual field measurements.

c. Correct dimensions and details transferred from shop drawings.

d. Correct grade, elevations, cross section, or alignment of roads, earthwork, structures or utilities if any changes were made from contract plans.

e. Actual location of anchors, construction and control joints, etc., in concrete.

f. Changes in location of equipment and architectural features.

g. Where contract drawings or specifications present options, only the option selected for construction shall be shown on the final as-built prints. Cross out such words and phrases as "optimal requirement," "or approved substitution," etc., and list specifically the items of material provided.

h. Unusual or uncharted obstructions that are encountered in the contract work area during construction.

i. Changes in details of design or additional information obtained from working drawings specified to be prepared and/or furnished by the Contractor; including but not limited to fabrication, erection, installation plans and placing details, pipe sizes, insulation material, dimensions of equipment foundations, etc.

j. If borrow material for this project is from sources on the Owner's property, or if Owner's property is used as a spoil area, the Contractor shall furnish a contour map of the final borrow pit/spoil area elevations.

k. Layout and schematic drawings of electrical circuits and piping. See the Electrical Specifications for the level of detail required to be accurately documented.

l. Layout and schematic drawings of mechanical and plumbing systems and piping. All shall be tied to permanent benchmarks showing horizontal and vertical data of primary and secondary branches.

m. Systems designed or enhanced by the Contractor, such as HVAC controls, fire alarm, fire sprinkler, and irrigation systems. All shall be tied to permanent benchmarks showing horizontal and vertical data of primary and secondary branches.

n. Changes or modifications that result from the final inspection.

1.7 OPERATION & MAINTENANCE MANUALS

A. General: If all specified information can be submitted in a single binder without being overfilled, submit three (3) copies in a white binder with white labels.

17. If all of the information cannot be submitted in a single binder, submit three (3) per design discipline as follows:

a. Architectural; submit in a white binder with white labels.

b. Mechanical; submit in a white binder with green labels.

c. Fire Protection; submit in a white binder with red labels.

d. Electrical; submit in a black binder with white labels.

e. Civil; submit in a white binder with yellow labels.

18. Submit O&M Manuals to OAR as specified in Paragraph 1.3.B.

B. Description: Submit the manual in a vinyl covered, 3-ring binder; with hard cover, with clear vinyl pockets on front (sized to hold 8-1/2" x 11" sheets) and spine (minimum spine size 1", maximum 3"). Binder shall be "View Binder" as manufactured by Avery Consumer Products, AVE 0560 series, or approved substitution. Provide additional binders if a single 3-inch binder is insufficient to contain all closeout information. Each section shall be divided by an 8-1/2" x 11" reinforced, clear ring binder index, 5 tabs. as manufactured by Wilson Jones, Stock No. WJ-54125, or approved substitution.

19. Full size, machine lettered labels shall be inserted into the front, back, and spine pockets. Labels shall be on paper in color(s) specified with black print, and shall clearly identify the following:

Okaloosa County
Destin-Fort Walton Airport
(ITB AP 35-20Design of Satellite , Concourse “C”)
(Manual Title)
(Date)

20. Contents of the Manual shall include:

    a. First page shall be a Cover Page, identifying:

Okaloosa County
Destin-Fort Walton Airport
(ITB AP 35-20Design of Satellite , Concourse "C")
(Manual Title)
(Date)

    b. Second page shall be a Table of Contents indicating the contents of the binder(s).

    c. The third page shall list the Names, Addresses, Contacts, and Phone Numbers for the following:

        1) RPR

        2) A/E(s)

        3) General Contractor

        4) Subcontractors

        5) Sub-subcontractors

        6) Suppliers

    d. The remaining portions of the manual shall be separated by each major division of work as identified by the Contract Documents.

        1) PROJECT INFORMATION (Exhibit A).

        2) Within each major division of work, each section shall be individually identified by a typed index/tab. For each specification requirement, submit the following information in the order outlined below:

            a) Copies of all warranties/guarantees, as specifically required by the specification section, and Letters of Certification. Executed original warranties/guarantees shall be included in the appropriate section of the Closeout Manual(s).

            b) Copies of the "Approved" Shop Drawing/Submittals/ Equipment Manufacturer's Schematics. Oversized drawings shall be folded and inserted in clear vinyl pockets or, for large sets of drawings, provide an insert page stipulating that the drawings are stored at VPS

ENGINEERING. All copies shall be stamped with the appropriate review stamp, marked, signed, and dated.

c) Operation and Maintenance Instructions, including but not limited to:

- Manufacturer's Recommended Care and Cleaning
- Installation Instructions
- Parts Lists
- Lubrication Checklists
- Equipment Supplier Lists
- Special Instructions
- Preventive Maintenance Instructions.

d) Service and Maintenance Contracts: Include Name, address, and phone number and contact of Manufacturer's authorized repair company.

e) Completed Turnover Forms:

- Performance Verification and Demonstration to Owner (Exhibit B) signed by Contractor and VPS representative
- Voltage and amperage Readings (Exhibit C) signed by Contractor, A/E and RPR
- Motor Test Information (Exhibit D) signed by Contractor and RPR.
- Check-out Memo (Exhibit E) signed by Contractor and Manufacturer's representative

f) Equipment and/or Systems Test Data and Conductor Insulation Resistance Test Data Sheets by installer and/or manufacturer where required. Form(s) to be provided by the installer and/or manufacturer performing the test [Exhibits G, H (signed by Contractor, A/E and VPS representative), I (signed by Contractor, Subcontractor and GOAA), J (signed by Contractor and RPR) and K (signed by Contractor, A/E and RPR)].

g) Copies of electrical panel schedules and directories.

C. Submit one copy of the O&M manual in PDF format on USB Jump Drive. Create a PDF file for each section of the manual. PDF files shall be named *C19-2811 OM Sec XXXXX.pdf*

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.4 CLOSEOUT PROCEDURES

A. Operation and Maintenance Instructions: Arrange for each installer of equipment that requires regular maintenance to meet with the Owner's personnel to provide instruction in proper operation and maintenance. If installers are not experienced in procedures, provide instruction by manufacturer's representatives. Include a detailed review of the following items:

1. Operation and Maintenance manuals.
2. As-Built Documents.
3. Spare parts and materials.
4. Tools.
5. Lubricants.
6. Fuels.
7. Identification systems.
8. Control sequences.
9. Hazards.
10. Cleaning.
11. Warranties and bonds.
12. Maintenance agreements and similar continuing commitments.

B. As part of instruction for operating equipment, demonstrate the following procedures:

13. Start-up.
14. Shutdown.
15. Emergency operations.
16. Noise and vibration adjustments.
17. Safety procedures.

3.4 CLEANING

A. General: General cleaning during construction is required.

B. Final Cleaning: Refer to Section 01 74 23, Final Cleaning.

3.4 ATTACHMENTS

A. The following information sheets have been included in this Section:

1. Exhibit A: Project Information
2. Exhibit B: Performance Verification and Demonstration to Owner
3. Exhibit C: Check-Out Memo
4. Exhibit D: Progress and As-Built Document Certification
5. Exhibit E: Spare Parts Certification Memo
6. Exhibit F: Existing Facilities Investigation Memo
7. Example: Description Sheet – Cover
8. Example: Description Sheet - Spine

EXHIBIT A
PROJECT INFORMATION
Destin- Fort Walton Beach Airport

Contractor shall fill in the blanks below and insert in the Operation and Maintenance Manuals. Submit one (1) sheet for each major division of Work.

Project Name: _____

Specification Division Number & Name: _____

Subcontractor: _____

Contact: _____ Phone: _____

Date Project Bid: _____

Project Start Date: _____

Days allowed for Construction: _____

Target Completion: _____

Substantial Completion Certification Date: _____

	Date Submitted	Date Provided
Close-out Documentation Manual:	_____	_____
Operation and Maintenance Manuals:	_____	_____
Owner Performance Verification and Demonstrations:	_____	_____
Manufacturer's Performance Verification Memos:	_____	_____
Manufacturer's Test Data:	_____	_____
Record Documents:	_____	_____

EXHIBIT B
PERFORMANCE VERIFICATION AND DEMONSTRATION TO OWNER
Destin-Fort Walton Beach Airport

This form verifies that the Owner has been given a demonstration of the proper operation on the equipment or systems noted below.

Project Name: _____

Specification Division Number & Name: _____

Equipment/Systems Demonstrated: _____

Along with a complete demonstration of the equipment/system, these items have been reviewed at this demonstration and shall be included in the Operation and Maintenance Manuals, under the appropriate specification section:

1) Written operating instructions.
2) Test data and performance verification information as required by the installer and/or manufacturer.
3) Maintenance information published by manufacturer's representative.
4) Check-out Memo signed by manufacturer's representative.
5) Printed warranties by manufacturer of equipment.
6) Explanation of the warranty/guarantee on the system.
7) Prints showing actual "As-Built" conditions.

(Name of General Contractor) ___ (Signature, Title, Date)

(Name of Subcontractor) ___ (Signature, Title, Date)

A demonstration of the system/equipment in operation and of the maintenance procedures has been successfully completed.

Destin-Fort Walton Beach Airport

(Signature, Date) ___ (VPS Department)

EXHIBIT C
CHECK-OUT MEMO
Destin-Fort Walton Beach Airport

This form shall be completed and a copy provided to the Owner at the Owner's Performance Verification and Demonstration meeting. A copy shall also be included in the specification section of the Operation and Maintenance Manual for the equipment checked.

Project Name: _____

Type of Equipment Checked: _____

Equipment Number: _____

Name of Equipment Manufacturer: _____

Signature below by the Manufacturer's authorized representative signifies that the equipment has been satisfactorily tested and checked out on the job by the manufacturer.

1. The attached Test Data and Performance Verification information was used to evaluate the equipment installation and operation.

2. The equipment is properly installed, has been tested by the manufacturer's authorized representative, and is operating satisfactorily in accordance with all requirements, except for items noted below. *

3. Written operating and maintenance information has been presented to the Contractor, and gone over with him in detail.

4. Sufficient copies of all applicable operating and maintenance information, part lists, lubrication checklists, and warranties have been furnished to the Contractor for insertion in the Operation and Maintenance Manuals.

Manufacturer's Representative: _____
(Print or Type Name and Title)

(Print or Type Address and Phone Number)

Signature of Manufacturer's Representative: _____
Date Checked
Witnessed By: _____
(Signature and Title of Contractor's Representative)

*Exceptions Noted at Time of Check-Out: (Use additional pages if necessary.)

EXHIBIT D
PROGRESS AND AS-BUILT DRAWING CERTIFICATION
Destin-Fort Walton Beach Airport

This form shall be completed and submitted with the As-Built Documents. Submit one form for each contractor/subcontractor providing as-built information. Include a copy of this form in the Close-out Documentation Manual.

Project Name: _____

Specification Division Number & Name: _____

The Contractor's and Subcontractor's signatures below certify that the attached drawings and specifications were marked and revised as items were installed/changed during the course of construction, and that these documents represent and accurate "As-Built" condition of the work as actually installed.

_____
(Name of General Contractor)

_____
(Signature, Title, Date)

_____
(Name of Subcontractor)

_____
(Signature, Title, Date)

EXHIBIT E
SPARE PARTS CERTIFICATION MEMO
(Refer to Division 16 Specifications)

This form shall be completed and a copy provided to the Owner at the Owner's Performance Verification and Demonstration meeting. A copy shall also be included in the specifications section of each Operation and Maintenance Manual for the equipment checked.

Name of Project: _____

Type of Spare Parts: _____

Specification Reference: _____

Quantity of Spare Parts: _____

Signature below by the Contractor and subcontractor signifies that the spare parts required by the drawings and/or specifications have been turned over to the Owner. Signature by the Owner acknowledges receipt of the same spare parts.

Name of General Contractor: _____

Authorized Signature and Title: _____

Date: _____

Name of Subcontractor: _____

Authorized Signature and Title: _____

Date: _____

Name of Owner: _____

Authorized Signature and Title: _____

Date: _____

EXHIBIT F
EXISTING FACILITIES INVESTIGATION MEMO
(Refer to Specification Section 16061)

Name of Project: _____

The existing systems on the above project have been investigated and checked to determine the existing condition of all existing electrical systems within the area(s) affected by the scope of work on this project. The investigation consisted of testing all electrical systems/devices as required by Section 16061 of these specifications.

All equipment was found to be operational except as noted herein:

_____

_____

_____

_____

_____

_____

Name of Prime Contractor: _____

Authorized Signature and Title: _____
Date
Name of Authorized Owner Representative: _____

Authorized Signature and Title: _____
Date

Note To Contractor: Upon completion of investigation and one week prior to the commencement of work, submit five copies of the completed EXISTING FACILITIES INVESTIGATION MEMO to the Owner's Authorized Representative, signed and dated by the Contractor. The Owner's Resident Professional Representative signature and date is required to verify receipt of memo. Retain copy(ies) and submit copy of MEMO in each Operation and Maintenance Manual. Contractor shall submit quantities of Memos as required to present required information.

FORM 01 78 10-1

SUBCONTRACTOR WARRANTY

PROGRAM: XXXXXXX

PROJECT NAME: C 19-2811, AP CONSTRUCTION OF SATELLITE CONCOURSE "C'

PROJECT NUMBER: C 19-2811

OWNER: Okaloosa County Board of County Commissioners

Architect of Record: MLM-Martin Architects, Inc.

General Contractor: XXXXXXXXXXXX

SCOPE OF WORK: XXXXXXXXXXXX

LENGTH OF WARRANTY: X Year(s)

STARTING DATE: XXXXXXX x, XXXX (Substantial Completion Date)

This document shall warrant that the materials and/or equipment furnished, or work performed by (Company Name), (hereafter called "Subcontractor") in connection with XXXXXXXXXXXXXXX (hereafter called "Project") under the Subcontract or Purchase Agreement between _____(hereafter called "General Contractor") and the Subcontractor fully conforms to all requirements of the Contract Documents and is free of any defect in equipment, material, design furnished, or workmanship performed by the Subcontractor. This warranty shall continue for a period of X year(s) commencing on the Substantial Completion Date for the aforementioned Project as determined by Okaloosa County Board of County Commissioners, (hereafter called "Owner"), except to the extent any longer warranty period is called for by the Contract Documents with respect to equipment, material, design furnished, or workmanship performed by the Subcontractor. Work not conforming to these requirements including substitutions not properly approved and authorized may be considered defective. The Subcontractor agrees to promptly make good, without cost to the General Contractor or the Owner, any and all defects due to faulty equipment, material, design furnished, or workmanship performed by the Subcontractor, which may appear within the established warranty period. Failure to make good such defects within X days after notification may cause the corrective work to be performed by others at the Subcontractor's expense. All expenses necessary to replace or repair work will be the Subcontractor's responsibility including that damaged or disturbed by making replacement or repairs. This warranty is in addition to and not in lieu of all other guarantees, warranties and rights contained in the Contract Documents or applicable law. In the event that an equipment, material, design furnished, or workmanship performed by the Subcontractor is repaired or replaced pursuant to these warranty provisions, the Subcontractor shall extend the warranty period with respect to the equipment, material, design furnished, or workmanship performed by the Subcontractor so

repaired or replaced for any additional period of time after Owner approval of the repair or replacement specified in the Contract Documents.

The Subcontractor hereby acknowledges that this warranty is given for the benefit of the Owner and General Contractor and agrees to honor requests or directives issued to the Subcontractor by the Owner or General Contractor for enforcement of this warranty. The Subcontractor further hereby assigns to the Owner all warranties, express or implied, issued by the Subcontractor and by manufacturers, suppliers, or subcontractors to the Subcontractor for equipment, material, design furnished, or workmanship performed by the Subcontractor in connection with the Project.

IN WITNESS WHEREOF, THE Subcontractor has caused this instrument to be signed and executed this X day of XXXXXXX, 20XX.

General Contractor WARRANTY

PROGRAM: XXXXXXXXXXXXXXXX

PROJECT NAME: XXXXXXXXXXX

PROJECT NUMBER: XXXXXXXXXXXX

OWNER: Okaloosa County Board of County Commissioners

Architect of Record: MLM-Martin Architects, Inc.

General Contractor: XXXXXXXXXXXX

SCOPE OF WORK: XXXXXXXXXXXX

LENGTH OF WARRANTY: X Year(s)

STARTING DATE: XXXXXXX x, XXXX (Substantial Completion Date)

This document shall warrant that the materials and/or equipment furnished, or work performed by , (hereafter called " General Contractor ") in connection with XXXXXXXXX, (hereafter called "Project") under the Agreement between Okaloosa County Board of County Commissioners (hereafter called "Owner") and the General Contractor fully conforms to all requirements of the Contract Documents and is free of any defect in equipment, material, design furnished, or workmanship performed by the General Contractor. This warranty shall continue for a period of X year(s) commencing on the Substantial Completion Date for the aforementioned Project as determined by the Owner, except to the extent any longer warranty period is called for by the Contract Documents with respect to equipment, material, design furnished, or workmanship performed by the General Contractor. Work not conforming to these requirements including substitutions not properly approved and authorized may be considered defective. The General Contractor agrees to promptly make good, without cost to the Owner, any and all defects due to faulty equipment, material, design furnished, or workmanship performed by the General Contractor, which may appear within the established warranty period. Failure to make good such defects within X days after notification may cause the corrective work to be performed by others at the General Contractor expense. All expenses necessary to replace or repair work will be the General Contractor responsibility including that damaged or disturbed by making replacement or repairs. This warranty is in addition to and not in lieu of all other guarantees, warranties and rights contained in the Contract Documents or applicable law. In the event that equipment, material, design furnished, or workmanship performed by the General Contractor is repaired or replaced pursuant to these warranty provisions, the General Contractor shall extend the warranty period with respect to the equipment, material, design furnished, or workmanship performed by the General Contractor so repaired or replaced for any additional period of time after Owner approval of the repair or replacement specified in the Contract Documents. The General Contractor hereby acknowledges that this warranty is given

for the benefit of the Owner and agrees to honor requests or directives issued to the General Contractor by the Owner for enforcement of this warranty. The General Contractor further hereby assigns to the Owner all warranties, express or implied, issued by the CM@R and by manufacturers, suppliers, or subcontractors to the General Contractor for equipment, material, design furnished, or workmanship performed by the General Contractor in connection with the Project.

IN WITNESS WHEREOF, THE General Contractor has caused this instrument to be signed and executed this X day of XXXXXXX, 20XX.

SECTION 01 79 00 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel where indicated in other sections, including the following:

1. Instruction in operation and maintenance of systems, subsystems, and equipment.
2. Demonstration and training video recordings.

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Qualification Data: For facilitator.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:
   a. Name of Project.
   b. Name and address of videographer.
   c. Name of Owner.
   d. Name of Architect.
   e. Name of Construction Manager.
   f. Name of Contractor.
   g. Date of video recording.

2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. At completion of training, submit complete training manual(s) for Owner's use prepared in same format required for operation and maintenance manuals specified in Section 01 78 00 “Closeout Submittals”.

1.5 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements, experienced in operation and maintenance procedures and training.

C. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 01 31 19 "Project Meetings”. Review methods and procedures related to demonstration and training including, but not limited to, the following:

1.6 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Architect.

1.7 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
   a. System, subsystem, and equipment descriptions.

b. Performance and design criteria if Contractor is delegated design responsibility.
c. Operating standards.
d. Regulatory requirements.
e. Equipment function.
f. Operating characteristics.
g. Limiting conditions.
h. Performance curves.

2. Documentation: Review the following items in detail:
   a. Emergency manuals.
   b. Systems and equipment operation manuals.
   c. Systems and equipment maintenance manuals.
   d. Product maintenance manuals.
   e. Project Record Documents.
   f. Identification systems.
   g. Warranties and bonds.
   h. Maintenance service agreements and similar continuing commitments.
3. Emergencies: Include the following, as applicable:
   a. Instructions on meaning of warnings, trouble indications, and error messages.
   b. Instructions on stopping.
   c. Shutdown instructions for each type of emergency.
   d. Operating instructions for conditions outside of normal operating limits.
   e. Sequences for electric or electronic systems.
   f. Special operating instructions and procedures.
4. Operations: Include the following, as applicable:
   a. Startup procedures.
   b. Equipment or system break-in procedures.
   c. Routine and normal operating instructions.
   d. Regulation and control procedures.
   e. Control sequences.
   f. Safety procedures.
   g. Instructions on stopping.
   h. Normal shutdown instructions.
   i. Operating procedures for emergencies.
   j. Operating procedures for system, subsystem, or equipment failure.
   k. Seasonal and weekend operating instructions.
   l. Required sequences for electric or electronic systems.
   m. Special operating instructions and procedures.
5. Adjustments: Include the following:
   a. Alignments.
   b. Checking adjustments.
   c. Noise and vibration adjustments.
   d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
   a. Diagnostic instructions.
   b. Test and inspection procedures.
7. Maintenance: Include the following:
   a. Inspection procedures.

b. Types of cleaning agents to be used and methods of cleaning.
c. List of cleaning agents and methods of cleaning detrimental to product.
d. Procedures for routine cleaning.
e. Procedures for preventive maintenance.
f. Procedures for routine maintenance.
g. Instruction on use of special tools.

8. Repairs: Include the following:
   a. Diagnosis instructions.
   b. Repair instructions.
   c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
   d. Instructions for identifying parts and components.
   e. Review of spare parts needed for operation and maintenance.

1.8 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module.

B. Set up instructional equipment at instruction location.

1.9 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner, through Construction Manager, with at least seven days' advance notice.

D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.

F. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.10 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include

classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.

1. Submit video recordings on DVD or thumb drive.
2. File Hierarchy: Organize folder structure and file locations according to Project Manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged according to Project Manual table of contents:
   a. Name of Contractor/Installer.
   b. Business address.
   c. Business phone number.
   d. Point of contact.
   e. Email address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed 15 minutes.
   a. Produce segments to present a single significant piece of equipment per segment.
   b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
   c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.

1. Furnish additional portable lighting as required.

E. Narration: Describe scenes on video recording by audio narration by microphone while video recording is recorded. Include description of items being viewed.

F. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.

G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

TABLE OF CONTENTS

1 PROJECT INFORMATION

1.1 PROJECT DESCRIPTION

We understand that Fort Walton Beach – Destin Airport (VPS) plans to construct a new approximately 37,000 square-foot two-story concourse facility to the southwest of their existing facility in Fort Walton Beach, Okaloosa County, Florida, as shown on the Vicinity Map (Figure 1) presented in the Appendix. Construction will consist of a slab-on-grade structure utilitizing shallow foundations.

Details regarding the proposed development including grading or structural loading information were not provided to PSI. Based on our current project understanding, maximum column and wall loads are anticipated to be approximately 150 kips and 3 kips per lineal foot; respectively. We anticipate relatively minor grading with cuts and/or fills of 2 feet or less required to achieve proposed grades.

Should any of the above information be inconsistent with the planned construction, PSI requests that you contact us immediately to allow us to make any necessary modifications to this report.

1.2 PURPOSE AND SCOPE OF WORK

The purpose of this exploration was to obtain information on the general subsurface soil and groundwater conditions at the proposed project site. The subsurface conditions encountered were then evaluated with respect to the provided project characteristics. In this regard, geotechnical engineering assessments for the following items were formulated.

1. Geologic review of the project site;
2. Subsurface conditions encountered including pertinent soil properties;
3. Soil or rock data review/analysis as it relates to the proposed development;
4. Geotechnical recommendations for site preparation, and placement and compaction of fill;
5. Comments relating to observed geotechnical conditions such as shallow auger refusal or groundwater which could impact development;
6. Geotechnical recommendations for the design and construction of foundations and floor slabs for the proposed concourse including allowable soil bearing capacity, estimated potential settlements, minimum foundation widths and depths of embedment.

The following services were provided in order to achieve the preceding objectives:

1. Reviewed the “Fort Walton Beach, FL, 2014” quadrangle map published by the United States Geological Survey (USGS) and the "Custom Soil Survey of Okaloosa County, Florida" published by the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS).
2. Executed a program of subsurface sampling and field testing which included six (6) soil test borings drilled in the proposed building area to a depth of 20 feet each below existing grade.
3. Visually classified and stratified representative soil samples in the laboratory using the Unified Soil Classification System. Conducted a limited laboratory testing program to assist with soil classifications. Identified soil conditions at each boring location and formed an opinion of the site soil stratigraphy.

1.3 REVIEW OF PUBLISHED DATA

1.3.1 USGS TOPOGRAPHIC MAP

The topographic survey map published by the (USGS) entitled “Fort Walton Beach, Florida” was reviewed. Based on this review, the natural ground surface elevation is approximately +82 to +88 feet National American Datum (NAD, 1983) and is generally downsloping to the south. Existing topographic information for the site was not provided to PSI.

1.3.2 NRCS SOIL MAP

The "Custom Soil Survey of Okaloosa County, Florida" published by the USDA NRCS, was reviewed for general near-surface soil information within the project vicinity. This information indicates that there is one primary mapping unit within the vicinity of the proposed project. The mapped soil unit depicted by the NRCS is summarized in the following table.

NRCS Soil Mapping Units Summary Table			
Soil Series	**Depth (inches)**	**Unified Classification**	**USDA Estimated Seasonal High Groundwater Table Depth (inches)**
12 – Lakeland Sand, 0 to 5 Percent Slopes	0 – 7 7 – 80	SP SP	> 80

Excerpts of the USGS “Fort Walton Beach, Florida” topographic map (Figure 1) and NRCS Okaloosa County Soil Survey map (Figure 2) showing the approximate site location are included in the Appendix.

2 FIELD EXPLORATION AND LABORATORY TESTING

2.1 FIELD EXPLORATION

The approximate locations of our Standard Penetration Test (SPT) borings are shown on Sheet 1 in the Appendix. The boring locations were selected by MLM Architects. The borings were located in the field by estimating distances from existing features identified on the plans provided and should be considered approximate.

The SPT borings were performed in general accordance with the procedures of ASTM D-1586. SPT samples were obtained at 2-foot intervals to a depth of 10 feet and at approximate 5-foot depth intervals thereafter. Soil Samples were obtained in the SPT borings by driving a standard 2-inch (O.D.) split-spoon sampler a distance of 24 inches using a 140-lb hammer dropped from a height of 30 inches. The number of blows required to drive the standard split spoon sampler the middle 12 inches is known as the penetration resistance (N-value) measured in blows per foot (bpf). Penetration resistance values provide an indication of the relative density of granular soils, such as sand, and the relative consistency of cohesive soils, such as clay or silt.

Samples from the SPT borings were placed in sealed containers and transported to PSI's soils and materials laboratory for further examination and testing. Upon completion of the SPT borings, the boreholes were backfilled to existing grade with soil cuttings. The results of the borings are presented in the Appendix in the form of soil profiles.

Included with the boring profiles is a legend describing the encountered soils in Unified Soil Classification System (USCS) format, measured groundwater levels and laboratory test results. The soil stratification presented is based on visual observation of the recovered samples, interpretation of field logs by a geotechnical engineer and the results of the laboratory testing. It should be noted that variations in the subsurface conditions are expected and may be encountered between and away from the boring. Also, whereas the individual boring logs indicate distinct strata breaks, the actual transition between the soil layers may be more gradual than shown on the soil profiles.

2.2 LABORATORY TESTING

Representative samples of soil obtained from the borings were tested to determine physical and engineering properties. The laboratory testing program included determinations of natural moisture content, and fines content. The laboratory results of the soil indices testing are presented adjacent to the individual soil profiles in the Appendix.

3 SITE AND SUBSURFACE CONDITIONS

3.1 SITE CONDITIONS

The proposed site is a parcel of land located to the southwest of the existing Fort Walton Beach – Destin Airport (VPS) in Fort Walton Beach, Okaloosa County, Florida. The existing site conditions were observed by a PSI representative on August 5, 2019. At the time of our visit, the site was relatively level and dry with no standing water observed. Ground cover primarily consisted of soil and vegetation including mature trees.

3.2 SUBSURFACE CONDITIONS

In general, the SPT borings performed at the site encountered very loose to medium dense slightly silty sand (SP-SM materials) from the existing ground to the maximum depth explored of about 20 feet below existing grade. The soils encountered were very loose to loose in the upper 12 feet of the borings performed. Boring B-1 was performed in an existing parking lot, and encountered 3¼ inches of asphalt, with 6 inches of aggregate base on top of the sand with silt.

3.3 GROUNDWATER

Groundwater was not apparent within the borings performed to the maximum depth explored of about 20 feet at the time of drilling. In this regard, we estimate the depth to the normal wet seasonal high groundwater table (SHWT) to be greater than 6 feet below current site grades.

In general, the estimated normal seasonal high groundwater level is not intended to define a limit or ensure that future seasonal fluctuations in groundwater levels will not exceed the estimated levels. Groundwater conditions will vary with environmental changes and seasonal conditions, such as, the frequency and magnitude of rainfall patterns, as well as man-made influences, such as swales, drainage ponds, underdrains, stormwater collection systems and areas of covered soil (buildings, paved parking lots, sidewalks, etc.). We recommend that the Contractor determine the actual groundwater level at the site at the time of the construction activities.

4 RECOMMENDATIONS

4.1 GENERAL

Existing pavements in the northern portion of the proposed concourse, will require removal prior to the proposed site development. Very loose to loose soils were encountered to depths on the order of 12 feet below current grades. Proposed structural loads were not provided. We recommend anticipated structural loads and settlement tolerances of the proposed structure be provided for our review. We recommend undercutting the upper three feet of soil and compacting the exposed grade with a large vibratory roller (at least 25 tons). A roller of this size should be capable of improving the very loose to loose sands to a depth of 3 to 4 feet. Compaction of the exposed subgrade should continue until a minimum density of 95% of the Modified Proctor maximum dry density is achieved. The stripped materials can then be reused as Engineered Fill to bring the site up to proposed grades. Care should be taken during site preparation activities to adequately compact soils supporting the proposed foundations. Any existing structures within 100 feet of the proposed concourse should be monitored during compaction operations.

Site preparation activities should be conducted under the full-time supervision of a PSI representative to ensure the prepared subgrade is capable of satisfactorily supporting the proposed development.

Once final design plans and specifications are available, a general review by PSI is strongly recommended as a means to check that the evaluations made in preparation of this report are correct and that earthwork and foundation recommendations are properly interpreted and implemented.

4.2 SITE PREPARATION

The following are our recommendations for general site preparation. These recommendations should be used as a guideline for the project general specifications prepared by the design engineer.

1. Vegetation in proposed construction areas should be stripped from the ground surface and removed. The existing pavements at the site should be demolished and removed. Any subsurface utilities not planned to be incorporated into the proposed construction should also be removed. It is possible that unsuitable materials or previously placed fills exist at the site. Should these materials be encountered we recommend that they be completely undercut and removed.

2. Following site stripping, we recommend undercutting at least 3 feet of soil. The undercut should extend at least 5 feet beyond the proposed building footprint. The exposed subgrade should be compacted to a minimum of 95% of the soil's modified Proctor maximum dry density using a large vibratory roller (minimum 25 tons). Areas where the recommended compaction cannot be achieved should be undercut to firm soils and replaced with compacted engineered fill.

3. Following compaction, development areas may be brought up to finished subgrade levels using engineered fill. The undercut materials should be satisfactory for reuse as Engineered Fill provided they are free of organic or deleterious materials. Some imported fill may be required after the very loose to loose sands are compacted. Fill soils should be tested and approved by PSI prior to hauling to the site. Imported fill (engineered fill) should consist of fine sand with less than 12% passing the No. 200 sieve, free of significant

rocks/rubble, organics, clay, debris and other unsuitable material. Fill should be tested and approved prior to acquisition. Approved sand fill should be placed in loose lifts not exceeding 12 inches in thickness and should be compacted to a minimum density of 95% of the Modified Proctor maximum dry density. Density tests to confirm compaction should be performed in each fill lift before the next lift is placed.

4. Prior to beginning compaction, soil moisture contents may need to be controlled in order to facilitate proper compaction. If additional moisture is necessary to achieve compaction objectives, then water should be applied in such a way that it will not cause erosion or removal of the subgrade soils. A moisture content within the percentage range needed to achieve compaction (typically +/- 2%) is recommended prior to compaction of the natural ground and fill.

A representative from our firm should be retained to provide full-time, on-site observation of earthwork and excavation activities. It is important that PSI be retained to observe that the subsurface conditions are as we have discussed herein, and that fill placement is in accordance with our recommendations.

4.3 FOUNDATION RECOMMENDATIONS

Following site preparation as previously recommended, it is our opinion the proposed buildings can be supported on conventional spread footing foundations bearing on approved properly compacted Engineered Fill in accordance with the recommendations of this report. Column footings and continuous wall foundations can be designed for a net allowable soil bearing pressure of 2,000 pounds per square foot, based on dead load plus design live load.

Exterior footings should bear at a depth of at least 18 inches below the final exterior grade. Interior footings may bear on properly compacted soils at a minimum depth of 12 inches, if desired.

The foundation excavations should be observed by a representative of PSI prior to steel or concrete placement to confirm that the compacted foundation materials are capable of supporting the design loads and are consistent with the materials discussed in this report. If the foundation excavations appear suitable as load bearing materials, the bottom of the foundation excavations should be compacted to a minimum density of 95% of the soil's modified Proctor maximum dry density for a minimum depth of one foot below the bottom of the footing depth, as determined by field density compaction tests. Soft or loose soil zones encountered at the bottom of the footing excavations should be removed and replaced with engineered fill soils (as directed above), lean concrete or graded compacted crushed stone (FDOT No. 57) compacted to a firm and unyielding condition.

After opening, footing excavations should be observed and concrete placed as quickly as possible to avoid exposure of the footing bottoms to wetting and drying. Surface run-off water should be drained away from the excavations and not be allowed to pond. The foundation concrete should be placed promptly after the excavation is made.

4.4 SETTLEMENT

The settlement of shallow foundations supported on compacted sandy soils should occur rapidly after loading. Thus, the majority of the expected settlement should occur during construction as structural loads are imposed. Provided the recommended site preparation operations are properly performed, any organic, previous fill, or deleterious materials encountered during site preparation or proof-rolling have been removed, and the

recommendations previously stated are utilized, the total settlement of wall and isolated column footings should not exceed 1 inch. Differential settlement between adjacent columns or across approximately 20 feet of continuous footing length is estimated to be on the order of 50 percent of the total settlement. Settlement of this magnitude is usually considered tolerable for most structures; however, the tolerance of the proposed structure to the predicted total and differential settlement should be confirmed by the structural engineer.

4.5 FLOOR SLAB RECOMMENDATIONS

Slab-on-grade construction should be supported on soils compacted to a minimum dry density of at least 95% of their modified Proctor value. We have assumed no extraordinary floor slab performance requirements such as very low allowable deflections or smoothness requirements are necessary. Any cuts that are made in the building pad for utility installation should be backfilled with compacted engineered fill that are compacted to at least 95 percent of their ASTM D-1557 maximum dry density. Material to be placed within 12 inches of the bottom of the slab should have no single particle greater than 3 inches in size and should meet the requirements of approved structural fill.

The floor slab should be adequately reinforced to reduce the risk of cracking due to differential settlement. An impervious membrane should be installed between the soil subgrade and bottom of floor slabs to be overlain with moisture sensitive coverings to avoid slab moisture problems. Floor slab design should conform to American Concrete Institute (ACI) design standards and practices.

5 CONSTRUCTION CONSIDERATIONS

5.1 GENERAL

It is recommended that PSI be retained to provide observation and testing of construction activities involved in the foundation, earthwork and related activities of this project. This will promote project continuity and will reduce the potential for misinterpretation of our recommendations.

5.2 UTILITY EXCAVATIONS

Utility trenches may be required for this project. We recommend all utility trench backfill comply to the gradation and requirements of structural fill, as described above and be placed and compacted to the recommendations contained in the site preparation section of this report. This fill should be compacted to a minimum of 95% of its modified Proctor value.

5.3 DRAINAGE CONCERNS

Water should not be allowed to collect in excavations, on floor slab areas, or on prepared subgrades of the construction area either during or after construction. Undercut or excavated areas should be sloped toward one corner to facilitate removal of any collected rainwater, groundwater, or surface runoff. Positive site surface drainage should be provided to reduce infiltration of surface water around the perimeter of the building and beneath the floor slabs. The grades should be sloped away from the building and surface drainage should be collected and discharged such that water is not permitted to infiltrate the backfill and floor slab areas of the building.

5.4 EXCAVATIONS

In Federal Register, Volume 54, No. 209 (October 1989), the United States Department of Labor, Occupational Safety and Health Administration (OSHA) amended its “Construction Standards for Excavations, 29 CFR, Part 1926, Subpart P”. This document was issued to better insure the safety of workmen entering trenches or excavations. It is mandated by this federal regulation that excavations, whether they be utility trenches, general construction excavations or footing excavations, be constructed in accordance with current OSHA guidelines. It is our understanding that these regulations are strictly enforced and if they are not closely followed, the owner and the contractor could be liable for substantial penalties.

The contractor is solely responsible for designing and constructing stable, temporary excavations and should shore, slope, or bench the sides of the excavations as required to maintain stability of both the excavation sides and bottom. The contractors “responsible person”, as defined in 29 CFR, Part 1926, should evaluate the soil exposed in the excavations as part of the contractor’s safety procedures. In no case should slope height, slope inclination, or excavation depth, including utility trench excavation depth, exceed those specified in all local, state, and federal safety regulations.

We are providing this information solely as a service to our client. PSI does not assume responsibility for construction site safety or the contractor’s or other party’s compliance with local, state, and federal safety or other regulations. It is the policy of PSI not to provide recommendations regarding temporary slopes during construction which is the sole responsibility of the contractor as indicated above.

6 REPORT LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices. This company is not responsible for the conclusions, opinions or recommendations made by others based on these data.

The scope of our exploration was intended to evaluate soil conditions within the influence of the proposed structure foundations and does not include an evaluation of potential deep soil problems such as sinkholes. The analysis and recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated and does not reflect any variations which may occur between or away from the borings. If any subsoil variations become evident during the course of this project, a re-evaluation of the recommendations contained in this report will be necessary after we have had an opportunity to observe the characteristics of the conditions encountered. The applicability of the report should also be reviewed in the event significant changes occur in the design, nature or location of the proposed construction.

The scope of our services does not include any environmental assessment or investigation for the presence or absence of hazardous or toxic materials in the soil, groundwater, or surface water within or beyond the site studied. Any statements in this report regarding odors, staining of soils, or other unusual conditions observed are strictly for the information of our client.

GENERAL NOTES

SAMPLE IDENTIFICATION

The Unified Soil Classification System (USCS), AASHTO 1988 and ASTM designations D2487 and D-2488 are used to identify the encountered materials unless otherwise noted. Coarse-grained soils are defined as having more than 50% of their dry weight retained on a #200 sieve (0.075mm); they are described as: boulders, cobbles, gravel or sand. Fine-grained soils have less than 50% of their dry weight retained on a #200 sieve; they are defined as silts or clay depending on their Atterberg Limit attributes. Major constituents may be added as modifiers and minor constituents may be added according to the relative proportions based on grain size.

DRILLING AND SAMPLING SYMBOLS

SFA: Solid Flight Auger - typically 4" diameter flights, except where noted.
HSA: Hollow Stem Auger - typically 3¼" or 4¼ I.D. openings, except where noted.
M.R.: Mud Rotary - Uses a rotary head with Bentonite or Polymer Slurry
R.C.: Diamond Bit Core Sampler
H.A.: Hand Auger
P.A.: Power Auger - Handheld motorized auger

SS: Split-Spoon - 1 3/8" I.D., 2" O.D., except where noted.
ST: Shelby Tube - 3" O.D., except where noted.
RC: Rock Core
TC: Texas Cone
BS: Bulk Sample
PM: Pressuremeter
CPT-U: Cone Penetrometer Testing with Pore-Pressure Readings

SOIL PROPERTY SYMBOLS

N: Standard "N" penetration: Blows per foot of a 140 pound hammer falling 30 inches on a 2-inch O.D. Split-Spoon.
N_{60}: A "N" penetration value corrected to an equivalent 60% hammer energy transfer efficiency (ETR)
Q_u: Unconfined compressive strength, TSF
Q_p: Pocket penetrometer value, unconfined compressive strength, TSF
w%: Moisture/water content, %
LL: Liquid Limit, %
PL: Plastic Limit, %
PI: Plasticity Index = (LL-PL),%
DD: Dry unit weight, pcf
▼ ▽ ▼: Apparent groundwater level at time noted

'–'

RELATIVE DENSITY OF COARSE-GRAINED SOILS

Relative Density	N - Blows/foot
Very Loose	0 - 4
Loose	4 - 10
Medium Dense	10 - 30
Dense	30 - 50
Very Dense	50 - 80
Extremely Dense	80+

ANGULARITY OF COARSE-GRAINED PARTICLES

Description	Criteria
Angular:	Particles have sharp edges and relatively plane sides with unpolished surfaces
Subangular:	Particles are similar to angular description, but have rounded edges
Subrounded:	Particles have nearly plane sides, but have well-rounded corners and edges
Rounded:	Particles have smoothly curved sides and no edges

GRAIN-SIZE TERMINOLOGY

Component	Size Range
Boulders:	Over 300 mm (>12 in.)
Cobbles:	75 mm to 300 mm (3 in. to 12 in.)
Coarse-Grained Gravel:	19 mm to 75 mm (¾ in. to 3 in.)
Fine-Grained Gravel:	4.75 mm to 19 mm (No.4 to ¾ in.)
Coarse-Grained Sand:	2 mm to 4.75 mm (No.10 to No.4)
Medium-Grained Sand:	0.42 mm to 2 mm (No.40 to No.10)
Fine-Grained Sand:	0.075 mm to 0.42 mm (No. 200 to No.40)
Silt:	0.005 mm to 0.075 mm
Clay:	<0.005 mm

PARTICLE SHAPE

Description	Criteria
Flat:	Particles with width/thickness ratio > 3
Elongated:	Particles with length/width ratio > 3
Flat & Elongated:	Particles meet criteria for both flat and elongated

RELATIVE PROPORTIONS OF FINES

Descriptive Term	% Dry Weight
Trace:	
With:	

ifier:

M
o
d

< 5%
5% to 12%
>12%

GENERAL NOTES

(Continued)

CONSISTENCY OF FINE-GRAINED SOILS

Q_U - TSF	N - Blows/foot	Consistency
0 - 0.25	0 - 2	Very Soft
0.25 - 0.50	2 - 4	Soft
0.50 - 1.00	4 - 8	Firm (Medium Stiff)
1.00 - 2.00	8 - 15	Stiff
2.00 - 4.00	15 - 30	Very Stiff
4.00 - 8.00	30 - 50	Hard
8.00+	50+	Very Hard

MOISTURE CONDITION DESCRIPTION

Description	Criteria
Dry:	Absence of moisture, dusty, dry to the touch
Moist:	Damp but no visible water
Wet:	Visible free water, usually soil is below water table

RELATIVE PROPORTIONS OF SAND AND GRAVEL

Descriptive Term	% Dry Weight
Trace:	< 15%
With:	15% to 30%
Modifier:	>30%

STRUCTURE DESCRIPTION

Description	Criteria
Stratified:	Alternating layers of varying material or color with layers at least ¼-inch (6 mm) thick
Laminated:	Alternating layers of varying material or color with layers less than ¼-inch (6 mm) thick
Fissured:	Breaks along definite planes of fracture with little resistance to fracturing
Slickensided:	Fracture planes appear polished or glossy, sometimes striated
Blocky:	Cohesive soil that can be broken down into small angular lumps which resist further breakdown
Lensed:	Inclusion of small pockets of different soils
Layer:	Inclusion greater than 3 inches thick (75 mm)
Seam:	Inclusion 1/8-inch to 3 inches (3 to 75 mm) thick extending through the sample
Parting:	Inclusion less than 1/8-inch (3 mm) thick

SCALE OF RELATIVE ROCK HARDNESS

Q_U - TSF	Consistency
2.5 - 10	Extremely Soft
10 - 50	Very Soft
50 - 250	Soft
250 - 525	Medium Hard
525 - 1,050	Moderately Hard
1,050 - 2,600	Hard
>2,600	Very Hard

ROCK BEDDING THICKNESSES

Description	Criteria
Very Thick Bedded	Greater than 3-foot (>1.0 m)
Thick Bedded	1-foot to 3-foot (0.3 m to 1.0 m)
Medium Bedded	4-inch to 1-foot (0.1 m to 0.3 m)
Thin Bedded	1¼-inch to 4-inch (30 mm to 100 mm)
Very Thin Bedded	½-inch to 1¼-inch (10 mm to 30 mm)
Thickly Laminated	1/8-inch to ½-inch (3 mm to 10 mm)
Thinly Laminated	1/8-inch or less "paper thin" (<3 mm)

ROCK VOIDS

Voids	Void Diameter
Pit	<6 mm (<0.25 in)
Vug	6 mm to 50 mm (0.25 in to 2 in)
Cavity	50 mm to 600 mm (2 in to 24 in)
Cave	>600 mm (>24 in)

GRAIN-SIZED TERMINOLOGY

(Typically Sedimentary Rock)

Component	Size Range
Very Coarse Grained	>4.76 mm
Coarse Grained	2.0 mm - 4.76 mm
Medium Grained	0.42 mm - 2.0 mm
Fine Grained	0.075 mm - 0.42 mm
Very Fine Grained	<0.075 mm

ROCK QUALITY DESCRIPTION

Rock Mass Description	RQD Value
Excellent	90 -100
Good	75 - 90
Fair	50 - 75
Poor	25 -50
Very Poor	Less than 25

DEGREE OF WEATHERING

Slightly Weathered: Rock generally fresh, joints stained and discoloration extends into rock up to 25 mm (1 in), open joints may contain clay, core rings under hammer impact.

Weathered: Rock mass is decomposed 50% or less, significant portions of the rock show discoloration and weathering effects, cores cannot be broken by hand or scraped by knife.

Highly Weathered: Rock mass is more than 50% decomposed, complete discoloration of rock fabric, core may be extremely broken and gives clunk sound when struck by hammer, may be shaved with a knife.

SOIL CLASSIFICATION CHART

NOTE: DUAL SYMBOLS ARE USED TO INDICATE BORDERLINE SOIL CLASSIFICATIONS

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE GRAINED SOILS MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	GRAVEL AND GRAVELLY SOILS MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES

SECTION 02 4141 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of selected portions of building or structure.
2. Demolition and removal of selected site elements.
3. Salvage of existing items to be reused or recycled.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged or reinstalled.

B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse.

C. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare for reuse, and reinstall where indicated.

D. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

E. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 PREINSTALLATION MEETINGS

A. Predemolition Conference:

1.6 INFORMATIONAL SUBMITTALS

A. Engineering Survey:

B. Proposed Protection Measures:

C. Schedule of Selective Demolition Activities:

D. Pre-demolition Photographs or Video:

1.7 CLOSEOUT SUBMITTALS

A. Inventory: Inventory: Submit a list of items that have been removed and salvaged.

1.8 FIELD CONDITIONS

A. Owner will occupy buildings immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.

D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.

1. If suspected hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.

E. Storage or sale of removed items or materials on-site is not permitted.

F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

1.9 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials and using approved contractors so as not to void existing warranties.

B. Notify warrantor on completion of selective demolition, and obtain documentation verifying that existing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

1.10 COORDINATION

A. Arrange selective demolition schedule so as not to interfere with Owner's operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting selective demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Survey of Existing Conditions: Record existing conditions by use of preconstruction photographs or video.

1. Comply with requirements specified in Section 01 3233 "Photographic Documentation."

2. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations.

3. Before selective demolition or removal of existing elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

3.2 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.

B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Owner will arrange to shut off indicated services/systems when requested by Contractor.

2. Arrange to shut off utilities with utility companies.

3. If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.

3.3 PROTECTION

A. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings, airplanes, equipment and facilities to remain.

1. Provide temporary weather protection, during interval between selective demolition of existing construction.

2. Comply with requirements for temporary enclosures, dust control as specified in Section 01 5000 "Temporary Facilities and Controls."

B. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

C. Remove temporary barricades and protections where hazards no longer exist.

3.4 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or

adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain.

2. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.

3. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

B. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

C. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition.

3.5 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least 3/4 inch at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.

B. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, and then remove masonry between saw cuts.

C. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, and then break up and remove.

3.6 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and recycle or dispose of them.

1. Do not allow demolished materials to accumulate on-site.

2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn demolished materials.

3.7 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

B. Refer to Section 01 7423 “Final Cleaning” for additional cleaning requirements.

END OF SECTION 02 4119

SECTION 03 1513 - WATERSTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Provision of waterstops embedded in concrete and, spanning control, expansion, and/or construction joints to create a continuous diaphragm to prevent fluid migration.

2. Non-metallic waterstops for use in concrete joints subjected to chlorinated water, sea water, and many waterborne chemicals.

B. Related Requirements:

1. Section 03 3000 “Cast-In-Place Concrete”

2. Section 07 1300 “Membrane Waterproofing”

1.3 REFERENCES

A. United States Army Corps of Engineers

1. CRD C513 - Rubber Waterstops

2. CRD C572-74 - Polyvinylchloride Waterstops

B. EPA Title 40

1.4 SUBMITTALS

A. Manufacturer's product data, samples, typical butt splicing details and certification that materials meet specified requirements.

B. Evidence of waterstop manufacturers technical support for the following:

1. Technical Seminars.

2. Hands-on field training.

3. Periodic worksite observation visits and reports on the Work performed.

C. Shop Drawings: Submit drawings showing locations of all joints to receive waterstops and methods of supporting waterstops in forms without displacement from pressure of concrete placement.

SECTION 03 00 00 – STRUCTURAL SUMMARY OF WORK

PART 1 - GENERAL

1.1 PRIMARY CONSTRUCTION CODES AND STANDARDS

A. 2017 Florida Building Code, Building

B. ASCE 7-10

C. ACI 318-14

1.2 CONSTRUCTION CRITERIA

A. Live Loads (reduced as allowed by the Building Code):

1.	GENERAL AREAS	100 psf
2.	PUBLIC ROOMS	100 psf
3.	CORRIDORS - FIRST FLOOR	100 psf
4.	MECHANICAL ROOMS	150 psf
5.	Partitions	15 psf
6.	Roof	20 psf

B. Basic Wind Speed: 154 mph (3-Second Ultimate Gust)

1. Exposure: C
2. Risk Category: III

1.3 STRUCTURAL TESTING AND INSPECTION

A. This building is designated as a Threshold Building.

1.4 MATERIAL PROPERTIES

A. Reinforcement:

1.	Reinforcing Steel	ASTM A615, Grade 60

B. Normal-Weight Concrete:

1.	Footings	3,000 psi
2.	Slab-on-Grade	3,000 psi

C. Structural Steel:

1. Structural steel W-shapes shall conform to ASTM A992, Grade 50.
2. Square /rectangular hollow structural sections (HSS) shall conform to ASTM A500 Grade B.
3. Round hollow structural sections (HSS) shall conform to ASTM A500, Grade B.
4. Other Steel shapes (channels, angles, and plates) may conform to ASTM A36.

1.5 GEOTECHNICAL REPORT

A. The geotechical report provided by Professional Service Industries Inc. (PSI), dated August 8, 2019 and Report Number 07832840 was used in the design of this building. Contractor shall follow the recommendations of this report for site preparation work.

1.6 FOUNDATIONS/SLAB-ON-GRADE

A. The foundations will consist of strip footings along the building perimeter to support the CMU bearing walls and individual spread footings at columns with a soil bearing capacity of 2,000 psf minimum as per the geotechnical report.

B. Column footings are indicated on plans and range from 3’-0” 3’-0” x 1’-0” thick to 8’-0” x 8’-0” x 1’-4” thick.

C. Wall footings are indicated on plans and range from 2’-0” x 1’-0” thick to 4’-0” x 1’-2” thick.

D. A soil-supported, 4-inch thick concrete slab, with WWF 6x6 - W4.0xW4.0 reinforcing is provided at the ground floor.

E. Slabs-on-grade shall be constructed on a 4-inch thick, free-draining granular subbase and 15 mil vapor barrier.

F. No retaining walls for the building structure are provided. Any retaining walls outside the building pad are not by TLC.

1.7 GRAVITY LOAD-RESISTING STRUCTURE

A. CMU bearing walls support steel joists and metal roof deck.

1.8 LATERAL LOAD-RESISTING STRUCTURE

A. CMU bearing walls will also act as shear walls, and additional CMU shear walls are provided to resist lateral loads.

1.9 MEZZANINE OR RAISED PLATFORMS

A. None.

1.10 ROOF STRUCTURE

A. 1-1/2-inch metal deck (galvanized, 20 gage).

END OF SECTION 03 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:

1. Section 033300 "Architectural Concrete" for general building applications of specially finished formed concrete.
2. Section 035300 "Concrete Topping" for emery- and iron-aggregate concrete floor toppings.
3. Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
4. Section 321313 "Concrete Paving" for concrete pavement and walks.
5. Section 321316 "Decorative Concrete Paving" for decorative concrete pavement and walks.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

C. Preinstallation Conference: Conduct conference at the Destin-Fort Worth Airport (VPS).

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.

c. Ready-mix concrete manufacturer.
d. Concrete Subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, curing procedures, construction contraction and isolation joints, and joint-filler strips, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, and concrete protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

C. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

D. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

1. Location of construction joints is subject to approval of the Architect.

E. Samples: For waterstops and vapor retarder.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer, manufacturer and testing agency.

B. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Fiber reinforcement.
6. Waterstops.
7. Curing compounds.
8. Floor and slab treatments.
9. Bonding agents.
10. Adhesives.
11. Vapor retarders.

12. Semirigid joint filler.
13. Joint-filler strips.
14. Repair materials.

C. Material Test Reports: For the following, from a qualified testing agency:

1. Aggregates: Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

D. Minutes of preinstallation conference.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician, Grade I. Testing agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician, Grade II.

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on concrete mixtures.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.9 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 117.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

D. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

E. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

F. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

G. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Plain-Steel Wire: ASTM A 1064/A 1064M.

C. Deformed-Steel Wire: ASTM A 1064/A 1064M.

D. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from as-drawn steel wire into flat sheets.

E. Deformed-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, flat sheet.

F. Galvanized-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from galvanized-steel wire into flat sheets.

2.4 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, ASTM A 775/A 775M epoxy coated.

C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.

D. Zinc Repair Material: ASTM A 780/A 780M.

E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150/C 150M, Type I/II.
2. Fly Ash: ASTM C 618, Class F.
3. Slag Cement: ASTM C 989/C 989M, Grade 100 or 120.
4. Silica Fume: ASTM C 1240, amorphous silica.

C. Normal-Weight Aggregates: ASTM C 33/C 33M, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source.

1. Maximum Coarse-Aggregate Size: [1-1/2 inches] [1 inch] [3/4 inch] <Insert dimension> nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Lightweight Aggregate: ASTM C 330/C 330M, [1-inch] [3/4-inch] [1/2-inch] [3/8-inch] nominal maximum aggregate size.

E. Air-Entraining Admixture: ASTM C 260/C 260M.

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Retarding Admixture: ASTM C 494/C 494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

G. Water: ASTM C 94/C 94M and potable.

2.6 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

B. Flexible PVC Waterstops: CE CRD-C 572,[with factory-installed metal eyelets,] for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

C. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

D. Self-Expanding Rubber Strip Waterstops: Manufactured rectangular or trapezoidal strip, bentonite-free hydrophilic polymer-modified chloroprene rubber, for adhesive bonding to concrete, 3/8 by 3/4 inch.

2.7 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.

B. Sheet Vapor Retarder: ASTM E 1745, Class B. Include manufacturer's recommended adhesive or pressure-sensitive tape.

C. Sheet Vapor Retarder: ASTM E 1745, Class C. Include manufacturer's recommended adhesive or pressure-sensitive joint tape.

D. Bituminous Vapor Retarder: 110-mil- thick, semiflexible, seven-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective

weathercoating, and removable plastic release liner. Furnish manufacturer's accessories, including bonding asphalt, pointing mastics, and self-adhering joint tape.

1. Water-Vapor Permeance: 0.0011 grains/h x sq. ft. x inches Hg; ASTM E 154.
2. Tensile Strength: 140 lbf/inch; ASTM E 154.
3. Puncture Resistance: 90 lbf; ASTM E 154.

2.8 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

F. Clear, Solvent-Borne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.

G. Clear, Waterborne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.

2.9 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 175, asphalt-saturated cellulosic fiberorASTM D 1752, cork or self-expanding cork.

B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, aromatic polyurea with a Type A shore durometer hardness range of 90 to 95 according to ASTM D 2240.

C. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.

D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

E. Reglets: Fabricate reglets of not less than 0.022-inch- thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

F. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.10 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than [4100 psi] <Insert strength> at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than [5000 psi] <Insert strength> at 28 days when tested according to ASTM C 109/C 109M.

2.11 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25 percent.
2. Combined Fly Ash and Pozzolan: 25 percent.
3. Slag Cement: 50 percent.
4. Combined Fly Ash or Pozzolan and Slag Cement: 50 percent portland cement minimum, with fly ash or pozzolan not exceeding 25 percent.
5. Silica Fume: 10 percent.
6. Combined Fly Ash, Pozzolans, and Silica Fume: 35 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.
7. Combined Fly Ash or Pozzolans, Slag Cement, and Silica Fume: 50 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 1.00 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a w/c ratio below 0.50.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

E. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.12 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings: Normal-weight concrete.

1. Minimum Compressive Strength: 3000 psi at 28 days.
2. Maximum W/C Ratio: 0.50.
3. Slump Limit: 8 inches for concrete with verified slump of 2 to 4 inches before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch.
4. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for [1-inch] [3/4-inch] nominal maximum aggregate size.

B. Slabs-on-Grade: Normal-weight concrete.

1. Minimum Compressive Strength: 3000 psi at 28 days.
2. Maximum W/C Ratio: 0.50.
3. Minimum Cementitious Materials Content: [470 lb/cu. yd.] [520 lb/cu. yd.] [540 lb/cu. yd.].

4. Slump Limit: 5 inches], plus or minus 1 inch.
5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for [1-inch] [3/4-inch] nominal maximum aggregate size.
6. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

C. Building Frame Members: Normal-weight concrete.

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum W/C Ratio: 0.48.
3. Slump Limit: 8 inches for concrete with verified slump of 2 to 4 inches before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch.
4. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for [1-inch] [3/4-inch] nominal maximum aggregate size.

2.13 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.14 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd..
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch for smooth-formed finished surfaces.
2. Class D, 1 inch for rough-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.
2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 VAPOR-RETARDER INSTALLATION

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.

B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.

3.5 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.6 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

7. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:
   1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

   1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
   2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
   3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

3.7 WATERSTOP INSTALLATION

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.8 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed.

B. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

C. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

D. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

3.9 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view or to be covered with a coating or covering material applied directly to concrete.

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix 1 part portland cement and 1 part fine sand with a 1:1 mixture of bonding agent and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.10 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to surfacesto receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfacesto be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.

2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

    a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.
    b. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

3.11 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Equipment Bases and Foundations:

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct concrete bases 8 inches high unless otherwise indicated, and extend base not less than 6 inches in each direction beyond the maximum dimensions of supported equipment unless otherwise indicated or unless required for seismic anchor support.
3. Minimum Compressive Strength: 3000 psi at 28 days.
4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
6. Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Cast anchor-bolt insert into bases. Install anchor bolts to elevations required for proper attachment to supported equipment.

3.12 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.

D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

    a. Water.
    b. Continuous water-fog spray.
    c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

    a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
    b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
    c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies does not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

    a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.13 LIQUID FLOOR TREATMENT APPLICATION

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
2. Do not apply to concrete that is less than three days' old.
3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.14 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least one month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.15 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.16 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

C. Inspections:

1. Steel reinforcement placement.
2. Headed bolts and studs.
3. Verification of use of required design mixture.
4. Concrete placement, including conveying and depositing.
5. Curing procedures and maintenance of curing temperature.

D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:
1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.

5. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.

6. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

    a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

7. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
8. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
9. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
10. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
11. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
12. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
13. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

E. Measure floor and slab flatness and levelness according to ASTM E 1155 within 24 hours of finishing.

3.17 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 033000

SECTION 04 22 00 - CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Decorative concrete masonry units.
3. Pre-faced concrete masonry units.
4. Mortar and grout.
5. Steel reinforcing bars.
6. Masonry-joint reinforcement.
7. Embedded flashing.
8. Miscellaneous masonry accessories.
9. Masonry-cell fill.

B. Products Installed but not Furnished under This Section:

1. Cast-stone trim in concrete unit masonry.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing dovetail slots for masonry anchors.
2. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
3. Section 071900 "Water Repellents" for water repellents applied to unit masonry assemblies.
4. Section 076200 "Sheet Metal Flashing and Trim" for sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

5. Section 323223 "Segmental Retaining Walls" for dry-laid, concrete unit retaining walls.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315. Show elevations of reinforced walls.
3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

C. Samples for Initial Selection:

1. Decorative CMUs, in the form of small-scale units.
2. Pre-faced CMUs.
3. Colored mortar.
4. Weep holes/vents.

D. Samples for Verification: For each type and color of the following:

1. Exposed and decorative CMUs.
2. Pre-faced CMUs.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include data on material properties and material test reports substantiating compliance with requirements.

b. For masonry units, include data and calculations establishing average net-area compressive strength of units.

2. Integral water repellant used in CMUs.

3. Cementitious materials. Include name of manufacturer, brand name, and type.

4. Mortar admixtures.

5. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.

6. Grout mixes. Include description of type and proportions of ingredients.

7. Reinforcing bars.

8. Joint reinforcement.

9. Anchors, ties, and metal accessories.

C. Mix Designs: For each type of mortar. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91/C 91M for air content.

2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

E. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

B. Sample Panels: Build sample panels to verify selections made under Sample submittals and to demonstrate aesthetic effects. Comply with requirements in Section 014000 "Quality Requirements" for mockups.

1. Build sample panels for each type of exposed unit masonry construction in sizes approximately 48 inches long by 48 inches high by full thickness.
2. Build sample panels facing south.
3. Where masonry is to match existing, build panels adjacent and parallel to existing surface.
4. Protect approved sample panels from the elements with weather-resistant membrane.
5. Approval of sample panels is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Architect in writing.

a. Approval of sample panels does not constitute approval of deviations from the Contract Documents contained in sample panels unless Architect specifically approves such deviations in writing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.9 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches (600 mm) down both sides of walls, and hold cover securely in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

A. Provide **structural** unit masonry that develops indicated net-area compressive strengths at 28 days.

1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to TMS 602/ACI 530.1/ASCE 6.
2. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

2.3 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6 except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work.

C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.

1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.4 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bull nose units for outside corners unless otherwise indicated.

B. CMUs: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength as indicated on plan.
2. Density Classification: Normal weight.
3. Size (Width): Manufactured to dimensions 3/8 inch less-than-nominal dimensions.

4. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.
5. Faces to Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.

2.5 CONCRETE AND MASONRY LINTELS

A. General: Provide one of the following:

B. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Section 033000 "Cast-in-Place Concrete," and with reinforcing bars indicated. See schedule on drawings.

C. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

D. Refer to architectural drawings and specifications for aesthetic requirements of exposed masonry lintels.

2.6 BURNISHED CMU

A. Manufacturers:

1. Basis of design: Westbrook Block Company, 860-399-6201
2. Arrowhead Concrete Work, Inc. 218-729-8274
3. Oneonta Block Company 607-432-6641
4. Cemex
5. Old Castle
6. Preferred Material

B. Description:

1. Integrally pigmented loadbearing hollow units with a net area compressive strength of greater or equal to 2000 P.S.I.
2. Compliance with ASTM C 90
3. Coloring: Integral, through-body coloring; synthetic or natural iron oxide pigments. Color to be selected by Architect from full range of standard colors.
4. Finish: Ground Face all three sides or as indicated on drawings.
5. Size and Shape: Based from the "National Concrete Masonry Association Concrete Masonry Shapes and Sizes Manual 1997 edition.
   00 GRF 040816-Stretcher
   00 GRF 040816-Corner
   00 GRF 040816-Return Corner

00 GRF 040808-Stretcher
00 GRF 040808-Corner
00 GRF 080816-Strecher
00 GRF 080816-Corner
00 GRF 080808-Strecher

6. Style: Hollow

7. Color: To be selected by Architect

2.7 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

D. Masonry Cement: ASTM C 91/C 91M.

E. Mortar Cement: ASTM C 1329/C 1329M.

F. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
3. White-Mortar Aggregates: Natural white sand or crushed white stone.
4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

G. Aggregate for Grout: ASTM C 404.

H. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for glazed or pre-faced masonry units (and approved for such use by manufacturer of units); in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's colors.

I. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.

J. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with

CMUs containing integral water repellent from same manufacturer.

K. Water: Potable.

2.8 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60 (Grade 420).

B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch (3.77-mm) steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

C. Masonry-Joint Reinforcement, General: Ladder type complying with ASTM A 951/A 951M.

1. Interior Walls: Mill- galvanized carbon steel.
2. Exterior Walls: Stainless steel.
3. Wire Size for Side Rods: [0.187-inch (4.76-mm)] diameter.
4. Wire Size for Cross Rods: [0.187-inch (4.76-mm)] diameter.
5. Spacing of Cross Rods: Not more than 16 inches (407 mm) o.c.
6. Provide in lengths of not less than 10 feet (3 m).

2.9 TIES AND ANCHORS

A. General: Ties and anchors shall extend at least 1-1/2 inches (38 mm) into masonry but with at least a 5/8-inch (16-mm) cover on outside face.

B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:

1. Mill-Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M, with ASTM A 641/A 641M, Class 1 coating.
2. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M, with ASTM A 153/A 153M, Class B-2 coating.
3. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304.
4. Galvanized-Steel Sheet: ASTM A 653/A 653M, Commercial Steel, G60 (Z180) zinc coating.
5. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.
6. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.
7. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

C. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch- (6.35-mm-) diameter, stainless-steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.
2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- (4.76-mm-) diameter, stainless-steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.

D. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.060-inch- (1.52-mm-) thick steel sheet, galvanized after fabrication.
    a. 0.064-inch- (1.63-mm-) thick, galvanized-steel sheet may be used at interior walls unless otherwise indicated.
2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- (4.76-mm-) diameter, stainless-steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.
3. Corrugated-Metal Ties: Metal strips not less than 7/8 inch (22 mm) wide with corrugations having a wavelength of 0.3 to 0.5 inch (7.6 to 12.7 mm) and an amplitude of 0.06 to 0.10 inch (1.5 to 2.5 mm) made from 0.060-inch- (1.52-mm-) thick steel sheet, galvanized after fabrication with dovetail tabs for inserting into dovetail slots in concrete.
    a. 0.064-inch- (1.63-mm-) thick, galvanized sheet may be used at interior walls unless otherwise indicated.

E. Partition Top Anchors: 0.105-inch- (2.66-mm-) thick metal plate with a 3/8-inch- (9.5-mm-) diameter metal rod 6 inches (152 mm) long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from stainless steel.

F. Rigid Anchors: Fabricate from steel bars 1-1/2 inches (38 mm) wide by 1/4 inch (6.35 mm) thick by 24 inches (610 mm) long, with ends turned up 2 inches (51 mm) or with cross pins unless otherwise indicated.

1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M.

2.10 EMBEDDED FLASHING MATERIALS

A. Metal Flashing: Provide metal flashing complying with Section 076200 "Sheet Metal Flashing and Trim" and as follows:

1. Stainless Steel: ASTM A 240/A 240M or ASTM A 666, Type 304, 0.016 inch (0.40 mm) thick.

2. Copper: ASTM B 370, Temper H00, cold-rolled copper sheet, 16-oz./sq. ft. (4.9-kg/sq. m) weight or 0.0216 inch (0.55 mm) thick or ASTM B 370, Temper H01, high-yield copper sheet, 12-oz./sq. ft. (3.7-kg/sq. m) weight or 0.0162 inch (0.41 mm) thick.

3. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.7 m). Provide splice plates at joints of formed, smooth metal flashing.

4. Fabricate through-wall metal flashing embedded in masonry from stainless steel, with ribs at 3-inch (76-mm) intervals along length of flashing to provide an integral mortar bond.

5. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.

6. Fabricate through-wall flashing with drip edge unless otherwise indicated. Fabricate by extending flashing 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees.

7. Fabricate through-wall flashing with sealant stop unless otherwise indicated. Fabricate by bending metal back on itself 3/4 inch (19 mm) at exterior face of wall and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.

8. Fabricate metal drip edges and sealant stops for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (76 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam sheds water.

9. Fabricate metal drip edges from stainless steel. Extend at least 3 inches (76 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees.

10. Fabricate metal sealant stops from stainless steel. Extend at least 3 inches (76 mm) into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.

11. Fabricate metal expansion-joint strips from stainless steel to shapes indicated.

12. Solder metal items at corners.

B. Flexible Flashing: Use one of the following unless otherwise indicated:

1. Copper-Laminated Flashing: 7-oz./sq. ft. (2-kg/sq. m) copper sheet bonded between two layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.

2. Asphalt-Coated Copper Flashing: 7-oz./sq. ft. (2-kg/sq. m) copper sheet coated with flexible asphalt. Use only where flashing is fully concealed in masonry.

3. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.040 inch (1.02 mm).

   a. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.

4. Butyl Rubber Flashing: Composite, self-adhesive, flashing product consisting of a

pliable, butyl rubber compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.040 inch (1.02 mm).

a. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.

5. Elastomeric Thermoplastic Flashing: Composite flashing product consisting of a polyester-reinforced ethylene interpolymer alloy.
   a. Monolithic Sheet: Elastomeric thermoplastic flashing, 0.040 inch (1.02 mm) thick.
   b. Self-Adhesive Sheet: Elastomeric thermoplastic flashing, 0.025 inch (0.64 mm) thick, with a 0.015-inch- (0.38-mm-) thick coating of adhesive.
   c. Self-Adhesive Sheet with Drip Edge: Elastomeric thermoplastic flashing, 0.025 inch (0.64 mm) thick, with a 0.015-inch- (0.38-mm-) thick coating of rubberized-asphalt adhesive. Where flashing extends to face of masonry, rubberized-asphalt coating is held back approximately 1-1/2 inches (38 mm) from edge.
      1) Color: Gray.
   d. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.

6. EPDM Flashing: Sheet flashing product made from ethylene-propylene-diene terpolymer, complying with ASTM D 4637/D 4637M, 0.040 inch (1.02 mm) thick.

C. Application: Unless otherwise indicated, use the following:

1. Where flashing is indicated to receive counterflashing, use metal flashing.
2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with a drip edge.
4. Where flashing is fully concealed, use metal flashing or flexible flashing.

D. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from UV-resistant, high-density polyethylene. Cell flashing pans have integral weep spouts designed to be built into mortar bed joints and that extend into the cell to prevent clogging with mortar.

E. Solder and Sealants for Sheet Metal Flashings: As specified in Section 076200 "Sheet Metal Flashing and Trim."

1. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
2. Solder for Copper: ASTM B 32, Grade Sn50.
3. Elastomeric Sealant: ASTM C 920, chemically curing urethane sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and remain watertight.

F. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.11 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D 226/D 226M, Type I (No. 15 asphalt felt).

2.12 MASONRY-CELL FILL

A. Loose-Fill Insulation: Perlite complying with ASTM C 549, Type II (surface treated for water repellency and limited moisture absorption) or Type IV (surface treated for water repellency and to limit dust generation).

B. Lightweight-Aggregate Fill: ASTM C 331/C 331M.

2.13 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime mortar unless otherwise indicated.
3. For exterior masonry, use portland cement-lime mortar.
4. For reinforced masonry, use portland cement-lime mortar.
5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type M.
2. For reinforced masonry, use Type S.

3. For mortar parge coats, use Type S.
4. For exterior, above-grade, load-bearing and nonload-bearing walls and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, use Type N.
5. For interior nonload-bearing partitions, Type O may be used instead of Type N.

D. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C 476, Table 1.
3. Provide grout with a slump of 8 to 11 inches (200 to 280 mm) as measured according to ASTM C 143/C 143M.

E. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.

1. Application: Use epoxy pointing mortar for exposed mortar joints with pre-faced CMUs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.
4. Verify that substrates are free of substances that would impair mortar bond.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Build chases and recesses to accommodate items specified in this and other Sections.

B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.

C. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch (12 mm) or minus 1/4 inch (6 mm).
2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch (12 mm).
3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch (6 mm) in a story height or 1/2 inch (12 mm) total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch (1.5 mm).

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm), with a maximum thickness limited to 1/2 inch (12 mm).

2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch (3 mm).

3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (9 mm) or minus 1/4 inch (6 mm).

4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm).

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 2 inches (50 mm). Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches (600 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.

2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch (13-mm) clearance between end of anchor rod and end of tube. Space anchors 48 inches (1200 mm) o.c. unless otherwise indicated.
3. Wedge nonload-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 078443 "Joint Firestopping."

3.5 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:
   1. Bed face shells in mortar and make head joints of depth equal to bed joints.
   2. Bed webs in mortar in all courses of piers, columns, and pilasters.
   3. Bed webs in mortar in grouted masonry, including starting course on footings.
   4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.

B. Lay solid CMUs with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set cast-stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
   1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
   2. Wet joint surfaces thoroughly before applying mortar.
   3. Rake out mortar joints for pointing with sealant.

D. Rake out mortar joints at pre-faced CMUs to a uniform depth of 1/4 inch (6 mm) and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.

E. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

F. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

G. Cut joints flush where indicated to receive waterproofing unless otherwise indicated.

H. Install molded-polystyrene insulation units into masonry unit cells before laying units.

3.6 MASONRY-JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).

1. Space reinforcement not more than 16 inches (406 mm) o.c.
2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.7 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:

1. Provide an open space not less than 1/2 inch (13 mm) wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (915 mm) o.c. horizontally.

3.8 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:

1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout, and rake out joints in exposed faces for application of sealant.
2. Install preformed control-joint gaskets designed to fit standard sash block.
3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar, or rake out joint for application of sealant.
4. Install temporary foam-plastic filler in head joints, and remove filler when unit masonry is complete for application of sealant.

3.9 LINTELS

A. Provide concrete or masonry lintels where shown and where openings of more than 12 inches (305 mm) for brick-size units and 24 inches (610 mm) for block-size units are shown without structural steel or other supporting lintels.

B. Provide minimum bearing of 8 inches (200 mm) at each jamb unless otherwise indicated.

3.10 FLASHING

A. General: Install embedded flashing at ledges and other obstructions to downward flow of water in wall where indicated.

B. Install flashing as follows unless otherwise indicated:

1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
2. At lintels, extend flashing a minimum of 6 inches (150 mm) into masonry at each end. At heads and sills, extend flashing 6 inches (150 mm) at ends and turn up not less than 2 inches (50 mm) to form end dams.
3. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches (38 mm) or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.
4. Install metal drip edges and sealant stops with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.

5. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall, and adhere flexible flashing to top of metal drip edge.

6. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall, and adhere flexible flashing to top of metal flashing termination.

7. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.

C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.

D. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.

3.11 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.

2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height.

2. Limit height of vertical grout pours to not more than 60 inches (1520 mm).

3.12 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as

needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.

E. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

F. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

G. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

I. Prism Test: For each type of construction provided, according to ASTM C 1314 at 7 days and at 28 days.

3.13 PARGING

A. Parge exterior faces of below-grade masonry walls, where indicated, in two uniform coats to a total thickness of 3/4 inch (19 mm). Dampen wall before applying first coat, and scarify first coat to ensure full bond to subsequent coat.

B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8 inch per foot (3 mm per 300 mm). Form a wash at top of parging and a cove at bottom.

C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.14 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.

3.15 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.

1. Crush masonry waste to less than 4 inches (100 mm) in each dimension.
2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 312000 "Earth Moving."
3. Do not dispose of masonry waste as fill within 18 inches (450 mm) of finished grade.

C. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

D. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 22 00

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Prefabricated building columns.
3. Field-installed shear connectors.
4. Grout.

B. Related Requirements:

1. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
2. Section 053100 "Steel Decking" for field installation of shear connectors through deck.
3. Section 055000 "Metal Fabrications" for miscellaneous steel fabrications and other steel items not defined as structural steel.
4. Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" and Section 099600 "High-Performance Coatings" for surface-preparation and priming requirements.
5. Section 133419 "Metal Building Systems" for structural steel.

1.3 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.

C. Heavy Sections: Rolled and built-up sections as follows:

1. Shapes included in ASTM A 6/A 6M with flanges thicker than 1-1/2 inches.
2. Welded built-up members with plates thicker than 2 inches.
3. Column base plates thicker than 2 inches.

D. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

E. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
5. Identify members and connections of the Seismic-Load-Resisting System.

6. Indicate locations and dimensions of protected zones.
7. Identify demand critical welds.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

D. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator, and testing agency.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Nonshrink grout.

F. Survey of existing conditions.

G. Source quality-control reports.

H. Field quality-control and threshold inspection reports.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.

C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement P1, Endorsement P2, Endorsement P3, or to SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:

1. AISC 303.
2. AISC 341 and AISC 341s1.
3. AISC 360.
4. RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.

3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer, to withstand loads indicated and comply with other information and restrictions indicated.

1. Select and complete connections using schematic details indicated and AISC 360.
2. Use Load and Resistance Factor Design; data is given as specified on the contract documents.

B. Moment Connections: Type FR, fully restrained.

C. Construction: Combined system of moment frame and shear walls.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A 992/A 992M.

B. Channels, Angles:ASTM A 36/A 36M.

C. Plate and Bar: ASTM A 36/A 36M.

D. Corrosion-Resisting Structural-Steel Shapes, Plates, and Bars: ASTM A 588/A 588M, Grade 50.

E. Cold-Formed Hollow Structural Sections: ASTM A 500/A 500M, Grade B, structural tubing.

F. Corrosion-Resisting, Cold-Formed Hollow Structural Sections: ASTM A 847/A 847M, structural tubing.

G. Steel Castings: ASTM A 216/A 216M, Grade WCB with supplementary requirement S11.

H. Steel Forgings: ASTM A 668/A 668M.

I. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; with plain finish.

1. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with plain finish.

B. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts

1. Finish: Hot-dip zinc coating.
2. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with mechanically deposited zinc coating finish.

C. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

D. Headed Anchor Rods: ASTM F 1554, Grade 36, straight.

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436, Type 1, hardened carbon steel.
4. Finish: Plain.

E. Threaded Rods: ASTM A 36/A 36M.

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Washers: ASTM F 436, Type 1, hardened carbon steel.
3. Finish: Plain.

F. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.

G. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.

H. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.

2.4 PRIMER

A. Primer: Comply with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

B. Primer: SSPC-Paint 23, latex primer.

C. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

D. Galvanizing Repair Paint: SSPC-Paint 20, ASTM A 780/A 780M.

2.5 GROUT

A. Metallic, Shrinkage-Resistant Grout: ASTM C 1107/C 1107M, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.

B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107/C 1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.6 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1.

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

G. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural-steel frame. Straighten as required to provide uniform, square, and true members in completed wall framing. Build up welded framing, weld exposed joints continuously, and grind smooth.

H. Welded Door Frames: Build up welded door frames attached to structural-steel frame. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than 10 inches o.c. unless otherwise indicated.

I. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.7 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.8 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.

3. Surfaces of high-strength bolted, slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.
6. Surfaces enclosed in interior construction.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."
3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
5. SSPC-SP 14/NACE No. 8, "Industrial Blast Cleaning."
6. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
7. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
8. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
9. SSPC-SP 8, "Pickling."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Painting: Prepare steel and apply a one-coat, nonasphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils.

2.9 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

2. Galvanize lintels, shelf angles attached to structural-steel frame and located in exterior walls.

2.10 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. Bolted Connections: Inspect and test shop-bolted connections according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

C. Welded Connections: Visually inspect shop-welded connections according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.
2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
3. Ultrasonic Inspection: ASTM E 164.
4. Radiographic Inspection: ASTM E 94.

D. In addition to visual inspection, test and inspect shop-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Baseplates Bearing Plates and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Pretensioned.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs where exposed to view, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," for mill material.

3.5 PREFABRICATED BUILDING COLUMNS

A. Install prefabricated building columns to comply with AISC 360, manufacturer's written recommendations, and requirements of testing and inspecting agency that apply to the fire-resistance rating indicated.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Bolted Connections: Inspect and test bolted connections according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

D. Welded Connections: Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

E. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

3.7 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780/A 780M.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

D. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

END OF SECTION 05 12 00

SECTION 05 21 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH-series long-span steel joists.
5. Joist accessories.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 042000 "Unit Masonry" for installing bearing plates in unit masonry.
3. Section 051200 "Structural Steel Framing" for field-welded shear connectors.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.

B. Shop Drawings:

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Welding certificates.

C. Manufacturer certificates.

D. Mill Certificates: For each type of bolt.

E. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

F. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications.”

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications."

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

A. Deliver steel bearing plates to be built into cast-in-place concrete and masonry construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Vulcraft; Nucor Vulcraft Group

B. New Millennium Building Systems, LLC

C. Canam Steel Corporation; Canam Group, Inc.

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.

1. Use ASD; data are given at service-load level.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:
    a. Roof Joists: Vertical deflection of 1/240 of the span.

2.3 K-SERIES STEEL JOISTS

A. Manufacture steel joists of type indicated according to "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.

B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.

C. Provide holes in chord members for connecting and securing other construction to joists.

D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."

E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

F. Do not camber joists.

G. Camber joists according to SJI's "Specifications," and as indicated in contract documents.

H. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 LONG-SPAN STEEL JOISTS

A. Manufacture steel joists according to "Standard Specification for Longspan Steel Joists, LH-Series in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as indicated.

1. Joist Type: LH-series steel joists.
2. Top-Chord Arrangement: Parallel, unless noted otherwise.

B. Provide holes in chord members for connecting and securing other construction to joists.

C. Camber long-span steel joists according to SJI's "Specifications," or as indicated.

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.5 PRIMERS

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

B. Primer: Provide shop primer that complies with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

2.6 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Bridging: Schematically indicated. Detail and fabricate according to SJI's "Specifications." Furnish additional erection bridging if required for stability.

C. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. Shop prime paint.

D. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."

E. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch (13 mm) of finished wall surface unless otherwise indicated.

1. Finish: Plain, uncoated.

F. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.

1. Finish: Plain.

G. Welding Electrodes: Comply with AWS standards.

H. Galvanizing Repair Paint: MPI#18, MPI#19, or SSPC-Paint 20 ASTM A 780/A 780M.

I. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.7 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2.

B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.

C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

D. Shop priming of joists and joist accessories is specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using carbon-steel bolts.

E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.

F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test field welds according to AWS D1.1/D1.1M and the following procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165/E 165M.

b. Magnetic Particle Inspection: ASTM E 709.

c. Ultrasonic Testing: ASTM E 164.

d. Radiographic Testing: ASTM E 94.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.4 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.

1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2 or power-tool cleaning according to SSPC-SP 3.

2. Apply a compatible primer of same type as primer used on adjacent surfaces.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

END OF SECTION 05 21 00

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Roof deck.
2. Cellular roof deck.
3. Acoustical roof deck.
4. Acoustical cellular roof deck.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 035216 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
3. Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.
4. Section 055000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
5. Section 099113 "Exterior Painting" for repair painting of primed deck and finish painting of deck.
6. Section 099123 "Interior Painting" for repair painting of primed deck and finish painting of deck.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.
2. Acoustical roof deck.

D. Evaluation Reports: For steel deck, from ICC-ES.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

C. Electrical Raceway Units: Provide UL-labeled cellular floor-deck units complying with UL 209 and listed in UL's "Electrical Construction Equipment Directory" for use with standard header ducts and outlets for electrical distribution systems.

D. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 ROOF DECK

A. Manufacturers:

1. Epic Metals Corporation
2. New Millennium Building System
3. Nucor Corp

B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:

1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), G90 zinc coating.
2. Deck Profile: Type WR, wide rib for building; dove-tail for canopy
3. Profile Depth: As indicated.
4. Design Uncoated-Steel Thickness: As indicated.
5. Span Condition: Triple span or more at building, single-span for canopy.
6. Side Laps: Overlapped.

2.3 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter. See drawings for sizes.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

G. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch thick, with factory-punched hole of 3/8-inch minimum diameter.

H. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.

I. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch-wide flanges and level recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field.

J. Galvanizing Repair Paint: ASTM A 780/A 780M.

K. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

3.3 ROOF-DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals as indicated.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum or butted at Contractor's option.

D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and mechanically fasten flanges to top of deck. Space mechanical fasteners not more than 12 inches apart with at least one fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and mechanically fasten.

E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Mechanically fasten to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

F. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

G. Sound-Absorbing Insulation: Installation into topside ribs of deck as specified in drawings.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

3.5 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

END OF SECTION 05 31 00

SECTION 05 40 00 – LIGHTGAGE STEEL FRAMING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide light gage steel framing shown on drawings and specified.

1.2 RELATED SECTIONS

A. Section 05 50 00 – METAL FABRICATIONS

1.3 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

AMERICAN IRON AND STEEL INSTITUTE (AISI)

1. Specification for Design of Cold-Formed Steel Structural Members

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

1.	ASTM A 123/A 123M	Zinc (Hot-Dipped Galvanized) Coatings on Iron and Steel Products
2.	ASTM A 153/A 153M	Zinc-Coated (Hot Dip) on Iron and Steel Hardware
3.	ASTM A 653/A 653M	Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process)
4.	ASTM A 570/A 570M	Structural Steel, Sheet and Strip, Carbon, Hot-Rolled
5.	ASTM A 611	Steel, Sheet, Carbon, Cold-Rolled, Structural Quality
6.	ASTM A 924/A 924M	Steel Sheet, Metallic-Coated by the Hot-Dip Process
7.	ASTM C 1007	Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories

AMERICAN WELDING SOCIETY (AWS)

1.4 QUALITY ASSURANCE

A. Component Design: Structural properties of steel members shall be in accordance with AISI Specification for Design of Cold-Formed Steel Structural Members.

B. Welding: Use qualified welders and materials that comply with AWS D1.3.

1.5 CONSTRUCTION REQUIREMENTS

A. The manufacturer of the framing system shall design the system including size, gage, strength, spacing of members, anchorage to structure, connections, angles, clips, bracing, strapping, bridging, supplementary framing, framing at openings, corners, and at control and expansion joints. Design provisions for movement of the structural and other components required to complete the framing systems indicated.

B. Framing system shall be designed by an engineer registered in the State of Florida to resist the construction loads indicated, and the design horizontal wind and wind uplift loads indicated on the drawings and all other loads as required by applicable building codes. Design of steel framing shall be in accordance with AISI Specification for the Design of Cold Formed Steel Structural Members.

C. Maximum allowable deflection of the systems under full lateral load shall not be more than L/360.

1.6 SUBMITTALS

A. Product Data: Manufacturer's product data and installation instructions for each item of lightgage framing and accessories.

B. Shop Drawings: Indicate each framing member with size, type and gage designations, quantity, location and spacing. Indicate and detail type of connections, anchorage to structure, supplemental framing, strapping, bracing, splices, bridging, accessories and other components and details required for proper installation.

C. Calculations: Submit structural calculations signed and sealed by a structural engineer, registered in the State of Florida which indicate all member sizes, spacings, connections and other pertinent design information. Calculations shall include analysis and design of all horizontal and vertical exterior metal studs and lightgage framing.

1.7 FIRE RATED ASSEMBLIES

A. Where framing units are components of assemblies indicated for a fire-resistance rating required for compliance with governing regulations, provide units that have been approved by governing authorities that have jurisdiction.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with requirements, provide lightgage metal framing of one of the following:

1. Alabama Metal Industries Corp.

2. Bostwick Steel Framing Co.

3. Consolidated Systems, Inc. (CSI)

4. Dale/Incor Industries, Inc.

5. Dietrich Industries, Inc.

6. Gold Bond Building Products

7. Superior Steel Studs, Inc.

8. U.S. Gypsum

2.2 METAL FRAMING

A. System Components: Provide manufacturer's standard load bearing framing members. With each type of metal framing required, provide manufacturer's standard steel runners (tracks), blocking, lintels, clip angles, shoes, reinforcements, fasteners, anchorages, accessories and other components as recommended by manufacturer for applications indicated, as needed to provide a complete metal framing system.

B. Materials and Finishes:

1. For 16-gage and heavier units, fabricate metal framing components of structural quality steel sheet with a minimum yield of not less than 40,000 psi: ASTM A 653/A 653M, ASTM A 570/A 570M, or ASTM A 611.

2. For 18-gage units, fabricate metal framing components of commercial quality steel sheet with minimum yield point of not less than 33,000 psi; ASTM A 653/A 653M, ASTM A 570/A 570M or ASTM A 611.

3. Provide galvanized finish to all metal framing components and accessories. For sheet metal components comply with ASTM A 924/A 924M for minimum G60 coating. For structural steel shapes provide galvanized coating complying with ASTM A 123/A 123M. For hardware galvanized coating complying with ASTM A 153/A 153M.

C. C-Shape Studs: Manufacturer's steel C-shape studs of size indicated and of gage and structural properties required. Provide flanges of proper bearing area and type for attachment of materials.

D. Furring: Manufacturer's standard hat-shaped or Z-shaped steel furring members of gage and structural properties required.

E. Joists: Manufacturer's standard C-shape sections of size, shape and gage indicated or required by manufacturer's design.

F. Fasteners: Corrosion-resistant plated steel or stainless steel.

2.3 GALVANIZING REPAIR PAINT

A. Galvicon, ZRC or approved equivalent.

2.4 FABRICATION

A. Framing components may be prefabricated into panels prior to erection. Fabricate panels plumb, square, true to line and braced against racking with joints welded. Perform lifting of prefabricated panels in a manner to prevent damage or distortion.

B. Fastenings: Attach components by welding, bolting or screw fasteners, as standard with manufacturer and as required by design calculations.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install metal framing systems in accordance with requirements of ASTM C 1007, approved shop drawings and manufacturer's instructions and recommendations. Tolerance per ASTM C 1007 for vertical and horizontal alignment is not to exceed ⅛-inch in 10-feet; Corners not more than ±⅛-inch out-of-square within 4-feet each side of corner.

B. Temporary bracing of walls and other lightgage framing shall be provided during erection until such time it is no longer needed.

C. Runner Tracks: Install continuous tracks sized to match studs. Align tracks accurately to layout at base and tops of studs. Secure tracks as recommended by manufacturer for type of construction involved, except do not exceed 24 inches o.c. spacing for powder-driven fasteners, or 16 inches o.c. for other types of attachment. Provide fasteners at corners and end of tracks.

D. Set studs plumb, except as needed for diagonal bracing.

E. Where stud system abuts structural columns or walls, anchor ends of stiffeners to supporting structure.

D. Install supplementary framing, blocking and bracing in metal framing system wherever walls or partitions are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, exterior metal panels and similar work requiring attachment to the

wall or partition. Where type of supplementary support is not otherwise indicated, comply with stud manufacturer's recommendations and industry standards, considering weight or loading resulting from items supported.

3.2 GALVANIZE COATING REPAIR

END OF SECTION 05 40 00

SECTION 05 50 00 – METAL FABRICATIONS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide miscellaneous metal work shown on the drawings, specified herein and required to complete the work.

B. Hot-Dip galvanize items as specified, scheduled or indicated and all anchors and plates for embedment in concrete or masonry miscellaneous steel as indicated.

1.2 RELATED SECTIONS

A. Section 05 40 00 Light Guage Steel Framing

1. NAAMM AMP 521 Pipe Railing Systems Manual

2. NAAMM AMP 500 Metal Finishes Manual for Architectural and Metal Products.

THE SOCIETY FOR PROTECTIVE COATINGS (SSPC)

1. SSPC-SP 1 Solvent Cleaning

2. SSPC-SP 2 Hand Tool Cleaning

3. SSPC-SP 3 Power Tool Cleaning

4. SSPC-SP 7/NACE No. 4 Brush-Off Blast Cleaning

1.4 QUALITY ASSURANCE

A. Field Measurements: Verify shop drawing dimensions by field measurements prior to fabrication.

B. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly.

C. Certification of Welders: Welding shall be done by welders who are currently qualified by test procedures in AWS D1.1/D1.1M, AWS D1.2, and AWS D1.3.

1.5 SUBMITTALS

A. Manufacturer's Product Data: Submit for products to be used in fabrication of miscellaneous steel work, including shop primer and galvanized repair compound.

B. Shop Drawings: Submit for each miscellaneous steel item. Include plans, elevations, details, sections and connections. Show anchorage attachment and accessory items.

C. Submit drawings for the following:

1. Supports for counters, labs, baby changing table support

2. Diagonal supports as shown on drawings**.**

PART 2 - PRODUCTS

2.1 MATERIALS AND COMPONENTS

A. Metal Surfaces: For miscellaneous steel work which will be exposed to view, materials shall be smooth and free of surface blemishes including pitting, seam marks, rolled trade names and roughness.

B. Steel Plates, Shapes and Bars: ASTM A 36/A 36M.

C. Steel Plates to be Bent or Cold Formed: ASTM A 283/A 283M, Grade C.

D. Steel Tubing: Cold-formed, ASTM A 500 Grade B.

E. Steel Bars and Bar-Sized Shapes: ASTM A 663, Grade 65 or ASTM A 36/A 36M.

F. Carbon Steel Sheets:

1. Cold-Rolled: ASTM A 366/A 366M.

2. Galvanized: ASTM A 653/A 653M, with ASTM A 924/A 924M, G90 Zinc Coating.

G. Steel Pipe: ASTM A 53, type as selected; Grade A; galvanized, standard weight (Schedule 40), unless otherwise indicated.

H. Satainless Steel Tubing , Plates, Shapes and Bars: Stainless Steel 304. Finished as noted on the drawings.

I. Concrete Inserts: Cast steel, ASTM A 27/A 27M, expansion sleeves and steel bolts ASTM A 307, galvanized.

J. Nonshrink Nonferrous Grout: Meadows Sealtight V-3, Sonneborn Sonogrout or Thoro Thoroset.

2.2 FASTENERS

A. General: Provide zinc-coated fasteners for all interior and exterior use. Select fasteners for the type, grade and class required.

B. Bolts and Nuts: Regular hexagon head type, ASTM A 307, Grade A and ASTM A 449.

C. Lag Bolts: Hex head type, ASTM A 307, Grade A.

D. Machine Screws: Alloy steel, galvanized ASTM A 574 and ASTM F 835.

E. Plain Washers: Round, carbon steel, ASTM F 436.

F. Expansion Anchorage Devices: Type and size as required and approved for intended use.

G. Toggle Bolts: Tumble-wing type, class and style as required and approved for intended use.

H. Lock Washers: Helical spring type carbon steel.

I. Screws, bolts, nuts and washers, 304 Stainless steel finished as noted on drawings.

2.3 ROUGH HARDWARE

A. Furnish standard and custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel shapes as required for framing and supporting wood and steel work, and for anchoring or securing steel and wood to concrete or other structures.

B. Manufacture or fabricate rough hardware items of sizes, shapes and dimensions required. Furnish malleable iron washers for heads and nuts which bear on wood structural connections; elsewhere, furnish steel washers.

2.4 SHOP PRIMER

A. Provide a universal primer as recommended by the manufacturer for the type metal being primed. Coordinate selection of metal primer with finish paint requirements specified in SECTION 09 91 00 - PAINTING. Primer selected must be compatible with finish coats of paints. Acceptable primers: Glidden Glid-Guard No. 5205; Sherwin-Williams Galvite B50 W3; Tnemec Galv-Guard Series 22; Southern Coatings Enviro-Guard 1-6227; or approved equivalent.

2.5 SHOP FABRICATION

A. Workmanship: Use materials of size and thickness shown, or, if not shown, of requirement size and thickness to produce strength and durability in finished product. Work to dimensions shown or accepted on shop drawings, using proven details of fabrication and support. Use type of materials shown or specified for various components of work.

B. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges. Ease exposed edges to a radius of approximately $^{1}/_{32}$-inch

unless otherwise shown. Form bent metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

C. Weld corners and seams continuously, complying with AWS recommendations. At exposed connections, grind exposed welds smooth and flush to match and blend with adjoining surfaces.

D. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners wherever possible. Use exposed fasteners of type shown or, if not shown, Phillips flat-head screws or bolts.

1. Provide for anchorage of type shown, coordinated with supporting structure. Fabricate and space anchoring devices to provide adequate support for intended use.

2. Cut, reinforce, drill and tap miscellaneous steel work as indicated to receive finish hardware and similar items.

2.6 SHOP PRIMING

A. Shop prime miscellaneous steel work including galvanized items, except members or portions of members to be embedded in concrete and masonry and surfaces and edges to be field welded.

B. Remove scale, rust and other deleterious materials before applying shop coat.

1. Remove oil, grease and similar contaminants in accordance with SSPC-SP 1 Solvent Cleaning.

2. Clean off rust and loose mill scale in accordance with SSPC-SP 2 Hand Tool Cleaning, or SSPC-SP 3 Power Tool Cleaning or SSPC-SP 7/NACE No. 4 Brush-Off Blast Cleaning.

C. Immediately after surface preparation, brush or spray on primer in accordance with manufacturer's instructions, and at a rate to provide uniform dry film thickness of 1.5 mils for each coat. Use painting methods which will result in full coverage of joints, corners, edges and exposed surfaces.

D. Apply one shop coat of primer to all fabricated metal items. Apply second coat or primer to surfaces inaccessible after assembly and erection. Change of second coat to distinguish it from the first.

2.7 GALVANIZING

A. Provide a zinc coating for items shown and for items specified to be galvanized. Hot-

dip galvanize after fabrication unless otherwise specified or indicated.

1. ASTM A 153/A 153M for galvanizing iron and steel hardware.

2. ASTM A 123/A 123M for galvanizing rolled, pressed and forged steel shapes, plates, bars and strips ⅛-inch thick and heavier.

3. ASTM A 123/A 123M for galvanizing assembled steel products.

B. Galvanizing Repair Compound: High zinc dust content for regalvanizing welds and damaged galvanized surfaces. Provide ZRC by ZRC Chemical Products Co. or Galvicon by Kenco Division of Southern Coatings.

2.8 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on masonry and concrete construction fabricate flat, free from warp and twist, and of required thickness and bearing areas. Drill plates to receive anchor bolts and for grouting as required. Galvanize items specified and items indicated.

2.9 LOOSE STEEL LINTELS

A. Provide loose structural steel lintels for openings and recesses in masonry walls and partitions as shown. Weld adjoining members together, to provide pipe separators, to form a single unit where indicated. Space welds not over 12 inches apart unless shown otherwise. Provide not less than 8 inches bearing at each side of openings, unless otherwise shown. Galvanize loose steel lintels to be installed in exterior walls.

2.10 MISCELLANEOUS FRAMING AND SUPPORTS

A. Provide miscellaneous steel framing and supports which are not a part of structural steel framework, as required to complete work.

B. Fabricate miscellaneous steel framing and support units to size, shapes and profiles shown, or, if not shown, of required dimensions to receive adjacent work and other work to be supported by framing. Except as otherwise shown, furnish units fabricated from structural steel shapes, plates and steel bars, and of welded construction using mitered joints for field connection. Cut, drill and tap units to receive hardware and similar items.

C. Furnish drilled-in type expansion anchors for items that are required to be installed at concrete slab.

1. Except as otherwise shown, space anchors 24 inches o.c. and provide minimum anchors of 1¼ x ¼ x 8 inch steel straps.

2. Galvanize miscellaneous frames and supports specified and indicated. All items exposed to weather shall be galvanized.

2.11 MISCELLANEOUS STEEL TRIM

A. Provide shapes and sizes for profiles shown. Except as otherwise noted, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other work. Galvanize miscellaneous steel trim exposed to weather and other trim where indicated.

2.12 STAINLESS STEEL TRIM

A. Provide shapes, sizes and finish for profiles shown.

1. Stainless Steel 304 finished as noted on drawings. If not noted use finish: #4 (dull).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install manufactured items according to printed directions of the manufacturer except as specified otherwise or modified by details.

B. Install, anchor and make field connections in accordance with approved shop drawings.

C. To prevent electrolysis, separate contacting surfaces of dissimilar metals with one ply of 15-pound asphalt-saturated felt or a bituminous coating.

D. Repair damaged areas of galvanized surfaces with galvanizing repair paint before and after installation.

E. Use setting drawings, diagrams, templates, manufacturer's instructions and directions for installation of anchorages such as concrete inserts, anchor bolts and miscellaneous items having integral anchors, which are to be embedded in concrete and embedded in masonry.

F. Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind exposed joints smooth and touch-up shop primer. Do not weld, cut or abrade the surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted field connections.

G. Permanently weld shelf angles after last course of masonry, immediately below the angle, has been laid.

H. Secure strap anchors to forms so shelf angles can be welded in place at proper elevation.

END SECTION 05 50 00

SECTION 05 81 01 - EXPANSION JOINT COVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including Contractual and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Floor expansion joint cover assemblies.
2. Wall expansion joint cover assemblies.
3. Ceiling expansion joint cover assemblies.
4. Soffit expansion joint cover assemblies.
5. Expansion joint cover system.

1.3 SUBMITTALS

A. General: Submit the following according to Conditions of the Contract and Division 1 Specification Sections.

1. Product data for each type of expansion joint cover assembly specified, including manufacturer's product specifications, installation instructions, details of construction relative to materials, dimensions of individual components, profiles, and finishes.
2. Shop drawings showing fabrication and installation of expansion joint cover assembly including plans, elevations, sections, details of components, joints, splices, and attachments to other units of Work.
3. Samples for initial selection purposes in the form of manufacturer's color charts, actual units, or sections of units showing full range of colors, textures, and patterns available for each exposed metal and elastomeric material of expansion joint cover assembly indicated.

1.4 QUALITY ASSURANCE

A. Single-Source Responsibility: Obtain expansion joint cover assemblies specified in this Section from one source from a single manufacturer. Coordinate compatibility with expansion joint cover assemblies specified in other sections.

B. Pre-Installation Conference: Include Architect, Owner Representative, joint cover and fireproofing seal manufacturer Technical Representatives, and installer.

C. Mock Up: Fabricate mock ups for each type/ system for review by Architect. Mock up shall be kept at site trailer for reference.

D. Fire-Test-Response Characteristics: Where indicated, provide expansion joint cover

assemblies identical to those assemblies whose fire resistance has been determined per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.

1. Fire-Resistance Ratings: Not less than the rating wall, ceiling, soffit, deck, beam and slab assembly where the joint resides.

1.6 WARRANTY

A. Manufacturer Warranty: 5 year manufacturer's warranty, on products against defect and watertight guarantee.

B. Installer Warranty: 2 year workmanship warranty against failure of watertightness or all aspects of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Specified Manufacturers and Model Numbers: Subject to compliance with requirements, products that may be incorporated in the Work include, but are not limited to, those specified.

B. Special Cover Mark Numbers, Model and Manufacturer – Basis of Design:

1. Ceiling Joint: EK-K1; 1-inch wide; MM Systems.
2. Wall Joint: "Emseal" Joint Systems Ltd. (EJS) "Seismic Colorseal" or approved equal "Willseal"
3. Expansion Joint Cover Corner Piece Type 3: ESC-500; Construction Specialties, Inc.”

C. Expansion Joint Cover System, Model and Manufacturer - Basis of Design:

1. Series FS 75 Migutran S; Migua, Westborough, MA.

2.2 MATERIALS

A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6, sheet and plate.

1. Protect aluminum surfaces to be placed in contact with cementitious materials with a protective coating.

B. Stainless Steel: ASTM A 167, Type 304 with 2B finish, unless indicated otherwise, for plates, sheet, and strips.

C. Extruded Preformed Seals: Single or multicellular elastomeric profiles as classified

under ASTM D 2000, designed with or without continuous, longitudinal, internal baffles. Formed to fit compatible frames, in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

D. Preformed Sealant: Manufacturer's standard elastomeric sealant complying with ASTM C 920, Use T, factory-formed and -bonded to metal frames or anchor members; in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

1. Joints 2 Inches Wide and Less: Withstand plus or minus 35 percent movement of the joint width without failure.
2. Joints Greater Than 2 Inches to 4 Inches Wide: Withstand plus or minus 50 percent movement of the joint width without failure.

E. Fire Barriers: Designed for indicated or required dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399. Tested in maximum joint width condition with a field splice as a component of an expansion joint cover per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies by a nationally recognized testing and inspecting agency acceptable to authorities having jurisdiction.

F. Accessories: Manufacturer's standard anchors, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesive, and other accessories compatible with material in contact, as indicated or required for complete installations.

G. Intersections: All exterior expansion joint seals will have factory fabricated transitions for use in all directional changes IE: "T" intersections and "L" intersections.

2.3 EXPANSION JOINT COVER ASSEMBLIES

A. General: Provide expansion joint cover assemblies of design, basic profile, materials, and operation indicated. Provide units comparable to those indicated or required to accommodate joint size, variations in adjacent surfaces, and dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399. Furnish units in longest practicable lengths to minimize number of end joints. Provide hairline mitered corners where joint changes directions or abuts other materials. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint cover assemblies.

B. Moisture Barrier: Provide manufacturer's continuous, standard, flexible vinyl moisture barrier under covers at locations indicated.

C. Fire-Rated Joint Covers: Provide expansion joint cover assemblies with manufacturer's continuous, standard, flexible fire barrier seals under covers at locations indicated to provide fire-resistive rating not less than the rating of adjacent construction.

D. Coverless Fire Barrier: Provide manufacturer's continuous standard flexible fire barrier seals at locations indicated to provide fire-resistive rating not less than the rating of adjacent construction.

E. Metal Floor-to-Floor Joint Cover Assemblies: Provide continuous extruded metal frames of profile indicated with seating surface and raised floor rim or exposed trim strip to accommodate flooring and concealed bolt and anchors embedded in concrete. Provide assemblies formed to receive cover plates of design indicated and to receive filler materials (if any) between raised rim of frame and edge of plate. Furnish depth and configuration to suit type of construction and to produce a continuous flush wearing surface with adjoining finish floor surface.

F. Floor-to-Wall Joints: Provide one frame on floor side of joint only. Provide wall side frame where required by manufacturer's design.

1. Angle Cover Plates: Attach angle cover plates for floor-to-wall joints to wall with countersunk, flat-head exposed fasteners secured to drilled-in-place anchor shields, unless otherwise indicated, at spacing recommended by joint cover manufacturer.

G. Wall, Ceiling, and Soffit Joint Cover Assemblies: Provide interior wall and ceiling expansion joint cover assemblies of same design and appearance. Provide exterior wall and soffit expansion joint cover assemblies of same design and appearance. Provide wall expansion joint cover assemblies compatible with floor expansion joint cover assemblies design and appearance.

H. All expansion joint seal materials will be 100% free of was and asphaltic compounds.

2.4 METAL FINISHES

A. General: Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise indicated. Apply finishes to products in factory after fabrication. Protect finishes on exposed surfaces before shipment.

B. Aluminum Finishes: Mill finish.

C. Stainless Steel Finishes: Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

1. Bright, Cold-Rolled Unpolished Finish: AISI No. 2B finish.

PART 3 - EXECUTION

3.1 PREPARATION

A. Manufacturer's Instructions: In addition to requirements of these specifications, comply with manufacturer's instructions and recommendations for phases of Work, including preparing substrate, applying materials, and protecting installed units.

B. Coordinate and furnish anchorages, setting drawings, templates, and instructions for installation of expansion joint cover assemblies to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.

C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure expansion joint cover assemblies to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and provide for secure attachment of expansion joint cover assemblies.

3.2 INSTALLATION

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required to install expansion joint covers. Install joint cover assemblies in true alignment and proper relationship to expansion joints and adjoining finished surfaces measured from established lines and levels. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling. Set floor covers at elevations to be flush with adjacent finished floor materials. Locate wall, ceiling, and soffit covers in continuous contact with adjacent surfaces. Securely attach in place with required accessories. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches on center.

B. Continuity: Maintain continuity of expansion joint cover assemblies with a minimum number of end joints and align metal members mechanically using splice joints. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials (if any) to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

C. Extruded Preformed Seals: Install seals complying with manufacturer's instructions and with minimum number of end joints. For straight sections provide preformed seals in continual lengths. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer. Apply adhesive, epoxy, or lubricant-adhesive approved by manufacturer to both frame interfaces before installing preformed seal. Seal transitions according to manufacturer's instructions.

D. Elastomeric Sealant Joint Assemblies: Seal end joints within continuous runs and joints at transitions according to manufacturer's directions to provide a watertight installation.

E. Fire Barriers: Install fire barriers, including transitions and end joints, according to manufacturer's instructions so that fire-rated construction is continuous.

3.3 CLEANING AND PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When

protective covering is removed, clean exposed metal surfaces to comply with manufacturer's instructions.

END OF SECTION 05810

SECTION 06 10 00 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 DESCRIPTION

A. This section includes the following:

1. Wood grounds, nailers, blocking, and panels.
2. Temporary wall and ceiling construction.
3. Wood furring.
4. Sheathing.

B. Related Sections: The following Sections contain requirements that relate to this Section.

1. Division 0 – Conditions to the Contract
2. Division 1 – General Requirements

1.2 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

APA - THE ENGINEERED WOOD ASSOCIATION (APA)

1.	APA F405	Product Guide Performance Rated Panels

AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI)

1.	ANSI B18.2.1	Square and Hex Bolts and Screws Inch Series
2.	ANSI B18.6.1	Wood Screws (Inch Series)

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

1.	ASTM A153/A153M	Zinc Coating (Hot-Dip) on Iron and Steel Hardware
2.	ASTM A307	Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength
3.	ASTM A563	Carbon and Alloy Steel Nuts

4. ASTM E84 — Surface Burning Characteristics of Building Materials

2. PS-20 — American Softwood Lumber Standard

WEST COAST LUMBER INSPECTION BUREAU (WCLIB)

A. Lumber Standard: Comply with NBS Voluntary Product Standard PS 20, American Softwood Lumber Standard.

B. Plywood Standard: Comply with U.S. Product Standard PS 1, Construction and Industrial Plywood.

C. Wood Treatment: American Wood Preservers Association (AWPA).

B. Plywood Standard:

C. Wood Treatment:

1.4 SUBMITTALS (SD-02 & SD-13)

A. SD-13; Material certificates for dimensional lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use as well as design values approved by the Board of Review of American Lumber Standards Committee.

B. SD-02; Manufacturer's product data as follows including chemical treatment manufacturer's instructions for handling, storing, installation, and finishing of treated material.

1. Submit one (1) electronic copy to the RPR & A/E in PDF or DWG format of the product data for each product specified.

2. For each type of preservative-treated wood product, include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.

3. For water-borne treated products, include statement that moisture content of treated materials was reduced to levels indicate prior to shipment to project site.

4. For fire-retardant-treated wood products, include certification by treating plant that treated material compiles with specified standard and other requirements.

5. Material test reports from qualified independent testing laboratory indicating and interpreting test results relative to compliance of fire-retardant-treated wood products with requirements indicated.

6. Warranty of chemical treatment manufacturer for each type of treatment.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Keep materials under cover and dry. Protect against exposure to weather and contact with damp or wet surfaces. Stack lumber, as well as plywood and other panels; provide for air circulation within and around stacks and under temporary coverings including polyethylene and similar materials.

B. For lumber and plywood pressure treated with waterborne chemicals, place spacers between each bundle to provide air circulation.

PART 2 - PRODUCTS

2.1 LUMBER, GENERAL

A. Furnish lumber manufactured to comply with PS 20 "American Softwood Lumber Standard" and with applicable grading rules of inspection agencies certified by American Lumber Standards Committee's (ALSC) Board of Review.

B. Inspection agencies and the abbreviations used to reference them with lumber grades and species include the following:

1. SPIB - Southern Pine Inspection Bureau

2. WCLIB - West Coast Lumber Inspection Bureau

3. WWPA - Western Wood Products Association

C. Grade Stamps: Provide lumber with each piece factory-marked with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.

D. Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.

1. Provide dressed lumber, S4S, unless otherwise indicated.

2. Provide seasoned lumber with 19% maximum moisture content at time of dressing and shipment for sizes 2” or less in nominal thickness, unless otherwise indicated.

2.2 DIMENSION LUMBER

A. For light framing (2” to 4” thick, 2” to 4” wide), provide the following grade and species:

1. "Construction" Grade No. 1

2. Southern Pine graded under SPIB rules, or approved equivalent.

B. For structural light framing (2” to 4” thick, 2” to 4” wide), provide the following grade and species:

1. SPIB "No. 2" Grade

2. Same species as indicated for structural framing grade below.

C. For structural framing (2” to 4” thick, 5” and wider), provide the following grade and species:

1. SPIB "No. 2" Grade

2. Southern Pine graded under SPIB rules.

D. For exposed framing lumber, provide material complying with the following requirements:

1. Definition: Exposed framing refers to dimension lumber that is not concealed by other construction and is indicated to receive a stained or natural finish.

2. Grading: Material hand selected at factory from lumber of species and grade indicated below that complies with "Appearance" grade requirements of ALSC National Grading Rule; issue inspection certificate of inspection agency for selected material.

3. Same species and grade as indicated for structural framing.

2.3 MISCELLANEOUS LUMBER

A. General: Provide lumber for support or attachment of other construction including rooftop equipment curbs and support bases, cant strips, bucks, nailers, blocking, furring, grounds, stripping, and similar members.

B. Fabricate miscellaneous lumber from dimension lumber of sizes indicated and into shapes shown.

C. Moisture Content: 19% maximum for lumber items not specified to receive wood-preservative treatment.

D. Grade: "Standard" grade light-framing-size lumber of any species or board-size lumber as required. "No. 3 Common" or "Standard" grade boards per WCLIB or WWPA rules or "No. 2 Boards" per SPIB rules.

2.4 CONCEALED PERFORMANCE-RATED CONSTRUCTION PANELS

A. General: Where construction panels are indicated for the following concealed types of applications, provide APA F405 Performance-Rated Panels complying with requirements designated under each application for grade designation, span rating, exposure durability classification, edge detail (where applicable), and thickness.

B. Wall Sheathing: APA F405 Rated Sheathing.

1. Exposure Durability Classification: EXPOSURE 1.

2. Span Rating: As required to suit stud spacing indicated.

2.5 CONSTRUCTION PANELS FOR BACKING

A. Plywood Backing Panels: For mounting electrical or telephone equipment, provide fire-retardant-treated plywood panels with grade designation, APA F405 C-D PLUGGED EXPOSURE 1, in thickness indicated or, if not otherwise indicated, not less than 15/32”.

2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture. Where rough carpentry is exposed to weather, in ground contact, or in area of high-relative humidity, provide fasteners with a hot-dip zinc coating per ASTM A153/A153M or of AISI Type 304 stainless steel.

1. *All fasteners in contact with Fire Retardant wood treated products will be stainless steel.*

B. Nails, Wire, Brads, and Staples: FS FF-N-105.

C. Lag Bolts: ANSI B18.2.1.

D. Bolts: Steel bolts complying with ASTM A307, Grade A; with ASTM A563 hex nuts and where indicated, flat washers.

2.7 PRESERVATIVE WOOD TREATMENT BY PRESSURE PROCESS

A. General: Where lumber or plywood is indicated as preservative-treated wood, or is specified herein to be treated, comply with applicable requirements of AWPA Standards C2 (Lumber) and C9 (Plywood). Mark each treated item with the AWPA or SPIB Quality Mark Requirements.

B. Pressure treat above-ground items with water-borne preservatives to a minimum retention of 0.25 pcf. For interior uses, after treatment, kiln-dry lumber and plywood to a maximum moisture content, respectively, of 19% and 15%. Treat indicated items and the following:

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, and waterproofing.

2. Wood floor plates installed over concrete slabs directly in contact with earth.

C. Pressure treat wood members in contact with the ground or fresh water with water-borne preservatives to a minimum retention of 0.40 pcf.

D. Complete fabrication of treated items prior to treatment, where possible. If cut after treatment, coat cut surfaces to comply with AWPA M4. Inspect each piece of lumber or plywood after drying and discard damaged or defective pieces.

2.8 FIRE-RETARDANT TREATMENT BY PRESSURE PROCESS

A. General: Fire-retardant-treated wood is required throughout the entire building, pressure impregnate lumber and plywood with fire-retardant chemicals to comply with AWPA C20 and C27, respectively, for treatment type indicated; identify "fire-retardant-treated wood" with appropriate classification marking of Underwriters Laboratories, Inc., U.S. Testing, Timber Products Inspection, Inc. or other testing and inspecting agency acceptable to authorities having jurisdiction.

1. Current Evaluation/Research Reports: Provide fire-retardant-treated wood for which a current model code evaluation/research report exists that is acceptable to authorities having jurisdiction and that evidences compliance of fire-retardant-treated wood for application indicated.

B. Interior Type A: For interior locations, use fire-retardant chemical formulation that produces treated lumber and plywood with the following properties under conditions present after installation:

1. No reduction takes place in bending strength, stiffness, and fastener-holding capacities below values published by manufacturer of chemical formulation that are based on tests by a qualified independent testing laboratory of treated-wood products identical to those indicated for this project under elevated temperature and humidity conditions simulating installed conditions.

2. No other form of degradation occurs due to acid hydrolysis or other causes related to manufacture and treatment.

3. No corrosion of metal fasteners result from their contact with treated wood.

C. Exterior Type: Use for exterior locations and where indicated.

D. Inspect each piece of treated lumber or plywood after drying and discard damaged or defective pieces.

E. Available Products: Subject to compliance with requirements, fire-retardant-treated wood products that may be incorporated in the work include, but are not limited to, the following:

1. Interior-Type, Fire-Retardant-Treated Wood:

a. "Dricon," Hickson Corporation

b. "Pyro-Guard," Hoover Treated Wood Products

c. "Flameproof LHC-HTT," Osmose Wood Preserving Co., Inc.

2. Exterior-Type, Fire-Retardant-Treated Wood:

a. "Exterior Fire-X," Hoover Treated Wood Products

2.9 ISOLATION MEMBRANE

A. WR GRACE, Perma Barrier Membrane or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Discard units of material with defects that impair quality of rough carpentry construction and that are too small to use in fabricating rough carpentry with minimum joints or optimum joint arrangement.

B. Set rough carpentry to required levels and lines with members plumb and true to line and cut and fitted.

C. Fit rough carpentry to other construction; scribe and cope as required to accurate fit. Correlate location of furring, nailers, blocking, grounds, and similar supports to allow attachment of other construction.

D. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated.

E. Countersink nail heads on exposed carpentry work and fill holes.

F. Countersink all anchor bolts at parapet. Top of anchor bolt to be flush with top of plate. File down rough bolt edge.

G. Use common wire nails, unless otherwise indicated. Use finishing nails for finish work. Select fasteners of size that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting of wood; predrill as required.

H. Fire retardant wood in contact with metal shall be isolated with a separator layer of “ Grace Perma Barrier”, or equal, membrane continuous at all locations.

END OF SECTION 06 1000

SECTION 06 22 00 - MILLWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Proposed plastic-laminate wall panel to the extent show on the drawing

1.3 DEFINITIONS

A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items, unless concealed within other construction before woodwork installation.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated including cabinet hardware, and accessories.

B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.

2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.

3. Show locations and sizes of cutouts and holes for plumbing fixtures, and other items installed in architectural woodwork.

4. Show details and installation of stainless steel cover system.

C. Samples for Verification: Where material finish and colors are indicated submit the following:

1. Plastic-laminate-clad panel products, 8 by 10 inches, for each type, color, pattern, and surface finish, with separate samples of unfaced panel product used for core.

2. Solid surface material, 8 by 10 inches, for each color and pattern.

3. One sample each of each hardware component, hinges, pull, shelves, drawer extensions, locks and plastic schushion and wire tray.

D. Product Certificates: Signed by manufacturers of woodwork certifying that products furnished comply with requirements.

E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed architectural woodwork similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing architectural woodwork similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of interior architectural woodwork, construction, finishes, and other requirements.

D. Preinstallation Conference: Conduct conference at Project site.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and will maintaining temperature between

60 and 90 degrees F and relative humidity between 43 and 70 percent during the remainder of the construction period.

C. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed and indicate measurements on Shop Drawings.

1.8 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that interior architectural woodwork can be supported and installed as indicated.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with requirements of the AWI quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. Wood Products: Comply with the following:

1. Hardboard: AHA A135.4.

2. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.

3. Softwood Plywood: DOC PS 1, Medium Density Overlay.

4. Hardwood Plywood and Face Veneers: HPVA HP-1.

5. All wood products shall be Fire Retardant.

C. Thermoset Decorative Overlay: Particleboard complying with ANSI A208.1, Grade M-2, or medium-density fiberboard complying with ANSI A208.2, Grade MD, with surface of thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.

D. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.

E. Solid-Surfacing Material: Homogeneous solid sheets of filled plastic resin complying with ISSFA-2.

1. Colors and Patterns: Match Architect's samples as noted on drawings

2.2 INSTALLATION MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or stainless steel anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.3 FABRICATION, GENERAL

A. Cabinets: Prepare surfaces to receive high pressure laminate in accordance with plastic laminate manufacturer's instructions and recommendations.

B. Casework Grade: Custom Grade interior woodwork complying with the referenced quality standard.

C. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

D. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4 Inch Thick or Less: 1/16 inch.

2. Edges of Rails and Similar Members More Than 3/4 Inch Thick: 1/8 inch.

3. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch.

4. All wood shall be Fire Retardant.

E. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.

2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

F. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of openings in countertops with a coat of varnish.

2.4 PLASTIC-LAMINATE PANELS

A. Manufacturers

1. Design is based upon products by the following manufacturers:

a. Formica Corporation.

b. Wilsonart.

c. Pionite.

2. Other acceptable manufacturers:

a. Nevamar.

b. Lamin-Art.

B. Grade: AWI Section 400B, Premium Grade.

C. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:

1. Vertical Surfaces: GP 28, General-Purpose Type 0.028-inch thick.

2. Horizontal Surfaces: GP 50, General-Purpose Type, 0.048-inch thick..

3. Cabinet Liner (Exposed Surfaces): CL 20, Cabinet-liner Type, 0.020-inch thick.

D. Colors, Patterns, and Finishes: Refer to the Casework Color Legend.

1. To match architect sample or to match existing.

2.5 CABINET HARDWARE AND ACCESSORY MATERIALS

A. General: Provide cabinet hardware and accessory materials associated with cabi-network.

B. Hardware Standards: Comply with ANSI A156.9 American National Standard for Cabinet Hardware, Grade 1.

C. Cabinet Hardware Schedule: Provide cabinetwork hardware as scheduled. Install as recommended by the hardware manufacturer.

1. Hinges: Concealed, 3-way adjustable System 1006 by Grass America, Inc. or approved equivalent.

2. Pulls: No. 4484 by Stanley or approved equivalent; one for each drawer and door.

3. Locks: Five pin tumbler type, master keyed to building system; Finish US 26.

a. Cabinet doors provide No. 511 (deadbolt) by Yale Security Inc. or approved equivalent.

b. Drawers provide No. 9402 by Yale Security Inc. or approved equivalent.

4. Drawer Guides: Full extension, 150-lbs. capacity, Model No. C3600 by Accuride; System VS603 by Grass America, Inc. or approved equivalent.

5. Catches: Magnetic, No. 40 Series by Stanley, or approved equivalent.

6. Shelf Standards and Supports: No. 255 Standards and No. 256 supports by Knape and Vogt, or approved equivalent.

7. Plastic Grommet Mockett CO "XG"

8. Under Counter metal wire cable tray.

D. Exposed Hardware Finish: Except where not available, provide exposed hardware with BHMA Code 626 satin chromium plate finish (US26D); where not available, provide either satin aluminum or satin stainless steel finish.

PART 3 - EXECUTION

3.1 PREPARATION

A. Condition woodwork to average prevailing humidity conditions in installation areas before installation.

B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and back priming.

3.2 INSTALLATION

A. Quality Standard: Install woodwork to comply with AWI Section 1700 for the same grade specified in Part 2 of this Section for type of woodwork involved.

B. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.

C. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces and repair damaged finish at cuts.

D. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

E. Panels: Install without distortion fit openings properly and are accurately aligned.

1. Install panels with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.

F. Complete the finishing work specified in this Section to extent not completed at shop or before installation of woodwork. Fill nail holes with matching filler where exposed.

G. Install all hardware using manufacturer's provided templates.

H. Install locks as indicated on drawing if not. Install locks on all doors and drawings of Gate check in podiums.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06402

SECTION 06 60 16 - SOLID SURFACING FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Lavatory countertops
2. Baby changing stations
3. Backsplash/ Skirts/Trim
4. Waste basket sliding drawer enclosure.
5. Other Miscellaneous work depicted on the drawings.

B. Custom work will require field verification of existing conditions prior to fabrication and final shop drawing.

1.2 Related Documents

A. Drawings and General Provisions of the Contract, including General and Supplemental Conditions and Division 1 apply to this section:

1. Section 05 50 00 Metal Fabrication
2. Section 08 80 00 Glazing
3. Section 09 21 16 Gypsum Board Assemblies

19. UL 2824 - GREENGUARD Certification Program, Method for Measuring Microbial Resistance from Various Sources Using Static Environmental Chambers

1.3 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Details of fabrication.
2. Recommendations for handling, protection, and maintenance.
3. For fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

B. Shop Drawings: Show assembly methods, joint details, plans, sections and elevations and accessories.

1. Show field measurements and concealed framing, blocking, and reinforcement locations

C. Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

1.4 QUALITY ASSURANCE

A. Supply lavatory countertops, backsplashes, trim, waste basket drawers, cabinet skirt/access panel and baby changing stations from one manufacturer.

B. Provide 5 years of successful documented experience in fabrication and installation of the Product. Provide certificate of training by manufacturer of the Procuct.

B. Tolerances:

1. Variation in component size: +/- 1/8 inch
2. Location of openings: +/- 1/8 inch from indicated location

C. Perform work to custom quality in accordance with "Quality Standards" of the Architectural Woodwork Institute (AWI).

D. Fire-Test-Response Characteristics: Provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL or another nationally known testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver cast polymer materials until painting and similar operations that could damage synthetic marble have been completed in installation areas. If cast polymer materials must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

B. Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cast polymer materials until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where cast polymer materials are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication.

1. Coordinate concealed framing, blocking, and reinforcements that

support cast polymer materials work.

1.7 WARRANTY

Manufacturer: Provide manufacturer's standard warranty for material for period of 10 years against defects. Promptly correct any defects or deficiencies which become apparent within warranty period.

Installation: Provide installation warranty for installation and workmanship for period of 5 years against installation defects. Promptly correct any defects which become apparent within the warranty period.

PART 2 - PRODUCTS

2.1 CAST POLYMER

A. Manufacturer: Basis of Design is Corian by Dupont. (CONTRACTOR WILL NEED TO MATCH COLOR OF SURFACE AND BOWL AS NOTED ON THE DRAWINGS FOR OTHER MANUFACTURER'S)

1. Corian® by DuPont; www.corian.com
2. Samsung Chemical USA; www.staron.com
3. Wilsonart Contract; www.wilsonartcontract.com

B. Performance Criteria:

1. Solid Surface Based Products:

a.	Tensile Strength	6000 psi min	ASTM D638
b.	Tensile Modulus	1.5 x 10^6 psi min	ASTM D638
c.	Tensile Elongation	0.4% min.	ASTM D638
d.	Flexural Strength	10000 psi min	ASTM D790
e.	Flexural Modulus	1.2 x 10^6 psi min	ASTM D790
f.	Hardness	>85-Rockwell "M" scale min.	ASTM D785
g.	Thermal Expansion	2.2 x 10^{-5} in./in./°F	ASTM E228
h.	Fungi and Bacteria	Does not support microbial growth	ASTM G21 & G22
i.	Microbial Resistance	Highly resistant to mold growth	UL 2824
j.	Ball Impact	No fracture - 1/2 lb. Ball: 6 mm slab - 36" drop 12 mm slab - 144" drop	NEMA LD 3, Method 3.8
k.	Weatherability	ΔE*94<5 in 1,000 hrs	ASTM G155
l.	Flammability	ASTM E84, NFPA 255 & UL 723	

All Colors

6 mm **12 mm**

m.	Flame Spread	<25	<25	
n.	Smoke Developed	<25	<25	
o.	Class	A	A	Florida Fire Protection Code, NFPA 101®, Life Safety Code

C. Fire Hazard Ratings:

1. Classified in accordance local codes and ordinances, ASTM E84 and the following:

   a. Class A
   b. Flame Spread: 0 – 25
   c. Smoke Developed: 0-450

D. Lavatory Countertops with intrigral lav and Baby Changing Stations:

1. Homogeneous cast polymer countertops. Thickness, sizes and profiles as shown on Drawings.

   a. Provide matching backsplash, side splash, aprons, shelves, integral bowl, and other accessories as shown on Drawings and specification in same material, color and finish as countertops except for color of Bowls.
   b. Color as noted on the drawings.

2. Separate Lavatory Bowls, As noted on drawings, if not noted Corian Model #820, Color as noted on the drawings or if not noted on drawings to be selected by Architect.

E. Accessories

1. Hafele or approved equal heavy duty side wall mounted, manual full extension ball bearing over travel slides.
2. Custom fabricated S.S. waste basket.
3. Custom fabricated S.S. time/sleeve at top of counter top for waste.
4. Cam locks for face access panel and waste receptacles.

2.2 INSTALLATION MATERIALS

A. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or stainless steel anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

B. Sink/Lavatory Mounting Hardware: Manufacturer's standard bowl clips, panel inserts and fasteners for attachment of undermount sinks/lavatories.

C. Adhesive and Sealant: As recommended by cast polymer manufacturer.

1. Use products that are approved by Cast polymer materials Manufacturer and as directed for type of installation.

2.3 FABRICATION

A. General:

1. Shop assemble cast polymer materials for delivery to Site in units easily handled and to permit passage through building openings.
2. Shop cut openings, to maximum extent possible, to receive hardware, accessories, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings.
   a. Rout and finish component edges with clean, sharp returns. Rout cutouts, radii and contours to template. Smooth edges. Repair or reject defective and inaccurate work.
3. When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide trip for scribing and site cutting.
4. Provide cutouts for plumbing fixtures, inserts, appliances, outlet boxes, accessories, control and other fixtures and fittings.
5. Provide for mounting of accessories indicated on the Drawings and Specification.
6. Edge treatment as indicated on drawings, or radius corners.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify adequacy of backing and support framing. Do not start installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Condition cast polymer materials to average prevailing humidity conditions in installation areas a minimum of 24 hours before installation.

3.3 INSTALLATION

A. All countertops, baby changer and accessories shall be installed as shown on Drawings and as specified. Follow manufacturers installation instructions.

B. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with final Shop Drawings and product data.

C. Adhere sinks and lavatory bowls to tops using manufacturer's recommended sealant, adhesive and mounting hardware. Wipe clean with denatured alcohol to remove any contaminants prior to applying adhesives.

D. Countertops and Baby Changing Stations:

1. Quality Standard: Comply with AWI Section 400 requirements for countertops.
2. Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
3. Install countertops with no more than 1/8 inch in 96 inch sag, bow, or other variation from a straight line.
4. Provide cutouts for the installation of plumbing fixtures.
5. Provide backsplashes, sidesplashes, and aprons as indicated on the Drawings. Adhere to tops using manufacturer's standard color-matched silicone sealant.

E. Waste receptacles:
1. Provide a solid surface face on waste receptacle drawer.
2. Skin exterior of drawer frame with 28 GA S.S.
3. Waste basket constructed of 22GA S.S. full welded joints polished smooth.
4. Install S.S. trim at counter circular cut out for dropping waste paper.

F. Integral sinks/vanities:

1. Provide solid surface materials bowls and/or lavatories sinks with overflows in locations shown on the drawings.

2. Secure lavatory bowls to tops using manufacturer's recommended sealant, adhesive and mounting hardware to maintain warranty.

3.4 ADJUSTING AND CLEANING

A. Keep components clean during installation. Remove adhesives, sealants and other stains. Keep clean until Date of Substantial Completion. Replace stained and damaged components.

B. Protect surfaces from damage until Date of Substantial Completion. Repair work or replace damaged work which cannot be repaired to Owner's Representative's satisfaction.

END OF SECTION 06 60 16

PAGE INTENTIONALLY LEFT BLANK

SECTION 07 21 00 - THERMAL INSULATION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. The General Provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

1.02 DESCRIPTION OF WORK

A. The extent of thermal insulation work is shown on the drawings, by the generic name of by its abbreviation. The applications of thermal insulation specified in this Section include the following:

1. Loose cavity wall insulation.
2. Batt-type building insulation.
3. Foam cavity wall insulation.
4. Semi-rigid board insulation.
5. Mineral wool blanket sound attenuation.
6. Fire batt insulation.

1.03 QUALITY ASSURANCE

A. Thermal Conductivity:

B. Fire and Insurance Ratings:

1.04 SUBMITTALS

A. Manufacturer's Data, Thermal Insulation:

1.05 PRODUCT HANDLING

A. Protection from Deterioration:

1.06 JOB CONDITIONS

A. Examination of Substrates:

PART 2 PRODUCTS

2.01 MATERIALS

A. Loose Granular Perlite Insulation: Expand aggregate; FS HH-I-574; k-value of 0.37; treated with silicone for water-repellency where used in exterior wall construction.

B. Loose Granular Vermiculite Insulation: Exfoliated micaceous aggregate; FS HH-I-585, Type I or II; k-value of 0.50; treated for water-repellency where used in exterior wall construction.

C. Mineral/Glass Fiber Blanket/Batt Insulation: Inorganic fibers formed into flexible resilient blankets or semi-rigid resilient sheets: ASTM C665 Type I

and ASTM E136: Density as indicated, but 1.0 lb. minimum; k-value of 0.27 where thickness is indicated, or k-value and thickness as required to provide "R" value as indicated. Manufacturer's standard lengths and widths as required to coordinate with spaces to be insulated:

1. Certain Teed – Thermal Batt Insulation unfaced.
2. Johns-Manville – Thermal Batt Insulation unfaced.
3. Owens-Corning – Thermal Batt Insulation unfaced.

D. Foam Insulation: Basis of Design. Core-Fill 500 foam insulation, 60 lbs. density developing a "R" value for 8" CMU of 14.2 and a "U" value of 0.07. Flame spread not to exceed 25. Smoke developed of not more than 450 as per ASTM E84. As manufactured by Tailored Chemical Products.

1. Other acceptable manufacturers subject to compliance with requirements, products may be incorporated in the work include, but are not limit to the following.
   a. Air Krete, Inc., Weed Sport, NY
   b. Thermco, Mt. Pleasant, Idaho

E. Miner/glass fiber board insulation inorganic fibers with a thermosetting resin binder into semi-rigid boards: ASTM C612, type IA and IB: Density as indicated, 3.0 PCF; K-value 23. Owens-Corning type 703, unfaced, or approved substitution.

F. Mineral Wool Blanket/Batt Insulation: Inorganic fibers formed into flexible resilient blankets. Classified non-combustible ASTM E136, ASTM C665, Type I sound attenuation fire batt insulation/MW/mineral wool. Owens-Corning, sound attenuation fire batt insulation/mineral wool, or approved substitution.

2.02 MISCELLANEOUS MATERIALS

A. Bronze/Stainless-Steel Screen.

B. Mechanical Anchors: Type and size shown or, if not shown, as recommended by insulation manufacturer for type of application, condition of substrate and cavity.

C. Grout

D. Galvanized expanded wire.

PART 3 EXECUTION

3.01 PREPARATION OF SUBSTRATE

A. Provide bronze/stainless-steel screen (inside) where openings must be maintained for drainage or ventilation.

3.02 INSTALLATION

A. General: Comply with manufacturer's instructions for the particular conditions of installation in each case. If printed instructions are not available, or do not apply to the project conditions, consult the

manufacturer's technical representative for specific recommendations before proceeding with the work. Do not install insulation in wet conditions.

B. Cavity-Wall and Masonry-Cell Insulation: Pour granular insulation into cavities as shown, to completely fill the void spaces. Maintain inspection ports to show presence of insulation at the extremities of each pour area. Close ports after complete coverage has been confirmed. Limit fall of insulation to one story in height, but not to exceed 20'-0".

C. Extend insulation full thickness as shown over entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Apply a single layer of insulation of the required thickness, unless otherwise shown or required to make up the total thickness.

E. Install foam product following the manufacturer's recommendations for mixing, installing, and curing.

F. Install board insulation creating a continuous layer of insulation.

3.03 GENERAL BUILDING INSULATION

A. Pour granular insulation into spaces and onto surfaces as shown. Screed horizontal applications to uniform thicknesses indicated.

B. Provide either perlite or vermiculite into miscellaneous voids and cavity spaces as indicated. Compact to approximately 40% of normal maximum volume to a density of approximately 2.5 lbs. per cubic foot.

C. Protect voids and cavities for concrete cells, columns, lintels, bond beam, and concrete beam forms free of insulation material. Clean completely of any loose fill insulation.

D. Apply insulation units to the substrate by the method indicated, complying with the manufacturer's recommendations. If no specific method is indicated, bond units to substrate with mechanical anchorage to provide permanent placement and support of units.

E. Stuff loose mineral fiber insulation into miscellaneous voids and cavity spaces as indicated. Compact to approximately 40% of normal maximum volume to a density of approximately 2.5 lbs. per cubic foot.

F. Install Galvanized wire support over mineral fiber insulation on exposed installations horizontally on vertical between supports.

END OF SECTION 07 21 00

SECTION 07 22 16 – ROOF BOARD INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes provisions and procedures governing the furnishing and installation of a roof insulation assembly incorporated into the work.

1.2 RELATED SECTIONS

A. Section 05 31 00 Steel Decking

B. Section 06 53 19 Rough Carpentry for Roofing.

C. Section 07 54 19 Thermoplastic Membrane Roofing.

D. Division 22 Plumbing

1.3 SYSTEM DESCRIPTION

A. Tapered roof insulation assembly shall consist of a combination of flat and tapered panels, for crickets, half-crickets, and saddles as required, to provide for the NRCA “positive drainage” of the roof at a minimum of 1/4 foot and 1/2 foot at crickets.

1.4 QUALITY ASSURANCE

A. Provide primary products by a single manufacturer, which has produced that type of product successfully for not less than five (5) years. Provide secondary products only as recommended by manufacturer of primary products for use with roofing system specified.

B. A single Installer (“Roofer”) shall perform the work of the section, and shall be a firm with not less than five (5) years of successful experience of installation of insulation systems similar to those required for this project and which is certified acceptable to or licensed by manufacturer of primary roofing materials.

C. Maintain a full-time supervisor/foreman, not a foreman/workman on the roof during times that tapered insulation assembly work is in progress and shall not be employed on any other project during the course of this project and shall not be changed without approval of the Architect.

D. All roofing materials shall be labeled Class A per ASTM E 108, and shall be certified by a nationally recognized independent testing laboratory.

E. Provide professional engineering services as required to assure engineering responsibility for the preparation of roofing system submittals based on testing and engineering analysis of the manufacturer’s roof system in assemblies similar to those indicated on the project.
   1. The Architect shall be entitled to rely upon such submittals and analysis to establish the materials and systems shall meet the requirements of the Contract Documents.

F. Provide Florida product approval and/or notice of acceptance for proposed product in addition to requirement set forth in paragraph E above.

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data, installation instructions and recommendations for each type of insulation product required. Include data substantiating that materials comply with requirements.

B. Shop Drawings
1. Submit manufacturer's shop drawings indicating insulation layout, cross section of assembly, and minimum board dimensions.
    a. Submit drawings indicating slope, ridges and valleys to achieve NRCA "positive drainage".
    b. Submit calculations certifying that insulation layout provides the R factor specified for each roof area.
2. Wind Load Drawings: Using the project drawings, submit Red-Lined drawings as required indicating roof system modification for wind load resistance with special emphasis on the following.
    a. Information related to wind loads including basic wind speed, wind importance factor, wind exposure, and applicable internal pressure coefficient.
    b. Wind load uplift pressures and dimensions of edge corner and field zones shall be shown for each roof area
    c. Type/Manufacturer of fastener and fastening pattern for each zone shall be shown for each roof area based upon same type, manufacturer roof fastener withdrawal resistance test results.
    d. Design calculations based on Florida Building Code latest edition.
    e. All drawings and support documentation shall be signed and sealed by a Florida Professional Engineer.
3. Insulation Fastener Withdrawal Resistance Testing: Submit Withdrawal resistance test report in accordance with the Florida Building Code; Testing Application Standard (TAS) 117(A)95.
    a. Test one (1) fastener per 5,000 square feet with a minimum of three (3) fasteners per substrate type per roof area.
4. Provide signed and sealed calculation design drawings prepared by a Florida Professional Engineer.

C. Samples; Insulation Materials: Submit three (3) twelve (12) inch square samples of each component of insulation assembly.

D. Samples; Fasteners: Submit three (3) samples of each fastener type.

E. Installer: Submit supervisor/foreman's resume.

F. Provide copies of Florida Product Approval.

1.6 JOB CONDITIONS

A. Weather Condition Limitations: Proceed with insulation work only when existing and forecasted weather conditions will permit work to be performed in accordance with manufacturer's recommendations and warranty requirements.

B. Wet Insulation: Roofing system(s) shall not be applied over wet insulation. Installed insulation which has become wet will be removed and replaced with dry material. Insulation which has become wet prior to installation shall not be installed in the work, and shall be removed from the project site. The definition of "wet shall be the moisture content determined to be in excess of NRCA Equilibrium Moisture Content".

1.7 PRODUCT HANDLING

A. Procedures in accordance with Section 01 60 00.

B. Deliver material in manufacturers original, unopened containers, with manufacturers labels intact and legible.

C. Deliver material requiring fire resistance classification to the job with the label attached and packaged as required by labeling service.

D. Deliver enough material to allow continuous work.

E. Store and handle roof insulation materials in a manner which will ensure that there is no possibility of moisture pick up. Store in a dry, well ventilated weather tight place or store properly protected by leak proof coverings or manufacturers original unopened containers. Do not leave unused materials on the roof overnight or when roofing work is not in progress without proper weather tight protection.

F. Store insulation on pallets or other raised surface. Handle and store materials or equipment in a manner not to exceed design live loads, and to avoid significant or permanent deflection of deck. The installer is responsible for any structural damage occurring due to the storage of materials or equipment on the roof.

G. Storage on newly installed membrane is not permitted.

1.8 WARRANTY

A. Insulation/Roofing Manufacturer's System Warranty: Manufacturer's standard form, without monetary limitation, in which manufacturer agrees to repair or replace components of insulation system, flashing system, copping system and membrane roofing system that fail in materials, workmanship, or items identified not in conformance with the project documents within specified warranty period as a wraparound warranty. Failure includes roof leaks.

1. Special warranty includes recovery board, roof insulation boards, flashing, curbs, copping and roofing membrane, base flashings, roofing membrane accessories, walkway products and other components of membrane roofing system.
2. Warranty Period: 20 years from date of Substantial Completion.
3. Special Warranty Rider: Coverage for winds up to and including **150** mph (3-second gust).
4. Provide a warranty for building and square footage.

B. Installer Warranty: Including all components of roofing system such as recovery board, insulation board, flashing, curbs, copping and roofing membrane, base flashing, fasteners, and walkway products.
   1. Warranty Period: Two (2) years from date of Substantial Completion.
   2. Provide warranties for building and square footage'
   3. During the warranty period, upon notification by VPS, the Installer must be on site within 24 hours to make necessary permanent or temporary repairs. Should the Installer fail to make such repairs within the time period, VPS may have the repairs made and charge the cost to the Installer; such repairs by VPS shall not void the system warranty. Emergency repairs required reasonably and immediately to protect life or property shall not void this warranty. Installer roof access shall not be unreasonably denied. Delay of construction contract payment by General Contractor shall not be cause to withhold warranty performance.

C. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including all components of membrane roofing system such as recovery board, insulation board, curbs, flashing, copping, roofing membrane, base flashing, fasteners, and walkway products, for the following warranty period:

   1. Warranty Period: Two years from date of Substantial Completion.

D. Special Warranty Requirements: Provide separate warranties for building and square footage. The work will require the original roofing warranty to be maintained current. Written acknowledgement by the original roof installer and manufacturer. That the work in place complies with warranty requirements for continuity of warranty and will include work installed.

E. Maintenance Data: For roofing system to include in maintenance manuals.
   1. Comply with requirements in Division 01 Section "Closeout Procedures".
   2. Procedure and instructions
      a. Include a set of instructions detailing preventative maintenance and noting a list of harmful substances which may damage installation.
      b. Include procedures for exercising warranty and guarantee provisions, leak calls, temporary repairs and future modifications to roof system
   3. Copies of as-built roofing details.
   4. Roof plan indicating penetrations, detail locations, roof drains, and seams.
   5. Copy of SPRI/NRCA "Manual of Roof Inspection, Maintenance and Emergency Repair for Existing Single-Ply Roofing Systems".
   6. FBC Compliance: Contractor's final statement of compliance.
   7. Inspection reports: Copy of all roofing system manufacturer's inspection reports of roofing installation shall be submitted for review by the Designer and forwarded to the Owner. Submit separate reports to Owner Designer for building not to exceed 20,000 sg ft per report per inspection by the Manufacturer's Representative.

PART 2- PRODUCTS

2.1 INSULATION ASSEMBLY: The drawings are based on a multi-layer, multi-material insulation assembly, mechanically fastened. Multiple layers may be drawn as a single layer regardless of layers required. Minor deviations will be acceptable, and/or use manufacturer's standard products, when in the Architects sole judgement, such deviations do not detract from design concept or intended performance.

A. Polyisocyanurate Board Insulation; Rigid cellular polyisocyanurate thermal insulation with core formed by using HCFC's as blowing agents complying with ASTM C1289, Type II, UL Classification: Class A, minimum 1.4 inches, maximum 2.0 inch thickness, and four (4) foot by eight (8) foot boards.

1. Insulation Board; The min roof insulation is R-25 across entire roof. See drawings.

B. Edge Strips: Rigid units if required by the Thermal Plastic Roofing Membrane manufacturer and compatible with system, tapered to sizes and shapes shown on the drawings.

C. Cants: four (4) inch vertical height and 45 degree face, full depth, pre-formed units, unless otherwise shown, of rigid units complying with thermal single ply roofing system manufacturer requirement for product compatibility and system warranty.

D. Base Board: Georgia-Pacific, DensDeck Prime 5/8 inch thick, mechanically fasten to steel deck.

D. Cover Board: Georgia- Pacific, DensDeck Prime 5/8 inch thick, Adhered to insulation board.

2.2 FASTENERS

A. For Fastening Roof Insulation to Deck
1. Roofing system manufacturer's recommended insulation fastener based on roof type/ manufacturer fastener withdrawal resistance testing and submitted signed and sealed shopdrawings.
2. Roofing system manufacturer's recommended insulation fastener shall be corrosion resistant meeting ASTM A641, Class 1 or equally corrosion resistant by coating etched galvanization, mechanical galvanization, hot dipped galvanization, stainless steel, nonferrous metal or other suitable corrosion resistant material.
3. Roofing deck fastener to existing deck with "OLYLOK" locking impact nail, galvanized (G-90), disk galvanized (AZ-55), locking staple: High tensile coated wire.

2.3 ADHESIVES

A. For Fastening Roof cover board to top of insulation.
1. Roofing system manufacturer's recommended adhesive based on roof type Insulation board and delamination resistance to resist applied wind loads

2. ADHESIVES: Shall meet minimum roofing system design requirements as evidence by testing in conjunction with proposed substrates and/or composite acceptable third party laboratory.

a. ADHESIVES: Shall be pre-authorized by roofing manufacturer.

3.1 GENERAL INSTALLATION REQUIREMENTS

A. In addition to the specified procedures, the installer shall be responsible for the installation of the tapered insulation assembly in accordance with the procedures required by the roofing material manufacturer for the proper execution of the work and assurance of the warranty.

B. The installer shall review the specified procedures for possible conflicts, prior to bidding for resolution.

3.2 FASTENER INSTALLATION REQUIREMENTS

A. Install fasteners in accordance with manufacturer's directions.

B. Fasteners shall be driven perpendicular to deck with proper length for fastening into deck, and to achieve required pull-out resistance.

C. All improperly installed fasteners shall be removed. Improper applications shall be characterized as:
1. Over driven to the point that the fastener is causing the stress plate to become concave or deformed.
2. Under driven to the point that the fastener head is not properly seated on the stress plate.
3. Broken or snapped under the driving load.
4. Bent due to improper installation.
5. Not engaged, due to improper locations or insufficient length.

3.3 INSPECTION

A. Examine substrates and conditions over which the tapered insulation assembly work is to be performed, and notify the Architect in writing of unsatisfactory conditions.

B. Do not proceed with the insulation assembly work until unsatisfactory conditions have been corrected in a manner acceptable to the installer.

C. Inspect existing curbs and nailers for damage or deterioration. Immediately notify the Architect of any defects.

D. When additional new installers are required, and when replacement items are required, verify that the new curbs and nailers are in place and properly installed.

E. Verify that curbs, vent stacks, and other roof fixtures have been raised in height as required for height of new roof membrane.

3.4.1 INSULATION ASSEMBLY MECHANICALLY FASTENED

A. Apply only as much insulation and cover board as can be completely covered with the roofing membrane in the same day.

B. Each layer of insulation shall be applied in parallel courses with long joint continuous and with cross joints broken. Tightly butt all edges, with no gaps exceeding ¼ inch. Do not force fit the insulation. Grind smooth all unevenness between edges.

1. Succeeding layers of boards shall be offset a minimum of twelve (12) inches from the preceding layer of boards.

C. Insulation edges at vertical surfaces and penetrations shall be trimmed a maximum of ¼ inch from the surface.

D. Apply one (1) layer of cover board over the entire surface of the taper insulation.

1. Apply a layer of cover and base board in parallel courses with long joints continuous and cross joints broken.
2. Tightly butt all edges with no gaps exceeding ¼ inch. Do not force fit the cover board.
3. Offset cover board joints a minimum of twelve (12) inches from taper board joints.
4. Cover board edges at vertical surfaces and penetrations shall be trimmed a maximum of ¼ inch from the surface.

E. Mechanically fasten the insulation assembly to the existing deck in accordance with approved wind load drawings.

3.5 EDGE STRIP INSTALLATION MECHANICALLY FASTENED

A. Install edge strips at roof drains to form a sump around the roof drain to provide a smooth transition from the tapered insulation assembly to drain clamp ring and to achieve NRCA "positive drainage".

B. Install edge strips as shown on the drawings. Grind smooth all unevenness between strips to develop slope to achieve NRCA "positive drainage".

C. Mechanically fasten edge strips to deck as follows:
1. Quantity, size and spacing per Engineered Shop drawings.

3.6 CANT STRIPS MECHANICALLY FASTENED

A. Install cant strips as shown on drawings.

B. Install cant strips in a 1/8 inch thick bead of roof cement and mechanically fasten to the deck as follows:
1. Quantity, size and spacing per Engineered Shop drawings.

3.7 PROTECTION OF INSULATION

A. Installer shall repair or replace deteriorated or defective work as directed by the architect.

B. Work will be coordinated as to severely limit the amount of roof-top traffic over completed insulation assembly areas.

END OF SECTION 07 22 16

SECTION 07 26 16 - BELOW-GRADE VAPOR BARRIERS

PART 1 GENERAL

1.01 SUMMARY

A. Products supplied under this section:

1. Vapor barrier and installation accessories for installation under concrete slabs, thickened slabs and foundations.

B. Related sections:

1. General conditions and supplemental conditions to the contract.
2. Section 03 30 00 Cast-in-Place Concrete.

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM E1745- 11Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.
2. ASTM E1643- 11Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.

B. Technical Reference - American Concrete Institute (ACI):

1. ACI 302.2R-06 Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials.

1.03 SUBMITTALS

Test Reports: Summary of test results per paragraph 9.3 of ASTM E 1745.

B. Sample/Product Data: Manufacturer’s samples and literature.

C. Manufacturer’s installation instructions for placement, seaming and penetration repair instructions.

D. All mandatory ASTM E1745 testing must be performed on a single production roll per ASTM E1745 Section 8.1.

PART 2 PRODUCTS

2.01 MATERIALS

A. Vapor barrier shall have all of the following qualities:

1. Maintain permeance of less than 0.01 Perms [grains/(ft2 · hr · inHg)] as tested in accordance with mandatory conditioning tests per ASTM E1745 Section 7.1 (7.1.1-7.1.5).
2. Other performance criteria:
   a. Strength: ASTM E1745 Class A.

b. Thickness: 15 mils minimum

B. Vapor barrier products:

1. Basis of Design: Stego Wrap Vapor Barrier (15-mil) by Stego Industries LLC., (877) 464-7834 www.stegoindustries.com.

2. Approved products meeting all performance and submittal requirements.

2.02 ACCESSORIES

A. Seams:

1. Stego Tape by Stego Industries LLC, (877) 464-7834 www.stegoindustries.com.

B. Penetrations of Vapor barrier:

1. Stego Mastic by Stego Industries LLC, (877) 464-7834 www.stegoindustries.com.

2. Stego Tape by Stego Industries LLC, (877) 464-7834 www.stegoindustries.com.

C. Perimeter/edge seal:

1. Stego Crete Claw by Stego Industries LLC, (887) 464-7834 www.stegoindustries.com.

2. StegoTack Tape (double sided) by Stego Industries LLC, (877) 464-7834 www.stegoindustries.com.

3. Stego Term Bar by Stego Industries LLC, (877) 464-7834 www.stegoindustries.com.

PART 3 EXECUTION

3.01 PREPARATION

A. Ensure that subsoil is approved by Architect, Structural Engineer, or Geotechnical Engineer.

1. Level and compact base material.

3.02 INSTALLATION

A. Install vapor barrier in accordance ASTM E1643.

1. Unroll vapor barrier with the longest dimension parallel with the direction of the concrete placement and face laps away from the expected direction of the placement whenever possible.

2. Extend vapor barrier under footings thickened edge and grade beams to a distance acceptable to the structural engineer or stop at impediments such as dowels and waterstops.

3. Seal vapor barrier to slab perimeter/edge using Stego Crete Claw and remove dirt, debris, and mud from Crete Claw prior to concrete placement.
4. Overlap joints 6 inches and seal with manufacturer's tape.
5. Apply tape/Crete Claw to a clean and dry vapor barrier.
6. Seal all penetrations (including pipes) per manufacturer's instructions.
7. No penetration of the vapor barrier is allowed except for reinforcing steel and permanent utilities. Seal penetration per manufacturer installation instructions.
8. Repair damaged areas by cutting patches of vapor barrier, overlapping damaged area 6 inches and taping all sides with tape.

.

END OF SECTION 07 26 16

SECTION 07 2700 FIRE STOPPING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Fire stopping shall include sealing (fire stopping) all existing and proposed openings, spaces and penetrations through fire and smoke barriers including floors, walls, partitions, and decks.

B. Seal floor-to-floor, floor-ceiling, and ceiling-roof penetrations openings and passages.

C. Seal proposed and existing pipes, conduits, wiring, sleeves, ducts, and other utilities that penetrate fire-rated walls, partitions, ceilings, and floors.

D. Specifically all VPS Electrical and Communication rooms to include their walls, ceiling and floor shall be protected to achieve the minimum fire resistance rating. Walls-1 hour, and ceiling/roof 1 (One) hours or as noted on the drawings or as noted on existing walls.

E. Specifically all airport facility spaces to include existing walls, ceilings, floors and roof which are labeled as rated per existing conditions, proposed work and requirement due to construction type classification with floor penetration having a minimum 2 (Two) hour resistance rating, and roof with a minimum of 1 (One) hour resistance rating.

1.2 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM) AND (ANSI) CODE REFERENCES

1.	ASTM E84	Surface Burning Characteristics of Building Materials.
2.	ASTM E814	Tests of Through-Penetration Fire Stops.
3.	ASTM E119	Standard Test Methods for Fire Tests of Building Construction and Materials.
4.	ASTM E2174	Standard Practice for On-Site inspection of Installed Fire stops.
5.	ANSI/UL 263	Fire Tests of Building Construction and Materials.

6.	ANSI/UL 723	Surface Burning Characteristics of Building Materials.
7.	ANSI/UL 1479	Standard for Fire Tests of Through Penetration Fire stops.

B. All materials used shall be tested in accordance with ASTM E814. Each system used for fire stopping shall be tested, approved and listed by U.L. or other approved testing agency. The rating of the fire stopping system shall provide the same or greater hourly fire rating as that of the fire barrier through which it is penetrating and sealed.

C. U.L. Test: ASTM E814 Fire Tests of Through-Penetration Fire Stops.

D. Provide products that are compatible with each other and by the same manufacture.

1.3 SUBMITTALS (SD-01, 02 & SD-10)

A. Provide (1) electronic copy of submittals via established drop box or equivalent per A/E's instructions. All copies to be in PDF & DWF formats with the only other exception being signed docs.

B. Manufacturer's Product Data: SD-01; Submit descriptive technical data and installation instructions for each material and product.

C. Test Report: SD-10; Submit scaled details and fire stopping test report from UL or other testing agency for each fire stopping system to be used as requested by the A/E.

D. See 3.1.A for required field product review as part of submittal product approval. All applicable trades shall participate.

1.4 QUALITY ASSURANCE

A. Single-Source Responsibility for FIRESTOPING: For the entire project, obtain materials and UL systems for all penetrations from the same manufacturer. Deviation from this requirement or use of multiple manufacturers will not be permitted.

B. Application of firestoping shall be performed by a Manufacturer authorized applicator with a minimum of 3 years' experience.

PART 2 - PRODUCTS

2.1 FIRESTOPPING

A. For specific components and accessories for the fire stop systems and as required by the UL Design Test Report, see Drawings Details.

B. If field conditions require detail system not shown on Drawing Details provide a UL system as manufactured by:

1. 3M Company, Fire Protection System (Basis of Design)
2. Hilti Fire stop
3. STI, Specified Technologies, Inc.

C. Materials shall have been tested in accordance with ASTM E814 or UL 1479, the Standard Method of Fire Tests of Through Penetration Fire stops, or equivalent.

D. System design shall provide a fire-resistance rating equal to or exceeding the fire-resistance rating of the floor or wall construction being penetrated.

E. Materials shall be water-resistant and shall be insoluble in water when cured.

F. Materials shall be compatible with all materials used in the construction. Solvent-based materials shall not be used.

G. Installations subject to movement or vibration shall be sealed with materials designed to perform under these conditions.

I. Basis of Design **3M product** types and applications. Approved equals by a single source manufacture may be submitted for acceptance.

A. 3M FireDam Spray 200: Product is recommended for large areas for fast coverage for perimeter joints, construction joints and abutting materials such as wall to ceiling joints.
1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

B. 3M Fire Barrier Ultra RC Pack: One piece metal collar assembly encasing intumescent material for fire stopping of pipes and cables through rated walls and floors.
1. Fire Resistance: For use in 1 or 2 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

C. 3M Fire Barrier Ultra Plastic Pipe Device: Intumescent device for fire stopping of plastic pipe and cables through rated walls and floors.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Configuration: One-piece metal collar, with locking latch and bendable tabs to secure; equipped also for conventional anchoring.

3. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

D. 3M Fire Barrier RC-1 Restricting Collar with either FS 195+ Wrap Strip or 3M Interam Ultra GS Wrap Strip . (See product descriptions below): For fire stopping of plastic pipes from 4 inches (102 mm) to 10 inches (254mm) in diameter.
1. Fire Resistance: For use in 1or 2 hour fire-rated systems.
2. Material: 28 gauge steel.
3. Size: 25 foot (7.6 m) roll.
4. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

E. 3M Fire Barrier CP25WB+ Sealant: High-performance, intumescent, water-based sealant. No-sag, fast drying, paintable, red in color. Versatile fire stops sealant for pipes (not for use with CPVC), cables, cable tray, blank opening and other penetrations along with mineral wool or other fire-rated assembly products.
1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.
3. STC rating of 54 when tested in STC 54-rated wall assembly.

F. 3M Fire Barrier IC 15WB+ Sealant: General-purpose, intumescent, water-based sealant. No-sag, fast drying, paintable, yellow in color. Economical fire stop sealant for
pipes, cables, cable tray, blank opening and other penetrations along with mineral wool or other fire-rated assembly products.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.
3. STC rating of 54 when tested in STC 54-rated wall assembly.

G. 3M Fire Barrier Sealant FD 150+: Single-part, water-based, acrylic latex sealant. No- sag, low-shrinkage, low VOC. Blue, red or limestone color. Used to fire stop for pipe penetrations (not for use with CPVC).
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.
3. STC rating of 54 when tested in STC 54-rated wall assembly.

H. 3M Fire Barrier Water Tight Sealant 3000 WT: Single-part, water-tight, intumescent silicone fire stop sealant for filling voids in concrete gypsum, metal, plastic, wood and insulation. Light gray color with black flecks. Meets UL Water Leakage Test, W Rating – Class 1 requirements.
1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.
3. STC rating of 53 when tested in STC 54-rated wall assembly.

I. 3M Fire Barrier Water Tight 1000 NS Sealant: Single-part, non-slump fire stopping silicone sealant for floor and wall openings. Light gray color. Meets UL Water Leakage Test, W Rating – Class 1 requirements.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

3. STC rating of 56 when tested in STC 56-rated wall assembly.

J. 3M Fire Barrier Water Tight Sealant 1003 SL: Single-part, self-leveling fire stopping silicone sealant for floor openings. Light gray color. Meets UL Water Leakage Test, W Rating – Class 1 requirements.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: For horizontal assemblies only.
3. STC rating of 56 when tested in STC 56-rated wall assembly.

K. 3M Fire Barrier Sealant 2000 NS: Single-part, non-slump elastomeric silicone fire stop sealant. Sag-resistant, low VOC. Light grey color. Used in mechanical, electrical and plumbing applications to fire stop openings and penetrations through fire-rated floor or wall assemblies. Typical penetrants include: metallic pipe, non-metallic pipe (FGG/BM system CPVC compatible), conduit, power and communication cable and telephone or electrical wiring.
1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical and horizontal assemblies.
3. STC-Rating of 56 when tested in STC 56-rated wall assembly.

L. 3M Fire Barrier Sealant 2000+: Single-part, elastomeric silicone fire stops sealant. Sag- resistant, low VOC. Light grey color. Used in mechanical, electrical and plumbing applications to fire stop openings and penetrations through fire-rated floor or wall assemblies. Typical penetrants include: metallic pipe, non-metallic pipe (FGG/BM system CPVC compatible), conduit, power and communication cable and telephone or electrical wiring.
1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical and horizontal assemblies.
3. STC-Rating of 56 when tested in STC 56-rated wall assembly.

M. 3M Fire Barrier Moldable Putty+: One-part, 100 percent solids intumescent fire stop.
Remains pliable, flexible and easily re-enterable. Non-toxic synthetic formula. Versatile putty for pipes, cables, cable tray, blank opening and other penetrations along with mineral wool or other fire-rated assembly products.
1. Type: Stick or Pad
2. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
3. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

N. 3M Fire Barrier 2001 Silicone RTV Foam: Two-part, liquid-silicone elastomer, foams in place when mixed. For use sealing large or complex openings such as cable bundles, cable trays and conduit banks.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

O. 3M Fire Barrier Mortar: For sealing openings in concrete and masonry walls and floors.
Self-Leveling, non-sag, low VOC.
1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

P. 3M Fire Barrier Self-Locking Pillow: Self-contained, intumescent fire stop pillow with interlocking strips. Meets fire rating without the use of wire mesh. For use in fire stopping larger openings
   1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
   2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

Q. 3M Fire Barrier Pillow: Self-contained, intumescent fire stop product. Meets fire rating without the use of wire mesh. For use in fire stopping larger openings
   1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
   2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

R. 3M Fire Barrier CS-195+ Composite Sheet: Organic/inorganic intumescent elastomeric sheet, bonded on one side to a layer of 28 gauge galvanized steel. Other side reinforced with steel-wire mesh and covered with aluminum foil. Re-enterable. For use in fire stopping larger openings
   1. Thickness: Nominal 0.3 inch (7.6 mm).
   2. Thermal Expansion: 8 - 10 times original size.
   3. Tensile Strength (ASTM D412): 93.6 psi (645 kPa)/489 percent.
   4. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
   5. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

S. 3M Interam Ultra GS Wrap Strip: Graphite based, flexible, largely inorganic, intumescent mat. For use around non-metallic piping with or with RC-1 collar.
   1. Fire Resistance: For use in 1, 2 or 3 hour fire rated systems.
   2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

T. 3M Fire Barrier FS-195+ Wrap/Strip: One-part, organic/inorganic intumescent strip with foil on one side. May be cut to fit irregular shapes. For use around non-metallic piping
with or with RC-1 collar.
   1. Length: 24 inch (610 mm).
   2. Width: 1 or 2 inches.
   3. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
   4. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

U. 3M Fire Barrier Pass-Through Devices: One-Piece device for fire stopping of cable penetrations through rated walls and floors.
   1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
   2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

V. 3M Fire Barrier Tuck-In: Graphite-based, flexible, intumescent wrap strip for use around non-metallic piping. Adhesive closure tab.
   1. Fire Resistance: For use in 1, 2 or 3 hour fire-rated systems.
   2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

W. 3M Fire Barrier Putty Sleeve Kit: Device used for fire stopping of cable penetrations through fire rated walls and floors.

1. Fire Resistance: For use in 1, 2, 3 or 4 hour fire-rated systems.
2. Locations: Vertical assemblies, horizontal assemblies and smoke barrier.

PART 3 - EXECUTION

3.1 PREPARATION

A. Construct an example of each type fire stop at the site for review and acceptance by the Owner.

B. Penetration shall be clean and free of debris, dirt, and dust, and dry.

C. Apply metal primer when recommended by manufacturer of the fire stopping material.

D. Dam penetration with acceptable material.

3.2 APPLICATION

A. Apply materials in accordance with manufacturer's directions.

B. Install the system in accordance with UL Design Test Report and rating required by the assembly.

C. Install system of same rating as existing and proposed wall, floor, and ceiling.

D. Install-stencil identification label by penetration listing UL # , manufacturer and hour rating.

PART 4 - DETAILS

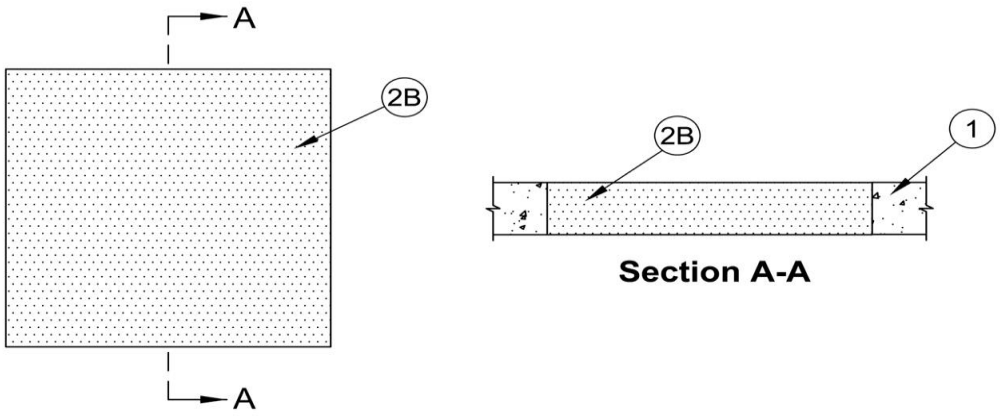
4.0 DETAILS

A. Details below are for wall penetration details. Contractor may submit other manufacture’s listed in Part 2 Product.

A 2 HR. THROUGH-PENETRATION C-AJ-0015 "TYPE A "

System No. C-AJ-0015

(Formerly System Nos. 476 and 489)
F Rating - 2 & 3 Hr (See Item 2B)
T Rating - 2 & 3 Hr (See Item 2B)



1. **Floor or Wall Assembly** - Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks*.** Max area of opening is 576 sq in. with max dimension of 24 in.

   See **Concrete Blocks -** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Firestop System** -The firestop system shall consist of the following:

   A. **Forms** (Not Shown) - Used as a form to prevent leakage of fill material during installation. Forms to be rigid sheet material, positioned on the bottom surface of the floor or both sides of the wall as required to accommodate the required thickness of fill material. Forms to be removed after fill material has cured.

   B. **Fill, Void or Cavity Materials* - Mortar** Fill material applied within annulus. Mortar to be mixed with water at a rate of 1.4 parts dry mixture to 1.0 part water by weight in accordance with the installation instructions supplied with the product. The F and T Ratings of the firestop system are dependent upon the min thickness of fill material and max dimensions of opening as tabulated below:

Min Fill Mtl Thkns In.	Max Dimension of Opening In.	F Rating Hr	T Rating Hr
4-1/2	24 in. by 24 in.	3	3
3-1/2	24 in. by 12 in.	2	2

SPECIFIED TECHNOLOGIES INC - SpecSeal Mortar

*Bearing the UL Classification Marking

B

3 HR. THROUGH-PENETRATION C-AJ-1080 "TYPE ◇B "

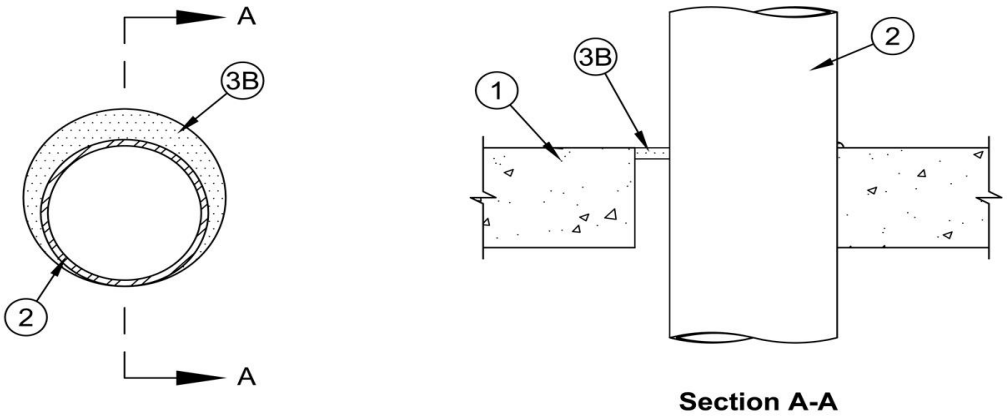
System No. C-AJ-1080

F Rating - 3 Hr

T Rating - 0 Hr

L Rating At Ambient - Less Than 1 CFM/sq ft

L Rating At 400 F - Less Than 1 CFM/sq ft



Section A-A

1. **Floor or Wall Assembly -** Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening is 32 in.

See **Concrete Block** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrants -** One metallic pipe, conduit or tubing to be centered within the firestop system. The annular space shall range from min 0 in. (point contact) to max 2 in. Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
   A. **Steel Pipe -** Nom 30 in. diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe -** Nom 30 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit -** Nom 4 in. diam (or smaller) electrical metallic tubing or nom 6 in. diam (or smaller) rigid galv steel conduit.
   D. **Copper Tubing -** Nom 6 in. diam (or smaller) Type M (or heavier) copper tubing.
   E. **Copper Pipe -** Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe.

3. **Firestop System -** The firestop system shall consist of the following:
   A. **Packing Material -** (Optional, Not Shown) - Mineral wool batt insulation, polyethylene backer rod or glass fiber batt insulation friction fitted into annular space. Packing material to be recessed from top surface of floor or both surfaces of wall as required to accommodate the required thickness of fill material.
   B. **Fill, Void or Cavity Material* - Caulk -** Min 1/2 in. thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. At point contact location, apply min 1/4 in. diam bead of sealant at the pipe/concrete interface on the top surface of the floor or both surfaces of wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal Series SSS Sealant or SpecSeal LCI Sealant

*Bearing the UL Classification Mark

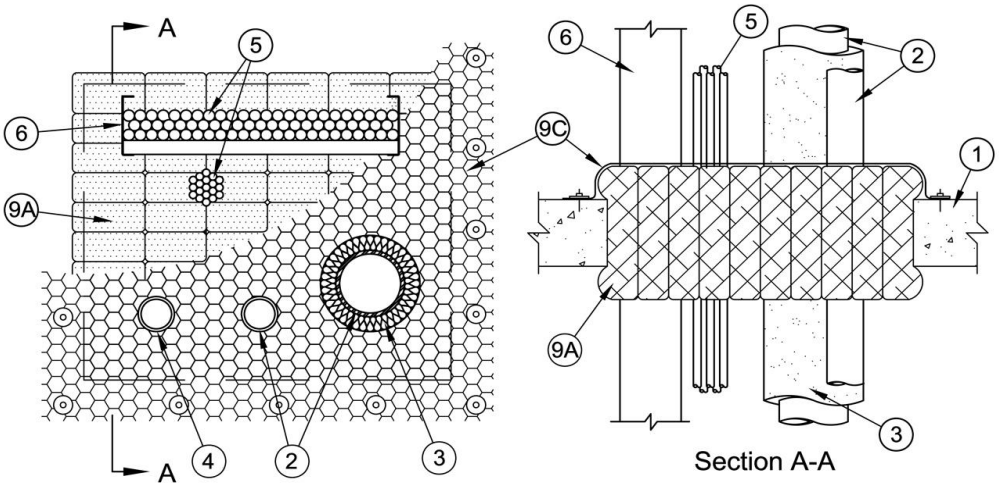
C

2 HR. THROUGH-PENETRATION C-AJ-8093 "TYPE C "

System No. C-AJ-8093

F Rating - 2 and 3 Hr (See Items 3, 4, 6 and 8)

T Rating - 0, 1/4, 1/2, 3/4, 1-1/2, and 2 Hr (See Items 2 through 8)



Section A-A

1. **Floor or Wall Assembly** - Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 18 sq ft with a max single dim of 6 ft. When any dim exceeds 3 ft, see Item 9C.

   See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Penetrants** - One or more metallic pipes, conduits or tubes to be installed within the opening. Min 1/2 in. clearance between penetrants. Min clearance between penetrants and periphery of opening is 0 in. (point contact). Penetrants rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe** - Nom 12 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe** - Nom 12 in. diam (or smaller) cast or ductile iron pipe.

   C. **Conduit** - Nom 6 in. diam (or smaller) rigid steel conduit, nom 4 in. diam (or smaller) electrical metallic tubing (EMT), or nom 4 in. diam (or smaller) steel **Flexible Metal Conduit#**.

   D. **Copper Pipe or Tube** - Nom 6 in. diam (or smaller) Regular (or heavier) copper pipe or Type M (or heavier) copper tube.

Type of Metallic Penetrant	Max Diam of Through Penetrant, in.	T Rating, Hr
Steel or Iron Pipe, Conduit or Copper Pipe or Tube	12	1/4
Steel or Iron Pipe, Conduit or EMT	4	3/4
Steel or Iron Pipe, Conduit or EMT	2	2

3. **Pipe Insulation** (Optional) - The following types of pipe insulations may be installed on one or more of the metallic pipes or tubing:

   A. **Pipe and Equipment Covering Materials*** - Max 2 in. thick hollow cylindrical heavy density (min 3.5 pcf) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product.

   See **Pipe and Equipment Covering Materials** (BRGU) - category in the Building Materials Directory for names of manufacturers. Any pipe covering meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

   B. **Pipe Covering Materials*** - Max 2 in. thick unfaced mineral fiber pipe insulation having a nom density of 3.5 pcf (or heavier) and sized to the outside diam of the pipe or tube. Pipe insulation secured with min 8 AWG steel wire spaced max 12 in. OC.

   OWENS CORNING HT INC, DIV OF

OWENS CORNING - High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT and High Temperature Pipe Insulation Thermaloc

C. **Sheathing Material*** - Use in conjunction with Item 3B. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 3B) with the kraft side exposed. Longitudinal and transverse joints sealed with metal fasteners or butt tape.

See **Sheathing Materials** (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

D. **Tube Insulation** - **Plastics##** - Max 1 in. thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) flexible foam furnished in the form of tubing. When tube insulation is used, nom diam of pipe or tube shall not exceed 4 in.

See **Plastics** (QMFZ2) category in the Plastics Recognized Component Directory for names of manufacturers. Any Recognized Component tube insulation meeting the above specifications and having a UL 94 Flammability Classification of 94-5VA may be used.

E. **Pipe Covering Materials*** - **Cellular Glass Insulation** - Max 3 in. thick cellular glass units sized to the outside diam of the pipe or tube and supplied in nom 24 in. long half sections or nom 18 in. long segments. Pipe insulation installed on pipe in accordance with the manufacturer's instructions.

PITTSBURGH CORNING CORP - FOAMGLAS

F. **Metal Jacket** - Used in conjunction with Item 3E. Min 12 in. long jacket formed from min 0.010 in. thick aluminum sheet cut to wrap tightly around the pipe insulation with a min 2 in. lap and secured using bands and seals of a similar material or min No. 18 AWG steel tie wire. Bands or steel tie wire to be located within 2 in. of each end of the jacket and spaced max 10 in. OC. Jacket installed with edge abutting surface of fill material (Item 9A) on top surface of floor or both surfaces of wall. Metal jacket to be used in addition to any other jacketing material which may be required on the pipe covering.

G. **Pipe and Equipment Covering Materials*** - Max 3 in. thick hollow cylindrical calcium silicate (min 10.0 pcf) sized to the outside diam of the pipe or tube. Pipe insulation secured with min 8 AWG steel wire spaced max 12 in. OC. See Pipe and Equipment Covering Materials (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

When Items 3A or 3D are used, the F Rating is 2 hr. When other pipe covering materials are used, F Rating is 3 hr. When Item 3D is used, the T Rating is 3/4 hr. When other pipe covering materials are used, T Rating is 1-1/2 hr.

4. **Nonmetallic Penetrants** - One or more nonmetallic pipes, conduits or tubes to be installed within the opening. Min clearance between nonmetallic penetrants to be 1 in.. Min clearance between nonmetallic and metallic penetrants to be 4 in. Min clearance between penetrants and periphery of opening is 1 in. (point contact). Penetrants rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:

   A. **Polyvinyl Chloride (PVC) Pipe** - Nom 2 in. diam (or smaller) solid or cellular core Schedule 40 PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe** - Nom 2 in. diam (or smaller) SDR17 CPVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

   C. **Rigid Nonmetallic Conduit+** - Nom 2 in. diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA 70).

   D. **Electrical Nonmetallic Tubing (ENT)+** - Nom 2 in. diam (or smaller) corrugated wall ENT formed of polyvinyl chloride (PVC) installed in accordance with Article 331 of the National Electrical Code (NFPA 70).

   E. **Optical Fiber Raceway (OFR)+** - Nom 2 in. diam (or smaller) OFR formed of either polyvinyl chloride (PVC) or polyvinylidene fluoride (PVDF) installed in accordance with Article 770 of the National Electrical Code (NFPA 70).

   When Item 4 is used, the F and T Ratings of the firestop system are 2 hr.

5. **Cables** - Nom 4 in. diam (or smaller) tight bundle of cables. Cable bundle spaced min 4 in. from all other penetrants. Clearance between cable bundle and periphery of opening is 0 in. (point contact). Cable bundle rigidly supported on both sides of floor or wall assembly. The following types and sizes of cables may be used:

   A. Max 1/C - 350 kcmil cable with polyvinyl chloride (PVC) or cross-linked polyethylene (XLPE) insulation and jacket.

   B. Max 7/C - No. 12 AWG cable with PVC-nylon insulation and PVC jacket.

   C. Max 100 pair - No. 24 AWG copper conductor telephone cable with PVC insulation and jacket.

   D. Max RG/U coaxial cables with fluorinated ethylene jacket and insulation.

   E. Multiple fiber optic cables with PVC insulation.

   F. **Through Penetrating Products*** - Max 2/C with ground No. 12 AWG Metal-Clad Cable+.

   AFC CABLE SYSTEMS INC

   When Item 5A or 5F is used, the T Rating is 1/2 hr. When other cables are used, T Rating is 3/4 hr.

6. **Cable Tray** - Max 30 in. wide by max 6 in. deep open ladder cable tray with channel-shaped side rails formed from min 0.060 in. thick

(No. 16 MSG) galv steel or min 0.060 in. thick aluminum with rungs spaced max 9 in. OC. A max of two cable trays may be installed within the opening with a min separation of 8 in. between trays. The min space between the cable tray and the periphery of the opening is 0 in. (point contact). Cable trays to be rigidly supported on both sides of the floor or wall assembly. Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. cable loading depth within tray. Any combination of the cable types specified in Item 5 may be used. **When width of cable tray exceeds 18 in., the F Rating is 2 hr.**

7. **Busway+** (Not Shown) - Nom 19 in. wide (or smaller) by 5 in. deep "I" shaped aluminum enclosure containing factory-mounted copper bars rated for 600 V, 5000 A or aluminum bars rated for 600 V, 4000 A. A max two busways to be installed within the opening. The annular space between the busway and the periphery of the opening shall be a min 1/2 in. to a max 3-1/2 in. Busways spaced min 6 in. from all other penetrants. Busway to be rigidly supported on both sides of floor or wall assembly. The busway shall bear the UL Listing Mark and shall be installed in accordance with all provisions of Article 364 of the National Electrical Code, NFPA 70. **When busway is used, the T Rating is 0 hr.**
8. **Steel Duct** (Not Shown) - Nom 18 in. diameter (or smaller) No. 28 GA (or heavier) steel duct installed within opening when opening contains no cable tray. A max of two steel ducts may be installed within the through-opening. Ducts to be spaced min 4 in. apart and min 8 in. from insulated penetrants and nonmetallic penetrants. The clearance between the steel duct and the periphery of the opening shall be min 0 in. (point contact). Steel ducts to be rigidly supported on both sides of floor or wall assembly. **When steel duct is used, the F Rating is 2 hr and the T Rating is 0 hr.**
9. **Firestop System** - The firestop system shall consist of the following items:

   A. **Fill, Void or Cavity Materials*** - **Pillows** - Nom 9 in. long by 4 to 6 in. wide by 1 to 3 in. thick plastic covered intumescent pillows. In floors, pillows to be installed lengthwise through opening and positioned to extend a maximum of 2-1/2 in. below the bottom plane of the floor. In walls, pillows to be installed lengthwise through opening and positioned to extend an equal distance from the approximate center line of the wall. Pillows tightly packed into the opening to fill the annular space between the annular space and the penetrating items.

   SPECIFIED TECHNOLOGIES INC - SpecSeal Firestop Pillows

   B. **Fill, Void or Cavity Materials*** - **Sealant or Putty** - Min 1/2 in. depth of fill material applied at point contact locations between penetrating items and periphery of opening. Additional fill material forced into interstices of grouped cables and grouped cables within cable trays.

   SPECIFIED TECHNOLOGIES INC - SpecSeal Series 100, 101, 102, 120, 129 or 105 Sealant or SpecSeal Putty

   C. **Wire Mesh** - Nom 1 in. hexagonal wire mesh fabricated from min 20 ga galv steel wire cut to fit the contours of the penetrating items and the opening with a min 2 in. lap beyond the periphery of the opening. Wire mesh secured to both sides of floor or wall by means of 1/4 in. diam by 1-1/2 in. long steel concrete screws in conjunction with 1-1/4 in. diam steel fender washers spaced max 6 in. OC. Any joints within wire mesh shall overlap 2 in. and be secured together by means of No. 20 AWG steel wire spaced 6 in. OC. When both the length and width dimensions of the through opening are less than 36 in. and when the max space between penetrants or between the penetrant and the perimeter of the opening is less than 10 in., the wire mesh is optional. When the area of the opening exceeds 1296 sq in., the gauge of the steel wire mesh shall be increased to min 16 AWG.

   D. **Steel Straps** (Not shown) - As an alternate to the wire mesh (Item 9C) in wall assemblies, min 1 in. wide by 0.015 in. thick steel banding straps sized to lap 2 in. beyond the periphery of the opening may be installed either horizontally or vertically between rows of penetrants with a max on center spacing of 4 in. Steel banding straps secured to concrete with 1/4 in. diam by 1-1/2 in. long steel concrete screws in conjunction with 1-1/4 in. diam steel fender washers.

*Bearing the UL Classification Mark

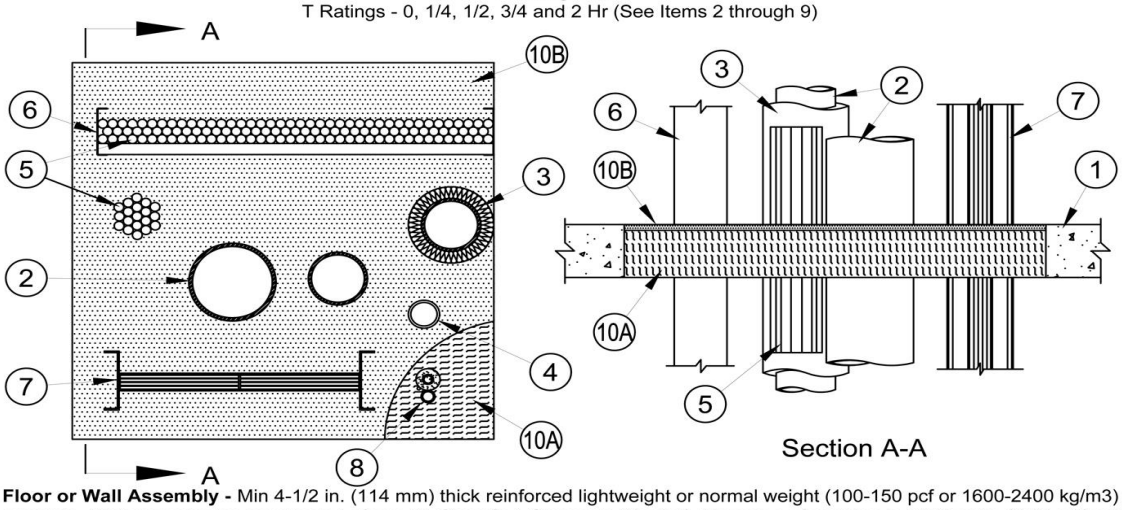
D

2 HR. THROUGH-PENETRATION C-AJ-8113 "TYPE D "

System No. C-AJ-8113

F Rating - 2 Hr

T Ratings - 0, 1/4, 1/2, 3/4 and 2 Hr (See Items 2 through 9)



1. **Floor or Wall Assembly -** Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 1024 sq in. (0.66 m2) with a max height of 32 in. (813 mm) when installed in a wall or a max width of 32 in. (813 mm) when installed in a floor.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Penetrants -** One or more metallic pipes, conduits or tubes to be installed within the opening. Annulus between penetrants is min 0 in. (point contact) to max 5 in. (127 mm). Annulus between penetrants and periphery of opening is 0 in. (point contact) to max 6 in. (152 mm). Penetrants rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe -** Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe -** Nom 12 in. (305 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit -** Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit, nom 4 in. (102 mm) diam (or smaller) electrical metallic tubing (EMT), or nom 4 in. (102 mm) diam (or smaller) steel Flexible Metal Conduit#.

   D. **Copper Pipe or Tube -** Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe or Type M (or heavier) copper tube.

Type of Metallic Penetrant	Max Dim of Throught Penetrants, In.(mm)	T Rating, Hr
Steel or Iron Pipe, Conduit	12 (305)	0
Copper Pipe or Tube	6 (152)	0
Steel or iron Pipe, Conduit or EMT	4 (102)	1/4
Steel or iron Pipe, Conduit or EMT	2 (51)	1/2
Steel or iron Pipe, Conduit or EMT	1(25)	3/4

3. **Pipe Insulation -** (Optional) - The following types of pipe insulations may be installed on one or more of the max 4 in. (102 mm) diam metallic pipes or tubes:

   A. **Pipe and Equipment Covering Materials* -** Nom 1 in. (25 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m3) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. **When Item 3A is used, T Rating is 3/4 Hr**.

See Pipe and Equipment Covering Materials (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

B. **Pipe Covering Materials* -** Nom 2 in. (51 mm) thick unfaced mineral fiber pipe insulation having a nom density of 3.5 pcf (56 kg/m3) (or heavier) and sized to the outside diam of the pipe or tube. Pipe insulation secured with min 8 AWG steel wire spaced max 12 in. (305 mm) OC. When **Item 3B is used, T Rating is 2 Hr**.

IIG MINWOOL L L C - High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT and High Temperature Pipe Insulation Thermaloc

C. **Sheathing Material* -** Use in conjunction with Item 3B. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 3B) with the kraft side exposed. Longitudinal and transverse joints sealed with metal fasteners or butt tape.

See **Sheathing Materials** (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

D. **Tube Insulation-Plastics## -** Nom 3/4 in. (19 mm) thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) flexible foam furnished in the form of tubing. **When Item 3D is used, T Rating is 1/2 Hr**.

See **Plastics** (QMFZ2) category in the Plastics Recognized Component Directory for names of manufacturers. Any Recognized Component tube insulation meeting the above specifications and having a UL 94 Flammability Classification of 94-5VA may be used.

E. **Pipe Covering Materials* - Cellular Glass Insulation -** Nom 2 to 3 in. (51 to 76 mm) thick cellular glass units sized to the outside diam of the pipe or tube and supplied in nom 24 in. (610 mm) long half sections or nom 18 in.(457 mm) long segments. Pipe insulation installed on pipe in accordance with the manufacturer's instructions. **When Item 3E is used, T Rating is 2 Hr.**

PITTSBURGH CORNING CORP - FOAMGLAS

F. **Metal Jacket -** Used in conjunction with Item 3E. Min 12 in. (305 mm) long jacket formed from min 0.010 in. (0.25 mm) thick aluminum sheet cut to wrap tightly around the pipe insulation with a min 2 in. (51 mm) lap and secured using bands and seals of a similar material or min No. 18 AWG steel tie wire. Bands or steel tie wire to be located within 2 in. (51 mm) of each end of the jacket and spaced max 10 in. (254 mm) OC. Jacket installed with edge abutting surface of fill material (Item 9A) on top surface of floor or both surfaces of wall. Metal jacket to be used in addition to any other jacketing material which may be required on the pipe covering.

G. **Pipe and Equipment Covering Materials* -** Nom 2 to 3 in. (51 to 76 mm) thick hollow cylindrical calcium silicate (min 14 pcf or 224 kg/m3) units sized to the outside diam of the pipe or tube. Pipe insulation secured with stainless steel bands or min 8 AWG stainless steel wire spaced max 12 in. (305 mm) OC. **When Item 3G is used, T Rating is 2 Hr.**

4. **Nonmetallic Penetrants -** One or more nonmetallic pipes, conduits or tubes to be installed within the opening. Annulus between penetrants and periphery of opening is min 1 in. (25 mm) to max 6 in. (152 mm). Separation between metallic and nonmetallic penetrants is min 6 in. Penetrants rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipes, conduits or tubing may be used:

A. **Polyvinyl Chloride (PVC) Pipe -** Nom 2 in. (51 mm) diam (or smaller) solid or cellular core Schedule 40 PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe -** Nom 2 in. (51 mm) diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

C. **Rigid Nonmetallic Conduit+ -** Nom 2 in. (51 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with the National Electrical Code (NFPA 70).

D. **Electrical Nonmetallic Tubing (ENT)+ -** Nom 2 in. (51 mm) diam (or smaller) corrugated wall ENT formed of polyvinyl chloride (PVC) installed in accordance with the National Electrical Code (NFPA 70).

E. **Optical Fiber Raceway+ -** Nom 2 in. (51 mm) diam (or smaller) optical fibner raceway (innerduct). Optical fiber raceway installed in accordance with Article 770 of the National Electrical Code (NFPA 70).

When Item 4 is used, the T Rating of the firestop system is 2 hr.

5. **Cables -** Nom 4 in. (102 mm) diam (or smaller) tight bundle of cables. Annulus between cable bundle and periphery of opening is min 0 in. (point contact) to max 6 in. (152 mm). Separation between cable bundle and metallic or nonmetallic penetrants shall be min 6 in. (152 mm). Cable bundle rigidly supported on both sides of floor or wall assembly. The following types and sizes of cables may be used:

A. Max 1/C - 1000 kcmil cable with polyvinyl chloride (PVC) or cross-linked polyethylene (XLPE) insulation and jacket.

B. Max 7/C - No. 12 AWG cable with PVC-nylon insulation and PVC jacket.

C. Max 400 pair - No. 24 AWG copper conductor telephone cable with PVC insulation and jacket.

D. Max RG/U coaxial cables with fluorinated ethylene jacket and insulation.

E. Multiple fiber optic cables with PVC insulation.

F. **Through Penetrating Products*** - Max 4/C with ground No. 2/O AWG **Metal-Clad Cable+.**

AFC CABLE SYSTEMS INC

When cables are used, T Rating is 1/2 hr.

6. **Cable Tray -** Max 30 in. (762 mm) wide by max 6 in. (152 mm) deep open ladder cable tray with channel-shaped side rails formed from min 0.060 in. (1.5 mm) thick (No. 16 MSG) galv steel or min 0.060 in. (1.5 mm) thick aluminum with rungs spaced max 9 in. (229 mm) OC. A max of two cable trays may be installed within the opening with a min separation of 8 in. (203 mm) between trays. Annulus between the cable tray and the periphery of the opening is min 0 in. (point contact) to max 6 in. (152 mm). Separation between cable tray and metallic or nonmetallic penetrants is min 6 in. (152 mm). Cable trays to be rigidly supported on both sides of the floor or wall assembly. Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. (76 mm) cable loading depth within tray. Any combination of the cable types specified in Item 5 may be used. **When cable tray is used, T Rating is 1/2 hr.**
7. **Busway+ -** Nom 19 in. (483 mm) wide (or smaller) by 6 in. (152 mm) deep "I" shaped aluminum enclosure containing factory-mounted copper bars rated for 600 V, 5000 A or max 26 in. (660 mm) wide by max 6 in. (152 mm) deep "I" shaped aluminum enclosure containing factory-mounted aluminum bars rated for 600 V, 4000 A. . A max of two busways may be installed within the opening. The annular space between the busway and the periphery of the opening shall be a min 0 in. (point contact) to a max 5 in. (125 mm). Busways spaced min 6 in. (152 mm) from all other penetrants. Busway to be rigidly supported on both sides of floor or wall assembly. The busway shall bear the UL Listing Mark and shall be installed in accordance with all provisions of the National Electrical Code, NFPA 70. **When busway is used, the T Rating is 1/4 hr.**
8. **Air Conditioning (AC) Line Set -** One or more AC line sets installed within opening. Each AC line set consists of two pipes or tubes (Item 8A), tubing insulation (Item 8B) and a thermostat cable (Item 8C). The space between the AC line sets shall be min 2 in. (51 mm). The space between the AC line sets and the periphery of the opening shall be min 0 in. (point contact) to max 6 in. (152 mm). The AC line sets shall be spaced min 6 in. from uninsulated metallic penetrants and shall be rigidly supported on both sides of the floor or wall assembly.

8A. **Through Penetrant -** A max of two pipes or tubes to be installed in each AC line set. Of the two pipes or tubes, only one may have a nom diam greater than 1/2 in. (13 mm). The following types and sizes of through penetrants may be used:

A. **Steel Pipe -** Nom 1 in. (25 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

B. **Iron Pipe -** Nom 1 in. (25 mm) diam (or smaller) cast or ductile iron pipe.

C. **Copper Pipe -** Nom 1 in. (25 mm) diam (or smaller) Regular (or heavier) copper pipe.

D. **Copper Tube -** Nom 1 in. (25 mm) diam (or smaller) Type L (or heavier) copper tube.

8B. **Tube Insulation - Plastics# -** Nom 3/4 in. (19 mm) thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) flexible foam furnished in the form of tubing. The tube insulation may be installed on one max 3/4 in. (19 mm) diam pipe or tube in each AC line set. The space between the insulated and uninsulated pipes or tubes within each AC line set shall be 0 in. (point contact).

See **Plastics** (QMFZ2) category in the Plastics Recognized Component Directory for names of manufacturers. Any Recognized Component tube insulation meeting the above specifications and having a UL 94 Flammability Classification of 945VA may be used.

8C. **Cable -** One 4 pair No. 18 AWG (or smaller) thermostat cable with polyvinyl chloride (PVC) insulation and jacket materials may be installed with each AC line set.

When Item 8 is used, the T Rating of the firestop system is 1/4 hr.

9. **Steel Duct -** (Not Shown) Nom 12 in. (305 mm) diameter (or smaller) No. 30 GA (or heavier) steel duct installed within opening when opening contains no cables or cable tray. A max of two steel ducts may be installed within the through-opening. Ducts to be spaced min 4 in. (102 mm) apart and min 8 in. (203 mm) from insulated penetrants and nonmetallic penetrants. Annulus between the steel duct and the periphery of the opening shall be min 0 in. (point contact) to max 6 in. (0 to 152 mm). Steel ducts to be rigidly supported on both sides of floor or wall assembly. **When steel duct is used, the T Rating is 0 hr.**
10. **Firestop System -** The firestop system shall consist of the following items:

A. **Packing Material -** Min 4 in. (102 mm) thickness of min 4 pcf (64 kg/m3) mineral wool batt insulation tightly packed into opening. Packing material recessed from top surface of floor assembly or from both surfaces of wall or precast concrete units to accommodate the required thickness of fill material.

B. **Fill, Void or Cavity Materials*-Sealant -** Min 1/2 in. (13 mm) depth of fill material applied within the annulus, flush with top surface of floor assembly or with both surfaces of the wall assembly. Additional fill material forced into interstices of grouped cables and grouped cables within cable trays. At point contact location between through penetrant and concrete, a min 3/8 in. (9.6 mm) diam of fill material shall be applied at through penetrant/concrete interface on top surface of floor or both surfaces of the wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal Series SSS Sealant or SpecSeal LCI Sealant

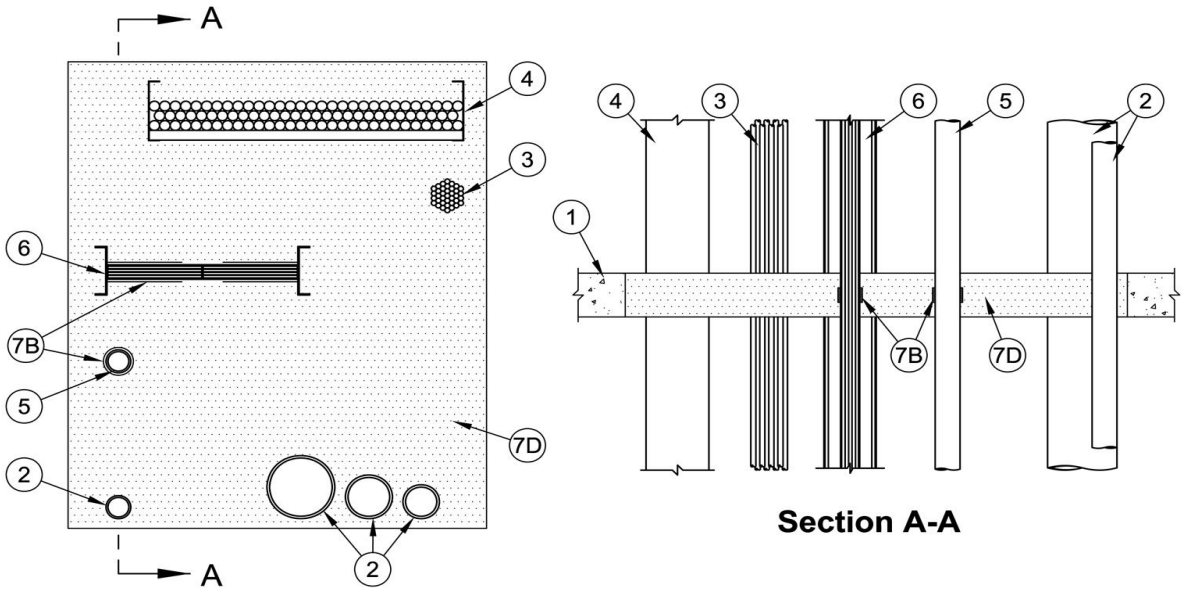
E 2 HR. THROUGH-PENETRATION C-AJ-8114 "TYPE E "

System No. C-AJ-8114

F Rating - 2 Hr
T Ratings - 0 and 1/2 Hr (See Items 2 through 6)



Section A-A

1. **Floor or Wall Assembly** - Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening is 1920 sq in. with a max dim of 48 in.

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Conduits** - One or more nom 6 in. diam (or smaller) rigid steel conduits, nom 4 in. diam (or smaller) electrical metallic tubing (EMT) or nom 1 in. diam (or smaller) flexible steel conduits installed within the opening. Min space between conduits and periphery of opening is 1 in. Min space between conduits is 1 in. Conduit to be rigidly supported on both sides of floor or wall assembly. **When metallic conduit is used, the T Rating is 1/2 hr**.

3. **Cables** - Nom 4 in. diam (or smaller) tight bundle of cables. Cable bundle spaced min 6 in. from metallic conduits. Clearance between cable bundle and periphery of opening is min 2 in. Cable bundle rigidly supported on both sides of floor or wall assembly. The following types and sizes of cables may be used:

   A. Max 1/C - 350 kcmil cable with polyvinyl chloride (PVC) or cross-linked polyethylene (XLPE) insulation and jacket.

   B. Max 7/C - No. 12 AWG cable with PVC-nylon insulation and PVC jacket.

   C. Max 200 pair No. 24 AWG copper conductor cable with PVC insulation and jacket.

   D. Max RG/U coaxial cables with fluorinated ethylene jacket and insulation.

   E. Multiple fiber optic cables with PVC insulation.

   F. **Through Penetrating Products*** - Max 3/C with ground No. 12 AWG Metal-Clad Cable+.

   AFC CABLE SYSTEMS INC

   When cables are used, the T Rating is 0 hr.

4. **Cable Tray** - Max 30 in. wide by 6 in. deep open ladder cable tray with channel-shaped side rails formed from min 0.060 in. thick (No. 16 GA) galv steel or min 0.060 in. thick aluminum with rungs spaced max 9 in. OC. A max of three cable trays may be installed within the opening with a min separation of 6 in. between cable trays and with a min separation distance of 6 in. from metallic conduits. The min space between the cable tray and the periphery of the opening is 2 in. Cable trays rigidly supported on both sides of floor or wall assembly. Aggregate cross-sectional area of cables in cable tray not to exceed 40 percent of the cross-sectional area of the cable tray based on a max 3 in. cable loading depth within the tray. Any combination of the cable types specified in Item 3 may be used. **When cable tray is used, the T Rating is 0 hr**.
5. **Nonmetallic Conduits** - One or more nonmetallic conduits spaced min 1 in. apart and 1 in. from periphery of opening. Min clearance between nonmetallic conduits and metallic conduits is 6 in. Penetrants rigidly supported on both sides of floor or wall assembly. Any of the following types and sizes may be used.
   A. **Rigid Nonmetallic Conduit+** - Nom 2 in. diam (or smaller) PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA 70).
   B. **Optical Fiber Raceway (OFR)+** - Nom 2 in. diam (or smaller) OFR formed of either polyvinyl chloride (PVC) or polyvinylidene fluoride (PVDF) installed in accordance with Article 770 of the National Electrical Code (NFPA 70).

   When nonmetallic conduit is used, the T Rating is 0 hr.
6. **Busway+** - Nom 19 in. wide (or smaller) by 5 in. deep "I" shaped aluminum enclosure containing factory-mounted copper bars rated for 600 V, 5000 A or aluminum bars rated for 600 V, 4000 A. A max of two busways may be installed within the opening. The min space between the busway and the periphery of the opening is 2 in. Busways spaced min 6 in. from all other penetrants. Busway to be rigidly supported on both sides of floor or wall assembly. The busway shall bear the UL Listing Mark and shall be installed in accordance with all provisions of Article 364 of the National Electrical Code, NFPA 70. **When busway is used, the T Rating is 0 hr.**
7. **Firestop System** - The firestop system consists of the following items:
   A. **Fill, Void or Cavity Material*** - **Putty or Sealant** - (Not Shown) - Fill material forced into grouped cable interstices to max extent possible.

      SPECIFIED TECHNOLOGIES INC - SpecSeal Putty or SpecSeal 100, 101, 105, 120 or 129 Sealant
   B. **Fill, Void or Cavity Material*** - **Wrap Strip** - Nom 2 in. wide by 3/16 in. thick or nom 1-1/2 in. wide by 1/4 in. thick wrap strip faced on both sides with a plastic film. One layer of wrap strip installed in web sections of busway and wrapped around outer circumference of nonmetallic conduit. Wrap strip ends butted and held in place with aluminum foil tape. In floors, the bottom edge of wrap strip shall be recessed 1-1/2 in. from the bottom surface of the floor. In walls having a thickness of 5 in. or less, the wrap strip shall be centered at mid-depth of wall assembly. In walls having a thickness of greater than 5 in., the wrap strip shall be installed on both sides of the wall such that the exposed edge of wrap strip is recessed 1-1/4 in. from each side of wall.

      SPECIFIED TECHNOLOGIES INC - SpecSeal BLU Wrap Strip or SpecSeal RED Wrap Strip
   C. **Forms** - (Not Shown) - Used as a form to prevent leakage of fill material. Forms to be rigid sheet material cut to fit the contours of the penetrants and positioned on the bottom surface of floor or both sides of wall to accommodate the required thickness of fill material. Forms to be removed after fill material has cured.
   D. **Fill, Void or Cavity Material*** - **Mortar** - Min 3-1/2 in. thickness of fill material applied within annulus. Mortar to be mixed with water in accordance with the installation instructions provided with the product. When cable tray or cables are used, min thickness of mortar is 4-1/2 in.

      SPECIFIED TECHNOLOGIES INC - SpecSeal Mortar

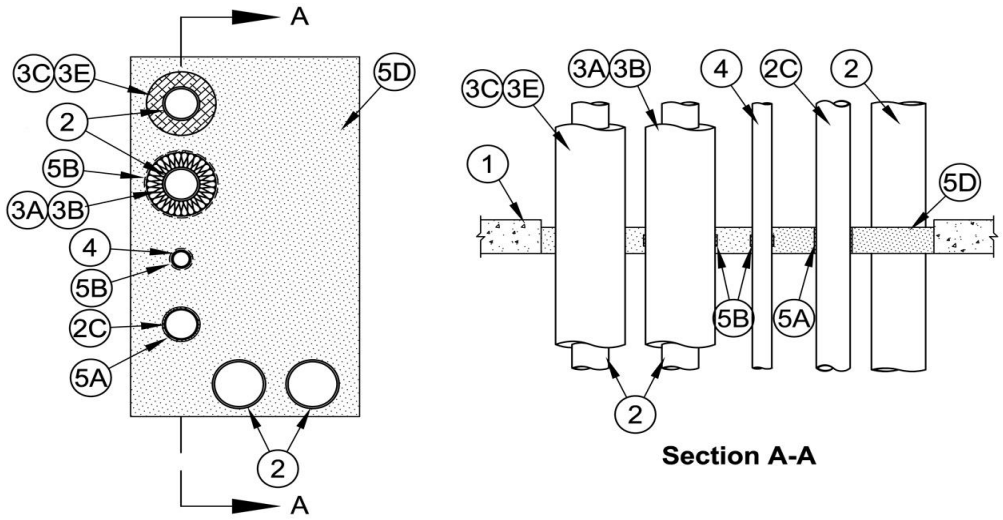
+Bearing the UL Listing Mark

F 2 HR. THROUGH-PENETRATION C-AJ-8115 "TYPE F "

System No. C-AJ-8115

F Rating - 2 Hr

T Ratings - 0, 3/4, 1 and 2 Hr (See Items 2, 3 and 4)



1. **Floor or Wall Assembly -** Min 4-1/2 in. thick reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks*.** Max area of opening is 1920 sq in. with a max dim of 48 in.

   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Metallic Penetrants -** One or more metallic pipes or tubes installed within the opening. Min space between pipes or tubing and periphery of opening is 1 in. Min space between pipes or tubes is 1 in. Metallic pipe or tubing to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipe or tubing may be used:

   A. **Steel Pipe -** Max 12 in. diam (or smaller) Schedule 10 (or heavier) steel pipe.

   B. **Iron Pipe -** Max 12 in. diam (or smaller) cast or ductile iron pipe.

   C. **Copper Pipe or Tube -** Max 6 in. diam (or smaller) Regular copper pipe or Type M (or heavier) copper tube.

   When uninsulated metallic penetrant is used, T Rating is 0 hr.

3. **Pipe Coverings - (Optional) -** One or more metallic pipes or tubes within the opening may be provided with pipe insulation. Min space between insulated pipes or tubes and periphery of opening is 1 in. Min space between insulated pipes or tubes is 2 in. Min separation distance between insulated pipes and uninsulated pipes is 6 in. The following types of pipe coverings may be used:

   A. **Pipe and Equipment Covering Materials* - Glass Fiber Insulation -** Max 2 in. thick hollow cylindrical heavy density (min 3.5 pcf) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with product. **When glass fiber pipe insulation is used, max diam of steel, iron or copper pipe is 4 in.**

   See **Pipe and Equipment Covering Materials*** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

   B. **Tube Insulation - Plastics# -** Max 3/4 in. thick acrylonitrile butadiene/polyvinyl chloride (AB/PVC) flexible foam furnished in the form of tubing. **When tube insulation is used, max diam of pipe or tube is 4 in.**

   See Plastics# (QMFZ2) category in the Plastics Recognized Component Directory for names of manufacturers. Any Recognized Component tube insulation material meeting the above specifications and having a UL 94 flammability Classification of 94-5VA may be used.

C. **Pipe and Equipment Covering Materials* - Mineral Fiber -** Nom 2 in. thick unfaced mineral fiber pipe sized to the outside diam of pipe or tube. Pipe insulation secured with min 8 AWG steel tie wire spaced max 12 in. OC.

IIG MINWOOL L L C - High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT or High Temperature Pipe Insulation Thermaloc

D. **Sheathing Material* -** Used in conjunction with Item 3C. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 3C) with the kraft side exposed. Longitudinal joints and transverse joints sealed with metal fasteners or butt tape.

See **Sheathing Materials*** (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

E. **Pipe Covering Materials* - Cellular Glass Units -** Nom 2 or 3 in. thick cellular glass units sized to the outside diam of the pipe or tube and supplied in nom 24 in. long half sections or nom 18 in. long segments. Pipe insulation installed on pipe in accordance with manufacturer's instructions.

PITTSBURGH CORNING CORP - FOAMGLAS

F. **Metal Jacket - -** Used in conjunction with Item 3E. Min 12 in. long jacket formed from min 0.010 in. thick aluminum sheet cut wrap tightly around the pipe insulation with a min 2 in. lap and secured using bands and seals of a similar material or min No. 18 AWG steel tie wire. Bands or steel tie wire to be located within 2 in. of each end of the jacket and spaced max 10 in. OC. Jacket installed with edge abutting surface of fill material (Item 5D) on top surface of floor or both surfaces of wall. Metal jacket used in addition to any other jacketing material which may be required on the pipe covering.

Insulated pipes or tubes must be spaced min 6 in. from metallic pipes or tubes. When Item 3A is used, the T Rating is 1 hr. When Item 3B is used, the T Rating is 3/4 hr. When other types of pipe coverings are used, the T Rating is 2 hr.

4. **Nonmetallic Penetrants -** One or more nonmetallic pipes installed within the opening. Min space between pipes and periphery of opening is 1 in. Min space between nonmetallic pipes is 1 in. Min separation distance between nonmetallic pipes and uninsulated metallic pipes or tubes is 6 in. Pipes to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of nonmetallic pipe may be used:

A. **Polyvinyl Chloride (PVC) Pipe -** Nom 2 in. diam (or smaller) Schedule 40 solid or cellular core PVC pipe for use in closed (process or supply) or vented (drain, waste, vent) piping systems.

B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe -** Nom 2 in. diam (or smaller) SDR13.5 CPVC pipe for use in closed (process or supply) piping systems.

When nonmetallic pipe is used, T Rating is 0 Hr.

5. **Firestop System -** The firestop system consists of the following items:

A. **Fill, Void or Cavity Material* - Putty Pad -** One layer of min 3/16 in. thick putty pads installed around each uninsulated copper tube. Putty pad width to extend throughout thickness of mortar pour (Item 5D).

SPECIFIED TECHNOLOGIES INC - SpecSeal Putty Pad

B. **Fill, Void or Cavity Material* - Wrap Strip -** Nom 2 in. wide by 3/16 in. thick or nom 1-1/2 in. wide by 1/4 in. thick wrap strip faced on both sides with a plastic film. One layer of wrap strip installed around outer circumference of glass fiber pipe insulation (Item 3A), AB/PVC tube insulation (Item 3B) or nonmetallic pipe (Item 4). Wrap strip ends butted and held in place with aluminum foil tape. In floors, the bottom edge of wrap strip shall be recessed 1 in. from the bottom surface of the floor. In walls having a thickness of 5 in. or less, the wrap strip shall be centered at mid-depth of wall assembly. In walls having a thickness greater than 5 in., the wrap strip shall be installed on both sides of the wall such that the exposed edge of wrap strip is recessed 1 in. from each side of wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal BLU Wrap Strip or SpecSeal RED Wrap Strip

C. **Forms - (Not Shown) -** Used as a form to prevent leakage of fill material. Forms to be rigid sheet material cut to fit the contours of the penetrants and positioned on the bottom surface of floor or both sides of wall to accommodate the required thickness of fill material. Forms to be removed after fill material has cured.

D. **Fill, Void or Cavity Material* - Mortar -** Min 3-1/2 in. thickness of fill material applied within annulus. Mortar to be mixed with water in accordance with the installation instructions provided with the product.

SPECIFIED TECHNOLOGIES INC - SpecSeal Mortar

*Bearing the UL Classification Mark

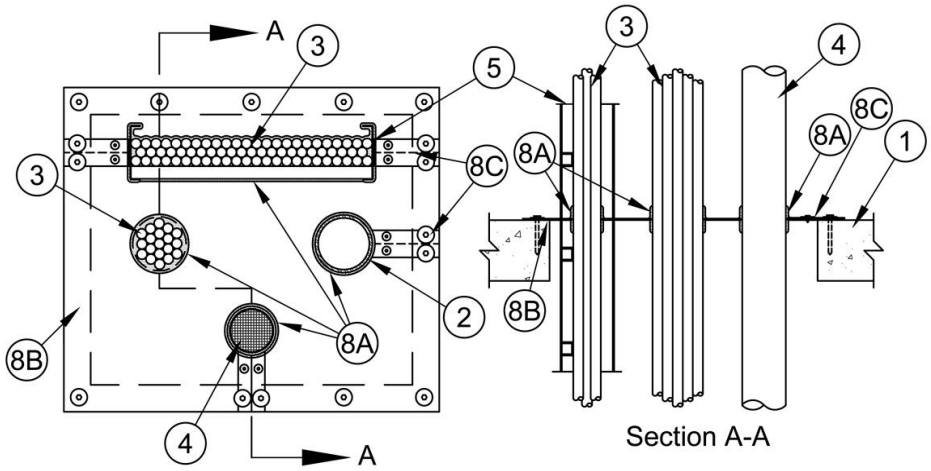
#Bearing the UL Recognized Components Mark

G

2 HR. THROUGH-PENETRATION C-AJ-8181 "TYPE G "

System No. C-AJ-8181

F Ratings - 2 and 3 Hr (See Items 3, 4, 5, 6 and 7)
T Rating - 0 Hr



1. **Floor or Wall Assembly -** Min 4-1/2 in. (114 mm) thick lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max area of opening 24 sq ft (3.4 m2) with one dimension of opening being 36 in. (914 mm) or less.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Pipe or Conduit -** One or more metallic pipes, conduits or tubing installed within the through opening. The space between penetrants shall be min 1 in. (25 mm). The space between penetrants and periphery of opening shall be min 1 in. (25 mm). Penetrants rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe -** Nom 12 in. (305 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe -** Nom 12 in. (305 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit -** Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit, nom 4 in. (102 mm) electrical metallic tubing (EMT) or nom 1 in. (25 mm) diam (or smaller) flexible steel conduit.

   D. **Copper Pipe or Tube -** Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe or Type L (or heavier) copper tube.

3. **Cables -** One or more max 4 in. (102 mm) diam tight bundle of cables. Cable bundle spaced min 4 in. (102 mm) from all other penetrants. Min clearance between cable bundle and periphery of opening is 1/4 in. (6 mm). Cable bundles rigidly supported on both sides of floor or wall. Any combination of the following types and sizes of cables may be used:

   A. Max 400 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with polyvinyl chloride (PVC) jacketing and insulation or with plenum rated jacketing and insulation.

   B. Max 350 kcmil single copper conductor power cable with XLPE jacket and insulation.

   C. Max 7/C No. 12 AWG copper conductor control cable with PVC or XLPE jacket and insulation.

   D. Max 3/C No. 10 AWG metal clad or armored cable with steel or aluminum jacket.

   E. Max 3/C No. 8 AWG NM cable (Romex) with PVC insulation and jacket.

   F. Max four pair No. 22 AWG (or smaller) copper conductor data cable with plenum or non-plenum rated jacketing and insulation.

   G. Max four pair No. 22 AWG (or smaller) copper conductor data cable with plenum or non-plenum rated jacketing and insulation.

   H. Max RG/U coaxial cable with plenum or non-plenum rated insulation and jacketing.

   I. Fiber optic cable with plenum or non-plenum rated jacket and insulation having a max diam of 5/8 in. (16 mm).

J. Aluminum or steel armored optical fiber cables jacketed with plenum or non-plenum rated jacket and insulation having a max diam of 5/8 in.

When Items 3 is used, the F Rating is 2 hr.

4. **Telephone Riser Cable -** One or more multiconductor telephone riser cable with max No. 22 AWG copper conductors insulated with PVC skinned expanded polyethylene. Conductors encased in an overlapped corrugated aluminum shield with a PVC jacket. Outside diam of riser cable not to exceed 3-1/4 in. (82.6 mm). Aggregate cross-sectional area of copper conductors within riser cable not to exceed 1.14 sq in. (735 mm2). Cables spaced min 4 in. (102 mm) from all other penetrants. Min clearance between cable and periphery of opening is 1/4 in. (6 mm). Cables to be rigidly supported on both sides of floor or wall assembly. **When Items 4 is used, the F Rating is 2 hr.**

5. **Cable Tray -** One or more cable trays may be installed within the opening with a min separation of 8 in. between trays. Max 24 in. (610 mm) wide by max 5 in. (127 mm) deep open ladder cable tray with channel-shaped side rails formed from min 0.060 in. (1.5 mm) thick (No. 16 MSG) galv steel or min 0.060 in. (1.5 mm) thick aluminum with rungs spaced max 9 in. (229 mm) OC. Min annular space between cable tray and edge of opening is 1 in. (25 mm). Cable tray spaced min 4 in. (102 mm) from all other penetrants. Cable tray to be supported on both sides of floor or wall assembly. Aggregate cross-sectional area of cables in cable tray not to exceed 39 percent of the cross-sectional area of the cable tray based on a max 3 in. cable loading depth within tray. Any combination of the cable types specified in Item 3 may be used. **When Items 5 is used, the F Rating is 2 hr.**

6. **Busway+ -** (Not Shown) - One or more nom 19 in. wide (or smaller) by 5 in. deep "I" shaped aluminum enclosure containing factory-mounted copper bars rated for 600 V, 5000A or aluminum bars rated for 600 V, 4000A. Busway to be rigidly supported on both sides of wall assembly. The annular space between the busway and the periphery of the opening shall be min 1 in. (25 mm). Busways spaced min 6 in. (152 mm) from all other penetrants. The busway shall bear the UL Listing Mark and shall be installed in accordance with all provisions of the National Electrical Code, NFPA 70. **When Items 6 is used, the F Rating is 2 hr.**

7. **Duct -** (Not Shown) - One or more max 12 in. by 14 in. (305 by 356 mm) min No. 24 gauge (0.61 mm) rectangular steel duct or max 12 in. diam (305 mm) min No. 28 gauge (0.38 mm) round steel duct, to be installed within the firestop system. Ducts to be spaced min 4 in. (102 mm) from all other penetrants. The clearance between the steel ducts and the periphery of the opening shall be min 1 in. (25 mm). Steel retaining angles (Item 8D) are required to be used with rectangular steel ducts. Steel duct to be rigidly supported on both sides of floor or wall assembly. **When Items 7 is used, the F Rating is 2 hr.**

8. **Firestop System -** Used in conjunction with The firestop shall consist of the following:

   A. **Fill, Void or Cavity Materials* - Putty or Sealant -** Min 3/16 in. (5 mm) thick by 2 in. (51 mm) wide band of putty required around entire periphery of each penetrant. Adjoining lengths of putty strips butted together by hand. One layer of putty required around penetrants on top side of floor or both sides of wall assembly. Bands of putty installed to project approx 1 in. (25 mm) beyond each face of the composite sheet (Item 8B) on both sides of floor or wall assembly. As an alternate to the putty described above, sealant may be used. One layer of 3/16 in. wide by 3/16 in. (5 mm) thick putty strips or 3/16 in. (5 mm) diam bead of caulk positioned under composite sheet around entire perimeter of through opening on top surface of floor or both sides of the wall. Generous application of putty to be applied around the base of the penetrants at their egress from the intumescent sheet on top side of the floor or both sides of the wall assembly. Caulk or putty to be applied into interstices between cables to max extent possible and into annular space between the cables or cable tray and the edges of the opening in the composite sheet.

SPECIFIED TECHNOLOGIES INC - SpecSeal Firestop Putty, SpecSeal 100, 101, 102, 120, 129 or 105 Sealant or SpecSeal LCI Sealant

   B. **Fill, Void or Cavity Materials* - Composite Sheet -** Foil-faced sheet with galv steel sheet backer. Sheets may be installed as one solid sheet, cut in two pieces or split on one side of the penetrant(s). Opening in intumescent sheet to be max 1/4 in. (6 mm) larger than through penetrants. Sheets cut to lap a min of 2 in. (51 mm) on the floor or wall surfaces. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against floor or wall surface) and secured to floor or wall surface with min 3/16 in. (5 mm) diam by 1-1/4 in. (32 mm) long steel concrete screws or min 0.145 in. (3.7 mm) diam by 1_1/4 in. (32 mm) long powder actuated fasteners in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 7 in. (178 mm) with additional fasteners located on each side of butted seams or slits made to permit installation or the sheet around the penetrants. In floor applications, sheet installed on top surface of floor. In wall applications, sheets installed on both sides of wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal Composite Sheet

C. **Steel Cover Strip -** Min 2 in. (51 mm) wide strip of min 0.018 in. (0.46 mm) thick galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 3B). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/8 by 1/2 in. (3.2 mm by 13 mm) ribbon of putty (Item 8A). Steel cover strip secured to galv steel sheet backer of composite sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

D. **Retaining Angles -** (Not Shown) - Min 2 by 2 in. (51 by 51 mm) No. 16 gauge (1.5 mm, or heavier) galv steel angles installed on all four sides of rectangular duct on top surface of floor or on both surfaces of wall. Angles on two opposing sides of duct to extend the full length of composite sheet (max 40 in.) such that the ends extend over the floor or wall surface by min 2 in. Angles attached to duct with min 1/4 in. (6 mm) long, No. 10 (or larger) steel sheet metal screws spaced a max of 1 in. (25 mm) from each end of duct and spaced a max of 6 in. (152 mm) OC. In floors, angles additionally attached to intumescent sheet with min 1/4 in. (6 mm) long, No. 10 (or larger) steel sheet metal screws spaced a max of 6 in. (152 mm) OC.

E. **Support Channel -** (Not Shown) - When area of through opening exceeds 1440 sq in. (0.93 m2), support channels to be used behind min one continuous seam in composite sheet (Item 8B) flush with the top edge of the floor or both surfaces of the wall. Support channels to be min 1 5/8 by 1-5/8 in. (41 by 41 mm) min 12 gauge (2.4 mm) painted or galv steel. Ends of steel channel bolted or welded to steel angles anchored to walls inside opening at both ends of channel. Composite sheet secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers spaced max 6 in. (152 mm) OC. Support channel may be used beneath butted seam of intumescent sheets or located away from intumescent sheet seam.

F. **Firestop Device* -** (Not Shown) - One or more banks of one, two, three, four or seven firestop device modules ganged together. A min separation of 3 in. (76 mm) shall be maintained between banks of firestop devices. Each firestop device module consists of a 3 by 3 by 10-1/2 in. (76 by 76 by 267 mm) long galv steel tube with an intumescent material lining. Firestop device modules to be installed in accordance with the accompanying installation instructions. Permissible cable types are listed under Item 5. The space between the firestop device module(s) and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3.2 mm) for square or rectangular plates and min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm) when circular wall plates are used. Firestop device module(s) secured in place by means of steel wall plates installed with gasket material supplied with product. Steel wall plates installed on both sides of the floor or wall and secured to each device by means of steel set screws provided with wall plates. Each firestop device module is to be installed with ends projecting an equal distance beyond each surface of the floor or wall assembly.

SPECIFIED TECHNOLOGIES INC - EZ PATH Series 33 Fire Rated Pathway

G. **Firestop Device* - Extension Module -** (Optional, Not Shown) - Module attached to ends of 3 by 3 by 10-1/2 in. (76 by 76 by 267 mm) long firestop device (Item 9G) to increase its length to facilitate installations in thicker floors or walls. Each module consists of a 3 by 3 by 6 in. (76 by 76 by 152 mm) long galv steel tube with an intumescent material lining. Extension module to be installed in accordance with the accompanying installation instructions. Permissible cable types are listed under Item 5. When module is used, firestop device (Item 9F) and extension module(s) secured in place by means of steel wall plates installed with gasket material supplied with product. Steel wall plates installed on both sides of the floor or wall and secured to each device or extension module(s) by means of steel set screws provided with wall plates. Firestop device and extension module(s) assembly to be installed with ends projecting an equal distance beyond each surface of the floor or wall assembly.

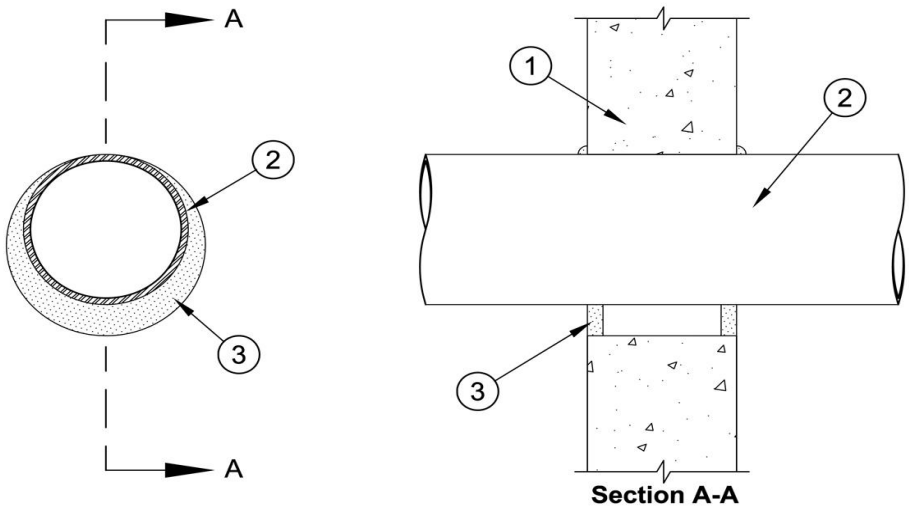
System No. W-J-1055

F Rating - 2 Hr

T Rating - 0 Hr

L Rating At Ambient - Less Than 1 CFM/sq ft

L Rating At 400 F - Less Than 1 CFM/sq ft



Section A-A

1. **Wall Assembly -** Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening is 26 in. (660 mm).

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Through Penetrant -** One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Pipe, conduit or tubing may be installed at an angle not greater than 45 degrees from perpendicular. The annular space between pipe, conduit or tubing and periphery of opening shall be min 0 in. (0 mm, point contact) to max 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduit or tubing may be used:
   A. **Steel Pipe -** Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe -** Nom 24 in. (610 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit -** Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing, nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 1 in. (25 mm) diam (or smaller) flexible steel conduit.
   D. **Copper Tubing -** Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe -** Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.
3. **Fill, Void or Cavity Material* - Sealant -** Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with both surfaces of wall. At the point contact location between through penetrant and concrete, a min 3/8 in. (10 mm) diam bead of fill material shall be applied at the concrete/through penetrant interface on both surfaces of wall.

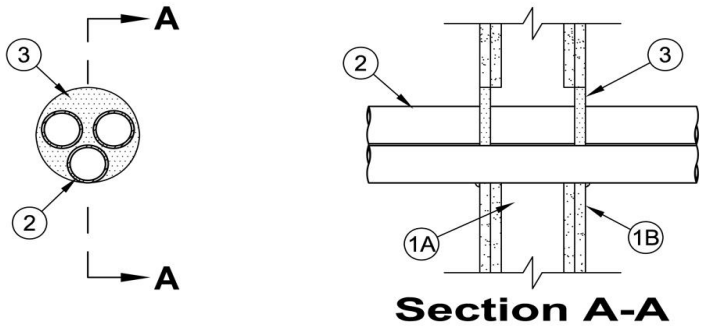
System No. W-L-1224

F Ratings - 1 and 2 Hr (See Item 1)
T Ratings - 1/4 and 1 Hr (See Item 2)



Section A-A

1. **Wall Assembly -** The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs -** Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. Steel studs to be min 3-5/8 in. wide and spaced max 24 in. OC.
   B. **Gypsum Board* -** Thickness, type, number of layers and fasteners as specified in the individual Wall and Partition Design. Max diam of opening is 6 in.

   The hourly F Rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.
2. **Through Penetrant -** One or more metallic pipes, conduits or tubing to be installed eccentrically or concentrically within the firestop system. The space between the pipes, conduits or tubing shall be a min 1/4 in. to max 2 in. The annular space between the pipes, conduits or tubing and the periphery of the opening shall be min 0 in. (point contact) to max 2 in. Pipes, conduits or tubing to be rigidly supported on both sides of the wall assembly. The following types and sizes of metallic pipes, conduits and tubes may be used:
   A. **Steel Pipe -** Nom 2 in. diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe -** Nom 2 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit -** Nom 2 in. diam (or smaller) rigid steel conduit, nom 2 in. diam (or smaller) steel electrical metallic tubing (EMT) or nom 2 in. diam (or smaller) flexible steel conduit.
   D. **Copper Pipe -** Nom 2 in. diam (or smaller) Regular (or heavier) copper pipe.
   E. **Copper Tube -** Nom 2 in. diam (or smaller) Type L (or heavier) copper tube.

   When Item 2A, 2B or 2C is used, T Rating is 1 hr. When Item 2D or 2E is used, T Rating is 1/4 hr.

2A. **Through Penetrating Product* - Flexible Metal Piping -** As an alternate to Item 2, one or more nom 2 in. diam (or smaller) steel flexible metal pipes to be installed either concentrically or eccentrically within the firestop system. The space between the pipes shall be min 1/4 in. to max 2 in. The annular space between the pipes and the periphery of the opening shall be min 0 in. (point contact) to max 2 in. Pipes to be rigidly supported on both sides of the wall assembly. When flexible metal piping is used, T Rating is 1 hr.

   OMEGA FLEX INC

   GASTITE, DIV OF TITEFLEX

   WARD MFG INC

3. **Fill, Void or Cavity Material* - Sealant -** Min 5/8 in. thickness of fill material applied within annulus, flush with both surfaces of wall assembly. At point contact location, min 1/4 in. diam bead of fill material applied at metallic pipe/gypsum board interface on both surfaces of wall.

System No. W-L-8003

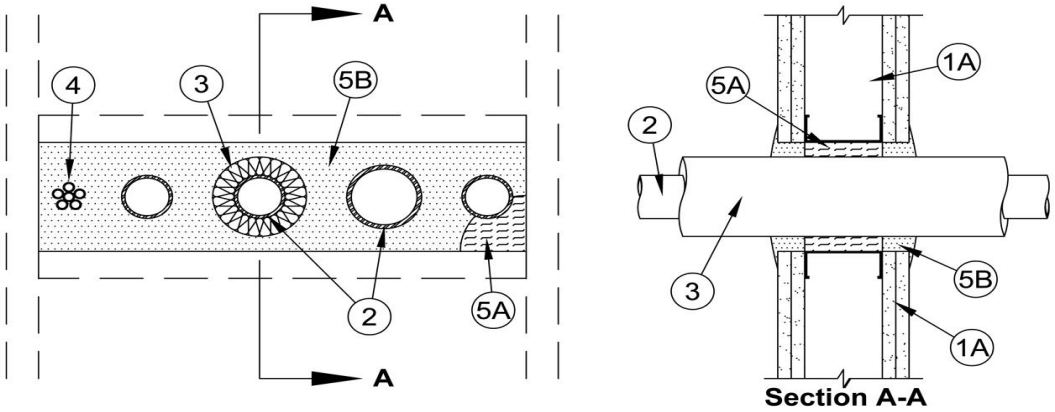
(Formerly System No. 633)

F Ratings - 1 and 2 Hr (See Item 1B)

T Rating - 0 Hr

L Rating At Ambient - 8 CFM/sq ft

L Rating At 400 F - Less Than 1 CFM/sq ft



1. **Wall Assembly -** The 1 or 2 h fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner specified in the individual U300 or U400 Series Wall and Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Studs -** Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. lumber spaced 16 in. OC. In 2 h fire-rated assemblies, steel studs to be min 2-1/2 in. wide and spaced max 24 in. OC. In 1 h fire rated assemblies, steel studs to be min 3-5/8 in. wide and spaced 24 in. OC. Additional studs shall be installed horizontally in such a manner to form a nom 22-3/4 in. wide by 6 in. high opening.
   B. **Gypsum Board* -** 5/8 in. thick, 4 ft wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. If the through penetrants are installed in a wood stud/gypsum board assembly, the max area of opening is 87 sq. in. with max dimension of 14-1/2 in.

The hourly F rating of the firestop system is equal to the hourly fire rating of the wall assembly in which it is installed.

2. **Through Penetrants -** Four pipes, conduits or tubing to be installed within the opening. The space between pipes, conduits or tubing shall be a nom 1-7/8 in. The space between pipes, conduits or tubing and periphery of opening shall be min 5/8 in. to max 1-15/16 in. Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of pipes, conduits or tubing may be used:
   A. **Steel Pipe -** Nom 3 in. diam (or smaller) Schedule 5 (or heavier) steel pipe.
   B. **Iron Pipe -** Nom 2 in. diam (or smaller) cast or ductile iron pipe.
   C. **Conduit -** Nom 3 in. diam (or smaller) steel electrical metallic tubing or steel conduit.
   D. **Copper Tubing -** Nom 2 in. diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe -** Nom 2 in. diam (or smaller) Regular (or heavier) copper pipe.
   F. **Polyvinyl Chloride (PVC) Pipe -** Nom 2 in. diam (or smaller) Schedule 40 PVC pipe for use in closed (process or supply) piping system.

3. **Pipe Covering -** One of the following types of pipe coverings shall be used:

   A. **Pipe and Equipment Covering - Marerials* -** Nom 1 in. thick hollow cylindrical heavy density (min 3.5 pcf) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. The pipe covering may be installed on one of the metallic pipes or tubing having a nom diam of 2 in. or less. The insulated pipe or tubing shall be spaced a nom 1-7/8 in. from the other through-penetrants. The annular space between the insulated through penetrant and periphery of the opening shall be a nom 1 in.

See **Pipe and Equipment Covering - Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

   B. **Pipe Covering Materials* -** Nom 1 in. thick unfaced mineral fiber pipe insulation sized to the outside diam of pipe or tube. Pipe insulation secured with min 8 AWG steel wire spaced max 12 in. OC. The insulated pipe or tubing shall be spaced a nom 1-7/8 in. from the other through-penetrants. The annular space between the insulated through penetrant and periphery of opening shall be a nom 1 in.

IIG MINWOOL L L C - High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT or High Temperature Pipe Insulation Thermaloc

   C. **Sheathing Material* -** (Not shown) - Used in conjunction with Item 3B. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 3B) with the kraft side exposed. Longitudinal joints and transverse joints sealed with metal fasteners or butt tape.

See **Sheathing Materials** (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

4. **Cables -** Max six cables to be installed within the firestop system. Cables to be spaced 1-1/2 in. from the through-penetrants. The space between the cables and periphery of opening shall range from a min 1 in. to a max 2-7/8 in. Cables to be tightly bundled together and rigidly supported on both surfaces of wall.

Any combination of the following types and sizes of copper conductor cables may be used:

   A. Max 25 pair No. 24 AWG (or smaller) telephone cables with polyvinyl chloride (PVC) insulation and jacket.

   B. Max 3/C (with ground) - No. 10 AWG (or smaller) nonmetallic sheathed ("Romex") cable with PVC insulation and jacket.

   C. Max 4 pair No. 18 AWG (or smaller) thermostat cables with PVC insulation and jacket.

5. **Firestop System -** The firestop system shall consist of the following:

   A. **Packing Material -** In 2 h fire-rated assemblies, min 2-1/2 in. thickness of min 6 pcf mineral wool batt insulation firmly packed into opening as a permanent form. In 1 h fire-rated assemblies, min 2-1/4 in. thickness of mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of wall as required to accommodate the required thickness of fill material.

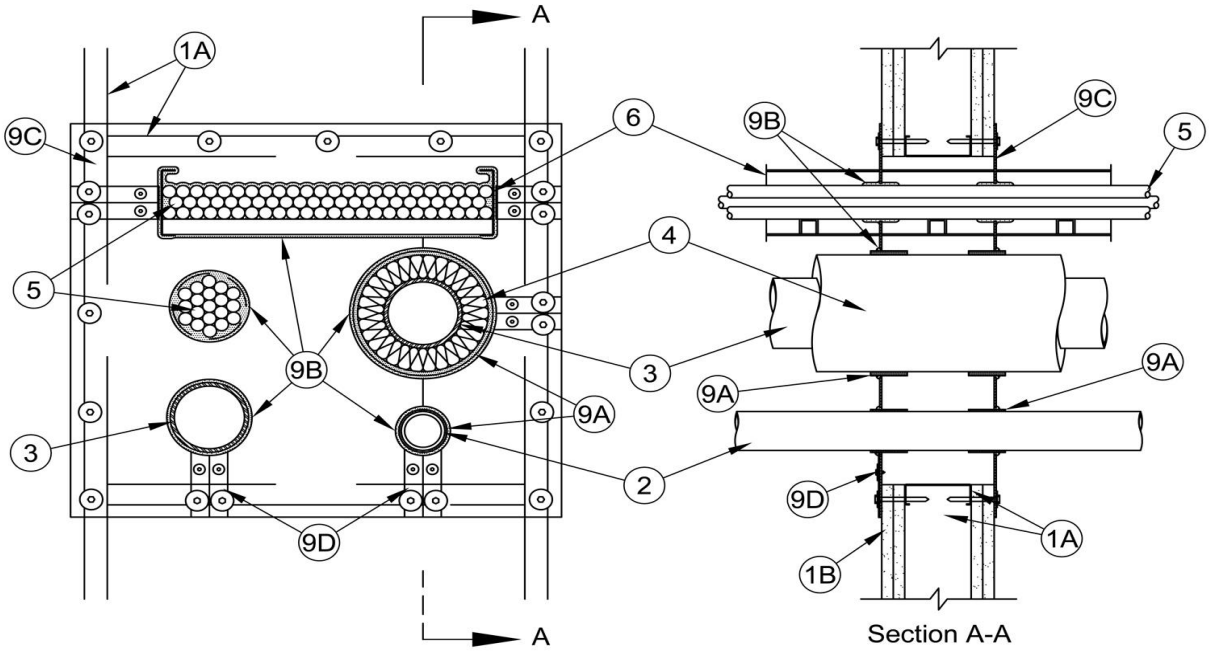
   B. **Fill, Void or Cavity Material* - Caulk -** Min 1-1/4 in. thickness of fill material applied within the annulus, on both surfaces of wall. Caulk to be forced into interstices of cable group to max extent possible. Additional caulk to be installed such that a min 1 in. is lapping beyond periphery of the opening.

SPECIFIED TECHNOLOGIES INC - SpecSeal Series SSS Sealant or SpecSeal LCI Sealant

*Bearing the UL Classification Mark

K 1 OR 2 HR. THROUGH-PENETRATION W-L-8073 "TYPE K "

System No. W-L-8073
F Ratings - 1 and 2 Hr (See Item 1)
T Rating - 0 Hr



1. **Wall Assembly -** The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described within the individual U400 or V400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall incorporate the following construction features:
   A. **Studs -** Wall framing shall consist of steel channel studs. Steel studs to be min 3-1/2 in. (89 mm) wide and spaced max 24 in. (610 mm) OC. Additional studs shall be installed horizontally to form a rectangular box around the through penetrants.
   B. **Gypsum Board* -** Thickness, type, number of layers and fasteners as specified in the individual Wall and Partition Design. Min separation between penetrants to be 1 in. (25 mm). Max area of opening 24 sq ft. (3.4 m2) with one dimension of opening being 36 in. (914 mm) or less.

The hourly F Rating of the firestop system is dependent upon the hourly rating of the wall in which it is installed.

2. **Nonmetallic Penetrants -** One or more nonmetallic pipes or conduits to be installed within the firestop system. A min separation of 3 in. (76.2 mm) shall be maintained between pipes and between pipes and the periphery of the opening. Pipes or conduits to be rigidly supported on both sides of the wall assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
   A. **Polyvinyl Chloride (PVC) Pipe -** Nom 2 in. (76 mm) diam (or smaller) Schedule 40 cellular or solid core PVC pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.
   B. **Chlorinated Polyvinyl Chloride (CPVC) Pipe -** Nom 2 in. (76 mm) diam (or smaller) SDR 13.5 CPVC pipe for use in closed (process or supply) piping systems.

C. **Rigid Nonmetallic Conduit+ -** Nom 2 in. (76 mm) diam (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).

D. **Acrylonitrile Butadiene Styrene (ABS) Pipe -** Nom 2 in. (76 mm) diam (or smaller) Schedule 40 cellular or solid core ABS pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

E. **Flame Retardant Polypropylene (FRPP) Pipe -** Nom 2 in. 51 mm) diam (or smaller) Schedule 40 FRPP pipe for use in closed (process or supply) or vented (drain, waste or vent) piping systems.

F. **Polypropylene (PP) Pipe -** Nom 1 in. (25 mm) diam (or smaller) Schedule 80 PP pipe for use in closed (process or supply) piping systems.

3. **Pipe or Conduit -** One or more metallic pipes, conduits or tubing installed within the firestop system. The space between penetrants shall be min 1 in. (25 mm). The space between penetrants and periphery of opening shall be min 1 in. (25 mm). Penetrants rigidly supported on both sides of the wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

   A. **Steel Pipe -** Nom 12 in. (305 mm) diam (or smaller) Schedule 5 (or heavier) steel pipe.

   B. **Iron Pipe -** Nom 12 in. (305 mm) diam (or smaller) cast or ductile iron pipe.

   C. **Conduit -** Nom 6 in. (152 mm) diam (or smaller) rigid steel conduit, nom 4 in. (102 mm) electrical metallic tubing (EMT) or nom 1 in. (25 mm) diam (or smaller) flexible steel conduit.

   D. **Copper Pipe or Tube -** Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe or Type L (or heavier) copper tube.

4. **Pipe Insulation -** (Optional) - Pipe insulation may be installed on one or more of the metallic pipes or tubes. When pipe insulation is used, min space between insulated metallic pipes and tubes and bare metallic pipes, conduits and tubing shall be min 2 in. The following types of pipe insulations may be used:

   A. **Pipe and Equipment Covering Materials* -** Nom 2 in. thick hollow cylindrical heavy density (min 3.5 pcf) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product.

See **Pipe and Equipment Covering Materials** (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

   B. **Pipe Covering Materials* -** Nom 2 in. thick unfaced mineral fiber pipe insulation having a nom density of 3.5 pcf (or heavier) and sized to the outside diam of the pipe or tube. Pipe insulation secured with min 8 AWG steel wire spaced max 12 in. OC.

IIG MINWOOL L L C - High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT and High Temperature Pipe Insulation Thermaloc

   C. **Sheathing Material* -** Use in conjunction with Item 3B. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 3B) with the kraft side exposed. Longitudinal and transverse joints sealed with metal fasteners or butt tape.

See **Sheathing Materials** (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

5. **Cables -** One or more max 4 in. (102 mm) diam tight bundle of cables. Cable bundle spaced min 4 in. (102 mm) from all other penetrants. Min clearance between cable bundle and periphery of opening is 1/4 in. (6 mm). Cable bundles rigidly supported on both sides of the wall. Any combination of the following types and sizes of cables may be used:

   A. Max 400 pair No. 24 AWG (or smaller) copper conductor telecommunication cable with polyvinyl chloride (PVC) jacketing and insulation or with plenum rated jacketing and insulation.

   B. Max 350 kcmil single copper conductor power cable with XLPE jacket and insulation.

   C. Max 7/C No. 12 AWG copper conductor control cable with PVC or XLPE jacket and insulation.

   D. Max 3/C No. 10 AWG metal clad or armored cable with steel or aluminum jacket.

   E. Max 3/C No. 8 AWG NM cable (Romex) with PVC insulation and jacket.

   F. Max four pair No. 22 AWG (or smaller) copper conductor data cable with plenum or non-plenum rated jacketing and insulation.

   G. Max four pair No. 22 AWG (or smaller) copper conductor data cable with plenum or non-plenum rated jacketing and insulation.

H. Max RG/U coaxial cable with plenum or non-plenum rated insulation and jacketing.

I. Fiber optic cable with plenum or non-plenum rated jacket and insulation having a max diam of 5/8 in. (16 mm).

J. Aluminum or steel armored optical fiber cables jacketed with plenum or non-plenum rated jacket and insulation having a max diam of 5/8 in.

6. **Cable Tray -** One or more cable trays may be installed within the opening with a min separation of 8 in. between trays. Max 24 in. (610 mm) wide by max 5 in. (127 mm) deep open ladder cable tray with channel-shaped side rails formed from min 0.060 in. (1.5 mm) thick (No. 16 MSG) galv steel or min 0.060 in. (1.5 mm) thick aluminum with rungs spaced max 9 in. (229 mm) OC. Min annular space between cable tray and edge of opening is 1 in. (25 mm). Cable tray spaced min 4 in. (102 mm) from all other penetrants. Cable tray to be supported on both sides of the wall assembly. Aggregate cross-sectional area of cables in cable tray not to exceed 39 percent of the cross-sectional area of the cable tray based on a max 3 in. cable loading depth within tray. Any combination of the cable types specified in Item 5 may be used.

7. **Busway+ -** (Not Shown) - One or more nom 19 in. wide (or smaller) by 5 in. deep "I" shaped aluminum enclosure containing factory-mounted copper bars rated for 600 V, 5000 A or aluminum bars rated for 600 V, 4000 A. Busway to be rigidly supported on both sides of the wall assembly. The annular space between the busway and the periphery of the opening shall be a min 1 in. (25 mm). Busways spaced min 6 in. (152 mm) from all other penetrants. The busway shall bear the UL Listing Mark and shall be installed in accordance with all provisions of Article 364 of the National Electrical Code, NFPA 70.

8. **Duct -** (Not Shown) - One or more max 12 in. by 14 in. (305 by 356 mm) min No. 24 gauge (0.61 mm) rectangular steel duct or max 12 in. diam (305 mm) min No. 28 gauge (0.38 mm) round steel duct, to be installed within the firestop system. Ducts to be spaced min 4 in. (102 mm) from all other penetrants. The clearance between the steel ducts and the periphery of the opening shall be min 1 in. (25 mm). Steel retaining angles (Item 9E) are required to be used with rectangular steel ducts. Steel duct to be rigidly supported on both sides of the wall assembly.

9. **Firestop System -** Used in conjunction with The firestop shall consist of the following:

A. **Fill, Void or Cavity Material* - Wrap Strip -** Nom 1/8 in. (3.2 mm, BLU2) or 3/16 in. (4.8 mm, BLU) thick intumescent material supplied in 2 in. (51 mm) wide strips or nom 1/4 in. (6.4 mm, RED) thick intumescent material supplied in 1-1/2 in. (38 mm) wide strips faced on both sides with a plastic film,. The SpecSeal BLU or SpecSeal BLU2 wrap strip shall be used in conjunction with nonmetallic pipes or nonmetallic conduits. The SpecSeal RED wrap strip shall be used in conjunction with insulated pipes. Wrap strip tightly-wrapped around each insulated metallic pipe, nonmetallic pipe or nonmetallic conduit and secured in place with one layer of aluminum foil tape. Wrap strips to project approx 1/2 in. (13 mm) beyond surface of the composite sheet (Item 6C) away from wall on each side of the wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal RED Wrap Strip, SpecSeal BLU Wrap Strip or SpecSeal BLU2 Wrap Strip

B. **Fill, Void or Cavity Materials* - Putty or Sealant -** Min 3/16 in. (5 mm) thick by 2 in. (51 mm) wide band of putty required around entire periphery of each penetrant. Adjoining lengths of putty strips butted together by hand. One layer of putty required around penetrants on both sides of wall assembly installed to project approx 1 in. (25 mm) beyond each face of the composite sheet (Item 9B) on both sides of wall assembly. As an alternate to the putty described above, sealant may be used. One layer of 3/16 in. wide by 3/16 in. (5 mm) thick putty strips or 3/16 in. (5 mm) diam bead of caulk positioned under composite sheet around entire perimeter of through opening on both sides of the wall. Generous application of putty to be applied around the base of the penetrants at their egress from the intumescent sheet on both sides of the wall assembly. Caulk or putty to be applied into interstices between cables to max extend possible and into annular space between the cables or cable tray and the edges of the opening in the composite sheet.

SPECIFIED TECHNOLOGIES INC - SpecSeal Firestop Putty, SpecSeal Series SSS Sealant or SpecSeal LCI Sealant

C. **Fill, Void or Cavity Materials* - Composite Sheet -** Foil-faced sheet with galv steel sheet backer. Sheets may be installed as one solid sheet, cut in two pieces or split on one side of the penetrant(s). Opening in intumescent sheet to be max 1/4 in. (6 mm) larger than through penetrants. Sheets cut to lap a min of 2 in. (51 mm) on wall surfaces. Sheet to be installed with the galv steel sheet backer exposed (aluminum foil facing against wall surface) and secured to wall surface, through gypsum wallboard layers, with min 1-1/2 (3 mm) in long steel drywall screws in conjunction with min 1-1/4 (32 mm) diam steel fender washers. Max spacing of fasteners not to exceed 6 in. (152 mm).

SPECIFIED TECHNOLOGIES INC - SpecSeal Composite Sheet

D. **Steel Cover Strip -** Min 2 in. (51 mm) wide strip of min 0.018 in. (0.46 mm) thick galv steel centered over entire length of each butted seam or slit made in the intumescent sheet (Item 8C). Prior to installation of the steel strip, the seam or slit in the intumescent sheet shall be covered with a nom 1/8 by 1/2 in. (3.2 mm by 13 mm) ribbon of putty (Item 8B). Steel cover strip secured to galv steel sheet backer of composite sheet with steel sheet metal screws or steel rivets spaced max 3 in. (76 mm) OC on each side of seam or slit.

E. **Retaining Angles -** (Not Shown) - Min 2 by 2 in. (51 by 51 mm) No. 16 gauge (1.5 mm, or heavier) galv steel angles installed on all four sides of rectangular duct on both surfaces of wall. Angles on two opposing sides of duct to extend the full length of composite sheet (max 40 in.) such that the ends extend over the wall surface by min 2 in. Angles attached to duct with min 1/4 in. (6 mm) long, No. 10 (or larger) steel sheet metal screws spaced a max of 1 in. (25 mm) from each end of duct and spaced a max of 6 in. (152 mm) OC.

F. **Support Channel -** (Optional, Not Shown) - When area of through opening exceeds 1440 sq in. (7355 cm2), support channels to be used behind min one continuous seam in composite sheet (Item 8C) flush with both surfaces of the wall. Support channels to be min 1-5/8 in. by 1-5/8 in. (41 by 41 mm) min 12 gauge (2.4 mm) painted or galv steel. Ends of steel channel bolted or welded to steel angles bolted or welded to wall framing inside opening on both ends of channel. Support channel to be flush with surfaces of gypsum wallboard wall. Composite sheet secured to steel support channels with steel sheet metal screws in conjunction with min 1-1/4 in. (32 mm) diam steel fender washers spaced max 6 in. (152 mm) OC. Support channel may be used beneath butted seam of intumescent sheets or located away from intumescent sheet seam.

G. **Firestop Device* -** (Not Shown) - One or more banks of one, two, three, four or seven firestop device modules ganged together. A min separation of 3 in. (76 mm) shall be maintained between banks of firestop devices. Each firestop device module consists of a 3 by 3 by 10-1/2 in. (76 by 76 by 267 mm) long galv steel tube with an intumescent material lining. Firestop device modules to be installed in accordance with the accompanying installation instructions. Permissible cable types listed under Item 5. The space between the firestop device module(s) and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3.2 mm) for square or rectangular plates and min 0 in. (0 mm, point contact) to max 1/2 in. (13 mm) when circular wall plates are used. Firestop device module(s) secured in place by means of steel wall plates installed with gasketing material supplied with product. Steel wall plates installed on both sides of wall and secured to each device by means of steel set screws provided with wall plates. Four- and seven- gang steel wall plates shall be secured to studs through gypsum wallboard layers with steel drywall screws or to composite sheet using four steel sheet metal screws. Each firestop device module is to be installed with ends projecting an equal distance beyond each surface of the wall assembly.

SPECIFIED TECHNOLOGIES INC - EZ PATH Series 33 Fire Rated Pathway

H. **Firestop Device* - Extension Module -** (Optional, Not Shown) - Module attached to ends of 3 by 3 by 10-1/2 in. (76 by 76 by 267 mm) long firestop device (Item 9G) to increase its length to facilitate installations in thicker walls. Each module consists of a 3 by 3 by 6 in. (76 by 76 by 152 mm) long galv steel tube with an intumescent material lining. Extension module to be installed in accordance with the accompanying installation instructions. Permissible cable types listed under Item 5. When module is used, firestop device (Item 9G) and extension module(s) secured in place by means of steel wall plates installed with gasketing material supplied with product. Steel wall plates installed on both sides of wall and secured to each device or extension module(s) by means of steel set screws provided with wall plates. Firestop device and extension module(s) assembly to be installed with ends projecting an equal distance beyond each surface of the wall assembly.

SPECIFIED TECHNOLOGIES INC - EZ PATH Extension

I. **Firestop Device* -** (Not Shown) - One or more firestop device module(s) consisting of a 1.4 by 1.4 by 10-1/2 in. (36 by 36 by 267 mm) long galv steel tube with an intumescent material lining. Firestop device module to be installed in accordance with the accompanying installation instructions. Permissible cable types listed under Item 5. The space between the firestop device module and the periphery of the opening shall be min 0 in. (0 mm, point contact) to max 1/8 in. (3.2 mm). Firestop device module secured in place by means of steel wall plates installed with gasketing material supplied with product. Steel wall plates installed on both sides of wall and secured to each device by means of steel set screws provided with device. The firestop device module is to be installed with ends projecting an equal distance beyond each surface of the wall assembly.

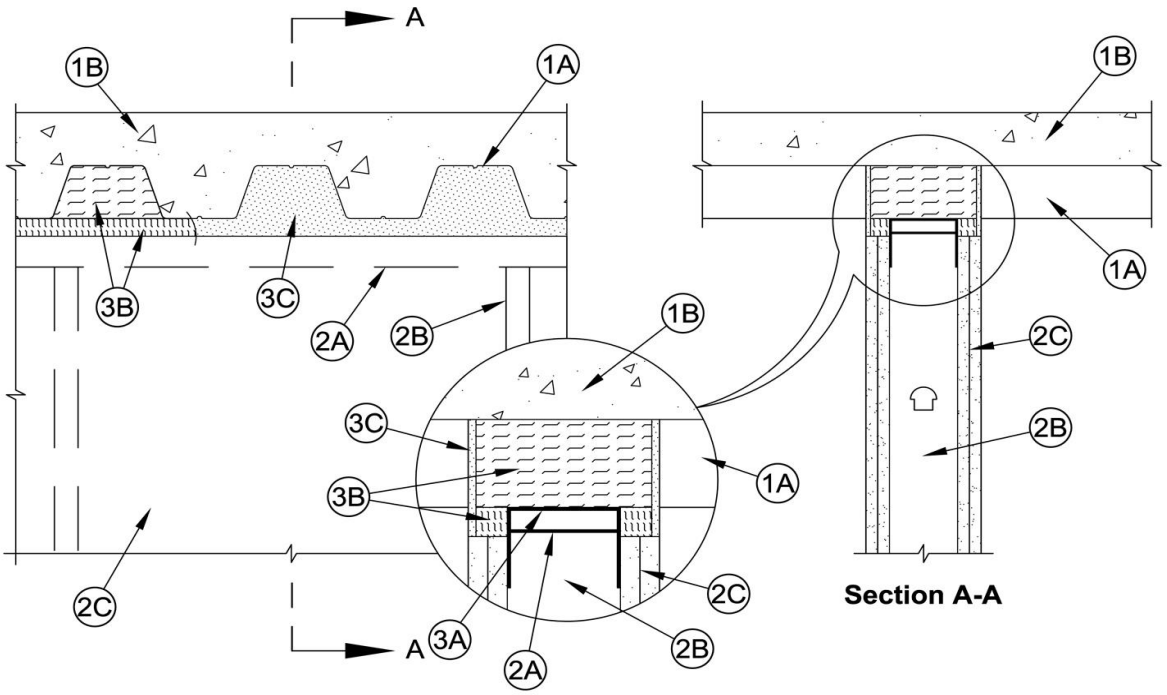
1 OR 2 HR. HEAD WALL JOINT HW-D-0034 "TYPE ◇L◇ "

System No. HW-D-0034
Assembly Ratings - 1 and 2 Hr (See Item 2)
Nominal Joint Width - 1 In.
L Rating At Ambient - Less Than 1 CFM/Lin Ft
L Rating At 400°F - Less Than 1 CFM/Lin Ft
Class II Movement Capabilities - 25% Compression or Extension



1. **Floor Assembly -** The fire-rated fluted steel deck/concrete floor assembly shall be constructed of the materials and in the manner described in the individual Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Steel Floor And Form Units* -** Max 3 in. (76 mm) deep galv steel fluted floor units.
   B. **Concrete -** Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

1A. **Roof Assembly -** (Not Shown) - As an alternate to the floor assembly (Item 1), a fire rated fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P900 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly fire rating of the roof assembly shall be equal to or greater than the hourly fire rating of the wall assembly. The roof assembly shall include the following construction features:
   A. **Steel Roof Deck -** Max 3 in. (76 mm) deep galv steel fluted roof deck.
   B. **Roof Insulation -** Min 2-1/4 in. (57 mm) thick poured insulating concrete, as measured from the top plane of the steel roof deck.
   C. **Roof Covering* -** Hot mopped or cold-application materials compatible with insulating concrete.

2. **Wall Assembly -** The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Floor and Ceiling Runners -** Floor and ceiling runners of wall assembly shall consist of galv steel channels sized to accommodate steel studs. Ceiling runner to be provided with min 1-1/4 in. (32 mm) to max 2 in. (51 mm) flanges. When deflection channel (Item 3A) is used, flange height of ceiling runner is to be equal to or greater than flange height of deflection channel and the ceiling runner is to nest within the deflection channel with a 1/2 to 3/4 in. (13 to 19 mm) gap maintained between the top of the ceiling runner and the top of the deflection channel. When deflection channel is not used, , ceiling runner to be provided with min. 1-1/2 in. (38 mm) flanges. Ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys with steel masonry anchors or welds spaced max 24 in. (610 mm) OC.

   A1. **Light Gauge Framing* - Clipped Ceiling Runner -** As an alternate to the ceiling runner in Item 2A, clipped runner to consist of galv steel channel with clips preformed in track flanges which positively engage the inside flange of the steel studs (Item 2B). Track sized to accommodate steel studs (Item 2B). Track flanges to be min 2-1/2 in. (64 mm). Clipped ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys with steel masonry anchors spaced max 12 in. (305 mm) OC. When clipped ceiling runner is used, deflection channel (Item 3A) shall not be used.

TOTAL STEEL SOLUTIONS L L C - Snap Trak

   A2. **Light Gauge Framing* - Slotted Ceiling Runner -** As an alternate to the ceiling runner in Item 2A, ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Items 2B). Ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys with steel masonry anchors spaced max 24 in. (610 mm) OC. When slotted ceiling runner is used, deflection channel (Item 3A) shall not be used.

CALIFORNIA EXPANDED METAL PRODUCTS CO - CST

SCAFCO STEEL STUD MANUFACTURING CO

BRADY CONSTRUCTION INNOVATIONS INC,

DBA SLIPTRACK SYSTEMS - SLP-TRK

STEELER INC - Steeler Slotted Ceiling Runner

   A3. **Light Gauge Framing - Floor and Ceiling Runners -** As an alternate to the ceiling and floor runners in Item 2A, 2A1 and 2A2, floor and ceiling runners to consist of galv steel channel sized to accommodate the Light Gauge Framing* Slotted Stud (Item 2B1) or Light Gauge Framing* Slider C-Clip System (Item 2B2). Floor and ceiling runners to be provided with min 1-1/4 in. and 3 in. (32 and 76 mm) flanges, respectively. Ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys with steel masonry anchors spaced max 12 in. (305 mm) OC. When ceiling runner is used, deflection channel (Item 3A) shall not be used.

STEELER INC - Floor and Ceiling Runners

   A4. **Light Gauge Framing*- Notched Ceiling Runner -** As an alternate to the ceiling runners in Items 2A through 2A3, notched ceiling runners to consist of C-shaped galv steel channel with notched return flanges sized to accommodate steel studs (Item 2B). Notched ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys with steel masonry anchors spaced max 24 in. (610 mm) OC. When notched ceiling runner is used, deflection channel (Item 3A) shall not be used.

DENMAR STEEL INC - Type SCR

   B. **Studs -** Steel studs to be min 3-1/2 in (89 mm) wide. Studs cut 1/2 to 3/4 in. (13 to 19 mm) less in length than assembly height with bottom nesting in and secured to floor runner. When deflection channel (Item 3A) is used, steel studs attached to ceiling runner with sheet metal screws located 1/2 in. (13 mm) below the bottom to the deflection channel. When deflection channel is not used, studs to nest in ceiling runner without attachment. When slotted ceiling runner (Item 2A2) is used, steel studs secured to slotted ceiling runner with No. 8 by 1/2 in. (13 mm) long wafer head steel screws at midheight of slot on each side of wall. Stud spacing not to exceed 24 in. (610 mm) OC.

   B1. **Light Gauge Framing* - Slotted Studs -** Slotted steel stud to be used in conjunction with **Light Gauge Framing* - Floor and Ceiling Runners** (Item 2A3). Slotted steel studs to be min 3-1/2 in. (89 mm) wide. Slotted steel studs cut 1 in. (25 mm) less in length than assembly height with bottom nesting in and secured to both ceiling and floor runners. Ceiling runner secured to preformed slot within steel stud by means of No. 10 by 3/4 in. (19 mm) long low profile head steel screw. Floor runner attached to bottom of steel stud by means of No. 8 by 1/2 in. (13 mm) long pan head steel screw. Slotted steel stud spacing not to exceed 24 in. (610 mm) OC.

STEELER INC - Slotted Stud

B2. **Light Gauge Framing* - Slider C-Clip System -** As an alternate to the **Light Gauge Framing* - Slotted Steel Studs** (Item 2B1), a Slider C-Clip System consisting of a C shaped steel clip with a slotted opening and a steel stud to be used in conjunction with **Light Gauge Framing - Floor and Ceiling Runners** (Item 2A3). Steel clips and studs to be min 3-1/2 in. (89 mm) wide. Steel clip inserted into inside flange of steel stud without attachment. Total length of steel stud cut 1 in. (25 mm) less than assembly height with bottom of steel stud nesting in and secured to floor runner. Floor runner attached to bottom of steel stud by means of No. 8 by 1/2 in. (13 mm) long pan head steel screw. Ceiling runner secured to steel C-Clip by means of No. 10 by 3/4 in. (19 mm) long pan head steel screw located 3/8 in. (10 mm) below top of ceiling runner. Top row of gypsum board screws shall be centered within the preformed slot of the C-Clip. Steel stud and steel clips spacing not to exceed 24 in. (610 mm) OC.

STEELER INC - Slider C Clip System

C. **Gypsum Board* -** Gypsum board sheets installed to a min total thickness of 5/8 in. or 1-1/4 in. (16 or 32 mm) on each side of wall for 1 hr or 2 hr fire rated wall, respectively. Wall to be constructed in the individual U400 or V400 Series Design in the UL Fire Resistance Directory, except that a nom 1 in. (25 mm) gap shall be maintained between the top of the wallboard and the bottom surface of the steel floor or roof deck. The screws attaching the gypsum board to the studs along the top of the wall shall be located 1 in. (25 mm) below the bottom of the ceiling runner. No gypsum board attachment screws shall be driven into the ceiling runner or into the optional deflection channel

The hourly fire rating of the joint system is dependent upon the hourly fire rating of the wall assembly in which it is installed.

3. **Joint System - Max separation between bottom of floor or roof deck and top of wall (at time of installation of joint system) is 1 in. The joint system is designed to accommodate a max 25 percent compression or extension from its' installed width.** The joint system shall consist of forming and fill materials, with or without a deflection channel (Item 3A), as follows:

A. **Deflection Channel -** (Optional) - Max 2 in. (51 mm) deep min 24 gauge galv steel channel sized to accommodate ceiling runner (Item 2A). Deflection channel installed perpendicular to direction of fluted steel deck and secured to valleys of with steel masonry anchors or welds spaced max 24 in. (610 mm) OC. The ceiling runner (Item 2A) is installed within the deflection channel to maintain a 1/2 to 3/4 in. (13 to 19 mm) gap between the top of the ceiling runner and the top of the deflection channel. The ceiling runner nests inside the deflection channel without attachment.

B. **Forming Material* -** Min 4-1/4 in. or 5-5/8 in. (108 or 149 mm) depth, for 1 hr or 2 hr fire rated wall, respectively, of 4 pcf (64 kg/m3) mineral wool batt insulation cut to the shape of the fluted deck, approx 20 percent larger than the area of the flutes and compressed into the flutes of the steel floor or roof deck between the top of the deflection channel and the steel floor or roof deck. Additional 2 in. (51 mm) thick by 1 in. (25 mm) wide sections of mineral wool batt insulation are compressed 50 percent and installed cut edge first to fill the 1 in. (25 mm) gap between the top of the wall and bottom of the steel floor or roof deck. The forming material shall be recessed from each surface of wall to accommodate the required thickness of fill material.

FIBREX INSULATIONS INC - FBX Safing Insulation

THERMAFIBER INC - Type SAF

ROCK WOOL MANUFACTURING CO - Delta Safing

ROXUL ASIA SDN BHD - Safe

ROXUL INC - Safe

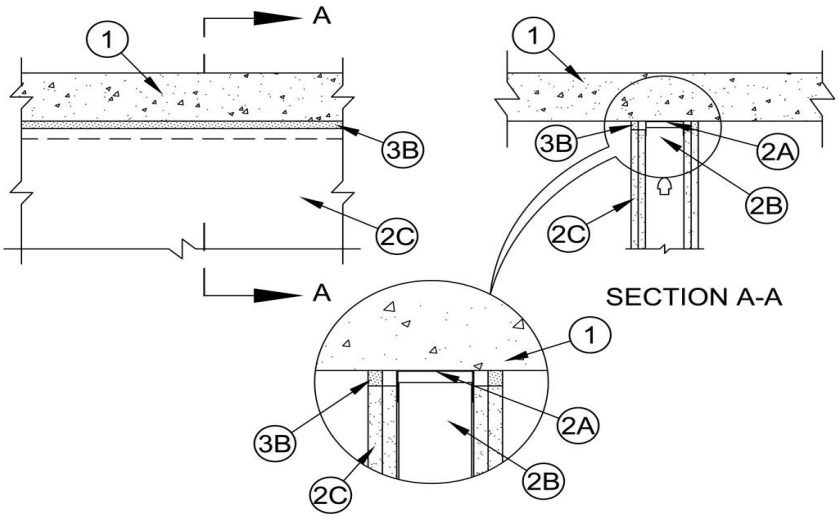
C. **Fill, Void or Cavity Material* - Sealant -** Min 1/4 in. (6 mm) thickness of fill material installed on each side of the wall in the flutes of the steel floor or roof deck and between the top of the wall and the bottom of the steel floor or roof deck, flush with each surface of wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal ES Sealant

*Bearing the UL Classification Mark

M 1 OR 2 HR. HEAD WALL JOINT HW-D-0483 "TYPE M "

System No. HW-D-0483
Assembly Ratings - 1 and 2 Hr (See Item 2)
Maximum Joint Width - 3/4 In.
Class II Movement Capabilities - 25% Compression



1. **Floor Assembly -** Min 4-1/2 in. (114 mm) thick steel-reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) structural concrete. Floor may also be constructed of any UL Classified hollow-core **Precast Concrete Units*.**

   See **Precast Concrete Units** (CFTV) in Fire Resistance Directory for names of manufacturers.

2. **Wall Assembly -** The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

   A. **Steel Floor and Ceiling Runners -** Floor and ceiling runners of wall assembly shall consist of galv steel channels sized to accommodate steel studs (Item 2B) with min 1-1/4 in. (32 mm) long flanges. Ceiling runner secured to concrete floor slab with steel masonry anchors spaced max 24 in. (610 mm) OC.

   A1. **Light Gauge Framing* - Clipped Ceiling Runner -** As an alternate to the ceiling runner in Item 2A, clipped runner to consist of galv steel channel with clips preformed in track flanges which positively engage the inside flange of the steel studs (Item 2B). Track sized to accommodate steel studs (Item 2B). Track flanges to be min 2-1/2 in. (64 mm) long. Clipped ceiling runner secured to concrete floor slab with steel masonry anchors spaced max 24 in. (610 mm) OC.

   CALIFORNIA EXPANDED METAL PRODUCTS CO - CST

   TOTAL STEEL SOLUTIONS L L C - Snap Trak

   A2. **Light Gauge Framing* - Slotted Ceiling Runner -** As an alternate to the ceiling runner in Item 2A, ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Items 2B). Ceiling runner secured to concrete floor slab with steel masonry anchors spaced max 24 in. (610 mm) OC.

   BRADY CONSTRUCTION INNOVATIONS INC,

   DBA SLIPTRACK SYSTEMS - SLP-TRK

   CLARKWESTERN BUILDING SYSTEMS INC - Type SLT, SLT-H

   METAL-LITE INC - The System

A3. **Light Gauge Framing* - Vertical Deflection Ceiling Runner -** As an alternate to the ceiling runner in Item 2A, vertical deflection ceiling runner to consist of galv steel channel with slotted vertical deflection clips mechanically fastened within runner. Slotted clip provided with step bushings for permanent fastening of steel studs. Flanges sized to accommodate steel studs (Item 2B). Vertical deflection ceiling runner secured to concrete floor slab with steel masonry anchors spaced max 24 in. (610 mm) OC.

THE STEEL NETWORK INC - VertiTrack VTD358, VTD400, VTD600 and VTD800

A4. **Light Gauge Framing* - Notched Ceiling Runner -** As an alternate to the ceiling runners in Items 2A through 2A3, notched ceiling runners to consist of C-shaped galv steel channel with notched return flanges sized to accommodate steel studs (Item 2B). Notched ceiling runner secured to concrete floor slab with steel masonry anchors spaced max 24 in. (610 mm) OC.

OLMAR SUPPLY INC - Type SCR

B. **Studs -** Steel studs to be min 3-1/2 in. (89 mm) wide. Studs cut 1/2 in. (13 mm) to 3/4 in. (19 mm) less in length than assembly height with bottom nesting in and resting on floor runner and with top nesting in ceiling runner without attachment. When deflection channel (Item 3A) is used, steel studs attached to ceiling runner with sheet metal screws located 1/2 in. (13 mm) below the bottom of the deflection channel. When slotted ceiling runner (Item 2A2) is used, steel studs secured to slotted ceiling runner with No. 8 by 1/2 in. (13 mm) long wafer head steel screws at midheight of slot on each side of wall. When vertical deflection ceiling runner (Item 2A3) is used, steel studs secured to slotted vertical deflection clips, through bushings, with steel screws at midheight of each slot. Stud spacing not to exceed 24 in. (610 mm) OC.

C. **Gypsum Board* -** Gypsum board sheets installed to a min total thickness of 5/8 in. (16 mm) and 1-1/4 in. (32 mm) on each side of wall for 1 and 2 hr fire rated assemblies, respectively. Wall to be constructed as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory, except that a max 3/4 in. (19 mm) gap shall be maintained between the top of the gypsum board and the bottom surface of the floor. In addition, the top row of screws shall be installed into the steel studs 1/2 to 1 in. (13 to 25 mm) below the bottom edge of the ceiling runner flange.

The hourly fire rating of the joint system is dependent on the hourly fire rating of the wall assembly in which it is installed.

3. **Joint System -** Max separation between bottom of floor and top of wall is 3/4 in. (19 mm). The joint system is designed to accommodate a max 25 percent compression from its installed width. . The joint system consists of the following:

A. **Forming Material -** (Optional, Not Shown) - In 2 hr fire rated wall assemblies, polyethylene backer rod, mineral wool batt insulation or fiberglass batt insulation friction fit into joint opening.

B. **Fill, Void or Cavity Material* - Sealant -** Min 5/8 in. (16 mm) thickness of fill material applied within joint opening on both sides of wall, flush with both surfaces of wall. As an option in 1 hr fire rated walls, bond breaker tape applied to ceiling channel (Item 2A) prior to installation of fill material.

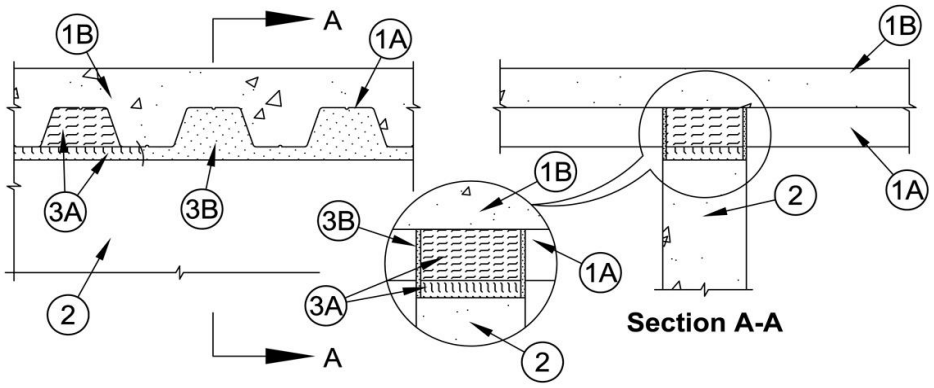
SPECIFIED TECHNOLOGIES INC - SpecSeal LC150 Sealant, SpecSeal LE600 Sealant

*Bearing the UL Classification Mark

N 2 HR. HEAD WALL JOINT HW-D-0039 "TYPE N "

System No. HW-D-0039

Assembly Rating - 2 Hr
Nominal Joint Width - 1 In.
L Rating At Ambient - Less Than 1 CFM/Lin Ft
L Rating At 400°F - Less Than 1 CFM/Lin Ft
Class II Movement Capabilities - 25% Compression Or Extension



1. **Floor Assembly -** The fire-rated fluted steel deck/concrete floor assembly shall be constructed of the materials and in the manner described in the individual Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:
   A. **Steel Floor And Form Units* -** Max 3 in. (76 mm) deep galv steel fluted floor units.
   B. **Concrete -** Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

1A. **Roof Assembly -** (Not Shown) - As an alternate to the floor assembly (Item 1), a fire rated fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P900 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly fire rating of the roof assembly shall be equal to or greater than the hourly fire rating of the wall assembly. The roof assembly shall include the following construction features:
   A. **Steel Roof Deck -** Max 3 in. (76 mm) deep galv steel fluted roof deck.
   B. **Roof Insulation -** Min 2-1/4 in. (57 mm) thick poured insulating concrete, as measured from the top plane of the steel roof deck.
   C. **Roof Covering* -** Hot mopped or cold-application materials compatible with insulating concrete.

2. **Wall Assembly -** Min 8 in. (203 mm) thick reinforced light or normal weight (100-150 pcf or 1600-2400 kg/m3) structural concrete. Wall may also be constructed of any UL Classified Concrete Blocks*.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Joint System - Max separation between bottom of floor or roof deck and top of wall (at time of installation of joint system) is 1 in. (25 mm). The joint system is designed to accommodate a max 25 percent compression or extension from it's installed width.** The joint system shall consist of a forming material and fill material in the flutes of the steel floor or roof deck and between the top of the wall and bottom of the steel floor or roof deck as follows:

   A. **Forming Material* -** Min 7 in. (178 mm) width of 4 pcf (64 kg/m3) mineral wool batt insulation firmly packed into the flutes of the steel floor or roof deck and between the top of the concrete wall and the bottom of the steel floor or roof deck and recessed from each surface of wall to accommodate the required thickness of fill material. Mineral wool batt insulation shall be packed into opening edge first with a min 50 percent compression.

   B. **Fill, Void or Cavity Material* - Sealant -** Min 1/4 in. (6 mm) thickness of fill material installed on each side of the concrete wall in the flutes of the steel floor or roof deck and between the top of the wall and the bottom of the steel floor or roof deck flush with each surface of concrete wall.

SPECIFIED TECHNOLOGIES INC - SpecSeal ES Sealant

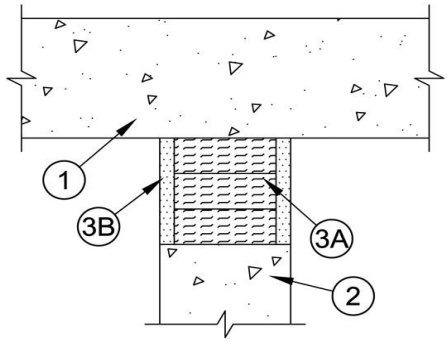
*Bearing the UL Classification Mark

O

1 OR 2 HR. HEAD WALL JOINT HW-D-1001 "TYPE ◇O◇ "

System No. HW-D-1001

Assembly Ratings - 1, 2 & 3 Hr (See Item 1)
L Rating At Ambient - Less Than 1 CFM/LIN Ft
L Rating At 400 F - Less Than 1 CFM/LIN Ft
Nominal Joint Width - 4 In.
Class II Movement Capabilities - 25% Compression Or Extension



1. **Floor Assembly -** Lightweight or normal weight reinforced (100-150 pcf or 1600-2400 kg/m3) structural concrete. The hourly rating of the joint system is dependent upon the min thickness of the floor as tabulated below:

Min Thickness of Floor, In (mm)	Assembly Rating, Hr
2-1/2 (64)	1
3-!/4 (83)	2
4-1/2 (114)	3

2. **Wall Assembly -** Min 5 in. (127 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) structural concrete. Wall may also be constructed of any UL Classified **Concrete Blocks*.**

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Joint System - Max separation between bottom of floor and top of wall (at time of installation of joint system) is 4 in. (102 mm). The joint system is designed to accommodate max 25 percent compression or extension from its installed width.** The joint system shall consist of the following:

   A. **Forming Material* -** Min 4 pcf (64 kg/m3) mineral wool batt insulation installed in joint opening as a permanent form. Pieces of batt cut to min width of 4 in. (102 mm) and installed edge-first into joint opening, parallel with joint direction, such that batt sections are compressed min 50 percent in thickness and such that the compressed batt sections are recessed from each surface of the wall to accommodate the required thickness of fill material. Adjoining lengths of batt to be tightly butted with butted seams spaced min 16 in. (406 mm) apart along the length of the joint.

FIBREX INSULATIONS INC - FBX Safing Insulation

IIG MINWOOL L L C - MinWool-1200 Safing

ROCK WOOL MANUFACTURING CO - Delta Board

ROXUL ASIA SDN BHD - SAFE

END SECTION 07 2700

SECTION 07 27 29 - AIR-BARRIER COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes vapor-retarding air-barrier coatings.

B. Related Requirements:

1. Section 06 16 00 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.

1.2 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.
2. Air Barrier Coating manufacturer representative shall attend.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.

B. Shop Drawings: For air-barrier assemblies.

1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
2. Include details of interfaces with other materials that form part of air barrier.

C. Sustainable Design Documentation Submittals: Refer to section 01 81 13.14 “Sustainable Design Requirements – LEED V4 BD+C”.

1. Product Certificates: Provide the following:

a. Corporate Sustainability Reporting (CSR’s)

b. Health Product Declarations (HPD's)

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.

B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Mockups for testing: Build mockups to set quality standards for materials and execution.

1. Build integrated mockups of exterior wall assembly, 150 sq. ft., incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
   a. Coordinate construction of mockups to permit inspection by owners' testing agency of air barrier before external insulation and cladding are installed.
   b. Include junction with roofing membrane, building corner condition, and foundation wall intersection.
   c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Visual Mock-ups: additional mock-up shall be completed for visual inspection in accordance with Section 01 43 39 "Visual Mock-Up Requirements".

1.7 DELIVERY, STORAGE, AND HANDLING

A. Remove and replace liquid materials that cannot be applied within their stated shelf life.

B. Protect stored materials from direct sunlight.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier performance.
2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Air barrier shall be capable of performing as a continuous vapor-retarding air barrier. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

2.3 VAPOR-RETARDING, AIR-BARRIER COATING

A. Vapor-Retarding, Air-Barrier Coating: Synthetic polymer membrane.

1. Basis-of-Design Product: Subject to compliance with requirements, provide GCP Applied Technologies, Perm-A-barrier NPL 10 or a comparable, impermeable product by one of the following:
   a. Carlisle Coatings & Waterproofing Inc.
   b. Henry Company.
   c. Approved Substitution.
2. Performance Requirements
   a. Dry mill thickness not less than 40 mils.
   b. Water penetration resistance: joint treatment and primary air barrier and vapor barrier material, comply with ICC ES AC 212, par 4.8.3, no water penetration after 5 hours hydrostatic pressure
   c. Nail sealability: ASTM D 1970, 7.9.1, primary air barrier and vapor barrier passes
   d. Elongation: ASTM D 413, primary air barrier and vapor barrier material, > 500% at 7 days
   e. Adhesion: joint treatment and primary air barrier and vapor barrier material, ASTM D 4541, $\geq$ 35 psi, or exceeds strength of glass mat facing on glass mat gypsum substrates
   f. Surface burning: ASTM E 84, joint treatment and primary air barrier and vapor barrier material flame spread $\leq$ 25, smoke developed $\leq$ 450, Class A building material
   g. Water vapor permeance: ASTM E 96 Method A, < 0.1 perms

h. Material air leakage: ASTM D 2178, primary air barrier and vapor barrier and joint treatment < 0.0002 cfm/ft2 at 1.57 psf
i. Assembly air leakage: ASTM E 2357, ≤ 0.004 cfm/ft^2 air leakage after conditioning protocol
j. Field adhesion testing: ASTM D 4541, ≥ 35 psi (207 kPA) or exceeds strength of glass mat facing on glass mat gypsum substrates

2.4 ACCESSORY MATERIALS

A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.

B. Primer: Liquid waterborne primer recommended for substrate by air-barrier material manufacturer.

C. Butyl Strip: Vapor retarding, 30 to 40 mils thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.

D. Joint Reinforcing Strip: Air-barrier manufacturer's self-adhering glass-fiber-mesh tape.

E. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.

F. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.

G. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187-inch-thick, and Series 300 stainless-steel fasteners.

H. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, 1.5- to 2.0-lb/cu. ft density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

I. Modified Bituminous Transition Strip: Vapor retarding, 40 mils thick, smooth surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil-thick polyethylene film with release liner backing.

J. Joint Sealant: Single component, neutral curing, ultra-low modulus sealant compatible with air barrier coating and provided by air barrier coating manufacturer.

1. Basis of design product: GCP Applied Technologies, PAB S100.

~~J.A. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 07 92 00 "Joint Sealants."~~

~~1. Provide manufacturer evidence of compatibility with air barrier.~~

K. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that masonry joints are flush and completely filled with mortar.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prime substrate and apply a single thickness of air-barrier manufacturer's recommended preparation coat extending a minimum of 3 inches along each

side of joints and cracks. Apply a double thickness of air-barrier coating material and embed joint reinforcing in preparation coat.

B. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of air-barrier coating material at joints. Tape joints with joint reinforcing after first layer is dry. Apply a second layer of air-barrier coating material over joint reinforcing.

3.4 TRANSITION STRIP INSTALLATION

A. General: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install modified bituminous transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.

~~B.~~A. ~~Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier coating material on same day. Reprime areas exposed for more than 24 hours.~~

~~1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.~~

~~C.~~B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

~~D.~~C. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

~~E.~~D. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

~~F.~~E. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply modified bituminous transition strip so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.

1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.

~~G.~~F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

~~H.~~G. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

~~I.~~H. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

~~J.~~I. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.5 AIR-BARRIER COATING INSTALLATION

A. General: Apply air-barrier coating to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply air-barrier coating within manufacturer's recommended application temperature ranges.

~~1. Apply primer to substrates at required rate and allow it to dry.~~
~~1.1. Limit priming to areas that will be covered by air-barrier coating on same day. Reprime areas exposed for more than 24 hours.~~
~~3.1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.~~

B. Air-Barrier Coatings: Apply a continuous unbroken air-barrier coating to substrates according to the following thickness. Apply an increased thickness of air-barrier coating in full contact around protrusions such as masonry ties.

1. Vapor-Retarding, Air-Barrier Coating: Total dry film thickness as recommended in writing by manufacturer to meet performance requirements, applied in two or more equal coats.
2. Apply additional coats as needed to achieve void- and pinhole-free surface.

C. Apply strip and transition strip a minimum of 1 inch onto cured air-barrier material or strip and transition strip over cured air-barrier material overlapping 3 inches onto each surface according to air-barrier manufacturer's written instructions.

D. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.

E. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Construction Manager will engage a qualified testing agency to perform tests and inspections.

B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements.

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Continuous structural support of air-barrier system has been provided.
3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.

4. Site conditions for application temperature and dryness of substrates have been maintained.
5. Maximum exposure time of materials to UV deterioration has not been exceeded.
6. Surfaces have been primed, if applicable.
7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.
9. Strips and transition strips have been firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

C. Air Barrier manufacturer shall make regularly scheduled site visits to inspect installation.

~~C.~~D. Tests: As determined by Owner's testing agency from among the following tests:

1. Qualitative Air-Leakage Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, smoke pencil with pressurization or depressurization.
2. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of 30 lbf/sq. in. according to ASTM D 4541 for each 600 sq. ft. of installed air barrier or part thereof.

~~D.~~E. Installer shall provide field quality control by staff having adequate prior experience and shall provide the following reports and checklists.

1. BECxA shall provide initial BECx checklists. ~~with~~ Contractor shall provide weekly updates verifying all locations have been inspected and are free of installation defects and damage.
   a. BECx Checklists shall include specific locations of the work and specific location and description of any repairs.
   b. BECx checklist ~~hall~~ shall be completed in its entirety and shall be provided weekly to the Construction Manager, Architect, and Owner.
2. Provide field inspection reports within 5 working days of inspection.

~~E.~~F. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

~~F.~~G. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.7 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than 30 days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION 07 27 29

SECTION 07 54 00 - THERMOPLASTIC MEMBRANE ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

2. Related Sections:
    1. Section 07 22 16 Roof Insulation Board.
    2. Section 07 71 00 Roof Specialties
    3. Section 07 72 00 Roof Accessories.
    4. Section 07 62 00 Sheet Metal Flashing and Trim.
    5. Section 07 92 00 Joint Sealants

1.2 SUMMARY

1. This Section includes thermoplastic membrane roofing system.

2. Miscellaneous steel angles, welds, bolts.

3. To the extent of roof work shown on drawing and specification.

1.3 PERFORMANCE REQUIREMENTS

1. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing , base flashings , counterflashing, curbs, and copping shall remain watertight.

2. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist wind pressure calculated according to the structural drawing wind speed, load, pressure, exposure, wind pressure zone diagram and schedules. See drawings.
    a. End Zone Distance from Edges (A): See Plan for load diagrams and tables

3. Provide installed roofing membrane and base flashings that remain watertight; do not allow water ponding 24 hours after rain event; do not permit the passage of water; and resist specified uplift pressures, thermally induced movement, and exposure to weather without failure. Adjust insulation board as required to maintain positive slope.

4. Anchoring Guideline:

    1. Membrane Roofing: Fully adhered on Dens-Deck Prime

        a. Install adhered sheet.

1) Secure membrane edges under battens or termination bars. Locate battens or termination bars continuously around the edge of the roof on the flat of the deck adjacent to the roof edge or parapet, around penetrations such as curbs in the field of the roof, and elsewhere as detailed.
2) Peel Stops: Install battens or termination bars continuously around the perimeter of the roof.
3) Field membrane sheets shall be installed so the water sheds and the laps do not create a dam.
4) Install crickets where slopes may be dammed by flat surfaces of curbs for roof hatches, vents, fans, etc.

b. Seams: Clean seam areas, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane to ensure a watertight seam installation.

2. Membrane Flashings and Preformed Flashing Accessories: Fully adhered.

a) Flash penetrations and field-formed inside and outside corners with sheet flashing. Prefabricated flashings as furnished by manufacturer are required and should be used wherever possible, field-formed/fabricated are to be used only by acceptance of the Owner.
b) Clean seam areas and overlap and firmly roll sheet flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation.
c) Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

1) Install horizontal rows of intermediate fasteners vertically, up walls, area dividers, and parapets. Install at a maximum of 18” above the finish roof membrane and every 18” vertical.
2) Space fasteners at 6” in these horizontally running vertical rows.

d) Secure top edge of preformed boots and pipe flashings with stainless steel wormgear type drawbands.
e) Apply a bead of sealant large enough to entirely fill the void at shaped term bars, reglets, and drawbands. Tool to shed water and insure full adherence to surfaces.

3. Flexible Walkways:

a. Install flexible walkways between and connecting the main roof access point and rooftop equipment requiring routine or seasonal maintenance or adjustment.

b. Heat weld to substrate and fully adhere walkway products to substrate with compatible adhesive.

c. Maintainability: Design roofing system and its related flashings so that removal of adjoining construction, or other types of adjacent roofing system(s), will not be necessary in order to replace membrane roofing or flashings during the life of the building.

1.4 SUBMITTALS

1. Product Data: For each type of product indicated. Include data substantiating that materials comply with requirements.
    1. Manufacturer’s technical data installation instructions and recommendations for each type of roofing product.
    2. Include data substantiating that materials comply with requirements.
    3. Maintenance standards
    4. Emissivity and solar reflectance values.

2. Samples for verification: For sheet roofing, membrane flashing, roof covering fasteners, termination bars, and battens.

3. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other Work. Drawing plans ¼” scale, details 3”.

    1. Membrane sheet layout.
    2. Membrane flashings and terminations.
    3. Walkpad Layout.
    4. Fastening pattern **for field, corner , edge conditions and special conditions.**
    5. Calculations for wind load design, signed and sealed by Florida Registered professional engineer in the state of Florida verifying the compliance with ASCE 7-10. and size, spacing and type of fasterner.

4. Installer Certificates: Signed by roofing system manufacturer certifying that Installer is approved, authorized, or licensed by manufacturer to install roofing system with required warranty.

5. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" and “Quality Assurance” Articles.

    1. Submit evidence of meeting performance requirements. Include Engineering Calculations signed and sealed by the qualified professional engineer who was responsible for their preparation.
        a. Copy of warranties.
        b. Submit **Florida Product Approval Literature including installation details.**
        c. Pre-roofing conference meeting minutes.
        d. Mock up.
        e. Manufacturer’s inspection, copy of roofing system, manufacturer’s inspection reports of roofing installation. Submit separate reports to Owner for each.
        f. Coordination drawings showing details including all roofing components and assemblies, such as but not limited to: Equipment curbs, other curbs, roof access hatch. skylight curbs, pipe and conduit supports and penetrations, parapets, copping, drips, flashing, counter flashing and other items as required by the work.

6. Maintenance Data: For roofing system to include in maintenance manuals.

7. Warranties:

    1. Notice of Intent to Warrant.
    2. Special warranties specified in this Section, paragraph 1.8.

8. Inspections:

   1. Obtain from the roofing manufacturer copies of each inspection and furnish a copy to the Architect and Owner. Inform the roofing manufacturer, with regard to warranties, that warranties shall be issued, based upon the acceptance of the roofing work, and that deficiencies noted upon inspection reports have been corrected. The manufacturer shall not refuse or restrict the provisions of its warranty, based upon deficiencies noted on inspection reports, especially any reports that may have not been furnished to the Architect. The Architect will not approve final payment of roofing work until final and interim inspection reports and warranty are in hand. The Architects representative shall accompany the manufacturer’s inspector and Roofing Installer during final inspection prior to issuing manufacturer’s warranty.

   2. Manufacturer’s Inspections: Manufacturer inspections shall be accomplished by technical representatives with technical department of the roof membrane manufacturer.

      a. In progress inspections. Not less than two (2) for building and 2 for each Alternate accepted..
         1) Make first in-progress inspection within seven (7) days of start of installation on each building.
      b. Substantial Completion Inspection for each building.
      c. Final Completion Inspection for each building.
      d. Sumitt copies of reports of field instpections.

   3. Roof Inspections: Arrange for roofing systems manufacturer’s system technical personnel to provide follow-up inspections of roofing installations.
      a. 11th month inspection for each building.
      b. 23rd month inspection for each building.

   4. Notify Owner not less than 48 hours in advance of dates and times for inspections. Report results in writing.

9. Samples: Bars and battens laboratory test showing roof assembly compliance with SSTD 12-99.

1.5 QUALITY ASSURANCE

1. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.

   1. Allow no work to be done to roof assembly by anyone other than roofing manufacturer’s approved Installer.
   2. Provide documentation indicating that all personnel onsite that have been trained by the manufacturer and any authorized to operate the automatic and hand welders shall provide documentation from the manufacturer certifying training within the last year.
   3. Maintain full-time supervisor, not a foreman / workman, on job site during times that roofing work is in progress. Provide a supervisor with proven experience in roofing similar to nature and scope of specified roofing.

2. Source Limitations: Obtain components for membrane roofing system from roofing membrane manufacturer.

    1. Original Manufacture: Provide membrane roofing of original manufacture.
    2. Track Record: Provide membrane roofing of same formulation, with not less than a ten (10) year track record of successful performance under the proposed conditions of installation.
    3. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing membrane manufacturer based on testing and field experience.

3. Fire-Test-Response Characteristics: Provide membrane roofing materials with the fire-test-response characteristics indicated as determined by testing identical products per test method below by UL, FMG, or another testing and inspecting agency acceptable to authorities having jurisdiction. Materials shall be identified with appropriate markings of applicable testing and inspecting agency.

    1. Exterior Fire-Test Exposure: Class A; ASTM E 108, for application and roof slopes indicated.
    2. Fire-Resistance Ratings: ASTM E 119, for fire-resistance-rated roof assemblies of which roofing system is a part.

4. Roofing shall have the following measurability and tested values.
    1. Emissivity: 0.78 min.

5. Pre-Installation Conference: Conduct conference at Project site. Comply with requirements in Division 01 Section "Project Management and Coordination". Notify participants a minimum of five (5) working days before conference. Review methods and procedures related to roofing system including, but not limited to, the following:

    1. Meet with Owner, Owner’s Building Enclosure Consultant, Architect, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing including installers of roof accessories and roof-mounted equipment.
    2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
    3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
    4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
    5. Review structural loading limitations of roof deck during and after roofing.
    6. Review flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
    7. Review governing regulations and requirements for insurance and certificates if applicable.
    8. Review temporary protection requirements for roofing system during and after installation.
    9. Review roof observation and repair procedures after roofing installation.
    10. Document proceedings, including corrective measures or actions required, and furnish copy of record to each participant.

6. Manufacturer's Inspections: Manufacturer inspections shall be accomplished by technical representatives with technical department of roof membrane manufacturer.

1.6 COORDINATION

1. Coordinate roofing work with installers of other work to ensure that components which are to be secured to or stripped into the roofing system are available and that flashings and counterflashings are installed as the work progresses.

    1. Phased construction is not acceptable.
    Delayed installation of sheet metal flashing and trim is not acceptable.

1.7 ROOF MAINTENANCE MANUAL

1. Submit a Roof Maintenance and Inspection Manual with warranties and project closeout submittals.

2. Roof Maintenance and Inspection Manual shall include:

    1. Cover letter recommending to the Owner that two roof maintenance inspections should be conducted per year.
    2. Table of Contents.
    3. Visual inspection checklist indicating specific flashings and details to be inspected. Include items such as base flashing, seams, reglets and counterflashings, roof edge flashings, roof penetration flashings, roof curb flashings, boot flashings, roof drain areas, parapet wall flashings, copings, roof membrane seams, etc. Applicable items shall be listed per project.

        a. Include a set of instructions detailing preventative maintenance and noting a list of harmful substances which may damage the roofing membrane.
        b. Include procedures for exercising warranty and guarantee provisions, leak calls, temporary repairs and future modifications to roof system.

    4. Copies of as-built roofing details.
    5. Roof plan indicating penetrations, detail locations, roof drains, and seams.
    6. Copy of SPRI / NRCA "Manual of Roof Inspection, Maintenance and Emergency Repair for Existing Single-Ply Roofing Systems".

1.8 WARRANTY

1. Roofing Manufacturer's System Warranty: Manufacturer's standard form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials, workmanship, or items identified not in conformance with the project documents within specified warranty period. Failure includes roof leaks.

    1. Special warranty includes roofing membrane, base flashings, roofing membrane accessories, walkway products and other components of membrane roofing system.
    2. Warranty Period: 20 years from date of Substantial Completion.
    3. Special Warranty Rider: Coverage for winds up to and including **150** mph (3-second gust).

4. Provide a warranty for building and square footage.

2. Installer Warranty: Including all components of membrane roofing system such as roofing membrane, base flashing, fasteners, and walkway products.
   1. Warranty Period: Two (2) years from date of Substantial Completion.
   2. Provide separate warranties and square footage.
   3. During the warranty period, upon notification by VPS, the Installer must be on site within 24 hours to make necessary permanent or temporary repairs. Should the Installer fail to make such repairs within the time period, VPS may have the repairs made and charge the cost to the Installer; such repairs by VPS shall not void the system warranty. Emergency repairs required reasonably and immediately to protect life or property shall not void this warranty. Installer roof access shall not be unreasonably denied. Delay of construction contract payment by General Contractor shall not be cause to withhold warranty performance.

3. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including all components of membrane roofing system such as roofing membrane, base flashing, fasteners, and walkway products, for the following warranty period:

   1. Warranty Period: Two years from date of Substantial Completion.

4. Special Warranty Requirements: Provide separate warranties for each individual building on the school’s campus identified as to building and square footage, or separately and specifically identify each building on the school’s campus included in and covered by the warranty with its respective square footage. The work will require the original roofing warranty to be maintained current. Written acknowledgement by the original roof installer and manufacturer. That the work in place complies with warranty requirements for continuity of warranty and will include work installed.

5. Maintenance Data: For roofing system to include in maintenance manuals.
   1. Comply with requirements in Division 01 Section “Closeout Procedures”.
   2. Visual Inspection checklist indicating specific flashings and details to be inspected. Include items such as base flashing, seams, reglets and counterflashings, roof edge flashings, roof penetration flashings, roof curb flashings, boot flashings, roof drain areas, parapet wall flashings, copings, roof membrane seams, etc. Applicable items shall be listed per project.
      a. Include a set of instructions detailing preventative maintenance and noting a list of harmful substances which may damage the roofing membrane.
      b. Include procedures for exercising warranty and guarantee provisions, leak calls, temporary repairs and future modifications to roof system
   3. Copies of as-built roofing details.
   4. Roof plan indicating penetrations, detail locations, roof drains, and seams.
   5. Copy of SPRI/NRCA “Manual of Roof Inspection, Maintenance and Emergency Repair for Existing Single-Ply Roofing Systems”.
   6. FBC Compliance: Contractor’s final statement of compliance.
   7. Inspection reports: Copy of all roofing system manufacturer’s inspection reports of roofing installation shall be submitted for review by the Designer and forwarded to the Owner. Submit separate reports to Owner Designer for each building not to exceed 20,000 sg ft per report per inspection by the Manufacturer’s Representative.

1.9 JOB CONDITIONS

A. Pre-Roofing Conference:

1. Prior to the installation of the roofing and associated work, meet as the project site with the installer, the installer of each component of associated work, the installers of the deck or substrate construction to receive roofing work, the installers of other work in and around roofing that must follow the roofing work (including Mechanical Work if any), the Architect and other representatives directly concerned with performance of the work, including (where applicable) insurers, test agencies, product manufacturers, governing authorities, and the Owner. Record (by Contractor) the discussions of the conference and the decisions and agreements (or disagreements) reached and furnish a copy of the record to each party attending. Review the foreseeable methods and procedures related to roofing work, including, but not limited to, the following:

a) Review Project requirements.

b) Review required submittals, both completed and yet to be completed.

c) Review status of substrate work (not by the roofing installer), including drying, structural loads, limitations and similar considerations.

d) Review availability of materials, tradesman, equipment and facilities needed to make progress and avoid delays.

e) Review required inspection, testing, certifying and accounting procedures.
f) Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions, including the possibility of temporary roofing.

g) Review regulations concerning code compliance, environmental protection, health, safety, fire and similar considerations.

h) Review procedures needed for protection of roofing during the remainder of the construction period.

i) Consider each party’s extant judgment, as advanced in the interest of successful completion of the work.

j) Document proceedings, including corrective measures or actions required and furnish copy of record to each participant.

B. Weather Condition Limitations:

8. Proceed with roofing and associated work only when weather conditions will permit unrestricted use of materials and quality control of the Work being installed, complying with the requirements and the recommendations of the roofing materials manufacturer.

   a. Proceed only when the installer is willing to guarantee work as required and with out additional reservations and restrictions

9. Apply in dry weather on dry deck only. Where rain or inclement weather occur during application, the Work shall stop and not resume until the weather has cleared and the deck is properly dry.

   a. Do not apply adhesives in conditions such as fog, dew, rain or snow, or when frost occurs on the surface on the membrane or substrate.

1,10 ROOF SLOPE:

1. Finished roof slope for PVC surfaces shall be ¼ inch per foot (2 per-cent) minimum for roof drainage.

1.11 IMPACT RESISTANCE:

1.11.1.1 Performance testing for impact resistance shall be in accordance with FM 4450, FM 4470 or ASTM D4272 to meet the specified impact resistance requirements.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURER:

A. SOPREMA, located at: 310 Quadral Dr.; Wadsworth, OH 44281; Tel: 800-356-3521; Tel: 330-334-0066; Website: www.soprema.us.

B. Fibertite, located at: 1000 Venture Blvd, Wooster, OH 44691; 800-927-8578; Website: www.fibertite.com

1. Duro-Last, located at: 525 Morley Drive, Saginaw, MI 48601; 800-248-0280; Website: www.duro-last.com

2.2 Basis of design, **Florida Product approval** noted below and details basis of design is Fiber Tite-SM, KEE Sheet as manufactured by Seaman Corporation.

1. Building:
   1. Building: **Florida Product Approval FL-4930-R-14 System No. S-11.**

2.3 Manufacturers:

1. Where title below introduces a list, the following requirements apply for product selection:

1. Products: Subject to compliance with requirements, provide one of the products and respective methods of installation specified.

    a. Product Certification:" Cool Roof Rating Council" (CRCC) Product Certification as recognized by EPA for the Energy Star Program; a third -party rating system for radiative properties of roof surfacing materials.

2.4 ROOFING MEMBRANE

A. PVC MEMBRANE, ADHERED:

1. SOPREMA® SENTINEL® PVC P150: Polyester reinforced, thermoplastic polyvinyl chloride membrane with a smooth back underside.
    1. Overall Thickness ASTM D4434 (ASTM D638): 60 mils minimum
        a. Manufacturer shall provide membrane at specified minimum 60 mils
        b. ASTM D4434 +/- tolerance for membrane thickness will not be accepted.
    2. Thickness over Scrim (ASTM D7635): 30 mils minimum
        a. Manufacturer shall provide membrane with minimum 30 mils compound thickness above reinforcement/scrim
    3. Width: 10 ft (3.0 m)
    4. Length: 100 ft (30.5 m)
    5. Physical Properties ASTM D4434.
        a. Breaking Strength, lbf/in
            1) 430 (MD) 300 (XMD
        b. Elongation at Break - %
            1) 25 (MD) 25(XMD)
        c. Tear Strength, lbf
            1) 150 (MD) 80 (XMD)
        d. Linear Dimensional Change - %
            1) <0.1%

    6. Fully adhered to Adhered cover board Dens-Deck Prime over mechanically attached insulation over mechanically attached Dens Deck Prime base board mechanically attached to metal deck.
    7. Color: white

2. PVC Sheet: ASTM D 4434, Type III, fabric reinforced.

    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Duro-Last Roofing, Inc.; "Duro-Last": Fully adhered to Adhered cover boad Dens-Deck Prime over mechanically attached insulation over mechanically attached Dens Deck Prime base board over metal deck.

    2. Thickness: 60 mils, nominal, membrane.
    3. Color: “Bright White”.

3. KEE Sheet: ASTM D 6754, fabric reinforced. (Basis of Design)

    1. Products: Subject to compliance with requirements, provide one of the following:

a. Seaman Corporation; "8552 FiberTite-SM".

1) "8552 Fiber Tite-SM "60 mills, fully adhered over, Dens-Deck Prime Cover over Rigid Insulation over Dens-Deck Prime Base board, both Rigid insulation and Base board shall be mechanically attached to metal deck below.

2. Color: White.

3. Thickness: 60 mils (1.5 mm) min membrane.

4. Membrane shall meet EPA Energy Star standards.

2.5 AUXILIARY MATERIALS

1. General: Auxiliary materials recommended by roofing manufacturer for intended use and compatible with roofing membrane.

2. Sheet Flashing: Manufacturer’s standard sheet flashing of same material, type, reinforcement, thickness, and color as sheet membrane for adhered or mechanically attached systems.

3. Laminated Metal: Manufacturer's standard minimum FiberCLAD 0.040" 3003H14 Aluminum laminated with a minimum of 20 mil compatible polymeric coating, of same color as sheet membrane.

4. Bonding Adhesive:
   1. Roofing Membrane: Manufacturer’s standard solvent or water based bonding adhesive for membrane.
   2. Sheet Flashing: Manufacturer’s standard solvent based bonding adhesive for base flashing.

5. Metal Termination Bars: Manufacturer's standard predrilled stainless steel or aluminum bars, approximately 1/8 inch by 1 inch, 6060-T5 aluminum with anchors.

6. Metal Battens: Manufacturer's standard aluminum-zinc-alloy coated or zinc coated steel sheet, or aluminum alloy bar, approximately 1 inch wide, pre-punched.

7. Polymeric Battens: Manufacturer’s standard high performance thermoplastic polymer strip, approximately 1 inch wide, pre-punched.

8. Fasteners: Factory coated steel fasteners and metal or plastic plates meeting corrosion resistance provisions in FMG 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

9. Miscellaneous Accessories: Provide preformed cone and vent sheet flashing, preformed inside and outside corner sheet flashing, T-joint covers, termination reglets, cover strips, and other accessories.

10. Flexible Walkways: Factory-formed, nonporous, heavy duty, slip resisting, surface-textured walkway pads or rolls, approximately 3/16 inch thick and acceptable to membrane roofing system manufacturer.

11. Pitch Pans: **Pitch Pans are not acceptable**.

12. Roofing Curbs: Provide roofing curbs at all penetrations using products as manufactured by the Pate Company, Lombard IL., www.patecurbs.com or by the following:
    1. Portals Plus, www.portalsplus.com
    2. R.P.S. Corporation, www.rpscurbs.com
    3. Thaler Metal USA, Inc., www.partsdome.com/thalermetal
    4. See Drawing details.

PART 3 - EXECUTION

3.1 EXAMINATION

1. Verify deck condition is suitable for the specified installation of roofing system. Do not proceed with application until all defects have been corrected.

2. Insulation is to be installed to provide positive slope and subsequent positive drainage of new roofing system.

3. Finished surface(s) to receive new roof system shall be smooth and level without significant surface depressions or irregularities. Caber differentials greater than 3/16 inch must be leveled using a cementitious grout.

4. Finished surfaces shall be free of moisture, dust, loose debris and other irregularity that may hinder the proper performance of the roofing system.

3.2 ROOFING MEMBRANE INSTALLATION

1. Install roofing membrane over area to receive roofing according to membrane roofing system manufacturer's written instructions, either fully adhered or mechanically attached, based on product and deck type. Unroll roofing membrane and allow to relax before installing.

    1. Install adhered sheet according to ASTM D 5036.

        a. Secure membrane edges under battens or termination bars. Locate battens or termination bars continuously around the edge of the roof on the flat of the deck adjacent to the roof edge or parapet, around penetrations such as curbs in the field of the roof, and elsewhere as detailed.
        b. Peel Stops: Install battens or termination bars continuously around the perimeter of the roof.

    2. Install mechanically fastened sheet according to ASTM D 5082.

        a. Install half sheets at roof perimeters and corners. Install full sheets at roof field.
        b. Secure membrane edges under battens or termination bars. Locate battens or termination bars continuously around the edge of the roof on the flat of the deck adjacent to the roof edge or parapet, around penetrations such as curbs in the field of the roof, and elsewhere as detailed.

c. Peel Stops: Install battens or termination bars continuously around the perimeter of the roof. Peel stops installed at distances from the roof edge corresponding to half-sheet dimension may take the place of the half-sheet installation requirement.

3. Seams: Clean seam areas, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane to ensure a watertight seam installation.

2. Membrane Flashings and Preformed Flashing Accessories: Fully adhere.

1. Flash penetrations and field-formed inside and outside corners with sheet flashing. Prefabricated flashings as furnished by manufacturer are required and should be used wherever possible. Field-formed/fabricated are to be used only by acceptance of the Owner.
2. Clean seam areas and overlap and firmly roll sheet flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation. Secure top edge of preformed boots and pipe flashings with drawbands.
3. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.
   a. Install horizontal rows of intermediate fasteners vertically, up walls, area dividers, and parapets. Install at maximum 18” above the finish roof membrane and every 18” vertical.
   b. Space fasteners at 6” in these horizontally running vertical rows.
4. Secure top edge of preformed boots and pipe flashings with stainless steel wormgear type drawbands.
5. Apply a bead of sealant large enough to entirely fill the void at shaped term bars, reglets, and drawbands. Tool to shed water and insure full adherence to surfaces.

3. Flexible Walkways:

1. Install flexible walkways between and connecting the main roof access point and rooftop equipment requiring routine or seasonal maintenance or adjustment.
2. Heat weld to substrate and fully adhere walkway products to substrate with compatible adhesive.

3.3 PROTECTION & PREPARTION

1. Protect adjacent areas, surfaces, curbs. Provide temporary walking surfaces per manufacture's recommendation to protect the existing membrane from puncture and excessive wear.

2. Vertical surfaces: Clean all vertical surfaces to receive membrane of deleterious and incompatible material due to the demolition and removal of old membranes and flashing. Prepare all surfaces using manufacturer approved cleaners and repair surfaces acceptable to receive adhesive, fastener and membrane.

3.4 FIELD QUALITY CONTROL

1. Manufacturer Roof Inspections: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on each building and submit separate reports to RPR and Architect for each.

1. In-progress inspections: Not less than three (3) for base bid per inspection and per accepted Alternate.

    a. Make first in-progress inspection within four (4) days of start of installation on each building.

2. Substantial Completion inspection for each building.
3. Final Completion inspection for each building.

2. Follow-up Roof Inspections: Arrange for roofing system manufacturer's technical personnel to provide follow-up inspections of roofing installation on each building and submit separate reports to Owner for each.

    1. 11th month inspection for each building.
    2. 23rd month inspection for each building.

3. Notify Architect and Owner 48 hours in advance of date and time of inspection.

4. Written and signed documentation shall be provided by the Manufacturer Technical Inspection Representative indicating all deficiencies identified in their reports have been corrected and verified.
    1. Manufacturer’s Technical Representative shall provide written report for every field inspection and forward copy to RPR, Architect, General Contractor, VPS and Building Enclosure Consultant..

3.5 ROOFING INSTALLER'S WARRANTY

1. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

    1. Owner: <Insert name of Owner.>
    2. Address: <Insert address.>
    3. Building Number(s)/Square footage(s): <Insert information>.
    4. Address: <Insert address.>
    5. Date of Building Substantial Completion: <Insert date>.
    6. Warranty Period: <Insert time.>
    7. Expiration Date: <Insert date.>

2. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

3. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

4. This Warranty is made subject to the following terms and conditions:

    1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

a. lightning;
b. peak gust wind speed exceeding 150 mph (3 second gust);
c. fire;
d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
e. faulty construction of parapet walls, copings, vents, equipment supports, and other edge conditions and penetrations of the work;
f. vapor condensation on bottom of roofing; and
g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.

    a. Roofing Installer shall guaranty to respond to all notifications within forty-eight (48) hours and to make all such repairs as deemed necessary to correct said leaks or defects to the satisfaction of the Owner, such satisfaction shall not be unreasonably withheld.
    b. Roofing Installer acknowledges Owner's right to make emergency repairs without violating this warranty, if the Roofing Installer does not respond within forty-eight (48) hours of notification by the Owner of a defect or leak.

7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

5. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.

1. Authorized Signature:
2. Name/Title:

END OF SECTION 07 54 00

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following sheet metal flashing and trim:

1. Manufactured reglets.
2. Formed roof drainage system; Gutters, Rain leaders.
3. Formed wall flashing, counter flashing and trim.
4. Formed equipment curb flashing.
5. Misc flashing required by the work.

1.3 SUBMITTALS

A. Product Data and Samples: Manufacturer's technical product data printed installation instructions and general recommendations for each specified sheet material fabricated product.

B. Shop Drawings: Show installation layouts of sheet metal flashing and trim, including plan layout at 1/4–inch scale, elevations, profiles, expansion-joint locations, and keyed details at 3-inch scale. Distinguish between shop- and field-assembled work.

1. Include details for forming, joining, supporting, and securing sheet metal flashing and trim, including pattern of seams, termination points, fixed points, expansion joints, expansion-joint covers, edge conditions, special conditions, and connections to adjoining work; including trim/ fascia units, and scuppers.

C. Samples: For each exposed product and for each finish specified. Eight inch square samples of specified sheet materials to be exposed as finished surfaces.

D. Engineered drawings & calculations, **signed and seal by a State of Florida Registered Professional Engineer**, certifying compliance with wind loads as required by FBC **2017** (current edition) for code approval.

E. Submit Supervisor's/Foreman resumes.

1.4 QUALITY ASSURANCE

A. Sheet metal workmanship including forming of joints anchoring, cleating and provisions for expansion shall conform to the standard details and recommendations of the copper and brass research association; and workmanship of the best quality, in accordance with best trade practice and the recommendations and specifications of the Sheet Metal Flashing and Trim

Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" and the Florida Building Code latest edition unless more stringent requirements are specified or shown on Drawings.

B. Fabricator Qualifications: Fabricator and Installer shall be a company specializing in sheet metal work and installation with five (5) years documented experience.

C. Conduct on site pre-installation conformance, including the Contractor and Roofing Contractor. Agenda includes phasing of work, product installation, quality control, inspection and other.

D. Installer shall maintain a full-time Supervisor/Foreman, not a Foreman/Workman, on the roof during times that the work of this Section is in progress. The Supervisor/Foreman shall not be employed on any other project during the course of this project and shall not be removed without approval of the Architect/Engineer.

E. In addition to complying with applicable codes and regulations, comply with recommendations contained in “Architectural Sheet Metal Manual”, latest edition, of the Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).

F. In addition to complying with applicable codes and regulations, comply with recommendations contained in “Sealants: The Professional’s Guide”, latest edition, of the Sealant, Waterproofing & Restoration Institute (SWR).

G. Coordinate installation of roofing and flashing and sheet metal work as a single integrated unit of work, without division of responsibility. Single installer responsibility is required.

H. Edge metals shall be furnished and installed in accordance with Chapters 15 & 16 of the SIXTH Edition (2017) FBC. Test will be conducted by General Contractor by testing agency. Test results will be provided by General Contractor indicating compliance with ANSI/SPRI ES– 1 with basic wind speeds taken from Table 1609 of Chapter 16, Sixth Edition 2017 FBC.

1.5 MOCKUP

A. Prior to the installation of flashing and sheet metal work, provide sample mock ups using materials required for final work.

B. Install mock up on the project, where directed, indicating the proposed workmanship to be executed in the completed Work. Provide special features as required and directed including sealants installation and continuous work.

C. Obtain Architect/Engineer’s acceptance of visual qualities, component, and installation approval before start of flashing and sheet metal work.

1.6 WARRANTY

A. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within 20 years from date of Substantial Completion.

B. See Section 07 54 00 Thermoplastic Roofing applies to this Section to its full extent.

1.7 PERFORMANCE REQUIREMENTS

A. General: Install sheet metal flashing and trim to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.

PART 2 - PRODUCTS

2.1 SHEET METALS

A. Aluminum Sheet: ASTM B 209, Alloy 3003, 3004, 3105, or 5005, Temper suitable for forming and structural performance required, but not less than H14, finished as follows:

1. Anodized Finish: Apply the following coil-anodized finish:

a. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

B. Stainless Steel: ANSI Type 304, ASTM A167, 2-D Annealed finish, soft, except harder temper required for forming or performance. For welding use Type 304 L.
1. For Metal Edge: 0.0250 **Inches**, **22** gauge, except as otherwise shown.
2. For Cleats: 0.0312 **Inches, 20** gauge, except as otherwise shown.
3. For all Flashings: 0.0250 **Inches, 20** gauge, except as otherwise shown.
4. For Copings: 0.0250 **Inches, 20** except as otherwise shown.

C. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 coating designation; structural quality, mill phosphatized for field painting.

D. For Fastening Sheet Metal to Masonry.
1. ¼ inch diameter "TruFast CF Tap Grip" of sufficient length for 1 ¼ inch penetration.

2.2 UNDERLAYMENT MATERIALS

A. Membrane Underlayment: See section Thermoplastic Membrane Roofing Section 07 54 00 for extension of roofing system membrane over curbs, wall surfaces, supports and under sheet metal flashing and trim.

2.3 FASTENERS

A. For Fastening Sheet Metal to Sheet Metal.
1. 1/8 inch diameter rivet, 300 series stainless steel mandrel and pin.
2. No. 12, 304 stainless steel screw of sufficient length for ½ inch penetration.

B. For Fastening Sheet Metal to Wood Nailers.

1. 11 or 12 gauge angular shank nail, 304 stainless steel of sufficient length for 1 ¼ inch nailer penetration.
2. No. 8 or 10 "Protech Deck Stainless Steel Screw" of sufficient length for 1 ¼ inch nailer penetration.

2.4 MISCELLANEOUS MATERIALS AND ACCESSORIES

A. Solder for Stainless Steel: ASTM B-32, 60-40 tin/lead.

B. Flux for Stainless Steel: Acid-Chloride type.

C. Flux Cleaner: Washing soda solution, 5% to 10%.

D. Welding Electrodes and Filler: Materials which will blend, match the color of metal being joined, and will avoid discoloration at welds.

E. Sealants: Approved Products
1. Sonneborn, NP-1
2. Tremco, Vulkem 116
3. Silka, Silkaflex 201

F. Sealant Tape: Approved Products
1. Sika, Sikalastomer 95 tape, ½ inch width x 1/8 inch thickness
2. Gulf Seal, MB-10A sealant, ½ inch width x 1/8 inch thickness
3. Tremco, 440 tape, ½ inch width x 1/8 inch thickness

G. Flashing Tape: Andek Corporation, "Evo Stik Flashband"

H. Metal Accessories: Provide sheet metal clips, straps, and similar accessory units as required for installation of work, matching or compatible with material being installed, noncorrosive, size and gauge required for performance.

I. Foam Backer Rod: Compressible rod stock of 2 lb/cu ft density, closed cell extruded polyethylene foam as recommended by sealant manufacturer when used for back-up of, and compatibility with sealant.

J. Miscellaneous Materials: All other materials and accessories not specifically described, but required for a complete and proper installation, shall be subject to the approval of the Architect/Engineer.
1. Temporary materials shall not be used.

2.5 FABRICATION, FIELD MEASUREMENTS

A. The sheet metal fabricator is responsible for details and dimensions controlled by the drawings. Make field measurements for verification of these dimensions.

B. Required sizes for flashings, including profile requirements are shown on drawings. Any variable dimensions are indicated, together with maximum and minimum dimensions required to achieve design requirements and coordination with other work.

C. The roof installer and sheet metal fabricator shall cooperate to establish and maintain these dimensions.

2.6 MANUFACTURED SHEET METAL FLASHING AND TRIM

A. Reglets: Units of 0.0187 inch thick Stainless steel, type and profile indicated, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory- mitered and -welded corners and junctions.

1. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
2. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
3. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
4. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
5. Flexible Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
6. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.

2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Expansion-Joint Cover: Fabricate from the following material:

1. Aluminum: Minimum 0.050 inch thick.
2. Stainless Steel: Minimum 0.0250 inch thick.
3. Galvanized Steel: Minimum 0.0336 inch thick.

B. Counterflashing: Fabricate from minimum 0.0187 inch thick Stainless Steel.

C. Flashing Receivers: Fabricate from minimum 0.0156 inch thick Stainless Steel.

D. Roof-Drain Flashing: Fabricate from 4.0 lb/sq. ft., hard tempered Lead.

2.8 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Overhead-Piping Safety Pans: Fabricate from minimum 0.0396 inch thick Galvanized Steel.

B. Sheet Metal Enclosure for Piping Through Roof Deck: Provide a sheet metal enclosure with removable top according to the following specification-plates in the NRCA's "Roofing and Waterproofing Manual" 5th Edition.

1. Thermoplastic Roof Membrane: Plates TP-16 and TP-16S.

2. Or as shown on the drawing.

2.9 FABRICATION, GENERAL METAL FABRICATION

A. Shop-fabricate work to greatest extent possible.

B. Comply with details shown, and with applicable requirements of SMACNA Manual.

2.10 FABRICATION, FORMING

A. All fabrication of edge metal flashing shall be in accordance with ANSI/SPRI ES-1.
   1. Only metal edge components tested to be in compliance with ANSI/SPRI ES-1 shall be approved for use on this project.
   2. Metal edge components shall also be accepted from NRCA's ITS authorized fabricators who have successfully completed third-party verification of compliance with NRCA's certification listing program.
   3. See http ://www. nrca. net/consumer/tech nical/details/authfab . pdf for a list.

B. Form sheet metal work accurately to the sizes and profiles required to fit substrates.

C. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels indicated.

D. Form sheet metal work in maximum lengths and keep joints to a minimum.

2.11 FABRICATION, SOLDERING FABRICATIONS IN STAINLESS STEEL

A. Edges of all sheets to be soldered, shall be tinned with solder on both sides for width not less than 1/2 inch.

B. Clean and flux metals prior to soldering.

C. All soldering shall be done slowly with well heated irons - to heat sheet thoroughly and to sweat solder completely through full width of seam.

D. Ample solder shall be used and seam shall show at least one full inch of evenly flowed solder.

E. Whenever possible, all soldering shall be done in a flat position.

F. Seams on slopes steeper than 45° shall be soldered a second time.

G. Soldering shall be done with heavy soldering irons blunt design, properly tinned before using.

H. As work progresses, neutralize excess flux with 5% to 10% washing soda solution, and thoroughly rinse free of stains.

2.12 FABRICATION, WELDING FABRICATIONS IN ALUMINUM

A. Clean metals prior to welding.

B. All welding shall be done slowly with clean tungsten, to weld completely through full width.

C. Ample filler rod shall be used. Seam shall show evenly flowed weld.

D. As weld progresses, thoroughly wash and clean stains.

2.13 FABRICATION, POP RIVET AND CAULKING FABRICATIONS IN COATED METAL

A. Clean coated metal.

B. Pop rivet fabrications securely to form one continuous piece.

C. Caulk all cut edges to form one continuous membrane finish.

2.14 FABRICATION, JOINING

A. lock and slip joints in accordance with applicable SMACNA Manual requirements.

B. Joints are to be made so that slight adjustments of the metal work can be made, and at the same time remain water tight.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals.

B. Protect existing to remain from damage during demolition and installation of new construction. Replace existing damaged caused by the Contractor.

C. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks; true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.

D. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

E. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not

be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.

F. Fasteners: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.

1. Aluminum: Use aluminum or stainless-steel fasteners.
2. Stainless Steel: Use stainless-steel fasteners.

G. Seal joints with sealant as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.

H. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pretin edges of sheets to be soldered to a width of 1-1/2 inches except where pretinned surface would show in finished Work.

1. Do not solder prepainted, metallic-coated steel and aluminum sheet.
2. Pretinning is not required for lead.
3. Stainless-Steel Soldering: Pretin edges of uncoated sheets to be soldered using solder recommended for stainless steel and phosphoric acid flux. Promptly wash off acid flux residue from metal after soldering.
4. Do not use open-flame torches for soldering. Heat surfaces to receive solder and flow solder into joints. Fill joints completely. Completely remove flux and spatter from exposed surfaces.

3.2 ROOF FLASHING INSTALLATION

A. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with elastomeric sealant.

1. Secure in a waterproof manner by means of snap-in installation and sealant or lead wedges and sealant.

B. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Install flashing as follows:
1. Turn lead flashing down inside vent piping, being careful not to block vent piping with flashing.

C. Install metal work free of dents stall metal work free of dents, without waves, warps, buckles, fastening stresses or distortion; allowing for expansion and contraction.

D. Locate and install metal work plumb, level, and in alignment with adjacent work.

E. Form tight joints, with exposed joints accurately fitted together. Provide reveals and openings for sealants, as shown.

F. Anchor sections of metal work in accordance with fastener type and spacing shown on the details. Every effort has been made to detail each fastener condition. Where a field condition is not detailed, fasten in accordance with ANSI SPRI ES-1.

G. Coat contacting dissimilar metals with bituminous coating 7 1/2 mil dry thicknesses, minimum, applied to each contacting metal face.

H. Review the construction details for additional specific installation requirements, coordinated with the roofer.

3.3 SEALANTS AND TAPES

A. Install sealants tapes in strict accordance with manufacturer's recommendations, taking care that they are deposited in uniform, continuous ribbons without gaps or air pockets; with complete "wetting" of joint bond surfaces equally on opposite sides.

B. Any sealant or tape found to be "lifting" or not anchored properly shall be totally removed, re-primed, and replaced. Resealing over previously installed material will not be allowed.

C. Indication of lack of skill on the part of the installers shall be sufficient grounds for the Architect/ Engineer to reject installed sealant or tape, which requires its immediate removal and complete resealing at no additional cost to the Owner.

3.4 CLEANING AND PROTECTION

A. Cleaning: Clean exposed surfaces, removing substances which might cause corrosion of metal or deterioration of finishes.

B. Protection: Installer shall advise Contractor of required procedures for surveillance and protection of flashings and sheet metal work during construction, to ensure that work will be without damage or deterioration, other than natural weathering, at time of Substantial Completion.

3.5 MISCELLANEOUS FLASHING INSTALLATION

A. Overhead-Piping Safety Pans: Suspend pans from pipe and install drain line to plumbing waste or drain line.

B. Sheet Metal Enclosure for Piping Through Roof Deck: Coordinate installation of sheet metal enclosure with installation of roofing and other items penetrating roof as roof installation progresses.

END OF SECTION 07 62 00

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Related Sections:
1. Section 07 22 16 Roof Board Insulation
2. Section 07 54 00 Thermoplastic Insulation
3. Section 07 31 00 Steel Decking
4. Section 07 62 00 Sheet Metal Flashing and Trim
5. Section 05 50 00 Metal Fabrications

1.2 SUMMARY

A. This Section includes the following manufactured roof specialties:

1. Copings.
2. Roof edge flashings.

1.3 PERFORMANCE REQUIREMENTS

A. General Performance: Roof specialties shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. SPRI Wind Design Standard: Manufacture and install copings and roof-edge flashings tested according to SPRI ES-1, and capable of resisting the following design pressures.

1. Wind Loads: In accordance with Florida Building Code **2017.**
   a. See Structural Drawings and Schedule for wind loads, wind pressure and exposure.
   b. See Florida Product Approval on drawing.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show layouts of manufactured roof specialties, including plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Identify factory- vs. field-assembled work. Include details for expansion and contraction; layout of fasteners, cleats,

clips, and other attachments; termination points and assemblies; and special conditions. Prepared by or under the supervision of a qualified professional engineer.

1. Do not prepare shop drawing until field conditions are verified.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for copings and roof edge flashings.

1. Submit evidence of meeting performance requirements. Include test reports signed and sealed by the qualified professional engineer witnessing the test and preparing the report.

D. Warranty: Sample of special warranties.

E. Provide Florida Product Approval certificates in compliance with wind load requirements.

1.5 WARRANTY

A. Manufacturer Warranty: Manufacturer’s standard form, without monetary limitation (NDL Type), in which manufacturer agrees to repair or replace components of membrane roofing system that fail in material, workmanship, items identified not in conformance with the project documents within specified warranty period. Failure includes roof leaks.

1. Warranty includes roofing membrane, base flashing, roof membrane accessories, walking products, coping, curbs, roof hatch, pipe supports.
2. Provide warranty for all building and square footage covered by the warranty with respect to square footage.

B. Special Wind Resistance Guarantee: Manufacturer's standard form against wind induced failure within specified warranty period.

1. Wind Resistance Warranty Period: 20 years from date of Substantial Completion.
2. Wind Speed: Not less than that of the related roofing system.
3. Warranty for coping against wind blow off.

C. Special Material Warranty: Manufacturer's standard form against material defect within specified warranty period.

1. Material Defect Warranty Period: 5 years from date of Substantial Completion.
2. Material Defect Warranty against coping blow off.

D. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Finish Warranty Period: 20 years from date of Substantial Completion.
2. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

PART 2 - PRODUCTS

2.1 EXPOSED METALS

A. Aluminum Sheet: ASTM B 209, alloy and temper recommended by manufacturer for use and finish indicated, finished as follows:

1. Surface: Smooth, flat finish.
2. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

a. Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:

1. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

a. Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

2.2 CONCEALED METALS

A. Aluminum Sheet: ASTM B 209, alloy and temper recommended by manufacturer for use and structural performance indicated, mill finished.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.

C. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.

D. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 coating designation; structural quality.

2.3 MISCELLANEOUS MATERIALS

A. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to withstand design loads.

1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.

B. Sealing Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.

C. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

2.4 COPINGS

A. Copings: Manufactured coping system consisting of formed-metal coping cap in section lengths not exceeding 12 feet, concealed anchorage, concealed splice plates with same finish as coping caps, mitered corner units, and end cap units.

1. Manufacturers:

a. Hickman, W. P. Company; 800-892-4031, http://www.wph.com/ Basis of Design.
b. Metal-Era, Inc.; 800-588-2162, http://www.metalera.com/ .
c. Architectural Products Company; 800-837-1001, http://www.archprod.com/ .

2. Coping Caps: Fabricated from minimum 0.050 inch thick Aluminum.
3. Coping Cap Color: Color to be selected by Architect or as indicated on the drawings.
4. Inside and Outside Corners: Continuously welded and sealed watertight, weld inside, outside and top corner units creating a single corner unit inside and outside.
5. Special Fabrications: As indicated and required.
6. Snap-on Coping Anchor Plates: Concealed, stainless steel sheet, 12 inches wide, 0.028 inch thick, with integral cleats.
7. Face Leg Cleats: Concealed, continuous stainless steel sheet.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install manufactured roof specialties according to manufacturer's written instructions. Anchor manufactured roof specialties securely in place and capable of resisting forces specified in performance requirements. Use fasteners, separators, sealants, and other miscellaneous items as required to complete manufactured roof specialty systems.

1. Install manufactured roof specialties with provisions for thermal and structural movement.
2. Torch cutting of manufactured roof specialties is not permitted.
3. Protect existing adjacent installation which is to remain. Replace damaged components.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of uncoated aluminum or stainless-steel manufactured roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing exposed-to-view components of manufactured roof specialties directly on cementitious or wood substrates, install a course of PVC roof system flashing underlayment.

3.2 COPING INSTALLATION

A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor copings to resist uplift and outward forces according to performance requirements.

1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at manufacturer's recommended spacing.

END OF SECTION 07 71 00

SECTION 07 72 00 - ROOF ACCESSORIES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General conditions provisions of the contract including contractual conditions, and division 1 specifications.

1.02 SUMMARY

A. This Section includes the following:

1. Roof scuttle.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, materials, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show fabrication and installation details. Indicate dimensions, weights, loadings, required clearances, method of field assembly, and components. Include plans, elevations, sections, details, and attachments to other Work.

1. Anchoring system for equipment supports and roof hatches shall comply with the requirements of the Florida Building Code.

C. Coordination Drawings: Roof plans drawn to scale and coordinating penetrations and roof-mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.

2. Method of attaching roof accessories to roof or building structure.

3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.

1.04 QUALITY ASSURANCE

A. Standards: Comply with the following:

1. SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

2. NRCA's "Roofing and Waterproofing Manual" details for installing units.

PART 2 PRODUCTS

2.01 MATERIALS, GENERAL

A. Roof Hatch:

1. Cover and liner: 11 gauge (0.090-inch) aluminum cover with 1 inch rigid fiberboard insulation and 18 gauge (0.040-inch) aluminum cover liner.

2. Curb: 11 gauge (0.090-inch) aluminum curb with 1 inch rigid fiberboard insulation.

3. Hinges: **Type 316 stainless steel** tamper-proof hinge contained within hatch as part of spring assembly.

4. Latch: **Type 304 stainless steel** slam latch with turn handle and inside/outside padlock hasps.

5. Springs: Greased heavy-duty compression springs in telescoping tubes.

6. Hardware: **Type 316 stainless steel** hold open arm(s) with red vinyl grip handle that automatically locks door when opened. Furnish hatches with interior padlock hasp and EPDM draft seal.

7. Mounting Flanges:

a. Single Wall Curb with 3.5” horizontal mounting flange

b. Double Wall Curb with 3.5” horizontal mounting flange

c. Curb Mount with 3” vertical mounting flange

B. Insulation: Manufacturer's standard rigid or semirigid glass-fiber board of thickness indicated.

C. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by manufacturer. Match finish of exposed fasteners with finish of material being fastened. If in contact with FR wood use stainless steel fasteners.

2.02 FINISHES:

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish designations prefixed by AA comply with system established by Aluminum Association for designating aluminum finishes.

C. Aluminum: Mill finish.

D. Steel: Stainless Steel with Factory- applied powder coat.

2.03 SAFETY RAILINGS: Model # SRC

A. Top rail, Mid rail and upright posts: Galvanized Steel Pipe, 1 ¼” ID, A53 Grade B pipe.

B. Exit: Self Closing Gate; Galvanized Steel Pipe, 1 ¼” ID A53 Grade B pipe, U bolt with hinge attachment and galvanized mounting bolts and nut hardware.

C. Fittings: Manufacturer’s standard aluminum magnesium alloy, cast with set screw pipe mount

D. Counterflash Mount: CRS, zinc plated mounting bracket with backer plate, pemmed nut for easy installation.

E. Hardware: Bolts and Tooling: 3/8 inch by 2-1/2 inch, grade Z, zinc plated, wrench for assembly

F. OSHA Compliance: Provide hatch safety railing system as required by OSHA Standard 1910.23 and 1910.27 and as specified.

1. Top Rail Height: 42 inches +/-3” above finished roof deck.

2. Top-Mid Rail Spacing: 21” diameter maximum..

3. Upright post maximum spacing of 8’.

G. Color: Safety Yellow

2.04 LADDER-ASSIST POST: Model SP roof-hatch manufacture’s standard device for attachment to roof access ladder.

A. Operation: Post locks in place on full extension: release mechanism returns post to closed position

2.05 MANUFACTURER

A. Other Manufactures: Subject to compliance with requirements, manufacturers producing roof hatches meeting the requirements indicated that may be incorporated into the Work include, but are not limited to the following:

1. Nystrom Inc.

2. Bilco

3. Custom Curb, Inc.

4. or approved substitution

2.06 FABRICATION

A. Series "Hurricane Hatch" Aluminum Roof Hatch Model, RHHA NOA No.18-18-0110.04, Florida Product Approval No FL-22631-R2

1. Model and Manufacturer – Basis of Design: Nystrom Building Products; Model RHHA 30x36S1T – Hurricane Zone Rated.

a. Size: 30" inch x 36" inch.

b. Curb Height: 12-inches.

2. Other Manufactures: Subject to compliance with requirements, manufacturers producing roof hatches meeting the requirements indicated that may be incorporated into the Work include, but are not limited to the following:

a. Bilco

b. Custom Curb, Inc.

c. or approved substitution

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with the following:

1. SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

2. NRCA's "Roofing and Waterproofing Manual" details for installing units.

3.02 CLEANING AND PROTECTION

A. Clean exposed surfaces according to manufacturer's written instructions. Touch up damaged metal coatings.

END OF SECTION 07 72 00

SECTION 07 8420 FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Design Documents and other division 7 specifications.

1.2 SUMMARY

A. This Section includes fire-resistive joint systems for the following:

1. Floor-to-floor joints.
2. Floor-to-wall joints.
3. Head-of-wall joints.
4. Wall-to-wall joints.

1.3 PERFORMANCE REQUIREMENTS

A. General: For joints in the following constructions, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistive joint systems are installed:

1. Fire-resistance-rated load-bearing walls, including partitions, with fire-protection-rated openings.
2. Fire-resistance-rated non-load-bearing walls, including partitions, with fire-protection-rated openings.
3. Fire-resistance-rated floor assemblies.
4. Exterior curtain-wall assemblies and fire-resistance-rated floor assemblies.

B. Fire Resistance of Joint Systems: Assembly ratings and movement capabilities indicated, but with assembly ratings not less than that equaling or exceeding fire-resistance rating of constructions in which joints are located, as determined by UL 2079.

1. Load-bearing capabilities as determined by evaluation during the time test.

C. Fire Resistance of Perimeter Fire-Containment Systems: Integrity and insulation ratings indicated as determined by UBC Standard 26-9 and UL 2079.

1.4 SUBMITTALS (SD-01, 02 & SD-10)

A. Product Data: For each type of product indicated.

B. Shop Drawings: For each fire-resistive joint system, show each kind of construction condition in which joints are installed and relationships to adjoining construction. Include fire-resistive joint system design designation of testing and inspecting agency acceptable to authorities having jurisdiction that demonstrates compliance with requirements for each condition indicated.

C. Submit one (1) electronic copy in PDF or DWF to the OAR and Architect for each product type for review and approval including illustrations from a qualified testing and inspecting agency that is applicable to each fire-resistive joint system configuration for construction and penetrating items.

D. Research/Evaluation Reports: For each type of fire-resistive joint system.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain fire-resistive joint systems for each kind of joint and construction condition indicated through one source from a single manufacturer.

B. Preconstruction Compatibility and Adhesion Testing: Submit to fire-resistive joint system manufacturers, for testing indicated below, samples of materials that will contact or affect fill materials.

1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of fill materials to joint substrates.

a. Perform tests under environmental conditions replicating those that will exist during installation.

2. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
3. For materials failing tests, obtain fire-resistive joint system manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

C. Fire-Test-Response Characteristics: Provide fire-resistive joint systems that comply with the following requirements and those specified in "Performance Requirements" Article:

1. Fire-resistance tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for fire-resistive joint systems acceptable to authorities having jurisdiction.

2. Fire-resistive joint systems are identical to those tested per UL 2079. Provide rated systems complying with the following requirements:

   a. Fire-resistive joint system products bear classification marking of qualified testing and inspecting agency.
   b. Fire-resistive joint systems correspond to those indicated by referencing system designations listed by the following:

      1) UL in its "Fire Resistance Directory."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver fire-resistive joint system products to Project site in original, unopened containers or packages with qualified testing and inspecting agency's classification marking applicable to Project and with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions for multicomponent materials.

B. Store and handle materials for fire-resistive joint systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Ventilate fire-resistive joint systems per manufacturer's written instructions by natural means or, if this is inadequate, forced-air circulation.

1.8 COORDINATION

A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

B. Coordinate sizing of joints to accommodate fire-resistive joint systems.

C. Notify Owner's inspecting agency at least seven days in advance of fire-resistive joint system installations; confirm dates and times on days preceding each series of installations.

D. Do not cover up fire-resistive joint system installations that will become concealed behind other construction until Owner's inspecting agency and building inspector, if required by authorities having jurisdiction, have examined each installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the products specified.

1. Fire-Resistive Joint Systems:

a. 3M Fire Protection Products.
b. DAP Inc.
c. Firestop Systems Inc.
d. Hilti, Inc.
e. ISOLATEK International.
f. Nelson Firestop Products.
g. Tremco, Inc.
h. A/D Fire Protection Systems Inc.

2. Perimeter Fire-Containment Systems:

a. Specified Technologies Inc.
b. United States Gypsum Company.

2.2 FIRE-RESISTIVE JOINT SYSTEMS, GENERAL

A. Compatibility: Provide fire-resistive joint systems that are compatible with joint substrates, under conditions of service and application, as demonstrated by fire-resistive joint system manufacturer based on testing and field experience.

B. Accessories: Provide components of fire-resistive joint systems, including forming materials that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing and inspecting agency for systems indicated.

2.3 FIRE-RESISTIVE JOINT SYSTEMS

A. Where UL-classified fire-resistive joint systems are indicated, they refer to alphanumeric designations listed in UL's "Fire Resistance Directory" under product Category XHBN.

2.4 PERIMETER FIRE-CONTAINMENT SYSTEMS

A. Where UL-classified perimeter fire-containment systems are indicated, they refer to alphanumeric designations listed in UL's "Fire Resistance Directory" under product Category XHDG.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:

1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from fire-resistive joint system materials. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with Part 1 "Performance Requirements" Article and fire-resistive joint system manufacturer's written installation instructions for products and applications indicated.

B. Install forming/packing/backing materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings and forming/packing/backing materials as required to achieve fire-resistance ratings indicated.
2. Apply fill materials so they contact and adhere to substrates formed by joints.
3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 FIELD QUALITY CONTROL

A. Inspecting Agency: The Contractor shall engage a qualified independent inspecting agency to inspect fire-resistive joint systems and to prepare inspection reports.

1. Inspecting agency will state in each report whether inspected fire-resistive joint systems comply with or deviate from requirements.

B. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and inspecting agency has approved installed fire-resistive joint systems.

C. If deficiencies are found, repair or replace fire-resistive joint systems so they comply with requirements.

3.5 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to joints as Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

END OF SECTION 07 8420

SECTION 07 92 10 - JOINT SEALANTS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Application of sealants at control and expansion joints on exterior vertical and horizontal intersections to provide a water and air tight barrier, as specified below and as noted on drawings.

B. Application of specialty sealants and caulking as noted on drawings.

C. Associated materials and preparatory work to insure a successful sealant application.

1. Provide sealant adhesion tests during sealant application.

1.2 REFERENCES

A. ASTM C 920 – Standard Specification for Elastomeric Joint Sealants.

B. ASTM D 2240 – Standard Test Method for Rubber Property-Durometer Hardness.

C. ASTM C 1248 – Standard Test Method for Staining of Porous Substrate by Joint Sealants.

D. ASTM C 719 – Standard Test Method for Adhesion and Cohesion of Elastomeric Joint Sealants Under Cyclic Movement (Hockman Cycle).

E. ASTM D 412 – Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers–Tension.

F. ASTM C 834 – Standard Specification for Latex Sealants.

G. ASTM C 881 – Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.

H. ASTM C 510 – Standard Test Method for Staining and Color Change of Single or Multi Component Joint Sealant.

I. Sealant, Waterproofing and Restoration Institute (SWRI) Sealant & Caulking Specification.

J. EIFS Industry Members Association (EIMA) Guide for use of Sealants with Exterior Insulation and Finish Systems Class PB.

1.3 SUBMITTALS

A. Product Literature: Product data sheets, color charts, and manufacturer's installation instructions.

B. Samples: A 2-inch cured sample of each chosen color and type of sealant.

C. Field Adhesion test.

1.4 QUALITY ASSURANCE

A. Compatibility with Substrate and Coatings:

1. Applicator shall be responsible for verifying with sealant manufacturer that sealants used are compatible with joint substrates and coatings to which sealants will come in contact.

2. Submit written certification from sealant manufacturer of acceptability for adhesion, staining, and compatibility with adjacent materials and finishes.

3. Schedule sufficient time for the conducting of field testing, certification of results and submission which will not cause a project delay.

B. Applicator shall be responsible for providing a completely sealed building and ensure that all exterior joints between surfaces are properly sealed.

1.5 FIELD QUALITY REQUIREMENTS

A. Selected sealant manufacturer shall conduct site visits throughout construction to perform random field adhesion pull tests.

1. Sealant manufacturer shall at a minimum perform 10 field adhesion tests for the initial 1,000 linear feet of sealant installed for each substrate type and one field adhesion test for each 1,000 linear feet installed thereafter for each substrate type.

2. Sealant contractor shall regularly perform sealant field adhesion tests and record all test results as part of a quality control plan.

1.6 MOCK-UP

A. Prior to installation of joint sealants, apply sealants to field constructed mock-ups to verify selections made in submittal process and to demonstrate aesthetic effects as well as qualities of material execution.

B. Conduct sealant adhesion pull tests as part of mock-up assembly.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 10 years experience.

B. Applicator and job foreman shall have minimum five years' experience on equivalent projects.

C. Use personnel specifically trained in proper application procedures that are thoroughly familiar with joint details shown on drawings and installation requirements as specified in this Section.

1.8 PRE-INSTALLATION CONFERENCE

A. Prior to installation of joint sealants, convene at project site to discuss application of joint sealants and related work. Attendees will include applicator, sealant manufacturer's technical representative, and applicators of related work, general contractor, and architect.

1.9 DELIVERY, STORAGE AND HANDLING

A. Deliver in manufacturer's original, unopened containers identifying each product specified, relating to product literature submitted.

B. Store in accordance with manufacturer's recommendation; take precautions to ensure material fitness when installed for design performance.

1.10 WARRANTY

A. Upon completion of the work, furnish a written and signed manufacturer's warranty against adhesive and cohesive failure of sealant and watertightness of sealed silicone joints for a period of twenty (20) years, and five (5) years for polyurethane sealant. This warranty shall certify the properties of the products affecting their performance and that the products are used in accordance with the recommendations of the manufacturer.

B. Provide a manufacturers 20-year non-staining warranty for silicone sealant.

C. The contractor shall submit the following written and signed document to the Architect for delivery to the Owner.

CONTRACTOR WARRANTY

The undersigned warrants all materials furnished and work performed in the installation of exterior sealant systems on the _____*(insert project title)*_____ will remain free from leaks and other defects for a period of five years extending from the date of completion and acceptance of the sealant system and agrees during that period to make all necessary repairs and replacement of defective work, and all other work, exclusive of contents and furnishings damaged thereby, without additional cost to the Owner. This warranty shall have no dollar limit and shall cover all labor and materials required for repairs and replacement.

_____	_____
General Contractor	Calk/Sealant Contractor
_____	_____
Signed	Signed
_____	_____
Title	Title

D. Temporary repairs may be made by the Owner to meet emergency conditions without invalidating either of these warranties.

E. The Contractor shall be responsible for damages to the building resulting from failure to prevent penetration of water during construction.

PART 2 - PRODUCTS

2.1 SILICONE SEALANTS (See schedule for application usage for each sealant type.)

A. Type 1: ASTM C 920; low modulus, one component, non-sag, neutral cure silicone.

1. Movement Capability: ASTM C 719; plus 100 percent to minus 50 percent; elongation, 1600% per ASTM D 412.

2. Service Temperature Range: Minus 20 to 160 degrees F.

3. Shore A Hardness Range: 15 – 20; ASTM D 2240.

4. Staining: None; ASTM C 1248.

5. Manufacturers: Dow Corning Corp. 790.

B. Type 2: ASTM C 920; intermediate modulus, one component, non-sag, neutral cure silicone.

1. Movement Capability: Plus or minus 50 percent.

2. Service Temperature Range: Minus 40 to 300 degrees F.

3. Shore A Hardness Range: 30; ASTM D 2240.

4. Staining: None; ASTM C 510.

5. Manufacturers: Dow Corning Corp. 795, 995.

C. Type 3: ASTM C 920; high modulus, one component, non-sag, acetoxy cure silicone.

1. Movement Capability: Plus or minus 25 percent.

2. Service Temperature Range: Minus 35 to 140 degrees F.

3. Shore A Hardness Range: 23; ASTM D 2240.

4. Manufacturers: Dow Corning Corp. 999A; Pecora 863; GE 1200.

D. Type 4: ASTM C 920; medium modulus, one component, non-sag, neutral cure silicone.

1. Movement Capability: Plus or minus 50 percent.

2. Service Temperature Range: Minus 20 to 120 degrees F.

3. Shore A Hardness Range: 25 – 30; ASTM D 2240.

4. Staining: None; ASTM C 1248.

5. Manufacturers: Dow Corning Corp. 791; GE Silpruf.

E. Type 5: ASTM C 920; one component, self-leveling, fuel resistant, low modulus silicone.

1. Movement Capability: Plus 100, minus 50 percent.

2. Service Temperature Range: Minus 20 to 160 degrees F.

3. Shore A Hardness Range: 15 – 20; ASTM D 2240.

4. Manufacturers: Dow Corning Parking Structure Self Leveling.

F. Type 6: ASTM C 920; one component, non-sag, sanitary silicone sealant.

1. Movement Capability: Plus or minus 25 percent.

2. Shore A Hardness Range: 20 – 20; ASTM D 2240.

3. Manufacturers: Dow Corning Corp. 786, GE 1700, Percora 898.

2.2 POLYURETHANE SEALANTS

A. Type 7: ASTM C 920; medium modulus, two components, non-sag, polyurethane.

1. Movement Capability: Plus or minus 50 percent.

2. Service Temperature Range: Minus 20 to 120 degrees F.

3. Shore A Hardness Range: 20 – 40; ASTM D 2240.

4. Manufacturers: Sika Corporation, Sikaflex 2c; Tremco, Dymeric 241, Pecora, Dynatrol II.

B. Type 8: ASTM C 920; low modulus, one component, non-sag, polyurethane.

1. Movement Capability: Plus or minus 50 percent.

2. Service Temperature Range: Minus 20 to 120 degrees F.

3. Shore A Hardness Range: 25 – 25; ASTM D 2240.

4. Manufacturers: Tremco, Vulkem 921, Sika Corporation, Sikaflex 15LM.

2.3 SPECIALTY SEALANTS

A. Type 9: Semi rigid, two component, epoxy joint filler.

1. Movement Capability: N/A, designed for non-moving floor joints.

2. Service Temperature Range: 40 to 120 degrees F.

3. Shore A Hardness Range: 50 - 75; ASTM D 2240.

4. Manufacturers: Euclid Chemical, Euco 700, Sika Corporation, Sikadur

CJR LPL.

B. Type 10: ASTM C 881; two component (security area) pick proof epoxy sealant.

1. Service Temperature Range: 40 to 120 degrees F.

2. Manufacturers: Sika, Sikadur 23 Lo-Mod Gel.

C. Type 11: ASTM C 920; Polyurethane security sealant.

1. Movement Capability: Plus or minus 12.5 percent.

2. Service Temperature Range: Minus 20 to 120 degrees F.

3. Shore A Hardness Range: 49 – 60; ASTM D 2240.

4. Manufacturers: Pecora Corporation, Dynaflex; Sika Corporation, Sikaflex TR.

2.4 ACOUSTICAL SEALANT

A. Type 12: ASTM C 834; single component, modified butyl.

1. Non-Hardening, Non-Drying, Non-Bleeding.

2. Unexposed joints only.

3. Manufacturers: Pecora, BA-98 Acoustical Sealant; Tremco, Tremco Acoustical Sealant.

2.5 CAULKING

A. Type 13: ASTM C 834; Acrylic latex caulking compound with silicone.

1. Movement Capability: Plus or minus 7.5 percent.

2. Manufacturers: Pecora, AC-20+Silicone; Tremco, Tremflex 834.

2.6 PRIMERS

A. Comply with manufacturer's instructions. Manufacturer shall be consulted for all surfaces not specifically covered in submitted application instructions.

2.7 BACKER ROD - TAPE

A. Closed-cell polyethylene; open-cell polyurethane; or non gassing, open-cell polyethylene soft-type backer rod as recommended by sealant manufacturer. Bond breaker tape shall be used to prevent three-sided adhesion in locations

where backer rod cannot be used.

B. Acceptable Manufacturers:

1. Closed-Cell: ITP, Standard Backer Rod; Nomaco Standard Backer Rod.

2. Open-Cell: Denver Foam; ITP Tundra Foam; Nomaco.

3. Soft-Type: ITP Soft-type; Nomaco Soft-rod.

4. Bond Breaker Tape: Pecora Corp.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate surfaces to ensure no bond breaker materials contaminate surface to which sealant is to adhere, and that unsound substrates are repaired.

B. Verify joint dimensions are within manufacturer's acceptable tolerances, per manufacturer's submittal literature.

3.2 PREPARATION

A. Protect adjacent exposed surfaces.

B. Prepare joints in accordance with manufacturer's recommended instructions for maximum adhesion; prime as required by manufacturer.

C. Consult manufacturer for surfaces not specifically covered in application instructions.

D. Installation of sealant shall be evidence of acceptance of substrate.

3.3 INSTALLATION: GENERAL.

A. Both temperature and dampness conditions may restrict application of these sealants. Comply with manufacturer's instructions.

B. Sealant shall be mixed (if multi-component) and installed in accordance with manufacturers' recommendations and instructions to ensure complete mixing and an installed proper width/depth ratio with maximum adhesion contact. Prevent three-sided adhesion.

3.4 BACKER ROD INSTALLATION

A. Backer rod shall be installed using only blunt or rounded tools which will ensure a uniform (+ or – 1/8") depth without puncturing the material. Backer rod shall be a minimum of 33% oversized for closed cell or soft rod and a minimum of 50% oversized for open cell backer rod, unless otherwise required by the manufacturer.

B. Set backer rod at proper depth in the joint. Do not leave voids or gaps between the ends of joint filler.

3.5 SEALANT INSTALLATION

A. Deposit sealants in uniform, continuous ribbons without gaps with complete "wetting" of the joint bond surfaces equally on opposite sides. Fill sealant joint to a slightly concave surface, slightly below adjoining surfaces.

B. Joint Size and Shape: Install sealants to depths recommended by sealant manufacturer. Fill joints to a depth equal to 50% of joint width, but no more than 50% of joint width, but nor more than ½-inch deep nor less than ¼-inch deep.

C. Finished bead shall be smooth, free from wrinkles, air pockets, and foreign matter.

3.6 CLEANING

A. Remove excess material adjacent to joint.

B. Remove unused materials from jobsite.

3.7 SCHEDULE

JOINT TYPE	SEALANT TYPE												
	1	2	3	4	5	6	7	8	9	10	11	12	13
Structural Glazing		X											
Glass to Glass (Non Structural)			X	X									
Perimeter Window Sealant		X		X									
Aluminum to Brick	X			X									
Brick to Brick	X						X						
Wood to Wood				X				X					
Metal to Metal		X		X									
Metal to Stucco				X									
Aluminum to Concrete	X			X									
Concrete to Concrete	X												
Aluminum to Plaster	X												
Stone to Stone	X												
Aluminum to EIFS (Note)				X									
EIFS to EIFS (Note)	X			X									
Paving on Grade					X								
Interior Caulking													X
Sanitary Sealant						X							
Warehouse Floor Control Joints									X				
Pick Proof Security Joints										X			
Tamper Proof Security Joints											X		
Interior Acoustical Joints												X	

Note: Consult Sealant and EIFS manufacturers for suitability of sealant to specific EIFS system.

END SECTION

SECTION 08 10 00 - STEEL DOOR FRAMES AND DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The General Provisions of the Contract, including General and Supplementary Conditions and General Requirements apply to the work specified in this section.

B. Section 04 22 00 Concrete Masonry Units
C. Section 087100, “Door and Hardware Schedule”
D. Section 092500, "Gypsum Drywall"
E. Section 099100, "Painting”
F. Section 062200, “Millwork”
G. Division 27 Access Control /Low Voltage

1.2 DESCRIPTION OF WORK

A. The extent of standard steel door frames and doors as shown on drawings, schedules specified herein.

1.3 QUALITY ASSURANCE:

A. Provide standard steel door frames manufactured by a single firm specializing in production of this type of work, unless otherwise acceptable to Architect.

B. Fabricate side panels and transom panels to match door frames in all respects, unless otherwise indicated.

C. Provide frames complying with the Steel Door Institute "Recommended Specifications, Standard Steel Doors and Frames" (SDI-100). All frame joints shall be shop-welded and primed.

D. Security Test – ASTM 476

E. At exterior provide doors and door frames that comply with the Florida Building Code 2017-Product Approval System for 150 mph 3-second gust.

1.4 FIRE-RATED ASSEMBLIES

A. Where fire-resistance classification is shown, scheduled, or specified for steel frames and doors, provide fire-rated frames and doors investigated and tested as a fire door assembly, complete with type of hardware to be used. Identify each fire door frame with recognized testing laboratory labels, indicating applicable fire rating of steel frames.

B. Construct and install assemblies to comply with N.F.P.A. Standard No. 80, and as herein specified.

1.5 SUBMITTALS

A. See Section 01 3323, "Shop drawings, Product Data and Samples".

B. Product Data - Standard Steel Door Frames and Doors.

C. Submit copies manufacturer's product data for fabrication and installation instructions.

D. Shop Drawings - Standard Steel Door Frames and Doors.

E. Submit copies of shop drawings for fabrication and installation of steel doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, location and installation requirements of finish hardware and reinforcements, and details of joints and connections. Show anchorage and accessory items.

F. Provide schedule of doors and frames using same reference numbers for details and openings as those on contract drawings.

G. Provide product approval documents, certification, test reports that verify compliance with the requirements set forth in the Florida Building Code Product Approval System for exterior doors and door frames.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow metal work cartooned or crated to provide protection during transit and job storage.

B. Inspect hollow metal work upon delivery for damage. Minor damages may be repaired provided finish items are equal in all respects to new work and acceptable to Architect; otherwise, remove, and replace damaged items as directed.

C. Store frames at building site under cover. Place units on at least 4" high wood sills or on the floors in a manner that will prevent rust and damage. Avoid use of non-vented plastic or canvas shelters which could create a humidity chamber. If cardboard wrapper on door becomes wet, remove carton immediately. Provide a 1/4" space between stacked doors to promote air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Amweld

B. Ceco Corp.

C. Steelcraft

D. Or approved substitution.

2.2 PRODUCTS

A. Provide metal doors of type and styles indicated on the drawings and schedules and complying with SDI 100 for minimum materials, requirements, Type II Heavy-Duty, Style 4 seamless construction.

1. 14-gauge steel, extra heavy-duty door insulated core, galvanized, doors.

2. 14-gauge steel, extra heavy-duty galvanized frame.

3. UL listed as doors and door frames for a one- and two-hour rated wall door opening.

4. Door and frame, assembly grade 40, based on ASTM 476.

5. Door and frame, assembly certified to meet the Florida Building Code Product Approval System.

6. Jamb depth: As shown on drawings.

7. Jamb anchors: Masonry, five (5) through bolt frame anchors at each Jamb, UL label. and product approval.

8. Fill Jambs solid with Grout at masonry openings.

9. Door size: As shown on drawings.

10. Provide galvanized door frames and doors at exterior locations and non-HVAC areas.

11. All exterior wall shall have a Florida Product approval in compliance with exposure and pressures noted on Structural Drawing Diagram and Schedules.

12. All exterior wall doors shall have an insulated core.

2.3 MATERIALS

A. Hot-Rolled Steel Sheets and Strip:

B. Commercial quality carbon steel, pickled and oiled, complying with ASTM A569 and ASTM A568.

C. Cold-Rolled Steel Sheets: Commercial quality carbon steel, complying with ASTM A366, and ASTM A568.

D. Galvanized Steel Sheets: Zinc-coated carbon steel sheets of commercial quality, complying with ASTM A526, with ASTM A525, G60 zinc coating, mil phosphatized.

E. Supports and Anchors:

1. Fabricate of not less than 14-gauge galvanized sheet steel.

2. Inserts, Bolts, and Fasteners: Manufacturer's standard units, except hot-dip galvanize items to be built into exterior walls, complying with ASTM A153, Class C or D as applicable.

3. Comply with Florida Building Code, product approval requirements for detail installation and the wind pressure, exposure as noted on Structural Drawing Diagram and Schedules.

F. Shop-Applied Paint: For steel surfaces, use rust-inhibitive enamel or paint, air-drying or baking, suitable as a base for specified finish paints.

G. Surface Filler: F.S. TT-F-3220 (1), two-component type or MIL-F-52252.

2.4 FABRICATION - GENERAL

A. Fabricate steel frame units to be rigid, neat in appearance and free from defects, warp or buckle. Wherever practicable, fit and assemble units in manufacturer's plant all joints welded. Clearly identify work that cannot be permanently factory-assembled before shipment to assure proper assembly at project site.

B. Fabricate frames, concealed stiffeners, reinforcement, edge channels, louvers, and moldings from either cold-rolled or hot-rolled steel.

C. Fabricate all interior frames from galvanized sheet steel.

D. Exposed Fasteners: Unless otherwise indicated, provide countersunk flat Phillips heads for exposed screws and bolts.

E. Finish Hardware Preparation:

1. Prepare hollow metal units to receive finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with final Finish Hardware Schedule and templates provided by hardware supplier.

2. Reinforce hollow metal units to receive surface- applied and or recessed hardware.

3. Prepare hollow metal units with internal rated raceways for power and access control to Mortise locks, and panic devices.

2.5 STEEL FRAMES

A. Provide primed metal frames of the types and styles indicated on drawings or schedules and complying with S.D.I.-100 for minimum materials and construction requirements.

B. Fabricate frames of welded construction for all applications.

C. Comply with Florida Building Code, for three second gust, wind load requirements or as noted on the Structural Wind Diagram and Schedule.

D. Door Silencers: Drill stops to receive two (2) silencers on strike jambs of single-swing frames and two (2) silencers on head of double-swing frames.

E. Plaster Guards: Provide 26-gauge steel plaster guards or mortar boxes, welded to frame, at back of finish hardware cutouts where mortar or other materials might obstruct hardware operation.

F. Prepare frames door and doors with UL listed power concealed raceways.

G. Prepare frames for electric transfer (EPT) on hinge side of frame.

PART 3 - EXECUTION

3.1 INSPECTION

A. Installer must examine substrate and conditions under which steel doors and frames are to be installed and notify the Contractor in writing of any conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION

A. General: Install hollow metal units and accessories in accordance with final shop drawings and manufacturer's data, and as herein specified.

B. Placing Frames: Comply with the provisions of SDI-105 "Recommended Erection Instructions for Steel Frames" and South Florida Building Code approvals for tested installation.

C. Place frames prior to construction of enclosing walls and ceilings. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is completed, remove temporary braces and spreaders leaving surfaces smooth and undamaged.

D. Install fire-rate frames in accordance with N.F.P.A. Standard No. 80.

E. Install per approved tested assembly which complies with the Florida Building Code Product Approval System, not less than five (5) wall anchors per jamb.

F. Drill holes in masonry above the head frame to allow grouting of door jambs after anchors are in place.

G. Place and fill jambs solid with grout.

3.3 DOOR INSTALLATION

A. Fit hollow metal doors accurately in their respective frames, within clearances in SDI-100.

B. Place fire-rated doors with clearances as specified in NFPA standard No. 80. " DO NOT PAINT OVER UL LABLE ON DOOR AND DOOR FRAMES".

3.4 FINISH HARDWARE

A. See Section 08 71 00, "Door Hardware".

3.5 ACCESS CONTROL

A. See Division 27 ACCESS CONTROL

3.6 ADJUST AND CLEAN

A. Final Adjustments: Check and readjust operating finish hardware items in hollow metal work prior to final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including doors and frames which are warped, bowed or otherwise damaged.

B. Prime Coat Touch-Up: Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touch-up of compatible air-drying primer.

END OF SECTION 08 1000

SECTION 08 31 13- ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General conditions provisions of the contract including contractual conditions, and division 1 specifications.

1.02 SUMMARY

A. This Section includes the following types of access doors:

1. Wall access doors.
2. Fire-rated wall access doors.
3. Ceiling access doors.
4. Fire-rated ceiling access doors.
5. Floor access doors.

B. This Section includes all access doors to the extent required by code:

1. Electrical Junction and pull boxes.
2. Communications, data, alarm, security, low voltage, CCTV junction, control and pull boxes
3. Access to mechanical equipment for maintenance and replacement.
4. Access to mechanical duct dampers.
5. Plumbing valves, devices, and cleanouts.
6. Fire Protection valves and devices.
7. Install Access doors required by code even if not shown on drawings. Access doors will be required to be installed through-out the project to comply with Code requirement for access.

1.03 SUBMITTALS

A. Product Data: For each type of access door assembly specified, including details of construction relative to materials, individual components, profiles, finishes, and fire-protection ratings (if required).

B. Include complete schedule: including types, general locations, sizes, wall and ceiling construction details, latching or locking provisions, and other data pertinent to installation.

C. Shop Drawings: Showing fabrication and installation of customized access doors and frames, including details of each frame type, elevations of door design types, anchorage, and accessory items.

1.04 QUALITY ASSURANCE

A. Single-Source Responsibility: Obtain access doors for entire Project from one source and by a single manufacturer.

B. Fire-Rated Door Assemblies: Units that comply with NFPA 80, are identical to door and frame assemblies tested for fire-test-response characteristics per test method as indicated below, and are labeled and listed by UL, Warnock Hersey, or another testing and inspecting agency acceptable to authorities having jurisdiction.

1. Test Method for Vertical Installations: ASTM E 152.

2. Test Method for Horizontal Installations: ASTM E 119.

C. Size Variations: Obtain Architect's acceptance of manufacturer's standard size units, which may vary slightly from sizes indicated.

1.05 COORDINATION

A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed equipment, and indicate on schedule specified under "Submittals" Article.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Bilco
2. J.L. Industries.
3. Karp Associates, Inc.
4. Milcor, Inc.
5. Nystrom, Inc.

2.02 MATERIALS

A. Steel Sheet: ASTM A 366 commercial-quality, cold-rolled steel sheet with baked-on, rust-inhibitive primer.

2.03 ACCESS DOORS

A. Insulated, Fire-Rated Access Doors: Self-latching units consisting of frame, trim, door, insulation, and hardware, including automatic closer, interior latch release, and complying with the following requirements:

1. Trimless Frame: Perimeter frame complying with the following requirements:

a. Metal: 0.0598-inch- thick steel sheet.

b. Frame Configuration: Flange integral with frame and overlapping face of adjoining gypsum board, with surface formed to receive joint compound.

2. Door: 0.0359-inch- thick steel sheet, welded pan type.

3. Hinges: Continuous type.

4. Keyed Latches: Bolt type, operated by flush key device, keyed to match building system. See Section 08 71 02 Door Hardware and Schedule.
5. Insulation: 2-inch- thick mineral-fiber insulation.
6. Fire-Protection Rating for Walls and Ceilings: 1 and 2 hours with UL listing and Label.

B. Noninsulated, Fire-Rated Doors for Walls: Self-latching units consisting of frame, trim, door, and hardware, including automatic closer, interior latch release, and complying with the following requirements:

1. Frame: 0.0598-inch- thick steel sheet.
2. Door: 0.0598-inch- thick steel sheet.
3. Hinge: Continuous type.
4. Keyed Latches: Key opens and closes Access Door, keyed to match building system. See Section 08 71 02 Door Hardware and Schedule.
5. Fire-Protection Rating for Walls: 1 and 2 hour UL listed and labled.

C. Trimless, Flush Access Doors for Gypsum Board: Units consisting of frame, concealed edge trim, door, hardware, and complying with the following requirements:

1. Frame: 0.0598-inch- thick steel sheet.
2. Door: 0.0747-inch- thick steel sheet.
3. Concealed, Gypsum Board Edge Trim: 0.0299-inch zinc-coated or galvanized-steel sheet with face flange formed to receive joint compound.
4. Hinge: Concealed spring pin or continuous type.
5. Keyed Latches: Key opens and closes Access Door, keyed to match building system. See Section 08 71 02 Door Hardware and Schedule.

D. Trimless, Flush Access Doors for Concrete Slab: Units consisting of frame, concealed edge trim, door, hardware, and complying with the following requirements:

1. Frame: 0.25-inch- thick aluminum channel (drainable).
2. Door: 0.25-inch- thick aluminum diamond plate.
3. Frame areas in contact with concrete coated with bituminous paint.
4. Hinge: Concealed spring pin or continuous type stainless steel.

5. Keyed Latches: Key opens and closes Access Door, keyed to match building system. See Section 08 71 02 Door Hardware and Schedule.

6. Basis of Design: Bilco J-1AL

2.04 FABRICATION

A. General: Manufacture each access door assembly as an integral unit ready for installation.

B. Steel Access Doors and Frames: Continuous welded construction. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.

1. Exposed Flange: Nominal 1 to 1-1/2 inches wide around perimeter of frame.

2. For gypsum board assemblies or gypsum veneer plaster, furnish frames with edge trim for gypsum board or gypsum base.

3. For installation in masonry construction, furnish frames with adjustable metal masonry anchors.

C. Locking Devices: Furnish number required to hold door in flush, smooth plane when closed.

1. For cylinder lock, furnish 2 keys per lock and key all locks alike. See Section 0876102 Door Hardware for 'Best" Cylinder and lock system requirements.

PART 3 EXECUTION

3.01 PREPARATION

A. Advise Installers of other work about specific requirements relating to access door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices. Furnish inserts and anchoring devices for access doors that must be built into other construction. Coordinate delivery with other work to avoid delay.

3.02 INSTALLATION

A. General: Comply with manufacturer's instructions for installing access doors.

1. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finished surfaces.
2. Paint exposed surface of access doors and frames to match adjacent surface finish.

B. Install Access doors at all locations as required by code coordinate with other trades which require doors for access for location, type and size.

3.03 ADJUST AND CLEAN

A. Adjust hardware and panels after installation for proper operation.

B. Remove and replace panels or frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 13

1.4 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by pressure and suction of wind acting normal to plane of folding glass wall as calculated in accordance with applicable code. See Structural Drawings for required wind pressures.

B. Outward/Inward opening Euro-C3 Aluminum Folding Door system when tested on a typical four panel folding door unit (3L3R), 218” (5537.2 mm) in width and 120” (3048 mm) in height shall meet or exceed the following performance tests.

1. AAMA / WDMA / CSA 101 / I.S.2 / A440-08 (NAFS-08), Air infiltration: A2, Water Leakage Resistance: DP70 (510 PA), Wind Load Resistance: DP45.

2. Design Pressure: 2400 Pa (50 psf), ASTM E330, Procedure A.

3. Negative Design Pressure = 2400 Pa (50 psf), ASTM E330, Procedure A.

4. Water Penetration Resistance: 510 Pa (10.5 psf), ASTM E 547 with no leakage.

5. Air Leakage Resistance: A2 under NAFS-08.

6. ADA and flush sill tested to 75DP without water.

C. Outward/Inward opening Euro-C3 - Florida Building Code Product Approval FL 17838-R2 ,Aluminum Folding Door system when installed to conforming to FBC , unlimited width

and 120” (3048 mm) in height shall meet or exceed the following performance tests.

1. ASTM E 330, Procedure A: Uniform Load Structural: PG75+/- (5040 Pa/ 105 psf).

2. AAMA / WDMA / CSA 101 / I.S.2 / A440-08 (NAFS-08), Air infiltration: A3, Water Leakage Resistance: DP75 (510 PA), Wind Load Resistance: DP75+/-.

3. Design Pressure: 75 psf, ASTM E 330, Procedure A.

4. Negative Design Pressure: 75 DP- ASTM E 330, Procedure A.

5. Water Penetration Resistance: 510 Pa (10.5 psf), ASTM E 547.

6. Air Leakage Resistance: A2 (NAFS-08)

7. TAS 201 TAS 202 TAS 203, Passed

8. Florida Product Approval: 17838_R2

D. Outward/Inward opening Euro-C3 Aluminum Folding Door system when tested on a typical four panel folding door unit (1L9R), 333” (8458.2 mm) in width and 120” (3048 mm) in height shall meet or exceed the following performance tests.

1. ASTM E 1886: 16 Large Missile Impact Shots: Pass

2. ASTM E 1996: 9000 Air Pressure Cycles (Positive/ Negative): 75 Psf.

3. ASTM E 330, Procedure A: Uniform Load Structural: DP75. 112.5 psf).

4. AAMA / WDMA / CSA 101 / I.S.2 / A440-08 (NAFS-08), Air infiltration: A3, Water Leakage Resistance: DP75, Wind Load Resistance: DP75

5. Design Pressure: 3360 Pa (70 psf), ASTM E 330, Procedure A.

6. Negative Design Pressure: 75 psf, ASTM E 330, Procedure A.

7. Water Penetration Resistance: 510 Pa (11.25 psf), ASTM E 547.

8. Leakage Resistance: A2 (NAFS-08)

9. TAS 201 TAS 202 TAS 203, Pass

1.5 SUBMITTALS

A. Submit under provisions of Section 01 33 23 Shop Drawings, Product Data, And

Samples.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.

2. Storage and handling requirements and recommendations.

3. Installation methods.

C. Shop Drawings: Detailed drawings prepared specifically for the project by manufacturer. Show opening dimensions, framed opening tolerances, profiles, product components, anchorages, and accessories.

1. Indicate material thickness, fastener locations, glazing and hardware arrangements.

2. Include schedule identifying each unit, with marks or numbers referencing drawings.

3. Provide drawing plans, sections, elevations and details, and calculations signed and sealed by Florida Registered Engineer.

D. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

E. Verification Samples:

1. Aluminum Finish: Two samples, minimum size 2 by 3 inches (50 by 75 mm), representing actual product and color.

3. Glass: Two samples, minimum size 12 inches (300 mm) square, of specified glass, including coatings or frit pattern.

3. Assembly Sample: 24 by 36 inch (600 by 900 mm) assembly complete with glazing, gaskets, fasteners, anchors, and finish; do not proceed with fabrication until workmanship and color are approved by Architect.

F. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

G. Closeout Submittals: Provide manufacturer's maintenance instructions that include recommendations for periodic checking and adjustment and periodic cleaning and maintenance of all components

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section with minimum 3 years experience in fabrication and erection of glazed window wall systems for projects of similar scope. N.A.M.I. Quality Assurance compliant # 1884-1. ISO/IEC 17020 & Guide 53. State of Florida QUA 1789.

B. Installer Qualifications: Experienced in performing work of this section that has specialized in installation of work similar to that required for this project with 3 years of successful documented experience..

C. Mock-Up: Provide a full size mock-up for evaluation of surface preparation techniques and application workmanship.
1. Finish areas designated by Architect.
2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
3. Refinish mock-up area as required to produce acceptable work.
4. Incorporate accepted mock-up as part of the Work.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation per manufacturer’s instruction.

B. Provide care and handling conforming to AAMA CW-1 0, “Care and Handling of Architectural Aluminum from Shop to Site”.

C. Store products out of contact with the ground, under a weather tight covering, so as to prevent bending, warping, or other damage. Do not cover with unventilated tarps, polyethylene film, or similar coverings.

D. Protect factory finishes from damage, precipitation and construction materials until ready for installation.

1.9 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.10 WARRANTY

A. Manufacturer: Products are warranted for 10 years.
B. Installer: Provide a 5 year warranty on installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer: Euro-Wall Systems, L.L.C. ; 2200 Murphy Court, North Port, FL 34289. ASD. Phone Toll Free: 888-989-EURO (3876). Fax: 941-979-5317. Web Site: www.euro-wall.com. Email: engineering@euro-wall.com

B. Or Approved Substitution.

C. Requests for substitutions will be considered in accordance with provisions of Section 01 25 00.

2.2 ALUMINUM SLIDING/FOLDING DOORS

A. Provide top hung sliding/folding glass doors to fit the openings and configurations indicated on the Drawings. Provide system complete with head, sill and jambs complete with weatherstripping, operating hardware and specified accessories as follows:

1. System: Euro-Wall System LLC Euro-C3 Aluminum folding doors system as manufactured by Euro-Wall Systems LLC
2. Door Panel Size: Provide doors as a factory fabricated knock-down system.
    a. As indicated on the Drawings.
3. Operation:
    a. Folding system as indicated on the Drawings.

7. Glazing: Provide safety glazing materials complying with ANSI Z97.1 and with the requirements of Section 08 80 00 GLAZING

    d. Glazing: 1” (24mm) Sealed Unit Hurricane glass. Tint to match Curtain Wall Glass system.

7. Framing: Extruded aluminum with nominal thickness of .078 inches (2.0 mm) to .1562 (4mm).

8. Weatherstripping:
    a. Dual weatherstripping on head, jambs and between panels, and single weatherstripping on sill.
    b. Hinge gaskets on specific hinges.
9. Sill:
    a. Floor channel ADA Compliant Sill

10. Accessories:
    a. Moldings.
    b. Sill Cover.

11. Hardware: Folding door.
    a. Aluminum hinges, color as follows:
       1) Clear Anodized.
    b. Stainless steel corrosion proof carriers with sealed, self-lubrication, ball bearing multi-rollers.
    c. Twinpoint stainless steel Handle and Gear Box.
    d. Multipoint stainless steel door lock system. With removable Core to match Best core.
12. Multipoint Mortise Lock with removable core: “Best” removable core required. See Section 08 71 02 Door Hardware and Schedule.

13. Door Handles:
    a. As selected by the Architect

    b. Florence Series.
       1) Satin nickel finish.
    c. Faenza Series.
       1) Satin nickel finish.

2.3 MATERIALS

A. Aluminum: 6063-T5 alloy and temper. Other alloys and tempers may be used for non-structural members provided they do not void the required warranties. Indicate alloys and tempers clearly on shop drawings and in structural calculations.

B. Glazing: Provide glazing type specified complying with ANSI Z97.1.

C. Flashings: Sheet aluminum, same finish as for system components; secured with concealed fastening method or fastener with head finished to match; thickness as required for conditions encountered.

C. Glazing Gaskets: Dry glazing system compression type design, replaceable; EPDM, complying with ASTM C 864, with solid strand cord to prevent shrinkage or; Elastomeric silicone with solid strand cord to prevent shrinkage, complying with ASTM C 1115, as provided by the manufacturer.

    1. Manufacturer's standard black color.

E. Setting Blocks, Edge Blocks, and Spacers: As required by manufacturer and compatible with insulated glass where required.

F. Anchors and Fasteners: Aluminum, zinc and stainless steel of type, which will not cause electrolytic action or corrosion.

G. Accessories: Provide accessories as scheduled to achieve design intent and environmental control.

H. Aluminum Finish: Anodized Class 1 complying with AAMA 611 Class 1 Acid Etch anodic coatings.
   1. Color: Clear.

I. Aluminum Finish: Standard mill finish with custom finish as follows:

   1. Annodized Class 1 (Clear Anodized) 10 year manufacturer warranty.

2.4 FABRICATION

A. Fabricate components in accordance with approved shop drawings. Remove burrs and rough edges. Shop fabricate to greatest extent practicable to minimize field cutting, splicing, and assembly.

B. Fabricate components true to detail and free from defects impairing appearance, strength or durability.

C. Fabricate components to allow for accurate and rigid fit of joints and corners. Match components carefully ensuring continuity of line and design. Ensure joints and connections will be flush and weathertight. Ensure slip joints make full, tight contact and are weathertight.

D. Reinforce components at anchorage and support points, at joints, and at attachment points for interfacing work.

E. Glass: Accurately size glass to fit openings allowing clearances following recommendations of the manufacturer.

F. Cut glass clean and carefully. Nicks and damaged edges will not be accepted. Replace glass that has damaged edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Verify openings are ready to receive work and dimensions and clearances are as indicated on the approved shop drawings.

C. If preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install system in accordance with approved shop drawings and manufacturer's instructions.

C. Install components level, plumb and true to line with uniform joints. Do not use defective parts that are warped, twisted, bowed, dented or abraded.

D. Separate dissimilar materials using nonconductive tape, paint, or other material not visible in finished work.

E. Provide attachments and shims to permanently fasten system to building structure.

F. Maintain dimensional tolerances and alignment with adjacent Work.

G. Anchor securely in place, allowing for required movement, including expansion and contraction.

H. Install glazing and sealants in accordance with manufacturer's instructions without exception, including surface preparations.

I. Set sill members in bed of sealant. Set other members with internal sealants to provide weathertight construction.

J. Install flashings, closures, corners, and other accessories as required or detailed.

K. Clean surfaces and install sealant in accordance with sealant manufacturer's instructions and structure manufacturer's guidelines.

3.4 ADJUSTING AND CLEANING

A. Adjust hinge sets, locksets, and other hardware for proper operation. Lubricate using a suitable lubricant compatible with door and frame coatings.

B. Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions before owner's acceptance.

C. Clean and maintain aluminum surfaces in accordance with AAMA 610.1.

D. Remove from project site and legally dispose of construction debris associated with this work.

3.5 PROTECTION

A. Protect installed products until completion of project.

END OF SECTION 08 35 00

SECTION 08 42 29 – AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes bi-parting sliding, with fixed sidelights

1.2 DEFINITIONS

A. Automatic entrance doors consist of the manufacturer's assembled automatic entrance door units including entrance doors and frames, door operator controls, powered door operators, and accessories.

B. Activation Device: Device that, when actuated, sends an electrical signal to the door operator to open the door.

C. Safety Device: Device that prevents a door from opening or closing, as appropriate.

1.3 RELATED SECTIONS

A. Section 03 30 00- Cast in Place Concrete

B. Section 04 22 10- Concrete Masonry Units

C. Section 08 71 02- Door Hardware and Schedule

D. Section 08 80 00- Glazing

E. Division 26- ELectrical

1.4 PERFORMANCE REQUIREMENTS

A. Opening-Force Requirements for Egress Doors: Not more than 50 lbf required to manually set door in motion in the direction of egress if power fails, and not more than 15 lbf required to open door to minimum required width.

B. Closing-Force Requirements: Not more than 30 lbf required to prevent door from closing.

1.5 SUBMITTALS

A. Product data:

1. Data on operators, hardware, and accessories
2. Roughing-in diagrams
3. Parts lists
4. Data on finishes and recommendations for maintenance and cleaning of exterior surfaces

B. Shop drawings:

1. Layout and installation details, including relationship to adjacent work.
2. Elevations at 1/4-inch scale.
3. Detail sections of typical composite members.

4. Anchors and reinforcement.
5. Hardware mounting heights.
6. Provisions for expansion and contraction.
7. Glazing details.
8. Shop drawings shall be signed and sealed by a licensed engineer registered in the State of Florida.

C. Wiring diagrams detailing wiring for power operator, signal, switch sensors, and control systems differentiating clearly between manufacturer-installed wiring and field-installed wiring.

D. Hardware Schedule: Submit complete hardware schedule for automatic entrance doors organized into sets based on hardware specified. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrance doors with hardware required for the rest of the Project. Include name of the item and the manufacturer and complete designations of every item required for each entrance. If hardware is not specified, provide locks that latch & secure group that are comparable with Russwin-Corbin with removeable core. See Section 087102 Door Hardware for core requirements.

E. Installers Certification from the AAADM

F. Maintenance Data: Submit manufacturer's maintenance and service data for door operators and control system including the name, address and telephone number of the nearest authorized service representative.

1. Provide spare parts list
2. Glass maintenance instructions

G. Sample warranty

H. Florida Product Approval documents

1.6 QUALITY ASSURANCE

A. Installer Qualifications: For installation of the automatic entrance doors, engage an experienced Installer who is an authorized representative of the manufacturer for both the installation and maintenance of the type of units required for this Project. Installer shall also be certified by the Association of Automatic Door Manufacturers (AAADM).

1. Maintenance Proximity: The Installer shall maintain offices and repair or service facilities not more than 2 hours normal travel time from the Project site.

B. Manufacturer's Qualifications: Provide automatic entrance doors produced by a firm experienced in manufacturing systems that are similar to those indicated for this Project and that have a record of successful in-service performance on not less than 10 years.

C. Company specializing in manufacturing the products specified in this section shall have minimum ten years experience and be a member of the American

Association of Automatic Door Manufacturers (AAADM). A completed AAADM compliance form shall be submitted as proof of compliance with ANSI A156.10 Standard for power operated pedestrian doors. Door(s) shall be inspected and form shall be signed by an AAADM certified inspector prior to placing door(s) in operation.

D. Source Limitations: Obtain automatic entrance assemblies through one source from a single manufacturer.

E. UL Standard: Provide powered door operators that comply with UL 325.

F. Design Criteria: The drawings indicate the size, profile and dimensional requirements of automatic entrance doors required and are based on the specific types and models indicated. Automatic entrance doors by other manufacturers may be considered provided deviations in dimensions and profiles are minor and do not change the design concept as judged by the Architect. The burden of proof of equality is on the proposer.

G. Emergency Exit Doors: Automatic entrance doors serving as a required means of egress shall comply with requirements of authorities having jurisdiction. Provide manufacturer's certification that doors comply with these requirements.

1.7 PROJECT CONDITIONS

A. Field Measurements: General Contractor shall verify openings to receive automatic entrance door assemblies by field measurements before fabrication and indicate measurements on Shop Drawings.

B. Mounting Surfaces: General Contractor shall verify all surfaces to be plumb, straight and secure; substrates to be of proper dimension and material.

C. Other trades: General Contractor shall advise of any inadequate conditions or equipment.

1.8 COORDINATION

A. Templates: Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic entrances to comply with indicated requirements.

B. Electrical System Roughing-in: Coordinate layout and installation of automatic entrance door assemblies with connections to power supplies.

1. Coordinate signaling device for BAS, signaling when door is stuck in the open or break-open position.

1.9 WARRANTY

A. Automatic Entrances shall be free of defects in material and workmanship for a period of one (1) year from the date of substantial completion.

B. During the warranty period the Owner shall engage a factory-trained technician to perform service and affect repairs. A safety inspection shall be performed after each adjustment or repair and a completed inspection form shall be submitted to the Owner.

C. During the warranty period all warranty work, including but not limited to emergency service, shall be performed during normal working hours.

1.10 FLORIDA PRODUCT APPROVAL

A. Door shall have a Florida Product approval meeting the Structural load requirements noted on Drawing Diagram and Schedule.

1.11 FLORIDA ACCESSIBILITY CODE FOR BUILDING CONSTRUCTION

A. Sliding door assembly shall conform with the Accessibility Requirements Manual from the Florida Department of Community Affairs, Florida Board of Building Codes and Standards Latest Edition.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Stanley Access Technologies; Dura Storm Series 3000, SGD. Florida Product approval FL 23979.1

B. Products of the following manufacturers may be considered provided they equal or exceed the material requirements and design qualities of the specified product. Submit requests for Architect's approval with complete technical data for evaluation.

1. Or Approved Substitution

2.2 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Headers, stiles, rails, and frames: 6063-T6.
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
3. Sheet and Plate: ASTM B 209.

B. Sealants and Joint Fillers: Performed under Division 7 Section "Joint Protection".

2.3 AUTOMATIC ENTRANCE DOOR ASSEMBLIES

A. General: Provide manufacturer's standard automatic entrance door assemblies including doors, sidelights, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for a complete installation.

B. Sliding Automatic Entrances:

1. Configuration: Two sliding leaves and two full sidelights.
2. Traffic Pattern: Two-way.
3. Emergency Breakaway Capability: Sliding leaves.
4. Mounting: Between jambs.

2.4 COMPONENTS

A. Framing Members: Manufacturer's standard extruded aluminum reinforced as required to support imposed loads.

1. Nominal Size: 1 3/4 inch by 6 inch.
2. Concealed Fastening: Framing shall incorporate a concealed fastening pocket, and continuous flush insert cover, extending full length of each framing member.

B. Stile and Rail Doors and Sidelights: Manufacturer's standard 1 3/4 inch thick glazed doors with extruded-aluminum tubular stile and rail members. All door corners, including intersections of stiles and rails or stiles and muntin bars, shall be welded secure.

1. Glazing Stops and Gaskets: Snap-on, extruded-security aluminum inboard stops with preformed glazing gaskets. Mechanically fastened outboard gutter stop with approved structural glazing tape.

2. Entrances with width exceeding 168 inches and height exceeding 96 inches:

a. Stile Design: Medium stile; 3 1/2 inch nominal width.
b. Bottom Rail Design: Minimum 10 inch nominal height.
c. Muntin Bars: Horizontal tubular rail member for each door; 8 1/2 inch nominal nominal height.

C. Glazing: Performed under Division 8 Section “Glazing” in accordance with product approvals and the following:

1. Glass: 5/8” inch impact rated glass. Tinted to match tint of curtain wall glass.
2. Glazing: Outboard stop with approved structural tape.

D. Headers: Fabricated from extruded aluminum and extending full width of automatic entrance door units to conceal door operators, carrier assemblies, and roller tracks. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.

1. Mounting: Concealed, with one side of header flush with framing.
2. Capacity: Capable of supporting up to 220 lb per panel, up to four panels, over spans up to 14 (Fourteen) feet without intermediate supports.

E. Carrier Assemblies and Overhead Roller Tracks: Manufacturer's standard carrier assembly that allows vertical adjustment of at least 1/8 inch; consisting of urethane with precision steel lubricated ball-bearing wheels, operating on a continuous roller track. Support panels from carrier assembly by load wheels and anti-riser wheels with factory adjusted cantilever and pivot assembly. Minimum two ball-bearing load wheels and two anti-rise rollers for each active leaf. Minimum load wheel diameter shall be 2 1/2 inch; minimum anti-rise roller diameter shall be 2 inch.

F. Thresholds: Manufacturer's standard thresholds as indicated below:

1. Where scheduled, continuous standard tapered extrusion with integrated guide, Continuous Standard tapered extrusion double bevel.
2. Where scheduled, continuous standard tapered extrusion with integrated guide, double bevel.
3. Comply with ADA requirements 1/2" max threshold height.

G. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.

H. Signage: Provide signage in accordance with ANSI/BHMA A156.10.

2.5 DOOR OPERATORS

A. General: Provide door operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, operation under normal traffic load for type of occupancy indicated.

B. Electromechanical Operators: Self-contained overhead unit powered by a minimum of one 1/4 horsepower, permanent-magnet DC motor with gear reduction drive, microprocessor controller; and encoder.

1. Operation: Power opening and power closing.
2. Operators: Provide two 1/4 horsepower motors for automatic entrances with width exceeding 168 inches, or height exceeding 96 inches.
3. Features:

a. Adjustable opening and closing speeds.
b. Adjustable latch-check and back-check.
c. Adjustable acceleration and braking.
d. Adjustable hold-open time between 0 and 30 seconds.
e. Obstruction recycle.
f. On/Off switch to control electric power to operator.
g. Energy conservation switch that reduces door-opening width.
h. Closed loop speed control with active braking and acceleration.
i. Adjustable obstruction recycle time delay.
j. Self adjusting stop position.
k. Self adjusting closing compression force.
l. Onboard sensor power supply.
m. Onboard sensor monitoring.
n. Switch to open/Switch to close operation.

4. Mounting: Concealed.
5. Drive System: Synchronous belt type.

C. Electrical service to door operators shall be provided under Division 16 Electrical. Minimum service to be 115 VAC, 5 amps.

2.6 ELECTRICAL CONTROLS

A. Electrical Control System: Electrical control system shall include a microprocessor controller and position encoder. The encoder shall monitor revolutions of the operator shaft and send signals to microprocessor controller to

define door position and speed. Systems utilizing external magnets and magnetic switches are not acceptable. A single controller shall be capable of controlling up to 2 operators per entrance system.

B. Performance Data: The microprocessor shall collect and store performance data as follows:

1. Counter: A non-resettable counter to track operating cycles.
2. Event Reporting: Unit shall include event and error recording including number of occurrences of events and errors, and cycle count of most recent events and errors.
3. LED Display: Display presenting the current operating state of the controller.

C. Controller Protection: The microprocessor controller shall incorporate the following features to ensure trouble free operation:

1. Automatic Reset Upon Power Up.
2. Main Fuse Protection.
3. Electronic Surge Protection.
4. Internal Power Supply Protection.
5. Auto-Resetting sensor supply protection.
6. Motor Protection, over-current protection.

D. Soft Start/Stop: A "soft-start" "soft-stop" motor driving circuit shall be provided for smooth normal opening and recycling.

E. Obstruction Recycle: Provide system to recycle the sliding panels when an obstruction is encountered during the closing cycle. If an obstruction is detected, the system shall search for that object on the next closing cycle by reducing door closing speed prior to the previously encountered obstruction location, and will continue to close in check speed until doors are fully closed, at which time the doors will reset to normal speed. If obstruction is encountered again, the door will come to a full stop. The doors shall remain stopped until obstruction is removed and operate signal is given, resetting the door to normal operation.

F. Programmable Controller: Microprocessor controller shall be programmable via standard push button controls, or by connection to a local configuration tool. Local configuration tool shall be a software driven handheld interface. The following parameters may be adjusted via the configuration tool.

1. Operating speeds and forces as required to meet ANSI/BHMA A156.10.
2. Adjustable and variable features as specified.
3. Reduced opening position.
4. Fail Safe/Secure control.
5. Firmware update.
6. Trouble Shooting
    a. I/O Status.
    b. Electrical component monitoring including parameter summary.

7. Software for local configuration tool shall be available as a free download from the sliding automatic entrance manufacturer's internet site. Software shall be compatible with the following operating system platforms: Palm®, Android®, and Windows Mobile®.

2.7 ACTIVATION AND SAFETY DEVICES

A. Motion Sensors: Motion sensors shall be mounted on each side of door header to detect pedestrians in the activating zone, and to provide a signal to open doors in accordance with ANSI/BHMA A156.10. Units shall be programmable for bi-directional or uni-directional operation and shall incorporate K-band microwave frequency to detect all motion in both directions.

B. Presence Sensors: Presence sensors shall be provided to sense people or objects in the threshold safety zone in accordance with ANSI/BHMA A156.10. Units shall be self-contained, fully adjustable, and shall function accordingly with motion sensors provided. The sensor shall be enabled simultaneously with the door-opening signal and shall emit an elliptical shaped infrared presence zone, centered on the doorway threshold line. Presence sensors shall be capable of selectively retuning to adjust for objects which may enter the safety zone; tuning out, or disregarding, the presence of small nuisance objects and not tuning out large objects regardless of the time the object is present in the safety zone. The door shall close only after all sensors detect a clear surveillance field.

C. Photoelectric Beams: In addition to the threshold sensor include a minimum of two (2) doorway holding beams. Photoelectric beams shall be pulsed infrared type, including sender receiver assemblies for recessed mounting. Beams shall be monitored by electrical controls for faults and shall fail safe.

2.8 HARDWARE

A. General: Provide units in sizes and types recommended by automatic entrance door and hardware manufacturers for entrances and uses indicated.

B. Emergency Breakaway Feature: Provide release hardware that allows panel(s) to swing out in direction of egress to full 90 degrees from any position in sliding mode. Maximum force to open panel shall be 50 lbf according to ANSI/BHMA A156.10. Interrupt powered operation of panel operator while in breakaway mode.

1. Emergency breakaway feature shall include at least two adjustable detent devices mounted in each breakaway panel; one top mounted and one bottom mounted, to control panel breakaway force.
2. Wind Resistant Damper: Provide factory installed concealed gas dampers in each non-sliding breakaway panel to protect door panels from wind damage. Dampers shall be designed to slow panel movement after breakout.

C. Locking: Provide manufacturer's approved multi-point locking system as follows:

1. Five-Point Locking: Provide locking components within sliding panels, operated by exterior cylinders and interior thumb turns, that extend flush

bolts into overhead carrier assemblies and threshold on engagement of hook bolt lock and related cylinder. Provide BEST removable cylinder and key. See Section 087002 Door Hardware for core specifications.

D. Control Switch: Provide manufacturer’s standard keyed rotary switch mounted on the interior jamb and door position switch to allow for full control of the automatic entrance door. Key to be compatible with BEST removeable core. Controls to include, but are not limited to:

1. One-way traffic
2. Reduced Opening
3. Open/Closed/Automatic

E. Power Switch: Sliding automatic entrances shall be equipped with a two position On/Off rocker switch to control power to the door.

F. Weather Stripping: Manufacturer's standard replaceable components complying with AAMA 701; made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

1. Provide double pile weather stripping on lead stiles of sliding panels and stiles adjacent to jambs.
2. Provide single pile weather stripping between carrier and header, lead stiles of sidelights, and on pivot stiles of sliding panels.

G. Weather Sweeps: Adjustable, dual brush, nylon brush sweep mounted to underside of door bottom.

2.9 FABRICATION

A. General: Factory fabricates automatic entrance door assembly components to designs, sizes, and thickness indicated and to comply with indicated standards.

1. Form aluminum shapes before finishing.
2. Use concealed fasteners to greatest extent possible.
    a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
    b. Reinforce members as required to receive fastener threads.

B. Framing: Provide automatic entrances as prefabricated assemblies.

1. Fabricate tubular and channel frame assemblies with manufacturer's standard mechanical or welded joints. Provide sub-frames and reinforcement as required for a complete system to support required loads.
2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
3. Form profiles that are sharp, straight, and free of defects or deformations.
4. Prepare components to receive concealed fasteners and anchor and connection devices.

5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.

C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.

D. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.

E. Welding: Comply with AWS A5.10 - Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.

F. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated.

G. Hardware: Factory install hardware to the greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site.

2.10 FINISHES

A. Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

B. Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.

C. Finish aluminum automatic entrance door system components to match adjacent aluminum curtain wall or storefront work.

D. Class I Clear Anodized Finish: AA-M12C22A41 (Mechanical Finish: as fabricated, nonspecular; Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural, clear film thicker than 0.7 mil) complying with AAMA 607.1.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify the openings are plumb and are dimensioned properly. Insure adequate support has been provided at the operator header. Proceed with the installation only after conditions are deemed satisfactory.

3.2 INSTALLATION

A. Comply with manufacturer's specifications and recommendations.

B. Set units plumb, level, and true to line without warp or rack of frames or doors. Anchor securely in place. Separate aluminum and other corrodible metal surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

1. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.

C. Door Operators: Connect door operators to electrical power distribution system. Coordinate with Electrical Facilities Subgroup.

D. Set sill members in a bed of sealant or with joint fillers or gaskets as indicated. Comply with requirements of Division 07 Section, Joint Protection for sealants, fillers, and gaskets, to be installed during installation of doors and frames.

1. Refer to Division 07 Section, Joint Protection for compounds, joint fillers, and gaskets to be installed after installation of frame assemblies.

E. Set tracks, header assemblies, operating brackets, rails and guides level and true to location with adequate anchorage for permanent support.

3.3 FIELD QUALITY CONTROL

A. Testing Services: Factory Trained Installer shall test and inspect each automatic entrance door to determine compliance of installed systems with applicable ANSI standards.

3.4 ADJUSTING AND CLEANING

A. After repeated operation of completed installation, equivalent to 3 days use by normal traffic (300 to 500 cycles), readjust door operators and controls for optimum operating condition and safety and for a tight closure. Lubricate hardware, operating equipment, and other moving parts.

B. Clean glass and aluminum surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Exercise care to avoid damage to coatings.

3.5 PROTECTION

A. Protect automatic entrance doors throughout the remainder of the construction period until the Date of Substantial Completion.

END OF SECTION 08 4229

SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Conditions/Provisions of Contract, including Contractual Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes glazed aluminum curtain wall systems.
B. Manufacturer shall pre-engineer the curtain wall to meet wind loads stated on structural drawings and high impact missile requirements.

1.3 SYSTEM DESCRIPTION AND PERFORMANCE REQUIREMENTS

A. General: Provide glazed aluminum curtain wall system that has the following capabilities based on testing manufacturer's standard units in assemblies similar to those indicated for this Project:

1. Withstands loads and thermal and structural movement requirements indicated without failure. Failure includes the following:

    a. Air infiltration and water penetration exceeding specified limits.
    b. Framing members transferring stresses, including those caused by thermal and structural movement, to glazing units.

B. Glazing is physically and thermally isolated from framing members.

C. System is pressure equalized at its interior face.

D. System is reglazable from the exterior.

E. Curtain wall system shall be designed to meet wind-loading and pressures listed on Structural Drawings.

1. Deflection of framing members in a direction normal to wall plane is limited to 1/175 of clear span or 3/4 inches; whichever is smaller, unless otherwise indicated.

2. Test Performance: Provide glazed aluminum curtain wall system that does not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of clear span when tested according to ASTM E 330.

    a. Test Pressure: 150 percent of inward and outward wind-load design pressures.

    b. Duration: As required by design wind velocity; fastest mile of wind for relevant importance factor for the Project. According to TAS 202 in 30 seconds.

F. Dead Loads: Provide glazed aluminum curtain wall system members that do not deflect an amount which will reduce glazing bite below 75 percent of design dimension when carrying full dead load. Provide a minimum 1/8-inch clearance between members, and top of fixed panels, glazing, or other fixed part immediately below.

G. Live Loads: Provide glazed aluminum curtain wall system, including anchorage, that accommodates supporting structure's deflection from uniformly distributed and concentrated live loads indicated without failure of materials or permanent deformation.

H. Air Infiltration: Provide glazed aluminum curtain wall system with permanent resistance to air leakage through system of not more than 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a static-air-pressure difference of 6.24 lbf/sq.ft.

I. Water Penetration: Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to ASTM E 331 and TAS 202 at 15psf (720 Pa).

J. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to AAMA 501.1 at dynamic pressure equal to 15psf (720 Pa).

1) Maximum Water Leakage: According to AAMA 501.1 No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation]. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.

K. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:

1) Temperature Change (Range): 0 deg F (-18 deg C), ambient; 180 deg F (82 deg C), ambient hot. Minimum 3 cycles.

2) Test Interior Ambient-Air Temperature: [75 deg F (24 deg C)]

3) Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

L. Windborne-Debris-Impact-Resistance Performance: Shall be tested in accordance with ASTM E 1886 and information in ASTM E 1996 and TAS 201/203.

1) Large –Missile Impact: For aluminum-framed systems located within 30 feet (9.1m) of grade.

M. Structural Support Movements: Provide glazed aluminum curtain wall system that accommodates structural movements including, but not limited to, sway, twist, column shortening, long-term creep, and deflection.

N. Condensation Resistance: When tested to AAMA Specification 1503, the condensation resistance factor shall not be less than:

1) 1630 SS IR:

a) CRF_{glass} (1-5/16" 1G HP) = 70, CRF_{frame} =74

O. Condensation Index (I): when tested to CSA-A440-00, the Condensation Index shall not be less than:

1) 1630 SS IR aluminum pressure plate:

a) I_{glass} (1-5/16" 1G HP) = 63, I_{frame} =67

P. Sound Transmission: Provide glazed aluminum curtain walls with fixed glazing and framing areas having the following sound-transmission characteristics:

1) 1630 SS IR:

a) (STC = 37) or (OITC = 32) when tested for laboratory sound transmission loss according to AAMA 1801, ASTM E 90 and ASTM E 1425, and based on 1-5/16" laminated insulating glass (1/4", 1/2" AS, 1/4").

Q. Dimensional Tolerances: Provide glazed aluminum curtain wall system, including anchorage that accommodates dimensional tolerances of building frame and other adjacent construction.

1.4 SUBMITTALS:

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Date for each product specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.

C. Shop Drawings: 6 Copies signed and sealed for review and 6 copies Signed and sealed for City of Orlando Building Department.

1. Shop Drawings to be signed and sealed by a registered structural engineer licensed in the state of Florida.
2. Provide Design Calculations for wind load shall be stamped, sealed and signed by a Professional Engineer in the State of Florida verifying compliance with ASCE 7-10 and load pressures indicated on Drawings.

D. Samples for verification of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.

E. Cutaway Samples of each vertical-to-horizontal intersection of system, made from 12-inch lengths of full-size components and showing details of the following:

1. Joinery
2. Anchorage Details
3. Expansion provisions
4. Fastener size and type
5. Glazing
6. Flashing and drainage

F. Welder certificates indicating that welders comply with requirements specified in "Quality Assurance" Article.

G. Installer certificates signed by manufacturer certifying that installers comply with requirements in "Quality Assurance" Article.

H. Preconstruction test reports from a qualified independent testing agency indicating and interpreting test results relative to compliance with performance requirements of glazed aluminum curtain wall system.

I. Product test reports from a qualified independent testing agency evidencing compliance of glazed aluminum curtain wall system with requirements based on comprehensive testing of manufacturer's current system.

J. Field test reports from a qualified independent inspecting and testing agency indicating and interpreting test results relative to compliance with performance requirements of glazed aluminum curtain wall system.

K. Provide Manufacturer installation instructions.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: To qualify for approval, an independent testing agency must demonstrate to Architect's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.

B. Professional Engineering Qualifications: A professional engineer who is legally qualified to practice in the state of Florida and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of glazed aluminum curtain wall systems that are similar to those indicated for this Project in material, design, and extent.

C. Installer Qualifications: Engage an experience installer to assume engineering responsibility and perform work of this Section who has specialized in installing glazed aluminum curtain wall systems similar to those required for this Project and who is acceptable to manufacturer.

1. Engineering Responsibility: Engage a qualified professional engineer to prepare or supervise the preparation of date for glazed aluminum curtain wall systems, including drawings, testing program development, test-result interpretation, and comprehensive engineering analysis that shows systems' compliance with specified requirements.

2. Engineering Responsibility: Prepare date for glazed aluminum curtain wall systems, including drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

D. Source Limitations: Obtain each type of glazed aluminum curtain wall system from one source and by a single manufacturer.

E. Product Options: Drawings indicated size, profiles, and dimensional requirements of glazed aluminum curtain wall system and are based on the specific system indicated. Other manufacturer's systems with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions".

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval and only to the extent needed to comply with performance requirements. Where modifications are proposed, submit comprehensive explanatory data to Architect for review.

F. Welding Standards: Comply with applicable provisions of AWS D1.2, "Structural Welding Code – Aluminum."

1. Engage welders who have satisfactorily passed AWS qualification tests for welding processes involved and who are currently certified for these processes.

G. Mockups: Prior to installing glazed aluminum curtain wall system, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for Work.

1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Notify RPR/ Architect seven (7) days in advance of the dates and times when mockups will be constructed.
3. Demonstrate the proposed range of aesthetic effects and workmanship.
4. Obtain RPR/ Architect's approval of mockups before start of Work.
5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    a. When directed, demolish and remove mockups from Project site.
    b. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

H. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1 Section "Project Meetings". Review methods and procedures related to glazed aluminum curtain wall system including, but not limited to, the following:

1. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
2. Review structural loading limitations.
3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review required inspecting, testing and certifying procedures.

5. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabrication without field measurements. Coordinate construction to ensure that actual dimensions correspond to guaranteed conditions.

1.7 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

B. Special Warranty: Submit a written warranty executed by the manufacturer agreeing to repair or replace components of a glazed aluminum curtain wall system that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:

1. Structural failures including, but not limited to, excessive deflection.
2. Noise or vibration caused by thermal movements.
3. Failure of system to meet performance requirements.
4. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
5. Failure of operating components to function normally.
6. Water leakage
7. Glazing breakage
8. Warrant Period: Manufacturer's Five (5) years from date of Substantial Completion and installer's two (2) years from date of Substantial Completion.

C. Special Finish Warranty: Provide manufacturer’s twenty (20) year warranty for finished coating system specified.

PART 2 - PRODUCTS

2.1 MANUFACTURER’S

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Basis of Design is YKK, AP America Inc.

2. Kawneer Company Inc.
3. Or Approved Substitution.

2.2 PRODUCT

A. YKK, YHC 300 OG-WZ3: 8 13/16" with 1-5/16" laminated insulated glass. FL12433

B. Kawneer, 1630 SS 1R: 8 13/16" with 1-5/16" laminated insulated glass. FL 16548

2.3 MATERIALS

A. Aluminum Extrusions: Alloy and temper recommended by glazed aluminum curtain wall manufacturer for strength, corrosion resistance, and application of required finish and not less than 0.070" wall thickness at any location for the main frame and complying with ASTM B 221: 6063-T6 alloy and temper.

B. Aluminum sheet alloy: Shall meet the requirements of ASTM B209.

C. Fasteners: Aluminum, nonmagnetic stainless steel or other materials to be non-corrosive and compatible with aluminum window members, trim hardware, anchors, and other components.

D. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.

E. Pressure Plate: Pressure plate shall be aluminum and fastened to the mullion with stainless steel screws.

F. Reinforcing Members: Aluminum, nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.

G. Sealant: For sealants required within fabricated curtain wall system, provide permanently elastic, non-shrinking, and non-migrating type recommended by sealant manufacturer for joint size and movement.

H. Thermal Barrier: Thermal barrier consists of 9/16" (14.25 mm) separation between the interior and exterior metal members in a typical condition, while maintaining a continuous watertight seal.

I. Tolerances: Reference to tolerances for wall thickness and other cross-sectional dimensions of glazed curtain wall members are nominal and in compliance with AA Aluminum Standards and Data.

J. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements, expect containing no asbestos, formulated for 30-mil thickness per coat.

2.4 CURTAIN WALL FRAMING

A. Framing Members: Manufacturer's standard extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Glazing System: 4 sided captured.
   2. Glazing Plane: Front.

B. Glass: 1-5/16" insulating glass for vision.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with non-staining, nonferrous shims for aligning system components.

D. Framing Sealants: Shall be suitable for glazed aluminum curtain wall as specified and tested by manufacturer.

E. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials. Where exposed shall be stainless steel.

F. Perimeter Anchors: When steel anchors are used, provide insulation between steel material and aluminum material to prevent galvanic action.

G. Packing, Shipping, Handling and Unloading: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

H. Storage and Protection: Store materials protected from exposure to harmful weather conditions. Handle curtain wall material and components to avoid damage. Protect curtain wall material against damage from elements, construction activities, and other hazards before, during and after installation.

2.5 COMPONENTS

A. Exterior Trim: Aluminum, profiles as indicated.

B. Brackets and Reinforcements: Provide manufacturer's standard high-strength aluminum brackets and reinforcements. Provide non-staining, nonferrous shims for aligning system components.

C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible within adjacent materials. Finish exposed portions to match glazed aluminum curtain wall.

   1. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended by manufacturer.

   2. Where fasteners anchor into aluminum less than 0.125-inch thick, provide reinforcement to receive fastener threads.

   3. Use exposed fasteners with countersunk Phillips screw heads finished to match framing members, unless otherwise indicated.

D. Anchors: 3-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.

E. Concealed Flashing Dead-soft, 0.018-inch-thick stainless steel, complying with ASTM A 666, of type selected by manufacturer for compatibility with system.

2.6 FABRICATION

A. General: Fabricate glazed aluminum curtain wall system according to Shop Drawings. Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortions. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

1. There shall be no split mullion seams.
2. Fabricate components to allow for expansion and contraction, field adjustment, and minimum clearance and shimming at the perimeter.
3. Prepare components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.

B. Forming: Form shapes with sharp profiles, straight and free of defects or deformations, before finishing.

C. Welding: Weld components to comply with referenced standard and Shop Drawings, unless otherwise indicated. Weld before finishing components. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

D. Glazing Pockets: Provide minimum clearances for thickness and type of glass indicated according to FGMA's "Glazing Manual".

E. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

F. Frame Units: Factory assembly frame units according to Shop Drawings to greatest extent possible. Rigidly secure non-movement joints. Seal joints water-tight, unless otherwise indicated. Assemble components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.

1. Install glazing according to Shop Drawings. Comply with requirements of Division 8 Section "Glazing", unless otherwise indicated.

2.7 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum clear anodized conforming to AA-M10C22A41. Architectural Class I etched, medium matte, clear anodic coating 0.7mil minimum thickness.

2.8 STEEL PRIMING

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying primer.

B. Surface Preparation: Perform manufacturer's standard cleaning operations to remove dirt, oil, grease, or other contaminants that could impair bond. Remove mill scale and rust, if present, from uncoated steel.

C. Priming: Apply manufacturer's standard corrosion-resistant primer immediately after surface preparation and pretreatment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of glazed aluminum curtain wall system. Do not proceed with installation until unsatisfactory conditions have been corrected
.

3.2 INSTALLATION

A. General: Comply with manufacturer's written instructions for protecting, handling, and installing glazed aluminum curtain wall system. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints. Seal joints water-tight, unless otherwise indicated. Provide means to drain water to the exterior to produce a permanently weatherproof system.

B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.

D. Install framing members plumb and true in alignment with established lines and grades.

E. Install factory-assembled frame units plumb and true in alignment with established lines and grades.

F. Anchorage: After system components are positioned, fix connections to building structure as indicated on Shop Drawings.

1. Provide separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

G. Welding: Weld components to comply with references standard and Shop Drawings, unless otherwise indicated. Weld in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.

H. Install glazing according to Shop Drawings. Comply with requirements of Division 8 Section "Glazing", unless otherwise indicated.

I. Install sealant according to Shop Drawings. Comply with requirements of Division 7 Section "Joint Sealants", unless otherwise indicated.

J. Install insulation materials in locations indicated. Comply with requirements of Division 7 Section "Building Insulation", unless otherwise indicated.

K. Refer to Division 7 "Firestopping" for firestopping of perimeter joints.

L. Erection Tolerances: Install glazed aluminum curtain wall system to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet
3. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16 inch; where a reveal or protruding element separates aligned surfaces by less that 2 inches, limit offset to 1/2 inch.
4. Location: Limit variation from plane or location shown on Shop Drawings to 1/8 inch in 12 feet; 1/2 inch over total length.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing agency to perform testing indicated.

B. Air Infiltration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 783.

C. Water Penetration: After the installation of the minimum number of test specimens indicated has been completed but before installation of interior finishes has begun, test systems for compliance with performance requirements according to ASTM 1105, expanded to include the joint between the glazed aluminum curtain wall and adjacent

construction, at minimum differential pressure of 20 percent of inward acting wind-load design pressure as defined by ASCE 7, "Minimum Design Loads for Buildings and Other Structures", but not less than 10 lbf/sq. ft.

1. The minimum dimensions of the required test areas shall be a full height, by 3 window panel wide sections of Curtain Wall.
2. The Architect will select the Curtain Wall areas to be tested.

D. Repair and remove Work that does not meet requirements or that is damaged by testing; replace to conform to specified requirements.

1. Should any of the specimens fail the field test, the specimens may be modified or repaired, re-tested.
2. Should any of the specimens fail the second field test, the specimens may be additionally modified or repaired, and re-tested.
3. All modifications and repairs made to the specimens shall be recorded, and the same modifications and repairs made to all the aluminum systems and adjacent construction on the Project.
4. Should the second test fail, the Architect with concurrence of the OAR may require two additional windows or bays and their adjacent construction to be tested.
5. Additional testing and inspecting at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

E. Rejection: Failure of any of the specimens to meet the test requirements of the third test shall be cause for rejection of all aluminum systems and adjacent construction on the Project.

3.4 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure aluminum curtain wall system is without damage or deterioration at the time of Substantial Completion.

END OF SECTION 08 92 00

SECTION 08 71 02 - DOOR HARDWARE AND SCHEDULE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Related Sections:

1. 08 10 00 Steel Door Frames and Doors
2. 08 31 13 Access Doors and Panels.
3. 08 42 29 Automatic Entrances
4. Division 27 & 28.

1.2 SCOPE

A. Work covered by this Section of Specifications consists of furnishing and delivering to the job site for fitting and installation of all finish hardware complete, in accordance with this Section and applicable drawings, and subject to terms and conditions of Contract.

B. It is intended that the following list of hardware will cover all finish hardware to complete the project. Omissions and/or discrepancies shall be brought to the Architect's attention during the bidding period. If a hardware set for a door is not called out in the specifications, but the door is shown on the drawings, provide hardware set of similar to door set listed here in. Provide complete hardware set for all doors shown on plan.

C. To the extent specified and shown on the drawings, provide and install all hardware for doors per schedule and/or notes on the drawings. Provide and install all hardware for doors shown on drawing plans.

D. Field coordination with field conditions is required.

E. Coordination with systems, electrical and wayfinding work is required.

F. This Section references specification sections relating to commercial door hardware for the following:

1. Swinging Doors.
2. Other doors to the extent indicated in the specifications and contract documents. Provide hardware components required and as noted on the drawings.

G. Commercial door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Passive door hardware.
3. Electro mechanical and access control door hardware.
4. Electro mechanical and access control door hardware power supplies, back-ups and surge protection.
5. UL listed transfer hinges.
6. Automatic operators.
7. Permanent Removable key Cylinders

8. Cylinders specified for doors in other sections. IE Aluminum Frame Folding Doors, Automatic Entrances and Access doors.

H. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction. (The basis of governing code is the edition in effect at the time on which contract documents were received by AHJ for permit review)

1. ANSI A117.1 – Accessible and Usable Buildings and Facilities.
2. FBC – Florida Building Code 2017and Amendments
3. FFPC- Florida Fire Protection Code 2017
4. NFPA 70 – National Electrical Code.
5. NFPA 80 – Fire Doors and Windows.
6. NFPA 101 – Life Safety Code. (As revised by Florida Fire Prevention Code 2017)
7. NFPA 105 – Installation of Smoke Door Assemblies.

I. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.

J. Exterior doors will require document submittals for confirmation with NOA and/or Florida Product approval.

K. Provide and install permanent cores, coordinating with VPS locksmith.

1.3 SUPPLIER

A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and an Architectural Hardware Consultant who is available during the course of the Work to consult with Contractor, Designer, VPS designated Locksmith and RPR about door hardware and keying.

1. Warehousing Facilities: In Project's vicinity.
2. Scheduling Responsibility: Preparation of door hardware and keying schedules.
3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as follows:

1. For door hardware, an Architectural Hardware Consultant (AHC) who is also an Electrified Hardware Consultant (EHC) and Architectural Openings Consultant (AOC).

2. Include AHC, EHC and AOC certificates with submittal.

C. Source Limitations: Obtain each type of door hardware from a single manufacturer.

1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

D. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.

E. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

F. Means of Egress Doors: Latches do not require more than 15 lbf (67 N) to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

G. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and Florida Building Code Accessibility 2017.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf (22.2 N).
2. Comply with the following maximum opening-force requirements:

a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf (22.2 N) applied perpendicular to door.
b. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.

3. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than 1/2 inch (13 mm) high.
4. Adjust door closer sweep periods so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches (75 mm) from the latch, measured to the leading edge of the door.

H. Keying Conference: Conduct conference at Project site to comply with requirements in Section 01 31 13 "Project Coordination." In addition to Contractor, and Architect, conference participants shall also include Installer's Architectural Hardware Consultant and VPS designated locksmith. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including, but not limited to, the following:

1. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
2. Preliminary key system schematic diagram.
3. Requirements for key control system.

4. Requirements for access control.
5. Address for delivery of keys.

I. Preinstallation Conference: Conduct conference at Project site.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Inspect and discuss preparatory work performed by other trades.
3. Inspect and discuss electrical roughing-in for electrified door hardware.
4. Review sequence of operation for each type of electrified door hardware.
5. Review required testing, inspecting, and certifying procedures.

1.4 DELIVERY

A. Items of finish hardware shall be delivered to the project site or as otherwise specified or required, and shall be checked in for completeness and familiarization with the contractor. All items of Finish Hardware shall be packaged, numbered, labeled to identify each opening for which it is intended and to correspond with item numbers on the approved Hardware Schedule.

1.5 TEMPLATES

A. All finish Hardware to be installed on or in metal doors and/or frames shall be manufactured to template. Template machine screws shall be furnished for all such materials. The supplier and Owner shall furnish Hardware Schedules as approved by the Architect and all necessary templates to metal door and frame fabricators for their coordination’s use.

1.6 SUBMITTALS

A. Submit complete electronic copy of typewritten Hardware Schedules to the Architect for approval. After approval, provide required number of copies of approved Hardware Schedule for Distribution. No factory Order shall be placed for materials until approval has been given by the Architect.

B. Electronic current copy of a catalog cut shall be submitted with the Hardware Schedule for each item of hardware listed in the schedule. The item shall be highlighted with red box or cloud around item.

C. Submit complete typewritten Hardware Schedules to the Architect for review. After approval provide required number of copies of approved Hardware Schedule for distribution. No factory Order shall be placed for materials until review has been completed by the Architect .

1. Format: Comply with scheduling sequence and vertical format in DHI’s “Sequence and Format for the Hardware Schedule.”
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening.

Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
4. Content: Include the following information:
    a. Type, style, function, size, label, hand and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Door and frame sizes and materials.

D. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for lockets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders. Coordinate with VPS designated Locksmith.

E. Summary or comments.

F. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

G. Operating and Maintenance Manuals: Provide manufacturer's operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware after completion of the installation test to include "as built" modifications made during installation, checkout and acceptance.

H. Warranties and Maintenance: Special warranties and maintenance agreements specified.

I. Certificates showing compliance certifications for AHC, EHC and AOC for preparer of submittal.

1.7 RESPONSIBILITY

A. It shall be the supplier's responsibility to furnish hardware in accordance with the intent of this specification, the functional use of door. Where, by virtue of Architectural design or by function, a change is necessary, hardware of equal design and quality shall be furnished upon written approval of the Architect.

1.8 LOCATIONS

A. Hardware locations dimension shall be as follows: Distance from finish floor to center line of:

Door Knob	38"
Door Pull	42"
Deadlock	60"
Exit Bolt Cross Bar	38"
Push Plate	50"
Butt Hinges	Bottom Hinges: Finish floor to bottom of Hinge 10".

Top Hinge: Head rabbet to top of Hinge 5".

Center Hinge: Equal distance between top and bottom hinges.

180 DEGREES OPENINGS

B. Other than those doors that are restricted to less than 180 degrees opening by building or by overhead holders or stops, all butts and/or closer arms shall be of sufficient size to allow full 180 degrees opening of doors.

1.9 WARRANTY

A. Provide in writing, guarantee that materials furnished under this Section are free from defect and warrant workmanship for a period of one (1) year from date of final payment. Exception: Supply closers with a ten- (10) year warranty from date of final payment.

1.10 DELIVERY, STOAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the contract documents and final Door Hardware Schedule. Include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the “Keying Conference”.

1.11 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrical hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door and Frame Preparation: Division 08 Sections doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

PART 2 - PRODUCTS

2.1 BUTTS

Doors 1-3/4" thick:	Minimum 4-1/2" high
Doors 1-3/8" thick:	Minimum 3-1/2" high

A. Each door shall not have less than three hinges. Doors 7'-10" and higher shall have four (4) hinges whether specified under items or not.

B. All butts used with door closers shall be ball bearing. All exterior doors shall have ball bearing butts.

C. Approved manufacturers are:

Hager	Five Knuckle, Ball Bearing, Heavy Duty, ANSI A 5111 Stainless Steel, BB1199, US32D, 630, Satin Stainless Steel

2.2 FINISH:

Butts, Exterior	US32D, 630, Satin Stainless Steel
Butts, Interior	US32D, 630, Satin Stainless Steel
Locks	US32D, 630, Satin Stainless Steel
Push, Pull, Kick Plates	US32D, 630, Satin Stainless Steel
Closers	US32D, 630, Satin Stainless Steel
Panic Devices	US32D, 630, Satin Stainless Steel
Door Stops, Miscellaneous	US32D, 630, Satin Stainless Steel
Door Trim	US32D, 630, Satin Stainless Steel

2.3 LOCKSETS

A. Manufacturer: BEST Mortise, 45H Series ANSI A156.13, Series 1000, Grade 1 operational, Grade 2 Security, Heavy Duty Mortise Locksets with Removable core with interchangeable cylinder. 630 Stainless Steel.

B. Manufacturer: Best Mortise, 48 H Series Deadlocks with removable core with interchangeable cylinder. 630 Stainless Steel.

C. Approved Substitution: NONE ALLOWED

2.4 CLOSERS

A. Closers shall be of the following manufacturers and shall be furnished in the manufacturer's recommended printed size for the specified conditions unless otherwise noted in the hardware sets. Closers shall be full rack and pinion complete with back check. Springs shall be motor clock type. Furnish flush mount transom brackets where not transom bar exists. Furnish parallel arm where required.

MANUFACTURER	SERIES
LCN	#4040 XP Extra Heavy Duty, Metal Cover 72 MC 630 Cush-N-Stop
	#4041XP-3049 Extra Heavy Duty, Metal Cover 72 MC 630, At Gate doors, 180 degree hold open.

2.5 DOOR TRIM

A. All push plates, pulls, pull plates, kick and/or armor plates shall be any one of the following manufacturer's products in catalog number as set forth herein:

MANUFACTURER	PUSH PLATE	PULL PLATE	KICK PLATE
Ives	8"x 16"	4" x 16"	8" High
Trimco	1001.11	1014.3	8" High
Rockwood	8" X 16"	4" X 16"	----------
Baldwin	8" X 16"	4" X 16"	----------

B. FINISH: 630 Satin Stainless Finish

2.6 DOOR STOPS

A. Stops shall be one of the following manufacturers:

MANUFACTURER	WALL	FLOOR
Ives	WS 404-CVX	----------
Glynn-Johnson	----------	----------
Hager	----------	----------

Finish: 630 (US32D) Satin Stainless Finish

2.7 THRESHOLDS

A. The following types of Manufacturer of Thresholds shall be used:

TYPE	MANUFACTURER
AS SCHEDULED	PEMKO

2.8 WEATHER/SOUND PERIMETER STRIPPINGS AND BOTTOM DROP SILLS

A. The following types of manufactures:

TYPE	MANUFACTURER
AS SCHEDULED OR REQUIRED BY FUNCTION	PEMKO

2.9 LOCK CYLINDERS, CORE AND KEYING

A. All locks, cores and keys on Airport Property shall be 'BEST' format, 7 pin small format interchangeable 'F' zero-bitted cores. No alternates will be accepted. Blank core & keys for each new lock are to be provided to the Airport's locksmith (vendor) to rekey prior to substantial completion. Grand Master keys, master keys and spare keys are not necessary.

B. Provide and install all hardware including locking hardware and provide removable temporary cores keyed for construction for use by the contractor, A/E and airport. Provide keys as required to cover needs of the construction project.

C. Provide Blank cores and keys for each new lock. Deliver to the Airport's Locksmith (vendor) to rekey prior to substantial completion. The Locksmith will perform all keying. Grand Master keys, master keys and spare keys are not necessary.

D. At Substantial occupancy the G.C. will install all re keyed cores as directed by VPS or VPS Locksmith (vendor).

E. Provide and install all "BEST" Removable Cylinders for all locksets and panic/fire devices. Coordinate with VPS Locksmith (vendor)

2.10 FASTENING

A. All screws shall be of matching finish to their product being fastened or installed and shall be the manufacturer's standard for that item.

B. Sex Bolts: Door closers, door holders, and exit devices installed on wood door shall be attached by means of thru-bolts and sex-nuts.

2.11 PANIC & FIRE DEVICES

A. VonDuprin Series 98/99 -630

B. VonDuprin Series 98/99 Chexit Electrified- 630

C. VonDuprin Series 98/99F-630

2.12 ACCESS CARD SYSTEM READER

A. Flush mounted, HID iClass RK40 with door number label.

2.13 SWITCH

A. "Sentrol" 2700 Series High Security Concealed Magnetic Contact.

2.14 AUDIO VISUAL ALARM

A. Interior flush mounted, Wheellock, MTWP-2475 W-NW, Multi-tone Strobe, Multi candela field selectable, white light with clear lense, white body.

B. Exterior flush mounted: Wheellock series, MTWP with amber lens, for wet location.

2.15 ELECTRIC STRIKE

A. HES 8500 Electric door strike, fail secure, provide optional face plate for "BEST o mortise locks

2.16 ELECTRIC POWER TRANSFER

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Von Duprin EPT.
   2. Securitron CEPT

B. Requirements:
   1. Provide power transfer with electrified options as scheduled in the hardware sets.
      a. Provide with number and gage of wires sufficient to accommodate electric function of specified hardware.
   2. Power transfer hinges are not allowed.

2.17 SIGNAGE ON DOORS:

A. Signage on doors to AOA: See wayfinding drawing for special delayed egress signage with international graphic symbols and other legal signage.

B. Signage at the top of every door frame with door number. See wayfinding drawings.

C. Signage at the lockset side of each door identifying room. See wayfinding drawings.

2.18 CONSTRUCTION AND PERMANENT CORES

A. Provide temporary and final permanent cores for each lock.

2.19 POWER SUPPLIES

A. Provide electrical accessories, such as power supply box for each electric hardware installation. See systems documents.

PART 3 - EXECUTION

3.1 DELIVERIES

A. Stockpile items sufficiently in advance to ensure their availability, and make necessary deliveries in a timely manner to ensure orderly progress of work.

3.2 INSPECTION AND INSTALLATION

A. Install finish hardware by hardware supplier.

B. Certify installers are factory trained for products specified in this Section.

C. Do not install surface-mounted items until finishes have been completed.

D. Set thresholds for exterior doors in full bed of caulking as specified in Section “Joint Sealers”.

E. Upon completion of installation, and as a condition of its acceptance, visually inspect finish hardware furnished under this Section and place in optimum working condition. Turn over to VPS Locksmith, permanent cores, installation instructions, templates, adjusting tools and extra parts.

F. Check upon completion of Project, check locks with VPS locksmith for proper location, operation, and keying.

G. Final Adjustment:

1. Wherever hardware installation is made more than one (1) month prior to final payment or occupancy of a space or area, return to work during week prior to acceptance or occupancy and make final check and adjustment of hardware items in such space or area.

2. Clean operating items as necessary to restore proper function and finish of hardware and doors.

3. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

H. Instruct VPS's personnel in proper adjustment, maintenance of hardware and repair of hardware. Videotape this instruction meeting and provide one copy of DVD-format disk to VPS for future use.

PART 4 - SCHEDULE

HARDWARE SET NO.1,

Doors: W-1005, W-1007, W-1010, W1013 Each bypass sliding door to have:

2-BEST removable cores and cylinders (1 core for locking dead bolt, 1 core for control switch interior).

4-Door Position Switches (At each active break out panel).

Balance of hardware by door manufacturer. Dead bolts (DL), Storm rated (SR)

HARDWARE SET NO. 2,

NOT USED

HARDWARE SET NO. 3,

Doors: W-1003, W-1285, W1283, W1273, W1271 Each door to have:

END OF SECTION 08 71 02

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide glazing work specified and shown on drawings.

B. Requirements for glazing work include the following:

1. Aluminum Frame Folding Doors.

2. Automatic Entrances.

2. Curtain walls.

3. Mirrors.

4. Other interior glass lights.

1.2 RELATED WORK

A. Section 08 35 00 – Aluminum Entrance & Storefront

B. Section 08 42 29- Automatic Entrances

C. Section 08 92 00 – Glazed Aluminum Curtain Wall

1.3 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI)

1.	ASTM C 542	Lock Strip Gasket
2.	ASTM C 864	Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers
3.	ANSI Z97.1	Safety Glazing Materials Used in Buildings

ASTM INTERNATIONAL (ASTM)

1.	ASTM C 1036	Flat Glass
2.	ASTM C 1048	Heat-Treated Flat Glass-Kind HS, Kind FT Coated and Uncoated Glass
3.	ASTM C 1172	Laminated Architectural Flat Glass
4.	ASTM D 1667	Flexible Cellular Materials-Vinyl Chloride Polymers and Copolymers (Closed-Cell Foam)
5.	ASTM E 774	Classification of the Durability of Sealed Insulating Glass Units
6.	ASTM E 1300	Practice for Determining Load Resistance of Glass in Buildings

CONSUMER PRODUCT SAFETY COMMISSION (CPSC)

1.	CPSC 16 CFR 1201	Safety Standard for Architectural Glazing Materials

FEDERAL SPECIFICATIONS (FS)

1.	FS A-A-3002	Glass Mirrors

FLORIDA BUILDING CODE: 2017 EDITION

1. NIJ STANDARD 0180.01.

UNDERWRITERS LABORATORY (UL)

1. UL 9 Fire Tests of Window Assemblies

2. UL 752 Standard for Bullet Resisting Equipment

1.4 STANDARDS

A. Glazing Standards:

1. Comply with recommendations of the GANA Glazing Manual and the GANA Sealant Manual except where more stringent requirements are indicated.

2. System design and glass selection for exterior use shall be verified by the Contractor as being in compliance with wind loading requirements of the applicable local building code.

3. All documentation required by the local authority having jurisdiction to verify code compliance, including engineering calculations, shall be submitted for approval.

B. Safety Glazing Standard: Comply with ANSI Z97.1 and testing requirements of 16 CFR 1201 for Category II materials. Provide safety glass permanently marked with certification label of SGCC (Safety Glass Certification Council).

C. Fire-Resistance Rated glass: Provide fire-rated clear and wireless glass that has been tested in compliance with UL 263, ASTM E 119 and labeled and listed by UL.

D. Insulating Glass: Conform to ASTM E 774 and the requirements of SIGMA (Sealed Insulating Glass Manufacturers Association). Units shall be permanently marked on spacer or on one pane with certification label of the Insulating Glass Certification Council (IGCC).

E. Bullet Resistant Glass: Comply with ASTM F 1233, NIJ 0180.01 or UL 752 standards. Provide level 3 protection.

F. Laminated Glass: Conform to the standards of GANA's Laminated Glass Design Guide. Provide laminated glass when required to comply with local codes.

G. Float Glass (Annealed): Conform to ASTM C 1036 requirements indicated by type, class, quality and form.

H. Heat-Treated Glass: Conform to ASTM C 1048 requirements indicated by type, class, quantity, style and grade.

I. Sizes: Fabricate to sizes shown on drawings as required, with edge clearances and tolerances complying with GANA's publications and recommendations of glass manufacturer. Provide thickness indicated or as recommended by glass manufacturer for application intended.

G Sizes: F

1.5 SUBMITTALS

A. Manufacturer's Product Data: Submit data and installation instructions for each type of glass and each glazing material required. Include test data substantiating that materials comply with specified requirements and certificates stating materials comply with requirements.

B. Test Reports: Submit sealant-substrate adhesion and sealant compatibility test reports including glazing sealant manufacturer's findings and recommendations. Reports shall include each type glazing and each type installation.

C. Samples: Provide 12 x 12-inch square sample of each glass type, tint, coating, and reflectance specified. Provide 12-inch long sample of each sealant and gasket indicating color and shape to be used.

1.6 WARRANTY

A. Provide manufacturer's standard 10-year warranty for sealed insulating glass units.

B. Laminated Glass: Provide manufacturer's standard 4-year warranty against manufacturing defects including edge separation and delamination.

C. Reflective Glass: Provide manufacturer's standard 5-year warranty against manufacturing defects including peeling, cracking, or deterioration of metallic coating.

D. Insulating Glass: Provide manufacturer's standard 10-year warranty against loss of seal for the air space of the insulating unit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS – TYPICAL GLASS

A. Subject to requirements indicated, provide products manufactured by one of the following:

1. Basis of Design is Viracon, Inc.

2. Guardian Industries Corp.

3. Pilkington Building Products North America

2.2 FABRICATORS

A. Subject to requirements indicated, provide products fabricated by one of the following:

1. Viracon, Inc.

2. Guardian Industries Corp.

3. Interpane Glass Co.

2.3 FLAT GLASS

A. Clear Float Glass: ASTM C 1036, Type I, Class 1, Quality q^3, ¼-inch thick, except as otherwise specified or indicated.

B. Tinted, Heat-Absorbing Glass: ASTM C 1036, Type I, Class 2, Quality q^3, ¼-inch thick, except as otherwise specified or indicated.

C. Clear Fire-Rated Glass:

1. ASTM E 119, high visible, 78% light transmission with intumescent interlayer.

2. Provide for labeled fire doors and sidelights and other locations indicated on drawings.

2.4 HEAT-TREATED GLASS

A. Conform to ASTM C 1048. Manufactured by horizontal (roller hearth) process with roll wave distortion parallel with bottom edge of glass as installed.

B. Heat Strengthened Glass: Float glass, Condition A uncoated and Condition B coated, ASTM C 1036, Style 1, Class 1, Type 1, Quality q, which has been heat-strengthened to increase flexural strength of glass.

C. Kind FT Fully Tempered: For safety glazing in storefront type doors and sidelights and other locations required by governing code, provide Kind FT glass of the type, tint, and thickness specified or indicated on drawings for the location. Insulating glass units for sidelights, both inboard and outboard lights, shall be tempered. All storefront type doors shall be single glazed with azurlite tinted, tempered glass kind FT.

1. Outboard lights of tinted laminated and insulating units, meeting wind load requirements and, not required to be safety glazing, may be furnished with Kind HS glass.

2.5 LAMINATED GLASS

A. Conform to ASTM C 1172, two pieces clear, tinted or Low E**,** Kind HS, Heat Strengthened, Glass of equal thickness as required, laminated together with a clear poly vinyl butyral (PVB) or (SAF) to a minimum thickness and quantities, interlayer required to meet NOA and or Florida Product Approvals.

2.6 EXTERIOR GLAZING

A. Curtainwall Glass: 1 5/16" VNE6-63 IS LAMI FT/HS/HS
¼" (6mm) BlueGreen FT VNE-63 #2
½" (13.2 mm) spacer-black-argon
¼" (6mm) Clear HS
.045" (1.14 mm) clear PVB
.045" (1.1.4mm) clear PVB
¼" (6mm) Clear HS

B. Aluminum Frame Folding Door Glass:1" thick to match the Tint/Color of Curtain wall glass
3/16" FT (Tempered Tinted)
.2225" Spacer-black-Argon
1/4" HT Clear
.090" Clear SGD
¼" HT Clear

C. Automatic Entrances Glass: 5/8" Impact rated to match Tint/Color of Curtain wall glass.
¼" HS Tinted
.015" SAF Glass Interlayer
1/8" Polycarbonate (NOA #13-1105.10
.015" SAF Glass Interlayer
¼" HS Clear

2.7 GLAZING AT INTERIOR WALLS

A. Type: Monolithic, clear, tempered, minimum 1/4-inch thick.

B. Supports: Top and bottom, butt glazed.

2.8 MIRRORS

A. Glass: Clear float glass ASTM C 1036 Type I, Class 1, Quality q^2 mirror, ¼-inch thick.

B. Mirror Coating: Silver coating, copper protective coating and non-metallic coating conforming to FS A-A-3002.

2.9 GLAZING SEALANTS AND COMPOUNDS

A. Comply with recommendations of sealant and glass manufacturers for the required application and condition of installation. Provide only compounds which have been tested and proven to be fully compatible with surfaces contacted.
B. Per NOA and Product approval test

2.10 GLAZING GASKETS

A. Type, size and material recommended by glass and frame manufacturers for exterior, exposed, watertight installation of glass, with only nominal pressure in the glazing channel; comply with ASTM D 1667.
B. Per NOA and Product Approval test.

2.11 MISCELLANEOUS GLAZING MATERIALS

A. Setting Blocks: Neoprene, EPDM or silicone, 80-90 Shore A durometer hardness, with proven compatibility with sealants used.

B. Spacers and Edge Blocks: Neoprene EPDM or silicone, of hardness as recommended by glass manufacturer with proven compatibility with sealants

used.

C. Backer Rod: Closed-cell or waterproof-jacketed rod stock of synthetic rubber or plastic foam, proven to be compatible with sealants used, flexible and resilient, with 5-10 psi compression strength for 25% deflection.

D. Cleaners, Primers and Sealers: Type recommended by glass, sealant and gasket manufacturers.

E. Mirror Adhesive: Type recommended by mirror and adhesive manufacturer for spot-application system, with mirror supported only at lower edge. Provide Mirror-Mastic and recommended primer and mirror back paint by Palmer Products Corp. or approved equivalent

PART 3 - EXECUTION

3.1 STANDARDS AND PERFORMANCE

A. Glass shall be installed watertight and airtight. The glazed installation shall withstand normal temperature changes, wind loading and impact loading for doors without failure of sealants or gaskets to remain watertight and airtight, deterioration of glazing materials and other defects in glazing systems.

B. Protect glass from edge damage at all times during handling and installation.

C. Comply with recommendations of glass manufacturer and manufacturer of sealants and other materials used in glazing.

D. Comply with FGMA Glazing Manual except as shown and specified otherwise, and except as specifically recommended otherwise by the manufacturers of the glazing materials.

E. Inspect each piece of glass immediately before installation, and eliminate each piece which has observable edge damage or face imperfections.

F. Unify appearance of each series of lights by setting each piece to match others as nearly as possible. Inspect each piece and set with pattern, draw and bow oriented in the same direction as other pieces.

G. Install sealants as recommended by sealant manufacturer.

3.2 PREPARATION FOR GLAZING

A. Clean the glazing channel, or other framing members to receive glass, immediately before glazing. Remove coating which is not firmly bonded to the substrate. Remove lacquer from metal surfaces wherever elastomeric sealants

are used.

B. Apply primer or sealer to joint surfaces wherever recommended by sealant manufacturer.

3.3 GLAZING

A. Install setting blocks of proper size at quarter points of sill rabbet. Set blocks in thin course of the heelbead compound.

END OF SECTION 08 80 00

SECTION 08 90 00 - LOUVERS AND VENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and General Conditions/Provisions of Contract, General Conditions, Supplemental Conditions, and other Division 1 Specification Sections Apply to this Section.

B. Extent of louvers and vents is indicated on drawings, including indications of sizes and locations.

1.2 SUMMARY

A. Types of louvers and vents include the following to the extent of extruded aluminum louvers to match the profile, function, appearance, and finish as shown on the drawing and specification herein.

B. Louver assemblies furnished to include Florida Product Approval assembly and or NOA.

1.3 REFERENCES

A. Air Movement and Control Association International, Inc.:

B. The Aluminum Association, Inc.:

C. American Society of Civil Engineers (ASCE):

D. American Society for Testing and Materials (ATSM):

E. FBC/Miami-Dade County Test Protocols:

F. Architectural Aluminum Manufacturers Association (AAMA):

1.4 QUALITY ASSURANCE

A. Performance Requirements:

B. AMCA Certification:

C. Comply with SMACNA "Architectural Sheet Metal Manual" recommendation for fabrication, construction details and installation procedures, except as otherwise indicated.

D. Shop Assembly:

1.5 SUBMITTALS

A. As per Section 01 33 23 Shop Drawings, Product Data and Samples, provide six (6) copies as follows.

B. Product Data:

C. Shop Drawings:

D. Certification:

E. Product Acceptance:

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. GREENHECK, P.O. Box 410, Schofield, WI 54476-0410, 715-359-6171, Greenheck.com.

B. Or approved equal.

2.2 PRODUCT

A. EHV-550D -Enhaced Level E- Wind-Driven Wind-Driven Rain Louver Dual Module, NOA No.19-0430.03, Florida Product Approval No. FL 30291

B. Or approved equal.

2.3 MATERIALS

A. Frame: Aluminum 5.5" deep extruded 0.081".

B. Blades: 6005-T5 extruded aluminum

C. Screen: 3/4" x.051” square mesh aluminum bird screen in removable frame

D. Finish: Clear Anodize 215 R-1 AA-M10C22A41 (>0.4-0.7 mil).

E. Anchors and Inserts: Use non-ferrous metal or stainless-steel anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use stainless-steel expansion bolt devices for drilled-place anchors. Furnish inserts, as required to be set into concrete or masonry work. Use fasteners compatible with adjacent materials.

F. Bituminous Paint: SSPC-Paint 12 (cold-applied mastic).

2.4 ACCESSORIES

A. Provide Bird/Insect Screen.

B. Provide 1 “ insulated Blank Off Panel with .05” Aluminum facing Custom cut as required.

2.5 FABRICATION, GENERAL

A. Provide louvers and accessories of design, materials, sizes, depth, arrangement, and metal thicknesses indicated, or if not indicated, as required for optimum performance with respect to airflow; water penetration; air leakage where applicable (for adjustable units, if any); strengths; durability; and uniform appearance.

B. Fabricate frames including integral sills to suit adjacent construction with tolerances for installation, including application of sealants in joints between louvers and adjoining work.

C. Include support, anchorages, and accessories required for complete assembly. Provide and install additional aluminum channels, angles, girts to span the opening.

D. Provide sill extensions and loose sills made of the same materials as the louver, where indicated, or required for drainage to exterior and to prevent water penetrating to interior.

E. Join frame members to one another and to stationary louver blades by welding, except where indicated otherwise or where necessary by size of louvers. Maintain equal blade spacing including separation between blades and frames at head and still to produce uniform appearance.

F. Provide additional structural aluminum framing as indicated on the drawings.

G. Louver Screens: Provide removable screens for louvers. Mount on the exterior color to match louvers.

H. Metal Finishes: General: Comply with NAAMM "Metal Finishes Manual" for finish designations and applications recommendations, except as otherwise indicated. Apply finishes in factory after products are assembled. Protect finishes on exposed surfaces with protective covering, prior to shipment. Remove scratches and blemishes from exposed surfaces that will be visible after completing finishing process. Finish of all louvers exposed to exterior view are to be of color to match frames.

I. Ferrous Metal Finishes: Preparation: clean surfaces of dirt, grease, and loose rust or mill scale, including items fabricated from galvanized steel, if any. Apply finish to surfaces of fabricated and assembled units, where exposed or concealed when installed, after pretreating with a conversion coating suited to organic coating applied over it.

J. Coordinate with Mechanical Contractor for the inter phase detail of louver and duct.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

3.2 INSTALLATION

A. Locate and place louver units plumb, level, and in proper alignment with adjacent work.

B. Use concealed anchorage wherever possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weather-tight connection.

C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.

D. Repair finishes damage by cutting, welding, soldering and griding operations required for fitting and jointing. Restore finishes so there is no evidence of corrective work. Return items that cannot be refinished in the field to shop make required alternations, and refinish entire unit, or provide new units, at Contractor's option.

E. Protect galvanized and non-ferrous metals surfaces from corrosion or galvanic action by application of heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry or dissimilar metals.

F. Provide concealed gaskets, flashings joints fillers, and insulations, and install as work progresses to make the installations weathertight.

G. Refer to Division 7 section for sealants in connection with installations of louvers.

H. Provide and install 1/8"-thick Stainless Steel 'Z' Flashing with soldered vertical sides (three (3) sides) and drip with clip to exterior for louver/damper drainage.

END OF SECTION 08 90 00

SECTION 09 21 16 – GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide gypsum drywall work shown on drawings and specified.

1.2 RELATED SECTIONS

A. Section 05 40 00 - LIGHT GUAGE STEEL FRAMING

B. Section 07 92 00 – JOINT SEALANTS

C. Section 09 21 18 – GYPSUM BOARD SHAFT WALL ASSEMBLIES

D. Section 09 22 16.13- INTERIOR METAL FRAMING

E. Section 09 22 26.23- METAL SUSPENSION SYSTEM

F. Section 09 30 00 -Tiling

G. Section 09 81 00 – ACOUSTICAL INSULATION

1.3 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI)

1.	ANSI A108.1	Installation of Ceramic Tile - A Collection
2.	ANSI A118.9	Test Methods and Specifications for Cementitious Backer Units (Available only as part of ANSI A108.1)

ASTM INTERNATIONAL (ASTM)

1.	ASTM A 653/A 653M	Design of Cold-Formed Steel Structural Members
2.	ASTM C 36/C 36M	Gypsum Wallboard
3.	ASTM C 442/C 442M	Gypsum Backing Board, Gypsum Coreboard, and Gypsum Shaftliner Board

4.	ASTM C 475	Joint Compound and Joint Tape for Finishing Gypsum Board
5.	ASTM C 630/C 630M	Water-Resistant Gypsum Backing Board
6.	ASTM C 645	Nonstructural, Steel Framing Members
7.	ASTM C 665	Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing
8.	ASTM C 754	Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products
9.	ASTM C 840	Application and Finishing of Gypsum Board
10.	ASTM C 919	Use of Sealants in Acoustical Applications
11.	ASTM C 954	Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 Inch (0.84 mm) to 0.112 Inch (2.84 mm) In Thickness
12.	ASTM C 1177/C 1177M	Glass Mat Gypsum Substrate for Use as Sheathing

UNITED STATES GYPSUM CO. (USG)

1. Gypsum Construction Handbook 7th edition

1.4 QUALITY ASSURANCE

A. ASTM Standards: Comply with applicable requirements.

B. Fire Resistance Ratings: Provide assemblies that have been tested, approved and listed by Underwriter's Laboratories, Inc., FM Global or other testing agency acceptable to local authorities and code.

1.5 SUBMITTALS

A. Submit manufacturer's product data, specifications and installation instructions for each product, system and component.

B. Submit shop drawings for details not in manufacturer's data. Include drawings locating ceiling and wall control joints as required by ASTM C 840 and drywall manufacturer. Control joint location is subject to approval by the Architect.

C. Submit a copy of the test(s) reports for each proposed Fire-Resistance Rated assembly.

D. Submit samples of all accessories edges, corners, transitions and termination.

1.6 PRODUCT HANDLING

A. Deliver materials in sealed containers and bundles, fully identified with manufacturer's name, brand, type, and grade. Store in a dry, well ventilated space, protected from the weather and off the ground.

PART 2 - PRODUCTS

2.1 SUSPENDED CEILING FRAMING AND FURRING or as indicated on the drawings.

A. Comply with ASTM C 754 and manufacturer's recommendations.

B. Ceiling Suspension Main Runners: ASTM C 754, 1½-inch steel channels, 0.475 pounds per foot, cold-rolled, galvanized.

1. Hanger Wire: ASTM C 754 galvanized, soft annealed steel wire, sized in accordance with Table 5, ASTM C 754.

2. Hanger Anchorage Devices: Size for 3 x calculated loads, except size direct-pull concrete inserts for 5 x calculated loads.

3. Steel Furring: ASTM C 645; 25 gage, hat-shaped, galvanized.

C. Direct Hung Suspension System: In lieu of suspended main runner channels and hat-shaped furring, a direct hung system of tees or channel studs may be provided. Members shall be prepared to receive screw attached gypsum board and system shall have structural strength and rigidity equal to the suspended main runner system.

2.2 STEEL STUD FRAMING AND FURRING

A. Steel Studs: Conform to ASTM C 645; 25-gage minimum**;** ASTM A 653/A 653M galvanized steel; profile, size and spacing shown on drawings. Gage of metal shall be increased in accordance with ASTM C 754 Table 3 or manufacturer's limiting height tables so that deflection shall not exceed L/240 at 10 psf.

B. Stud Accessories: Provide galvanized steel.

1. Runners: Provide type recommended by stud manufacturer to match studs, for floor and ceiling support of studs, and for abutment to other work.

2. Stud System Accessories: Provide stud manufacturer's standard reinforcements, fasteners and other accessories.

3. Deflection Clips: Provide attachment system or clips for attachment of studs to head track designed to permit deflection of structure without transferring vertical loading to the studs where studs extend from floor to underside of floor above.

C. Steel Furring: ASTM C 645; 25-gage, hat-shaped, galvanized.

D. Steel Furring Resilient: ASTM C 645, 25-gage, manufacturer's standard design to reduce sound transmission.

E. Wire Mesh: ASTM F 2453, 9 gage galvanized expanded wire metal mesh.

F. Fasteners for Steel: ASTM C 954; size recommended by gypsum board manufacturer.

2.3 GYPSUM WALLBOARD

A. Manufacturers:

1. Georgia-Pacific Gypsum, LLC
2. National Gypsum Co.
3. United States Gypsum Company.

B. Provide Gypsum Board of types indicated in maximum lengths available to minimize joints.

1. Thickness: Provide Gypsum Boards ¼", 5/8" and 1" thick comply with ASTM C840 for application system and support spacing and assembly indicated.

B. Regular Gypsum Wallboard: ASTM C 36/C 36M, regular type with tapered long edges.

1. Sheet Size: Maximum length available by 4'-0" wide.

2. Thickness: Shall be ⅝-inch unless otherwise indicated**.**

3. Use sag-resistant type for ceiling surfaces.

B. Fire Retardant Gypsum Wallboard: ASTM C 36/C 36M, Type X, provide where fire rated construction is indicated.

1. Size: 4-foot wide sheets by maximum length available.

2. Thickness: Shall be ⅝-inch unless otherwise indicated.

C. Gypsum Backing Board and Coreboard: ASTM C 442/C 442M, Type X, coreboard with moisture-resistant paper facings in thickness indicated for system required for rated assembly.

D. Gypsum Sheathing Board: ASTM C 1177, glass mat faced, Type X, water resistant core and surface paper. Sheet size: Maximum length available for intended use by 4'-0" wide by 5/8-inch thick.

E. Abuse Resistant Board: ASTM D 4977; gypsum core encased in heavy smooth abrasion 100% recycled paper on the face side and heavy mold/mildew-resistant liner paper on the back side. Type X, 5/8-inch thick.

F. Impact Resistant Wallboard: ASTM C 1278, ASTM C 1629, ASTM C 1658; gypsum core encased in heavy smooth abrasion-resistant mold/mildew-resistant, recycled paper on the face side and heavy mold/mildew-resistant, liner paper on the back side. A fiberglass mesh is embedded in the board. Type X, 5/8-inch thick.

G. Tile Backer Boards: Georgia -Pacific Gypsum LLC: Impact-Resistant Fiberglass-Mat Faced Gypsum Board: DensArmor Plus Impart-Resistant Panel is the basis of design or approved substitution.

1. Exposed side -Impact-Resistant Fiberglass-Mat Faced Gypsum Board:

a. Thickness: 5/8"

b. Width: 4'

c. Length: 8'

d. Weight: 2.8 lb/sq. ft.

e. Edges: Tapered

f. Surfacing: Coated fiberglass mat on face, back, and long edges

g. Flexural Strength, Parallel (ASTM C473, ASTM C1658): Not less than 100 lbf.

h. Flexural Strength, Perpendicular (ASTM C473, ASTM C1658): Not less than 140 lbf.

i. R-Value (ASTM C518): 0.67

j. Nail Pull Resistance (ASTM C473, ASTM C1658): Not less than 90 lbf.

k. Humidified Deflection (ASTM C473, ASTM C1658): Not less than 1/8"

m. Hardness, Core, Edges, and Ends (ASTM C473, ASTM 1396, ASTM C1658): Not less than 15

o. Water Absorption (ASTM C630, ASTM C1396, ASTM C1658): Less than 5% of weight

p. Mold Resistance (ASTM D3273): 10, in a test as manufactured

q. Microbial Resistance (ASTM D6329, EPA 12-week protocol): Will not support microbial growth

r. Abuse Resistance (ASTM C1629):

1. Surface Abrasion: Level 3

2. surface Indentation: Level 1

3. Soft-Body Impact: Level 3

4. Hard-Body Impact: Level 2

2.4 TRIM ACCESSORIES

A. Provide galvanized steel trim accessories manufactured by U.S. Gypsum Company, or approved equivalent.

1. Casing Trim: USG No. 200 series, type as detailed.

2. Corner Beads: USG NO. 103 Durabead reinforcement, 1¼" x 1¼".

4. Control Joints: USG No. 093.

C. Manufacturer: Fry Reglet Architectural Co. 800-237-9773. Basis of design.

1. Reveal Base:
   a. Acceptable Product: Number DRMB
   b. Characteristics:
      i. Description: Reveal base shall from damage-resistant base at bottom of wall.
      ii. Material: Extruded Aluminum

iii. Dimensions: As indicated on the drawings
iv. Radius: As indicated on the drawings
v. Finish: Mill Finished Aluminum

2. Expansion Joint:
   a. Acceptable Product: Number DRM-5, 3-piece
   b. Characteristics:
      i. Description: 3-piece expansion joint with compression seals to prevent cracking of drywall joints caused by minor settling of the building. Maximum amount of movement is 3/8"
      ii. Material: Extruded Aluminum
      iii. Dimensions: As indicated on the drawings
      iv. Radius: As indicated on the drawings
      v. Finish: Mill Finished Aluminum

3. "F" Reveal:
   a. Acceptable Product: Number FDM
   b. Characteristics:
      i. Description: Reveal shall create a wall reveal transition between ceiling and wall or other building materials.
      ii. Material: Extruded Aluminum
      iii. Dimensions: As indicated on the drawings
      iv. Radius: As indicated on the drawings
      v. Finish: Mill Finished Aluminum

2.5 JOINT TREATMENT MATERIALS

A. Comply with ASTM C 475.

B. Joint Tape: U.S. Gypsum Perf-A-Tape and U.S. Gypsum Imperial type P or S for water-resistant wallboard or approved equivalent by Georgia Pacific or National Gypsum Co.

C. Joint Compound: U.S. Gypsum All-Purpose Ready-Mixed Joint Compound, vinyl tape or approved equivalent by Georgia Pacific or National Gypsum Co.

2.6 MISCELLANEOUS MATERIALS

A. Fastening to Metal: Screws, ASTM C 954.

B. Spot Grout: ASTM C 475, setting-type joint compound of type recommended for spot grouting hollow metal door frames.

C. Nine gauge expanded wire mesh attached to metal studs before application of gypsum board.

1. Refer to drawings for locations.

2.7 SOUND INSULATION

A. Refer to Section 09 81 00 ACOUSTICAL INSULATION

2.8 ACOUSTICAL SEALANT

A. Non-drying, non-hardening, non-skinning, non-staining, gunnable synthetic rubber sealant complying with requirements of SECTION 07 92 00 - JOINT SEALANTS.

PART 3 - EXECUTION

3.1 INSTALLING STEEL FRAMING AND FURRING, GENERAL

A. Comply with ASTM C 754 for installation of steel framing members; ASTM C 1007 for load bearing partitions, and manufacturer's instructions for screw attachment of gypsum board.

B. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, trim, grab bars, toilet accessories, furnishings or other similar items supported from ceiling or partition framing. Comply with details indicated and with recommendations of gypsum board manufacturer or, if none available, with "Gypsum Construction Handbook" published by U. S. Gypsum Company.

C. Installation Tolerances:

1. Install framing to an alignment tolerance not to exceed ⅛-inch in 10-feet vertically and horizontally. Square corners to a tolerance not to exceed ⅛-inch in 4-feet each side of corner.

2. Install steel framing components for suspended ceilings so that cross-furring members or grid suspension members are level to within ⅛-inch in 12-feet as measured both lengthwise on each member and transversely between parallel members.

D. Do not bridge building expansion joints with support system, frame both side of joints with furring and other support as indicated.

3.2 INSTALLING CEILING FRAMING

A. Space ceiling suspension main runners not more than 4'-0" o.c., and space hangers at not more than 4'-0" o.c. along runners unless shown otherwise. Coordinate ceiling framing with structure. Provide additional hangers and runners to support electrical,

mechanical, system and other work indicated and required.

B. Space ceiling furring members 16-inches o.c., except as otherwise indicated on drawings.

D. Attach furring members to main ceiling runners and to other structural supports as indicated and in accordance with ASTM C 754 and manufacturer's directions.

3.3 INSTALLING STEEL FRAMING FOR PARTITIONS AND WALLS

A. Install steel studs and furring in sizes and at spacings indicated but not less than that required by the referenced steel framing installation standard to comply with maximum loading requirements specified.

B. Space studs at 16-inches o.c. unless otherwise indicated on drawings.

C. Terminate partition stud system at ceilings, except where shown to be extended to structural support or substrate above.

D. Door Frames: Install a minimum of two jamb studs at door frames. Space jack studs over door frames at same spacing as partition studs.

E. Space wall furring members 16-inches o.c. unless otherwise indicated on drawings.

F. Provide and install supplemental blocking for support at all accessories. See drawings for accessories location.

3.4 SHAFT WALL SYSTEM

A. Install gypsum board shaft wall system to comply with performance and other requirements indicated as well as with manufacturer's installation instructions.

B. Install supplementary framing, blocking and bracing to support gravity and pull-out loads of fixtures, equipment, services, trim, furnishings and similar work which cannot be adequately supported directly by regular framing of gypsum board shaft wall system. Provide additional reinforcement for vertical bracing and deflection control due to wall height or span.

1. Where handrails are indicated for direct attachment to gypsum board shaft wall system, provide not less than a 0.0341-inch thick by 4- inch wide galvanized steel reinforcement strip, accurately positioned and secured behind not less than one gypsum board face layer of ½-inch or ⅝-inch thickness.

C. Isolate shaft wall system from transfer of structural loading to system, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral

support and avoid axial loading. Comply with details indicated and with manufacturer's instructions.

D. Seal gypsum board shaft walls at perimeter of each section which abuts other work and at joints and penetrations within each section. Install acoustical sealant to withstand dislocation by air pressure differential between shaft and external spaces. Comply with ASTM C 919 and manufacturer's instructions.

3.5 FIRE RATED ASSEMBLIES

A. Installation, spacing of framing members and spacing of fasteners shall conform to the UL test report of each fire rated assembly.

B. Fire rated walls and partitions shall extend to floor or roof construction above. Install UL listed joint details in compliance with fire rated assmply.

3.6 GYPSUM WALLBOARD INSTALLATION

A. Comply with ASTM C 840 systems as listed below, manufacturer's instructions and the requirements specified and indicated for fire-resistance ratings.

1. System VIII; Application of Gypsum Board to Steel Framing and Furring.

2. System X; Application of Gypsum Board to Receive Tile by Adhesive Application.

3. System XIII; Control (Expansion) Joints.

B. Space Fasteners in wallboard in accordance with ASTM C 840.

3.7 INSTALLATION TRIM ACCESSORIES

A. Use the same screw fasteners to anchor trim necessary flanges as required to fasten gypsum board to the supports. Stapling flanges is not permitted.

B. Install corner beads at external corners of gypsum board work.

E. Install edge trim whenever edge of wallboard would otherwise be exposed or semi-exposed. Install L-type trim where work is tightly abutted to other work, and install U-type trim where indicated and where edge is exposed.

3.8 SOUND ATTENUATION BLANKETS

A. Install in accordance with manufacturer's directions.

B. Provide in partitions and walls indicated for sound insulation.

C. Provide in fire-rated partitions and walls when mineral wool blankets are part of the test for fire rating.

3.9 WALLBOARD FINISHING

A. Comply with ASTM C 840. Apply treatment at wallboard joints, flanges of trim accessories, penetrations, fastener heads, surface defects and everywhere as required for a Level 5 surface to prepare work for painting or other finish materials. Prefill open joints and beveled edges using type of compound recommended by manufacturer.

1. Apply joint tape at joints between wallboards, except where a trim accessory is to be provided.

2. Apply joint compound in three coats, not including prefill of openings in base, and sand after second coat and after last coat.

3. Where gypsum wallboard butts CMU walls and other work, provide appropriate sealant to resulting joint to completely fill void between wallboard and other work. Provide and install plumb corner bead.

3.10 FIELD QUALITY CONTROL

A. Above-Ceiling Observation: Before Contractor installs gypsum board ceilings, Architect will conduct an above-ceiling observation and report deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.

B. Notify Architect seven (7) days in advance of date and time when Project, or part of Project, will be ready for above-ceiling observation.

C. Before notifying Architect, complete the following in areas to receive gypsum board ceilings:

a. Installation of 80% of lighting fixtures, powered for operation.

b. Installation, insulation, and leak and pressure testing of water piping systems.

c. Installation of air-duct systems.

d. Installation of air devices.

e. Installation of mechanical system control-air tubing.

f. Installation of ceiling support framing.

g. Firestopping of penetrations and joints in fire rated assemblies.

h. Smoke sealing of penetrations and joints in smoke resistant assemblies.

3.11 CLEANING AND PROTECTION

A. Promptly remove all residual joint compound from adjacent surfaces. Protect adjacent finishes.

B. Provide final protection and maintain conditions, in a manner that ensures that gypsum board assemblies remain free from damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 09 21 16.23 – GYPSUM BOARD SHAFT-WALL ASSEMBLIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including Contractual Conditions and Division 1 Specification Sections, apply to this Section.

B. Refer to Division 7, Section Firestopping Systems for firestop and smoke seal devices and systems.

1.2 SUMMARY

A. Section includes shaft enclosures as required by proposed new work, renovations and alternations.

1.3 DEFINITIONS

A. Gypsum Board Construction Terminology: Refer to ASTM C11 and GA-505 for definitions of terms for gypsum board construction not defined in this Section or in other referenced standards.

1.4 PERFORMANCE REQUIREMENTS

A. Structural Performance Characteristics: As follows:

1. Provide gypsum board shaft-wall assemblies capable of withstanding the full air-pressure loads indicated for maximum heights of partitions indicated without failing and while maintaining an airtight and smoke-tight seal. Evidence of failure includes deflections exceeding limits indicated, bending stresses causing studs to break or to distort, and end-reaction shear causing runners to bend or to shear and studs to become crippled.

2. Provide gypsum board shaft-wall assemblies for horizontal duct enclosures capable of spanning distances indicated within the deflection limits indicated.

1.5 SUBMITTALS

A. General: Submit the following according to Conditions of Contract and Division 1 Specification Sections.

1. Product Data: Submit product data for each gypsum board shaft-wall assembly specified.

2. Fire-Test-Response Reports: Submit information from a qualified independent testing and inspecting agency substantiating each gypsum board shaft-wall assembly's required fire-resistance rating. Include data substantiating that elevator entrances and other items that penetrate each gypsum board shaft-wall assembly do not negate fire-resistance rating.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain components for each gypsum board shaft-wall assembly indicated through one source from a single manufacturer.

B. Fire-Resistance-Rated Assemblies: Provide gypsum board shaft-wall assemblies as follows:

1. Assemblies comply with requirements of fire-response-tested assemblies indicated by GA File Numbers in GA-600, "Fire Resistance Design Manual"; or design designations in UL's "Fire Resistance Directory" or certification listings of Warnock Hersey or another testing and inspecting agency acceptable to authorities having jurisdiction.

2. Fire-resistance ratings were determined by testing assemblies for fire response per ASTM E119.

C. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1, Section Project Meetings. Review methods and procedures related to gypsum board shaft-wall assemblies including, but not limited to, the following:

1. Fasteners proposed for anchoring steel framing to building structure.

2. Structural framing protected by sprayed-on fireproofing.

3. Doors and other items penetrating shaft-wall assemblies.

4. Mechanical work enclosed within shaft-wall assemblies.

5. Construction schedule and availability of materials, Installer's personnel, and items installed with gypsum board shaft-wall assemblies that are needed to avoid delay.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages, containers, and bundles bearing brand name and identification of manufacturer or supplier.

B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and

other causes. Neatly stack gypsum boards flat on leveled supports off the ground to prevent sagging.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Georgia-Pacific Gypsum LLC: Impact-Resistant Fiberglass-Mat Faced Gypsum Board: DensArmor Plus Impact-Resistant Interior Panel, or approved substitution.

2. Exposed side -Impact-Resistant Fiberglass-Mat Faced Gypsum Board:

   a. Thickness: 5/8"

   b. Type “X”: Provide as indicated (Fire Resistant)

   c. Width: 4'

   d. Length: 8'

   e. Weight: 2.8 lb/sq. ft.

   f. Edges: Tapered

   g. Surfacing: Coated fiberglass mat on face, back, and long edges

   h. Flexural Strength, Parallel (ASTM C473, ASTM C1658): Not less than 100 lbf.

   i. Flexural Strength, Perpendicular (ASTM C473, ASTM C1658): Not less than 140 lbf.

   j. R-Value (ASTM C518): 0.67

   k. Nail Pull Resistance (ASTM C473, ASTM C1658): Not less than 90 lbf.

   l. Humidified Deflection (ASTM C473, ASTM C1658): Not less than 1/8"

   m. Hardness, Core, Edges, and Ends (ASTM C473, ASTM 1396, ASTM C1658): Not less than 15

   n. Water Absorption (ASTM C630, ASTM C1396, ASTM C1658): Less than 5% of weight

o. Mold Resistance (ASTM D3273): 10, in a test as manufactured

p. Microbial Resistance (ASTM D6329, EPA 12-week protocol): Will not support microbial growth

q. Abuse Resistance (ASTM C1629):

1. Surface Abrasion: Level 3

2. Surface Indentation: Level 1

3. Soft-Body Impact: Level 3

4. Hard-Body Impact: Level 2

2.2 GYPSUM BOARD PRODUCTS

A. GENERAL: To the extent not otherwise indicated, comply with GA-216, as specified and recommended.

1. Blind side Gypsum Board: Also know as gypsum wallboard. Regular type with tapered long edges.

a) Sheet Size: 4' x8'.

b) Thickness: 1" except where otherwise indicated

c) Type "X": Provide where indicated (fire resistant).

2. Gypsum Backing Board: Regular type, with V-groove or square edges, except provide exposed gypsum boards with tapered edges where joint treatment is required.

a) Thickness 1" except where otherwise indicated.

b) Type "X": Provide where indicated (fire resistant).

2.3 ASSEMBLY MATERIALS

A. General: Provide materials and components complying with requirements of fire-resistance-rated assemblies indicated. Provide panels in maximum lengths available to eliminate or minimize end-to-end butt joints.

B. Steel Framing: ASTM C645.

1. Protective Coating: ASTM A653, G40 hot-dip galvanized coating.

2. Studs: Manufacturer's standard profile for fire-resistance-rated assembly indicated and in depth and thickness indicated in the Gypsum Board Shaft-Wall Assembly Schedule.

3. Track (Runner): Manufacturer's standard J-profile track with long-leg length as standard with manufacturer, but at least 2", in depth matching studs and in thickness indicated in the Gypsum Board Shaft-Wall Assembly Schedule.

4. Jamb Struts: Manufacturer's standard J-profile strut with long-leg length of 3" in depth matching studs, and not less than 0.0329" thick.

5. Corner and End Members: Manufacturer's standard profile framing member for use at corners or where assembly terminates at other work, in depth matching studs and in manufacturer's standard thickness not less than the stud thickness indicated in the Gypsum Board Shaft-Wall Assembly Schedule.

6. Provide additional framing if required by unbrace height or load.

C. Gypsum Liner Panels: Manufacturer's proprietary liner panels in 1-inch thickness and with moisture-resistant paper faces.

D. Gypsum Wallboard: ASTM C36, core type as required by fire-resistance-rated assembly indicated. Edges are tapered.

E. Accessories: Cornerbead, edge trim, and control joints of material and shapes specified in Division 9, Section Gypsum Board Assemblies that comply with gypsum board shaft-wall assembly manufacturer's written recommendations for application indicated.

F. Gypsum Wallboard Joint-Treatment Materials: Provide materials complying with ASTM C475 and gypsum board shaft-wall assembly manufacturer's written recommendations for applications indicated, and as specified in Division 9 Section Gypsum Board Assemblies.

2.4 MISCELLANEOUS MATERIALS

A. General: Provide auxiliary materials for gypsum board shaft-wall construction that comply with requirements indicated and gypsum board shaft-wall assembly manufacturer's written recommendations.

B. Fasteners: Steel drill screws complying with ASTM C1002 for fastening gypsum board to steel members less than 0.03" thick.

C. Fasteners: Steel drill screws complying with ASTM C954 for fastening gypsum board to steel members from 0.03" to 0.112" thick.

D. Runner (Track) Fasteners: Power-driven fasteners of type indicated below and of size and material required to withstand loading conditions imposed on shaft-wall assemblies without exceeding allowable design stress of runners, fasteners, or structural substrates where anchors are embedded.

1. Powder-Actuated Fasteners: Provide powder-actuated fasteners with capability to sustain, without failure, a load equal to ten (10) times that imposed by shaft-wall assemblies, as determined by testing conducted by a qualified independent testing agency according to ASTM E1190.

2. Post-Installed Expansion Anchors: Where indicated, provide expansion anchors with capability to sustain, without failure, a load equal to 5 times that imposed by shaft-wall assemblies, as determined by testing conducted by a qualified independent testing agency according to ASTM E488.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates to which gypsum board shaft-wall assemblies attach or abut, with Installer present. Substrates include hollow-metal frames, cast-in anchors, and structural framing; examine for compliance with requirements for installation tolerances and other conditions affecting performance of gypsum board shaft-wall assemblies. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed-on fireproofing is applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed-on fireproofing. Where offset anchor plates are required, install continuous units formed from hot-dip galvanized steel sheet of thickness indicated. Fasten plates to building structure with fasteners spaced not more than 24" on center. Secure ceiling runners (tracks) to offset plates with screws spaced not more than 24" on center.

3.3 INSTALLATION

A. General: Install gypsum board shaft-wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and the following:

1. ASTM C754 for installing steel framing.

2. Division 9, Section Gypsum Board Assemblies for applying and finishing gypsum wallboard and other panels indicated.

3.4 FIELD QUALITY CONTROL

A. Above-Ceiling Observation: Before Contractor installs gypsum board ceilings, Architect will conduct an above-ceiling observation and report deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.

1. Notify Architect seven (7) days in advance of date and time when Project, or part of Project, will be ready for above-ceiling observation.

2. Before notifying Architect, complete the following in areas to receive gypsum board ceilings:

a. Installation of 80% of lighting fixtures, powered for operation.

b. Installation, insulation, and leak and pressure testing of water piping systems.

c. Installation of air-duct systems.

d. Installation of air devices.

e. Installation of mechanical system control-air tubing.

f. Installation of ceiling support framing.

g. Firestopping of penetrations and joints in fire rated assemblies.

h. Smoke sealing of penetrations and joints in smoke resistant assemblies.

3.5 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure gypsum board shaft-wall assemblies are without damage or deterioration at the time of Substantial Completion.

END OF SECTION 09 21 16.23

PAGE INTENTIONALLY LEFT BLANK

SECTION 09 22 16.13 - INTERIOR METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Interior metal wall, ceiling and rated steel wall and ceiling framing to the extent shown on drawings and specified herein.

1.2 SUBMITTALS

A. Product Data: Manufacturers cut sheets for all material and fastener.

B. Shop Drawings: Show both rated and non-rated deflection track details. Include testing laboratory's assembly number for the rated conditions.

C. Design analysis data showing design loads and stud gages for each condition. Submit Drawings and calculations prepared by a Florida Registered Engineer.

PART 2 - PRODUCTS

2.1 STEEL FRAMING FOR WALLS AND PARTITIONS

A. Provide steel framing members complying with the following requirements:

1. Component Sizes and Spacings: Comply with ASTM C 754 under the following maximum deflection and lateral loading conditions:

a. Maximum Deflection at 5 pound-foot per square foot:

1) Painted Interior Partitions: L/240
2) Tiled Interior Walls: L/270
3) Large Format Tiled Walls: L/360

2. Protective Coating: G-40 hot-dip galvanized coating per ASTM C 645. B.

Steel Studs and Runners: ASTM C 645

C. Fasteners for Metal Framing: Provide fasteners of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel framing and furring members securely to substrates involved; complying with the recommendations of gypsum board manufacturers for applications indicated.

D. Unless indicated otherwise, metal stud framing shall be formed from the following gage metal. If two conditions apply in the following listing, use the heavier gage:

1. Framed openings (heads and jambs of door and window openings) - 16 gage.

a. 16 gage studs include both (2) studs at each jamb, full height, and headers.

2. Remaining metal studs - 20 gage minimum or as necessary not to exceed the max allowable deflection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to which gypsum board assemblies attach or abut, installed hollow metal frames, cast-in-anchors, and structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of assemblies. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLING STEEL FRAMING, GENERAL

A. Steel Framing Installation Standard: Install steel framing to comply with ASTM C 754 and with ASTM C 840 requirements that apply to framing installation.

B. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, wayfinding, monitor mounts or similar construction. Comply with details indicated and with recommendations of gypsum board manufacturer.

C. Isolate steel framing from building structure to prevent transfer of loading imposed by structural movement. Use vertical sliding slide clip application or use of deflection track and plate track two-piece system, or slip-joint with U-channel.

1. Where building structure abuts ceiling perimeter or penetrates ceiling.
2. Where partition framing and wall furring abut structure, including steel beams, steel joists, at bottom of roof decks and floor decks, except at floor.

a. Provide slip-type joints to attain lateral support and avoid axial loading.

3. Rated Deflection Track: Maintain continuity of fire-resistance-rated assembly indicated.

D. Do not bridge building expansion and control joints with steel framing or furring members. Independently frame both sides of joints with framing or furring members as indicated.

3.3 INSTALLING STEEL FRAMING FOR SUSPENDED AND FURRED CEILINGS

A. Suspend ceiling hangers from building structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, counters playing, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with the location of hangers required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.

3. Secure wire hangers by looping and wire-tying, either directly to structures or to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause them to deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
4. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for structure as well as for type of hanger involved, and in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
5. Do not support ceilings directly from permanent metal forms.
6. Do not attach hangers to steel deck tabs.
7. Do not attach hangers to steel roof deck. Attach hangers to structural members.
8. Do not connect or suspend steel framing from ducts, pipes or conduit.

B. Sway-brace suspended steel framing with hangers used for support.

C. Install suspended steel framing components in sizes and at spacings indicated but not less than that required by the referenced steel framing installation standard.

1. Wire Hangers: 0.1620-inch (8-gage) diameter, 4 feet o.c.
2. Carrying Channels (Main Runners): 2-1/2 inch, 4 feet o.c.
3. Rigid Furring Channels (Furring Members) 7/8": 24 inches o.c.

D. For ceiling grid suspension system, comply with manufacturer's instructions.

E. Installation Tolerances: Install steel framing components for suspended ceilings so that cross-furring members or grid suspension members are level to within 1/8 inch in 12 feet as measured both lengthwise on each member and transversely between parallel members.

F. Wire-tie or clip furring members to main runners and to other structural supports as indicated.

3.4 INSTALLING STEEL FRAMING FOR WALLS AND PARTITIONS

A. Install runners (tracks) at floors, ceilings, and structural walls and columns where gypsum board stud assemblies abut other construction.

1. Where metal framing is installed directly against exterior walls, install asphalt felt strips between studs and wall.

B. Extend partition framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Cut studs 1/2 inch short of full height. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.

C. Install steel studs and furring in sizes and at spacing indicated but not less than that required by the referenced steel framing installation standard to comply with maximum deflection and minimum loading requirements specified.

1. Install metal studs at 16 inches o.c. at partitions scheduled to receive tile finishes.
2. Radius walls install at 4 inches o.c. at partitions to create the radius wall.

D. Install steel studs so that flanges point in the same direction and so that leading edges or ends of each gypsum board can be attached to open (unsupported) edges of stud flanges first.

E. Frame door openings to comply with details indicated, with GA-219, and with applicable published recommendations of gypsum board manufacturer or as indicated on drawings. Attach vertical studs at jambs with screws either directly to frames or to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

1. Extend vertical jamb studs through suspended ceilings and attach to underside of floor or roof structure above.

F. Frame openings other than door openings in same manner as required for door openings. Install framing below sills of openings to match framing required above door heads.

G. For UL rated construction follow UL listed assembly requirements for installation.

END OF SECTION 09 22 16.13

SECTION 09 22 26.23 - METAL SUSPENSION SYSTEMS

Drywall Flat or Curved Applications

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

1.2 SUMMARY

A. Section Includes:

1. Suspension System Framing and Furring for Plaster and Gypsum Board Assemblies
2. Wire hangers, fasteners, main runners, cross tees, and wall angle moldings.

B. Related Sections:

1. Section09 21 16 - Gypsum Board Assemblies
2. Section 09 2013 - Acoustical Panel Ceilings
3. Fire Sprinkler specifications on drawings
4. Division 23 Sections – HVAC Work
5. Division 26 Sections - Electrical Work
6. Division 27 Sections-Communications Work
7. Division 28 Electronic Safety and Security

14. NOA #14-1204.05 Miami/Dade Impact
15. ESR-1289 ICC-ES Evaluation Report

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's technical literature.

B. Samples: 8 inch long samples of suspension system components, including main runner, cross tees, and angle molding.

C. Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards.

D. Design Data: Calculations depicting spacing, size and hanger wire. Calculations signed and sealed by a Florida Registered Professional Engineer.

1.5 QUALITY ASSURANCE

A. Single-Source Responsibility: To ensure proper interface, all drywall furring components shall be produced or supplied by a single manufacturer.

B. All accessory components from other manufacturers shall conform to ASTM standards.

C. Fire Resistance Ratings: As indicated by reference to design designations in UL Fire Resistance Directory, for types of assemblies in which drywall ceilings function as a fire protective membrane and tested per ASTM E 119. Installation in accordance with the UL Design being referenced.

E. Coordination of Work:

1. Coordinate drywall furring work with installers of related work including, but not limited to: acoustical ceilings, building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers.

2. All work above the ceiling line should be completed prior to installing the drywall sheet goods. There should be no materials resting against or wrapped around the suspension system, hanger wires or ties.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.

1.7 WARRANTY

A. Suspensions System: Submit a written limited warranty executed by the manufacturer, agreeing to repair or replace grid components that are supplied with a hot-dipped galvanized coating or aluminum base material. Failures include, but are not limited to the occurrence of 50% red rust as defined by ASTM D 610 test procedures as a result of defects in materials or factory workmanship.
B. Warranty Period:
Grid: Ten years from date of installation.
C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Suspension Systems: Basis of Design Armstrong World Industries, Inc.
B. Or Approved substitution

2.2 SUSPENSION SYSTEMS

A. Components:

1. Main Beam: Shall be double-web construction (minimum 0.0179 inch prior to protective coating, ASTM C645), hot dipped galvanized (per ASTM A653).

a. HD8906/HD890610: 1-11/16 inch web height, 1-1/2 inch flange, available with G40 or G90 hot dipped galvanization.

2. Primary Cross Tees: Shall be double-web steel construction (minimum 0.0179 inch prior to protective coating, ASTM C645), hot dipped galvanized (minimum G40 or G90 per ASTM A653)

a. XL8945P: 48 inch, web height 1-1/2 inch with rectangular bulb and pre-

finished 1-1/2 inch knurled flange

3. QuikStix Soffits DGS: Shall be double web steel construction (minimum 0.0179 inch prior to protective coating, ASTM C645), Tees designed for creating soffits; 1-1/2 inch web height. 1-1/2 inch flange, flattened bulb, bending crimp, knockouts and alignment holes to facilitate creating 15, 30, 45, 60, and 90 degree angles; available with G40 or G90 hot dipped galvanization.

    a. QS612: 12 foot tee with knockouts 6 inches O.C., rout holes 6 inches O.C.

    b. QS812: 12 foot tee with knockouts 8 inches O.C. rout holes 8 inches O.C.

4. Wall Molding:
    a. KAM -12: 12 foot Knurled Angle molding, 1-1/4 inch x 1-1/4 inch, knurled surface, screw stop hem, pre-punched holes in top flange, 4" O.C., .018 mil. 25g.
5. Transition Molding: Drywall to Acoustical ceiling.
    a. Pre-Painted Armstrong Global White integral acoustical flange and drywall taping flange, hot dipped cold rolled steel.

A. 7905: 120 inch with 9/16" flush horizontal flange.

6. Screws for wallboard application shall be bugle head screws in accordance with thickness of material used.

7. Metal Trim or Plastic Members:

    a. Corner bead: Minimum #26 gauge, zinc alloy or plastic square edge type with expanded flanges

    b. Casing bead: Minimum #24 gauge, zinc alloy or plastic square edge type with expanded flanges

    c. Control Joints: Minimum #26 gauge, roll-formed zinc alloy, extruded aluminum or plastic with expanded flanges
    d. Special Trim Shapes: As detailed on plans, extruded aluminum with acrylic coating by Fry Reglet or approved equal

    e. Metal Lath: 3.4 lbs/square yard, galvanized 3/8 inch diamond mesh or flat rib lath; security lath for applications requiring high degree of security

B. STRUCTURAL CLASSIFICATION:

1. Main Beam shall be heavy duty per ASTM C 635.

2. Classification can require wires to be closer together for additional loading when used to

support double layer gypsum, verticals, slopes, domes, half barrels, circles, soffits, canopies, and step conditions, which call for loading or unusual designs and shapes in drywall construction. Using cross tees in the construction of circles, barrels, etc. is common in order to hold the radius.

3. Deflection of fastening suspension system supporting light fixtures, ceiling grilles, access doors, verticals, and horizontal loads shall have a maximum deflection of 1/360 of the span.

PART 3 – EXECUTION

3.1 INSTALLATION – GENERAL

A. Install suspension system and panels in accordance with the manufacturer's instructions, in compliance with ASTM installation standard, and with applicable codes as required by the authorities having jurisdiction.

B. The Armstrong Drywall Grid System can be installed in interior or exterior applications.

C. To secure to metal clips, concrete inserts, steel bar joist or steel deck, use power actuated fastener, or insert. Coordinate placement for hanger wire spaced as required for expected ceiling loads and layout.

D. Install hanger wire as required with necessary on center spacing to support expected ceiling load requirements, following local practices, codes and regulations. Provide additional wires at light fixtures, grilles, and access doors where necessary. A pigtail knot shall be used with three tight wraps at top and bottom fastening locations.

E. Add additional wire as needed when using compatible clips and accessories.

F. Control Joints: Roll-formed zinc alloy, aluminum, or plastic as required for expansion and contraction as shown on drawings.

G. Expansion Joints: Roll-formed zinc alloy, aluminum, or plastic as required for expansion and contraction as shown on drawings.

H. Main beams shall be suspended from the overhead construction with hanger wire, spaced as required for expected ceiling loads, along the length of the main beams.

I. Install cross tees at on center spacing as specified by the drywall manufacturer. Typical drywall cross tee spacing:

1. 16 inches on center with 5/8 or 1/2 inch gypsum board

2. 24 inches on center with 5/8 inch gypsum board

J. Other items such as wood, sheet metal, or plastic panels should be screwed to comply with deflection limit equivalent to that of the ceiling installation.

K. Use channel molding or angle molding to interface with Drywall Grid System to provide perimeter attachment or to obtain drop soffits, verticals, slopes, etc.

L. To suspend a second ceiling beneath a new or existing drywall ceiling, without breaching the integrity of the upper ceiling, use the Drywall Clip. To form a transition from a drywall ceiling to an acoustical ceiling, use the Drywall Transition Clips spaced as required for expected loads.

M. For light fixtures (Type G, Type F) use secondary framing cross tees as required to frame opening.

N. Single cross tees in a rout hole to be secured by 7/16 inch framing screw or alternative methods.

3.2 INSTALLATION - INTERIOR APPLICATIONS

A. Install main beams and cross tees at the on center spacing required for ceiling loading, and location of in-ceiling services.

B. Install additional bracing at 48” o.c or as indicated by delegated Engieer.

3.3 INSTALLATION - RADIUS APPLICATIONS

A. Determine the bow or camber (Convex or Concave) in a main runner.

B. Establish a jig or pattern on a flat surface, mark locations to cut main beam, and use four pan head screws to fasten a Radius Clip (RC2) flat to the web between the bulb and the flange per the manufacturer's instructions.

C. Install main beams with on center spacing and wire spacing, as needed, to support expected ceiling load.

D. Additional bracing at 48” O.C. or as indicated by delegated Engineer.

E. Install cross tees at on center spacing as specified by the manufacturer.

END OF SECTION 09 22 26.23

SECTION 09 24 23

PORTLAND CEMENT PLASTER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification sections, apply to work of this section.

B. Section 04 22 00 – Concrete Masonry Unit

C. Section 07 27 26 – Fluid Applied Barrier

D. Section 07 92 10 – Joint Sealants

E. Section 09 65 53 -Elastomeric Coatings

1.2 DESCRIPTION OF WORK

A. Types of work include:

1. Metal furring and lathing.

2. Portland Cement plastering.

3. Expansion Joints.

4. Accent Joints.

B. Locations include: Buildings exterior.

C. Types

1. Stucco Fine Finish Smooth or as indicated on drawings.

1.3 QUALITY ASSURANCE

A. Portland Cement plastering standards, A.S.T.M. C-926-16a, Standard Specification for Application of Portland Cement Plaster.

B. Portland Cement Stucco Manual, Portland Cement Association, (EB049) Fifth Edition

C. ASTM C1063-19a, Standard Specification For Installation of Lathing and Furring To Receive Interior and Exterior Cement-Based Plastering.

D. Applicator with minimum of 5 years of successful documented experience. Submit samples and address of completed project in Florida.

1.4 SUBMITTALS

A. See Section 01 33 23 - Shop Drawings, Product Data, And Samples

B. Submit 6 copies manufacturer's product specifications and installation instructions for each material, including other data as may be required to show compliance with these specifications.

C. Submit Samples of all accessories and materia

D. Proposed pre mix mixing and installation instructions

E. Submit shop drawings depict elevations and details for stucco installation.

1.5 PRODUCT HANDLING

A. Deliver, store and protect manufactured materials to comply with referenced standards.

1.6 JOB CONDITIONS

A. Comply with referenced standards for environmental conditions. Protect contiguous work from soiling, spattering, moisture deterioration and other harmful effects, which might result from plastering.

1.7 PRE-INSTALLATION MEETING.

A. Conduct a pre-installation meeting with manufacturer representative prior to the start of work.

1.8 SAMPLE PANEL

A. Construct (two) eight-foot square panel for each stucco finish type for approval by the Architect prior to installation of the finish. Construct panel showing ,head sill, sill and jamb at curtain wall. The second panel will show all accessories.

B. Construct a 3nd panel that show samples of joint construction corners, control joints, expansion joints and intersection without stucco. The sample will show attachment, cuts, fitting and method of caulking the joints on the back side. Call for inspection of method of installation.

PART 2 - PRODUCTS

2.1 METAL SUPPORT, FURRING, LATHING AND ACCESSORY MATERIALS

A. Metals and Finishes: Manufacturer's standard steel products, unless indicated as zinc alloy or other metal; where not otherwise indicated, provide manufacturer's standard galvanized finish on steel products except as follows:

1. Exterior/Interior Components: Hot-dip galvanized finish, A.S.T.M. A-525-G-90 for 18 gage and lighter formed metal products, A.S.T.M. A-123 galvanized after fabrication for 16 gage and heavier products.

2. Exterior/Interior Exposed Plastering Accessories: Provide zinc alloy accessories for exterior work and work in "high humidity" area.

3. Wire Ties: Galvanized soft steel wire, 8 gauge.

2.2 ACCESSORY MATERIALS DEPTH

A. Coordinate depth of accessory with thickness of number of coats of plaster to be applied.

1. 7/8" thick, three-coat system on metal lath.

2.3 SMALL NOSE CORNER BEADS

A. General-purpose type with expanded or perforated flanges.

2.4 CORNER TIE

A. Manufacturer's standard pre-formed interior corner reinforcement made from 2.5lbs. per sq. yd. galv. diamond mesh lath.

2.5 SQUARE EDGE CASING BEADS

A. Manufacturer's standard with expanded or short flange to suit application.

2.6 TWO-PIECE EXPANSION JOINTS

A. Manufacturer's standard galv. roll-formed pair of casing beads with modified back flanges providing positive slip joint action and dust barrier, adjustable for joint width variation of 1/8" to 5/8".

2.7 ONE-PIECE CONTROL JOINTS

A. Manufacturer's standard galv. roll-formed control joint with back flanges.

2.8 CORNER REINFORCEMENT

A. Special stucco-type woven galvanized wire corner reinforcing strips.

2.9 FASTENERS

A. Galvanized steel of type and length suitable for adequate penetration of the substrate.

2.10 PORTLAND CEMENT PLASTER MATERIALS

A. Provide either neat or ready-mixed (where applicable) materials, at installer's option, complying with A.N.S.I. A-42.2.

B. Base Coat Cement: Portland Cement, A.S.T.M. C-150, Type I or IA.

C. Base Coat Lime: Special finishing hydrated lime, Type S.

D. Base Coat Aggregate: Sand.

E. Finish Coat: Site prepare finish coat of texture indicated.

F. Texture: Fine Finish Smooth or as noted on the drawing.

2.11 BONDING MATERIALS

A. Bonding Additive: Acrylic-based emulsion for bonding exterior and interior Portland Cement plaster base-coat to solid substrates.

B. Products: Quick-Cure, Ad-Liquid (FINESTONE CORP.); Acrylic Admix-101 (LARSEN PRODUCTS CORP.); or Acryl-60 (STANDARD DRYWALL PRODUCTS).

2.12 PLASTER MIXES

A. Mix for Exterior Portland Cement Plaster. Include bonding additive in accordance with manufacturer’s instructions.

2.13 SEALANT

A. Install Elastomeric (Dow Corning) sealants in two piece expansion joints. At all joints and under joints

B. Install Elastomeric (Dow Corning) sealant at butt joints of all control and expansion joint edges.

C. Install Elastomeric (Dow Corning) sealants at all accessories intersection joints.

D. Install elastomeric sealants at all exposed edges of "J" end and edges.
E. And as shown on the drawings

2.14 LATH

A. 3.4 lbs./sq. yard sqf. furring, diamond mesh galvanized metal on 15lbs non perforated asphalt felt.

2.15 THE WIRE

A. 8 gauge galvanized wire.

2.16 WEATHERIZATION MEMBRANE

A. See Section 07 62 29 Water and Air Barrier Coating.

2.17 STUCCO HORIZONTAL, VERTICAL EXPANSION JOINT AND CONTROL JOINT , CORNER AND J BEADS.

A. As manufactured by “Amico” or approved substitution.
   1. Corner beads
   2. "J" Beads
   3. "W" Control Joint.
   4. Two Piece Expansion Joint

2.18 FOUNDATION SCREED

A. 631-78

2.19 OTHER MISCELLANEOUS ACCESSORIES

A. Other miscellaneous accessories as required by field conditions and drawings.
B. Install Contineous perimeter Sealant at all wall penetrants (Pipes, conduits, anchors) at waterproofing membrane and at stucco.

PART 3 - EXECUTION

3.1 PREPARATION

A. Plastering: Clean plaster bases and substrates to be plastered, removing loose materials, coatings and other substances, which might impair the work.

3.2 COORDINATION

A. Coordinate installation of plaster work with work performed under damproofing and water proofing sections.

3.3 INSTALLATION OF WEATHERIZATION MEMBRANE

A. Conduct pre-installation conference with manufacturer

B. Install per manufacturers written instructions and pre-installation conference instructions.

C. Install in direction and with lap as noted in installation instruction.

D. Repair all holes, nail punchers and rips in membrane using manufacturers' requirements and recommendations for area required for lap of edge of repair and adhesives.

E. Flash and install sealant cont around perimeter of penetrations.

3.4 INSTALLATION OF METAL SUPPORT SYSTEMS

A. Isolation: Where lathing and metal support system abuts building structure horizontally, and where partition wall work abuts overhead structure, isolate the work from structural movement sufficiently to prevent transfer of loading into the work from the building structure. Install slip or cushion type joints to absorb deflections but maintain lateral support.

B. Frame both sides of control and expansion joints independently, and do not bridge joints with furring and lathing or accessories.

C. Fixture Support Framing: Install supplementary framing, blocking and bracing where work is indicated to support fixtures, equipment, services, casework, heavy trim and furnishings and similar work requiring attachment and support.

3.5 METAL LATHING

A. Install metal lath to comply with referred standards and as indicated on drawings and specifications over waterproofing membrane.

3.6 PLASTER ACCESSORIES

A. Anchor each flange of accessories 8" o.c. to plaster base. Miter cope accessory corners and install with tight joints accurately aligned. Set accessories plumb, level and true to line with a tolerance of 1/8" in 10'-0". Install metal corner beads at external corners.

B. Install casing beads at terminations of plaster work, except where plaster is indicated to pass through other work and be concealed by lapping work, and except where

special screens, bases or frames act as casing beads including interior metal door frames.

C. For exterior work, set casing beads 1/4" from abutting frames and other work (for application of sealant).

D. Install prefabricated expansion joints of 2-piece design where shown as "expansion joint".

E. Seal all intersection joints of accessories with Sealant , Dow Corning Silicone Sealant, continuous behind and at each intersection joint.

F. Cut Metal Lath on either side of Control/Expansion joint accessories,

G. Extend non perforated asphalt paper cont under accessory, expansion/control joint..

3.7 INSTALLATION OF PLASTER

A. Mechanically mix plaster materials at the project site. Do not hand mix except where small amounts are needed, using less than one bag of plaster. Sequence plaster installation properly with the installation and protection of other work so that neither will be damaged by the installation of the other.

B. Plaster flush with metal frames and other built-in metal items or accessories, which act as a plaster ground, unless otherwise shown. Where plaster is not terminated at metal by casing beads, cut base coat free from metal before plaster sets and groove finish coat at the junctures with metal.

C. Apply thicknesses and number of coats of plaster as indicated, or as required by referenced standards. Provide 3-coats 7/8" total thickness plaster at metal lath installation.

D. Wet cure Portland Cement Plaster.

3.8 TEXTURE OF PLASTER FINISHES

A. Except as otherwise indicated, apply finish coat as follows:

1. Exterior Portland Cement Plaster: Fine Finish Smooth or as noted on drawings.

3.9 CUTTING AND PATCHING

A. Cut, patch, point-up and repair plaster as necessary to accommodate other work and to restore cracks, dents and imperfections. Repair or replace work to eliminate blisters, buckles, excessive crazing and check cracking, dry-outs, efflorescence, sweat-outs and similar defects, including areas of the work which do not comply with

specified tolerances and where bond to the substrate has failed. Trowel finishes lightly to remove trowel marks and arises.

3.10 SEALANT INSTALLATION

A. Butter all butt joint and back of joints of accessories with sealant.
B. Install cont. bead of sealant round all penetrants going thru waterproofing building membrane and stucco.
C. Seal all open edges or stucco joints cont.

3.11 CURING

A. Maintain 80% Relative humidity for at least 24 hours after installation. Cure stucco with moisture.
B. Cure stucco for 30 days or PH level less than 7 (Neutral prior to installation of any finish.

3.12 CLEANING AND PROTECTION

A. Remove temporary protection and enclosure of other work. Promptly remove plaster from doorframes, windows, and other surfaces that are not to be plastered. Repair floors, walls, and other surfaces that have been stained, marred or otherwise damaged during the plastering work. When plastering work is completed, remove unused materials, containers and equipment and clean floors of plaster debris.

B. Installer shall advise the Contractor of requirements for the protection of plaster from deterioration and damage during the remainder of the construction period.

END SECTION 09 24 23

THIS PAGE LEFT BLANK

SECTION 09 30 00 – TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. To the extent of requirements in drawing and specifications for:
      a. Porcelain Stone tile
      b. Glass Mosaic

1.2 REFERENCES

A. 2019 TCNA Handbook for Ceramic Stone, and Glass Tile Installation by the Tile Council of North America, Inc.

B. ANSI A 108 Series/A118 Series-American National Standards for Installation of Ceramic Tile

C. ANSI A 137.1- American National Standard Specifications for Ceramic Tile.

D. TTMAC-Tile Specification Guide 09 30 00 Tile Installation Manual.

E. ISO 13007- International Standards Organization; classification for Grout and Adhesives.

1.3 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction on Walkway Surfaces: Provide the following values as determined by ASTM C 1028:

   1. Flat Surfaces: Minimum 0.6
   2. Step Treads: Minimum 0.6
   3. Ramp Surfaces: Minimum 0.8

1.4 SUBMITTALS

A. Product Data:

   1. Published data for each type of tile, mortar, grout, and product specified.
   2. One current TCNA Handbook on Site for reference.
   3. Maintenance instructions, including cleaning methods, chemical solutions, stain removal methods, polishes, and sealants recommended.

B. Samples:

   1. Color samples showing the full range of colors, textures, and patterns for tiles selected on the drawing.

   2. Color samples consisting of actual sections of grout (cured).

3. Construction of wall and floor mock up for review and acceptance by the Architect prior to installation. The designated mock up sample may become part of the installed work after review and acceptance. If mock up is not accepted it will be removed.

4. Sample of each accessory type.

1.5 QUALITY ASSURANCE

A. 2019 TCNA Handbook to be available on site at the request of the Architect.

B. Engage an experienced installer who has completed tile installations similar in material, design, and extent to that indicated for this Project.

C. Obtain each color, grade, finish, type, composition, and variety of tile from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.

B. Prevent damage or contamination to materials by water, foreign matter, and other causes.

1.7 PROJECT CONDITIONS

A. Do not install tile until construction in spaces is completed and ambient temperature and humidity conditions are being maintained per manufacturer's written instructions.

B. Shade work areas from direct sunlight to prevent rapid evaporation caused by excessive heat.

1.8 RELATED SECTIONS

A. Section 06 10 00 - Rough Carpentry
B. Section 06 60 16 - Solid Surfaces
C. Section 09 21 16 - Gypsum Board Assemblies
D. Section 09 22.26.23 – Metal Suspension Systems

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Crossville, 321-229-3252, Basis of design, no substitution

1. Tile types, size and finish as shown on the drawings

B. Tile-Setting and Grouting Materials:

1. Floor: TCNA: F205a-130 Stone and MAPEI: 205/A

Epoxy Grout: Kerapoxy CQ, ISO RG and ANSI A118.3 or better

Bond Coat: "Ultrflex LFT", ISO C2TES1P1 and ANSI A118.4 or better

Isolation/Waterproofing Membrane: "Mapelastic 400"

Cementitious self-leveling underlayment: MAPEI "Utraplan Easy"

Primer: MAPEI "Primer T"

Patching and Skimcoat Compound: Planipatch

2. Walls: TCNA:W244F-13 and MAPEI MW244F

Epoxy Grout: MAPEI, Kerapoxy CQ, ISO RG and ANSI A118.3 or better

Bond Coat:MAPEI "Ultrflex LFT", ISO C2TES1P1 and ANSI A118.4 or better

C. Tile Accessories

1. Schluter-Systems

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.

B. Colors, Textures, and patterns: as noted on the drawings

1. Grout color: Mapei 27 Silver and or as selected by Architect from all available price groups.

2. Grout joint in wall shall align with floor joints except for the curved vestibule walls.

C. Factory Blending: For tile exhibiting color variations within ranges selected during Sample submittals, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

2.4 MISCELLANEOUS MATERIAL

A. Isolation/Waterproofing Membrane: Mapelastic 400 by Mapei

D. Expansion Joints

1. If not indicated on the Drawings, expansion joints shall be installed in accordance with the Tile Council of North America, Inc., Handbook for Ceramic Tile Installation, latest edition, as follows:

a. Interior: 20' to 25' in each direction.
b. Exterior: 8' to 12' in each direction.
c. Interior tilework exposed to direct sunlight or moisture: 8' to 12' in each direction.
d. Where tilework abuts restraining surfaces such as perimeter walls, dissimilar floors, curbs, columns, pipes, ceilings, and where changes occur in backing materials.
e. All expansion, control, construction, and cold joints in the structure shall continue through the tilework including such joints at vertical surfaces.
f. Joints through tilework directly over structural joints shall never be narrower than the structural joint.
g. Joints at perimeter of each space where no field joints are detailed.

PART 3 - EXECUTION

3.1 INSPECTION

A. Prior to installing tile, inspect surfaces to receive tile. Do not proceed with installation until such defects or conditions have been corrected.

1. Verify walls have no efflorescence
2. Examine drains, and clamping devices to verify that they are in a condition ready to receive waterproofing membrane with no deficiency that could result in a potentially defective installation or leaks.
3. Verify floor meets L/360 minimum.
4. Verify wall substrate surfaces are a maximum of 1/8 inch in 10 feet, any direction.

B. All flattening must be completed prior to any cleavage membranes or waterproofing membranes are installed.

C. Do not install tile over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.2 PREPARATION

A. Consult Architect to establish floor levels and floor recesses before setting any work. Maximum surface variation shall not exceed 1/4 inch in 10 feet, non-accumulative.

B. Clean rough concrete slab surface of drippings and other debris. Roughen surface if necessary. Wash thoroughly with clean water permitting concrete to become saturated. Slush with neat cement grout to insure good bond.

1. Neutralize any trace of strong acid or alkali (PH level 7 to 9).

C. When necessary because of unevenness or roughness of base, or to bring tile to proper flattness, install leveling coat and permit to set and harden, wet cure.

D. Provide tape reinforcement at joints including inside corners and outside corners.

3.3 LAYOUT

A. See Drawing – with proposed lay out assignments for floor to wall.

B. Determine locations of movement joints before starting tilework.

C. Locate cuts in both walls and floors in alighment.

D. Lay out tile wainscots to next full tile beyond dimensions shown.

F. Joints, See floor plans and elevations.

a. Align wall joints to give straight, uniform grout lines, plumb and level.
b. Align floor joints to give straight uniform grout lines parallel with walls.
c. Wall and floor joints to align except at curved walls.
d. No Bond Coat to be visible in finished installation.

G. Make joints between tile sheets same width as joints within sheets so extent of each sheet is not apparent in finished Work.

H. Porcelain tile can have large variances in sizing. Do not mix sizes and types of tiles in pattern areas. Joints that do not line up or joint widths that vary will be unacceptable.

1. Joint Width: 1/8 inch wide, unless otherwise recommended.

3.4 MIXING MORTARS AND GROUT

A. Proportion mixes in accordance with latest ANSI standard specifications.

B. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions using mixing equipment designed for optimum performance characteristics for installations indicated.

C. Add materials, potable water, and additives in accurate proportions according to manufacturer's written instructions.

1. Liquid latex additive shall be added undulited.

3.5 SETTING METHODS

A. Comply with parts of ANSI A108 series of tile installation standards in "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. Install floor tile, thresholds and base in accordance with Tile Council of North America recommendations.

C. All areas must have a cleavage membrane installed under 100 percent of

tiled floor area, and beyond tile area to limits shown on drawing.

D. Concrete Subfloors

1. Slabs on Second Floor : TCNA F205A-130 Stone

E. Walls

1. High Impact Panel (Thin-Set Method): TCNA W244F-13

F. Sound each tile after set. Replace all tiles sounding hollow.

3.6 INSTALLATION, GENERAL

A. Perform cutting and drilling of tile without marring visible surfaces. Grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

1. Smooth exposed cut edges.
2. When using glazed tile sheets, minimize tearing sheets apart by drilling pipe holes as much as possible.

B. Extend tile work into recesses and under or behind equipment and fixtures. Terminate work at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Ensure tile joints are uniform in width, subject to normal variance in tolerance allowed in tile size. Ensure joints are watertight, without voids, cracks, excess mortar or grout.

D. Locate expansion, control, contraction, and isolation joints, during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Locate joints in tile surfaces directly above joints in concrete substrates.
2. Prepare joints and apply sealants to comply with requirements of Division 07 Section, Joint Protection.

E. Allow tile to set for a minimum of 48 hours prior to grouting. Follow manufacturer's directions if longer waiting period is required.

F. Curing:

1. Flattening Beds: Moist cure for 20 hours at minimum 70° F for dry-set mortar installations. Allow to dry before setting tile. Environmental conditions and manufacturer may require longer cure times.
2. Dry-set Mortar: Minimum 48 hours, longer depending on temperature, humidity, and manufacturer recommendations.
3. Dry-set Grout: Damp cure minimum 72 hours, longer depending on temperature, humidity, and manufacturer recommendations.

3.7 GROUTING

A. Install grouting in accordance with ISO RG and ANSI A118.3 and manufacturer's written instructions during application and cleaning.

B. Rinse tile work with clean water before and after using chemical cleaners as recommended by tile and grout manufacturer.

3.8 WATERPROOFING MEMBRANES

A. Install in accordance with manufacturer's written installation instructions.

B. Install waterproof membrane on flat over mortar to drains as required by the manufacturer's written installation instructions.

C. Upon completion of work, test for leaks by plugging the drain or damming areas and filling with water a minimum of 4 inches at curbs for a period of 24 hours. Inspect for leakage. Make necessary adjustments to stop all leakage and re-test until watertight, before mortar bed is installed.

3.9 CLEANING AND PROTECTING

A. Clean tile and grout as recommended by manufacturer. Remove all traces of grout.

B. Cover exposed hardware with a heavy coating of Vaseline to protect the metal from the possible effects of the acid or its fumes, when acid solutions are recommended by manufacturer to clean the face of finished tile work of surplus grouting or pointing mortar. Do not use acid solution for cleaning glazed tile.

C. Protect the tile against damage after installation. Damaged tile that appears in the finish work prior to the data of Substantial Completion is to be repaired or replaced. Protect adjoining areas and surfaces.

END OF SECTION 09 30 00

SECTION 09 51 13 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General conditions provisions of the contract including contractual conditions, and Division 01 specifications.

1.2 SUMMARY

A. Work to the extent shown on the drawings and specifications.

B. Section Includes:

1. Acoustical ceiling panels.
2. Exposed grid suspension system.
3. Wire hangers, fasteners, main runners, cross tees, and wall angle moldings.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's technical data for each type of acoustical ceiling unit and suspension system required.

B. Samples: Minimum 6" x 6" samples of specified acoustical panel; 8"-long samples of exposed wall molding and suspension system, including main runner and 4' cross tees.

C. Shop Drawings: Layout and details of acoustical ceilings. Show locations of items, which are to be coordinated with or supported by the ceilings.

D. Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards. For acoustical performance, each carton of material must carry an approved independent laboratory classification of NRC, CAC, and AC.

E. If the material supplied by the acoustical subcontractor does not have an Underwriter's Laboratory classification of acoustical performance on every carton, subcontractor shall be required to send material from every production run appearing on the job to an independent or NVLAP approved laboratory for testing, at the architect's or owner's discretion. All products not conforming to manufacturer's current published values must be removed, disposed of, and replaced with complying

product at the expense of the Contractor performing the work.

F. Signed and Sealed Shop Drawings: Provide shop drawings with details and calculations that show the fastening of hanger cables to the underside of the structure. For each type of condition prepare signed and sealed documents by Florida Registered Engineer.

1.4 QUALITY ASSURANCE

A. Single-Source Responsibility: Provide acoustical panel units and grid components by a single manufacturer.

B. Fire Performance Characteristics: Identify acoustical ceiling components with appropriate markings of applicable testing and inspecting organization.

1. Surface Burning Characteristics: As follows, tested per ASTM E84 and complying with ASTM E1264 for Class A products.

a. Flame Spread: 25 0r less
b. Smoke Developed: 50 or less

C. Provide field pull testing on hanger wire and fasteners for field installed components in accordance with ASTM C 754 and testing protocol to be reviewed by the OAR.

1.5 PROJECT CONDITIONS

A. Space Enclosure:

1. All ceiling products and suspension systems must be installed and maintained in accordance with Armstrong written installation instructions for that product in effect at the time of installation and best industry practice. Prior to installation, the ceiling product must be kept clean and dry, in an environment that is between 32°F (0°C) and 120°F (49°C) and not subject to Abnormal Conditions. Abnormal conditions include exposure to chemical fumes, vibrations, moisture from conditions such as building leaks or condensation, excessive humidity, or excessive dirt or dust buildup.

2. HumiGuard Plus Ceilings: Installation of the products shall be carried out where the temperature is between 32°F (0°C) and 120°F (49°C). It is not necessary for the area to be enclosed or for HVAC systems to be functioning. All wet work (plastering, concrete, etc) must be complete and dry. The ceilings must be maintained to avoid excessive dirt or dust buildup that would provide a medium for microbial growth on ceiling panels. Microbial protection does not extend beyond the treated surface as received from the factory and does not

protect other materials that contact the treated surface such as supported insulation materials.

1.6 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace acoustical panels that fail within the warranty period. Failures include, but are not limited to:

1. Acoustical Panels: Sagging and warping as a result of defects in materials or factory workmanship.
2. Acoustical Panels with BioBlock Plus or designated as inherently resistive to the growth of micro-organisms installed with Armstrong suspension systems:
3. Visible sag and will resist the growth of mold/mildew and gram positive and gram negative odor and stain causing bacteria, and
4. Grid System: Rusting and manufacturer's defects.

B. Warranty Period Humiguard:

1. Acoustical panels: Ten (10) years from date of substantial completion.
2. Grid: Ten (10) years from date of substantial completion.
3. Acoustical panels and grid systems with HumiGuard Plus or HumiGuard Max performance supplied by one source manufacturer is thirty (30) years from date of substantial completion.

C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Ceiling Panels: Armstrong World Industries, Inc. is the basis of design.

2.2 ACOUSTICAL CEILING UNITS

A. Acoustical Panels Types: As noted on drawings

1. Surface Texture: As noted on drawings
2. Composition: Mineral Fiber

3. Color: White
4. Size: As noted on drawings
5. Edge Profile: As noted on drawings for interface with Interlude XL 9/16" Dimensional Tee
6. Noise Reduction Coefficient (NRC): ASTM C423; Classified with UL label on product carton, As noted on drawings
7. Ceiling Attenuation Class (CAC): ASTM C1414; Classified with UL label on product carton, as noted on drawings
8. Emissions Testing: Section 01350 Protocol, <13.5 ppb of formaldehyde when used under typical conditions required by ASHRAE Standard 62.1-2004, "Ventilation for Acceptable Indoor Air Quality"
9. Flame Spread: ASTM E1264; Class A (UL)
10. Light Reflectance (LR): ASTM E1477; White Panel: Light Reflectance: 0.90
11. Dimensional Stability: HumiGuard Plus - Temperature is between 32°F (0°C) and 120°F (49°C). It is not necessary for the area to be enclosed or for HVAC systems to be functioning. All wet work (plastering, concrete, etc.) must be complete and dry.
12. Antimicrobial Protection: BioBlock Plus - Resistance against the growth of mold/mildew and gram positive and gram negative odor and stain causing bacteria.
13. Acceptable Product: As noted on drawings as manufactured by Armstrong World Industries is basis of design or approved substitution.

2.3 SUSPENSION SYSTEMS

A. Components: All main beams and cross tees shall be commercial quality hot-dipped galvanized (galvanized steel, aluminum, or stainless steel) as per ASTM A653. Main beams and cross tees are double-web steel construction with type exposed flange design. Exposed surfaces chemically cleansed, capping pre-finished galvanized steel (aluminum or stainless steel) in baked polyester paint. Main beams and cross tees shall have rotary stitching (exception: extruded aluminum or stainless steel).

1. Structural Classification: ASTM C635 HD.
2. Color: White or as noted otherwise.
3. Acceptable Product: Interlude XL 9/16" Dimensional Tee as manufactured by Armstrong World Industries, Inc. basis of design or approved substation.

B. Attachment Devices: Size for five (5) times design load indicated in ASTM C635, Table 1, Direct Hung, unless otherwise indicated.

1. Wire for hangers and ties: ASTM A641, Class 1 zinc coating, soft temper, pre- stretched, with a yield stress load of at least three (3) times design load, but not less than 9 gauge.
2. Edge moldings and trim: Metal or extruded aluminum of types and profiles indicated or, if not indicated, manufacturer's standard moldings for edges and

penetrations, including light fixtures, that fit type of edge detail and suspension system indicated. Provide moldings with exposed flange of the same width as exposed runner.

3. Accessories: 12' hemmed angle molding and miscellaneous molding required and special edges.
4. Ceiling expansion joint: Construction Specialties, Inc. C/S FCF-200 or as shown on drawings.
5. Lay-in ceiling to wall expansion joint: FCFC-200 or as shown on drawings

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not proceed with installation until all wet work such as concrete, gypsum board, plastering and painting has been completed and thoroughly dried out, unless expressly permitted by manufacturer's printed recommendations

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less than half width units at borders, and comply with reflected ceiling plans. Coordinate panel layout with mechanical and electrical fixtures.

3.3 INSTALLATION

A. Install suspension system and panels in accordance with the manufacturer's instructions, and in compliance with ASTM C 636 and with the authorities having jurisdiction.

B. Suspend main beam from overhead structure with hanger wires spaced 4’-0” on center along the length of the main runner. Install hanger wires plumb and straight.

C. Install wall moldings at intersection of suspended ceiling and vertical surfaces. Miter corners where wall moldings intersect or install corner caps.

D. Install knife edge at corners with mitered 45 degree corner joints.

E. For reveal edge panels: Cut and reveal or rabbet edges of ceiling panels at border areas and vertical surfaces. Paint exposed cut edges to match tile color.

F. Install acoustical panels in coordination with suspended system, with edges resting on

flanges of main runner and cross tees. Cut and fit panels neatly against abutting surfaces.

G. Support edges by wall moldings. No Ceiling tiles are to be installed in the grid until all above ceiling work is complete and signed off / accepted by the OAR. For any exceptions, notify the OAR / PM in advance of installing ceiling tiles.

H. Install hanger wires to support grid at each corner of light fixtures, at each speaker, CCTV Camera and other ceiling mounted devices.

3.4 ADJUSTING AND CLEANING

A. Replace damaged and broken panels.

B. Clean exposed surfaces of acoustical ceilings, including trim, edge moldings, and suspension members. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage. Ceiling Touch-Up Paint, (Item #5760, 8oz. bottles) (Item #5761, quart size cans), "global white" latex paint should be used to hide minor scratches and nicks in the surface and to cover field tegularized edges that are exposed to view.

C. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage

END OF SECTION 09 51 13

SECTION 09 65 19 – LVT – RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Resilient Floor Tiles – Luxury Vinyl Tile (LVT)
2. Stair Riser & Tread
3. Static Dissipative VCT
4. Vinyl coved base

1.2 SUBMITTALS

A. Product Data: Manufacturer's published data including maintenance data.

B. Submit shop drawings, seaming plan, coving details, and manufacturer's technical data, installation and maintenance instructions (latest edition of Armstrong Flooring Guaranteed Installation systems manual, F-5061 for flooring and accessories.

C. Samples: Manufacturer's color charts consisting of actual tiles or sections of tiles showing full range of colors and patterns available for each type of floor and base indicated.

1. For resilient accessories, manufacturer's standard-size samples, but not less than 12 inches long, of each resilient accessory color and pattern specified.

D. Results from Calcium Chloride Test and RH Test.

E. Warranty: Warranty documents specified herein.

1.3 QUALITY ASSURANCE

A. Single-Source Responsibility: provide types of flooring and accessories supplied by one manufacturer, including leveling and patching compounds, and adhesives.

B. Contractor Qualifications:

1. Employ contractors skilled in the successful installation of the specified materials and accessories on similar projects for a minimum of five years.
2. Select an installer who is competent in the installation of Armstrong Commercial resilient solid vinyl tile flooring.
3. Engage installers certified as Armstrong Commercial Flooring Certified Installers.
4. Confirm selected installers with certification by requesting credentials.

C. Anhydrous Calcium Chloride Moisture Tests: Conduct moisture tests on concrete substrates where moisture sensitive flooring is scheduled, prior to flooring installation. Provide frequency of tests as recommended by flooring

manufacturer. 50 percent of test locations must be in the center of the slab, away from edges or expansion joints.

1. Test concrete slabs in accordance with ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride to ensure emission of no more than 3 lbs of water/1000 sf of slab in 24-hour period.
2. When test cannot be conducted under temperature and humidity conditions that will prevail under normal conditions, provide and maintain the 75 Deg F (+/- 5 Deg F) temperature and 50 percent (+/- 10 percent) humidity for 48 hours prior to and during the test.

D. Relative Humidity (RH) Probe within an Insulated Hood: Conduct moisture tests on concrete substrates where moisture sensitive flooring is scheduled, prior to flooring installation. Conduct RH tests on concrete substrates where surface moisture is to be 70 percent or lower for sensitive flooring per manufacturer's requirements.

1. Test concrete in accordance with ASTM F2420 Standard Test Method for Determining Relative Humidity on the Surface of Concrete Floor Slabs Using Relative Humidity Probe Measurement and Insulated Hood. Secure insulated hood to floor and measure RH within the box. Condition floor slab for 48 hours prior to starting the test. Provide test results to each flooring supplier/installer for warranty implications.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Site in original unopened containers each bearing names of product and manufacturer, project identification, and shipping and handling instructions.

B. Store materials in dry spaces protected from the weather. Maintain ambient temperatures between 50 and 90 degrees F.

C. Store materials on flat surfaces. Condition materials in spaces where they will be installed a minimum of 48 hours prior to installation.

1.5 PROJECT CONDITIONS

A. Maintain a minimum temperature of 65 degrees F in spaces to receive tiles for at least 48 hours prior to installation, during installation, and for not less than 48 hours after installation. After this period, maintain a temperature of not less than 55 degrees F.

B. Do not install materials until they have been conditioned to the space where they are to be installed.

C. Close spaces to traffic during tile installation.

1.6 SEQUENCING AND SCHEDULING

A. Install tiles and accessories after other finishing operations, including painting, have been completed.

B. Do not begin installation until concrete slabs have cured, dry, and able to bond with adhesive as determined by manufacturer.

1.7 WARRANTY

A. Manufacturer's Warranty: Standard warranty covering manufacturing defects and installation integrity: Installation integrity is defined as products installed in accordance with the manufacturer's installation manual.

1. Flooring: SDT Five years minimum
2. Base: One year minimum

B. Installer's Warranty: Guarantee flooring and base installation against defects in installation, workmanship and loss of adhesion for one year.

C. Warranty period begins on the Date of Substantial Completion.

1.8 LIMITED WARRANTY

A. LVT Resilient Flooring: Submit a written warranty executed by the manufacturer, agreeing to repair or replace resilient flooring that fails within the warranty period.

B. Limited Warranty Period: 20 years for Natural Creations with Diamond 10 Technology. Plus an additional 10 years with use of the Strong System for sub-floor preparation.

C. The Limited Warranty shall not deprive the Owner of other rights the Owner may have under other provision of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under re requirements of the Contract Documents.

D. For the Limited Warranty to be valid, this product is required to be installed using the appropriate Armstrong Flooring Guaranteed Installation system. Product installed not using the specific instruction from the Guaranteed Installation System will void the warranty.

PART 2 - PRODUCTS

2.1 LUXURY VINYL TILE FLOORING

A. Luxury Vinyl Tile a layered construction with vinyl wear layer over solid vinyl backing. Protected by a diamond-infused UV-cured polyurethane finish. Overall thickness is 3.2 mm. Luxury Vinyl Tile as noted on the drawings. No substitution

B. Reference specification – ASTM F 1700, Class III, Type B – Embossed Surface. Product Line and Manufacturer: LVT Product Contact: T.J. Thompson, Cain & Bultman (407) 209-8252, tthompson@cain-bultman.com.

C. Product Characteristics: No Substitutions.

a. Size; as noted on drawings.

b. Samples to be reviewed by Architect.

c. Owner selected color/pattern: As noted on the drawings, No substitution

d. Size: As noted on the drawings. No substitution

e. Hardness: ASTM D 2240: > 85 Shore A.

f. Slip Resistance: ASTM D 2047: COF > 0.5

g. Fire Resistance: ASTM E 648/NFPA 253: Class 1

h. Static Load Limit: 250 lbs./sq.in. (17.6 kg/cm2) ASTM F 970

i. Scratch Resistance Level: on the Mohs Scale of Hardness: Absolute Hardness of greater than 1200.

D. The Qualified / Certified Installers with local availability as follows:

1. Hudson Everly – contact: Kyle Everly keverly@hudsoneverly.com
2. Spectra – contact: Gregg Nelsen Gregg.nelsen@spectracf.com
3. Acousti – contact: Josh Rodgers joshrodgers@acousti.com
4. Other approved and certified installer of product by manufacturer.

E. Edge Transition Strips: Stainless Steel Schluter-Schiene transition strip a shown on drawings.

2.2 Static Dissipative VCT Tile

A. Basis of Design is Armstrong Static Dissipative Tile (SDT™)

B. The following additional manufacturers will also be acceptable

1. Tarkett
2. Mannington
3. Vinylasa Commercial

C. VCT tile size to be 1/8" in thickness and 12'x12' in size.

D. S-202 Static Dissipative Tile Adhesive Required

E. Electrical properties minimum criteria;

1. Resistance ANSI/ESD S7.1 ASTM F-150 Point to point and point to ground: 106 to 109 ohms
2. Resistance in Combination with a Person ANSI/ESD STM 97.1 At 12% R.H. with Dissipative footwear: 106 to 109 ohms
3. Static Generation ANSI/ESD STM 97.2 At 40% R.H. with Dissipative footwear: < 10 volts
4. At 12% R.H. with Dissipative footwear: < 10 volts
5. Static Dissipation ETS Dissipation At 12% R.H. with Dissipative footwear: 1000 to 100 volts: 0.2 seconds avg.
6. Color: As noted on the drawings.

2.3 RESILIENT BASE

A. Vinyl Cove Base: Vinyl, complying with FS SS-W-40, Type II, 4 inches in height by roll stock and 1/8-inch thick, ribbed back, rounded top, and set on type. (4 foot length base material is not acceptable.)

1. Provide molded corners 4 inches in height by 4 inches in length each way for internal and external corners.
2. Type: Standard toe (cove) at hard floor finishes, straight at carpet, unless otherwise indicated.
3. Color: As shown on the drawings.

2.4 ACCESSORIES

A. Stairs

1. Armstrong rubber square pattern tread. See drawings.

2. Armstrong rubber riser cut to fit. See drawings.

2.5 MISCELLANEOUS MATERIALS

A. Adhesive: Provide as recommended by manufacturer, Armstrong two-part epoxy.

B. For patching, smoothing and leveling monolithic subfloor (concrete) provide Armstrong fast-setting self-leveling underlayment as recommended by manufacturer.

C. Provide transition Schluder-Schiene S.S. strips. See drawings.

D. Provide threshold of thickness and width as shown on the drawings.

E. Provide stainless steel metal edge strips of width shown on the drawings and of required thickness to protect exposed edges of the flooring. Provide units of maximum available length to minimize the number of joints. Use stainless steel metal edge strips, Schluter, transition strips.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrate conditions are acceptable for product installation in accordance with manufacturer's instructions. Examine areas where installation of tiles will occur.

B. Concrete Subfloors: Verify concrete slabs comply with ASTM F 710 and the following:

1. Dry and free of curing compounds, sealers, hardeners, and other materials whose presence would interfere with bonding of adhesive. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by tile manufacturer.
2. Finishes of subfloors comply with tolerances and other requirements specified in Division 03 Section, Cast-In-Place Concrete for slabs receiving resilient flooring.

3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits of any kind.
4. Report conditions contrary to contract requirements that would prevent a proper installation. Do not proceed until unsatisfactory conditions have been corrected.
5. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor. Installation indicates acceptance of substrates about conditions existing at the time of installation.

3.2 PREPARATION

A. Comply with manufacturer's installation specifications to prepare substrates to receive tile.

B. For subfloor preparation: smooth concrete surfaces, removing rough areas, projections, ridges, and bumps, and filling low spots, control or construction joints, and other defects with manufacturer recommended Armstrong fast-setting cement-based patch and underlayment.

C. For subfloor cleaning: the surface shall be free of dust, solvents, varnish, paint, wax, oil, grease, sealers, release agents, curing compounds, residual adhesive, adhesive removers and other foreign materials that might affect the adhesion of resilient flooring to the concrete of cause a discoloration of the flooring from below. Remove curing and hardening compounds not compatible with the adhesives used, as indicated by a bond test or by the compound manufacturer’s recommendations for flooring. Avoid organic solvents. Spray paints, permanent markers and other indelible ink markers must not be used to write on the back of the flooring material or used to mark the concrete slab as they could bleed through, telegraphing up to the surface and permanently staining the flooring material. If these contaminants are present on the substrate they must be mechanically removed prior to the installation of the flooring.

D. Broom and vacuum substrates immediately before tile installation. Following cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust.

3.3 INSTALLATION

A. Comply with tile manufacturer's installation directions and other requirements indicated applicable to each type of tile installation scheduled. Install LVT in strict accordance with the latest edition of Armstrong Flooring Guaranteed Installation systems manual, F-5061.

B. Lay out tile from center marks established with principal walls so tiles at opposite edges of room are of equal width. Adjust to avoid using widths less than half of a tile. Install tiles square with room axis, unless otherwise indicated.

1. Install LVT vinyl tiles as shown on drawings.

C. Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered. Cut tiles neatly around all fixtures. Discard broken, cracked, chipped, or deformed tiles.

1. Lay tiles in pattern with respect to location of colors, patterns, and sizes as indicated on Drawings.

D. Scribe, cut, and fit tiles to butt tightly to vertical surfaces, permanent fixtures, built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosing.

E. Extend tiles into toe spaces, door reveals, closets, and similar openings.

F. Maintain reference markers, holes, or openings that are in place or plainly marked for future cutting by repeating on finish flooring as marked on subfloor. Use chalk or other nonpermanent marking device.

G. Install tiles on covers for telephone and electrical ducts, and similar items occurring within finished floor areas. Maintain overall continuity of color and pattern with pieces of flooring installed on these covers.

H. Set tile to substrates without producing open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections in completed tile installation.

I. Roll with a 100-pound (45.36 kilogram) roller in the field areas. Refer to specific rolling instructions of the flooring manufacturer.

J. Install flooring with adhesives, tools, and procedures in strict accordance with the manufacturer's written instructions. Observe the recommended adhesive trowel notching, open times, and working times.

K. Coordinate depth of transition strip required with field condition for depth encounter and required for transition between finish floor materials and depth of leveling material.

3.4 RESILIENT WALL BASE INSTALLATION

A. Apply wall base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required. See drawings.

B. Install wall base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

C. Tightly adhere wall base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

D. Do not stretch wall base during installation.

E. On masonry surfaces or other similar irregular substrates, fill voids along top edge of wall base with manufacturer's recommended adhesive filler material.

F. Premolded Corners: Install premolded corners before installing straight pieces.

G. Apply butt-type metal edge strips where shown on the drawings before flooring installation. Secure units to the substrate, complying with the edge strip manufacturer's recommendations.

3.5 INSTALLING RISERS AND TREADS

A. Install risers and treads per manufactures recommendations. Risers and Treads will have uniform glue over the entire surface in contact to the structural surface. No voids, bubbles or blisters are acceptable. Continues adhesion along the edges.

3.6 CLEANING AND PROTECTION

A. Perform the following operations immediately after completing tile installation:

1. Allow adhesive to dry for 48 hours after installation.
2. Remove visible adhesive and other surface blemishes using cleaner recommended by tile manufacturers.
3. Sweep or vacuum floor thoroughly.
4. Do not wash floor until after time period recommended by resilient floor tile manufacturer.
5. Damp-mop tile to remove black marks and soil.
6. Tiles with debris trapped underneath, shall be removed and replaced, prior to cleaning.
7. Perform initial and on-going maintenance according to the latest edition of Armstrong Flooring Maintenance Recommendations and Procedures manual, F-8663.

B. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended by tile manufacturer.

1. Cover tiles with undyed, untreated building paper until inspection for Substantial Completion.
2. Do not move heavy and sharp objects directly over tiles. Place plywood sheets over tiles and under objects while they are being moved. Slide or roll objects over panels without moving panels.

C. Clean tiles, base, tread and riser not more than 4 days prior to dates scheduled for inspections intended to establish date of Substantial Completion in each area of Project. Clean tiles using method recommended by manufacturer.

END OF SECTION 09 65 19

SECTION 09 70 00 – EPOXY FLOOR COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division -1 Specification sections, apply to the work of this section.

1.2 DESCRIPTION OF WORK:

A. To the extent shown on drawings and specified herein, Epoxy flooring and curbs.

B. This work includes the application of special coating systems to items and surfaces as scheduled including surface preparation, waterproofing coats, prime coats, and topcoats.

1. Special coating systems are defined as those types of materials and methods of application requiring more than normal skills and techniques for mixing handling and application.

C. Coat surfaces scheduled for special coating systems whether or not colors are designated, except where specifically noted as a surface not to be coated.

E. Floors, 6" base, equipment curbs, floor opening curbs, alcove curbs and door sill curbs.

1.3 QUALITY ASSURANCE:

A. Single-Source Responsibility: Provide primers and other undercoat material produced by the same manufacturer as the finish coats. Use only thinners recommended by the manufacturer and only within recommended limits.

B. Coordination of Work: Review other sections of these specifications in which prime paints are to be provided to ensure compatibility of the total coatings systems for various substrates. Upon request, furnish information on the characteristics of specified finish materials, to ensure that compatible prime coats are used. Notify Architect of any anticipated problems using coating systems as specified.

1.4 SUBMITTALS: (SD-01, 02, 03, 14 & SD-16)

A. Product Data: Submit one (1) electronic copy to the Architect for review and approval in PDF format. Include manufacturer's technical information including basic materials analysis and application instructions for each coating material specified. List each material and cross-reference to the specific coating and finish system and application. Identify by manufacturer's catalog number and general classification. Provide specific physical color samples that are readily available.

B. Samples: Submit samples for the Architect's review of color and texture only. Provide a listing of material and application for each coat of each finish samples. Provide six (3) 4" square samples for each type of color and finish; define prime and finish coats.

1.5 DELIVERY, STORAGE, AND HANDLING:

A. Deliver materials to the job site in the manufacturer's original, new, unopened packages and containers bearing manufacturer's name and label and the following information:

Name or title of material.
Federal Specification number, if applicable.
Manufacturer's stock number and date of manufacture.
Manufacturer's name.
Contents by volume, for major pigment and vehicle constituents.
Thinning instructions.
Application instructions.
Color name and number.
Handling instructions and precautions.

B. Take precautions to ensure that workmen and work areas are adequately protected from fire hazards and health hazards resulting from handling, mixing and application of special coatings.

C. Store materials not in actual use in tightly-covered containers. Maintain containers used in storage of coatings in a clean condition, free of foreign materials and residue. Protect from freezing where necessary. Keep storage area neat and orderly. Remove oily rags and waste daily. Take all necessary precautionary measures to ensure that workmen and work areas are adequately protected from fire hazards and health hazards resulting from handling, mixing and application of stains.

1.6 JOB CONDITIONS:

A. Install work only when the manufactures recommendations of installation for temperature, humidity and cleanliness is met and confirmed.

B. Do not apply exterior coatings in rain, fog or mist, or when the relative humidity exceeds 85%, or to damp or wet surfaces, unless otherwise permitted by manufacturer's printed instructions.

C. Coating work may continue during inclement weather only if areas and surfaces to be coated are enclosed and the temperature within the area can be maintained within limits specified by the manufacturer during application and drying periods.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products to match existing floor as manufactured by "Stonhard", Inc. 800-257-7953.

1. Stongard MR- 1mm thick

    a. Waterproofing Membrane Stonproof ME7
    b. Finish Coat Stonkote GS4
    c. Primer Standard Primer and SL Primer
    d. 6" integral seal cove base

2. Dur-A-Flex Inc.

3. Sika Corp., Industrial Flooring, 201 Polito Avenue,
   Lyndhurst, NJ 07071
   Phone 201.933.8800
   Fax 201.933.6225
   www.sikafloorusa.com

B. Texture and color per schedules on drawings.

2.2 INSPECTION

A. Material Quality: Provide best quality grade of various types of coatings as regularly manufactured by acceptable coating materials manufacturers. Use only materials displaying manufacturer's identification as a standard, best-grade product. Federal Specifications establish minimum acceptable quality for paint materials, except where other product identification used. Provide a written certification from coating manufacturer that materials provided meet or exceed these criteria.

B. Color Pigments: Pure, non-fading, applicable types to suite substrates and service indicated.

PART 3 - EXECUTION

3.1 INSPECTION:

A. Starting of coating work will be construed as the Applicator's acceptance of surfaces within any particular area.

B. Do not apply coating over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to formation of a durable coating film.

3.2 SURFACE PREPARATION:

A. General: Perform preparation and cleaning procedures in compliance with coating manufacturer's instructions for particular substrate conditions, and as herein specified.

1. Provide barrier coats over incompatible primers or remove and reprime as required. Notify Architect in writing of any anticipated problems in using the specified coating systems with substrates primed by others.
2. Remove hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items which are not to be coated, or provide surface-applied

protection prior to surface preparation and coating operations. Remove, if necessary, for complete coating of items and adjacent surfaces. Following coating completion in each space or area, reinstall removed items, using workman skilled in trades involved.

B. Cementitious Surfaces: Prepare cementitious surfaces of concrete, concrete masonry, cement plaster and similar surfaces scheduled to receive special coatings by removing efflorescence, chalk, dust, dirt, grease, oils, and by roughing if required to remove glaze.

1. Determine alkalinity and moisture content of surfaces to be coated by performing appropriate tests. Do not apply coatings over surfaces where moisture content exceeds that permitted in manufacturer’s printed directions.
2. Mechanically prepare all surfaces to receive coating with a "Blastric Machine" removing all surface laitance, oil, grease, and dirt from surface and provide a mechanical profile for surface bonding.

3.3 MATERIAL PREPARATION:

A. General: Carefully mix and prepare materials in compliance with the coating manufacturer’s directions.

1. Do not mix coating materials produced by different manufacturers.
2. Maintain containers used in mixing and application in a clean condition, free of foreign materials and residue.
3. Stir materials before application to produce a mixture of uniform density, and as required during application. Do not stir film, which may form on surfaces, into the material. Remove film and, if necessary, strain the coating material before using.

3.4 APPLICATION

A. General: Apply special coatings by trowel, brush, roller, spray, squeegee, or other applicators in accordance with the manufacturer’s directions. Use brushes best suited for the type of material being applied.

B. Minimum Coating Thickness: Apply each material at not thinner than the manufacturer’s recommended spreading rate. Provide a total dry film or material thickness of the entire coating system as recommended by the manufacturer.

E. Completed Work: Match approved samples for color, texture and coverage. Remove, refinish or recoat work not in compliance with specified requirements.

F. Wall Base material in rooms shall be the same color and thickness as the flooring material for Epoxy installations and shall extend vertically a minimum of 8” unless specified otherwise on the finish schedule.

3.5 CLEAN-UP AND PROTECTION

A. Clean-Up: During progress of work, remove from project site discarded materials, rubbish, cans and rags resulting from work. Upon completion of the work, clean all coating-spattered surfaces. Remove spattered coatings by washing, scraping or other proper methods, using care not to scratch or otherwise damage adjacent finished surfaces.

B. Protection: Protect work of other trades, whether to be coated or not, against damage. Correct damage by cleaning, repairing or replacing, and recoating as acceptable to the Architect. Leave the work in an undamaged condition.

C. Provide "Wet Paint" signs as required to protect newly-coated finishes. Remove temporary protective wrappings provided by others for protection of their work, after completion of coating operations.

END OF SECTION 09 70 00

SECTION 09 81 00 – ACOUSTICAL INSULATION

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide mineral fiber batt type, unfaced acoustical insulation as specified and indicated on drawings.

B. Install above ceiling and in stud walls as scheduled.

1.2 RELATED SECTIONS

A. Section 09 21 1 6 –GYPSUM BOARD ASSEMBLIES

B. Section 09 22 26.23- METAL SUSPENSION SYSTEM

C. Section 09 51 13 – ACOUSTICAL PANEL CEILINGS

1.3 REFERENCES

A. ASTM INTERNATIONAL (ASTM)

1. ASTM C 423 – Sound Absorbtion and Sound Absorption Coefficient by the Reverberating Room Method.

2. ASTM C 553 – Specification for Mineral Fiber Blanket and Felt Insulation (Industrial Type).

3. ASTM C 612 – Specification for Mineral Fiber Block and Board Thermal Insulation.

4. ASTM C 665 – Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

5. ASTM C 1104 – Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation.

6. ASTM E 84 – Test Method for Surface Burning Characteristics of Building Materials.

7. ASTM E 119 – Test Methods for Fire Tests of Building Construction and Materials.

8. ASTM E 136 – Test Method for Behavior of Materials in a Vertical Tube Furnace at 750C.

B. NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)

1. NFPA 101 LIFE SAFETY CODE.

1.4 QUALITY ASSURANCE

A. Fire Resistance Ratings: Materials identical to those which have been determined by ASTM test indicated to comply with the fire-resistance and flammability ratings as tested by independent testing and inspecting organization acceptable to authorities having jurisdiction required by governing code and regulations.

B. Thermal Resistance: R-Values specified are for thermal resistance R-Value at 75°F.

C. Insulation shall provide a minimum STC Value of 51, ASTM C 423, when 3-inch thickness is placed inside a 3-1/2-inches metal stud wall with 5/8-inch thick gypsum board installed on both sides.

D. Obtain acoustical insulation through one source from a single manufacturer.

1.5 SUBMITTALS

A. Manufacturer's Product Data: Submit for each type of insulation, including installation instructions.

1.6 PRODUCT HANDLING

A. Protection: Keep insulation materials dry. Comply with manufacturer's recommendations for handling storage and protection.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. IIG MinWool-1200; Batt Sound Attenuation Fire Batts.

B. Johns Manville: Minwool Sound Attenuation Fire Batts (SAFB)

C. Roxul, Inc.; Acoustical Fire Batt (AFB).

D. Thermafiber, Inc.; Sound Attenuation Fire Blankets (SAFB).

2.2 MINERAL FIBER BATT INSULATION

A. ASTM C 665, Class A, Type I, unfaced, with a flame spread of 5 and smoke developed of 0; ASTM E 84.

B. NFPA 101: Class A rated interior finish.

C. ASTM E 136, rated non-combustible per NFPA Standard 220 less than 1% by volume.

D. ASTM C 1004, Fungi and Bacterial Resistance: Does not promote; absorbs.

E. R per inch thickness: 3.7.

F. Density: 2.5 lbs./cu.ft. minimum.

G. Size: 16-inches and 24-inches x 48-inches, or as required by stud spacing.

H. Thickness:

1. Ceiling: Minimum 3-inches and as scheduled.
2. Walls: Minimum 3-1/2-inches and as scheduled.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Manufacturer's Instructions: Comply with manufacturer's instructions.

B. Wall Installation: extend insulation full thickness over entire area as specified or indicated on drawings. Cut and fit tightly around obstructions, and fill voids with insulation. Butt ends and sides of blankets closely together.

1. Provide batt insulation in single layer of required thickness.

C. Ceiling Overlayment Application: Install single layer of insulation over entire ceiling in rooms scheduled. Tightly fit around the grillage, hangers and other vertical penetrations. Fit tightly around light fixtures.

END SECTION

SECTION 09 91 00 - PAINTING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide painting work as specified and when shown on the drawings. The word paint means to apply paint materials and refers to the paint materials specified including primers, undercoats, sealers, fillers, stains and the finish coats of paint material.

B. Shop priming and primer touch-up miscellaneous steel items is specified in other sections.

C. The work includes painting of interior and exterior unfinished and primed items and surfaces throughout the project, unless otherwise specified or shown on drawings. Where items and surfaces are not specifically identified but are not specifically excluded from the painting work, paint the same as specified for adjacent similar surfaces and items.

D. Colors will be selected by Architect and or as shown on drawings.

E. Coordinate painting with all other sections for surfaces and items specified to be shop primed and for items to be factory and shop finished.

1.2 SURFACES NOT TO BE PAINTED

A. Surface preparation and priming of items and surfaces specified in other sections to be factory or shop primed.

B. Surfaces and items specified in other sections to be factory or shop finished.

C. Concealed wall and ceiling surfaces and inaccessible surfaces such as in pipe and duct chases and shafts, elevator shafts and similar areas.

D. Galvanized steel surfaces that will be concealed in completed work.

E. Fire rating labels, equipment labels and name plates.

1.3 REFERENCE STANDARDS

A. Master Painters Institute (MPI)

1. MPI 3.0 Painting Standards.

1.4 SUBMITTALS

A. Manufacturer's Product Data: Submit for each product. Include block fillers

and primers.

1. General: Include manufacturer's identification numbers, major pigment and vehicle constituents by volume, surface preparation, mixing, thinning, application and curing instructions.

2. Material List: Submit an inclusive list required coating materials. Submit list of manufacturer's brand name and number of each material proposed for use. Identify surface(s) to receive material.

3. Certification by the manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

B. Samples: Submit for each material and color to be applied, with texture to simulate actual conditions, on representative samples of the actual substrate. After initial color selection from samples submitted. Paint 4' x 4' wall area on site for final approval by VPS.

C. Qualifications: Applicators shall submit data to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names of architects and owners, and other information that may substantiate experience.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: Applicator shall have completed painting system applications similar in material and extent to that indicated for this project with a record of successful in-service performance.

B. Source Limitations: Obtain block fillers, primers, and undercoat materials for each coating system from the same manufacturer as the finish coats.

1.6 MPI STANDARDS

A. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."

B. Preparation and Workmanship: Comply with requirements in "MPI Architectural Painting Specification Manual" for products and paint systems indicated.

1.7 MOCKUPS

A. Apply benchmark samples of each paint system indicated and each color and finish selected to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.

    a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft.

    b. Other Items: Architect will designate items or areas required.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver all materials to the project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:

1. Product or material name.

2. Product description (generic classification or binder type).

3. Contents by volume, for pigment and vehicle constituents.

4. Thinning and application instructions.

5. Volatile organic compound (VOC) content.

1.9 JOB CONDITIONS

A. Paint Application:

1. Apply water-based paints only when temperature of surfaces to be painted are between 50ºF and 90ºF.

2. Apply solvent thinned paints only when the temperature of surfaces to be painted are between 45ºF and 95ºF.

B. Do not apply paint in rain, fog, or mist; or when the relative humidity exceeds 85 percent; or at temperatures less than 5ºF above the dew point; or to damp or wet surfaces.

C. Paint Coordination: Review other sections in which primer paints are specified to ensure chemical compatibility with finish coating system. Furnish finish products which are compatible with primer products, or apply barrier coats over incompatible primers or remove and reprime.

D. Protection: Remove or otherwise protect hardware, lighting fixtures, sprinkler heads, electric device plates, HVAC grilles and registers and similar items in place prior to painting and re-position upon completion of operations. Protect floors, ceilings, curtain walls, equipment and other adjacent work by use of clean drop cloths or similar coverings. Protect the work of other trades from

damage. Post signs on freshly painted surfaces immediately following their completion.

1.10 PREINSTALLATION CONFERENCE

A. Conduct a preinstallation conference prior to the commencement of exterior paint to review materials, installation procedures and schedules.

1. Conference shall be attended by the installer, manufacturer's representative, Architect, Owner, General Contractor and any subcontractor who will interface with the painting.

1.11 WARRANTY

A. Manufacturer shall provide a five (5) year warranty against facing and loss of adhesion.

B. Installer shall provide a two (2) year warranty for all exterior painting.

PART 2 - PRODUCTS

2.1 GENERAL

A. Paint systems, primers, sealer, fillers and finish paint shall be by one manufacturer for each type surface. Products shall be factory ready mixed for immediate application without thinning or other modification.

2.2 ACCEPTABLE MANUFACTURERS

A. Products of Sherwin-Williams Company are listed in the Product Schedule to illustrate paint material quality and type. Equivalent products of the listed acceptable manufacturers are also acceptable.

B. First grade products of the following manufacturers are acceptable, subject to submittal and approval of a schedule of products listing the surfaces for which they are intended.

1. Benjamin Moore & Company.

2. ICI Paints. (Formerly Devoe & Raynolds Company and Glidden Paint)

3. PPG Industries, Inc.

4. Pratt & Lambert Company.

2.3 PRODUCT SCHEDULE

EXTERIOR SCHEDULE

A. Metal (Steel, Ferrous Metal – Doors & Frames)

1. Alkyd Systems

a. Semi-Gloss Finish (MPI 48)

(1) 1st Coat: S-W Kem Kromik Universal Metal Primer, B50 Series (5-10 mils wet, 2-4 mils dry).

(2) 2nd Coat: S-W Industrial Urethane Alkyd Enamel Semi-Gloss, B54-150 Series.

(3) 3rd Coat: S-W Industrial Urethane Alkyd Enamel Semi-Gloss, B54-150 Series (5.2 mils wet, 3.0 mils dry per coat).

B. Aluminum

1. Acrylic System (MPI 114)

a. Semi-Gloss

(1) 1st Coat: Pro Industrial Pro Cryl Universal Acrylic Primer, B66W00310

(2) 2nd Coat: Pro Industrial High Performance Acrylic, B66W00651

(3) 3rd Coat: Pro Industrial High Performance Acrylic, B66W00651

INTERIOR SCHEDULE

A. Drywall (Walls, Ceilings, Gypsum Board, etc.)

1. Latex Systems

a. Egg Shell/Satin Finish (MPI 50). Low Odor – Zero VOC Finish.

(1) 1st Coat: S-W ProGreen 200 Interior Latex Primer, B28W600 Series (4 mils wet, 1.5 mils dry).

(2) 2nd Coat: S-W ProMar 200 Zero VOC Latex

Egg Shell, B20-2600 Series.

(2) 3rd Coat: S-W ProMar 200 Zero VOC Latex Egg Shell, B20-2600 Series (4 mils wet, 1.6 mils dry per coat).

b. Semi-Gloss Finish (Wet areas – bathrooms, etc.) Low Odor – Zero VOC Finish (MPI 50).

(1) 1st Coat: S-W ProGreen 200 Interior Latex Primer, B28W600 Series (4 mils wet, 1.5 mils dry).

(2) 2nd Coat: S-W ProMar 200 Zero VOC Latex Semi-Gloss, B31-2600 Series.

(3) 3rd Coat: S-W ProMar 200 Zero VOC Latex Semi-Gloss, B31-2600 Series (4 mils wet, 1.7 mils dry per coat).

B. Wood (Doors)

1. Alkyd Systems

a. Semi-Gloss Finish (MPI 43)

(1) 1st Coat: S-W Premium Wall & Wood Primer, B28W8111 (4 mils wet, 1.8 mils dry).

(2) 2nd Coat: S-W ProMar 200 Interior Zero VOC Latex Semi-Gloss, B31WQ2651 Series.

(3) 3rd Coat: S-W ProMar 200 Interior Zero VOC Latex Semi-Gloss, B31WQ2651 Series (4 mils wet, 1.5 mils dry per coat).

C. Metal (Steel, Ferrous Metal – Hollow Metal Doors and Frames)

1. Latex Systems (MPI 141)

1. Semi-Gloss Finish:

(1) 1st Coat: S-W Kem Kromik Universal Metal Primer, B50 Series (5-10 mils wet, 2-4 mils dry).

(2) 2nd Coat: S-W Pro Industrial Acrylic Semi-Gloss coating, B66W00651 Series.

(3) 3rd Coat: S-W Pro Industrial Acrylic Semi-Gloss coating, B66W00651 Series (4 mils wet, 1.5 mils dry per coat).

D. Drywall

1. Interior-Latex (MPI 139)

a. Egg Shell

(1) 1st Coat: ProMar 200 Zero VOC Interior Latex Primer, B28W02600

(2) 2nd Coat: Eminence HP Interior latex Low-Lustre, D17WQ8851

(3) 3rd Coat: Eminence HP Interior latex Low-Lustre, D17WQ8851

E. Stairwell Railings

1. Pre-catalyzed Waterbased Epoxy (MPI 141)

a. Semi-Gloss Finish

(1) 1st Coat: S-W Pro Industrial Pro-Cryl Industrial Primer, B66-310 Series.

(2) 2nd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46-151 Series

(3) 3rd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46-151 Series

F. Concrete Masonry Units

1. Pre-Catalyzed Waterbased Epoxy (MPI 153)

a. Semi-Gloss Finish

(4) 1st Coat: S-W Heavy Duty Block Filler

(5) 2nd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46WOO151 Series

(6) 3rd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46WOO151 Series

G. Metal Door and Frame

1. Pre-Catalyzed Waterbased Epoxy (MPI 141)

a. Semi-Gloss Finish

(7) 1st Coat: S-W Pro Industrial Pro-Cryl Industrial Primer, B66-310 Series.

(8) 2nd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46-151 Series

(9) 3rd Coat: S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy K46-151 Series

PART 3 - EXECUTION

3.1 PREPARATION OF SURFACES

A. Cleaning: Remove accumulated dirt and loose dust by brushing or wiping.

B. Concrete Masonry: Clean all excess mortar, loose and foreign material using metal scraper and wire brush. Remove all grease and oil spots by suitable cleaning compound and rinse (to remove alkali). If necessary, neutralize by washing with zinc sulphate solution.

C. Gypsum Board: Inspect joint and nail-head treatment; correct all imperfections before proceeding. Remove all dust and dirt by use of a soft cloth or brush.

D. Metal: Surfaces shall be free of rust and loose scale. Clean with mineral spirits before painting. Surfaces which will be inaccessible after installation shall be completely painted before installation. Prime field welds, bolts and rivets.

1. Aluminum: Clean and remove all lacquer or other protective coating.

2. Steel: Wipe shop primed metal clean of foreign matter, retouch where scratched, marred or rusted using similar primer. As soon as practical after erection (to minimize rusting) wire brush structural and miscellaneous steel and touch-up welds, scratches and abrasions of shop applied primer.

E. Wood: Sandpaper smooth. Before installation apply wood-sealer. Back-prime trim and prime cut ends to match finished surface. Ease sharp knife-edge corners by rubbing with fine sandpaper. Remove soil by wiping using clean cloth moistened with alcohol.

3.2 APPLICATION

A. Workmanship: Read and conform to instructions in label on containers. Materials uniformly spread and smoothly finished. Do not thin in excess of the printed directions. Mix and apply in accordance with manufacturer's directions. Field applied priming coats shall be applied as soon as possible after the work is received or in place. Apply coats by brush or roller. Coverage of products shall not be less than that recommended by manufacturer. When finishing operating parts, the parts shall be painted in the "open" position and shall remain so until dry. Metal surfaces required to be bare for proper operations shall be kept free of paint. Cut sharp lines at different colors, glass and other unpainted materials. In painted work each coat shall differ in color from the preceding and succeeding coats.

3.3 COLORS

A. Colors shall match colors scheduled by on drawing schedule or as selected by Architect and approved by VPS.

B. Colors for surfaces not scheduled:

1. Access Panels: Match adjacent wall or ceiling.

2. Electric and Telephone Panels: Match adjacent walls or ceiling.

3. Closets: Match spaces into which they open.

4. Steel Door Frames: Match door.

5.. Interior of Ducts Visible Through Grilles: Matte black.

3.4 TOUCH-UP

A. Retouch finished surfaces, including factory finished items, necessary so work is neat, clean and unblemished at time of substantial completion.

3.5 CLEANING

A. Keep freshly coated surfaces, brushed and cans clean and dust free. Remove paint splatters and daubs from hardware, glass, floors and any other surfaces not indicated to be painted.

END OF SECTION

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide a breathable elastomeric finish coating on exterior Portland Cement Stucco wall, exposed masonry and as indicated on the drawing and specifications.

1.2 RELATED SECTIONS

A. Drawing and General Provisions of the Contract including General and Supplemental Conditions to the Contract.

B. Section 09 24 23 – PORTLAND CEMENT PLASTER

C. Section 04 22 10 – CONCRETE MASONRY UNITS

1.3 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

ASTM INTERNATIONAL (ASTM)

1.	ASTM D 412	Vulcanized Rubber and Thermoplastic Elastomers - Tension
2.	ASTM D 1653	Water Vapor Transmission of Organic Coating Films
3.	ASTM D 1849	Package Stability of Paints
4.	ASTM D 2240	Rubber Property – Durometer Hardness
5.	ASTM D 2369	Volatile Content of Coatings
6.	ASTM D 3273	Resistance to Growth of Mold
7.	ASTM D 3274	Evaluating Degree of Surface Disfigurement of Paint Films by Microbial Growth of Soil and Dirt Accumulation
8.	ASTM D 3960	Volatile Organic Compound Content of Paint and Related Coatings

1.4 SUBMITTALS

A. Manufacturer's Product Data: Submit data and application instructions for each product.

B. Submit colors for selection.

C. Submit specimen copy of manufacturer's warranty.

D. Submit laboratory test reports for compliance with referenced standards.

1.5 MOCKUPS

A. Apply benchmark samples of the elastomeric coating system indicated to verify preliminary selections made under sample submittals to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select two areas to represent surfaces and conditions for application of elastomeric coating to each type of substrate.

a. Wall Surfaces: Provide two samples of at least 100 sq. ft.

2. Final approval of color selections will be based on benchmark samples.

a. If preliminary color selections are not approved, apply additional benchmark samples of additional colors selected by Architect at no added cost to Owner.

1.6 PRODUCTS DELIVERY, STORAGE AND HANDLING

A. Deliver in sealed containers with labels legible and intact.

B. Store in accordance with manufacturer's directions.

1.7 PROJECT CONDITIONS

A. Comply with manufacturer's recommendations as to environmental conditions under which coating system can be applied.

B. Do not apply elastomeric coating when the ambient or surface temperature is expected to fall below 40 degrees F within 24 hours of application.

C. Do not apply elastomeric coating when there is a threat of rain within the next 24 hours or the relative humidity is in excess of 90 percent.

D. Do not apply finish in areas where dust is being generated.

E. Cover or otherwise protect finished work of other surfaces not being coated

concurrently or not to be coated.

1.8 COATING ADHESION TESTS

A. Verify that coating is obtaining proper adhesion to the substrate as described in the manufacturer’s coating and application guide.

1. Perform field adhesion tests on each type of substrate to verify proper adhesion is achieved without the use of a primer. Test on all four sides of the building.

2. If adhesion does not meet manufacturer’s requirements, perform a field adhesion test using manufacturer’s primer and apply the two coats as recommended by the manufacturer applications of coating.

1.9 MANUFACTURER’S WARRANTY

A. Provide coating manufacturer's 10 year warranty against defective materials.

B. Warranty shall protect against peeling, cracking, blistering, flaking and other defects that would cause coating to allow moisture to migrate into substrate.

C. Cost of labor and materials to repair or replace defective materials shall be included.

1.10 APPLICATOR’S WARRANTY

A. Provide a 5 year applicator’s warranty against defective workmanship.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURER

A. Dow Corning AllGuard Silicone Elastomeric Coating and AllGuard Primer.

2.2 MATERIALS

A. Type: One-component, pigmented, water-based silicone elastomer.

1. Forms a flexible membrane impervious to water but has ability to breathe allowing water vapor to escape from inside the substrate.

B. Properties as supplied:

1. Solids Content: 58.6 percent by weight; ASTM D 2369.

2. High Temperature Stability: Greater than 28 days; ASTM D 1849.

3. Volatile Organic Content: 0.459 lb/gal; ASTM D 3960.

C. Properties as cured:

1. Durometer Hardness: 38 Shore A; ASTM D 2240.

2. Tensile Strength: Greater than 145 psi; ASTM D 412.

3. Elongation: 600 percent; ASTM D 412.

4. Fungus Resistance: No growth; ASTM D 3274.

5. Mold Resistance: No growth; ASTM D 3273.

6. Water Vapor Permeance: 43.2 English Perms; ASTM D 1653.

D. Colors: colors selected by the Architect.

2.3 PATCHING AND SEALING

A. Provide Dow Corning 790, 791, or 795 silicone building sealant as recommended by the manufacturer.

PART 3 - EXECUTION

3.1 SURFACE PREPARATION

A. General: Comply with the manufacturer's most recent printed Coating Application and Maintenance Guide for all surfaces to be coated.

B. All surfaces to receive this coating shall be free of dirt, frost, oil, grease, mold, fungus, efflorescence, laitance, peeling of existing coating, chalking of existing coating and any other foreign material which will inhibit bonding to the substrate's exterior surface.

A. Pressure wash, wire brush or grind the concrete surfaces to remove all the above materials.

1. Pressure wash the split faced concrete masonry units as recommended by the manufacturer to remove the foreign materials listed above.

D. Repair any damaged concrete areas, concrete masonry units and plaster surfaces. Repair any cracks larger than 1/16-inch wide with silicone sealant as

recommended by the manufacturer of this product.

3.2 COATING ADHESION TEST

A. Before application of the elastomeric coating, perform coating adhesion tests as specified and recommended by manufacturer.

3.3 APPLICATION

A. Mix and apply in accordance with manufacturer's directions and as specified.

B. Apply coating only when moisture content of surface is within limitations recommended by coating manufacturer. Test with moisture meter.

C. Apply coating with roller or spray equipment recommended by coating manufacturer.

D. Application Thickness:

1. Two total coats are required. Provide a minimum of 10 mil total dry film thickness.

E. Final coat shall be smooth, free of pinholes, laps, pile up of coating and skipped or missed areas.

3.4 CLEANING

A. Remove spilled, splashed or splattered coating from adjacent surfaces and surfaces not scheduled to be coated.

B. Do not mar surface finish of item being cleaned.

END OF SECTION

SECTION 10 14 16 - PLAQUE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Conditions of the Contract and Division 1, as indexed, apply to this Section.

1.2 SCOPE

A. Supply and install all Plaques as shown on Drawings and as specified herein.

B. Owner will supply final graphic for Airport seal.

C. Owner will supply a final list of County commissioners & Mayor, List of airport administrators, name of Architect and General Contractor.

1.3 GUARANTEE

A. Per General Conditions.

~~1.5~~ 1.4 SUBMITTAL

Formatted: Bullets and Numbering

A. Submit Shop Drawings: Drawing proof of layout, and mounting details
B. Product data: Manufacturer product literature and material
C. Samples: Submit two samples of metal finish selected and samples of any exposed hardware.

PART 2 - PRODUCTS

2.1 MANUFACTUER

A. Ramos, Architectural Signage Systems (405) 235-5505

B. Metal Arts, (800) 237-8069

C. OMC Industries, Inc., (800) 488-4662, or accepted equal.

D. Accepted Equal.

2.2 BUILDING PLAQUE

A. Sign type model I-89.

B. Bronze 32 "x 38"

C. Standard raised letters font type as shown on drawing or as selected by Architect

D. Manufacturers:

1. A.R.K. Ramos Architectural Border, BR-400 background.
2. Gemini Plaques
3. Or approved equal.

E. Sign to list the following:

1. Airport Seal and County Seal
~~1.~~2. Name of Project — **Formatted:** Bullets and Numbering
~~2.~~3. County Board Chairman — **Formatted:** Bullets and Numbering
~~3.~~4. County Board of County Commissioners List — **Formatted:** Bullets and Numbering
5. Name of Airport Executive Administrator, Assistant Administrator
~~4.~~6. Year of Construction — **Formatted:** Bullets and Numbering
~~5.~~7. Name of Architectural Firm — **Formatted:** Bullets and Numbering
~~6.~~8. Name of General Contractor Firm — **Formatted:** Bullets and Numbering

F. Beveled edge

G. Surface mounted blind mount.

H. Lettering "Times Roman"

~~G.~~ — **Formatted:** Bullets and Numbering

2.4 BUILDING ADDRESS NUMBERS FOR BUILDING

A. Injection molded plastic - color black.

B. 6" high

C. Style "Times Roman"

D. 6 numbers

PART 3 - EXECUTION

3.1 MEASUREMENTS

A. Verify all dimensions shown on Drawings by taking field measurements; proper fit and attachment.

3.2 COORDINATION

A. Coordinate with all other trade whose Work relates to plaque installation for placing of all required blocking, sub-framing, backing, furring, filled cells etc., to insure proper locations. Surface attachment.
B. Final location for the Plaque will be as directed by VPS.
C. Final location of building numbers as directed by Building Department and Architect.

3.3 DELIVERY AND STORAGE

A. Deliver and store materials in dry, protected areas. Keep free of corrosion or other damage. Replace any damaged plaque at no cost to Owner.

3.4 INSTALLATION

A. Install all plaque as per manufacturer's published instructions and accepted installation layouts. Provide and size all templates for proper coordination and placement of anchor in masonry walls.
B. General Contractor install support in wall, IE steel angles, plates, filled cell with concrete.

3.5 CLEAN-UP

A. Per General Conditions.

END SECTION 10 14 16

THIS PAGE WAS LEFT INTENTIONALLY BLANK

SECTION 10 21 13.19- HDP TOILET PARTITIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications Sections, apply to this Section.

B. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

1.2 SUMMARY

A. Solid high density polyethylene (HDPE) resins toilet compartments including the following:

1. Section includes toilet partions, urinal screens and accessories to the extent shown on drawings and specifiec herein.

1.3 RELATED SECTIONS

A. Section 05 50 00 - Metal Fabrications.

B. Section 05 40 00- Cold-Formed Metal Framing

C. Section 06 10 00 - Rough Carpentry.

D. Section 09 30 00- Tiling

E. Section 10-28 13-Toilet Accessories

1.4 REFERENCES

A. ASTM A 666 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.

B. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

C. National Fire Protection Association (NFPA) 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

D. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.5 SUBMITTALS

A. Submit under provisions of Section 01 33 23 – Shop Drawing, Product Data and Samples

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Product Data.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings: Provide layout drawings and installation details with location and type of hardware required. Drawing plans, elevations, details and hardware prepared to scale. Verify field dimensions prior to preparation of shopdrawings.

D. Verification Samples: For each finish product specified, two samples representing actual product, color, and patterns. Submitt 6” square samples of panel material.

E. Warranty Submittals:
   1. Submit manufacturers warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A company regularly engaged in manufacture of products specified in this section, and whose products have been in satisfactory use under similar service conditions for not less than 5 years.

B. Installer Qualifications: A company regularly engaged in installation of products specified in this Section, with a minimum of 5 years experience.

C. Materials: Doors, panels and pilasters, constructed from high density polyethylene (HDPE) resins. Partitions to be fabricated from polymer resins compounded under high pressure, forming a single component which is waterproof, nonabsorbent and has a self-lubricating surface that resists marks from pens, pencils, markers and other writing instruments. Cover all plastic components with a protective plastic during shipping and storage.

D. Warranty: Provide manufacturer’s 25 year standard limited warranty.

E. Performance Requirements:
   1. Fire Resistance: Partition materials shall comply with the following requirements, when tested in accordance with ASTM E 84:

      a. Class A flame spread/smoke developed rating.

   2. Material Fire Ratings:

      a. National Fire Protection Association (NFPA) 286: Pass.
      b. International Code Council (ICC): Class B.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

1.8 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.9 WARRANTY

A. Manufacturer guarantees its plastic against breakage, corrosion, and delamination under normal conditions for 25 years from the date of receipt by the customer. If materials are found to be defective during that period for reasons listed above, the materials will be replaced free of charge. Labor not included in warranty.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:
1. Scranton Products, which is located at: 801 E. Corey St.; Scranton, PA 18505; Toll Free Tel: 800-445-5148; Fax: 855-376-6161; Email:request info (info@scrantonproducts.com); Web:www.scrantonproducts.com

B. Fabricators: Not permitted.
1. Santana Toilet and Urinal Partitions.
2. Comtec Toilet and Urinal Partitions.
3. Fabricator: Capitol Toilet and Urinal Partitions.

2.2 MATERIAL

A. Plastic Panels: High density polyethylene (HDPE) suitable for exposed applications, waterproof, non-absorbent, and graffiti-resistant textured surface.

B. Zinc Aluminum Magnesium and Copper Alloy (Zamac): ASTM B 86.

C. Stainless Steel Castings: ASTM A167, Type 304.

D. Aluminum: ASTM 6463-T5 alloy.

2.3 SOLID HDPE TOILET COMPARTMENTS

A. Basis of Design: Hiny Hiders Toilet Partitions as manufactured by and supplied by Scranton Products.
1. Style: Floor mounted overhead-braced toilet compartments.

B. Doors, Panels, and Pilasters: 1 inch (25 mm) thick with all edges rounded to a radius. Mount doors and dividing panels based on height of specified and or as shown on drawing.
1. Door and Panel Height: 55 inches (1397 mm).
2. Pilasters: 82 inches (2083 mm) high and fastened to floor.

C. Panel Color: Warm Series.
1. As noted on the drawings

2. As noted on the drawings

D. Pilaster Shoes: 3 inches (76 mm) high type 304, 20 gauge stainless steel. Secured to pilasters with a stainless steel tamper resistant Torx head sex bolt.

E. Headrail: Heavy-duty extruded 6463-T5 alloy aluminum with anti-grip design. Finish to be clear anodized. Fastened to headrail brackets with stainless steel tamper resistant Torx head sex bolt, and fastened at the top of the pilaster with stainless steel tamper resistant Torx head screws.
1. Headrail Brackets: 20 gauge stainless steel with satin finish. Secured to the wall with stainless steel tamper resistant Torx head screws.

F. Wall Brackets:
1. Stainless Steel Brackets: Stainless steel type 304.
2. Brackets are fastened to pilasters with stainless steel tamper resistant Torx head screws and fastened to the panels with stainless steel tamper resistant Torx head sex bolts.
3. Bracket Type: Continuous 54 inches (1372 mm) stainless steel.

G. Door Hardware:
1. Wrap-Around Hinges: 8 inches (203 mm) and fabricated from heavy-duty extruded aluminum. Hinges are through-bolted to pilasters and doors with stainless steel tamper resistant Torx head sex bolts. Hinges operate with field adjustable nylon cams. Cams can be field set in 30, 60 or 9 degree increments.
2. Door Strike/Keeper: Heavy-duty extruded aluminum 6436-T5 alloy with a bright dip anodized finish. Secured to pilasters with stainless steel tamper resistant Torx head sex bolts. Bumper shall be made of extruded black vinyl.
a. Style: 6 inches (152 mm) aluminum.
3. Stainless Steel Slide Bolt Latch and Housing: Heavy-duty stainless steel type 304. The latch and housing to have a bright finish. The slide bolt and button to have a black anodized finish.
4. Doors supplied with one coat hook/bumper and door pull made of chrome plated Zamak.
5. Equip outswing handicapped doors with second door pull and door stop.

2.4 SOLID HDPE URINAL SCREENS

A. Provide plastic privacy screens in urinal as indicated on drawings

B. Panels, 1 inch (25 mm) thick with edges rounded to a radius. Screens to be mounted at 14 inches (356 mm) above the finished floor. Color to match toilet partitions
1. Aluminum heat sink fastened to bottom edges.

C. Screen Type: Wall mounted.

1. Urinal Screens: 18 inches (457 mm) wide by 55 inches (1397 mm) high.
2. Wall Brackets: Stainless Steel Brackets: Stainless steel type 304.
3. Brackets are fastened to pilasters with stainless steel tamper resistant Torx head

screws and fastened to the panels with stainless steel tamper resistant Torx head sex bolts.

4. Bracket Type: Continuous 54 inches (1372 mm) stainless steel.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Examine areas to receive toilet partitions, screens, and shower compartments for correct height and spacing of anchorage/blocking and plumbing fixtures that affect installation of partitions. Report discrepancies to the architect.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install partitions rigid, straight, plumb, and level manor, with plastic laid out as shown on shop drawings.

C. Clearance at vertical edges of doors shall be uniform top to bottom and shall not exceed 3/8 inch (9.5 mm).

D. No evidence of cutting, drilling, and/or patching shall be visible on the finished work.

E. Finished surfaces shall be cleaned after installation and be left free of imperfections.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 10 21 13.19

Page intentionally left blank

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 10 22 00 - DEMOUNTABLE WALL SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications Sections, apply to this Section.

B. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

1.2 SUMMARY

A. Section Includes:

1. Non-progressive, movable and reconfigurable system of unitized or pre-assembled panels, from a single manufacturer.
2. Trim, Sealants, Hardware and Accessories.
3. Stainless steel 1/8-inch perforated transom panel as shown on drawings.

1.3 RELATED SECTIONS

A. Cold Formed Framing-Section 05 40 00

B. Gypsum Drywall 09 25 00

C. Door Hardware – Section 08 7100

D. Glazing – Section 08 8000

1.4 PERFORMANCE REQUIREMENTS

A. Installer Qualifications: Engage an experienced installer who has successfully completed demountable partition installations similar in material, design, and extent to that indicated for this Project and is mutually accepted by the manufacturer and GOAA.

B. Structural Performance: Provide demountable partitions capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Load-Bearing Capacity of Panel System: Not less than 7 lbs./linear inch (3.175 kg/25.4 mm) distributed proof load when tested according to BIFMA X 5.6, Section 03, Table 06.
2. Transverse-Load Capacity of Panel System:
    a. Interior wall panel deflections shall not exceed 1/120 of the span for flexible facing material or 1/240 of the span for brittle facing materials

under a 5 psf (0.240 kN/m^2) uniform transverse design load per the 2017 FBC Table 1604.3. Interior wall panel deflections for glass panel frames shall not exceed 1/175 of the span or 0.75 inches, whichever is less under a 5 psf (0.240 kN/m^2) uniform transverse design load per the 2017 FBC Table 1604.3.

b. 2017 FBC, Section 1607.14: Interior demountable partition or butt-glazed entrances/storefronts wall products that exceed 6 feet (1829mm) in height, including their finish materials shall have adequate strength to resist the loads which they are subjected but not less than a horizontal load of 5 psf (0.240 kN/m^2).

C. Fire Retardancy: No flammable materials shall be used in the manufacture of the wall system. Provide independent laboratory tests for surface-burning characteristics of panel finishes in accordance with ASTM E-84. Flame Spread: Class A for powder coat finish and steel.

D. Combustibility Performance: Product shall have finishes and construction acceptable for use in Non-Combustible buildings, in accordance with Chapters 6 and 8 of the Florida Building Code, 2017 Edition.

E. ADA Compliance: Doorways shall be minimum clear opening of 36" of the door and the opposite stop, and shall have 80" (2030mm) minimum clear headroom.

See SECTION 08 7100 Door Hardware for Lockset.

F. Certification: Include supporting certified laboratory testing data indicating that material meets specified test requirements.

G. Mock Up for Verification Purposes: In a location designated by the Architect, install a full scale installation incorporating at least one of each type of panel, and accessory required, illustrating each installation condition. Retain mock up installation until completion of total installation or dismantle earlier at the direction of the Architect. Materials used for the mock up installation will not be considered part of either the base contract materials or the attic stock materials. If life cycle costs of the product are an important decision criteria, the mock up installation and reconfiguration should be timed, and the reuse of components should be evaluated.

1.5 CONSTRUCTION REQUIREMENTS

A. The extent of the demountable partition work as shown on the drawings, and as specified herein.

B. Provide all materials, labor, and equipment to install demountable partitions. The demountable wall system shall offer maximum flexibility and reusability to accommodate frequent and quick relocation work without loss of materials, damage or modification to panels or to adjoining structures such as ceilings, fixed walls and floors. The factory assembled system must be unitized or pre-assembled (not stick built), non-progressive and modular, allowing the removal of individual panels from any location without disturbing adjoining units and providing interchangeability of panels and door units on the

same module.

C. The head detail is recessed. See drawings.

D. The base assembly with an integrated leveling system shall be permanently attached to the panel. Detached and loosely shipped floor tracks and leveling components shall not be permitted.

E. Panels are stackable to accommodate ceiling height changes and panel type changes. See Elevations.

F. Factory installed panel shells or faces shall be removable and interchangeable in the field without dismantling as complete units.

G. The factory assembled demountable walls should be flexible to accommodate the building conditions. The demountable wall should have flexible vertical adjustability. An Adjustable, u-channel head assembly shall provide a ± ½" adjustment at the ceiling. At the floor, a self-contained leveling glide system and a flush 5"- high base cover shall allow for an adjustment of ± 1 ½" for a 5" base. Combined, this shall provide an overall vertical adjustment of ± 2" for a 5" to compensate for ceiling and floor irregularities. Where the wall system meets the building core walls, columns or window mullions, a telescopic, spring-loaded wall post or U-channel shall allow for a ±1" horizontal adjustment. All products shall be able to accommodate incremental sizes to a 1/16 IN increments.

H. Provide stainless steel countersunk screws at each end of base to secure to vertical frame members.

1.6 SUBMITTALS

A. Submittals for 01 33 23 Shop Drawing, Product Data and Samples.

B. Product Data: Product data on physical characteristics, durability, resistance to fading, and flame spread characteristics for each type of partition and accessory.

C. Shop Drawings: Shop drawings showing location and extent of partitions. Include plans, elevations, sections, details, and attachments to other work. Shop drawings shall be prepared by a signed and sealed by a Florida Professional Engineer. The submittal shall include certification by P.E. of securement at base and ceiling are in compliance with FBC Section 16.

D. Samples:

1. Samples for Initial Selection: Samples for initial selection purposes in form of manufacturers standard color charts showing full range of colors, textures, and patterns available for each type of material exposed to view.

2. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

    a. Panel Finish Face: Manufacturer's standard-size unit, but not less than 3 inches (75mm) square.

    b. Base Trim: 12-inch (300mm) long Samples.

c. Door Finish Face: Manufacturer's standard-size unit, but not less than 3 inches (75mm) square.

d. Glazing: Manufacturer's standard-size unit, but not less than 3 inches (75 mm) square.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of demountable partition.

F. Contract Closeout Information:

1. Warranty.

2. Maintenance Data: For demountable partitions to include in maintenance manuals.

a. Recommended cleaning materials and warnings about cleaning methods that could be detrimental to finishes and performance.

b. Installation manual detailing methods to move reuse and adjust demountable product.

1.7 PROJECT CONDITIONS

A. Delivery, Storage, and Handling: Deliver materials to Project Site in original factory wrappings and containers/skids, clearly labeled with identification of manufacturer, brand name, model number and order number. Store materials in original undamaged packages and containers, inside well ventilated area protected from weather, moisture, soiling, extreme temperatures, humidity; store product according to installation manual and away from other trades.

B. Environmental Limitations: Do not deliver or install demountable partition components until building is enclosed and finishing operations, including ceiling and floor-covering installation and painting, are complete.

C. Field Measurements: Indicate measurements on Shop Drawings.

D. Coordination of Work: Coordinate layout and installation of demountable partition components with other units of Work. Installation of ceilings, floor coverings, lighting fixtures, HVAC equipment, and fire-suppression systems should be completed before demountable partitions are installed.

E. Special Requirements: Comply with instructions and recommendations of manufacture for special delivery, storage, and handling requirements.

1.8 EXTRA MATERIALS

A. Deliver to the Owner, not less than three percent of the Project total for each component, panel and accessory of each type, color, and finish of demountable partition system exclusive of material required to properly complete installation. Furnish accessory components and installation tools as indicated on schedule. Furnish extra materials from

same production run as materials installed. Package extra materials with protective covering, identified with appropriate labels.

1.9 WARRANTY

A. Demountable system glazed units, door frames, and related components to be without defects in material or workmanship for a period of ten (10) years from the date of delivery. Wood doors shall be warranted for ten (10) years from the date of delivery, subject to the manufacturer's terms and conditions. Third party supplied product such as door hardware and film applied to glass will be warranted based on their own warranty terms.

   This warranty does not cover defects or damage resulting from accidents, misuse, improper relocation methods or transfer to storage. Plastic laminates, and wood veneer finishes are not warranted against fading or wearing, or if improperly cleaned or treated by the Owner or by others.

1.10 NON-OBSOLENCE

A. Demountable system components and parts, with exception of third party supplied product (such as door hardware, glass, film applied to glass) are guaranteed to be compatible and available for purchase for ten years from date of the original order.

1.11 TSA Offices and Radio Charging room

A. Provide Stainless Steel angles and fasteners to secure Demountable wall system to the concrete floor slab. Include angle connectors at each corner post, at both jamb frames of doors and at all intermediate vertical frames.
B. Demountable partitions shall be 8'-0" in height.

PART 2 – PRODUCTS

2.1 DEMOUNTABLE PANEL PARTITIONS

A. Products: Subject to compliance with requirements, provide the Basis-of-Design Product, or one of the following:
   1. No Substitution Permitted.
   2. Basis-of-Design Product: Subject to compliance with requirements, provide KI "Genius Wall".
B. Aluminum Glass Framing:
   1. Frame Finishes: Clear Anodized.
   2. Glass Frame & Panel Conf. See Architectural Drawings.

C. Panel Connector or Joint Closure:
    1. Connector Type: See Architectural Drawing.
    2. Finish: Clear Anodized.

D. Trim: Base trim is continuous, factory-finished, snap-on type or recessed; adjustable for variations in floor. Ceiling trim is continuous and compensates for ceiling irregularities.
    1. Base Trim Profile: Flush.
    2. Flush Base Trim Height: 5".
        a. Screw each end of 10'-foot section with stainless steel flush screws.
    3. Ceiling Trim Profile: Recessed.
    4. Exposed-Metal Trim Finish: Clear Anodized.

E. Aluminum Door Leaves: Manufacturer's standard aluminum extrusion and fully glazed.
    1. Door Finish: Clear Anodized.

F. Door Frames: Manufacturer's standard aluminum extrusion, factory-machined to receive hardware, for 1-3/4-inch (45 mm) doors.
    1. Frame Finishes: Clear Anodized.
    2. Frame Height: Transom-height.
    3. Transom Height finish (if applicable): Glass.
    4. Frame Type: Single Reversible Pivot.

G. Door Hardware: As specified in hardware Section 08 71 00.

H. Glass and Glazing: Safety glazing in compliance with Glass and Glazing – Section 08 81 00.
    1. Single Glazed Thickness: 3/8".
    2. Glass Type: Tempered, Clear.
    3. Translucent Film: as noted on Architectural Elevations.

I. Transom Security Panel: 1/8"-inch thick Stainless steel (#304) perforated panel with 1"-inch diameter perforations staggered, see Architectural Drawings.

2.2 FABRICATION

A. Demountable Panels: Factory-assembled, flush, hollow unit construction; with faces smooth and free of buckles, oil canning, and seams; and insulated with solidly packed, formaldehyde free insulation. Fabricate panels for installation with concealed fastening devices and pressure-fit components that will not damage ceiling or floor coverings. Fabricate panels with continuous light-and-sound seals at floor, ceiling and

other locations where panels abut fixed construction.

1. Factory glaze panels to the greatest extent possible.

B. Components: Fabricate components for installation with concealed fastening devices and pressure-fit members that will not damage ceiling or floor coverings. Fabricate for installation with continuous seals at floor, ceiling, and other locations where partition assemblies abut fixed construction and for installation of sound attenuation insulation in partition cavities.

2.3 FINISHES, GENERAL

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and are assembled or installed to minimize contrast.

2.4 PREPARATION

A. Prior to installation of demountable partition system, clean floor to remove dust, debris, and loose particles.

B. Maintain temperature in the area of installation at a constant minimum of 65 degrees F with relative humidity less than 70 percent for a period of 48 hours prior to installation and during installation process.

C. Demountable manufacturer determines that conditions are acceptable to receive the work of this section. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to installer. Starting of work shall be construed as acceptance of conditions.

2.5 INSTALLATION

A. Install demountable partition systems rigid, level, plumb, and aligned. Install seals to prevent light and sound transmission at connections to floors, ceilings, fixed walls, and abutting surfaces.

   a. Installation Tolerance: Install each demountable partition so surfaces vary not more than 1/8 inch (3 mm) from the plane formed by the faces of adjacent partitions.
   b. Panel top trim shall be customized to transition between the lower acoustical lay-in ceiling and the higher gypsum wall board ceiling.

B. Do not alter ceiling suspension system.

   a. Connect demountable partition top header to ceiling grid perpendicular to wall.
   b. Connect demountable partition to galvanized metal framing behind finish gypsum board. See Architectural Drawings.

C. Install door-and-frame, solid panel and frame, and glazing-and-glazing frame assemblies securely anchored to partitions and with doors aligned and fitted. Install and adjust door hardware for proper operation.

2.6 DEMONSTRATION

A. Engage a factory-authorized service representative to demonstrate and train Owner’s maintenance personnel to adjust, operate, and maintain demountable partitions. Refer to Division 01 Section “Demonstration and Training”.

END OF SECTION 10 22 00

SECTION 10 26 13 – CORNER GUARDS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Section includes:

1. Vinyl, thermoplastic surface mounted corner guards.

1.2 RELATED SECTIONS

A. Section 09 21 16 – GYPSUM BOARD ASSEMBLIES.

B. Section 09 26 24 – PROTECTIVE WALL COVERING.

1.3 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

1. ASTM D 256: Determining the Izod Pendulum Impact Resistance of Plastics.

2. ASTM D 635: Rate of Burning and/or Extent and Time of burning of Plastics in a Horizontal Position.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Provide corner guard systems that conform to the following requirements of regulatory agencies.

1. Fire Performance Characteristics: Provide UL Classified corner guards conforming with NFPA Class A fire rating. Surface burning characteristics, as determined by UL-723 (ASTM E 84), shall be flame spread of 10 and smoke development of 350 – 450. Provide ULC (Canada) listed corner guards conforming to the requirements of the National Building C ode of Canada 2010, Subsection 3.1.13. Surface burning characteristics, as determined by CAN/ULC-S102.2, shall be flame spread of 15 and smoke developed of 35.

2. Self-Extinguishing: Provide corner guards with a CC1 classification, as tested in accordance with the procedures specified in ASTM D 635-74, Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position, as referenced in UBC 52-4-1988.

3. Impact Strength: Provide rigid vinyl profile materials that have an Impact Strength of 30.2 ft-lbs/inch of thickness as tested in accordance with the procedures specified in ASTM D 256-90b, Impact Resistance of Plastics.

4. System Impact Resistance: Provide a corner guard system that resists an impact of 153.9 ft-lbs while producing no visual blemishes upon the vinyl cover.

1.5 SUBMITTALS

A. Product Data: For manufactured items, illustrated catalog and complete technical data.

B. Shop Drawings: Indicate fabrication, mounting details and installation recommendations.

C. Samples: Six-inch long member, showing finish and color.

1.6 MAINTENANCE MANUAL

A. Prepare and furnish applicable portions of manufacturer's manual indicating maintenance procedures.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in unopened factory packaging to the jobsite.

B. Inspect materials at delivery to assure that specified products have been received.

C. Store in original packaging in a climate controlled location away from direct sunlight.

1.8 PROJECT CONDITIONS

A. Environmental Requirements: Products shall be installed in an interior climate controlled environment.

1.9 WARRANTY

A. Standard Limited Lifetime Warranty against material and manufacturing defects.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer: InPro Corporation.

1. Vinyl Corner Guards: 160BN BluNose High Impact surface mount corner guards.

B. Other Manufacturers of Similar Products:

1. Construction Specialties, Acrovyn.

2. Pawling Corporation, CG-10R Series.

2.2 MANUFACTURED UNITS

A. Corner Guard System

1. 160BN BluNose High Impact Surface Mount Corner Guard Profile. 2" x 2", 90 degree.

2. Select from 4', 8', 9' and 12' standard heights.

2.3 MATERIALS

A. Vinyl Covers: Snap on cover of .080" thickness extruded from chemical and stain resistant polyvinyl chloride with the addition of impact modifiers. No plasticizers shall be added.

1. Provide with pebblette texture.

B. Vinyl Retainers: Continuous vinyl retainers of .070" thickness with a co-extruded Biopolymer Flex apex shall be fabricated from polyvinyl chloride with the addition of impact modifiers.

2.4 COMPONENTS

A. Top caps and bottom caps shall be made of injection molded thermoplastics.

B. Fasteners: All mounting system accessories appropriate for substrates indicated on the drawings shall be provided.

C. Flexible top caps shall be made of injection molded Biopolymer Flex PVC.

2.5 FINISHES

A. Vinyl Cover Colors:

1. CG~~0~~1: (~~Ramps and Sterile Corridor) Cadet Blue 0134 and~~ White **Sand,** 0103, **locations** as scheduled.

B. Molded Components: Top caps and bottom caps shall be of a color matching the corner guards. All surfaces shall have a pebblette texture.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions in which the corner guard systems will be installed.

1. Complete all finishing operations, including painting, before beginning installation of corner guard system materials.

B. Wall surface shall be dry and free from dirt, grease and loose paint.

3.2 PREPARATION

A. General: Prior to installation, clean substrate to remove dust, debris and loose particles.

3.3 INSTALLATION

A. General: Locate corner guard as indicated on approved detail drawings for the appropriate substrate and in compliance with the manufacturer's installation instruction. Install corner guard level and plumb at the height indicated on drawings.

B. Retainer Installation:

1. Position the vinyl retainer against the wall, allowing 5/16" from the bottom of the retainer to the top of the cove base or baseboard for the bottom cap.

a. Drywall: Secure the retainer to the wall using #8 x 1-1/4" Phillips round head, self-tapping screws. Stagger the fasteners on each

wing of the retainer. Use 4 screws per 3' length, 6 screws per 4' length, 10 screws per 8' length, or 12 screws per 9' length.

b. Concrete: Drill ¼" holes into the ends of the retainer for the top and bottom caps. Stagger the holes on each wing of the cap. Use the slotted tabs on the top and bottom cap to transfer hole location to the retainer. Drill ¼" holes on the two wings of the retainer. Stagger the fasteners on each wing of the retainer. Drill 4 holes per 3' length, 6 holes per 4' length, 10 holes per 8' length, or 12 holes per 9' length. Transfer the location of all mounting holes to the wall. Drill ¼" holes and position ALLIGATOR anchors into the holes on the wall. Mount the retainer with #10 x 1-3/4 Phillips pan head screws and tighten to secure the retainer to the wall.

C. Top and Bottom Cap Installation:

1. Drywall: Overlap the retainer with the mounting tabs of the top and bottom caps and attach them to the retainer using two, #8 x 1-1/4" Philips flat head, self-tapping screws per cap. Stagger the fasteners on each wing of the cap.

2. Concrete: Overlap the retainer with the mounting tabs of the top and bottom caps and attach them to the retainer and into the ALLIGATOR anchors using two #8 x 1-1/2" Philips flat head screws per cap. When installing flexible top caps on custom angle corner guards, use cup washers and flat head screws to fasten the top caps to the retainer.

D. Position the vinyl covers on the retainer to check the fit. Adjust the top cap on the retainer to obtain a tight fit with the vinyl cover. Starting to the top, push the vinyl cover over the retainer pressing over the entire length until the cover snaps securely into place.

1. INSTALLATION NOTE: Vinyl retainers can be field bent to angles 10° wider or 10° tighter than 135°. When doing so top and bottom caps cannot be used and the installation should be full height from floor to ceiling. When doing so use flexible top and bottom caps or the installation should be full height from floor to ceiling.

3.4 CLEANING

A. At completion of the installation, clean surfaces in accordance with the manufacturer's clean-up and maintenance instructions.

END OF SECTION 10 26 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 10 26 23.13 - IMPACT-RESISTANT WALL PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Wall guards.

1.3 SUBMITTALS

A. Product Data: Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes for each impact-resistant wall-protection unit.

B. Shop Drawing: Include plan showing location of corner guards, plan detail for mounting and height.

C. Sample: Submit a sample for color and texture.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store impact-resistant wall-protection units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Stainless-Steel Sheet: ASTM A 240/A 240M.

B. Adhesive: Type recommended by manufacturer for use with material being adhered to substrate indicated.

1. Use adhesives and sealants that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

a. Gypsum Board and Panel Adhesives: 50 g/L.
b. Multipurpose Construction Adhesives: 70 g/L.
c. Contact Adhesive: 250 g/L.

2.2 CORNER GUARDS

A. Surface-Mounted, Metal Corner Guards: Fabricated from 1-piece, formed metal with formed edges; with 90- or 135-degree turn to match wall condition.

1. Material: Stainless steel, Type 304.

a. Thickness: Minimum 16 Gauge.

b. Finish: Directional satin(vertical), No. 4

2. Corner Radius: 1/8 inch (3 mm).

3. Mounting: Stainless Steel Screws and continuous S.S. clip. See drawings details.

2.3 FABRICATION

A. Fabricate impact-resistant wall-protection units to comply with requirements indicated for design, dimensions, and member sizes, including thicknesses of components.

2.4 METAL FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Remove tool and die marks and stretch lines or blend into finish.
2. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

B. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

C. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

1. Examine walls to which impact-resistant wall protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
2. For impact-resistant wall-protection units attached with adhesive or foam tape, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
3. Proceed with installation only after unsatisfactory conditions have been corrected.
4. Corner guard edges will be buffed to remove any sharp edge. All metal edges will be rounded.

3.2 PREPARATION

A. Complete finishing operations, including painting, before installing impact-resistant wall-protection system components.

B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

A. General: Install impact-resistant wall-protection units level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.

3.4 CLEANING

A. Clean using methods and materials recommended in writing by manufacturer and or supplier of stainless steel corner guards.

END OF SECTION 10 26 23.13

SECTION 10 28 13 – TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes toilet accessory items. Refer to the Toilet Accessory Schedule on the Drawings.

B. Reference Division 08 Section, Glazing for wall mirrors

1.2 SUBMITTALS

A. Product data for each toilet accessory item specified, including construction and mounting details, dimensions, gages, profiles, specified options, and finishes.

B. Schedule indicating types, quantities, sizes, and installation locations (by room) for each toilet accessory item to be provided for Project.

C. Setting Drawings where cutouts are required in other Work, including templates, substrate preparation instructions, and directions for preparing cutouts and installing anchorage devices.

D. Maintenance instructions including replaceable parts and service recommendations.

E. Sample warranties.

1.3 QUALITY ASSURANCE

A. Inserts and Anchorages: Furnish accessory Manufacturers' standard inserts and anchoring devices that must be set in concrete or built into masonry. Coordinate delivery with other Work to avoid delay.

B. Single-Source Responsibility: Provide products of same Manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise acceptable to Architect.

C. Performance Requirements:

1. Grab Bar Structural Requirements: FBC 1607.7

1.4 PROJECT CONDITIONS

A. Coordinate accessory locations, installation, and sequencing with other Work to avoid interference with and ensure proper installation, operation, adjustment, cleaning, and servicing of toilet accessory items.

1.5 WARRANTY

A. Toilet Accessory Warranty: Provide manufacturers one year warranty from the Date of Substantial Completion, against defects in material and workmanship.

B. Mirror Warranty: Written warranty executed by mirror manufacturer, agreeing to replace mirrors that develop visible silver spoilage defects within 15 years from the Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TOILET ACCESSORY MANUFACTURERS A.

Manufacturers: Listed on Schedule and as shown on drawings

2.2 MATERIALS, GENERAL

A. Stainless Steel: AISI Type 302/304, with polished No. 4 finish brushed, 0.034-inch (22-gage) minimum thickness.

B. Brass: Leaded and unleaded, flat products, ASTM B 19; rods, shapes, forgings, and flat products with finished edges, ASTM B 16; Castings, ASTM B 30.

C. Sheet Steel: Cold-rolled, commercial quality ASTM A 366, 0.04-inch (20-gage) minimum. Surface preparation and metal pretreatment as required for applied finish.

D. Galvanized Steel Sheet: ASTM A 527, G60.

E. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.

F. Mirror Glass: Nominal 6.0-mm (0.23-inch) thick, conforming to ASTM C 1036, Type I, Class 1, Quality q2, and with silvering, electro-plated copper coating, and protective organic coating.

G. Galvanized Steel Mounting Devices: ASTM A 153, hot-dip galvanized after fabrication.

H. Fasteners: Screws, bolts, and other devices of same material as accessory unit, or of galvanized steel where concealed.

2.3 FABRICATION

A. No names or labels are permitted on exposed faces of toilet and bath accessory units. On either interior surface not exposed to view or on back surface, provide identification of each accessory item either by a printed, waterproof label or a stamped nameplate indicating Manufacturer's name and product model number.

B. Surface-Mounted Toilet Accessories, General: Except where otherwise indicated, fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage wherever possible.

C. Recessed Toilet Accessories, General: Except where otherwise indicated, fabricate units of all-welded construction, without mitered corners. Hang doors or access panels with full-length, stainless steel piano hinge. Provide anchorage that is fully concealed when unit is closed.

D. Framed Mirror Units, General: Fabricate frames for glass mirror units to accommodate wood, felt, plastic, or other glass edge protection material. Provide mirror backing and support system that will permit rigid, tamperproof

glass installation and prevent moisture accumulation, as follows:

1. Provide galvanized-steel backing sheet, not less than 0.034 inch (22 gage) and full mirror size, with nonabsorptive filler material. Corrugated cardboard is not an acceptable filler material.

E. Mirror Unit Hangers: Provide system for mounting mirror units that will permit rigid, tamperproof, and theft proof installation, as follows:

1. One-piece, galvanized-steel, wall-hanger device with spring-action locking mechanism to hold mirror unit in position with no exposed screws or bolts.
2. Heavy-duty wall brackets of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.

F. Keys: Provide universal keys for access to toilet accessory units requiring internal access for servicing and re-supply. Provide six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install toilet accessory units according to manufacturers' instructions, using fasteners appropriate to substrate as recommended by unit manufacturer. Install units plumb and level, firmly anchored in locations and at heights indicated.

B. Secure mirrors to walls in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square at locations indicated, according to Manufacturer's instructions for type of substrate involved.

C. Install grab bars to withstand a downward load of at least 250 lbf, complying with ASTM F 446, and in accordance with Performance Requirements.

D. Install changing stations to within static loads of 400 lbf. and per manufacturer’s recommended instructions.

3.2 ADJUSTING AND CLEANING

A. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly. Replace damaged or defective items.

B. Clean and polish all exposed surfaces strictly according to manufacturer's recommendations after removing temporary labels and protective coatings.

3.3 TOILET ACCESSORIES SCHEDULE

See schedule on drawings

END OF SECTION 10 28 13

SECTION 10 43 13 - DEFIBRILLATOR CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections (including all sustainability requirements), apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Defibrillator cabinets, accessories, and installation.
2. Automated external defibrillators (AED's)

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for AED cabinets.

1. Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
2. Automated External Defibrillator

B. Shop Drawings: For defibrillator cabinets. Include plans, elevations, sections, details, and attachments to other work.

C. Samples: For each type of exposed finish required.

D. Samples for Initial Selection: For each type of exposed finish required.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples 6 by 6 inches square.

F. Product Schedule: For defibrillator cabinets. Indicate whether recessed, semi recessed, or surface mounted. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function. Use same designations indicated on Drawings.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For AED cabinets and AED’s to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Pre-installation Conference: Conduct conference at Project site.

1. Review methods and procedures related to AED cabinets including, but not limited to, the following:
   a. Schedules and coordination requirements.

C. Qualifications:

1. Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
2. Manufacturer Qualifications: Manufacturer capable of providing field service representation during construction and approving application method.

1.6 DELIVERY, STORAGE & HANDLING

A. Delivery:

1. Deliver materials in manufacturer’s original packaging with identification labels intact.

B. Storage and Protection:

1. Store materials protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.

1.7 SEQUENCING

A. Sequence with Other Work: Comply with defibrillator cabinet manufacturer’s written recommendations for sequencing construction operations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

B. Stainless-Steel Sheet: ASTM A 666, Type 304.

C. Tempered Float Glass: ASTM C 1048, Kind KT, Condition A, Type I, Quality q3, 1/8 inch, Class I (clear).

2.2 AED CABINET

A. Cabinet Type: Suitable for mounting AED with emergency telephone and alarm.

B. Basis of Design manufacturer: Potter Roemer LLC; or a comparable product by one of the following:

1. J. L. Industries, Inc., a division of Activar Construction Products Group;.

2. Larsen's Manufacturing Company.

C. Cabinet Interior Size: 14 inches wide by 14 inches high by 6-3/4 inches deep, as required to incorporate AED and specified features. All cabinet components and equipment shall be accessible, removable and replaceable with the cabinet door in a 90 degree position.

D. Cabinet Material: Stainless-steel sheet.

E. Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim.

F. Cabinet Trim Material: Stainless-steel sheet.

G. Door Material: Stainless-steel sheet.

H. Door Style: Provide limited visibility window.

I. Door Glazing: Tempered float glass.

J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

1. Provide manufacturer's standard.
2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.

K. Accessories:

1. Identification: Manufacturer's standard.

L. Finishes:

1. Manufacturer's standard baked-enamel paint for the interior of cabinet.
2. Stainless Steel: No. 4.

M. Cabinet Interior Features:

1. Emergency Phone Box.
2. Cable Access Box
3. Raceway

N. Alarm:

1. Circuitry Board.
2. Alarm Circuitry
3. Alarm Key Switch and Key:
4. Control for Visual Alarm, Audio Alarm and Relay Closures:

O. Power Requirements for Alarm Board, Siren and LED:

2.3 AUTOMATED EXTERNAL DEFIBRILLATOR (AEDS)

A. Basis-of-Design Product: Subject to compliance with requirements, provide Philips Heartstart OnSite Defibrillator or comparable approved product meeting all requirements.

B. Refer to Sections 01 2500 “Substitution Procedures” and 01 6000 “Product Requirements” for comparable product requirements.

2.4 FABRICATION

A. AED Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Weld joints and grind smooth.
2. Provide factory-drilled mounting holes.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces of AED cabinets from damage by applying a strippable, temporary protective covering before shipping.

C. Finish AED cabinets after assembly.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for recessed fire protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION

A. General: Install AED cabinets in locations and at mounting heights, at heights acceptable to the Fire Department and according to the Florida Building Code – Accessibility, 2017.

B. AED Cabinets: Fasten cabinets to structure, square and plumb.

3.4 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.

B. Adjust cabinet doors to operate easily without binding.

C. On completion of cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by AED cabinet and mounting bracket manufacturers.

E. Replace AED cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10 43 13

SECTION 10 44 14 – FIRE EXTINGUISHERS AND WALL CABINETS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide portable fire extinguishers and fire extinguisher cabinets specified and indicated on drawings.

1.2 REFERENCE STANDARDS

A. The latest edition of publications listed below form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

NATIONAL FIRE PROTECTION ASSOCIATION

1. NFPA 10 Portable Extinguishers

UNDERWRITERS LABORATORIES (UL)

1. UL 299 Dry Chemical Fire Extinguishers

1.3 STANDARDS

A. Conform to NFPA 10 requirements for extinguishers.

B. Fire extinguishers and cabinets shall be obtained from one manufacturer.

1.4 SUBMITTALS

A. Manufacturer's Product Data: Submit data on each product, include installation instructions, color and finish, installation details, rough-in measurements and description of cabinet door and trim.

B. Submit manufacturer's operation and maintenance data.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. The following manufacturers are acceptable subject to providing products equal to that specified.

1. J.L. Industries, Bloomington, MN.

2. Larsen's Manufacturing Co., Ft. Lauderdale, FL.

3. Modern Metal Products, Owatonna, MN.

4. Potter-Romer, Inc., Cerritos, CA.

B. Products of Larsen's Manufacturing Co. are specified to establish quality, type and design. Approved products of listed manufacturers will be acceptable.

C. Portable extinguishers shall be listed and labeled to meet or exceed all performance standards of UL 299.

2.2 FIRE EXTINGUISHERS

A. Heavy duty steel cylinder; Metal valves, siphon tubes and pressure gage; pull pin squeeze grip operation; by Larsen's Manufacturing Co. or equivalent.

B. Multi-Purpose Dry Chemical Type: MP Series Model No. MP5, UL rated 2A 10B:C.

2.3 CABINETS

A. Provide Model SS2409-R3 Architectural Series by Larsen's Manufacturing Co. or approved equivalent. Recessed tub shall be white baked enamel finish on cold rolled steel. Door and trim shall be 304 stainless steel with No. 4 satin finish, each fabricated from one piece of material. Provide fire-rated cabinets when they are indicated in fire-rated partitions.

B. Provide "Helvetica" style identification decal when required.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install cabinets plumb and level in wall openings 36-inches from finished floor to inside bottom of cabinet.

B. Secure rigidly in place in accordance with manufacturer's instructions.

3.2 LOCATIONS

A. As shown on drawings. If not shown place extinguishers so that travel distance to an

extinguisher does not exceed 75-feet from any area of the building and the area covered does not exceed 6,000-square feet for light hazard.

3.3 CLEAN-UP

A. Clean glass and cabinets. Touch-up damaged finishes.

END OF SECTION 10 44 14

SECTION 10 5020 ALUMINUM SUN SHADE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. To the extent shown on drawings and specified here in.
2. Building supported, pre-engineered metal canopies including fascia channels, decking, tension rods, and attachment hardware.

1.2 Related Sections:

A. Division 01: Administrative requirements

B. Section 03 30 00-Cast-in-place Concrete

C. Section 04 22 10-Concrete Masonry Units

D. Section 07 62 00- Sheet Metal Flashing

E. Section 09 24 23-Portland Cement Plaster

F. Section 09 91 00- Painting

1.3 REFERENCES

A. Aluminum Association (AA)DAF 45 - Designation System for Aluminum Finishes.

B. American Architectural Manufacturers Association (AAMA)
2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Architectural Extrusions and Panels.

C. American Society of Civil Engineers (ASCE) 7 - Minimum Design Loads for Buildings and Other Structures.

D. ASTM International (ASTM)
1. B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
2. B429 - Standard Specification for Aluminum-Alloy Extruded Pipe and Tube.

1.4 SYSTEM DESCRIPTION

A. Design Requirements: Design canopy system to withstand:

1. Standards for wind pressure, as shown on the drawing wind diagram and wind pressures requirements on the structural drawings.

1.5 SUBMITTALS

A. Submit the following per Section 01 33 23 Shop Drawings, Product Data and Samples

1. Product Data: Manufacturer printed data for material and compliance with standards.
2. Shop Drawings: Indicate system components, dimensions, attachments, and accessories. Provide signed and sealed calculations and drawings prepared by a Florida Registered Professional Engineer.
3. Samples: 3 x 3 inch coating samples in specified color. 6 inch long fascia extrusion sample showing profile and standard finish.6 inch decking samples showing profile and standard finish.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Minimum 5 years' documented successful experience in installation of MASA products. Provide a list of installations in Florida with references. Include name, address, and phone number.
B. Mockup: Provide mockup of canopy system including all framing members, supports, decking, hanger rods, and attachments at location selected by architect.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Bais of design: Extrudeck Series By: MASA Architectural Canopies, 21 Randolph Ave.,Avenel, NJ 07001. 800-761-7446, www.architecturalcanopies.com.
B. Or approved substitution.

2.2 MATERIALS

A. Aluminum Extrusions:

1. ASTM B221& ASTM B429 6061-T6511 alloy and temper.

B. Hardware:

1. All fasteners shall be Type 304 stainless steel.

2.3 COMPONENTS

C. Framing

1. Type: 8” X .125” Extruded Aluminum “J” Channel (6063-T5)

D. Decking:

1. Type: 3” x 6” x .090” Interlocking Extruded Aluminum Flat Soffit Decking (6063-T5)

E. Mounting

1. Type: Hanger Rod Supported- 3” x 2 1/2" x 1/4” I-Beam Outriggers (6061-T6511) W/3/4"D Schedule 40 Steel Pipe (A500), Escutcheon Plate - 6 SQU (S):

F. Profile/ Crown Profile

1. Profile Variables - IND LT 8 (S) Crown

2.3 ACCESSORIES

A. Drainage:

1. Concealed internal drainage with downspout, Formed .090” Aluminum (AA5052-H32). Final location to be selected and approved by Architect.

2.4 FABRICATION

A. Fabricate canopy system in accordance with approved Shop Drawings. Kit canopies to be mechanically assembled with shear stress strength as per engineering. Pre- assembled canopies are shop welded by MASA approved personnel. Drainage system to be concealed type. Covered surfaces direct water to field drilled drain, to be coordinated at site. Location of drain to be approved by architect.

2.5 FINISHES

A. Pre- Treatment: Pre-treat to ASTM D1730 type B, Method 5 using a multi stage chromate process or an approved chrome- free pretreatment process approved by powder coating manufacturer for optimized weather resistance.
B. Finish coat: AAMA 2603 Thermosetting Polyester Resin-based Powder
C. Source: Tiger Drylac powder coating or approved equal.
D. Color: to be selected by architect from MASA color range or as indicated on the drawings.

PART 3 - EXECUTION

3.1 FIELD DIMENSIONS

A. Field verify dimensions of supporting structure at site of installation prior to fabrication.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions and approved Shop Drawings.

B. Install components plumb and level, in proper plane, free from warp and twist.

C. Anchor system to building components per Shop Drawings; provide dimensional clearance for thermal expansion and contraction as noted and required by Shop Drawings and assembly instructions and recommendations from the manufacturer.

D. Install stainless steel flashing and counter flashing along building wall.

E. Install continuous bead of sealant along flashing joint between building and canopy.

F. Set bolts and plates in a full bead of silicone sealant.

3.3 TOUCH UP

A. Touch up paint minor scratches and abrasions on finished surfaces to match original finish.

END OF SECTION 01 50 00

SECTION 12 48 16 - ENTRANCE FLOOR GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections (including all sustainability requirements), apply to this Section.
B. Section-03 30 00 Cast-In- Place Concrete
C. Section-09 65 19 LVT-Resilient Tile Flooring

1.2 SUMMARY

A. Section includes recessed floor grilles and frames.

1.3 COORDINATION

A. Coordinate size and location of recesses in concrete to receive floor grilles and frames.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for entrance floor grilles and frames.

B. Shop Drawings:
   1. Items penetrating floor grilles and frames, including door control devices.
   2. Divisions between grille sections.
   3. Perimeter floor moldings.

C. Samples: For the following products, in manufacturer's standard sizes:
   1. Floor Grille: Assembled section of floor grille.
   2. Frame Members: Sample of each type and color.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For floor grilles and frames to include in maintenance manuals.

1.6 FIELD CONDITIONS

A. Field Measurements: Indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide the following:

1. Construction Specialties, Inc.
2. Or approved substitution

2.2 FLOOR GRIDS

A. Model and Description-G6 GridLine-Cradel 2, type 302 Stainless Steel, 5/8” deep. Wires to be .090” X.150” electronically welded and spaced .145” apart.

2.3 GRID FRAMES:

A. SSA- Stainless Steel Angle Frame, Type 304 Stainless Steel with 1/*’ Exposed surface.

2.4 LOCK DOWN MECHANISM:

A. HL-Hidden Lock Down shall be a hidden device to secure the GridLine to the Concrete surface. Type 305 Stainless Steel.

2.5 ENTRANCE FLOOR GRILLES, GENERAL

A. Structural Performance: Provide floor grilles and frames capable of withstanding the following loads and stresses within limits and under conditions indicated:

1. Unit to withstand 1000 lb/wheel loads (load applied to a solid 5”x2” wide polyurethane wheel for 1000 passes without damage)

B. Accessibility Standard: Comply with applicable provisions in the Florida Building Code Fifth Edition - Accessibility.

2.6 FLOOR GRILLES

A. General: Provide manufacturer's standard floor-grille assemblies consisting of treads of type and profile indicated, interlocked or joined together by cross members, and other components needed to produce a complete installation.

B. Stainless-Steel Floor Grille: Type 304.

C. Lockdown: Hidden.

2.7 FRAMES

A. Provide manufacturer's standard SSA frames of 1/8” and style for grille type, for permanent recessed installation in subfloor, complete with installation anchorages and accessories. Unless otherwise indicated, fabricate frame of same material and finish as grilles.

2.8 MATERIALS

A. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304.

B. Stainless-Steel Angles: ASTM A 276 or ASTM A 479/A 479M, Type 304.

2.9 FABRICATION

A. Shop fabricate floor grilles to greatest extent possible in sizes as indicated. Unless otherwise indicated, provide each grille as a single unit; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in grilles are necessary, space symmetrically and away from normal traffic lanes.

B. Fabricate frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

2.10 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, size, minimum recess depth, and other conditions affecting installation of floor grilles and frames.

B. Examine roughing-in for drainage piping systems to verify actual locations of piping connections before floor grille and frame and drain pan installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install recessed floor grilles and frames to comply with manufacturer's written instructions at locations indicated and with top of floor grilles and frames in relationship to one another and to adjoining finished flooring as recommended by manufacturer. Set floor-grille tops at height for most effective cleaning action. Coordinate top of floor-grille surfaces with doors that swing across grilles to provide clearance under door.

B. Verification of Conditions, examine areas and condition. Do not proceed until all unsatisfactory conditions have been corrected.
C. Follow manufacturer’s installation instructions.

3.3 PROTECTION

A. After completing frame installations, provide temporary filler of plywood or fiberboard in floor-grille recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION 12 48 16

SECTION 22 00 00 – PLUMBING SUMMARY OF WORK

PART 1 - GENERAL

1.1 PRIMARY CONSTRUCTION CODES AND STANDARDS

a. Florida Building Code 6th Edition (2017)
b. Florida Building Code: Plumbing 6th Edition (2017)
c. Florida Building Code: Fuel Gas 6th Edition (2017)

1.2 CONSTRUCTION CRITERIA

A. A complete sanitary sewer system with waste and vent piping will be provided and connected to the site sanitary system.

B. Waste/Storm piping shall be cast iron no-hub piping with heavy duty no hub couplings above ground, and be schedule 80 DWV PVC below grade.

C. Condensate piping shall be Type L copper and be insulated with elastomeric insulation.

D. Pipe insulation shall comply with ASHRAE 90.1.

E. Building will have piped primary storm drainage piping connected to site civil storm drainage system.

F. Wall and floor/ground cleanouts will be indicated where required.

1. Restrooms main underground sanitary shall have cleanouts outside the building, located at grade.
2. Sanitary main will be routed to accommodate future restrooms.

G. A mop sink will be provided in janitor's closet.

H. Electric water heaters will be provided at the mechanical room or janitor’s closet. Water heating would be dedicated to the public bathrooms and mop sinks only. Water heaters, associated recirculation pumps, and mixing valves shall be provided.

I. Local temperature mixing valves will be utilized before each fixture.

J. Domestic hot water heater will store at 140 degrees. Point of use mixing valves will be installed on restroom sinks.

K. Domestic hot water system will have an appropriately sized domestic hot water recirculation pump.

L. Floor drains will be provided in each public toilet room, janitor's closet, mechanical rooms, break rooms with sinks, at drinking fountains, and where required for proper maintenance. The drains will have trap primer valves.

M. Wall hydrants (freeze-proof, box type hose bibs) shall be provided on the exterior perimeter of the building on the front and back sides. Hydrants to be spaced approximately 100 feet apart.

1. Hose bibs shall be provided in all gang toilet rooms. Located under one of the Lav's under the counter for each restroom.

2. Wall hydrants will also be located in the mechanical room, service yard, and adjacent to the roof access ladder at the base of the ladder.

N. The building shall be provided with 3" metered potable water service that will be distributed through mains, and branches to plumbing fixtures. Cold and hot water piping material will be type "L" copper (aboveground) and type "K" (belowground). The domestic water distribution system shall be constructed utilizing an adequately sized system sized to limit velocity to 5-7 fps to reduce noise and water hammer.

O. The domestic water is served from the city provider and is understood to be acceptable for domestic water service. Local water filters or softeners for any humidifier, heating, or steam system will be evaluated if required.

P. Hot water piping will be insulated with fiberglass pipe insulation with AHJ jacket. PVC jacket will be provided where exposed.

Q. Water hammer arrestors shall be provided at each fixture or battery of fixtures. Lavatories will be provided with thermostatic mixing valves at each location.

R. Area shut-off valves shall be provided at each branch take-off or group of fixtures in an area for maintenance isolation. (e.g. above lay-in ceilings) Valves will be located at accessible locations for ease of maintenance. All fixtures shall be provided with service stops.

S. Plumbing fixtures shall be commercial grade type which will provide more durable, long lasting fixtures.

T. Lavatory faucets shall be solid brass for long life. Fixtures will be specified to meet ADA accessibility requirements, and will be coordinated with architectural design to meet an appropriate design quality. Faucets at restroom lavatories shall be (hard wired) sensor controlled.

U. Water closets shall be vitreous china, dual flush 1.6/1.1 gallon, white, elongated, wall hung, siphon jet action with (hard wired) sensor flush valves.

V. Urinals shall be vitreous china, sensor 0.125 gallon flush valve (hard wired), white, wall hung, with integral trap.

W. Stainless Steel, water coolers will be wall hung, self-contained with bottle fill station, refrigerated type, with integrated filter, flush mount (dual height “bird bath” type) meeting ADA accessibility requirements.

SECTION 22 05 00 - COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Transition fittings.
3. Dielectric fittings.
4. Sleeves.
5. Escutcheons.
6. Grout.
7. Equipment installation requirements common to equipment sections.
8. Painting and finishing.
9. Concrete bases.
10. Supports and anchorages.

1.3 APPLICABLE STANDARDS

A. Code Compliance: Refer to Division 1. As a minimum, unless otherwise indicated, comply with all rules, regulations, standards, codes, ordinances and laws of local, state and federal governments and the amendments and interpretation of such rules, regulations, standards, codes, ordinances and laws of local, state and federal governments by the authorities having lawful jurisdiction.

B. ADA: Comply with the requirements of the Americans with Disabilities Act (ADA).

C. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

D. Comply with the National Fire Protection Association (NFPA) Standards and other Codes and Standards as adopted by the Local Authority having Jurisdiction.

E. 2015 International Building Code: Conform in strict compliance to the International Building Code (IBC) and the amendments which are enforced by the local authority having jurisdiction.

1. 2015 International Building Code, Building
2. 2015 International Plumbing Code, Plumbing
3. 2015 International Plumbing Code, Fuel Gas

1.4 DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:

1. CPVC: Chlorinated polyvinyl chloride plastic.
2. PE: Polyethylene plastic.
3. PVC: Polyvinyl chloride plastic.

1.5 SUBMITTALS

A. Product Data: For the following:

1. Piping materials.
2. Transition fittings.
3. Dielectric fittings.
4. Sleeves.
5. Escutcheons.
6. Grout.
7. Supports and anchorages.

1.6 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.8 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual Division 22 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping:

1. CPVC Piping: ASTM F 493.
2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.

2.3 TRANSITION FITTINGS

A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

1. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve-type coupling.

B. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

2.4 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

2.5 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.

D. PVC Pipe: ASTM D 1785, Schedule 40.

E. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

2.6 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Polished chrome-plated and rough brass.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.

1. Finish: Polished chrome-plated and rough brass.

E. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

F. Split-Plate, Stamped-Steel Type: With hinge, set screw or spring clips, and chrome-plated finish.

2.7 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing. Valves located above ceilings shall be positioned no further than arms length away from accessible ceiling opening.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:

a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.

M. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

N. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.

3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

   a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
   b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.

O. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.

P. Verify final equipment locations for roughing-in.

Q. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.2 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
3. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
4. PVC Nonpressure Piping: Join according to ASTM D 2855.

3.3 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.4 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.5 PAINTING

A. Painting of plumbing systems, equipment, and components is specified in Division 09 Sections "Interior Painting" and "Exterior Painting."

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

C. All plumbing equipment including but not limited to pipes and connectors shall be factory painted, and attachments above baffle ceiling will be field painted “Matte Black” under another Division of this specification. Coordinate with painting sub-contractor and provide all required prep to components to receive approved paint system.

D. Cover all labels required to be left unpainted by code with a removable plate painted ”Matte Black”.

3.6 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. As specified in Division 03 Section.

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 05 Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.8 GROUTING

A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

END OF SECTION 22 05 00

SECTION 22 05 16 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Flexible-hose packless expansion joints.
2. Metal-bellows packless expansion joints.
3. Rubber packless expansion joints.
4. Grooved-joint expansion joints.
5. Pipe loops and swing connections.
6. Alignment guides and anchors.

1.3 PERFORMANCE REQUIREMENTS

A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.

B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 - PRODUCTS

2.1 PACKLESS EXPANSION JOINTS

A. Flexible-Hose Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Flex Pression Ltd.

b. Flex-Hose Co., Inc.
c. Flexicraft Industries.
d. Mason Industries, Inc.
e. Metraflex Company (The).
f. Unisource Manufacturing, Inc.

2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.

3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.

4. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.

   a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
   b. Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F (4830 kPa at 21 deg C) and 500 psig at 450 deg F (3450 kPa at 232 deg C) ratings.

5. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with threaded end connections.

   a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F (2070 kPa at 21 deg C) and 225 psig at 450 deg F (1550 kPa at 232 deg C) ratings.
   b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F (2890 kPa at 21 deg C) and 315 psig at 450 deg F (2170 kPa at 232 deg C) ratings.

6. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6 (DN 65 to DN 150): Stainless-steel fittings with flanged end connections.

   a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70 deg F (1380 kPa at 21 deg C) and 145 psig at 600 deg F (1000 kPa at 315 deg C) ratings.
   b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70 deg F (1900 kPa at 21 deg C) and 200 psig at 600 deg F (1380 kPa at 315 deg C) ratings.

7. Expansion Joints for Steel Piping NPS 8 to NPS 12 (DN 200 to DN 300): Stainless-steel fittings with flanged end connections.

   a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70 deg F (860 kPa at 21 deg C) and 90 psig at 600 deg F (625 kPa at 315 deg C) ratings.
   b. Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F (1130 kPa at 21 deg C) and 120 psig at 600 deg F (830 kPa at 315 deg C) ratings.

B. Metal-Bellows Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Adsco Manufacturing LLC.
b. American BOA, Inc.
c. Badger Industries, Inc.
d. Expansion Joint Systems, Inc.
e. Flex Pression Ltd.
f. Flex-Hose Co., Inc.
g. Flex-Weld, Inc.

2. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
3. Type: Circular, corrugated bellows with external tie rods.
4. Minimum Pressure Rating: 175 psig (1200 kPa) unless otherwise indicated.
5. Configuration: Single joint class(es) unless otherwise indicated.
6. Expansion Joints for Copper Tubing: Single-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.

a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint.
b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint.
c. End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.

C. Rubber Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Amber/Booth Company, Inc.
b. Flex-Hose Co., Inc.
c. Flex-Weld, Inc.
d. Flexicraft Industries.

2. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
3. Material: Fabric-reinforced rubber complying with FSA-NMEJ-703.
4. Arch Type: Single or multiple arches with external control rods.
5. Spherical Type: Single or multiple spheres with external control rods.
6. Minimum Pressure Rating for NPS 1-1/2 to NPS 4 (DN 40 to DN 100): 150 psig (1035 kPa) at 220 deg F (104 deg C).
7. Minimum Pressure Rating for NPS 5 and NPS 6 (DN 125 and DN 150): 140 psig (966 kPa) at 200 deg F (93 deg C).
8. Minimum Pressure Rating for NPS 8 to NPS 12 (DN 200 to DN 300): 140 psig (966 kPa) at 180 deg F (82 deg C).
9. Material for Fluids Containing Acids, Alkalies, or Chemicals: EPDM.
10. Material for Fluids Containing Gas, Hydrocarbons, or Oil: Buna-N.
11. Material for Water: BR.
12. End Connections: Full-faced, integral steel flanges with steel retaining rings.

2.2 GROOVED-JOINT EXPANSION JOINTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Anvil International, Inc.
2. Shurjoint Piping Products.
3. Victaulic Company.

B. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.

C. Standard: AWWA C606, for grooved joints.

D. Nipples: Galvanized, ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.

E. Couplings: Five, flexible type for steel-pipe dimensions. Include ferrous housing sections, EPDM gasket suitable for cold and hot water, and bolts and nuts.

2.3 ALIGNMENT GUIDES AND ANCHORS

A. Alignment Guides:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Adsco Manufacturing LLC.
b. Advanced Thermal Systems, Inc.
c. Flex-Hose Co., Inc.
d. Flex-Weld, Inc.
e. Flexicraft Industries.

2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.

B. Anchor Materials:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

a. Stud: Threaded, zinc-coated carbon steel.
b. Expansion Plug: Zinc-coated steel.
c. Washer and Nut: Zinc-coated steel.

5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.

a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
c. Washer and Nut: Zinc-coated steel.

PART 3 - EXECUTION

3.1 EXPANSION-JOINT INSTALLATION

A. Install expansion joints of sizes matching sizes of piping in which they are installed.

B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."

C. Install rubber packless expansion joints according to FSA-NMEJ-702.

D. Install grooved-joint expansion joints to grooved-end steel piping

3.2 PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.

B. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.

C. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.

D. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.3 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.

C. Attach guides to pipe and secure guides to building structure.

D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

E. Anchor Attachments:

1. Anchor Attachment to Black-Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
2. Anchor Attachment to Galvanized-Steel Pipe: Attach with pipe hangers. Use MSS SP-69, Type 42, riser clamp welded to anchor.
3. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.

1. Anchor Attachment to Steel Structural Members: Attach by welding.
2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.

G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 22 05 16

SECTION 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Escutcheons.
2. Floor plates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.

B. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

C. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.

D. Split-Plate, Stamped-Steel Type: With chrome-plated finish, hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.(In Finished area's only)

B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. New Piping: One-piece, floor-plate type.

END OF SECTION 22 05 18

SECTION 22 05 19 - METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Bimetallic-actuated thermometers.
2. Filled-system thermometers.
3. Liquid-in-glass thermometers.
4. Thermowells.
5. Dial-type pressure gages.
6. Gage attachments.
7. Test plugs.
8. Test-plug kits.

B. Related Sections:

1. Section 21 "Facility Fire-Suppression Water-Service Piping" for fire-protection water-service meters outside the building.
2. Section 21 "Fire-Suppression Standpipes" for fire protection pressure gages.
3. Section 21 "Wet-Pipe Sprinkler Systems"
4. Section 21 "Dry-Pipe Sprinkler Systems" for fire protection pressure gages.
5. Section 22 "Facility Water Distribution Piping" for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
6. Section 22 "Domestic Water Piping" for water meters inside the building.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of meter and gage, from manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ashcroft Inc.
2. REOTEMP Instrument Corporation.
3. Trerice, H. O. Co.
4. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.

.

B. Standard: ASME B40.200.

C. Case: Liquid-filled type(s); stainless steel with 5-inch nominal diameter.

D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F and deg C.

E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.

F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.

G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.

H. Window: Plain glass.

I. Ring: Stainless steel.

J. Element: Bimetal coil.

K. Pointer: Dark-colored metal.

L. Accuracy: Plus or minus 1 percent of scale range.

2.2 FILLED-SYSTEM THERMOMETERS

A. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Ashcroft Inc.
   b. REOTEMP Instrument Corporation.
   c. Trerice, H. O. Co.
   d. Weiss Instruments, Inc.
2. Standard: ASME B40.200.

3. Case: Sealed type, cast aluminum or drawn steel5-inch nominal diameter.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Pointer: Dark-colored metal.
8. Window: Glass.
9. Ring: Stainless steel.
10. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device rigid, backrigid, bottom; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
    a. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

2.3 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    a. Trerice, H. O. Co.
    b. REOTEMP Instrument Corporation.
    c. Weiss Instruments, Inc.
    d. WIKA Insturment Corporation-USA.
2. Standard: ASME B40.200.
3. Case: Cast aluminum; 6-inch nominal size.
4. Case Form: Back angle or Straight unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Window: Glass.
8. Stem: Aluminum or brass and of length to suit installation.
    a. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.4 THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR.
4. Material for Use with Steel Piping: CRES.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1 ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.5 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Ashcroft Inc.
   b. REOTEMP Instrument Corporation.
   c. Trerice, H. O. Co.
   d. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
   e. Weiss Instruments, Inc.
2. Standard: ASME B40.100.
3. Case: Liquid-filled type(s); cast aluminum or drawn steel4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.

9. Window: Glass.
10. Ring: Brass or Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.6 GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.

B. Valves: Brass or stainless-steel needle], with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.

2.7 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flow Design, Inc.
2. National Meter, Inc.
3. Peterson Equipment Co., Inc.
4. Trerice, H. O. Co.
5. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
6. Weiss Instruments, Inc.

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4 orNPS 1/2, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: Chlorosulfonated polyethylene synthetic self-sealing rubber.

2.8 TEST-PLUG KITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flow Design, Inc.
2. National Meter, Inc.
3. Peterson Equipment Co., Inc.
4. Trerice, H. O. Co.
5. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
6. Weiss Instruments, Inc.

B. Furnish one test-plug kit(s) containing one thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

C. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F .

D. High-Range Thermometer: Small, bimetallic insertion type with1- to 2-inch- diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F.

E. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- (diameter dial and probe. Dial range shall be at least 0 to 200 psig.

F. Carrying Case: Metal or plastic, with formed instrument padding.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.

B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

C. Install thermowells with extension on insulated piping.

D. Fill thermowells with heat-transfer medium.

E. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

F. Install valve and snubber in piping for each pressure gage for fluids.

G. Install test plugs in piping tees.

H. Install thermometers in the following locations (May not be shown on drawings):

1. Inlet and outlet of each water heater.
2. Inlets and outlets of each domestic water heat exchanger.
3. Inlet and outlet of each domestic hot-water storage tank.
4. Outlet of all master mixing valves.

I. Install pressure gages in the following locations(May not be shown on drawings):

1. Building water service entrance into building.
2. Inlet and outlet of each pressure-reducing valve.
3. Suction and discharge of each domestic water pump.

3.2 CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.3 ADJUSTING

A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F.

B. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F.

3.5 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Water Service Piping: 0 to 160 psi.

B. Scale Range for Domestic Water Piping: 0 to 200 psi.

END OF SECTION 22 05 19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 23 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Bronze angle valves.
2. Brass ball valves.
3. Bronze ball valves.
4. Bronze lift check valves.
5. Bronze swing check valves.
6. Bronze gate valves.

B. Related Sections:

1. Section 22 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
2. Section 22 "Domestic Water Piping" for valves applicable only to this piping.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene copolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

D. NRS: Nonrising stem.

E. OS&Y: Outside screw and yoke.

F. RS: Rising stem.

G. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of valve indicated.

1.5 QUALITY ASSURANCE

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.

C. NSF Compliance: NSF 61 for valve materials for potable-water service.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Use the following precautions during storage:

1. Maintain valve end protection.

2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

B. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Refer to valve schedule articles for applications of valves.

B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

C. Valve Sizes: Same as upstream piping unless otherwise indicated.

D. Valve Actuator Types:

1. Gear Actuator: For quarter-turn valves NPS 8 and larger.

2. Handlever: For quarter-turn valves NPS 6 and smaller except plug valves.

3. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 10 plug valves, for each size square plug-valve head.

4. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

E. Valves in Insulated Piping: With 2-inch stem extensions and the following features:

1. Gate Valves: With rising stem.

2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

F. Valve-End Connections:

1. Flanged: With flanges according to ASME B16.1 for iron valves.

2. Grooved: With grooves according to AWWA C606.

3. Solder Joint: With sockets according to ASME B16.18.
4. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.; Apollo Valves.
   b. Crane Co.; Crane Valve Group; Crane Valves.
   c. Hammond Valve.
   d. Milwaukee Valve Company.
   e. NIBCO INC.
2. Description:
   a. Standard: MSS SP-110.
   b. SWP Rating: 150 psig.
   c. CWP Rating: 600 psig.
   d. Body Design: Two piece.
   e. Body Material: Bronze.
   f. Ends: Threaded.
   g. Seats: PTFE or TFE.
   h. Stem: Bronze.
   i. Ball: Chrome-plated brass.
   j. Port: Full.

2.3 BRONZE LIFT CHECK VALVES

A. Class 125, Lift Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Hammond Valve.
   b. Kitz Corporation.
   c. Milwaukee Valve Company.
   d. NIBCO INC.
2. Description:
   a. Standard: MSS SP-80, Type 2.

b. CWP Rating: 200 psig.

c. Body Design: Vertical flow.

d. Body Material: ASTM B 61 or ASTM B 62, bronze.

e. Ends: Threaded.

f. Disc: NBR, PTFE, or TFE.

2.4 BRONZE SWING CHECK VALVES

A. Class 250, Iron Swing Check Valves with Metal Seats:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Stockham Division.

b. Hammond Valve.

c. Milwaukee Valve Company.

d. NIBCO INC.

2. Description:

a. Standard: MSS SP-71, Type I.

b. CWP Rating: 500 psig.

c. Body Design: Clear or full waterway.

d. Body Material: ASTM A 126, gray iron with bolted bonnet.

e. Ends: Flanged.

f. Trim: Bronze.

g. Gasket: Asbestos free.

B. Class 150, NRS Bronze Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Hammond Valve.

b. Kitz Corporation.

c. Milwaukee Valve Company.

d. NIBCO INC.

2. Description:

a. Standard: MSS SP-80, Type 1.

b. CWP Rating: 300 psig.

c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.

d. Ends: Threaded.

e. Stem: Bronze.

f. Disc: Solid wedge; bronze.

g. Packing: Asbestos free.

h. Handwheel: Malleable iron, bronze, or aluminum.

2.5 IRON GATE VALVES

A. Class 125, NRS, Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Stockham Division.

b. Hammond Valve.

c. Kitz Corporation.

d. Milwaukee Valve Company.

e. NIBCO INC.

2. Description:

a. Standard: MSS SP-70, Type I.

b. CWP Rating: 200 psig.

c. Body Material: ASTM A 126, gray iron with bolted bonnet.

d. Ends: Flanged.

e. Trim: Bronze.

f. Disc: Solid wedge.

g. Packing and Gasket: Asbestos free.

B. Class 250, NRS, Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.

b. Crane Co.; Crane Valve Group; Stockham Division.

c. NIBCO INC.

2. Description:

a. Standard: MSS SP-70, Type I.

b. CWP Rating: 500 psig.

c. Body Material: ASTM A 126, gray iron with bolted bonnet.

d. Ends: Flanged.

e. Trim: Bronze.

f. Disc: Solid wedge.

g. Packing and Gasket: Asbestos free.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install check valves for proper direction of flow and as follows:

1. Swing Check Valves: In horizontal position with hinge pin level.

2. Lift Check Valves: With stem upright and plumb.

3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. If valve applications are not indicated, use the following:

1. Shutoff Service: Ball or gate valves.

2. Pump-Discharge Check Valves:

a. NPS 2 and Smaller: Bronze swing check valves with bronze or nonmetallic disc.

b. NPS 2-1/2 and Larger for Domestic Water: Iron swing check valves with lever and weight or with spring or iron-seat check valves.

c. NPS 2-1/2 and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.

B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.

C. Select valves, except wafer types, with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
3. For Steel Piping, NPS 2 and Smaller: Threaded ends.
4. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
5. For Grooved-End Copper Tubing and Steel Piping: Valve ends may be grooved.

3.5 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:

1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
2. Ball Valves: Two piece, full port, brass or bronze with brass trim.
3. Bronze Swing Check Valves: Class 150,bronze disc.
4. Bronze Gate Valves: Class 150, NRS.

B. Pipe NPS 2-1/2 and Larger:

1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
2. Iron Ball Valves: Class 150.
3. Iron Swing Check Valves: Class 125nonmetallic-to-metal seats.
4. Iron Gate Valves: Class 125NRS.

3.6 STORM-DRAINAGE VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Ball Valves: Two piece,full port, bronze] withbronze trim.
3. Bronze Swing Check Valves: Class 125nonmetallic disc.
4. Bronze Gate Valves: Class 150, NRS.

B. Pipe NPS 2-1/2 and Larger:

1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.

2. Iron Ball Valves: Class 150.

3. Iron Swing Check Valves: Class 125,nonmetallic-to-metal seats.

4. Iron Gate Valves: Class 125, NRS.

END OF SECTION 22 05 23

SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe stands.
7. Pipe positioning systems.
8. Equipment supports.

B. Related Sections:

1. Section 05 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.

1.3 DEFINITIONS

A. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS

A. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following; include Product Data for components:

1. Trapeze pipe hangers.
2. Metal framing systems.
3. Fiberglass strut systems.
4. Pipe stands.
5. Equipment supports.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.7 QUALITY ASSURANCE

A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

2.2 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Allied Tube & Conduit.
   b. Cooper B-Line, Inc.

c. Unistrut Corporation; Tyco International, Ltd.

2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.

3. Standard: MFMA-4.

4. Channels: Continuous slotted steel channel with inturned lips.

5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

6. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

7. Metallic Coating: Hot-dipped galvanized.

8. Plastic Coating: Polyurethane.

2.4 THERMAL-HANGER SHIELD INSERTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ERICO International Corporation.

2. PHS Industries, Inc.

3. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.

4. Rilco Manufacturing Co., Inc.

5. Value Engineered Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

A. Powder-Actuated Fasteners Powder-actuated fasteners are not acceptable.

B. Mechanical-Expansion Anchors: Insert-wedge-type,stainless- steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE STANDS

A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

C. Low-Type, Single-Pipe Stand: One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

D. High-Type, Single-Pipe Stand:

1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

2. Base: Stainless steel.

3. Vertical Members: Two or more stainless-steel, continuous-thread rods.

4. Horizontal Member: stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

E. High-Type, Multiple-Pipe Stand:

1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.

2. Bases: One or more; plastic.

3. Vertical Members: Two or more protective-coated-steel channels.

4. Horizontal Member: Protective-coated-steel channel.

5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.7 PIPE POSITIONING SYSTEMS

A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.8 EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.9 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.

2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.

2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

E. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.

2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.

F. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.

G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

I. Install hangers and supports to allow controlled thermal movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

N. Insulated Piping:

1. Attach clamps and spacers to piping.
    a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
    a. NPS 1/4 to NPS 3-1/2 : 12 inches long and 0.048 inch thick.
    b. NPS 4 : 12 inches long and 0.06 inch thick.
    c. NPS 5 and NPS 6 : 18 inches long and 0.06 inch thick.
    d. NPS 8 to NPS 14 : 24 inches long and 0.075 inch thick.
    e. NPS 16 to NPS 24 : 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make bearing surface smooth.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches .

3.5 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099113 "Exterior Painting."

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use carbon-steel pipe hangers and supports metal trapeze pipe hangers and metal framing systems and attachments for general service applications.

F. Use stainless-steel pipe hangers attachments for hostile environment applications.(Under track piping)

G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.

H. Use padded hangers for piping that is subject to scratching.

I. Use thermal-hanger shield inserts for insulated piping and tubing.

J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.

2. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.

3. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.

4. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.

5. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.

K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.

L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.

2. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.

M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.

2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.

3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.

4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.

5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
7. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    a. Light (MSS Type 31): 750 lb.
    b. Medium (MSS Type 32): 1500 lb.
    c. Heavy (MSS Type 33): 3000 lb.

N. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

O. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

P. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

Q. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 22 05 29

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 53 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Equipment labels.
2. Pipe labels.
3. Valve tags.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1.4 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
2. Letter Color: White.
3. Background Color: Black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

7. Fasteners: Stainless-steel rivets or self-tapping screws.

8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2. Lettering Size: At least 1-1/2 inches high.

2.3 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: Brass, 0.032-inch or Stainless steel, 0.025-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.

2. Fasteners: Brass wire-link or beaded chain or S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.

2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.

3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.

4. At access doors, manholes, and similar access points that permit view of concealed piping.

5. Near major equipment items and other points of origination and termination.

6. Spaced at maximum intervals of 25 feet along each run. Reduce intervals to 10 feet in areas of congested piping and equipment.

7. Identification of potable and non-potable water.(irrigation water)

a. In all buildings where two or more water distribution system, one potable water and the other non-potable water, are installed, each system shall be identified either by color marking or metal tags as required by ASME A13.1. Reclaimed water systems shall be identified using color coded Pantone Purple 522C and marked with the statement “NONPOTABLE WATER - NOT FOR HUMAN CONSUMPTION.

B. Pipe Label Color: Refer to ASME (ANSI) Standard A13.1-2007.

3.4 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

a. Cold Water: 2 inches, round.

b. Hot Water: 2 inches, round.

END OF SECTION 22 05 53

SECTION 22 07 19 - PLUMBING PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section includes insulating the following plumbing piping services:

1. Domestic hot-water piping.
2. Domestic recirculating hot-water piping.
3. Roof drains and rainwater leaders. Horizontal piping and roof drain body.
4. Supplies and drains for handicap-accessible lavatories and sinks.

B. Related Sections:

1. Division 22 Section "Plumbing Equipment Insulation."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties, equipment connections, and access panels.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.

C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:

1. Preformed Pipe Insulation Materials: 12 inches (300 mm) long by NPS 2 (DN 50).
2. Jacket Materials for Pipe: 12 inches (300 mm) long by NPS 2 (DN 50).

3. Sheet Jacket Materials: 12 inches (300 mm) square.

4. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.

1. Piping Mockups:

a. One 10-foot (3-m) section of NPS 2 (DN 50) straight pipe.

b. One each of a 90-degree threaded, welded, and flanged elbow.

c. One each of a threaded, welded, and flanged tee fitting.

d. One NPS 2 (DN 50) or smaller valve, and one NPS 2-1/2 (DN 65) or larger valve.

e. Four support hangers including hanger shield and insert.

f. One threaded strainer and one flanged strainer with removable portion of insulation.

g. One threaded reducer and one welded reducer.

h. One pressure temperature tap.

i. One mechanical coupling.

2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.

3. Notify Architect seven days in advance of dates and times when mockups will be constructed.

4. Obtain Architect's approval of mockups before starting insulation application.

5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

7. Demolish and remove mockups when directed.

D. Comply with the following applicable standards and other requirements specified for miscellaneous components:

1. Supply and Drain Protective Shielding Guards: ICC A117.1.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor,

Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pittsburgh Corning Corporation; Foamglas.

2. Block Insulation: ASTM C 552, Type I.

3. Special-Shaped Insulation: ASTM C 552, Type III.

4. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.

5. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2.

6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Aeroflex USA, Inc.; Aerocel.

b. Armacell LLC; AP Armaflex.

c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.

H. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corp.; SoftTouch Duct Wrap.

b. Johns Manville; Microlite.

c. Knauf Insulation; Friendly Feel Duct Wrap.

d. Manson Insulation Inc.; Alley Wrap.

e. Owens Corning; SOFTR All-Service Duct Wrap.

I. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, provide one of the following:
    a. Fibrex Insulations Inc.; Coreplus 1200.
    b. Johns Manville; Micro-Lok.
    c. Knauf Insulation; 1000-Degree Pipe Insulation.
    d. Manson Insulation Inc.; Alley-K.
    e. Owens Corning; Fiberglas Pipe Insulation.
2. Type I, 850 Deg F (454 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

J. Phenolic:
1. Products: Subject to compliance with requirements, provide one of the following:
    a. Kingspan Tarec Industrial Insulation NV; Koolphen K.
    b. Resolco International BV; Insul-phen.
2. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
3. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
4. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
5. Factory-Applied Jacket: ASJ. Requirements are specified in "Factory-Applied Jackets" Article.

K. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials.
1. Products: Subject to compliance with requirements, provide one of the following:
    a. Armacell LLC; Tubolit.
    b. Nomaco Insulation; IMCOLOCK and NOMALOCK.

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.
1. Products: Subject to compliance with requirements, provide one of the following:
    a. Ramco Insulation, Inc.; Super-Stik.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.
1. Products: Subject to compliance with requirements, provide one of the following:
    a. Ramco Insulation, Inc.; Thermokote V.

C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F (minus 73 to plus 93 deg C).
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
    2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Aeroflex USA, Inc.; Aeroseal.
        b. Armacell LLC; Armaflex 520 Adhesive.
        c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
        d. K-Flex USA; R-373 Contact Adhesive.
    2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
        b. Eagle Bridges - Marathon Industries; 225.
        c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
        d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

E. Phenolic Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F (minus 59 to plus 149 deg C).

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.

b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-33.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

F. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.

b. Eagle Bridges - Marathon Industries; 225.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-20.

d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

G. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Corning Corporation; 739, Dow Silicone.

b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.

c. P.I.C. Plastics, Inc.; Welding Adhesive.

d. Speedline Corporation; Polyco VP Adhesive.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.

b. Vimasco Corporation; 749.

2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.

3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).

4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.

5. Color: White.

C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below-ambient services.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.

b. Eagle Bridges - Marathon Industries; 501.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.

d. Mon-Eco Industries, Inc.; 55-10.

2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.03 metric perm) at 35-mil (0.9-mm) dry film thickness.

3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).

4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.

5. Color: White.

D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.

b. Eagle Bridges - Marathon Industries; 570.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.

2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.

3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).

4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.

5. Color: White.

E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.

b. Eagle Bridges - Marathon Industries; 550.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.

d. Mon-Eco Industries, Inc.; 55-50.

e. Vimasco Corporation; WC-1/WC-5.

2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.

3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).

4. Solids Content: 60 percent by volume and 66 percent by weight.

5. Color: White.

2.5 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C, Class I, Grade A, and shall be compatible with insulation materials, jackets, and substrates.

1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.

b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.

c. Vimasco Corporation; 713 and 714.

3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.

4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).

5. Color: White.

2.6 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass and Phenolic Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.

b. Eagle Bridges - Marathon Industries; 405.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.

d. Mon-Eco Industries, Inc.; 44-05.

e. Pittsburgh Corning Corporation; Pittseal 444.

2. Materials shall be compatible with insulation materials, jackets, and substrates.

3. Permanently flexible, elastomeric sealant.

4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).

5. Color: White or gray.

6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.

b. Eagle Bridges - Marathon Industries; 405.

c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.

d. Mon-Eco Industries, Inc.; 44-05.

2. Materials shall be compatible with insulation materials, jackets, and substrates.

3. Fire- and water-resistant, flexible, elastomeric sealant.

4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Fabric: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas Number 10.

B. Woven Polyester Fabric: Approximately 1 oz./sq. yd. (34 g/sq. m) with a thread count of 10 strands by 10 strands/sq. in. (4 strands by 4 strands/sq. mm), in a Leno weave, for pipe.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.

b. Vimasco Corporation; Elastafab 894.

2.9 FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).

1. Products: Subject to compliance with requirements, provide one of the following:

a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.

2.10 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Johns Manville; Zeston.

b. P.I.C. Plastics, Inc.; FG Series.

c. Proto Corporation; LoSmoke.

d. Speedline Corporation; SmokeSafe.

2. Adhesive: As recommended by jacket material manufacturer.

3. Color: White.

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

C. Metal Jacket:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.

b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.

c. RPR Products, Inc.; Insul-Mate.

2. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.

a. Sheet and roll stock ready for shop or field sizing.

b. Finish and thickness are indicated in field-applied jacket schedules.

c. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.

d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.

e. Factory-Fabricated Fitting Covers:

1) Same material, finish, and thickness as jacket.

2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.

3) Tee covers.

4) Flange and union covers.

5) End caps.

6) Beveled collars.

7) Valve covers.

8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.

a. Sheet and roll stock ready for shop or field sizing.

b. Material, finish, and thickness are indicated in field-applied jacket schedules.

c. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.

d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.

e. Factory-Fabricated Fitting Covers:

1) Same material, finish, and thickness as jacket.

2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.

3) Tee covers.

4) Flange and union covers.

5) End caps.

6) Beveled collars.

7) Valve covers.

8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

D. Underground Direct-Buried Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Pittsburgh Corning Corporation; Pittwrap.

b. Polyguard Products, Inc.; Insulrap No Torch 125.

2.11 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, provide one of the following:

a. ABI, Ideal Tape Division; 428 AWF ASJ.

b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.

c. Compac Corporation; 104 and 105.

d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.

2. Width: 3 inches (75 mm).

3. Thickness: 11.5 mils (0.29 mm).

4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.

5. Elongation: 2 percent.

6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.

7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, provide one of the following:

a. ABI, Ideal Tape Division; 491 AWF FSK.

b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.

c. Compac Corporation; 110 and 111.

d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.

2. Width: 3 inches (75 mm).

3. Thickness: 6.5 mils (0.16 mm).

4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.

5. Elongation: 2 percent.

6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.

7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. ABI, Ideal Tape Division; 370 White PVC tape.
    b. Compac Corporation; 130.
    c. Venture Tape; 1506 CW NS.
2. Width: 2 inches (50 mm).
3. Thickness: 6 mils (0.15 mm).
4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. ABI, Ideal Tape Division; 488 AWF.
    b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
    c. Compac Corporation; 120.
    d. Venture Tape; 3520 CW.
2. Width: 2 inches (50 mm).
3. Thickness: 3.7 mils (0.093 mm).
4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

2.12 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following:
    a. ITW Insulation Systems; Gerrard Strapping and Seals.
    b. RPR Products, Inc.; Insul-Mate Strapping and Seals.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch (0.38 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.
3. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) wide with wing seal or closed seal.

B. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.

C. Wire: 0.080-inch (2.0-mm) nickel-copper alloy.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. C & F Wire.

2.13 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers,:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Engineered Brass Company.

b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.

c. McGuire Manufacturing.

d. Plumberex.

e. Truebro; a brand of IPS Corporation.

f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.

2. Description: Manufactured plastic wraps for covering plumbing fixture hot-water supply and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

B. Protective Shielding Piping Enclosures,:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Truebro; a brand of IPS Corporation.

b. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.

2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.

2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.

3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.

a. For below-ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.

5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above-ambient services, do not install insulation to the following:

1. Vibration-control devices.

2. Testing agency labels and stamps.

3. Nameplates and data plates.

4. Cleanouts.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.

3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.

4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.

3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).

4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

F. Insulation Installation at Floor Penetrations:

1. Pipe: Install insulation continuously through floor penetrations.

2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.

2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.

3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation

to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.

4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.

2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.

3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.

4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.

4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.

4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

3.7 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.

2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.

2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.8 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.

4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.

4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.

3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

4. Install insulation to flanges as specified for flange insulation application.

3.9 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.

2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.

3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.10 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.

2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.

3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.

2. Install lap or joint strips with same material as jacket.

3. Secure jacket to insulation with manufacturer's recommended adhesive.

4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.

5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.11 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.12 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.13 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Drainage piping located in crawl spaces.

2. Underground piping.

3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.14 INDOOR PIPING INSULATION SCHEDULE

A. Domestic Hot and Recirculated Hot Water:

1. NPS 1-1/4 (DN 32) and Smaller: Insulation shall be one of the following:
   a. Cellular Glass: 1-1/2 inches (38 mm) thick.
   b. Flexible Elastomeric: 3/4 inch (19 mm) thick.
   c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) thick.
   d. Phenolic: 1 inch (25 mm) thick.
   e. Polyolefin: 3/4 inch (19 mm) thick.
2. NPS 1-1/2 (DN 40) and Larger: Insulation shall be one of the following:
   a. Cellular Glass: 1-1/2 inches (38 mm) thick.
   b. Flexible Elastomeric: 1 inch (25 mm) thick.
   c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
   d. Phenolic: 1 inch (25 mm) thick.
   e. Polyolefin: 1 inch (25 mm) thick.

B. Stormwater and Overflow:

1. All Pipe Sizes: Insulation shall be one of the following:
   a. Cellular Glass: 1-1/2 inches (38 mm) thick.
   b. Flexible Elastomeric: 1 inch (25 mm) thick.
   c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
   d. Phenolic: 1 inch (25 mm) thick.
   e. Polyolefin: 1 inch (25 mm) thick.

C. Hot Service Vents:

1. All Pipe Sizes: Insulation shall be one of the following:
   a. Cellular Glass: 1-1/2 inches (38 mm) thick.
   b. Mineral-Fiber, Preformed Pipe, Type I or II: 1 inch (25 mm) thick.

3.15 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Domestic Hot and Recirculated Hot Water:

1. All Pipe Sizes: Insulation shall be one of the following:
   a. Cellular Glass: 2 inches (50 mm) thick.
   b. Flexible Elastomeric: 2 inches (50 mm) thick.
   c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.
   d. Phenolic: 2 inches (50 mm) thick.
   e. Polyolefin: 2 inches (50 mm) thick.

3.16 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Concealed:

1. None.
2. PVC: 20 mils (0.5 mm) thick.
3. Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
4. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
5. Stainless Steel, Type 304,: 0.010 inch (0.25 mm) thick.

D. Piping, Exposed:

1. None.
2. PVC: 20 mils (0.5 mm) thick.
3. Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
4. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
5. Stainless Steel, Type 304,: 0.010 inch (0.25 mm) thick.

3.17 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Concealed:

1. None.
2. PVC: 30 mils (0.8 mm) thick.
3. Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
4. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
5. Stainless Steel, Type 304: 0.010 inch (0.25 mm) thick.

D. Piping, Exposed:

1. PVC: 20 mils (0.5 mm) thick.
2. Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
3. Stainless Steel, Type 304: 0.010 inch (0.25 mm) thick.

END OF SECTION 22 07 19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 11 16 - DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Under-building slab and aboveground domestic water pipes, tubes, fittings, and specialties inside the building.
2. Encasement for piping.
3. Flexible connectors.
4. Water meters furnished by utility company for installation by Contractor.
5. Water meters.

B. Related Section:

1. Division 22 Section "Facility Water Distribution Piping" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.

1.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Domestic water piping and support and installation shall withstand effects of earthquake motions determined according to ASCE/SEI 7.

1.4 ACTION SUBMITTALS

A. Product Data: For the following products:

1. Specialty valves.
2. Transition fittings.
3. Dielectric fittings.
4. Flexible connectors.
5. Water meters.
6. Backflow preventers.
7. Water penetration systems.

1.5 INFORMATIONAL SUBMITTALS

A. Water Samples: Specified in "Cleaning" Article.

B. Coordination Drawings: For piping in equipment rooms and other congested areas, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Fire-suppression-water piping.
2. Domestic water piping.
3. HVAC hydronic piping.

C. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14 for plastic, potable domestic water piping and components. Include marking "NSF-pw" on piping.

C. Comply with NSF 61 for potable domestic water piping and components.

1.7 PROJECT CONDITIONS

A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of water service.
2. Do not proceed with interruption of water service without Owner's written permission.

1.8 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS UNDER-RAIL

A. Potable water conveyance: Ductile iron pipe and fittings supplied for potable water conveyance shall be cement-mortar lined in accordance with ANSI/AWWA C104/A21.4, *Cement-Mortar Lining for Ductile-Iron Pipe and Fittings.* The lined and coated product shall comply with the National Sanitation Foundation Specification NSF-61.

B. Above ground piping systems: Above ground pipe exposed to harsh environments, i.e. salt water spray shall be coated with 20 mils nominal thickness of Ceramawrap manufactured by Induron Coatings. The coating shall be applied in a coating manufacturer’s certified facility that is subjected to scheduled audits by the manufacturer for conformance with the manufacturer’s specified application procedures.

C. Pipe: Ductile iron pipe shall be designed in accordance with the latest revision of the American National Standard ANSI/AWWA C150/A21.50, Thickness Design ot Ductile-Iron Pipe, and manufactured in accordance with the latest revision of the American National Standard ANSI/AWWA C151/A21.51, Ductile-Iron Pipe, Centrifugally Cast. Pipe sizes 4-inch through 24-inch shall be supplied in 20 foot nominal lengths, Pipe sizes 30 through 42-inch shall be supplied in 18 foot nominal lengths, and pipe in sizes 48 – inch through 64-inch shall be supplied in 20 foot nominal lengths.

D. Joints: Flange Joints shall comply with the applicable portions of the American National Standards ANSI/AWWA C110/A21.10, Ductile-Iron and Gray-Iron Fittings, ANSI/AWWA C111/A21.11, Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings, and ANSI/AWWA C115/A21.15, Flanged Ductile-Iron Pipe With Ductile-Iron or Gray-Iron Threaded Flanges. Flange joints shall be assembled with a ribbed style gasket such as the FLANGE-TYTE® Gasket marketed by United States Pipe and Foundry Company, LLC. Flanged joints in sizes 4-inch through 24-inch shall have a working water pressure rating of 350 psi when sealed with the FLANGE-TYTE®. Flanged joints in sizes 30-inch through 64-inch shall have a working water pressure rating of 250 psi when employing FLANGE-TYTE® Gaskets. Flanged piping shall not be employed for buried service.

Mechanical Joints shall conform to the American National Standard ANSI/AWWA C111/A21.11, Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings. Mechanical Joints in 4-inch through 12-inch and 16-inch sizes shall be restrained by use of MJ FIELD LOK® Gaskets. For Mechanical joints 14-inch and larger restraint shall be provided by the use of footed retainer glands.

E. Fittings: Fittings for ductile iron pipe shall conform to the latest revision of the American National Standards ANSI/AWWA C110/A21.10, Ductile-Iron and Gray-Iron Fittings and ANSI/AWWA C153/A21.53, Ductile-Iron Compact Fittings. The fitting joints shall be of the same configuration as the pipe in in the system where they are installed. The fittings for potable water conveyance shall be supplied asphalt coated and cement-mortar lined in accordance with ANSI/AWWA C104/A21.4, Cement-Mortar Lining for Ductile-Iron Pipe and Fittings. Fittings for wastewater conveyance shall be lined with Protecto 401 in a lining manufacturer’s certified facility that is subjected to scheduled audits by the manufacturer for conformance with the manufacturer’s specified application procedures.

F. Installation: Pipe, Fittings, and appurtenances shall be installed in conformance with ANSI/AWWA C600, *Installation of Ductile-Iron Mains and Their Appurtenances.* When TR FLEX® Restrained Joint Pipe and Fittings are installed in an aboveground support system, i.e. pipe crossing a bridge, the pipe shall be installed on the supports isolated from the buried portion of the pipe system. After installation of the pipe on the supports, the installed pipe section shall be appropriately plugged and/or capped, filled with water, purged of air, and the internal pressure shall be raised to the project specified test pressure and the pressure held for the for the time period specified by the project specifications. After completion of the successful pressure test the pipe installed on the support system shall be connected to the buried pipe system.

2.2 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.

1. Cast-Copper Solder-Joint Fittings: ASME B16.18, pressure fittings.

2. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.

3. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

B. Soft Copper Tube: ASTM B 88, Type K and ASTM B 88, Type L water tube, annealed temper.

1. Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.

2.4 CPVC PIPING

A. CPVC Pipe: ASTM F 441/F 441M, Schedule 40.

1. CPVC Socket Fittings: ASTM F 438 for Schedule 40.

2.5 PEX PIPING

A. Crosslinked polyethylene (PEXa) piping.

B. Distribution manifold(s) with balancing and flow control valves where required.

C. Cold-expansion fittings.

D. Pipe fasteners as approved by the manufacturer of the PEXa piping.

E. Supervision and field engineering required for the complete and proper function of the system.

1. Standard grade hydrostatic pressure ratings from Plastics Pipe Institute in accordance with TR-3. The following three standard-grade hydrostatic ratings are required:

a. 200°F (93°C) at 80 psi (551 kPa)

b. 180°F (82°C) at 100 psi (689 kPa)

c. 73.4°F (23°C) at 160 psi (1102 kPa)

2. Listing of Flame Spread Index and Smoke Developed Index to ASTM E 84 (in U.S.) and ULC S102.2. (in Canada). It may be necessary to encase with 1/2 inch fiberglass insulation or ½ inch Armaflex insulation as required by the manufacturer's listing.

2.6 PIPING JOINING MATERIALS

A. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

B. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F 493.

1. CPVC solvent cement shall have a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.7 ENCASEMENT FOR PIPING

A. Standard: ASTM A 674 or AWWA C105.

B. Form: Sheet.

C. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.

D. Color: Black.

2.8 TRANSITION FITTINGS

A. General Requirements:

1. Same size as pipes to be joined.

2. Pressure rating at least equal to pipes to be joined.

3. End connections compatible with pipes to be joined.

B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

C. Sleeve-Type Transition Coupling: AWWA C219.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Cascade Waterworks Manufacturing.

b. Dresser, Inc.; Dresser Piping Specialties.

c. Ford Meter Box Company, Inc. (The).

d. JCM Industries.

e. Romac Industries, Inc.

f. Smith-Blair, Inc; a Sensus company.

g. Viking Johnson; c/o Mueller Co.

D. Plastic-to-Metal Transition Fittings:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Charlotte Pipe and Foundry Company.

b. Harvel Plastics, Inc.

c. Spears Manufacturing Company.

2. Description: CPVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert and one solvent-cement-socket or threaded end.

E. Plastic-to-Metal Transition Unions:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Colonial Engineering, Inc.

b. NIBCO INC.

c. Spears Manufacturing Company.

2. Description: CPVC four-part union. Include brass or stainless-steel threaded end, solvent-cement-joint or threaded plastic end, rubber O-ring, and union nut.

2.9 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Capitol Manufacturing Company.

b. Central Plastics Company.

c. Hart Industries International, Inc.

d. Jomar International Ltd.

e. Matco-Norca, Inc.

f. McDonald, A. Y. Mfg. Co.

g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

h. Wilkins; a Zurn company.

2. Description:

a. Standard: ASSE 1079.

b. Pressure Rating: 150 psig.

c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Capitol Manufacturing Company.
    b. Central Plastics Company.
    c. Matco-Norca, Inc.
    d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    e. Wilkins; a Zurn company.
2. Description:
    a. Standard: ASSE 1079.
    b. Factory-fabricated, bolted, companion-flange assembly.
    c. Pressure Rating: 150 psig .
    d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Advance Products & Systems, Inc.
    b. Calpico, Inc.
    c. Central Plastics Company.
    d. Pipeline Seal and Insulator, Inc.
2. Description:
    a. Nonconducting materials for field assembly of companion flanges.
    b. Pressure Rating: 150 psig.
    c. Gasket: Neoprene or phenolic.
    d. Bolt Sleeves: Phenolic or polyethylene.
    e. Washers: Phenolic with steel backing washers.

E. Dielectric Nipples:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Elster Perfection.
    b. Grinnell Mechanical Products.
    c. Matco-Norca, Inc.

d. Precision Plumbing Products, Inc.

e. Victaulic Company.

2. Description:

a. Standard: IAPMO PS 66

b. Electroplated steel nipple. complying with ASTM F 1545.

c. Pressure Rating: 300 psig at 225 deg F.

d. End Connections: Male threaded or grooved.

e. Lining: Inert and noncorrosive, propylene.

2.10 FLEXIBLE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Flex-Hose Co., Inc.

2. Flexicraft Industries.

3. Flex Pression, Ltd.

4. Flex-Weld, Inc.

B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.

1. Working-Pressure Rating: Minimum 250 psig.

2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.

3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

1. Working-Pressure Rating: Minimum 250 psig.

2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.

3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

2.11 WATER METERS

A. Turbine-Type Water Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. AALIANT; a Venture Measurement Product Line.

b. ABB.

c. Badger Meter, Inc.

d. Hays Fluid Controls.

e. Master Meter, Inc.

f. McCrometer.

g. Mueller Company; Water Products Division.

h. Schlumberger Limited; Water Division.

i. SeaMetrics Inc.

j. Sensus Metering Systems.

2. Description:

a. Standard: AWWA C701.

b. Pressure Rating: 150-psig working pressure.

c. Body Design: Turbine; totalization meter.

d. Registration: In gallons as required by utility company.

e. Case: Bronze.

f. End Connections for Meters NPS 2 nd Smaller: Threaded.

g. End Connections for Meters NPS 2-1/2 and Larger: Flanged.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."

C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.

D. Install underground copper tube in PE encasement according to ASTM A 674 or AWWA C105.

E. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages and Division 22 Section "Domestic Water Piping Specialties" for drain valves and strainers.

F. Install shutoff valve immediately upstream of each dielectric fitting.

G. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for pressure-reducing valves.

H. Install domestic water piping level without pitch and plumb.

I. Rough-in domestic water piping for water-meter installation according to utility company's requirements.

J. Install seismic restraints on piping. Comply with requirements in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment" for seismic-restraint devices.

K. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

L. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

M. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

N. Install piping adjacent to equipment and specialties to allow service and maintenance.

O. Install piping to permit valve servicing.

P. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.

Q. Install piping free of sags and bends.

R. Install fittings for changes in direction and branch connections.

S. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

T. Install pressure gages on suction and discharge piping from each plumbing pump and packaged booster pump. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages.

U. Install thermostats in hot-water circulation piping. Comply with requirements in Division 22 Section "Domestic Water Pumps" for thermostats.

V. Install thermometers on outlet piping from each water heater. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers.

W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

3.3 PEX INSTALLATION

A. Install in accordance with manufacturer's published installation manual and/or technical guidelines and final drawings. Technical guidelines are the most current and applicable versions of all the technical literature, including but not limited to technical manuals, installation guides, technical bulletins, training presentations and submittals

B. Manifolds shall be mounted as level as possible.

C. Route piping in an orderly manner, according to layout and spacing shown in final drawings. All installation notes shown on the drawings shall be followed.

D. At connections and fittings, use a plastic pipe cutter to ensure square (90°) and clean cuts, and join pipes immediately or cap ends of pipe to seal from contaminants.

E. Pipe shall be dispensed using a suitable uncoiling device. Remove twists prior to securing pipe. Pipe shall lie flat on an even plane.

F. Piping that passes through expansion joints or walls shall be covered in protective polyethylene convoluted sleeving (flexible conduit) extending 15 in (38 cm) on each side of the joint. Sleeving shall be secured on pipe to prevent movement during installation.

G. Where piping enters or exits a wall a protective conduit shall be placed around the pipe, with the conduit extending a minimum of 6 in (15 cm) into the wall and exiting by a minimum of 6 in (15 cm). For penetrations at manifolds, use rigid PVC bend guides secured in place to prevent movement

3.4 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.

2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

E. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.

2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.

3. PVC Piping: Join according to ASTM D 2855.

F. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.5 VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for valve installations.

B. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball or gate valves for piping NPS 2 and smaller. Use butterfly or gate valves for piping NPS 2-1/2 and larger.

C. Install drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping. Drain valves are specified in Division 22 Section "Domestic Water Piping Specialties."

1. Hose-End Drain Valves: At low points in water mains, risers, and branches.

2. Stop-and-Waste Drain Valves: Instead of hose-end drain valves where indicated.

D. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Set balancing valves partly open to restrict but not stop flow. Use ball valves for piping NPS 2 and smaller and butterfly valves for piping NPS 2-1/2 and larger. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves.

E. Install calibrated balancing valves in each hot-water circulation return branch and discharge side of each pump and circulator. Set calibrated balancing valves partly open to restrict but not stop flow. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for calibrated balancing valves.

3.6 TRANSITION FITTING INSTALLATION

A. Install transition couplings at joints of dissimilar piping.

B. Transition Fittings in Underground Domestic Water Piping:

1. NPS 1-1/2 and Smaller: Fitting-type coupling.

2. NPS 2 and Larger: Sleeve-type coupling.

C. Transition Fittings in Aboveground Domestic Water Piping NPS and Smaller: Plastic-to-metal transition fittings or unions.

3.7 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings.

C. Dielectric Fittings for NPS 2-1/2 to NPS 4 : Use dielectric flanges.

D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.8 FLEXIBLE CONNECTOR INSTALLATION

A. Install flexible connectors in suction and discharge piping connections to each domestic water pump and in suction and discharge manifold connections to each domestic water booster pump.

B. Install bronze-hose flexible connectors in copper domestic water tubing.

C. Install stainless-steel-hose flexible connectors in steel domestic water piping.

3.9 WATER METER INSTALLATION

A. Rough-in domestic water piping for water meter installation according to utility company's requirements.

B. Water meters will be furnished and installed by utility company.

C. Install water meters according to AWWA M6, utility company's requirements, and the following:

D. Install displacement-type water meters with shutoff valve on water-meter inlet. Install valve on water-meter outlet and valved bypass around meter unless prohibited by authorities having jurisdiction.

E. Install turbine-type water meters with shutoff valve on water-meter inlet. Install valve on water-meter outlet and valved bypass around meter unless prohibited by authorities having jurisdiction.

F. Install compound-type water meters with shutoff valves on water-meter inlet and outlet and on valved bypass around meter. Support meters, valves, and piping on brick or concrete piers.

G. Install fire-service water meters with shutoff valves on water-meter inlet and outlet and on full-size valved bypass around meter. Support meter, valves, and piping on brick or concrete piers.

H. Install remote registration system according to standards of utility company and of authorities having jurisdiction.

3.10 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment" for seismic-restraint devices.

B. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support products and installation.

1. Vertical Piping: MSS Type 8 or 42, clamps.

2. Individual, Straight, Horizontal Piping Runs:

a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.

b. Longer than 100 Feet MSS Type 43, adjustable roller hangers.

c. Longer Than 100 Feet If Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch (10 mm).

E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
4. NPS 2-1/2: 108 inches with 1/2-inch rod.
5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
6. NPS 6: 10 feet with 5/8-inch rod.
7. NPS 8: 10 feet with 3/4-inch rod.

F. Install supports for vertical copper tubing every 10 feet.

G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
2. NPS 1-1/2 108 inches with 3/8-inch rod.
3. NPS 2 10 feet with 3/8-inch rod.
4. NPS 2-1/2; 11 feet with 1/2-inch rod.
5. NPS 3 and NPS 3-1/2 12 feet with 1/2- rod.
6. NPS 4 and NPS 5 : 12 feet with 5/8-inch rod.
7. NPS 6 : 12 feet with 3/4-inch rod.
8. NPS 8 to NPS 12 12 feet with 7/8-inch rod.

H. Install supports for vertical steel piping every 15 feet

I. Install vinyl-coated hangers for CPVC piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1 and Smaller: 36 inches with 3/8-inch rod.
2. NPS 1-1/4 to NPS 2 48 inches with 3/8-inch rod.
3. NPS 2-1/2 to NPS 3-1/2 48 inches with 1/2-inch rod.
4. NPS 4 and NPS 5 48 inches with 5/8-inch rod.
5. NPS 6 48 inches with 3/4-inch rod.
6. NPS 8 48 inches with 7/8-inch rod.

J. Install supports for vertical CPVC piping every 60 inches for NPS 1 and smaller, and every 72 inches for NPS 1-1/4 and larger.

K. Install vinyl-coated hangers for PEX piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1 and Smaller: 32 inches with 3/8-inch rod.

L. Install vinyl-coated hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 2 and Smaller: 48 inches with 3/8-inch rod.
2. NPS 2-1/2 to NPS 3-1/2 48 inches with 1/2-inch rod.
3. NPS 4 and NPS 5 48 inches with 5/8-inch rod.
4. NPS 6: 48 inches with 3/4-inch rod.
5. NPS 8: 48 inches with 7/8-inch rod.
6. Install supports for vertical PVC piping every 48 inches.

M. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.11 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment and machines to allow service and maintenance.

C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.

D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:

1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
3. Plumbing Fixtures: Cold- and hot-water supply piping in sizes indicated, but not smaller than required by plumbing code. Comply with requirements in Division 22 plumbing fixture Sections for connection sizes.
4. Equipment: Cold- and hot-water supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.12 IDENTIFICATION

A. Identify system components. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification materials and installation.

B. Label pressure piping with system operating pressure.

3.13 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Piping Inspections:

1. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.

2. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:

a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

b. Final Inspection: Arrange final inspection for authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

3. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.

4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

C. Piping Tests:

1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.

2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.

3. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.

4. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.

5. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.

6. Prepare reports for tests and for corrective action required.

D. Domestic water piping will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.14. PEX FIELD QUALITY CONTROL

A. Filling, Testing & Balancing: Tests of domestic plumbing systems shall comply with authorities having jurisdiction, and, where required, shall be witnessed by the building official.

B. Pressure gauges used in testing and balancing shall show pressure increments of 1 psig and shall be located at or near the lowest points in the distribution system.

C. Air Test:

1. Charge the completed, yet unconcealed pipes with air at a minimum of 40 psig.
2. Do not exceed 150 psig.
3. Use soap solution to check for leakage at manifold connections.

D. Water Test:

1. Purge air from pipes.
2. Charge the completed, yet unconcealed pipes with water.
3. Take necessary precautions to prevent water from freezing.
4. Check the system for leakage, especially at all pipe joints.

E. Perform a preliminary pressure test pressurizing the system to the greater of 1.5 times the maximum operating pressure or 100 psig for 30 minutes.

1. As the piping expands, restore pressure, first at 10 minutes into the test and again at 20 minutes.
2. At the end of the 30-minute preliminary test, pressure shall not fall by more than 8 psig from the maximum, and there shall be no leakage.

F. After successfully performing the preliminary pressure test, perform the main pressure test immediately.

1. The test pressure shall be restored and continued as the main test for 2 hours.
2. The main test pressure shall not fall more than 3 psig after 2 hours.
3. No leakage shall be detected.

G. Complete inspection and furnish test reports supplied by the manufacturer of the system.

H. Cleaning

1. Clean exposed surfaces upon completion of installation using clean, damp cloth. No cleaning agents are allowed.

2. Comply with manufacturer’s recommendations.

I. Protection

1. Protect installation throughout construction process until date of final completion.

2. Replace components that cannot be repaired

3.15 ADJUSTING

A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
    a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide flow of hot water in each branch.
    b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.16 CLEANING

A. Clean and disinfect potable domestic water piping as follows:
    1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
    2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
        a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
        b. Fill and isolate system according to either of the following:
            1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
            2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
        c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
        d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

B. Clean non-potable domestic water piping as follows:
    1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
    2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:

a. Flush piping system with clean, potable water until dirty water does not appear at outlets.

b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

C. Prepare and submit reports of purging and disinfecting activities.

D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.17 PIPING SCHEDULE

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.

C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.

D. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 and larger, shall be one of the following:

1. Mechanical-joint, ductile-iron pipe; standard- pattern mechanical-joint fittings; and mechanical joints.

2. PVC, Schedule 80 pipe; PVC, Schedule 80 socket fittings; and solvent-cemented joints.

E. Aboveground domestic water piping, NPS 2 and smaller, shall be one of the following:

1. Hard copper tube, ASTM B 88, Type L; cast- or wrought- copper solder-joint fittings; and soldered joints.

2. CPVC, Schedule 40 pipe; CPVC, Schedule 40 socket fittings; and solvent-cemented joints.

F. Aboveground domestic water piping, NPS 2-1/2 to NPS 4, shall be one of the following:

1. Hard copper tube, ASTM B 88, Type L cast- or wrought- copper solder-joint fittings; and soldered joints.

2. CPVC, Schedule 40 pipe; CPVC, Schedule 40 socket fittings; and solvent-cemented joints.

G. Aboveground domestic water piping, NPS 5 to NPS 8 shall be one of the following:

1. Galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

2. CPVC, Schedule 80 pipe; CPVC, Schedule 80 threaded fittings; and threaded joints.

3.18 VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Shutoff Duty: Use ball or gate valves for piping NPS 2 and smaller. Use ball, or gate valves with flanged ends for piping NPS 2-1/2 and larger.
2. Throttling Duty: Use ball or globe valves for piping NPS 2 and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 and larger.
3. Hot-Water Circulation Piping, Balancing Duty: Calibrated balancing valves.
4. Drain Duty: Hose-end drain valves.

B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

C. Iron grooved-end valves may be used with grooved-end piping.

D. CPVC valves matching piping materials may be used.

END OF SECTION 22 11 16

SECTION 22 11 19 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. This Section includes the following domestic water piping specialties:

1. Vacuum breakers.
2. Backflow preventers.
3. Water pressure-reducing valves.
4. Balancing valves.
5. Temperature-actuated water mixing valves.
6. Outlet boxes.
7. Hose bibbs.
8. Wall hydrants.
9. Water hammer arresters.
10. Trap-seal primer valves.
11. Trap-seal primer systems.

B. Related Sections include the following:

1. Division 22 Section "Meters and Gages For Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
2. Division 22 Section "Domestic Water Piping" for water meters.
3. Division 22 Section "Drinking Fountains and Water Coolers" for water filters for water coolers.

1.3 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig, unless otherwise indicated.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Diagram power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. NSF Compliance:

1. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic domestic water piping components.

2. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."

PART 2 - PRODUCTS

2.1 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. FEBCO; SPX Valves & Controls.
c. Watts Industries, Inc.; Water Products Div.
d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1001.
3. Size: NPS 1/4 to NPS 3, as required to match connected piping.
4. Body: Bronze.
5. Inlet and Outlet Connections: Threaded.
6. Finish: Chrome plated.

B. Hose-Connection Vacuum Breakers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Watts Industries, Inc.; Water Products Div.
b. Woodford Manufacturing Company.
c. Zurn Plumbing Products Group; Light Commercial Operation.
d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1011.

3. Body: Bronze, nonremovable, with manual drain.
4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
5. Finish: Rough bronze.

2.2 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. FEBCO; SPX Valves & Controls.
c. Watts Industries, Inc.; Water Products Div.
d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Configuration: See Plumbing Drawings.

B. Double-Check Backflow-Prevention Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. FEBCO; SPX Valves & Controls.
c. Watts Industries, Inc.; Water Products Div.
d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1015.
3. Operation: Continuous-pressure applications.

C. Beverage-Dispensing-Equipment Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. Watts Industries, Inc.; Water Products Div.
c. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1022.
3. Operation: Continuous-pressure applications.
4. Size: NPS 1/4 or NPS 3/8.
5. Body: Stainless steel.
6. End Connections: Threaded.

D. Carbonated-Beverage-Dispenser, Dual-Check-Valve Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Cash Acme.

b. Lancer Corporation.
c. Watts Industries, Inc.; Water Products Div.

2. Standard: ASSE 1032.
3. Operation: Continuous-pressure applications.
4. Size: NPS 1/4 or NPS 3/8.
5. Body: Stainless steel.
6. End Connections: Threaded.

E. Backflow-Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. FEBCO; SPX Valves & Controls.
   c. Watts Industries, Inc.; Water Products Div.
   d. Zurn Plumbing Products Group; Wilkins Div.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.3 WATER PRESSURE-REDUCING VALVES

A. Water Regulators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. Watts Industries, Inc.; Water Products Div.
   c. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial working pressure of 150 psig .
4. Design Inlet Pressure: See Plumbing Drawings.
5. Design Outlet Pressure Setting: See Plumbing Drawings.
6. Body: Bronze with chrome-plated finish for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3.
7. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

2.4 BALANCING VALVES

A. Copper-Alloy Calibrated Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Armstrong International, Inc.

b. ITT Industries; Bell & Gossett Div.
c. NIBCO INC.
d. Taco, Inc.
e. Watts Industries, Inc.; Water Products Div.

2. Type: Ball valve with two readout ports and memory setting indicator.
3. Body: Brass or bronze.
4. Size: Same as connected piping
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

2.5 TEMPERATURE-ACTUATED WATER MIXING VALVES

A. Water-Temperature Limiting Devices:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. Powers; a Watts Industries Co.
c. Symmons Industries, Inc.
d. Watts Industries, Inc.; Water Products Div.
e. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig
4. Type: Thermostatically controlled water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded inlets and outlet.
7. Accessories: Check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Tempered-Water Setting: See Plumbing Drawings.
9. Tempered-Water Design Flow Rate: See Plumbing Drawings.
10. Valve Finish: Rough bronze.

B. Primary, Thermostatic, Water Mixing Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Armstrong International, Inc.
b. Leonard Valve Company.
c. Powers; a Watts Industries Co.
d. Symmons Industries, Inc.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig.
4. Type: Exposed-mounting, thermostatically controlled water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded inlets and outlet.

7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Pressure Rating: 125 psig minimum, unless otherwise indicated.
9. Tempered-Water Setting: See Plumbing Drawings.
10. Tempered-Water Design Flow Rate: See Plumbing Drawings.
11. Pressure Drop at Design Flow Rate: See Plumbing Drawings.
12. Valve Finish: Rough bronze.
13. Piping Finish: Copper.
14. Cabinet: Factory-fabricated, stainless steel, for surface mounting and with hinged, stainless-steel door.

C. Manifold, Thermostatic, Water-Mixing-Valve Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Leonard Valve Company.
   b. Powers; a Watts Industries Co.
   c. Symmons Industries, Inc.
2. Description: Factory-fabricated, exposed-mounting, thermostatically controlled, water-mixing-valve assembly in two-valve parallel arrangement.
3. Large-Flow Parallel: Thermostatic water mixing valve and downstream pressure regulator with pressure gages on inlet and outlet.
4. Intermediate-Flow Parallel: Thermostatic water mixing valve and downstream pressure regulator with pressure gages on inlet and outlet.
5. Small-Flow Parallel: Thermostatic water mixing valve.
6. Thermostatic Mixing Valves: Comply with ASSE 1017. Include check stops on hot- and cold-water inlets and shutoff valve on outlet.
7. Water Regulator(s): Comply with ASSE 1003. Include pressure gage on inlet and outlet.
8. Component Pressure Ratings: 125 psig minimum, unless otherwise indicated.
9. Cabinet: Factory-fabricated, stainless steel, for surface mounting and with hinged, stainless-steel door.
10. Selected Large Flow, Tempered Water Valve Size: See Plumbing Drawings.
11. Tempered-Water Setting: See Plumbing Drawings.
12. Unit Tempered-Water Design Flow Rate: See Plumbing Drawings.
13. Unit Minimum Tempered-Water Design Flow Rate: See Plumbing Drawings.
14. Unit Pressure Drop at Design Flow Rate: (kPa)S
15. Unit Tempered-Water Outlet Size: See Plumbing Drawings.
16. Unit Hot- and Cold-Water Inlet Size: See Plumbing Drawings.
17. Thermostatic Mixing Valve and Water Regulator Finish: Rough bronze.
18. Piping Finish: Copper.

D. Individual-Fixture, Water Tempering Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. Leonard Valve Company.
   c. Powers; a Watts Industries Co.
   d. Watts Industries, Inc.; Water Products Div.
   e. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1016, thermostatically controlled water tempering valve.
3. Pressure Rating: 125 psig minimum, unless otherwise indicated.
4. Body: Bronze body with corrosion-resistant interior components.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Finish: Rough or chrome-plated bronze.
8. Tempered-Water Setting: See Plumbing Drawings.
9. Tempered-Water Design Flow Rate: See Plumbing Drawings.

2.6 OUTLET BOXES

A. Icemaker Outlet Boxes:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Acorn Engineering Company.
      b. IPS Corporation.
   2. Mounting: Recessed.
   3. Material and Finish: Enameled-steel or epoxy-painted-steel box and faceplate.
   4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
   5. Supply Shutoff Fitting: NPS 1/2 gate, globe, or ball valve and NPS 1/2 copper, water tubing.

2.7 HOSE BIBS

A. Hose Bibs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Josam Company.
      b. Prier Products, Inc.
      c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      d. Watts Drainage Products Inc.
      e. Woodford Manufacturing Company.
      f. Zurn Plumbing Products Group; Light Commercial Operation.
      g. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.18.1 for sediment faucets.
3. Body Material: Bronze.
4. Seat: Bronze, replaceable.
5. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
6. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
7. Pressure Rating: 125 psig.
8. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
9. Finish for Equipment Rooms: Rough bronze, or chrome plated.
10. Finish for Finished Rooms: Chrome plated.
11. Operation for Equipment Rooms: Wheel handle.
12. Operation for Finished Rooms: Operating key.
13. Include operating key with each operating-key hose bibb.

2.8 WALL HYDRANTS

A. Nonfreeze Wall Hydrants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Josam Company.
   b. Prier Products, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Watts Drainage Products Inc.
   e. Woodford Manufacturing Company.
   f. Zurn Plumbing Products Group; Light Commercial Operation.
   g. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.21.3M for concealed outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4.
7. Description: See Plumbing Drawings.
8. Operating Keys(s): One with each wall hydrant.

2.9 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:
1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 125-psig minimum CWP.
3. Size: NPS 3/4.
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.

6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

B. Stop-and-Waste Drain Valves:
1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig minimum CWP or Class 125.
3. Size: NPS 3/4.
4. Body: Copper alloy or ASTM B 62 bronze.
5. Drain: NPS 1/8 side outlet with cap.

2.10 WATER HAMMER ARRESTERS

A. Water Hammer Arresters:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Josam Company.
b. Sioux Chief Manufacturing Company
c. Precision Plumbing Products
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Copper tube with piston with threaded end connection.
4. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

2.11 TRAP-SEAL PRIMER VALVES

A. Supply-Type, Trap-Seal Primer Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. PPP Inc.
b. Sioux Chief Manufacturing Company, Inc.
c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
d. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1018.
3. Pressure Rating: 125 psig minimum.
4. Body: Bronze.
5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

2.12 TRAP-SEAL PRIMER SYSTEMS

A. Trap-Seal Primer Systems:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. PPP Inc.
   2. Standard: ASSE 1044,
   3. Piping: NPS 3/4, ASTM B 88, Type L; copper, water tubing.
   4. Cabinet: Surface-mounting steel box with stainless-steel cover.
   5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
   6. Vacuum Breaker: ASSE 1001.
   7. Size Outlets: NPS 1/2.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.

   1. Locate backflow preventers in same room as connected equipment or system.

   2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.

   3. Do not install bypass piping around backflow preventers.

C. Install water regulators with inlet and outlet shutoff valves. Install pressure gages on inlet and outlet.

D. Install water control valves with inlet and outlet shutoff valves. Install pressure gages on inlet and outlet.

E. Install balancing valves in locations where they can easily be adjusted.

F. Install temperature-actuated water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.

   1. Install thermometers and water regulators if specified.

   2. Install cabinet-type units recessed in or surface mounted on wall as specified.

G. Install Y-pattern strainers for water on supply side of each water pressure-reducing valve, solenoid valve, and pump.

H. Install outlet boxes recessed in wall. Install 2-by-4-inch fire-retardant-treated-wood blocking wall reinforcement between studs. Fire-retardant-treated-wood blocking is specified in Division 06 Section "Rough Carpentry."

I. Install water hammer arresters in water piping according to PDI-WH 201.

J. Install air vents at high points of water piping.

K. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.

L. Install drainage-type, trap-seal primer valves as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.

M. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping and specialties.

B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:

1. Intermediate atmospheric-vent backflow preventers.
2. Reduced-pressure-principle backflow preventers.
3. Double-check backflow-prevention assemblies.
4. Carbonated-beverage-machine backflow preventers.
5. Dual-check-valve backflow preventers.
6. Water pressure-reducing valves.
7. Calibrated balancing valves.
8. Primary, thermostatic, water mixing valves.
9. Manifold, thermostatic, water-mixing-valve assemblies.
10. Outlet boxes.
11. Trap-seal primer systems.

B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in

addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and prepare test reports:

1. Test each reduced-pressure-principle backflow preventer assembly according to authorities having jurisdiction and the device's reference standard.

B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

3.5 ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable flow set points of balancing valves.

C. Set field-adjustable temperature set points of temperature-actuated water mixing valves.

END OF SECTION 22 11 19

SECTION 22 13 16 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Pipe, tube, and fittings.

1.3 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water (30 kPa).

B. Seismic Performance: Soil, waste, and vent piping and support and installation shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For sovent drainage system. Include plans, elevations, sections, and details.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For waste and vent piping, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Detailed description of piping anchorage devices on which the certification is based and their installation requirements.

B. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

C. All cast iron soil pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute (CISPI) and be listed by NSF International.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS IN ALL PLENUM AREAS.

A. Pipe and Fittings: ASTM A 74, Service class(es).

B. Gaskets: ASTM C 564, rubber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS (ALL KITCHEN SANITARY PIPE)

A. Pipe and Fittings: Per CISPI 301.

B. Sovent Stack Fittings: ASME B16.45 or ASSE 1043, hubless, cast-iron aerator and deaerator drainage fittings.

C. Heavy-Duty, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    a. ANACO-Husky.
    b. Clamp-All Corp.
    c. MIFAB, Inc.
    d. Mission Rubber Company; a division of MCP Industries, Inc.
2. Standards: ASTM C 1277 and ASTM C 1540.
3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

2.4 PVC PIPE AND FITTINGS

A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.

B. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.

C. Adhesive Primer: ASTM F 656.

1. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Solvent Cement: ASTM D 2564.

1. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Solvent cement shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 3 - EXECUTION

3.1 EARTH MOVING

A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

3.2 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping at indicated slopes.

F. Install piping free of sags and bends.

G. Install fittings for changes in direction and branch connections.

H. Install piping to allow application of insulation.

I. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

K. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

L. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:

1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.

2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.

3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping according to ASTM A 674 or AWWA C105/A 21.5.

N. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."

O. Install aboveground PVC piping according to ASTM D 2665.

P. Install underground PVC piping according to ASTM D 2321.

Q. Install engineered soil and waste drainage and vent piping systems as follows:

1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.

2. Sovent Drainage System: Comply with ASSE 1043 and sovent fitting manufacturer's written installation instructions.

R. Plumbing Specialties:

1. Install backwater valves in sanitary waster gravity-flow piping. Comply with requirements for backwater valves specified in Section 221319 "Sanitary Waste Piping Specialties."

2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."

S. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

U. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION

A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

C. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.

D. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.

2. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

3.4 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

B. Comply with requirements for pipe hanger and support devices and installation specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.

2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch rod.

3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.

4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.

5. NPS 10 and NPS 12: 60 inches with 7/8-inch rod.

6. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.

F. Install supports for vertical cast-iron soil piping every 15 feet .

G. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/4 : 72 inches with 3/8-inch rod.
2. NPS 1-1/2 and NPS 2 : 96 inches with 3/8-inch rod.

H. Install supports for vertical copper tubing every 10 feet.

I. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 48 inches with 3/8-inch rod.
2. NPS 3 (DN 80): 48 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
4. NPS 6 and NPS 8: 48 inches with 3/4-inch rod.
5. NPS 10 and NPS 12: 48 inches with 7/8-inch rod.

J. Install supports for vertical PVC piping every 48 inches.

K. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.5 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect drainage and vent piping to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.

3.6 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.7 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
2. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
3. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

3.8 CLEANING AND PROTECTION

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

D. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

3.9 PIPING SCHEDULE

A. Aboveground, soil and waste piping shall be one of the following:

1. Hubless, cast-iron soil pipe and fittings, heavy-duty hubless-piping couplings; and coupled joints.

2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

B. Aboveground, vent piping shall be one of the following:

1. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.

2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

C. Underground, soil, waste, and vent piping shall be one of the following:

1. Service class, cast-iron soil piping; gaskets; and gasketed joints.

2. Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

END OF SECTION 22 13 16

SECTION 22 13 19 - SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Cleanouts.
2. Floor drains.
3. Trench drains.
4. Miscellaneous sanitary drainage piping specialties.
5. Grease interceptors.
6. Oil interceptors.

B. Related Requirements:

1. Section 221423 "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
2. Section 224000 “Plumbing Fixtures” for hair interceptors
3. Section 224300 "Medical Plumbing Fixtures" for plaster sink interceptors.

1.3 DEFINITIONS

A. ABS: Acrylonitrile-butadiene-styrene plastic.

B. FOG: Fats, oils, and greases.

C. FRP: Fiberglass-reinforced plastic.

D. HDPE: High-density polyethylene plastic.

E. PE: Polyethylene plastic.

F. PP: Polypropylene plastic.

G. PVC: Polyvinyl chloride plastic.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for the following:

1. Grease interceptors.

2. Oil interceptors.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."

B. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Metal Cleanouts:

1. ASME A112.36.2M, Cast-Iron Cleanouts:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Josam Company.

2) Smith, Jay R. Mfg. Co.

3) Watts Drainage Products.

4) Zurn Plumbing Products Group.

B. Floor Cleanouts:

1. ASME A112.36.2M, Cast-Iron Cleanouts. Provide with recessed top for matching to surrounding floor finish.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Josam Company.

2) Smith, Jay R. Mfg. Co.

3) Watts Drainage Products.

4) Zurn Plumbing Products Group.

2.2 FLOOR DRAINS

A. Cast-Iron Floor Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Josam Company; Josam Div.

b. Smith, Jay R. Mfg. Co.

c. Tyler Pipe; Wade Div.

d. Watts Drainage Products.

e. Zurn Plumbing Products Group; Light Commercial Operation.

2.3 TRENCH DRAINS

A. Trench Drains :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Josam Company; Josam Div.

b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.

c. Tyler Pipe; Wade Div.

d. Watts Drainage Products Inc.

e. Zurn Plumbing Products Group; Specification Drainage Operation.

2.4 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Deep-Seal Traps :

1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.

B. Floor-Drain, Trap-Seal Primer Fittings :

1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.

2. Size: Same as floor drain outlet with NPS 1/2 side inlet.

C. Air-Gap Fittings :

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.

2.5 GREASE INTERCEPTORS

A. Grease Interceptors :

1. Cast-Iron or Steel Grease Interceptors:
    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        1) Watts Drainage Products.
        2) Zurn Plumbing Products Group.
2. Plastic Grease Interceptors:
    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        1) Schier Products Company.
        2) Zurn Plumbing Products Group.
        3) Green Turtle.

2.6 OIL INTERCEPTORS

A. Oil Interceptors:
1. Cast-Iron or Steel Oil Interceptors:
    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        1) Green Turtle.
        2) Zurn Plumbing Products Group
        3) Smith, Jay R. Mfg. Co.
        4) Josam Company.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Refer to Section 220500 “Common Work Results for Plumbing” for piping joining materials, joint construction, and basic installation requirements.

B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
2. Locate at each change in direction of piping greater than 45 degrees.
3. Locate at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.

1. Position floor drains for easy access and maintenance.

2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:

a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.

b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.

c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.

3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.

4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

F. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface, unless otherwise indicated.

G. Install deep-seal traps on floor drains and other waste outlets, if indicated.

H. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.

1. Exception: Fitting may be omitted if trap has trap-seal primer connection.

2. Size: Same as floor drain inlet.

I. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.

J. Install grease interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing.

1. Above-Floor Installation: Set unit with bottom resting on floor, unless otherwise indicated.

2. Flush with Floor Installation: Set unit and extension, if required, with cover flush with finished floor.

3. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.

4. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.

K. Install oil interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing. Coordinate oil-interceptor storage tank and gravity drain with Section 231113 "Facility Fuel-Oil Piping."

L. Install wood-blocking reinforcement for wall-mounting-type specialties.

M. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

N. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

3.2 CONNECTIONS

A. Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Grease Interceptors: Connect inlet and outlet to unit, and connect flow-control fitting and vent to unit inlet piping. Install valve on outlet of automatic drawoff-type unit.

D. Oil Interceptors: Connect inlet, outlet, vent, and gravity drawoff piping to unit; flow-control fitting and vent to unit inlet piping; and gravity drawoff and suction piping to oil storage tank.

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:

1. Grease interceptors.
2. Oil interceptors.
3. Solids interceptors.

B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 13 19

SECTION 22 42 13.13 - COMMERCIAL WATER CLOSETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Water closets.
   2. Flushometer valves.
   3. Toilet seats.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 WATER CLOSETS

A. Water Closets
   1. Basis-of-Design Product: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work are limited to::
      a. American Standard America.
      b. TOTO USA, INC.
      c. Kohler Co.

2.2 FLUSHOMETER VALVES

A. Flushometer Valves:
   1. Basis-of-Design Product: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work are limited to:
      a. Zurn Industries, LLC; Commercial Brass and Fixtures.
      b. Toto USA, Inc.
      c. Sloan Valve Company.

2.3 TOILET SEATS

A. Toilet Seats:
   1. Basis-of-Design Product: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work are limited to:
      a. American Standard America.
      b. Church Seats.
      c. Kohler Co.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before water-closet installation.

B. Examine walls and floors for suitable conditions where water closets will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Water-Closet Installation:
   1. Install level and plumb according to roughing-in drawings.
   2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.
   3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.

B. Support Installation:
   1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
   2. Use carrier supports with waste-fitting assembly and seal.

3. Install floor-mounted, back-outlet water closets attached to building floor substrate, onto waste-fitting seals; and attach to support.
4. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.

C. Flushometer-Valve Installation:
1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
4. Install actuators in locations that are easy for people with disabilities to reach.
5. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

D. Install toilet seats on water closets.

E. Wall Flange and Escutcheon Installation:
1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
2. Install deep-pattern escutcheons if required to conceal protruding fittings.
3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

F. Joint Sealing:
1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
2. Match sealant color to water-closet color.
3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.

B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."

C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.4 ADJUSTING

A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.

B. Adjust water pressure at flushometer valves to produce proper flow.

C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.

B. Install protective covering for installed water closets and fittings.

C. Do not allow use of water closets for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 42 13.13

SECTION 22 42 16.13 - COMMERCIAL LAVATORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Lavatories.
2. Shampoo bowls.
3. Faucets.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LAVATORIES

A. Lavatory.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a. Sloan
b. American Standard America.
c. Kohler Co.
d. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.2 LAVATORY FAUCETS

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet materials that will be in contact with potable water.

B. Lavatory Faucets.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a. Sloan
b. American Standard America.
c. Kohler Co.
d. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.3 SUPPLY FITTINGS

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.

B. Standard: ASME A112.18.1/CSA B125.1.

C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless-steel wall flange.

D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping. Stops to have brass valve stems, plastic is not acceptable.

E. Operation: Loose key.

F. Risers:

1. NPS 3/8.

2. Chrome-plated, rigid-copper-pipe and brass straight or offset tailpieces or chrome-plated, soft-copper flexible tube riser.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.

B. Examine counters and walls for suitable conditions where lavatories will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install lavatories level and plumb according to roughing-in drawings.

B. Install supports, affixed to building substrate, for wall-mounted lavatories.

C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1.

D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."

C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.

B. Adjust water pressure at faucets to produce proper flow.

C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

A. After completing installation of lavatories, inspect and repair damaged finishes.

B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.

C. Provide protective covering for installed lavatories and fittings.

D. Do not allow use of lavatories for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 42 16.13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 42 16.16 - COMMERCIAL SINKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. All equipment, accessories, etc. shall comply with the Buy America Act. Sub-Contractor shall coordinate with General Contractor for specific requirements.

1.2 SUMMARY

A. Section Includes:

1. Service basins.
2. Service sinks.
3. Utility sinks.
4. Handwash sinks.
5. Sacristy sinks.
6. Sink faucets.
7. Supply fittings.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for sinks.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sinks to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 SERVICE BASINS

A. Service Basins: Terrazzo, floor mounted.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   a. Sloan
   b. American Standard America.
   c. Kohler Co.
   d. Zurn Industries, LLC; Commercial Brass and Fixtures.

B. Service Basins : Plastic, floor mounted.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a. Sloan
b. American Standard America.
c. Kohler Co.
d. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.2 SERVICE SINKS

A. Service Sinks : Enameled, cast iron, trap standard mounted.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
a. Sloan
b. American Standard America.
c. Kohler Co.
d. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.3 SINKS

A. Sinks: Stainless steel.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
a. Sloan
b. American Standard America.
c. Kohler Co.
d. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.4 SINK FAUCETS

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet-spout materials that will be in contact with potable water.

B. Sink Faucets.

1. Faucets.

a. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
b. Sloan
c. American Standard America.
d. Kohler Co.
e. Zurn Industries, LLC; Commercial Brass and Fixtures.

2.5 SUPPLY FITTINGS

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.

B. Standard: ASME A112.18.1/CSA B125.1.

C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.

D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping. Stops to have brass valve stems, plastic is not acceptable.

E. Operation: Loose key.

F. Risers:

1. NPS 3/8

2. Chrome-plated, rigid-copper pipe or chrome-plated, soft-copper flexible tube.

2.6 GROUT

A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.

B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install sinks level and plumb according to roughing-in drawings.

B. Install supports, affixed to building substrate, for wall-hung sinks.

C. Install accessible wall-mounted sinks at handicapped/elderly mounting height according to ICC/ANSI A117.1.

D. Set floor-mounted sinks in leveling bed of cement grout.

E. Install water-supply piping with stop on each supply to each sink faucet.

1. Exception: Use ball, gate, or globe valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 22 "General-Duty Valves for Plumbing Piping."

2. Install stops in locations where they can be easily reached for operation.

F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

G. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

H. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."

C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.

B. Adjust water pressure at faucets to produce proper flow.

3.5 CLEANING AND PROTECTION

A. After completing installation of sinks, inspect and repair damaged finishes.

B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.

C. Provide protective covering for installed sinks and fittings.

D. Do not allow use of sinks for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 42 16.16

SECTION 23 00 00 – MECHANICAL SUMMARY OF WORK

PART 1 - GENERAL

1.1 PRIMARY CONSTRUCTION CODES AND STANDARDS

a. Florida Building Code 6th Edition (2017)
b. Florida Building Code: Mechanical 6th Edition (2017)
c. Florida Building Code: Energy Conservation 6th Edition (2017)
d. Florida Building Code: Plumbing 6th Edition (2017)
e. ASHRAE 62.1-2013
f. ASHRAE 90.1-2016
g. ASHRAE 15-2013
h. SMACNA

1.2 CONSTRUCTION CRITERIA

A. Climate Design Criteria (ASHRAE Handbook – Fundamentals (2017)

1. Summer Outside:

   a. 93.9°F DB
   b. 77.5°F WB

2. Winter Outside:

   a. 30°F DB

3. ASHRAE Climate Zone: 2A

B. Envelope Design Criteria:

1. Walls:
   a. Mass Walls: R-5.7 continuous insulation
   b. Metal Framed Walls: R-13 insulation between framing

2. Roof: R-25 continuous insulation

3. Glazing

   a. Windows: U-0.5 SHGC-0.25
   b. Skylights: U-0.65 SHGC-0.35

C. Building Occupancy Schedule:

1. It is understood that this facility will sustain 24/7 operation.

D. Indoor Design Criteria:

1. Offices: Cooling

   a. Occupied: 74°F
   b. Unoccupied: 80°F

2. Offices: Heating

   a. Occupied: 70°F
   b. Unoccupied: 60°F

3. Holdrooms: Cooling

   a. Occupied: 72°F
   b. Unoccupied: 80°F

4. Holdrooms: Heating

   a. Occupied: 72°F
   b. Unoccupied: 60°F

5. Electrical/Mechanical Rooms: Cooling

   a. Occupied: 78°F
   b. Unoccupied: 78°F

6. IDF/MDF Spaces: Cooling

   a. Occupied: 74°F
   b. Unoccupied: 74°F

7. Concession Spaces: Cooling

   a. Occupied: 72°F
   b. Unoccupied: 80°F

8. Concession Spaces: Heating

   a. Occupied: 72°F
   b. Unoccupied: 60°F

9. Corridors: Cooling

a. Occupied: 72°F
b. Unoccupied: 80°F

10. Corridors: Heating

a. Occupied: 72°F
b. Unoccupied: 60°F

11. TSA/Security Checkpoints: Cooling

a. Occupied: 72°F
b. Unoccupied: 80°F

12. TSA/Security Checkpoints: Heating

a. Occupied: 72°F
b. Unoccupied: 60°F

E. Ventilation Requirements and Building Air Balance:

1. Ventilation outside Air shall be in accordance with ASHRAE 62.1.
2. The balance between outside air and exhaust air will result in a positively pressurized building when in occupied periods.

F. Filtration:

1. AHU's:

a. Pre-Filters: 4" 30% ASHRAE efficient filters (MERV 8)
b. Final Filters: 12" Cartridge 90% ASHRAE efficient filters (MERV 13)

2. FCU's:

a. Filters: 4" 30% ASHRAE efficient filters (MERV 8)

3. Filters shall be industry standard sizes.
4. Filter frames shall be galvanized sheet metal with spot welds or fully welded.

G. The new building is designed as an approximate 42,000 s.f. single story Airport Concourse facility with mechanical mezzanines. Preliminary load calculations have been conducted to determine rough HVAC equipment sizing. The total peak cooling load is anticipated to be approximately 250 tons.

H. Chilled water will be provided to the building via two 250-ton high efficiency air-cooled packaged chillers (15°F deltaT, 42°F CHWS) piped in parallel, located outside the building on grade, (Each Chiller shall be sized at 100% of peak load for N+1 redundancy.). Variable flow

primary pumping with two full size 400 GPM chilled water pumps (N+1) and associated variable frequency drives will provide chilled water to the building. Chilled water pumps will be located in the indoor mechanical mezzanine. Chiller Basis of Design: Trane RTAF

1. Chillers shall be specified with barrel heaters for freeze protection.
2. Chiller shall be specified with hail guards.
3. Chiller shall be specified with a sound-reduction package. Sound reduction package includes: acoustic enclosure around compressors, reduced-speed fans with acoustic treatment, and designing to reduce sound levels without affecting chiller performance.
4. Chilled water pumps shall be vertical inline split case type and provided with vibration isolation.
5. An Air/Dirt Separator, expansion tank, and chemical shot feeder shall be provided.

I. The Air Handling Units (AHU) shall be provided on the mechanical mezzanines and will condition the Office spaces, Hold Rooms, and TSA/Security Checkpoints. The AHUs shall have chilled water cooling coils and electric heating coils for single zone VAV units. VAV AHU's utilizing VAV terminal units for zone control will have electric re-heat within the VAV terminal units.

1. AHUs shall have the following configuration:

    a. Mixing box section
    b. Filter section with 4" pre-filters and 12" final-filters
    c. Access Section
    d. Chilled water coil.
    e. Access Section
    f. Electric Heating Coil
    g. Plenum supply fan array (Minimum 4 supply fans in array)
    h. Discharge Plenum

2. Solid Double wall construction (MFG guaranteed non-condensing thermal performance), set on concrete pad, with internal spring isolated fans (minimum 2" deflection spring isolation, and neoprene pad below.)
3. Coil shall be 12 FPI max.
4. Cooling coils shall be sized for 52 degree LAT.
5. Condensate drains shall be stainless steel.
6. Coil casings shall be stainless steel.
7. Control Dampers will have airfoil blades with blade seals.
8. Motors shall be provided with AEGIS shaft grounding rings, factory installed, for all motors served from VFD's.

J. Building Ventilation air shall be routed from exterior AMCA 540/550 wall louvers and induced into the return side of the AHU's. Outside air paths will be monitored by airflow monitoring stations (Ebtron Gold or approved equal) for airflow tracking and proper building pressure control.

K. Building general exhaust shall be provided by inline general exhaust fans located on the mechanical mezzanines above the restrooms. Additional exhaust shall be provided as necessary for building relief air. Exhaust air will terminate to an AMCA 540/550 louver on an exterior wall of the building.

L. Building Heating will be provided by electric duct heaters at each Single Zone VAV AHU supply duct main. For AHUs with VAV terminal units, electric reheat shall be provided at the terminals (VTUs), with SCR control, sized to meet building heating demands.

M. Temperature critical spaces which require continual cooling such as IT/Data rooms shall be provided with independent chilled water fan coil units (FCU) and a Split-DX backup system for redundancy.

N. Supply, return and outside air ductwork will be externally insulated galvanized steel when routed above ceilings, and would be double wall round if exposed. All ductwork to be insulated in concealed areas shall be fiber blanket type, all insulated ductwork exposed in mechanical spaces shall be rigid board insulation.

O. All ductwork shall be formed from galvanized steel and shall conform to the requirements of SMACNA's Duct Construction Standards, NFPA Standard 90A. All supply ductwork shall be externally wrapped with 2 inch fiberglass insulation with FSK vapor barrier. Return and exhaust ductwork shall be constructed per low pressure supply ductwork standards, except that they will not be insulated except as required by the International Energy Code. Fire dampers and combination fire/smoke dampers will be installed at all ductwork penetrations of rated fire and smoke walls/partitions and shafts as shown on the architectural floor plans. Seal all ductwork (supply, return and exhaust) in accordance with the International Energy Code. Do not use snap lock construction.

1. Low pressure ductwork will be designed from the terminal units (VTU) to the diffusers/grills, RA ductwork, and exhaust ductwork. Low pressure ductwork will be sized to deliver air at a friction pressure drop not to exceed 0.08"w.c. per 100' of duct. (i.e. Air Duct Calculator)
2. Medium pressure ductwork will be designed from the VAV AHU to the terminal units (VTU). Medium pressure ductwork will be sized to deliver air at a friction pressure drop not to exceed 0.2"w.c. per 100' of duct or no more than 2000 FPM (Max 1500 FPM in acoustic sensitive locations.). (i.e. Air Duct Calculator)

P. Exhaust ductwork shall be un-insulated galvanized steel.

Q. The complete air and water system will be tested, adjusted and balanced by an independent certified testing and balancing firm (NEBB or AABC) as required to ensure system performance in accordance with design criteria.

R. A direct digital control (DDC) building automation system (BAS) shall be provided. All HVAC mechanical devices will be interfaced with the BAS for control, monitoring and alarm. A

centrally located operator's computer workstation will be provided for BAS reference and adjustment. Siemens is the owner preferred controls manufacturer.

1. All air-handling units and other major equipment shall use DDC with stand-alone panels for each unit.
2. Provide Optimized start/stop scheduling, occupied/unoccupied set-points, Night set-back, Schedule control, Static pressure reset schedules, SA reset schedules, OA flow monitoring/control, Relief Airflow monitoring/control, VFD's on all fans other than small CV general exhaust.
3. All cooling and heating coils shall have Discharge air temperature sensors for monitoring performance.
4. Damper actuators shall be DDC.
5. Control valves shall be pressure independent Characterized ball control valves with stainless steel stems and balls.
6. Control sequences shall comply with ASHRAE 90.1.

S. UL555s Combination Fire Smoke Dampers, UL555 Fire Dampers, and UL555s Smoke Dampers shall be provided in accordance with FBC/FMC.

T. Air distribution shall be supplied through diffusers located in acoustical ceiling tile or drywall ceiling, at ceiling level. Ceiling return grilles shall transfer the supplied air to the return air system. It is anticipated that the following grilles/diffusers will be incorporated in the design.

1. 24x24 Lay-In Architectural Plaque Diffuser
2. 12x12 Surface Mounted Plaque Diffuser
3. 1 to 3 slot diffusers ¾" slot – (High Ceiling Areas / Perimeters)
4. Perforated Return Grilles
5. Louvered Return Grilles (i.e. Sidewall)
6. Louvered Supply Grilles (i.e. Sidewall)
7. Supply Nozzles (High Volume Spaces such as Hold Rooms and TSA/Security Checkpoints)

U. Intake Louvers sized for 500 FPM at free area, and exhaust louvers shall be sized for 750 FPM at free area. Louvers will be specified to be AMCA 540/550.

V. Chilled water and hot water piping shall be supplied to each AHU/Terminal unit through insulated piping sized for 4' per 100 linear feet of pipe pressure drop or a maximum of 8 feet per second water velocity. Chilled Water system shall be designed for 15°F Delta T. An air separator and expansion tank will be provided for air removal and system pressure regulation for each closed loop system. Chemical shot feeder shall be provided for CHW closed loop chemical treatment.

1. Air Vents will be high capacity ITT Bell & Gossett or Armstrong.
2. Control valves are to be two way, characterized ball style control valves, with stainless steel balls and stems.

3. Piping is to be welded schedule 40 steel or Type K Copper, 2-1/2” and larger. Grooved steel piping is also acceptable for 2-1/2” and larger.
4. Piping is to be soldered Type K copper 2” and smaller.
5. Chilled water piping shall be insulated with cellular glass foam insulation with all-service jacket. Piping located in the mechanical rooms shall be insulated with cellular glass foam insulation with PVC jacketing. Piping located outside shall be insulated with thicker cellular glass foam insulation with aluminum jacketing.

END OF SECTION 23 00 00

SECTION 23 00 10 - BASIC MECHANICAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. This specification section is applicable to all division 23 specification sections.

1.2 SUMMARY

A. Mechanical systems, equipment, devices and accessories shall be installed, finished, tested and adjusted for continuous and proper operation. Any apparatus, material or device not shown on the Drawings but mentioned in these Specifications, or vice versa, or any incidental accessories necessary to make the project complete and operational in all respects, shall be provided. Include all materials, equipment, supervision, operation, methods and labor for the fabrication, installation, start-up and tests necessary for complete and properly functioning systems.

1.3 MECHANICAL SYSTEMS DESCRIPTIONS

A. Basic Design Criteria
   1. The following publications will be used as a reference for design of the mechanical systems:

      a. Florida Building Code 6th Edition (2017)
      b. Florida Building Code: Mechanical 6th Edition (2017)
      c. Florida Building Code: Energy Conservation 6th Edition (2017)
      d. Florida Building Code: Plumbing 6th Edition (2017)
      e. ASHRAE 62.1-2013
      f. ASHRAE 90.1-2016
      g. ASHRAE 15-2013
      h. SMACNA

B. Climate Design Criteria (ASHRAE Handbook – Fundamentals (2017)

   1. Summer Outside:

      a. 93.9°F DB
      b. 77.5°F WB

   2. Winter Outside:

a. 30°F DB

3. ASHRAE Climate Zone: 2A

C. Envelope Design Criteria:

1. Walls:
   a. Mass Walls: R-5.7 continuous insulation
   b. Metal Framed Walls: R-13 insulation between framing

2. Roof: R-25 continuous insulation

3. Glazing

   a. Windows: U-0.5 SHGC-0.25
   b. Skylights: U-0.65 SHGC-0.35

D. Building Occupancy Schedule:

1. It is understood that this facility will sustain 24/7 operation.

E. Indoor Design Criteria:

1. Offices: Cooling

   a. Occupied: 74°F
   b. Unoccupied: 80°F

2. Offices: Heating

   a. Occupied: 70°F
   b. Unoccupied: 60°F

3. Holdrooms: Cooling

   a. Occupied: 72°F
   b. Unoccupied: 80°F

4. Holdrooms: Heating

   a. Occupied: 72°F
   b. Unoccupied: 60°F

5. Electrical/Mechanical Rooms: Cooling

   a. Occupied: 78°F
   b. Unoccupied: 78°F

6. IDF/MDF Spaces: Cooling

    a. Occupied: 74°F
    b. Unoccupied: 74°F

7. Concession Spaces: Cooling

    a. Occupied: 72°F
    b. Unoccupied: 80°F

8. Concession Spaces: Heating

    a. Occupied: 72°F
    b. Unoccupied: 60°F

9. Corridors: Cooling

    a. Occupied: 72°F
    b. Unoccupied: 80°F

10. Corridors: Heating

    a. Occupied: 72°F
    b. Unoccupied: 60°F

11. TSA/Security Checkpoints: Cooling

    a. Occupied: 72°F
    b. Unoccupied: 80°F

12. TSA/Security Checkpoints: Heating

    a. Occupied: 72°F
    b. Unoccupied: 60°F

F. Ventilation Requirements and Building Air Balance:

1. Ventilation outside Air shall be in accordance with ASHRAE 62.1.
2. The balance between outside air and exhaust air will result in a positively pressurized building when in occupied periods.

G. Filtration:

1. RHU's:

    a. Pre-Filters: 4" 30% ASHRAE efficient filters (MERV 8)
    b. Final Filters: 12" Cartridge 90% ASHRAE efficient filters (MERV 13)

2. FCU's:

   a. Filters: 4" 30% ASHRAE efficient filters (MERV 8)

3. Filters shall be industry standard sizes.
4. Filter frames shall be galvanized sheet metal with spot welds or fully welded.

H. The new is designed as an approximate 42,000 s.f. single story Airport Concourse facility with mechanical mezzanines. Preliminary load calculations have been conducted to determine rough HVAC equipment sizing.

I. Packaged DX Rooftop Units (RTU) shall be provided on the roof and will condition the Office spaces, Hold Rooms, and TSA/Security Checkpoints. The RTUs shall have DX cooling coils and electric re-heat coils. The RTU's will utilize VAV terminal units for zone control will have electric heat within the VAV terminal units.

1. RTUs shall have the following configuration:

   a. Mixing box section
   b. Filter section with 4" pre-filters and 12" final-filters
   c. Access Section
   d. DX coil.
   e. Access Section
   f. Plenum supply fan array (Minimum 2 supply fans in array)
   g. Electric Heat Coil
   h. Discharge Plenum

2. Solid Double wall construction (MFG guaranteed non-condensing thermal performance), set on concrete pad, with internal spring isolated fans (minimum 2" deflection spring isolation, and neoprene pad below.)
3. Coil shall be 12 FPI max.
4. Cooling coils shall be sized for 52 degree LAT.
5. Condensate drains shall be stainless steel.
6. Coil casings shall be stainless steel.
7. Control Dampers will have airfoil blades with blade seals.
8. Motors shall be provided with AEGIS shaft grounding rings, factory installed, for all motors served from VFD's.

J. Building Ventilation air shall be induced directly into the RTU's intake hood. Outside air paths will be monitored by airflow monitoring stations (Ebtron Gold or approved equal) for airflow tracking and proper building pressure control.

K. Building general exhaust shall be provided by roof mounted centrifugal downblast exhaust fans located on the roof.

L. Building Heating will be provided by electric heaters at each RTU. For RTUs with VAV terminal units, electric reheat shall be provided at the terminals (VTUs), with SCR control, sized to meet building heating demands.

M. Temperature critical spaces which require continual cooling such as IT/Data rooms shall be provided with dedicated VAV terminal units and a Split-DX backup system for redundancy.

N. Supply and return air ductwork will be externally insulated galvanized steel when routed above ceilings, and would be double wall round if exposed. All ductwork to be insulated in concealed areas shall be fiber blanket type, all insulated ductwork exposed in mechanical spaces shall be rigid board insulation.

O. All ductwork shall be formed from galvanized steel and shall conform to the requirements of SMACNA's Duct Construction Standards, NFPA Standard 90A. All supply ductwork shall be externally wrapped with 2 inch fiberglass insulation with FSK vapor barrier. Return and exhaust ductwork shall be constructed per low pressure supply ductwork standards, except that they will not be insulated except as required by the International Energy Code. Fire dampers and combination fire/smoke dampers will be installed at all ductwork penetrations of rated fire and smoke walls/partitions and shafts as shown on the architectural floor plans. Seal all ductwork (supply, return and exhaust) in accordance with the International Energy Code. Do not use snap lock construction.

1. Low pressure ductwork will be designed from the terminal units (VTU) to the diffusers/grills, RA ductwork, and exhaust ductwork. Low pressure ductwork will be sized to deliver air at a friction pressure drop not to exceed 0.08"w.c. per 100' of duct. (i.e. Air Duct Calculator)
2. Medium pressure ductwork will be designed from the VAV AHU to the terminal units (VTU). Medium pressure ductwork will be sized to deliver air at a friction pressure drop not to exceed 0.2"w.c. per 100' of duct or no more than 2000 FPM (Max 1500 FPM in acoustic sensitive locations.). (i.e. Air Duct Calculator)

P. Exhaust ductwork shall be un-insulated galvanized steel.

Q. The complete air and water system will be tested, adjusted and balanced by an independent certified testing and balancing firm (NEBB or AABC) as required to ensure system performance in accordance with design criteria.

R. A direct digital control (DDC) building automation system (BAS) shall be provided. All HVAC mechanical devices will be interfaced with the BAS for control, monitoring and alarm. A centrally located operator’s computer workstation will be provided for BAS reference and adjustment. Siemens is the owner preferred controls manufacturer.

1. All air-handling units and other major equipment shall use DDC with stand-alone panels for each unit.
2. Provide Optimized start/stop scheduling, occupied/unoccupied set-points, Night set-back, Schedule control, Static pressure reset schedules, SA reset schedules, OA flow monitoring/control, Relief Airflow monitoring/control, VFD’s on all fans other than small CV general exhaust.
3. All cooling and heating coils shall have Discharge air temperature sensors for monitoring performance.
4. Damper actuators shall be DDC.

5. Control valves shall be pressure independent Characterized ball control valves with stainless steel stems and balls.
6. Control sequences shall comply with ASHRAE 90.1.

S. UL555s Combination Fire Smoke Dampers, UL555 Fire Dampers, and UL555s Smoke Dampers shall be provided in accordance with FBC/FMC.

T. Air distribution shall be supplied through diffusers located in acoustical ceiling tile or drywall ceiling, at ceiling level. Ceiling return grilles shall transfer the supplied air to the return air system. It is anticipated that the following grilles/diffusers will be incorporated in the design.

1. 24x24 Lay-In Architectural Plaque Diffuser
2. 12x12 Surface Mounted Plaque Diffuser
3. 1 to 3 slot diffusers ¾" slot – (High Ceiling Areas / Perimeters)
4. Perforated Return Grilles
5. Louvered Return Grilles (i.e. Sidewall)
6. Louvered Supply Grilles (i.e. Sidewall)
7. Supply Nozzles (High Volume Spaces such as Hold Rooms and TSA/Security Checkpoints)

U. Intake Louvers sized for 500 FPM at free area, and exhaust louvers shall be sized for 750 FPM at free area. Louvers will be specified to be AMCA 540/550.

V. Commissioning:

1. The building will be commissioned to meet the design intent of the drawings. Contractor shall provide all required labor and material to support commissioning process. Contractor shall provide labor to complete testing of systems under the direction of the commissioning authority.
2. Commissioning shall be provided to meet code minimum commissioning requirements.

1.4 QUALITY ASSURANCE

A. Code Compliance: Comply with all rules, laws, statutes, regulations, building codes, and the amendments of local, state and federal governments by the authorities having jurisdiction.

B. ADA: Comply with the requirements of the Americans with Disabilities Act (ADA).

C. HANDICAP ACCESS: Comply with Chapter 553, Part II, Florida Statutes, "ACCESSIBILITY BY HANDICAP PERSONS"; and the accessibility requirements manual from the Florida Board of Building Codes and Standards, Department of Community Affairs, latest Revisions.

D. NFPA: Comply with the National Fire Codes compiled by the National Fire Protection Association.

E. Florida Building Code: Conform in strict compliance to the current editions of Florida Building Code; Florida Mechanical Code; Florida Energy Efficiency Code, Florida Plumbing Code; Florida Fuel Gas Code; and the amendments to these codes which are enforced by the local authority having lawful jurisdiction.

1.5 DRAWINGS AND SPECIFICATIONS

A. Equipment Placement: The drawings are diagrammatic, intended to show general arrangement, capacity and location of various components, equipment and devices. Reasonable changes in locations ordered by the Engineer prior to the installation may be made at no additional cost.

B. Drawing Scale: Due to the small scale of the drawings, and to unforeseen job conditions, all required offsets, transitions and fittings may not be shown but shall be provided at no additional cost.

1.6 DEFINITIONS

A. Concealed: When standing inside a finished room, insulated or non-insulated piping or ductwork not visible after installation, such as inside a chase or above a ceiling.

B. Exposed: When standing inside a finished room, insulated piping or ductwork is visible after installation, such as inside an equipment room or an air handling unit room.

C. Protected: The surface of insulated or non-insulated piping or ductwork on the exterior of the building but protected from direct exposure to the weather by an overhang, eave, in an unconditioned parking garage or building crawl space.

D. Unprotected: The surface of insulated on non-insulated piping or ductwork on the exterior of the building and exposed to the weather.

1.7 SUBMITTALS

A. Shop Drawings: Shop drawings include piping system layouts, ductwork layouts, fabrication and installation drawings of supports and anchorage for mechanical materials and equipment, and coordination drawings. Shop drawings also include proposed equipment layouts, drawn to scale, indicating that proposed equipment will fit into allotted space, including service access, connections, etc.

1. Piping Systems: See Specification 232113 HYDRONIC PIPING. Submit shop drawings for piping systems drawn at a minimum scale of ¼ inch per foot to verify clearances and equipment locations. Show required maintenance and operational clearances. Include the following:

a. Architectural and structural backgrounds with room names and numbers, including but not limited to plans, sections, elevations and details.
b. Fabrication and erection dimensions.
c. Arrangements and sectional views.

d. Details, including complete information for making connections to equipment.
e. Descriptive names of equipment.
f. Modifications and options to standard equipment required by Contract Documents.
g. All in ground: Electrical Boxes, plumbing, mechanical, valve boxes or similar.

2. Ductwork: See Specification 233113 METAL DUCTS. Submit shop drawings for duct systems at a minimum scale of 1/4 inch per foot to verify clearances and equipment locations. Show required maintenance and operational clearances. Include the following:

   a. Architectural and structural backgrounds with room names and numbers, etc., including but not limited to plans, sections, elevations, details, etc.
   b. Fabrication and erection dimensions.
   c. Arrangements and sectional views.
   d. Details, including complete information for making connections to equipment.
   e. Materials and finishes.
   f. Descriptive names of equipment.
   g. Modifications and options to standard equipment required by Contract Documents.

3. Coordination Drawings: Submit coordination drawings including detailed drawings showing locations and positions of all Architectural, structural, plumbing, fire protection, electrical and mechanical elements. Drawings shall be minimum ¼ inch per foot for each mechanical equipment room, mechanical riser, or chase. All other areas shall be a minimum 1/8 inch per foot. Including but not limited to the following:

   a. Refer to 230010-1.7 below for additional coordination drawing requirements.
   b. Architectural and structural backgrounds with room names and numbers, etc., including but not limited to plans, sections, elevations, details, etc.
   c. Show all trades coordinated and signed off by all trades prior to submitting.
   d. Show all required maintenance and operational clearances.
   e. Show all required access doors, proposed door types, door finishes, and sizes for Architect review. (Walls, Floors Ceilings…)
   f. All in ground: Electrical Boxes, plumbing, mechanical, valve boxes or similar.

4. All overhead equipment requiring access for maintenance and replacement shall have a clear vertical space from the equipment to the floor, excluding removable ceiling tiles. The clear vertical space shall also include the space required for equipment access from a ladder. This overhead equipment shall include but not be limited to air terminal units, exhaust fans and valves. Contractor shall coordinate with all trades to ensure this clearance is maintained; as this clearance area shall not be infringed upon by any equipment including conduit, wiring, piping or ceiling grid support wires. (No equipment shall be over 16'AFF, and all equipment shall be accessible with no more than a standard 10' ladder.).
5. All exterior electrical, plumbing, mechanical or other similar equipment shall be shown on the coordination drawings and shop drawings, and shall be easily accessed without disturbing or traversing any landscaping.

B. Product Data: Product data includes the manufacturer's printed literature, and the complete model number for each piece of equipment.

C. Performance Data: Provide performance data, wiring and control diagrams.

D. Installation Instructions: Installation instructions include detailed information, from the manufacturer, indicating specific installation requirements, instructions, and recommendations. Generic installation instructions are not acceptable. Instructions shall be the same as those included with the product when it is shipped from the factory.

E. Written Operating Instructions: Operating instructions shall be the manufacturer's written operating instructions for the specified product. If the instructions cover more than one model or type of product they shall be clearly marked to identify the instructions that cover the product delivered to the project.

F. Maintenance Instructions: Maintenance instructions shall be the manufacturer's printed instructions and parts lists for the equipment furnished. If the instructions cover more than one model or type of equipment they shall be marked to identify the instructions for the furnished product.

G. Operations and Maintenance Manuals:

1. In addition to the comments noted above refer to below CxA requirements and refer to Commissioning Specifications and Commissioning Plan for additional requirements.
2. O&Ms shall be submitted (30) days after the approved equipment submittals.
3. O&M data shall be developed and compiled in accordance with ASHRAE Guideline 4.
4. One (1) bound copy and two (2) copies in PDF format are required. The PDF shall include recognizable text and bookmarks for ease of navigation.
5. The equipment submittals shall be provided by the CM in (1) complete and cohesive PDF package. If PDFs are combined, each submittal section shall be individually bookmarked to aid in navigation and review.
6. Any documentation that requires project completion shall be provided with a detailed placeholder indicating the information needed and the anticipated date or project milestone. All placeholders shall be filled and incorporated into the O&Ms prior to Substantial Completion.
7. A Schedule of Fuses, that lists all equipment which uses fuses, shall be included in the O&M manuals. This schedule shall indicate the quantity and size of fuses for each piece of equipment.
8. The following information shall be included in the O&M submittal for each system:

    a. Manufacturer’s installation information
    b. Manufacturer’s operational information
    c. Manufacturer’s maintenance information

d. Manufacturer or 3rd party start-up information
e. Equipment name and full model number for each piece of equipment that is addressed by the O&M section
f. All options or accessories that have been provided are identified and all items that have not been included are stricken
g. All requirements to keep warranty in effect
h. Any service contracts issued.

9. The O&Ms shall be reviewed and approved by the A/E team.

a. When the A/E team's approval of the O&Ms is imminent, the CxA shall be notified proceed with a commissioning process related review of the documents. The CxA's comments shall be returned to the A/E team. The A/E team shall respond to these comments (where required response is needed by the A/E) and incorporate them into their comments to the contractor as needed to provide resolution.

H. Warranty Manuals:

1. In addition to the comments noted above refer to below CxA requirements and refer to Commissioning Specifications and Commissioning Plan for additional requirements.
2. Each manual shall have a "Table of Contents" page and each section shall be easily identified by a tabbed divider sheet.
3. Each manual shall have a title page that includes the name of the project; name of the manual; name, address and telephone number of the Contractor and Sub-contractor; and the date of expiration of the warranty.
4. All warranties are to be begin from the date of Substantial Completion.

5. The warranty manuals shall include a warranty matrix. Below is a list of information that shall be included in the warranty matrix. This information is intended to augment, but not replace any typical warranty requirements.

a. This warranty matrix shall be a supplement to other specified warranty document requirements in the project specifications.
b. The CM shall prepare and manage a warranty matrix (by division) that includes the warranty information for all of the equipment and systems in the project. The purpose of the warranty matrix is so the owner has a single reference document which provides basic information on warrantees.

c. As a minimum, the warranty matrix shall include the following information:

1) Product Manufacturer
2) Manufacturer Address
3) Manufacturer's Project Order Number or Warranty Number
4) Serial numbers for all major equipment
5) Warranty Department Contact Information (Name, Phone Number, Address)

6) Start Date of Warranty
7) Duration of Warranty
8) Coverage
9) Limitation/Exclusions
10) Any specific maintenance or documentation requirements to maintain warranty
11) Owner of Warranty
12) When the A/E team's approval of the Warranty Manual is imminent, the CxA shall be notified proceed with a commissioning process related review of the documents. The CxA's comments shall be returned to the Owner and A/E team. The A/E team shall respond to these comments (where required response is needed by the A/E) and incorporate them into their comments to the contractor as needed to provide resolution.

I. As-Built Documents:

1. In addition to project specification requirements indicated in other specification sections and/or drawing notes, the following requirements shall be incorporated by the contractor.

2. An accurate set of construction as-builts is critical to the sustainability of the building. The following items shall outline the desired process associated with obtaining accurate as-builts:

a. As-built documents shall be on the construction site at all times. The documents shall be updated to the current stage of construction, at least weekly.
b. A field-copy of the completed as-built drawings shall be available for verification during commissioning verification.
c. Following commissioning verification, any modifications shall be completed by the contractor, scanned and provided to the Owner and A/E team in PDF format (and electronic current AutoCAD or Revit format.). The PDF files shall be combined and bookmarked in the same manner as the original construction documents. All PDF bookmarks shall include the drawing number and description from the original titleblock. (Contractor shall provide their own title block for as-builts.)

d. The A/E team shall be responsible for using the field-copy of the as-builts, field notes obtained during the construction administration process, and electronic as-builts provided by the contractor, to update the construction documents into an as-built set of documents.

1) The as-built drawings and specifications shall be provided to the Owner in an electronic format. This shall include all files and X-refs in DWG or DXF file format, as well as assembled and bookmarked PDFs. There shall be (1) copies provided by way of individual and labeled DVDs.

e. The contractor shall be responsible for identifying all in-ground boxes and providing as-built GPS coordinates for these locations on the respective as-built documents.

J. Training Plan. Refer to Requirements below

K. Systems Manual. Refer to Requirements below.

L. Spare Parts:

1. Spare materials shall be provided as a part of this project. In addition to any requirements in the drawings and/or specifications, the following minimum list of items shall be provided:

a. 5 of each of temperature sensor
b. 1 of each type of humidity sensor
c. 1 of each type of CO2 or VOC sensor
d. 1 of each type of dry differential pressure sensor and/or switch
e. 1 of each type of wet differential pressure sensor and/or switch
f. 1 of each type of air flow measuring station
g. 1 of each type of CT
h. 1 of each type of actuator
i. 1 of each type of thermometer
j. 1 of each type of pressure gauge
k. 1 of each type of BAS controller
l. 1 of ANY critical of long lead items
m. 2 of each type of BAS controller
n. 1 extra of any BAS interface

1.8 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces.

D. The Contractor shall coordinate efforts of all trades and shall furnish (in writing, with copies to the Architect and Owner) any information necessary to permit the Work of all trades to be installed satisfactorily and with the least possible interference or delay.

E. The Contractor and all Subcontractors shall prepare a complete set of construction coordination drawings (“Coordination Drawings”) indicating the equipment actually purchased and the exact routing and elevations for all lines such as piping, busway, conduit, ductwork , etc., including conduit embedded in concrete and openings, sleeves,

etc., required in the structure, walls, partitions, etc. The Coordination Drawings shall be submitted complete for review to the Architect, Engineer and Owner. The Coordination Drawing preparation and completion shall comply with the requirements of the Schedule. Prior to commencing the Work, the Subcontractor shall obtain from the Architect or Engineer a set of AutoCAD compatible format Architectural and Engineering Drawings on compact disks, to be used to produce the Coordination Drawings. The Subcontractor shall give to the Architect and Engineer a written release acceptable to the Architect and Engineer signed by a corporate officer of the Subcontractor, prior to receipt of the compact disks. The sheet metal Drawings, prepared on electronic media (CADD) at a scale not less than 1/4" = 1'-0", shall serve as the base Drawings to which all other Subcontractors will overlay and add their Work. The Division 23 Mechanical Subcontractor shall be designated as the lead contractor in the development of the composite layering process and shall be responsible for electronically restacking the various trade layers into the final composite (CADD) Drawings. Each trade shall draw their Work on separate layers represented by individual colors. Each Coordination Drawing shall be completed and signed off by the other Subcontractors and the Contractor prior to the installation of the Work in the area covered by the specific Coordination Drawing. The Subcontractors Work shall be installed in accordance with the Shop Drawings and the Coordination Drawings and shall include the required maintenance access space and the code clearance space. If the Contractor allows one trade to install their Work before coordinating with the Work of other trades, the Contractor shall make necessary changes to correct the condition without extra cost to the Owner. The Coordination Drawings indicating piping, conduit, busway and equipment support points and loads exceeding 250 lb. imposed on the building structure shall be submitted to the Architect for review and approval. The elevation, location, support points, static, dynamic and expansion forces and loads imposed on the structure at support and anchor points and the size of all lines shall be indicated. All beam penetrations, slab penetrations and sleeves shall be indicated, sized and coordinated with all other Work. All required code clearance space and required maintenance access space shall be indicated and coordinated with all other work. All Work routed underground or embedded in concrete shall be indicated by dimension to column and building lines and shall be coordinated. This requirement for Coordination Drawings shall not be construed as authorization for the Contractor or Subcontractor to make any unauthorized changes to the Drawings. All space allocations shown on the Drawings shall be maintained, such as ceiling height. Prior to final acceptance of the Work, the Contractor shall give the Drawing files in the latest version of AutoCAD or compatible format on CD-RW Recordable Rewrite Compact Discs, containing the Contractor's coordination documentation, to the Owner.

1.9 INSTRUCTION TO THE OWNER

A. General: Instructions to the Owner shall be accomplished by representatives of the manufacturers involved. Allow time for complete coverage of all operating procedures. Provide field training in the design, operation and maintenance of the equipment and troubleshooting procedures. Explain the identification system, operational diagrams, emergency and alarm provisions, sequencing requirements, seasonal provisions, security, safety, efficiency and similar provisions of the systems. On the date of substantial completion, turn over the prime responsibility for operation of the mechanical equipment and systems to the Owner's operating personnel.

B. Training Period: Training period shall encompass a minimum of 12 hours of hands-on instructions with a maximum period of 4 hours per day.

C. Scheduling: Submit any remaining required items for checking at least one week before final inspection of the work. When submittal items are found acceptable, notify the Owner, in writing, that an "Instruction Conference" may proceed. Conference will be scheduled by the Owner. After the conference, copies of a memo certifying that the "Instruction Conference" and "Completed Demonstration" have been made will be signed by the Owner and the instructors, and one copy will be inserted in each submittal binder.

1. Training shall not be conducted with the owner until after the commissioning activities are complete.

D. Training Plan Content Requirements:

1. In addition to the comments noted above refer to below CxA requirements and refer to Commissioning Specifications and Commissioning Plan for additional requirements.
2. A Training Plan shall be developed by the contractor and provided to the Owner and A/E team for review and approval prior to any training instruction being conducted. When the A/E team's approval of the Training Plan is imminent, the CxA shall be notified proceed with a commissioning process related review of the documents. The CxA's comments shall be returned to the Owner and A/E team. The A/E team shall respond to these comments (where required response is needed by the A/E) and incorporate them into their comments to the contractor as needed to provide resolution.

3. The information below includes the typical requirements for the training plan for each building system:

a. Clearly identify the systems, subsystems, equipment, and assemblies for which training will be required.

1) Outline of instructional topics related to the systems, subsystems, equipment, and assemblies. These topics shall address the design, construction, operation, and maintenance of specific systems, assemblies, and equipment
2) Learning objectives and training delivery methods for each instructional topic

b. Clearly identify the number and type of training sessions.

1) The training program should be organized into a series of instructional modules, each covering a portion of the facility's systems, equipment, and assemblies.
2) The planned location of the training sessions (classroom, on site, and off site) and the minimum duration of each training session, in hours, to be completed as required in the OPR, Cx Plan, or construction documents

c. Instructor's qualifications

d. General purpose of system (design intent).

1) Overview and description of the purposes of the system.

e. Use of project documents.

1) Training materials requirements to be employed during the instructional process
2) Training report, records, and recording requirements
3) Upkeep of the Systems Manual and associated maintenance documentation and logs.

f. Review of control drawings and schematics.

1) Review of control drawings and schematics (have copies for attendees)
2) Building automation system (BAS) controls: programming, troubleshooting, alarms, manual operation, interface with integral controls
3) Integral controls (packaged): programming, troubleshooting, alarms, manual operation

g. Startup, normal operation, shutdown, unoccupied operation, seasonal changeover, manual operation, control setup and programming troubleshooting, and alarms.

1) System response to different operating conditions.
2) Startup, loading, normal operation, unloading, shutdown, unoccupied operation, seasonal changeover, etc., as applicable
3) Operation instructions and procedures: the procedures required for normal operation of the facility, including step-by-step instructions for day-to-day operation.
4) Adjustment instructions: information for maintaining operational parameters.
5) System troubleshooting: description of diagnostic step-by-step procedures for determining the source of problems on the system level; review technical service manual in detail.
6) Component troubleshooting: description of diagnostic procedures for determining the source of problems on the component level.
7) Common troubleshooting issues and methods, control system warnings and error messages, including using the control system for diagnostics.
8) Troubleshooting procedures: instructions for diagnosing operating problems and procedures for testing and inspecting.
9) Emergency instructions and procedures: those required for operating the facility during various emergencies, including step-by-step instructions for each type of emergency.

h. Interactions with other systems, including operation during power outage and fire.
i. Adjustments and optimizing methods for energy conservation.
j. Relevant health and safety issues and concerns and special safety features.
k. Demonstrate for the Owner that all floors with floor drains are pitched to the floor drain. Demonstrate all floor drains during training.
l. As a part of training, the contractor shall arrange for the Owner to access each piece of equipment located above finished floor, to confirm that clear vertical spaces have been provided.
m. All equipment located above the ceiling or behind an access door shall have the name of the equipment provided on the ceiling grid or access door that is clearly visible from ground level. This includes, but is not limited to air terminal units, valves, fire dampers and exhaust fans. During training the contractor shall identify each of these labels during a walk-thru style review with the Owner.

n. Component maintenance:

1) Instruction of required procedures for weekly, monthly, and annual preventive checks and timely repairs to preserve system integrity (sources, spare parts inventory, special tools, etc.).
2) Any special issues to maintain warranty.
3) Repair procedures: instructions for diagnosing problems and for disassembly, component removal, replacement, and reassembly.

o. The anticipated capabilities and knowledge of the occupants and operations and maintenance personnel.

1) Measurable learning objectives and teaching outlines should be developed to clearly describe the specific skills and knowledge that the participant is expected to master.

p. Occupant interaction issues.

1) Special requirements of tenants for this equipment's function.

q. Question and Answer Period.

4. Supplemental requirements for the Training have been provided below. These supplemental requirements shall be integrated with the training plan requirements as applicable.

a. A digital video recording of each training session shall be made and three (3) copies shall be provided to the Owner prior to Substantial Completion.
b. A minimum of four (4) hours of instruction shall be provided for each system or major piece of equipment.

c. Classroom training shall be provided for the BAS system in the following quantities; three (3) day basic operator training for four (4) students; four (4) day intermediate training for four (4) students; four (4) day advance training for four (4) students.
d. One week of factory training for two (2) operators at the general level and one week for two (2) operators at the advanced level shall be provided for the BAS system.
e. Owner personnel shall receive training in the prevention, recognition and resolution of indoor environmental quality concerns.
f. The Owner requires at least two (2) weeks reviewing the contractor provided training schedule and responding with availability for training sessions.
g. The Owner desires more hands on training. Contractor shall indicate hands on sessions vs classroom sessions in the training plan for review by the Owner.
h. Multiple sessions and shifts shall be coordinated with the Owner.
i. Multi-lingual training shall be coordinated with the Owner for specific personnel and systems.
j. All training shall include Standard Operating Procedures and the Procedures indicated above

E. Systems Manual:

1. A Systems Manual shall be developed for the commissioned systems. This document shall be developed to comply with the requirements and recommendations of ASHRAE 202-2013, ASHRAE GL-0-2005, ASHRAE GL-4 and LEED 2009. Refer to the table indicated in the Commissioning specifications, for the general format of the document and the responsible parties.
2. The initial system manual shall be submitted (30) days after the approved equipment.
3. The Final System manual shall be submitted prior to commissioning verification and substantial completion, whichever is first.
4. At the time of the initial and final system manual submission, the CxA shall provide the section covers and table of contents documents as described in the Commissioning plan. The documents will then be sent to the Design (A/E) Team for review and comment. Following approval; the A/E team, Owner, Contractor shall incorporate their portions of the systems manual and the forward it the CxA for verification. The CxA will return any comments to the A/E team and incorporate their portions of the systems manual.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Specified Products: Manufacturer's names and product model numbers indicated on the drawings and in these specifications establish the type, style, quality, performance, and sound rating of the desired product. Listing of other manufacturers indicates that their equivalent products would be acceptable if they meet the specification requirements, the

specific use and installation shown on the drawings, including space and clearance requirements, and the energy consumption and efficiency of the specified product.

B. Space Requirements: All manufactured products furnished on this project must have the required space and service areas indicated in the manufacturer's printed literature or shown on their approved shop drawings. When the manufacturer does not indicate the space required for servicing the equipment, the space shown on the drawings or as required by the Engineer must be provided.

2.2 MATERIAL AND EQUIPMENT

A. General: Material and equipment used shall be produced by manufacturers regularly engaged in the production of similar items, and with a history of satisfactory use as judged by the Engineer.

B. Specified Equipment: Equipment shall be the capacity and types indicated. Equipment and material furnished shall be the manufacturer's standard item of production unless specified or required to be modified to suit job conditions. Sizes, material, finish, dimensions and the capacities for the specified application shall be published in catalogs for national distribution. Ratings and capacities shall be certified by a recognized rating bureau. Products shall be complete with accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.

C. Aompatibility: Material and equipment of one and the same kind, type or classification and used for identical or similar purposes shall be made by the same manufacturer. Where more than one choice is available, select the options which are compatible with other products already selected. Compatibility is a basic general requirement of product selection.

D. Zero where possible, and Low VOC construction materials shall be utilized for this project to comply with owners OPR and BOD. Product submittals shall clearly indicate compliance with this project requirement.

2.3 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.4 JOINING MATERIALS

A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

    a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.5 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solderjoint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F .

2.6 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

2. Pressure Plates: Stainless steel. Include two for each sealing element.
3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.7 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
1. Underdeck Clamp: Clamping ring with set screws.

E. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.

F. PVC Pipe: ASTM D 1785, Schedule 40.

2.8 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Polished chrome-plated.

D. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

E. Split-Plate, Stamped-Steel Type: With exposed-rivet hinge, set screw or spring clips, and chrome-plated finish.

F. One-Piece, Floor-Plate Type: Cast-iron floor plate.

2.9 VIBRATION AND SOUND CONTROL

A. Sound is of the utmost critical nature in this facility. The contractor shall comply with Specification Section 230548 Vibration Controls for HVAC Piping & Equipment. Contractor shall provide isolation and support in strict accordance to the specification.

1. Contractor shall provide all necessary vibration isolation and support to install a noise and vibration-free systems.

B. Contractor shall provide hanging and support in compliance with Specification Section 23 0529 Hangers and Supports for HVAC Piping and Equipment.

2.10 EXPOSED DUCTWORK AND EQUIPMENT

A. All exposed ductwork and equipment shall be installed with attention to aesthetic details. System shall be installed in a logical method.

1. Equipment shall be systematically laid out. Exposed piping, ductwork, etc. that is visually undesirable to the architect/engineer shall be reinstalled at the contractor's sole expense.
2. Exposed Ductwork in the space that is visually undesirable to the architect/engineer shall be reinstalled at the contractor's sole expense.

2.11 EQUIPMENT GREASE FITTINGS

A. Provide grease fittings for all equipment requiring grease for maintenance. Grease fittings shall fit a standard grease gun.

B. Access to grease points on all equipment shall be provided without the use of remote grease fittings. If this cannot be provided, the remote grease lines shall be copper, with grease fittings located in an accessible location.

PART 3 - EXECUTION

3.1 WORKMANSHIP

A. General: Personnel who install materials and equipment shall be qualified by training and experience to perform their assigned tasks.

B. Performance: Material and equipment installations not in compliance with the Contract Documents, or installed with substandard workmanship in the opinion of the Engineer, shall be removed and reinstalled.

3.2 CLEANING AND PROTECTION

A. General: Refer to Division 01.

B. Housekeeping: Keep interiors of duct and pipe systems clean and free from dirt, rubbish and foreign matter. Close open ends of piping and ductwork at all times throughout the installation. Install 30% efficient filter media over each return air grille and open return duct opening; change media regularly during construction when dirty to keep duct interiors clean. Prevent dust, debris and foreign material from entering the piping and ductwork.

C. Equipment Protection: Protect fan motors, switches, equipment, fixtures, and other items from dirt, rubbish and foreign matter. Do not operate air handling equipment if the building is not clean or if dust can enter the coils or the fan housings.

D. Equipment Cleaning: Thoroughly clean equipment and entire piping systems internally upon completion of installation and immediately prior to Submittal Completion. Open dirt pockets and strainers, blow down each piping system and clean strainer screens of accumulated debris. Remove accumulated dirt, scale, oil and foreign substances. Thoroughly wipe clean internal surfaces of ductwork and air handling units prior substantial completion. Refer to Section 15060, Pipe and Fittings, for detailed requirements for piping systems' flushing and cleaning.

E. Fixture Cleanup: Remove temporary labels, stickers, etc., from fixtures and equipment. Do not remove permanent name plates, equipment model numbers, ratings, etc.

F. Filter Replacement: Provide filters, with the same efficiency rating as required for the final installation, for the protection of the air moving equipment and ductwork continuously throughout the construction phase. Provide a new set of clean filters for the test and balance of the air side equipment.

G. Protection of Finished Installation: Where installation is required in areas previously finished by other trades, protect the area from marring, soiling or other damage.

3.3 CORRECTION OF WORK

A. General: At no additional cost to the Owner, rectify discrepancies between the actual installation and Contract Documents when in the opinion of the Testing and Balancing Agency (T&B Agency) or the Engineer the discrepancies will affect system balance and performance.

B. Drive Changes: Include the cost of all pulley, belt, and drive changes, as well as balancing dampers, valves and fittings, and access panels to achieve proper system balance recommended by the T&B Agency.

3.4 COORDINATION AND ASSISTANCE

A. General: Provide all labor, equipment, tools and material required to operate the equipment and systems necessary for the testing and balancing of the systems and for the adjustment, calibration and repair of all electric or pneumatic automated control devices and components. These services shall be available on each working day during the period of final testing and balancing.

B. Drawings and Specifications: Provide to the T&B Agency a complete set of project record drawings and specifications and an approved copy of all HVAC shop drawings and equipment submittals. The T&B Agency shall be informed of all changes made to the system during construction, including applicable change orders.

C. Coordination: Coordinate the work of all trades and equipment suppliers to complete the modifications recommended by the T&B Agency and accepted by the Engineer. Cut or drill holes for the insertion of air measuring devices as directed for test purposes; repair to as-new condition, inserting plastic caps or covers to prevent air leakage. Repair or replace insulation and re-establish the integrity of the vapor retardant.

3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. Piping:

    a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    b. Insulated Piping: One-piece, stamped-steel type with spring clips.
    c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, castbrass type with polished chrome-plated finish.

d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece or split-casting, cast-brass type with polished chrome-plated finish.
f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge and set screw.
g. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated finish.
h. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type with concealed or exposed-rivet hinge and set screw or spring clips.
i. Bare Piping in Equipment Rooms: One-piece, cast-brass type.
j. Bare Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.
k. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

3.6 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using leadfree solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.7 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.8 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.9 PAINTING

A. Painting of HVAC systems, equipment, and components is specified in Division 9 Sections "Interior Painting" and "Exterior Painting."

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.10 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use minimum 3000-psi (or higher psi rating if required by the equipment manufacture or structural drawings), 28-day compressive-strength concrete and reinforcement as specified in Division 3 Section "Cast-in-Place Concrete.".

3.11 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 5 Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.12 GROUTING

A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

3.13 ACCESS DOORS AND FRAMES

A. Provide access doors and frames of the appropriate size and locations to allow access to mechanical equipment, valves, dampers, etc. All locations are to be field verified with the Architect prior to installation.

3.14 CEILING GRID / ACCESS DOOR LABELING AND EQUIPMENT LABELS:

A. All equipment located above the ceiling or behind an access door shall have the name of the equipment provided on the ceiling grid or access door that is clearly visible from ground level. This includes, but is not limited to air terminal units, valves, fire dampers and exhaust fans. During training the contractor shall identify each of these labels during a walk-thru style review with the Owner.

B. Equipment shall be clearly labeled (including but not limited to starters, disconnects, VFDs, Equipment…) and shall be consistent with the names used on the design drawings.

C. Refer to individual specification sections for additional labeling requirements.

D. Refer to Specification Section 230553 “Identification for HVAC Piping and Equipment” for additional requirements.

3.15 IN GROUND BOXES:

A. All in-ground electrical boxes, valve boxes or other similar equipment smaller than 24”x24” shall have a concrete pad poured around the perimeter to extend the edges of the location to at least 24”x24”.

3.16 INSTALLATION OF HVAC EQUIPMENT SUPPLIED BY OTHERS DIVISIONS

A. A. Division 23 Contractors shall be responsible provide all necessary labor, materials, and coordination required for successful installation of equipment provide by other divisions but vital for successful operation of HVAC equipment. Equipment and materials vital for successful operation of HVAC equipment include but are not limited to the follow:

1. Control Dampers
2. Control Valves

3. Kitchen Equipment:

    a. Cooler/Freezer Refrigeration Equipment
    b. Cooler/Freezer Refrigerant Piping
    c. Cooler/Freezer Refrigeration Curbing/Support/Wind Restraints

4. Thermowells
5. Pipe Taps
6. Water Sensors and Switches

3.17 PREPARATIONS FOR PERFORMANCE VERIFICATION

A. See Specification Section 230593 TESTING, ADJUSTING, AND BALANCING

B. Verification: Prior to commencement of balancing by the T&B Agency, verify the following in writing:

1. Air filters have been replaced and are clean.
2. Linkages between dampers and their actuators are secure, non-overloading and non-binding.
3. Ductwork specialties are in their normal operating positions.
4. Fans are operating at the correct rotation and specified RPM.
5. Ductwork has been pressure tested and accepted.

6. Strainers have been removed, cleaned and replaced, and that temporary construction strainers have been removed.
7. Compression or expansion tanks have been inspected, are not air-bound or water-logged and are pre-charged, and that the piping systems have been completely vented and filled with water.
8. Air vents at coils and high points of the piping systems have been inspected and installed and operating freely.
9. Automatic valves, hand valves, and balancing valves have been placed in a fixed open position for full flow through all devices.
10. Linkages between valves and their actuators are secure, non-overloading and non-binding.
11. Pressures for hydronic reducing valves have been set.
12. Operating temperatures have been set for chillers and regulating valves.
13. Pumps are operating at the correct rotation and specified horsepower.
14. Piping has been pressure tested and accepted and piping systems have been cleaned, flushed, sterilized and refilled with chemicals and prescribed treated water and vented.
15. Operating safety features (such as thermal overloads, firestats, freezestats, smoke detectors and relief valves), are installed and fully functional.
16. Equipment has been lubricated and can be operated without damage.
17. Systems are operational and complete.
18. No latent residual work remains to be completed.

3.18 PREFUNCTIONAL AND FUNCTIONAL PERFORANCE TESTING

A. Division 23 Contractors shall be responsible to carry out the commissioning requirements specified in the commissioning sections, and all other sections where related to commissioning. Provide all necessary labor, materials, and coordination required for successful completion of the commissioning requirements. Refer to all other individual project specification sections, Commissioning Specifications and Commissioning Plan for additional testing requirements.

B. System verification: HVAC Controls:

1. In addition to any other specified System Verification Requirements, the following minimum system verification shall be performed in addition to other project specifications. (Note: If there is a duplicate of system verification, it is not the intent to specify System Verification twice, but to establish the minimum requirements if not specified otherwise.)

2. Verify all sequences of operation, schedules, alarms and notifications

   a. Test method:

      1) Sequences, alarms and notifications will be demonstrated by the controls contractor using the functional performance test provided by the CxA.

b. Requirements to facilitate testing:

1) All sequences of operation, schedules, alarms and notifications shall be included on the contractors shop drawings in accordance with the construction documents, and numbered to allow ease of reference.
2) Each sequence, alarm or notification shall include a defined start, stop and response time value.

3. Verify setpoints and time delays:

1) Test method:

a) Setpoints and time delays will be demonstrated by the controls contractor using the functional performance test or construction checklists provided by the CxA

2) Requirements to facilitate testing:

3) All setpoints and time delays shall be included on the contractors shop drawings in accordance with the construction documents, along with the following information:

a) Values that shall be visible on the user graphics.
b) Values adjustable from the user graphics
c) Allowable range for user manipulation from the Values being trended
d) User adjustments being monitored
e) Adjustable range by users in space

4. Verify component calibration:

a. Component Calibration data required below, shall be clearly indicated in the contractors shop drawings, in accordance with contract drawings and specifications, to facilitate Component Calibration.

b. Humidity sensors and temperature sensors (air or water):

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractors using a calibrated test instrument and comparing the control system value to the test measurement obtained within 12” of the sensors location.

2) Requirements to facilitate testing: The following values need to be defined in the contractors shop drawings per the contract documents for each sensor type:

a) Intended installation location
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value
d) Allowable control system or transducer offset
e) Wet temperature sensors require a pressure/temperature port that will provide an accurate and consistent reading. Provide a P/T test port by each wet sensor.

f) Air sensors require a ductwork location that will provide an accurate and consistent reading, therefore shall be located to provide the specified accuracy in accordance with the manufactures installation guidelines for the actual installation conditions.

c. Carbon Dioxide (CO2) or Volatile Organic Compound (VOC):

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractors using an HVAC sequence of operation and test for relative calibration.
b) With building empty, allow O/A to enter the building until the reading for the O/A is within 50ppm of the indoor air, then close the O/A damper and continue to circulate indoor air for approximately 1-hr to confirm all sensors measure within 50ppm of each other.

2) Requirements to facilitate testing: The following values need to be defined in the contractors shop drawings per the contract documents for each sensor type:

a) Intended installation location
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value
d) Allowable control system or transducer offset

d. Airflow measuring stations:

1) Test Method:

a) Calibration will be demonstrated by TAB and controls contractor at the top and bottom of the typical operating range by performing a duct traverse up or downstream of device and comparing it to the control system value.

b) Where provided on design drawings, verification of an air filter between the unfiltered outside air and the airflow measuring station will be visually verified with the mechanical contractor.

2) Requirements to facilitate testing: The following values need to be defined on the contractors shop drawings in accordance with the contract documents for each sensor:

a) Intended installation location on ductwork drawing showing manufacturer recommended upstream and downstream straight duct requirements.
b) Intended installation location of the outside air filter.
c) Device accuracy defined as a set value, percentage of operating range or percentage of measured value.
d) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value.
e) Allowable control system or transducer offset.

e. Dampers:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor by conducting a visual verification of the device and comparing it to the control system value.

2) Requirements to facilitate testing:

a) Access doors and/or an accessible location within a user serviceable distance from the equipment shall be installed. Doors shall be sized to provide proper service access and accommodate testing/verification.

f. Hydronic valves:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor by conducting a visual verification of the valve stem position and comparing it to the control system value.
b) The closed position shall be demonstrated by the TAB contractor using a differential pressure or temperature based leak-by test.

2) Requirements to facilitate testing:

a) Pressure/temperature test ports shall be installed immediately before and after the location of the leak-by test.

g. Current (Amp) Transducer or Switch:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor using a calibrated test instrument and comparing the control system value to the test measurement.

2) Requirements to facilitate testing: The following values need to be defined for each sensor type:

a) Intended installation location
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value
d) Allowable control system or transducer offset

h. Hydronic static pressure or differential pressure sensor:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor at the top and bottom of the typical operating range using a calibrated test instrument and comparing it to the control system value.

2) Requirements to facilitate testing: The following values need to be defined for each sensor type:

a) Intended installation location
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value.
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value
d) Allowable control system or transducer offset.
e) Wet pressure sensors require a pressure/temperature port that will provide an accurate and consistent reading. Provide a P/T test port tee'd into each wet sensor input to accommodate calibration and testing.

i. Airflow Switch:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor conducting a visual verification of the device and comparing it to the control system value.

2) Requirements to facilitate testing: The following values need to be defined for each sensor type:

a) Intended installation location
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value.
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value.
d) Allowable control system or transducer offset.

j. Hydronic flow meter:

1) Test Method:

a) Calibration will be demonstrated by the TAB and controls contractor by isolating flow to a single pump or coil, determining the associated flow based on pressure drop and comparing it to the control system value

2) Requirements to facilitate testing: The following values need to be defined for each sensor type:
a) Intended installation location on CHW/HHW piping in accordance with manufacturer recommended upstream and downstream straight piping requirements.
b) Device accuracy defined as a set value, percentage of operating range or percentage of measured value.
c) Field calibration accuracy defined as a set value, percentage of operating range or percentage of measured value.
d) Allowable control system or transducer offset.

5. System verification: Each AHU, FCU, RTU or similar air handling device:

a. Control system components, including but not limited to sequences of operation, setpoints, time delays, dampers and valves shall be verified in accordance with the HVAC Control System information above.

b. Verify minimum / maximum supply, outside air and exhaust air volume.

1) Test method:

a) TAB contractor shall perform a duct traverse and compare it to the design values.

2) Requirements to facilitate testing:

a) Identify the intended test location on ductwork shop drawings and any requirement for straight ductwork.

c. Verify total and external static pressure on equipment

1) Test method:

a) TAB contractor shall perform static pressure profile across all associated dampers, filters, coils, heating elements and similar components at the maximum volume and compare it to the design value.

2) Requirements to facilitate testing:

a) Adequate access to drill or use pre-installed test ports at each pressure drop location along the equipment. (Contractor shall seal and plug all test ports after testing is complete with a removable plug to accommodate re-testing in the future.).

d. Verify hydronic volumes:

1) Test method:

a) TAB contractor shall demonstrate by measuring wet differential pressure across coil and comparing it to the manufacturer's coil data.
b) Verification shall be conducted (and documented) with system at the minimum differential pressure required to satisfy the building's most hydraulically remote device.

2) Requirements to facilitate testing:

a) Pressure and temperature test ports of adequate length will be needed immediately before and after CHW coil connection. (Install P/T Test ports to accommodate verification.)

e. Verify static and differential pressure at balancing device.

1) Test method:

a) Static and differential pressure will be verified with TAB contractor at the pressure and temperature ports nearest the balancing device.

2) Requirements to facilitate testing:

a) Pressure and temperature test ports needed to verify coil GPM should facilitate this test as well.

f. Verify heat transfer capacity of hydronic heating or cooling coil.

1) Test method:

a) While inducing the coil's maximum capacity by manipulating air volumes and temperatures, the TAB contractor will measure the water temperature and pressure drop to calculate the coil capacity.

2) Requirements to facilitate testing:

a) Pressure and temperature test ports needed to verify coil GPM should facilitate this test as well.

g. Verify heat transfer capacity of electric or DX heating or cooling coil:

1) Test method:

a) While inducing the coil's maximum capacity by manipulating air volumes and temperatures, temperature before and after the coil will be verified with the TAB contractor and used in conjunction with a known or measured air volume.
b) For electric heating coils, capacity may be determined by measuring voltage and amperage in lieu of air temperatures.

2) Requirements to facilitate testing:

a) Ductwork test location used for verifying air volumes should also facilitate this test

h. Verify coil EAT (DB & WB), LAT (DB & WB), EWT and LWT.

1) Test Method:

a) These values will be verified with the TAB contractor using a calibrated test instrument upstream and downstream of the coil.

2) Requirements to facilitate testing:

a) Sufficient access to ductwork and piping around unit. Testing for the unit's hydronic volumes should facilitate test ports for these measurements as well.

i. Verify motor(s) HP, amps and volts:

1) Test Method:

a) While at maximum design conditions, these values will be verified with the TAB contractor and their previously used calibrated test instruments.
b) Requirements to facilitate testing: No specific requirements.

j. Verify motor and Fan RPM

1) Test Method:

a) While at maximum design conditions, these values will be verified the TAB contractors calibrated tachometer.

2) Requirements to facilitate testing: No specific requirements.

k. Verify VFD operation

1) Test Method:

a) All Programmed settings will be accessed locally at the equipment verified with the TAB and mechanical contractor.
b) Direction of equipment rotation will be verified with the mechanical contractor using the VFD inverter and the mechanical bypass.

2) Requirements to facilitate testing:

a) Programmed settings for the following values need to be defined by the VFD start-up technician and controls contractor for a stable operating system:
b) Acceleration & Deceleration time
c) Minimum & Maximum operation frequency
d) Safeties that must remain in place when in bypass

6. System verification: Each Terminal Unit:

a. Verify control system components including but not limited to sequences of operation, setpoints, time delays, dampers and valves in accordance with the HVAC Control System information above.

b. Verify minimum and maximum air volumes for heating and cooling

1) Test Method:

a) Air volumes for each grille downstream of the unit shall be verified with the TAB contractor using a duct traverse or flow hood measurement.

2) Requirements to facilitate testing:

a) Access to terminal unit and grilles and/or ductwork. (Flow Hood is the preferred method.)

c. Verify heat transfer capacity in accordance with the AHU, FCU, RTU information above.

7. System verification: Each Pump:

a. Verify control system components including but not limited to sequences of operation, setpoints, time delays, dampers and valves in accordance with the HVAC Control System information above.
b. Verify volume, head pressure, impeller diameter

c. Test Method:

1) Differential pressure across the pump shall be verified with the TAB contractor and compared to the manufacturer's performance curve at shut-off and the systems designed differential pressure setpoint.

2) Requirements to facilitate testing:

a) Pressure/temperature ports immediately before and after the pump.
b) Differential pressure setpoint used during the TAB. (Note: This should be the lowest differential pressure that maintain the system balance requirements, and is determined during TAB.)

d. Verify motor HP, amps, volts, RPM

1) Test Method:
a) While at maximum design conditions, these values will be verified with the TAB contractor and their previously used calibrated test instruments.

2) Requirements to facilitate testing: No specific requirements

e. Verify VFDs in accordance with the AHU, FCU, RTU information above.

8. System verification: Each supply fan, exhaust fan or outside air fan:

a. Verify control system components including but not limited to sequences of operation, setpoints, time delays, dampers and valves in accordance with the HVAC Control System information above.
b. Verify minimum / maximum air volume in accordance with the AHU, FCU, RTU information above.
c. Verify motor(s) HP, amps and volts in accordance with the AHU, FCU, RTU information above.

d. Verify motor and fan RPM in accordance with the AHU, FCU, RTU information above.
e. Verify VFDs in accordance with the AHU, FCU, RTU information above.

C. Photo Documentation of Valves:

1. All automatic flow control balancing valves, manual balancing valves and motorized control valves shall be photographed in their installed position prior to insulation installation. The pictures shall include the nameplate of the associated equipment and the nameplate of the valve with the manufacturer, model, volume and flow direction clearly visible. Additional pictures shall be taken as necessary to clearly illustrate the valves position in the piping relative to the surrounding equipment and devices.
2. All valves shall be equipped with a valve tag and match the valve chart.

3.19 PROTECTION OF MATERIALS AND EQUIPMENT

A. Requirements: Do not store fiberglass insulation or any equipment within the building until it has been "dried in". If dry space is unavailable and the insulation and equipment must be installed or stored before the building is "dried in" and completely enclosed, provide polyethylene film cover for protection.

B. Replacement of Damaged Stored Material and Equipment: Any material and equipment that has been wet or otherwise damaged prior to installation shall be replaced with new material regardless of the condition of the material and equipment at the time of installation.

C. Repair of Damaged Installed Material and Equipment: After installation correct or repair dents, scratches and other visible blemishes. At the direction of Engineer replace or repair to "as new" condition equipment which has been damaged during construction.

3.20 COORDINATION OF SERVICES

A. Interruption of services: Provide shutoff valves at points of interconnection to minimize downtime.

END OF SECTION 23 00 10

SECTION 23 05 00 - COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Dielectric fittings.
3. Mechanical sleeve seals.
4. Sleeves.
5. Escutcheons.
6. Grout.
7. Equipment installation requirements common to equipment sections.
8. Painting and finishing.
9. Concrete bases.
10. Supports and anchorages.

1.3 DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to

outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:

1. CPVC: Chlorinated polyvinyl chloride plastic.
2. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Dielectric fittings.
2. Mechanical sleeve seals.
3. Escutcheons.

B. Welding certificates.

1.5 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."

2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, the manufacturers specified.

2.2 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.

b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. Solvent Cements for Joining Plastic Piping:

1. CPVC Piping: ASTM F 493.
2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.

2.4 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

1. Manufacturers:

a. Epco Sales, Inc.
b. Watts Industries, Inc.; Water Products Div.
c. Zurn Industries, Inc.; Wilkins Div.

D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

1. Manufacturers:

a. Capitol Manufacturing Co.
b. Epco Sales, Inc.
c. Watts Industries, Inc.; Water Products Div.

E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Central Plastics Company.
d. Pipeline Seal and Insulator, Inc.

2. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

1. Manufacturers:

a. Calpico, Inc.
b. Lochinvar Corp.

G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

1. Manufacturers:

a. Perfection Corp.
b. Precision Plumbing Products, Inc.
c. Sioux Chief Manufacturing Co., Inc.
d. Victaulic Co. of America.

2.5 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.

2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Plastic. Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.6 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

2.7 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Rough brass.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.

1. Finish: Rough brass.

E. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

F. Split-Plate, Stamped-Steel Type: With exposed-rivet hinge and chrome-plated finish.

2.8 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.

2. Design Mix: 5000-psi, 28-day compressive strength.

3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:

a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Insulated Piping: One-piece, stamped-steel type with spring clips.
c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type and set screw.

M. Sleeves are not required for core-drilled holes.

N. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.

3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. Steel Pipe Sleeves: For pipes smaller than NPS 6.

b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing and Trim" for flashing.

1) Seal space outside of sleeve fittings with grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.

O. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Install steel pipe for sleeves smaller than 6 inches in diameter.
2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

P. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

Q. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.

R. Verify final equipment locations for roughing-in.

S. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.2 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
3. PVC Nonpressure Piping: Join according to ASTM D 2855.

3.3 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.4 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.5 PAINTING

A. Painting of HVAC systems, equipment, and components is specified in Division 09 Sections "Interior Painting" and "Exterior Painting."

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.6 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 5 Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.8 GROUTING

A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

END OF SECTION 23 05 00

SECTION 23 05 13 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION

A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:

1. Motor controllers.
2. Torque, speed, and horsepower requirements of the load.
3. Ratings and characteristics of supply circuit and required control sequence.
4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.

B. Comply with NEMA MG 1 unless otherwise indicated. Motors shall meet “NEMA Premium” Efficiency motor program.

C. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

A. Duty: Continuous duty at ambient temperature of 40 deg C and at sea level.

B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Energy efficient, as defined in NEMA MG 1.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.

1. For motors with 2:1 speed ratio, consequent pole, single winding.
2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Rotor: Random-wound, squirrel cage.

F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

G. Temperature Rise: Match insulation rating.

H. Insulation: Class F.

I. Code Letter Designation:

1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.

4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

B. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

1. Permanent-split capacitor.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION

3.1 All equipment with electric motors larger than 10 hp shall be provided with access for a motor lift and provisions to move the lift from the equipment’s location to ground level on the exterior of the building.

END OF SECTION 23 05 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 14 - VARIABLE FREQUENCY MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION

A. This specification is to cover a complete Variable Frequency motor Drive (VFD) consisting of a pulse width modulated (PWM) inverter designed for use with a standard NEMA Design B induction motor.

B. The drive manufacturer shall supply the drive and all necessary options, specified. The manufacturer shall have been engaged in the production of this type of equipment for a minimum of ten years. All VFDs installed on this project shall be from the same manufacturer.

1.3 SUMMARY

A. Related Sections:

1. Section 237300 – Custom Indoor Central-Station Air-Handling Units
2. Section 233423 - HVAC Power Ventilators
3. Section 232123 - Hydronic Pumps
4. Section 230900 – Instrumentation and Control For HVAC

B. Section includes separately enclosed, pre-assembled, combination VFCs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.

1.4 REFERENCES

A. Institute of Electrical and Electronics Engineers

1. IEEE C62.41 – Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.

B. National Electrical Manufacturers Association

   1. NETA ATS – Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.5 SUBMITTALS

A. Shop Drawings: Indicate front and side views of enclosures with overall dimensions and weights shown; conduit entrance locations and requirements; and nameplate legends.

B. Product Data: For each type and rating of VFC indicated. Include the following features:

   1. Performance
   2. Electrical Ratings
   3. Operating Characteristics
   4. Dimensioned outline drawing
   5. Schematic diagram
   6. Component list
   7. Power and control connection diagram(s).
   8. Bacnet Interface Controller

   9. Compliance to IEEE 519 – harmonic analysis for particular jobsite including total harmonic voltage distortion and total harmonic current distortion (TDD).

      a. The VFD manufacturer shall provide calculations; specific to this installation, showing total harmonic voltage distortion is less than 5%. Input filters shall be sized and provided as required by the VFD manufacturer to ensure compliance with IEEE standard 519. All VFD's shall include a minimum of 5% impedance reactors.

C. Test Reports: Indicate field test and inspection procedures and test results.

D. Manufacturer's Field Reports: Indicate start-up inspection findings.

E. Harmonic Analysis Study and Report: Comply with IEEE 399 and NETA Acceptance Testing Specification; indentify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze possible operating scenarios, including recommendations for VFC input filtering to limit TDD and THD (V) at each VFC to specified levels.

1.6 CLOSEOUT SUBMITTALS

A. Section 01 - Execution and closeout requirements.

B. Provide final equipment submittal information with all noted corrections incorporated.

C. Field quality-control reports.

D. Operation and Maintenance Data: Submit instructions complying with NEMA ICS 7.1. Include procedures for starting and operating controllers, and describe operating limits possibly resulting in hazardous or unsafe conditions. Include routine preventive maintenance schedule.

1. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and MCP trip setting.
2. Manufacturer's written instructions for setting field-adjustable overload relays.
3. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
4. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.

E. Load Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that switch settings for motor-running overload protection suit actual motor to be protected.

1.7 QUALITY ASSURANCE

A. Refer to calculation and additional testing requirements located within Division 26 and Part 3 of this Section.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. QUALITY ASSURANCE

1. Referenced Standards:

a. Institute of Electrical and Electronic Engineers (IEEE)

1) Standard 519-1992, IEEE Guide for Harmonic Content and Control.

b. Underwriters laboratories

1) UL508C

c. National Electrical Manufacturer's Association (NEMA)

1) ICS 7.0, AC Adjustable Speed Drives

d. IEC 16800 Parts 1 and 2

e. National Electric Code (NEC)

1) NEC 430.120, Adjustable-Speed Drive Systems

2. Qualifications:
   a. VFDs and options shall be UL listed as a complete assembly. VFD's that require the customer to supply external fuses for the VFD to be UL listed are not acceptable. VFDs with red label UL stickers, requiring additional branch circuit protection are not acceptable. The base VFD shall be UL listed for 100 KAIC without the need for input fuses.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01 – Product Requirements: Product storage and handling requirements.

B. Store in clean, dry space. Maintain factory wrapping and provide additional plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided. Handle carefully to avoid damage to components, enclosure, and finish.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions:

1. Ambient Temperature: Not less than 14 deg. F. and not exceeding 104 deg. F.
2. Ambient Storage Temperature: Not less than minus 4 deg. F. and not exceeding 140 deg. F.
3. Humidity: Less than 95 percent (noncondensing).
4. Altitude: Not exceeding 1000 feet.

B. Conform to NEMA ICS 7 service conditions during and after installation of variable frequency controllers.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within the specified warranty period.

B. Furnish five year manufacturer warranty for variable frequency controller.

1.11 TRAINING

A. Contractor shall provide 16 hours of training to university staff divided into 4 sessions.

B. Training shall be video taped by a licensed videographer. One DVD copy shall be provided to the owner and one DVD copy shall be provided to the commissioning agent for issuance into the commissioning report.

1.12 MAINTENANCE SERVICE

A. Section 01 – Execution and Closeout Requirements: Maintenance service.

B. Furnish service and maintenance of variable frequency controller for one year from Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 VARIABLE FREQUENCY CONTROLLER

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ABB (ACH 550) Or approved equal.
2. Or approved equal.

2.2 VARIABLE FREQUENCY CONTROLLER

A. The VFD package as specified herein shall be enclosed in a UL Listed Type enclosure, exceeding NEMA enclosure design criteria (enclosures with only NEMA ratings are not acceptable), completely assembled and tested by the manufacturer in an ISO9001 facility. The VFD tolerated voltage window shall allow the VFD to operate from a line of +30% nominal, and -35% nominal voltage as a minimum.

1. Environmental operating conditions: VFDs shall be capable of continuous operation at 0 to 500 C (32 to 1220 F) ambient temperature as per VFD manufacturers documented/submittal data or VFD must be oversized to meet these temperature requirements. Not acceptable are VFD's that can only operate at 40° C intermittently (average during a 24 hour period) and therefore must be oversized. Altitude 0 to 3300 feet above sea level, less than 95% humidity, non-condensing. All circuit boards shall have conformal coating.

B. All VFDs shall have the following standard features:

1. All VFDs shall have the same customer interface, including digital display, and keypad, regardless of horsepower rating. The keypad shall be removable, capable of remote mounting and allow for uploading and downloading of parameter settings as an aid for start-up of multiple VFDs.
2. The keypad shall include Hand-Off-Auto selections and manual speed control. The drive shall incorporate "bumpless transfer" of speed reference when switching between "Hand" and "Auto" modes. There shall be fault reset and "Help" buttons on the keypad. The Help button shall include "on-line" assistance for programming and troubleshooting.
3. There shall be a built-in time clock in the VFD keypad. The clock shall have a battery backup with 10 years minimum life span. The clock shall be used to date

and time stamp faults and record operating parameters at the time of fault. If the battery fails, the VFD shall automatically revert to hours of operation since initial power up. Capacitor back-up is not acceptable. The clock shall also be programmable to control start/stop functions, constant speeds, PID parameter sets and output Form-C relays. The VFD shall have a digital input that allows an override to the time clock (when in the off mode) for a programmable time frame. There shall be four (4) separate, independent timer functions that have both weekday and weekend settings.

4. The VFD's shall utilize pre-programmed application macro's specifically designed to facilitate start-up. The Application Macros shall provide one command to reprogram all parameters and customer interfaces for a particular application to reduce programming time. The VFD shall have two user macros to allow the end-user to create and save custom settings.
5. The VFD shall have cooling fans that are designed for easy replacement. The fans shall be designed for replacement without requiring removing the VFD from the wall or removal of circuit boards. The VFD cooling fans shall operate only when required. To extend the fan and bearing operating life, the VFD shall cycle the cooling fans on and off as required.
6. The VFD shall be capable of starting into a coasting load (forward or reverse) up to full speed and accelerate or decelerate to set point without tripping or component damage (flying start).
7. The VFD shall have the ability to automatically restart after an over-current, over-voltage, under-voltage, or loss of input signal protective trip. The number of restart attempts, trial time, and time between attempts shall be programmable.
8. The overload rating of the drive shall be 110% of its normal duty current rating for 1 minute every 10 minutes, 130% overload for 2 seconds. The minimum FLA rating shall meet or exceed the values in the NEC/UL table 430.250 for 4-pole motors.
9. The VFD shall have internal 5% impedance reactors to reduce the harmonics to the power line and to add protection from AC line transients. The 5% impedance may be from dual (positive and negative DC bus) reactors, or 5% AC line reactors. VFD's with only one DC reactor shall add an AC line reactor.
10. The input current rating of the VFD shall be no more than 3% greater than the output current rating. VFD's with higher input current ratings require the upstream wiring, protection devices, and source transformers to be oversized per NEC 430.120. Input and output current ratings must be shown on the VFD nameplate.
11. The VFD shall include a coordinated AC transient surge protection system consisting of 4-120 joule rated MOV's (phase to phase and phase to ground), a capacitor clamp, and 5% impedance reactors.
12. The VFD shall provide a programmable loss-of-load (broken belt / broken coupling) Form-C relay output. The drive shall be programmable to signal the loss-of-load condition via a keypad warning, Form-C relay output, and / or over the serial communications bus. The loss-of-load condition sensing algorithm shall include a programmable time delay that will allow for motor acceleration from zero speed without signaling a false loss-of-load condition.

13. The VFD shall have user programmable underload and overload curve functions to allow user defined indications of broken belt or mechanical failure / jam condition causing motor overload
14. The VFD shall include multiple “two zone” PID algorithms that allow the VFD to maintain PID control from two separate feedback signals (4-20mA, 0-10V, and / or serial communications). The two zone control PID algorithm will control motor speed based on a minimum, maximum, or average of the two feedback signals. All of the VFD PID controllers shall include the ability for “two zone” control.
15. If the input reference (4-20mA or 2-10V) is lost, the VFD shall give the user the option of either (1) stopping and displaying a fault, (2) running at a programmable preset speed, (3) hold the VFD speed based on the last good reference received, or (4) cause a warning to be issued, as selected by the user. The drive shall be programmable to signal this condition via a keypad warning, Form-C relay output and / or over the serial communication bus.
16. The VFD shall have programmable “Sleep” and “Wake up” functions to allow the drive to be started and stopped from the level of a process feedback signal.

C. All VFDs to have the following adjustments:

1. Three (3) programmable critical frequency lockout ranges to prevent the VFD from operating the load continuously at an unstable speed. The lockout range must be fully adjustable, from 0 to full speed.
2. Two (2) PID Set point controllers shall be standard in the drive, allowing pressure or flow signals to be connected to the VFD, using the microprocessor in the VFD for the closed-loop control. The VFD shall have 250 ma of 24 VDC auxiliary power and be capable of loop powering a transmitter supplied by others. The PID set point shall be adjustable from the VFD keypad, analog inputs, or over the communications bus. There shall be two independent parameter sets for the PID controller and the capability to switch between the parameter sets via a digital input, serial communications or from the keypad. The independent parameter sets are typically used for night setback, switching between summer and winter set points, etc.
3. There shall be an independent, second PID loop that can utilize the second analog input and modulate one of the analog outputs to maintain the set point of an independent process (ie. valves, dampers, etc.). All set points, process variables, etc. to be accessible from the serial communication network.
4. Two (2) programmable analog inputs shall accept current or voltage signals.
5. Two (2) programmable analog outputs (0-20ma or 4-20 ma). The outputs may be programmed to output proportional to Frequency, Motor Speed, Output Voltage, Output Current, Motor Torque, Motor Power (kW), DC Bus voltage, Active Reference, Active Feedback, and other data.
6. Six (6) programmable digital inputs for maximum flexibility in interfacing with external devices. All digital inputs shall be programmable to initiate upon an application or removal of 24VDC or 24VAC.
7. Three (3) programmable, digital Form-C relay outputs. The relay outputs shall include programmable on and off delay times and adjustable hysteresis. The relays shall be rated for maximum switching current 8 amps at 24 VDC and 0.4 A at 250 VAC; Maximum voltage 300 VDC and 250 VAC; continuous current rating

of 2 amps RMS. Outputs shall be true Form-C type contacts; open collector outputs are not acceptable.

8. Run permissive circuit - There shall be a run permissive circuit for damper or valve control. Regardless of the source of a run command (keypad, input contact closure, time-clock control, or serial communications), the VFD shall provide a dry contact closure that will signal the damper to open (VFD motor does not operate). When the damper is fully open, a normally open dry contact (end-switch) shall close. The closed end-switch is wired to a VFD digital input and allows VFD motor operation. Two separate safety interlock inputs shall be provided. When either safety is opened, the motor shall be commanded to coast to stop and the damper shall be commanded to close. The keypad shall display “start enable 1 (or 2) missing”. The safety input status shall also be transmitted over the serial communications bus.
9. The VFD control shall include a programmable time delay for VFD start and a keypad indication that this time delay is active. A Form C relay output provides a contact closure to signal the VAV boxes open. This will allow VAV boxes to be driven open before the motor operates. The time delay shall be field programmable from 0 – 120 seconds. Start delay shall be active regardless of the start command source (keypad command, input contact closure, time-clock control, or serial communications), and when switching from drive to bypass.
10. Seven (7) programmable preset speeds.
11. Two independently adjustable accel and decel ramps with 1 – 1800 seconds adjustable time ramps.
12. The VFD shall include a motor flux optimization circuit that will automatically reduce applied motor voltage to the motor to optimize energy consumption and reduce audible motor noise. The VFD shall have selectable software for optimization of motor noise, energy consumption, and motor speed control.
13. The VFD shall include a carrier frequency control circuit that reduces the carrier frequency based on actual VFD temperature that allows higher carrier frequency settings without derating the VFD.
14. The VFD shall include password protection against parameter changes.

D. The Keypad shall include a backlit LCD display. The display shall be in complete English words for programming and fault diagnostics (alpha-numeric codes are not acceptable). All VFD faults shall be displayed in English words. The keypad shall include a minimum of 14 assistants including:

1. Start-up assistant

2. Parameter assistants

    a. PID assistant
    b. Reference assistant
    c. I/O assistant
    d. Serial communications assistant
    e. Option module assistant
    f. Panel display assistant
    g. Low noise set-up assistant

3. Maintenance assistant
4. Troubleshooting assistant
5. Drive optimizer assistants

E. All applicable operating values shall be capable of being displayed in engineering (user) units. A minimum of three operating values from the list below shall be capable of being displayed at all times. The display shall be in complete English words (alpha-numeric codes are not acceptable):

1. Output Frequency
2. Motor Speed (RPM, %, or Engineering units)
3. Motor Current
4. Motor Torque
5. Motor Power (kW)
6. DC Bus Voltage
7. Output Voltage

F. Serial Communications

1. The VFD shall have an EIA-485 port as standard. The standard protocols shall be ASHRAE 135 - BACnet. Each individual drive shall have the protocol in the base VFD. The use of third party gateways and multiplexers is not acceptable. All protocols shall be “certified” BTL Listed for BACnet. Use of non-certified protocols is not allowed.

2. The BACnet connection shall be an EIA-485, MS/TP interface operating at 76.8 Kbps. The connection shall be tested by the BACnet Testing Labs (BTL) and be BTL Listed. The BACnet interface shall conform to the BACnet standard device type of an Applications Specific Controller (B-ASC). The interface shall support all BIBBs defined by the BACnet standard profile for a B-ASC including, but not limited to:

   a. Data Sharing – Read Property – B.
   b. Data Sharing – Write Property – B.
   c. Device Management – Dynamic Device Binding (Who-Is; I-Am).
   d. Device Management – Dynamic Object Binding (Who-Has; I-Have).
   e. Device Management – Communication Control – B.

3. If additional hardware is required to obtain the BACnet interface, the VFD manufacturer shall supply one BACnet gateway per drive. Multiple VFDs sharing one gateway shall not be acceptable.
4. Serial communication capabilities shall include, but not be limited to; run-stop control, speed set adjustment, proportional/integral/derivative PID control adjustments, current limit, accel/decel time adjustments, and lock and unlock the keypad. The drive shall have the capability of allowing the DDC to monitor feedback such as process variable feedback, output speed / frequency, current

(in amps), % torque, power (kW), kilowatt hours (resettable), operating hours (resettable), and drive temperature. The DDC shall also be capable of monitoring the VFD relay output status, digital input status, and all analog input and analog output values. All diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote VFD fault reset shall be possible.

5. Serial communication in bypass shall include, but not be limited to; bypass run-stop control, the ability to force the unit to bypass, and the ability to lock and unlock the keypad. The bypass shall have the capability of allowing the DDC to monitor feedback such as, current (in amps), kilowatt hours (resettable), operating hours (resettable), and bypass logic board temperature. The DDC shall also be capable of monitoring the bypass relay output status, and all digital input status. All bypass diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote bypass fault reset shall be possible.
6. The VFD / bypass shall allow the DDC to control the drive and bypass digital and analog outputs via the serial interface. This control shall be independent of any VFD function. The analog outputs may be used for modulating chilled water valves or cooling tower bypass valves. The drive and bypass' digital (Form-C relay) outputs may be used to actuate a damper, open a valve or control any other device that requires a maintained contact for operation. In addition, all of the drive and bypass' digital inputs shall be capable of being monitored by the DDC system. This allows for remote monitoring of which (of up to 4) safeties are open.
7. The VFD shall include an independent PID loop for customer use. The independent PID loop would be used for chilled water value control. Both the VFD PID control loop and the independent PID control loop shall continue functioning even if the serial communications connection is lost. As default, the VFD shall keep the last good set point command and last good DO & AO commands in memory in the event the serial communications connection is lost and continue controlling the process.

G. EMI / RFI filters. All VFD's shall include EMI/RFI filters. The onboard filters shall allow the VFD assembly to be CE Marked and the VFD shall meet product standard EN 61800-3 for the First Environment restricted level with up to 100 feet of motor cable. No Exceptions. Certified test reports shall be provided with the submittals confirming compliance to EN 61800-3, First Environment.

H. All VFD's through 25HP at 480 V shall be protected from input and output power mis-wiring. The VFD shall sense this condition and display an alarm on the keypad. The VFD shall not sustain damage from this power mis-wiring condition.

I. ADDITIONAL FEATURES – Optional features to be furnished and mounted by the drive manufacturer. All optional features shall be UL Listed by the drive manufacturer as a complete assembly and carry a UL508 label.

1. Fieldbus adapters - BACnet IP, shall be provided by adding of an optional card.

J. BYPASS CONTROLLER

1. A complete factory wired and tested bypass system consisting of a door interlocked, padlockable circuit breaker, output contactor, bypass contactor, and fast acting VFD input fuses are required. UL Listed motor overload protection shall be provided in both drive and bypass modes.
2. The bypass enclosure door and VFD enclosure must be mechanically interlocked such that the disconnecting device must be in the “Off” position before either enclosure may be accessed.
3. The VFD and bypass package shall have a UL listed short circuit current rating (SCCR) of 100,000 amps and this rating shall be indicated on the UL data label.
4. Drive Isolation Fuses - To ensure maximum possible bypass operation, fast acting fuses, exclusive to the VFD, shall be provided to allow the VFD to disconnect from the line prior to clearing upstream branch circuit protection. This maintains bypass operation capability in the event of a VFD failure. Bypass designs which have no such fuses, or that incorporate fuses common to both the VFD and the bypass, will not be accepted.
5. The system (VFD and Bypass) tolerated voltage window shall allow the system to operate from a line of +30%, -35% nominal voltage range. The system shall incorporate circuitry that will allow the drive or bypass contactor to remain “sealed in” over this voltage tolerance at a minimum.
6. The bypass shall maintain positive contactor control through the voltage tolerance window of nominal voltage +30%, -35%. This feature is designed to avoid contactor coil failure during brown out / low line conditions and allow for input single phase operation when in the VFD mode. Designs that will not allow input single phase operation in the VFD mode are not acceptable.
7. Motor protection from single phase power conditions - the bypass system must be able to detect a single phase input power condition while running in bypass, disengage the motor in a controlled fashion, and give a single phase input power indication. Bypass systems not incorporating single phase protection in bypass mode are not acceptable.
8. The bypass system shall NOT depend on the VFD for bypass operation. The bypass system shall be designed for standalone operation and shall be completely functional in both Hand and Automatic modes even if the VFD has been removed from the system for repair / replacement. Serial communications shall remain functional even with the VFD removed.
9. Serial communications – the bypass shall be capable of being monitored and controlled via serial communications. Communication shall be through BACnet IP.
10. Serial communication capabilities shall include, but not be limited to; bypass run-stop control; the ability to force the unit to bypass; and the ability to lock and unlock the keypad. The bypass shall have the capability of allowing the DDC to monitor feedback such as, current (in amps), kilowatt hours (resettable), operating hours (resettable), and bypass logic board temperature. The DDC shall also be capable of monitoring the bypass relay output status, and all digital input status. All bypass diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote bypass fault reset shall be possible. The following additional status indications and settings shall be

transmitted over the serial communications bus and / or via a Form-C relay output – keypad “Hand” or “Auto” selected, bypass selected, and broken belt indication. The DDC system shall also be able to monitor if the motor is running in the VFD mode or bypass mode over serial communications. A minimum of 50 field serial communications points shall be capable of being monitored in the bypass mode.

11. The bypass serial communications shall allow control of the bypass’ digital outputs via the serial interface. This control shall be independent of any bypass function or operating state. The bypass’ digital (relay) outputs may be used to actuate a damper, open a valve or control any other device that requires a maintained contact for operation. In addition, all of the bypass’ digital inputs shall be capable of being monitored by the DDC system.
12. There shall be an adjustable motor current sensing circuit for the bypass and VFD modes to provide proof of flow (broken belt) indication. The condition shall be indicated on the keypad display, transmitted over the building automation protocol and / or via a Form-C relay output contact closure. The broken belt indication shall be programmable to be a system (drive and bypass) indication. The broken belt condition sensing algorithm shall be programmable to cause only a warning or a fault and / or system shutdown.
13. The digital inputs for the system shall accept 24VAC or 24VDC. The bypass shall incorporate an internally sourced power supply and not require an external control power source. The bypass power board shall supply 250 ma of 24 VDC for use by others to power external devices.
14. There shall be a run permissive circuit for damper or valve control. Regardless of the source of a run command (keypad command, time-clock control, digital input, or serial communications) the bypass shall provide a dry contact closure that will signal the damper to open (motor does not operate). When the damper is fully open, a normally open dry contact (end-switch) shall close. The closed end-switch is wired to a bypass system input and allows motor operation. Up to four separate safety interlock inputs shall be provided. When any safety is opened, the motor shall be commanded to coast to stop, and the damper shall be commanded to close. This feature will also operate in Fireman’s override / smoke control mode.
15. The bypass control shall monitor the status of the VFD and bypass contactors and indicate when there is a welded contactor contact or open contactor coil. This failed contactor condition shall be indicated on the bypass LCD display, programmed to fire a Form-C relay output, and / or over the serial communications protocol.
16. The bypass control shall include a programmable time delay for bypass start and keypad indication that this time delay is in process. A Form C relay output provides a contact closure to signal the VAV boxes open. This will allow VAV boxes to be driven open before the motor operates at full speed in the bypass mode. The time delay shall be field programmable from 0 – 120 seconds.

17. There shall be a keypad adjustment to select manual or automatic transfer bypass. The user shall be able to select via keypad programming which drive faults will result in an automatic transfer to the bypass mode and which faults require a manual transfer to bypass. The user may select whether the system

shall automatically transfer from drive to bypass mode on the following drive fault conditions:

a. Over current
b. Over voltage
c. Under voltage
d. Loss of analog input

18. The following operators shall be provided:

a. Bypass Hand-Off-Auto
b. Drive mode selector
c. Bypass mode selector
d. Bypass fault reset

19. The bypass shall include a two line, 20 character LCD display. The display shall allow the user to access and view:

a. Energy savings – in US dollars
b. Bypass motor amps
c. Bypass input voltage– average and individual phase voltage
d. Bypass power (kW)
e. Bypass faults and fault logs
f. Bypass warnings
g. Bypass operating time (resettable)
h. Bypass energy (kilowatt hours – resettable)
i. I/O status
j. Parameter settings / programming
k. Printed circuit board temperature

20. The following indicating lights (LED type) or keypad display indications shall be provided. A test mode or push to test feature shall be provided.

a. Power-on (Ready)
b. Run enable
c. Drive mode selected
d. Bypass mode selected
e. Drive running
f. Bypass running
g. Drive fault
h. Bypass fault
i. Bypass H-O-A mode
j. Automatic transfer to bypass selected
k. Safety open
l. Damper opening
m. Damper end-switch made

21. The Bypass controller shall have six programmable digital inputs, and five programmable Form-C relay outputs. This I/O allows for a total System (VFD

and Bypass) I/O count of 24 points as standard. The bypass I/O shall be available to the BAS / DDC system even with the VFD removed.

a. The on-board Form-C relay outputs in the bypass shall programmable for any of the following indications.

1) System started
2) System running
3) Bypass override enabled
4) Drive fault
5) Bypass fault
6) Bypass H-O-A position
7) Motor proof-of-flow (broken belt)
8) Overload
9) Bypass selected
10) Bypass run
11) System started (damper opening)
12) Bypass alarm
13) Over temperature

22. The bypass shall provide a separate terminal strip for connection of freeze, fire, smoke contacts, and external start command. All external safety interlocks shall remain fully functional whether the system is in VFD or Bypass mode. The remote start/stop contact shall operate in VFD and bypass modes. The terminal strip shall allow for independent connection of up to four (4) unique safety inputs.
23. Class 10, 20, or 30 (programmable) electronic motor overload protection shall be included.

K. Enclosures:

1. Provide the VFD and bypass panels with the appropriate NEMA rated enclosure for the following applications:

a. Indoors: NEMA 12.
b. Indoors (mechanical rooms): NEMA 12.
c. Outdoors (Protected by overhang): NEMA 12 in NEMA 3R enclosure.
d. Outdoors (exposed to windblown dust or water): NEMA 12 in NEMA 4

2. Provide appropriate ventilation of VFD cabinetry to maintain ambient temperature rating of the drive based upon application. On outdoor installations appropriate ventilation shall be powered ventilation fan(s) and external 12”x12”x1”paper filter arranged so as to not allow paper filter to be exposed to rain.

2.3 SOURCE QUALITY CONTROL

A. Shop, inspect and perform standard productions tests for each controller.

B. Make completed controllers available for inspection at manufacturer's factory prior to packaging for shipment. Notify the Owner at least seven days before inspection is allowed.

C. Allow witnessing of factory inspections and tests at manufacturer's test facility. Notify the Owner at least seven days before inspections and tests are scheduled.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01300 – Administrative Requirements: Coordination and project conditions.

B. Verify that building environment can be maintained within the service and ambient temperature and humidity ratings required by the VFD manufacturer

3.2 INSTALLATION

A. Installation shall be the responsibility of the mechanical contractor. The contractor shall install the drive in accordance with the recommendations of the VFD manufacturer as outlined in the VFD installation manual.

B. Power wiring shall be completed by the electrical contractor, to NEC code 430.122 wiring requirements based on the VFD input current. Caution: VFDs supplied without internal reactors have substantially higher input current ratings, which may require larger input power wiring and branch circuit protection. The contractor shall complete all wiring in accordance with the recommendations of the VFD manufacturer as outlined in the installation manual.

C. Install in accordance with NEMA ICS 7.1.

D. Verify that mounting surface for VFDs are ready to receive work. Mount VFDs on the wall or at supports in locations identified on the drawings.

E. Tighten accessible connections and mechanical fasteners after placing controller.

F. Install fuses in fusible switches.

G. Select and install overload heater elements in motor controllers to match installed motor characteristics.

H. Install engraved plastic nameplates in accordance with Section 23 05 53.

I. Neatly type label inside controller door identifying motor served, nameplate horsepower, full load amperes, code letter, service factor, and voltage/phase rating. Place label in clear plastic holder.

J. Ground and bond controller in accordance with Section 26 05 26.

K. Controls installer shall provide all wiring and conduit associated with the control signals into and out of the VFD to the DDC EMS and as required for any motor control interlocks.

3.3 FIELD QUALITY CONTROL

A. Inspect and test in accordance with NETA ATS, except Section 4.

B. Perform inspections and tests listed in NETA ATS, Section 7.16 and NEMA ICS 7.1.

C. Perform power quality analysis per warranty requirements.

3.4 MANUFACTURER'S FIELD SERVICES

A. VFD Start-up: Provide certified factory start-up for each drive by a factory authorized service center representative. A certified start-up form shall be filled out for each drive with a copy provided to the Owner, and a copy kept on file at the manufacturer. The following VFD start-up services are to be provided as a minimum:

1. Service center technician shall be responsible for verifying correct installation, power and control wiring connections, starting-up the drive, and checking out for proper operation.
2. Service center technician shall also provide all final adjustments to meet the specified performance requirements.

3.5 DEMONSTRATION AND TRAINING

A. Provide 16 hours of instruction to be conducted at the project site with manufacturer's representative. The training shall be conducted at 4 hour maximums. Contractor to also provide two sets of VFD operation manuals for use at the training session and then provide to the Owner after completion of the session.

3.6 VARIABLE FREQUENCY DRIVE START-UP SERVICE

A. Provide start-up commissioning of variable frequency drive and optional circuits by factory certified service technician experienced in start-up and repair services. Commissioning personnel shall be the same personnel that will provide factory service and warranty repairs at site. Sales personnel and other agents who are not factory certified technicians for drive field repair not acceptable.

B. Include checking for verification of proper operation and installation and interface wiring to building automation system. Include as a minimum:

1. Verify contractor wire terminations to VFD optional circuitry.
2. Verify proper operation and reliability of VFD, motor being driven and building automation system.
3. Provide up to one hour of Owner/operator training on operation and service diagnostics during commissioning.

4. Measure to verify proper operation on:

    a. Motor voltage and frequency. Verify proper motor operation.
    b. Control input for proper building automation system interface and control calibration.
    c. Calibration check for:
    d. Minimum speed.
    e. Maximum speed.
    f. Acceleration and deceleration rates.
    g. Adjust as necessary.

C. Configure VSD for automatic restart after a power failure or after an external fault is cleared.

3.7 COMMISSIONING

A. Refer to Commissioning Specifications, Section 018110, for related commissioning requirements.

B. Contractor shall provide all necessary support to the commissioning team to implement commissioning plan as outlined in Section 018110.

END OF SECTION 23 05 14

SECTION 23 05 17 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves.
2. Grout.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.

2.2 GROUT

A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.

2. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.

3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.

C. Install sleeves for pipes passing through interior partitions.

1. Cut sleeves to length for mounting flush with both surfaces.
2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 07 "Joint Sealants."

D. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 "Penetration Firestopping."

3.2 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Concrete Walls above Grade:

a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves.
b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves.

2. Concrete Slabs above Grade:

a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves.
b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves.

3. Interior Partitions:

   a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves.
   b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves.

END OF SECTION 23 05 17

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 19 - METERS AND GAGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Thermowells.
2. Dial-type pressure gages.
3. Gage attachments.
4. Test plugs.
5. Test-plug kits.
6. Insertion Electromagnetic flowmeters.
7. Insertion Electromagnetic, thermal-energy meters.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of meter and gage, from manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

B. Spare Parts:

1. Spare materials shall be provided as a part of this project. In addition to any requirements in the drawings and/or specifications, the following minimum list of items shall be provided:

a. 1 of each type of thermometer
b. 1 of each type of pressure gauge.
c. 1 of each type of P/T port.

PART 2 - PRODUCTS

2.1 FILLED-SYSTEM THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Miljoco Corporation.
b. Trerice, H. O. Co.
c. Weiss Instruments, Inc.
d. Winters Instruments - U.S.
e. Weksler.

2. Standard: ASME B40.200.
3. Case: Cast aluminum; 7-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or plastic.

8. Stem: Aluminum and of length to suit installation.

a. Design for Thermowell Installation: Bare stem.

9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Miljoco Corporation.
b. Trerice, H. O. Co.
c. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
d. Weiss Instruments, Inc.
e. Weksler.

2. Standard: ASME B40.100.
3. Case: Liquid-filled type; cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Black metal.
9. Window: Glass or plastic.
10. Ring: Metal.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.3 GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/4, ASME B1.20.1 pipe threads and-type surge-dampening device. Include extension for use on insulated piping.

2.4 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Flow Design, Inc.
2. Miljoco Corporation.
3. Trerice, H. O. Co.
4. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
5. Weiss Instruments, Inc.

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: EPDM self-sealing rubber.

2.5 TEST-PLUG KITS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Flow Design, Inc.
2. Miljoco Corporation.
3. Trerice, H. O. Co.
4. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
5. Weiss Instruments, Inc.

B. Furnish one test-plug kit(s) containing one thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

C. Carrying Case: Metal or plastic, with formed instrument padding.

2.6 FLOWMETERS

A. Insertion Electromagnetic Flow Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. ONICON Incorporated

2. Description: Bi-directional Flowmeter with sensor and indicator.
3. Factory programmed and ready for use upon delivery.
4. Scalable pulse output to totalize forward and reverse flow.
5. Separate pulse output for flow rate.
6. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.

7. Sensor: Inline type; for installing between pipe flanges and measuring flow directly in gallons per minute.

a. Design: Flow metering for measuring electrically conductive liquids.
b. Wetted metal component: 316 Stainless-steel body, with integral transmitter.
c. Sensing Method: Electromagnetic Sensing
d. Flow Range: 0.1 ft/sec to 20 ft/sec (200:1 turndown)
e. Maximum Pressure Rating: 400 psig.

f. Pressure Drop: Less than 0.1 psi at 12 ft/s velocity in 3” and larger pipes
g. Input Power: 20-28 VDC, 250mA @ 24 VDC
h. Liquid Temperature Range: 15 °F to 250 °F.
i. Ambient Temperature Range: -20 °F to 150 °F.
j. Minimum Temperature Rating: 500 deg F.
k. Integral Transformer: For low-voltage power operation.

8. Accuracy: Plus or minus 1.0 percent for readings from 2 ft/sec to 20 ft/sec and 0.02 percent for below 2 ft/sec.
9. Operating Instructions: Include complete instructions with each flowmeter.

2.7 THERMAL-ENERGY METERS

A. Insertion Electromagnetic, Thermal-Energy Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. ONICON Incorporated.

2. Description: System with insertion electromagnetic flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.

3. Flow Sensor: Bi-directional Flowmeter with corrosion-resistant-metal body and transmitter; for installing in piping.

   a. Design: Total thermal-energy measurement.
   b. Minimum Pressure Rating: 150 psig.
   c. Minimum Temperature Range: 40 to 250 deg F.

4. Temperature Sensors: Insertion-type transducer.

5. Indicator: Solid-state, integrating-type meter; for wall mounting.

   a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units.
   b. Battery Pack: Five-year lithium battery.

6. Accuracy: Plus or minus 1 percent.
7. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or British thermal units.
8. Strainer: Full size of main line piping.
9. Operating Instructions: Include complete instructions with each thermal-energy meter system.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.

B. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.

C. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

D. Install valve and snubber in piping for each pressure gage for fluids (except steam).

E. Install valve and syphon fitting in piping for each pressure gage for steam.

F. Install test plugs in piping tees.

G. Install flow indicators in piping systems in accessible positions for easy viewing.

H. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.

I. Install flowmeter elements in accessible positions in piping systems.

J. Install permanent indicators on walls or brackets in accessible and readable positions.

K. Install connection fittings in accessible locations for attachment to portable indicators.

L. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.

M. Install thermometers in the following locations:

1. At the supply and return CHW risers to the building
2. At the supply and return CHW risers to the CEP building
3. At each AHU CHWS and CHWR mains.
4. At each Chiller CHWS and CHWR main.
5. At each Chiller CWS and CWR main.
6. At each Cooling Tower CWS.
7. At each Cooling Tower CWR.
8. Where indicated in other specification sections and drawing details.

N. Install pressure gages in the following locations:

1. At the supply and return CHW risers to the building
2. At the supply and return CHW risers to the CEP building
3. Suction and discharge of each pump (Pressure gauge for each pump can be one gauge, valved three ways.)
4. Upstream of each pump strainer (Pressure gauge for each pump can be one gauge, valved three ways.)
5. At each AHU CHWS and CHWR mains.
6. At each Chiller CHWS and CHWR main.
7. At each Chiller CWS and CWR main.
8. At each Cooling Tower CWS.
9. At each Cooling Tower CWR.
10. At DP sensors.
11. Where indicated in other specification sections and drawing details.

O. Install pressure/temperature test ports in the following locations:

1. Adjacent to each Pressure gauge.
2. Adjacent to Temperature gauges.
3. At each coil inlet and outlet.
4. At each balance valve for T&B.
5. Upstream and downstream of each strainer.
6. At each device, where required by the device manufacture for proper operation and confirmation of device performance by a T&B company.
7. At devices for Commissioning. See Commissioning Requirements.
8. Where indicated in other specification sections and drawing details.

3.2 CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

B. Connect flowmeter-system elements to meters.

C. Connect flowmeter transmitters to meters.

3.3 ADJUSTING

A. After installation, calibrate meters according to manufacturer's written instructions.

B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 PRESSURE-GAGE SCHEDULE

A. Pressure gages at suction and discharge of each pump shall be the following:

1. Liquid-filled, direct-mounted, metal case.
2. Test plug with EPDM self-sealing rubber inserts.

3.5 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Chilled-Water Piping: 0 to 30 psi.

3.6 FLOWMETER SCHEDULE

A. Flowmeters for Chilled-Water Piping: Insertion Electromagnetic type.

3.7 THERMAL-ENERGY METER SCHEDULE

A. Thermal-Energy Meters for Chilled-Water Piping: Insertion Electromagnetic type.

END OF SECTION 23 05 19

SECTION 23 05 23 - GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Bronze ball valves.
2. Iron ball valves.
3. Iron, single-flange butterfly valves.
4. Bronze swing check valves.
5. Iron swing check valves.
6. Bronze gate valves.
7. Iron gate valves.

B. Related Sections:

1. Division 23 HVAC piping Sections for specialty valves applicable to those Sections only.
2. Division 23 Section "Identification for HVAC Piping and Equipment" for valve tags and schedules.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene copolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

D. NRS: Nonrising stem.

E. OS&Y: Outside screw and yoke.

F. RS: Rising stem.

G. SWP: Steam working pressure.

1.4 SUBMITTALS

A. Product Data: For each type of valve indicated.

1.5 QUALITY ASSURANCE

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
2. ASME B31.1 for power piping valves.
3. ASME B31.9 for building services piping valves.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball and plug valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Refer to HVAC valve schedule articles for applications of valves.

B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

C. Valve Sizes: Same as upstream piping unless otherwise indicated.

D. Valve Actuator Types:

1. Gear Actuator: For quarter-turn valves NPS 8 and larger.
2. Handwheel: For valves other than quarter-turn types.
3. Handlever: For quarter-turn valves NPS 6 and smaller except plug valves.
4. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 15 plug valves, for each size square plug-valve head.
5. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

E. Valves in Insulated Piping: With 2-inch stem extensions and the following features:

1. Gate Valves: With rising stem.
2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
3. Butterfly Valves: With extended neck.

F. Valve-End Connections:

1. Flanged: With flanges according to ASME B16.1 for iron valves.
2. Grooved: With grooves according to AWWA C606.
3. Solder Joint: With sockets according to ASME B16.18.
4. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE ANGLE VALVES

A. Class 125, Bronze Angle Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Valves must be American Made):

a. Hammond Valve.
b. Milwaukee Valve Company.

2. Description:

a. Standard: MSS SP-80, Type 1.
b. CWP Rating: 200 psig.

c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
d. Ends: Threaded to 2", Flanged 2" and greater.
e. Stem and Disc: Bronze.
f. Packing: Asbestos free.
g. Handwheel: Malleable iron, bronze, or aluminum.

B. Class 150, Bronze Angle Valves with Bronze Disc (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Stockham Division.
b. Kitz Corporation.

2. Description:

a. Standard: MSS SP-80, Type 1.
b. CWP Rating: 300 psig.
c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
d. Ends: Threaded.
e. Stem and Disc: Bronze.
f. Packing: Asbestos free.
g. Handwheel: Malleable iron, bronze, or aluminum.

2.3 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Valve, Inc.
b. Conbraco Industries, Inc.; Apollo Valves.
c. Crane Co.; Crane Valve Group; Crane Valves.
d. Milwaukee Valve Company.
e. NIBCO INC.
f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

a. Standard: MSS SP-110.
b. SWP Rating: 150 psig.
c. CWP Rating: 600 psig.
d. Body Design: Two piece.
e. Body Material: Bronze.

f. Ends: Threaded to 2", Flanged 2" and greater.
g. Seats: PTFE or TFE.
h. Stem: Bronze.
i. Ball: Chrome-plated brass.
j. Port: Full.

2.4 IRON, SINGLE-FLANGE BUTTERFLY VALVES

A. 150 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bray Controls; a division of Bray International.
b. Conbraco Industries, Inc.; Apollo Valves.
c. Cooper Cameron Valves; a division of Cooper Cameron Corp.
d. Crane Co.; Crane Valve Group; Jenkins Valves.
e. Crane Co.; Crane Valve Group; Stockham Division.
f. Kitz Corporation.
g. Milwaukee Valve Company.
h. NIBCO INC.
i. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

a. Standard: MSS SP-67, Type I.
b. CWP Rating: 150 psig.
c. Body Design: Wafer Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
e. Seat: EPDM.
f. Stem: One- or two-piece stainless steel.
g. Disc: Aluminum bronze.

2.5 BRONZE SWING CHECK VALVES

A. Class 125, Bronze Swing Check Valves with Bronze Disc (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Valve, Inc. Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Jenkins Valves.
c. Crane Co.; Crane Valve Group; Stockham Division.

d. Kitz Corporation.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Powell Valves.
h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

a. Standard: MSS SP-80, Type 3.
b. CWP Rating: 200 psig.
c. Body Design: Horizontal flow.
d. Body Material: ASTM B 62, bronze.
e. Ends: Threaded to 2", Flanged 2" and greater.
f. Disc: Bronze.

2.6 IRON SWING CHECK VALVES

A. Class 125, Iron Swing Check Valves with Metal Seats (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Jenkins Valves.
c. Crane Co.; Crane Valve Group; Stockham Division.
d. Hammond Valve.
e. Kitz Corporation.
f. Milwaukee Valve Company.
g. NIBCO INC.
h. Powell Valves.
i. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
j. Keckley.

2. Description:

a. Standard: MSS SP-71, Type I.
b. NPS 2-1/2 to NPS 12, CWP Rating: 200 psig.
c. NPS 14 to NPS 24, CWP Rating: 150 psig.
d. Body Design: Clear or full waterway.
e. Body Material: ASTM A 126, gray iron with bolted bonnet.
f. Ends: Threaded to 2", Flanged 2" and greater.
g. Trim: Bronze.
h. Gasket: Asbestos free.

B. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Resilient Seat (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Crispin Valve.
    b. DFT Inc.
    c. Flo Fab Inc.
    d. Milwaukee Valve Company.
    e. NIBCO INC.

2. Description:

    a. Standard: MSS SP-125.
    b. NPS 2-1/2 to NPS 12, CWP Rating: 200 psig.
    c. NPS 14 to NPS 24, CWP Rating: 150 psig.
    d. Body Material: ASTM A 126, gray iron.
    e. Style: Compact wafer.
    f. Seat: EPDM.

2.7 BRONZE GATE VALVES

A. Class 125, NRS Bronze Gate Valves (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Crane Co.; Crane Valve Group; Crane Valves.
    b. Crane Co.; Crane Valve Group; Jenkins Valves.
    c. Crane Co.; Crane Valve Group; Stockham Division.
    d. Kitz Corporation.
    e. Milwaukee Valve Company.
    f. NIBCO INC.
    g. Powell Valves.
    h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    i. Zy-Tech Global Industries, Inc.

2. Description:

    a. Standard: MSS SP-80, Type 1.
    b. CWP Rating: 200 psig.
    c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
    d. Ends: Threaded to 2”, Flanged 2” and greater.
    e. Stem: Bronze.
    f. Disc: Solid wedge; bronze.
    g. Packing: Asbestos free.
    h. Handwheel: Malleable iron, bronze, or aluminum.

2.8 IRON GATE VALVES

A. Class 125, NRS, Iron Gate Valves (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Jenkins Valves.
c. Crane Co.; Crane Valve Group; Stockham Division.
d. Flo Fab Inc.
e. Kitz Corporation.
f. Legend Valve.
g. Milwaukee Valve Company.
h. NIBCO INC.
i. Powell Valves.
j. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

a. Standard: MSS SP-70, Type I.
b. NPS 2-1/2 to NPS 12, CWP Rating: 200 psig.
c. NPS 14 to NPS 24, CWP Rating: 150 psig.
d. Body Material: ASTM A 126, gray iron with bolted bonnet.
e. Ends: Threaded to 2”, Flanged 2” and greater.
f. Trim: Bronze.
g. Disc: Solid wedge.
h. Packing and Gasket: Asbestos free.

2.9 BRONZE GLOBE VALVES

A. Class 125, Bronze Globe Valves with Bronze Disc (Valves must be American Made):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Stockham Division.
c. Kitz Corporation.
d. Milwaukee Valve Company.
e. NIBCO INC.
f. Powell Valves.
g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

a. Standard: MSS SP-80, Type 1.

b. CWP Rating: 200 psig.
c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
d. Ends: Threaded to 2", Flanged 2" and greater.
e. Stem and Disc: Bronze.
f. Packing: Asbestos free.
g. Handwheel: Malleable iron, bronze, or aluminum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown. Locate valves for easy access and provide separate support where necessary.

B. Install valves in horizontal piping with stem at or above center of pipe.

C. Install valves in position to allow full stem movement.

D. Install check valves for proper direction of flow and as follows:

1. Swing Check Valves: In horizontal position with hinge pin level.

E. Install main isolation valves at the main entrance/exit of each building.

F. Install independent isolation valves at each coil/equipment. (These isolation valves are to be independent and in addition to any balance valves.).

G. Install isolation valves at main branch take-offs to allow for branch isolation.

H. Install isolation valves at mechanical room entrance, when connecting more than one coil in the respective mechanical room. (This is to facilitate future renovation/service.)

3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. If valve applications are not indicated, use the following:

1. Shutoff Service: Ball, butterfly, or gate valves.
2. Butterfly Valve Dead-End Service: Single-flange (lug) type.
3. Throttling Service: Ball, or butterfly valves.

4. Pump-Discharge Check Valves:

a. NPS 2 and Smaller: Bronze swing check valves with bronze disc.
b. NPS 2-1/2 and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, metal-seat check valves.

B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.

C. Select valves, except wafer types, with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends or solder-joint valve-end.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends.
3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends or threaded valve-end.
6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.5 CHILLED-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:

1. Ball Valves: Two-piece, full port, bronze with bronze trim.
2. Bronze Gate Valves: Class 125, NRS, bronze.

B. Pipe NPS 2-1/2 and Larger:

1. Iron Ball Valves, NPS 2-1/2 to NPS 10: Class 150.
2. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12: 200 CWP, EPDM seat, aluminum-bronze disc.
3. Iron Swing Check Valves with Closure Control, NPS 2-1/2 to NPS 12: Class 125, lever and spring.

END OF SECTION 23 05 23

SECTION 23 05 29 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following hangers and supports for HVAC system piping and equipment:

1. Steel pipe hangers and supports.
2. Trapeze pipe hangers.
3. Thermal-hanger shield inserts.
4. Fastener systems.
5. Pipe stands.
6. Equipment supports.

B. Related Sections include the following:

1. Division 21 Section "Fire-Suppression Piping" for pipe hangers for fire-protection piping.
2. Division 23 Section "Vibration Controls for HVAC Piping and Equipment" for vibration isolation devices.
3. Division 23 Section(s) "Metal Ducts" for duct hangers and supports.

1.3 DEFINITIONS

A. MSS: Manufacturers Standardization Society for The Valve and Fittings Industry Inc.

B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.4 SUBMITTALS

A. Product Data: For the following:

1. Steel pipe hangers and supports.
2. Thermal-hanger shield inserts.

1.5 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel."

B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.3, "Structural Welding Code--Sheet Steel."
3. AWS D1.4, "Structural Welding Code--Reinforcing Steel."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 STEEL PIPE HANGERS AND SUPPORTS

A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.

B. Manufacturers:

1. AAA Technology & Specialties Co., Inc.
2. B-Line Systems, Inc.; a division of Cooper Industries.
3. Grinnell Corp.
4. National Pipe Hanger Corporation.
5. PHD Manufacturing, Inc.
6. Empire.

C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.3 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.4 THERMAL-HANGER SHIELD INSERTS

A. Description: 100-psig- minimum, compressive-strength insulation insert encased in sheet metal shield.

B. Manufacturers:

1. Carpenter & Paterson, Inc.
2. PHS Industries, Inc.
3. Pipe Shields, Inc.
4. Rilco Manufacturing Company, Inc.

C. Insulation-Insert Material for Cold Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with vapor barrier.

D. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate.

E. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

F. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

G. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers:

a. B-Line Systems, Inc.; a division of Cooper Industries.
b. Hilti, Inc.
c. MKT Fastening, LLC.

d. Powers Fasteners.

2.6 PIPE STAND FABRICATION

A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

1. Manufacturers:

a. ERICO/Michigan Hanger Co.
b. MIRO Industries.
c. Portable Pipe Hangers.

2. Base: Plastic.
3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

2.7 EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.

2.8 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT APPLICATIONS

A. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment. Supports and associated anchors shall be sized for the anticipated loads (dead, live, wind), and coordinated with the building structural requirements.

B. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use padded hangers for piping that is subject to scratching.

F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30.

G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.

H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.

I. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction to attach to top flange of structural shape.
2. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.

J. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
2. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

K. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.

L. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

3.2 HANGER AND SUPPORT INSTALLATION

A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.

C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

D. Fastener System Installation:

1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

E. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounting Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
2. Curb-Mounting-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. Refer to Division 7 Section "Roof Accessories" for curbs.

F. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

G. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

I. Install lateral bracing with pipe hangers and supports to prevent swaying.

J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

K. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.1 (for power piping) and ASME B31.9 (for building services piping) are not exceeded.

M. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.

    a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    c. Do not exceed pipe stress limits according to ASME B31.1 for power piping and ASME B31.9 for building services piping.

2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:

    a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
    b. NPS 4: 12 inches long and 0.06 inch thick.
    c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.

5. Insert Material: Length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.3 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make smooth bearing surface.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.6 PAINTING

A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 9 painting Sections.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.
