A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Isolation pads.
2. Isolation mounts.
3. Spring isolators.
4. Duct silencers.
5. Acoustic housings.
6. Ductwork lagging.

1.3 DEFINITIONS

A. ICC-ES: ICC-Evaluation Service.

B. OSHPD: Office of Statewide Health Planning and Development for the State of California.

2. ASTM E477 - Standard Test Method for Measuring Acoustical and Airflow Performance of Duct Liner Materials and Prefabricated Silencers.
3. ASTM E596 - Standard Test Method for Laboratory Measurement of the Noise Reduction of Sound-Isolating Enclosures.

F. Sheet Metal and Air Conditioning Contractors' National Association:

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.
2. SMACNA - Restraint Manual: Guidelines for Mechanical Systems.

1.5 PERFORMANCE REQUIREMENTS

A. Wind-Restraint Loading:

1. Basic Wind Speed: 110 mph.
2. Building Classification Category: I.
3. Minimum 10 lb/sq. ft. multiplied by the maximum area of the HVAC component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

1.6 SUBMITTALS

A. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
3. Acoustical Silencers.

B. Delegated-Design Submittal: For vibration isolation and wind restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, wind forces required to select vibration isolators, wind restraints, and for designing vibration isolation bases.

    a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.

C. If the standard sizes of silencers offered by the silencer manufacturer or vendor do not provide attenuation equal to or greater than the specified insertion loss in each octave band 1 through 6, then at the time of bidding the manufacturer/vendor making the submission shall note all such discrepancies and provide alternative proposals and pricing to make up the discrepancies. The controlling requirements are the insertion loss, pressure drop and self-noise.

D. Welding certificates.

E. Sheet Metal: Coordinated shop drawings shall be submitted for review and approval to indicate the following:

1. Length, width, height, and elevation of bottom of each duct segment.
2. Sheet metal gauge
3. Location of duct silencers, fire dampers, and balancing dampers.

F. Air moving devices for classrooms (AHU's): Submit sound power levels in octave bands from 63 Hz through 8000 Hz inclusive for the operating conditions specified. Data shall be obtained in accordance with AMCA 300-85. If fans are variable speed, provide sound power level data for maximum rpm and also at 80% and 60% of maximum rpm. Provide discharge, inlet and case-radiated sound power data for all fans.

1. Submit for each fan a performance curve showing the operating point for which the acoustical data has been provided.

G. Silencers: Submit test data from an independent laboratory showing the insertion loss and air-flow-regenerated noise of the specified silencers in octave bands from 63 Hz to 8000 Hz, measured in accordance with ASTM E477-73. Pressure drop ratings shall be measured for the same silencer tested for acoustical performance; the data shall be submitted with the acoustical performance data. The insertion loss of the silencers shall be measured and reported in octave band or 1/3 octave bands.

1.7 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Wind Restraint devices shall comply with the wind rating as specified within this section. Restraint devices shall be suitable for the specific application and have a Florida structural engineering seal for compliance.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amber/Booth Company, Inc.
2. Kinetics Noise Control.
3. Mason Industries.

B. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.

1. Resilient Material: Oil- and water-resistant neoprene.

C. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.

1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

D. Spring Hangers with Vertical-Limit Stop: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression and with a vertical-limit stop.

1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.

7. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
8. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

2.2 FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.

1. Powder coating on springs and housings.
2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
3. Baked enamel or powder coat for metal components on isolators for interior use.
4. Color-code or otherwise mark vibration isolation and wind-control devices to indicate capacity range.

2.3 DUCT SILENCERS

A. All prefabricated duct silencers shall be furnished by a single manufacturer with a minimum five years experience. The following manufacturers are pre-approved based on the quality of their products. The Acoustics Consultant and Architect must approve any alternates. All provided equipment must be in compliance with the specified design and performance requirements:

1. Industrial Acoustics Company, Bronx, New York
2. Vibro-Acoustics, Scarborough, Ontario
3. AeroAcoustic Corporation, Roselle, New Jersey
4. Pre-Approved Alternate Manufacturer Prior to Bid.

B. Rectangular duct silencers shall have outer casings of not less than 22-gauge galvanized steel. Seams shall be lock formed and mastic filled. The internal baffles (splitters) shall be not less than 24-gauge galvanized perforated steel having an open area of about 30%. The nosings shall be full radius or airfoil shape.

C. The sound absorbing media shall be not less than 4.5 pcf glass/mineral fiber packed under 5% compression. The fiber fill shall be incombustible, mildew resistant and vermin proof. The sound absorbing material shall be protected from erosion.

D. If the silencer is supplied in modular sections, the silencer shall meet or exceed the specification for single-module silencers with respect to insertion loss, pressure drop, regenerated noise and air leakage.

E. Rating:

1. ASTM E477 Minimum Required Insertion Loss and Maximum Allowable Generated Noise at 1000 fpm (7 m/sec). See schedules on Drawings.

2. Static Pressure Drop: see schedules on Drawings.
3. Air Tight Static Pressure: 10 inches wg (2.5 kPa).

F. Performance: Achieve insertion loss self generated noise, and static pressure drop for cfm flow required per schedules on Drawings.

2.4 DUCTWORK LAGGING

A. Acoustic Insulation: 2 inch thick, 3 to 5 lb/cu ft density glass fiber or mineral wool insulation.

B. Covering: Sheet lead with surface weight minimum 4 lb/sq ft.

C. Provide Duct lagging from sound attenuator location within mechanical room to mechanical room wall to prevent break-in noise.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and equipment to receive vibration isolation and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service member of ICC-ES.

B. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
5. Test to 90 percent of rated proof load of device.
6. Measure isolator restraint clearance.
7. Measure isolator deflection.
8. Verify snubber minimum clearances.
9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust isolators after piping system is at operating weight.

B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust active height of spring isolators.

D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.5 HVAC VIBRATION-CONTROL RESTRAINT DEVICE SCHEDULE

A. Supported or Suspended Equipment:

1. Air Handling Unit Vibration Pads:

   a. Material: Neoprene.
   b. Thickness: 3/4 inches.
   c. Provide Full sheet of Neoprene Under Base Rail of Units.

END OF SECTION 23 05 48

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Equipment labels.
2. Warning signs and labels.
3. Pipe labels.
4. Duct labels.
5. Stencils.
6. Valve tags.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Valve numbering scheme.

1.4 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Metal Labels for Equipment:

1. Material and Thickness: Aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 CEILING GRID TAGS FOR EQUIPMENT LOCATED ABOVE HARD OR LAY-IN CEILING

A. Description: 3/4” x 3” vinyl label, 3.0 Mil self adhesive vinyl similar to DuraLabel Pro. Label color shall be black text on a white background. The label shall contain the following information:

1. Equipment name: Per Scheduled Equipment Naming convention.

B. All scheduled equipment above finish hard or lay-in ceiling shall be identified with an Equipment Tag.

2.3 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Letter Color: Red.

C. Background Color: White.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.4 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches.

2.5 DUCT LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Letter Color: Black.

C. Background Color: White.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

H. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches.

2.6 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: Aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass wire-link or beaded chain; or S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

C. All mechanical equipment, located above the ceiling and requiring maintenance or accessibility, shall be labeled on the ceiling or ceiling grid, directly below the indicated equipment.

1. Provide ceiling grid tags to locate scheduled equipment above T-bar type panel ceilings. Locate in corner of grid closest to equipment.
2. Provide ceiling tags to locate scheduled equipment above access panels in hard ceilings. Locate in corner of access panel closest to equipment.

3.3 PIPE LABEL INSTALLATION

A. Piping Color-Coding: Painting of piping is specified in Division 9 Section "Interior Painting."

B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

C. Pipe Label Color Schedule:

1. Chilled-Water Piping:

a. Background Color: White.
b. Letter Color: Blue.

2. Refrigerant Piping:

a. Background Color: Black.
b. Letter Color: White.

3.4 DUCT LABEL INSTALLATION

A. Install plastic-laminated duct labels with permanent adhesive on air ducts in the following color codes:

1. Blue: For cold-air supply ducts.
2. Yellow: For hot-air supply ducts.
3. Green: For exhaust-, outside-, relief-, return-, and mixed-air ducts.

B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

3.5 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

a. Chilled Water: 2 inches, square.

2. Valve-Tag Color:

a. Chilled Water: Natural.

3. Letter Color:

a. Chilled Water: Black.

END OF SECTION 23 05 53

SECTION 23 05 93 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Balancing Air Systems:

a. Constant-volume Dehumidification air systems.
b. Variable-air-volume systems.
c. General exhaust systems.
d. Chilled Beam Air systems.
e. Plate & Frame Heat Exchangers

2. Balancing Hydronic Piping Systems:

a. Variable-flow hydronic systems.

1) Systems installed with pressure independent control valves shall not require hydronic system balancing. Flow shall be verified and adjusted for the pressure independent valve assembly for field conditions using the pressure independent control valve manufacturer’s documented procedure for 25% of the total installed product. Exact locations of tested product to be coordinated with the commissioning agent.

1.3 DEFINITIONS

A. AABC: Associated Air Balance Council.

B. NEBB: National Environmental Balancing Bureau.

C. TAB: Testing, adjusting, and balancing.

D. TABB: Testing, Adjusting, and Balancing Bureau.

E. TAB Specialist: An entity engaged to perform TAB Work.

1.4 SUBMITTALS

A. Qualification Data: Within 30 days of Contractor's Notice to Proceed, submit documentation that the TAB contractor and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.

B. Contract Documents Examination Report: Within 30 days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.

C. Strategies and Procedures Plan: Within 60 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.

D. Certified TAB reports.

E. Sample report forms.

F. Instrument calibration reports, to include the following:

1. Instrument type and make.
2. Serial number.
3. Application.
4. Dates of use.
5. Dates of calibration.

1.5 QUALITY ASSURANCE

A. TAB Contractor Qualifications: Engage a TAB entity certified by AABC, NEBB or TABB.

1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC, NEBB or TABB.
2. TAB Technician: Employee of the TAB contractor and who is certified by AABC, NEBB or TABB as a TAB technician.

B. TAB Conference: Meet with Architect, Owner Representative, General Contractor, Engineer and Commissioning Authority on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.

1. Agenda Items:

a. The Contract Documents examination report.

b. The TAB plan.
c. Coordination and cooperation of trades and subcontractors.
d. Coordination of documentation and communication flow.

C. Certify TAB field data reports and perform the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

D. TAB Report Forms: Use standard TAB contractor's forms approved by Commissioning Authority.

E. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

1.6 PROJECT CONDITIONS

A. Full Owner Occupancy: Owner will occupy the site and existing building during entire TAB period. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

B. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

1.7 COORDINATION

A. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.

B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 Section "Metal Ducts" and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.

F. Examine equipment performance data including fan and pump curves.

1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

H. Examine test reports specified in individual system and equipment Sections.

I. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.

K. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.

L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

M. Examine system pumps to ensure absence of entrained air in the suction piping.

N. Examine operating safety interlocks and controls on HVAC equipment.

O. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

A. Prepare a TAB plan that includes strategies and step-by-step procedures.

B. Complete system-readiness checks and prepare reports. Verify the following:

1. Permanent electrical-power wiring is complete.
2. Hydronic systems are filled, clean, and free of air.
3. Automatic temperature-control systems are operational.
4. Equipment and duct access doors are securely closed.
5. Isolating and balancing valves are open and control valves are operational.
6. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
7. Windows and doors can be closed so indicated conditions for system operations can be met.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance", ASHRAE 111, NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems", and SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.

1. Comply with requirements in ASHRAE 62.1-2004, Section 7.2.2, "Air Balancing."

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.

1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
2. After testing and balancing, install test ports and duct access doors that comply with requirements in Division 23 Section "Air Duct Accessories."
3. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 Section "HVAC Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

E. The project's DDC system shall be completed and confirmed in writing by the responsible contractor prior to final TAB activities taking place. The intent is to allow the TAB contractor to verify system operation in its final configuration and minimize inconsistencies introduced by changes to the DDC system.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Division 23 Section "Metal Ducts.".

1. Prior to the ductwork being leak and pressure tested, the TAB contractor shall sign off that devices are installed that are needed to properly test and balance the system.

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.

1. Measure total airflow.

a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.

2. Measure fan static pressures as follows to determine actual static pressure:

a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
b. Measure static pressure directly at the fan outlet or through the flexible connection.
c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.

a. Report the cleanliness status of filters and the time static pressures are measured.

4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
5. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
6. Obtain approval from Engineer and Commissioning Authority for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
7. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.

1. Measure airflow of submain and branch ducts.

a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.

2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.

C. Measure air outlets and inlets without making adjustments.

1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.

1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.6 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
3. Measure total system airflow. Adjust to within indicated airflow.
4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the

air outlets downstream from terminal units the same as described for constant-volume air systems.

5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.

    a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.

6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.

    a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
8. Record final fan-performance data.

C. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
3. Set terminal units at full-airflow condition.
4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
5. Adjust terminal units for minimum airflow.
6. Measure static pressure at the sensor.
7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

3.7 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.

B. Prepare schematic diagrams of systems' "as-built" piping layouts.

C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:

1. Open all manual valves for maximum flow.
2. Check flow-control valves for specified sequence of operation, and set at indicated flow.
3. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
4. Set system controls so automatic valves are wide open to district loop.
5. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
6. Check air vents for a forceful liquid flow exiting from vents when manually operated.

D. Before the piping is flushed and cleaned, the TAB contractor shall sign off that all devices (thermowells and threaded ports) needed are in place to correctly test and balance the system and calibrate all devices are installed in the piping for this flushing and cleaning activity.

3.8 PROCEDURE FOR HYDRONIC SYSTEMS

A. Systems installed with pressure independent control valves shall not require hydronic system balancing. Flow shall be verified and adjusted for the pressure independent valve assembly for field conditions using the pressure independent control valve manufacturer’s documented procedure for 25% of the total installed product. Exact locations of tested product to be coordinated with the commissioning agent.

3.9 PROCEDURES FOR MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer's name, model number, and serial number.
2. Motor horsepower rating.
3. Motor rpm.
4. Efficiency rating.
5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove

proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.10 TOLERANCES

A. Set HVAC system's air flow rates and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
2. Air Outlets and Inlets: Plus or minus 10 percent.
3. Cooling-Water Flow Rate: Plus or minus 10 percent.

3.11 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: Prepare monthly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.12 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.

1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.

B. Final Report Contents: In addition to certified field-report data, include the following:

1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and product data.

C. General Report Data: In addition to form titles and entries, include the following data:

1. Title page.
2. Name and address of the TAB contractor.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
8. Report date.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.

11. Summary of contents including the following:

    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.

12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.

15. Test conditions for fans and pump performance forms including the following:

    a. Settings for outdoor-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Face and bypass damper settings at coils.
    e. Fan drive settings including settings and percentage of maximum pitch diameter.
    f. Inlet vane settings for variable-air-volume systems.
    g. Settings for supply-air, static-pressure controller.
    h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:

1. Quantities of outdoor, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.
5. Terminal units.

6. Balancing stations.
7. Position of balancing devices.

E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Make and type.
d. Model number and unit size.
e. Manufacturer's serial number.
f. Unit arrangement and class.
g. Discharge arrangement.
h. Sheave make, size in inches, and bore.
i. Center-to-center dimensions of sheave, and amount of adjustments in inches.
j. Number, make, and size of belts.
k. Number, type, and size of filters.

2. Motor Data:

a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.

3. Test Data (Indicated and Actual Values):

a. Total air flow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Filter static-pressure differential in inches wg.
f. Cooling-coil static-pressure differential in inches wg.
g. Heating-coil static-pressure differential in inches wg.
h. Outdoor airflow in cfm.
i. Return airflow in cfm.
j. Outdoor-air damper position.
k. Return-air damper position.
l. Vortex damper position.

F. Apparatus-Coil Test Reports:

1. Coil Data:

a. System identification.
b. Location.
c. Coil type.
d. Number of rows.
e. Fin spacing in fins per inch o.c.
f. Make and model number.
g. Face area in sq. ft.
h. Tube size in NPS.
i. Tube and fin materials.
j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):

a. Air flow rate in cfm.
b. Average face velocity in fpm.
c. Air pressure drop in inches wg.
d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
e. Return-air, wet- and dry-bulb temperatures in deg F.
f. Entering-air, wet- and dry-bulb temperatures in deg F.
g. Leaving-air, wet- and dry-bulb temperatures in deg F.
h. Water flow rate in gpm.
i. Water pressure differential in feet of head or psig.
j. Entering-water temperature in deg F.
k. Leaving-water temperature in deg F.

G. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:

1. Unit Data:

a. System identification.
b. Location.
c. Coil identification.
d. Capacity in Btu/h.
e. Number of stages.
f. Connected volts, phase, and hertz.
g. Rated amperage.
h. Air flow rate in cfm.
i. Face area in sq. ft.
j. Minimum face velocity in fpm.

2. Test Data (Indicated and Actual Values):

a. Heat output in Btu/h.
b. Air flow rate in cfm.
c. Air velocity in fpm.
d. Entering-air temperature in deg F.
e. Leaving-air temperature in deg F.

f. Voltage at each connection.
g. Amperage for each phase.

H. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:

a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Center-to-center dimensions of sheave, and amount of adjustments in inches.

2. Motor Data:

a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Suction static pressure in inches wg.

I. Round and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:

a. System and air-handling-unit number.
b. Location and zone.
c. Traverse air temperature in deg F.
d. Duct static pressure in inches wg.
e. Duct size in inches.
f. Duct area in sq. ft.

g. Indicated air flow rate in cfm.
h. Indicated velocity in fpm.
i. Actual air flow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

J. Air-Terminal-Device Reports:

1. Unit Data:

a. System and air-handling unit identification.
b. Location and zone.
c. Apparatus used for test.
d. Area served.
e. Make.
f. Number from system diagram.
g. Type and model number.
h. Size.
i. Effective area in sq. ft.

2. Test Data (Indicated and Actual Values):

a. Air flow rate in cfm.
b. Air velocity in fpm.
c. Preliminary air flow rate as needed in cfm.
d. Preliminary velocity as needed in fpm.
e. Final air flow rate in cfm.
f. Final velocity in fpm.
g. Space temperature in deg F.

K. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Service.
d. Make and size.
e. Model number and serial number.
f. Water flow rate in gpm.
g. Water pressure differential in feet of head or psig.
h. Required net positive suction head in feet of head or psig.
i. Pump rpm.
j. Impeller diameter in inches.
k. Motor make and frame size.
l. Motor horsepower and rpm.
m. Voltage at each connection.

n. Amperage for each phase.
o. Full-load amperage and service factor.
p. Seal type.

2. Test Data (Indicated and Actual Values):

a. Static head in feet of head or psig.
b. Pump shutoff pressure in feet of head or psig.
c. Actual impeller size in inches.
d. Full-open flow rate in gpm.
e. Full-open pressure in feet of head or psig.
f. Final discharge pressure in feet of head or psig.
g. Final suction pressure in feet of head or psig.
h. Final total pressure in feet of head or psig.
i. Final water flow rate in gpm.
j. Voltage at each connection.
k. Amperage for each phase.

L. Instrument Calibration Reports:

1. Report Data:

a. Instrument type and make.
b. Serial number.
c. Application.
d. Dates of use.
e. Dates of calibration.

3.13 INSPECTIONS

A. Initial Inspection:

1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.

2. Check the following for each system:

a. Measure airflow of at least 10 percent of air outlets.
b. Measure water flow of at least 5 percent of terminals.
c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
d. Verify that balancing devices are marked with final balance position.
e. Note deviations from the Contract Documents in the final report.

B. Final Inspection:

1. After initial inspection is complete and documentation by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Commissioning Authority.
2. The TAB contractor's test and balance engineer shall conduct the inspection in the presence of Commissioning Authority.
3. Commissioning Authority shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

C. TAB Work will be considered defective if it does not pass final inspections. If TAB Work fails, proceed as follows:

1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
2. If the second final inspection also fails, Owner may contract the services of another TAB contractor to complete TAB Work according to the Contract Documents and deduct the cost of the services from the original TAB contractor's final payment.

D. Prepare test and inspection reports.

3.14 ADDITIONAL TESTS

A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

3.15 COMMISSIONING

A. Refer to Commissioning Specifications, Section 01 81 10, for related commissioning requirements.

B. Test and Balance contractor shall provide necessary support to complete necessary Pre-functional testing, Functional Testing, and any retesting required as required to complete the commissioning process.

END OF SECTION 23 05 93

SECTION 23 07 00 - HVAC INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Insulation Materials:

    a. Cellular glass.
    b. Flexible elastomeric.
    c. Mineral fiber.

2. Adhesives.
3. Mastics.
4. Sealants.
5. Factory-applied jackets.
6. Field-applied jackets.
7. Tapes.

B. Related Sections:

1. Division 21 Section "Fire-Suppression Systems Insulation."
2. Division 22 Section "Plumbing Insulation."
3. Division 23 Section "Metal Ducts" for duct liners.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.

2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
3. Detail application of field-applied jackets.
4. Detail application at linkages of control devices.

C. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application, duct Installer for duct insulation application, and equipment Installer for equipment insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.7 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide the following:

a. Pittsburgh Corning Corporation; Foamglas Super K.

2. Block Insulation: ASTM C 552, Type I.
3. Special-Shaped Insulation: ASTM C 552, Type III.
4. Board Insulation: ASTM C 552, Type IV.
5. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2. ASJ jacketing for all piping areas outside of mechanical rooms.
6. Preformed Pipe Insulation with Field-Applied PVC jacketing: Comply with ASTM C 552, Type II, Class 2. PVC jacketing for all piping areas inside mechanical rooms.

7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

G. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Aeroflex USA Inc.; Aerocel.
b. Armacell LLC; AP Armaflex.
c. RBX Corporation; Insul-Sheet 1800 and Insul-Tube 180.

2. Flexible Elastomeric Permitted Locations

a. Pump housing.
b. 4’-0” piping runout to AHU’s.

H. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corp.; Duct Wrap.
b. Johns Manville; Microlite.
c. Knauf Insulation; Duct Wrap.
d. Manson Insulation Inc.; Alley Wrap.
e. Owens Corning; All-Service Duct Wrap.

I. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation. For equipment applications, provide insulation. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corp.; Commercial Board.
b. Fibrex Insulations Inc.; FBX.
c. Johns Manville; 800 Series Spin-Glas.
d. Knauf Insulation; Insulation Board.
e. Manson Insulation Inc.; AK Board.
f. Owens Corning; Fiberglas 700 Series.

2.2 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Cellular-Glass Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Products, Division of ITW; CP-96.
b. Foster Products Corporation, H. B. Fuller Company; 81-33.

2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Aeroflex USA Inc.; Aeroseal.
b. Armacell LCC; 520 Adhesive.
c. Foster Products Corporation, H. B. Fuller Company; 85-75.
d. RBX Corporation; Rubatex Contact Adhesive.

2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Products, Division of ITW; CP-82.
b. Foster Products Corporation, H. B. Fuller Company; 85-20.
c. ITW TACC, Division of Illinois Tool Works; S-90/80.
d. Marathon Industries, Inc.; 225.
e. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Products, Division of ITW; CP-82.
b. Foster Products Corporation, H. B. Fuller Company; 85-20.
c. ITW TACC, Division of Illinois Tool Works; S-90/80.
d. Marathon Industries, Inc.; 225.
e. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

F. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Chemical Company (The); 739, Dow Silicone.
b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
c. P.I.C. Plastics, Inc.; Welding Adhesive.
d. Speedline Corporation; Speedline Vinyl Adhesive.

2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.

B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.

C. For indoor applications, use mastic that has a voc content of 50 G/L or less when calculated according to 40 CFR 59, subpart D (EPA Method 24).

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Products, Division of ITW; CP-35.
b. Foster Products Corporation, H. B. Fuller Company; 30-90.
c. ITW TACC, Division of Illinois Tool Works; CB-50.
d. Marathon Industries, Inc.; 590.
e. Mon-Eco Industries, Inc.; 55-40.
f. Vimasco Corporation; 749.

2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
5. Color: White.

2.4 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements:

    a. Childers Products, Division of ITW; CP-76.
    b. Foster Products Corporation, H. B. Fuller Company; 30-45.
    c. Pittsburgh Corning Corporation; Pittseal 444.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide the following:

    a. Childers Products, Division of ITW; CP-76.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.5 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.6 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Johns Manville; Zeston.
b. P.I.C. Plastics, Inc.; FG Series.
c. Proto PVC Corporation; LoSmoke.
d. Speedline Corporation; SmokeSafe.

2. Adhesive: As recommended by jacket material manufacturer.
3. Color: White.

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

5. Factory-fabricated tank heads and tank side panels.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

1. Verify that systems and equipment to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.

3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.

    a. For below ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.

3.4 PENETRATIONS

A. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

B. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.

1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

3.5 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.

1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
2. Seal longitudinal seams and end joints.

B. Insulation Installation on Pumps:

1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
2. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.6 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe

insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
8. Label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 CELLULAR-GLASS INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.8 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.9 MINERAL-FIBER INSULATION INSTALLATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
d. Do not overcompress insulation during installation.
e. Impale insulation over pins and attach speed washers.
f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.

5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

    a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    d. Do not overcompress insulation during installation.
    e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

    a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.10 FIELD-APPLIED JACKET INSTALLATION

A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.11 FINISHES

A. Duct, Equipment, and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.12 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
2. Inspect field-insulated equipment, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
3. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations

of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.13 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply, return, and outdoor air.
2. Indoor, exposed supply, return, and outdoor air.
3. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
4. Indoor, exposed exhaust between isolation damper and penetration of building exterior.

B. Items Not Insulated:

1. Factory-insulated flexible ducts.
2. Flexible connectors.
3. Factory-insulated access panels and doors.

3.14 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Concealed, round and flat-oval, supply-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

B. Concealed, round and flat-oval, return-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

C. Concealed, rectangular, supply-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

D. Concealed, rectangular, return-air duct insulation shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

E. Exposed, rectangular, supply/return-air duct insulation inside mechanical rooms shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 2-lb/cu. ft. nominal density.

F. Exposed, rectangular or round, supply/return-air duct insulation outside mechanical rooms shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 2-lb/cu. ft. nominal density.

G. Concealed, return-air plenum insulation shall be the following:

1. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft. nominal density.

3.15 EQUIPMENT INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.

B. Insulate indoor equipment in paragraphs below that is not factory insulated.

C. Chilled-water air-separator insulation shall be the following:

1. Flexible Elastomeric: 1-1/2 inch thick.

3.16 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

3.17 INDOOR PIPING INSULATION SCHEDULE

A. Chilled Water, above 40 Deg F:

1. NPS 2 and Smaller: Insulation shall be the following:

a. Cellular Glass: 1-1/2 inches thick.

2. NPS 2-1/2 and Larger: Insulation shall be the following:

a. Cellular Glass: 2 inches thick.

B. Refrigerant Suction and Hot-Gas Tubing/Piping:

1. All Pipe Sizes: Insulation shall be the following:

a. Flexible Elastomeric: 1 inch thick.

C. Condensate and Equipment Drain Water below 60 Deg F:

1. All Pipe Sizes: Insulation shall be the following:

    a. Flexible Elastomeric: 3/4 inch thick.

3.18 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Mechanical Rooms:

1. PVC: 20 mils thick.

3.19 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. If more than one material is listed, selection from materials listed is Contractor's option.

C. Piping, Outdoor:

1. Aluminum.

3.20 OUTDOOR, UNDERGROUND CHILLED WATER PIPING

A. All outdoor chilled water piping shall be pre-insulated metal piping with welded joints. Pre-insulated piping manufacturer shall provide shop drawings routing, thrust blocks, expansion loops, etc. for engineer’s review.

END OF SECTION 23 07 00

SECTION 23 08 00 - COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section, including 019113 – General Commissioning Requirements.

1.2 SUMMARY

A. Section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.

B. Related Sections:

1. Refer to Division 01 Section 019113 “General Commissioning Requirements” for additional commissioning scope and requirements. All testing and commissioning requirements of that section shall be met.

1.3 CONTRACTOR'S RESPONSIBILITIES

A. Perform commissioning tests at the direction of the Commissioning Authority (CxA).

B. Attend construction phase controls coordination meeting.

C. Attend testing, adjusting, and balancing review and coordination meeting.

D. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.

E. Provide information requested by the CxA for final commissioning documentation.

F. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

1.4 CxA RESPONSIBILITIES

A. Provide project-specific construction checklists and commissioning process test procedures for actual HVAC&R systems, assemblies, equipment, and components to be furnished and installed as part of the construction contract.

B. Direct commissioning testing.

C. Verify testing, adjusting, and balancing of Work are complete.

D. Provide test data, inspection reports, and issues log in Final Report.

1.5 COMMISSIONING DOCUMENTATION

A. Provide the following information to the CxA for inclusion in the commissioning plan:

1. Plan for delivery and review of submittals, systems manuals, and other documents and reports.
2. Identification of installed systems, assemblies, equipment, and components including design changes that occurred during the construction phase.
3. Process and schedule for completing construction checklists and manufacturer's prestart and startup checklists for HVAC&R systems, assemblies, equipment, and components to be verified and tested.
4. Certificate of completion certifying that installation, prestart checks, and startup procedures have been completed.
5. Certificate of readiness certifying that HVAC&R systems, subsystems, equipment, and associated controls are ready for testing.
6. Test and inspection reports and certificates.
7. Corrective action documents.
8. Verification of testing, adjusting, and balancing reports.

1.6 SUBMITTALS

A. Certificates of readiness.

B. Certificates of completion of installation, prestart, and startup activities.

C. See other related specification sections for required submittals and manuals, including 019113 – General Commissioning Requirements.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TESTING PREPARATION

A. Certify that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.2 TESTING AND BALANCING VERIFICATION

A. Prior to performance of testing and balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

B. Notify the CxA at least 10 days in advance of testing and balancing work, and provide access for the CxA to witness testing and balancing work.

C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.

1. The CxA will notify testing and balancing Contractor 10 days in advance of the date of field verification. Notice will not include data points to be verified.
2. The testing and balancing Contractor shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.3 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.

1. Testing Strategies and Sampling: Refer to section 019113 for testing of equipment strategies and sampling requirement functional performance test requirements.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the HVAC&R Contractor, testing and balancing Contractor, and HVAC&R Instrumentation and Control Contractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.4 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Boiler Testing and Acceptance Procedures: Testing requirements are specified in Division 23 boiler sections. Provide submittals, test data, inspector record, and boiler certification to the CxA.

B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for

HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.

C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment requirements are specified in Division 23 piping Sections. HVAC&R Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:

1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
2. Description of equipment for flushing operations.
3. Minimum flushing water velocity.
4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

D. Energy Supply System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of hot-water systems and equipment at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

E. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

F. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.

G. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

3.5 NONCONFORMANCE

A. The CxA will record the results of the Functional Performance Tests. All deficiencies, nonconformance issues, or test failures will be noted and reported to the Contractors in a deficiency list or in a punch-list format.

B. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA. In such cases the deficiency and resolution will be documented on the procedure form.

C. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the CxA will not be pressured into overlooking deficient work or loosening acceptance criteria to satisfy scheduling or cost issues, unless there is an overriding reason to do so at the request of the Owners Representative.

D. Retesting:

1. If a Functional Performance Test fails, corrections shall be made to the deficient equipment or systems by the Contractors. The systems will be re-tested until they pass the Tests.
2. The time/cost for the CxA to perform any retesting required because of improper set up of the systems by the contractors or failed functional or performance tests will be back-charged to the Contractor (who may choose to recover costs from the party responsible for executing faulty equipment startup/checkout and associated checklists). This includes instances where a specific item was overlooked in the equipment startup and checkout procedures, reported to have been successfully completed but determined during Functional Performance testing to be faulty.
3. Any required retesting by any contractor, sub-contractor, or vendor shall not be considered a justified reason for a claim of delay or for a time extension by the Contractor.

3.6 DEFICIENCIES AND RETESTING

A. The CxA documents the results of each test. (Corrections of minor installation or sequence of operation deficiencies are made during tests at the discretion of CxA.)

B. Deficiencies/nonconformance issues not corrected during testing are reported to the Contractors for corrective action. Upon completion, a request is made by the Contractors to CxA for retest.

END OF SECTION 23 08 00

SECTION 23 09 00 - INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls, and Lab Controls.

B. Related Sections include the following:

1. Division 23 Section "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.

1.3 DEFINITIONS

A. BAS: Direct digital control.

B. I/O: Input/output.

C. MS/TP: Master slave/token passing.

D. PC: Personal computer.

E. PID: Proportional plus integral plus derivative.

F. BAS: Building Automation System

1.4 SYSTEM PERFORMANCE

A. Comply with the following performance requirements:

1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.

3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.
5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute BAS PID control loops, and scan and update process values and outputs at least once per second.

8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:

    a. Water Temperature: Plus or minus 1 deg F.
    b. Water Flow: Plus or minus 2 percent of full scale.
    c. Water Pressure: Plus or minus 5 percent of full scale.
    d. Space Temperature: Plus or minus 1 deg F.
    e. Ducted Air Temperature: Plus or minus 1 deg F.
    f. Outside Air Temperature: Plus or minus 2 deg F.
    g. Dew Point Temperature: Plus or minus 3 deg F.
    h. Temperature Differential: Plus or minus 0.25 deg F.
    i. Relative Humidity: Plus or minus 2 percent.
    j. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
    k. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
    l. Airflow (Terminal): Plus or minus 10 percent of full scale.
    m. Air Pressure (Space): Plus or minus 0.01-inch wg.
    n. Air Pressure (Ducts): Plus or minus 0.1-inch wg.
    o. Electrical: Plus or minus 5 percent of reading.

1.5 SEQUENCE OF OPERATION

A. See Control Diagrams on Design Documents for Sequences of Operations.

1.6 SUBMITTALS

A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.

1. BAS System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.

2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
3. Wiring Diagrams: Power, signal, and control wiring.
4. Details of control panel faces, including controls, instruments, and labeling.
5. Written description of sequence of operation.
6. Schedule of dampers including size, leakage, and flow characteristics.
7. Schedule of valves including flow characteristics.

8. BAS System Hardware:

   a. Wiring diagrams for control units with termination numbers.
   b. Schematic diagrams and floor plans for field sensors and control hardware.
   c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.

9. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.

10. Controlled Systems:

    a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
    b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
    c. Written description of sequence of operation including schematic diagram.
    d. Points list.

11. All HVAC control system submittals, as-builts, graphics, alarms and programming shall use the same equipment and device naming convention used on the construction documents.

12. PICS (Performance Interoperability Conformance Statements)

a. Contractor shall provide for each type of equipment being supplied by all contracting trades.

C. Data Communications Protocol Certificates: Certify that each proposed BAS system component complies with ASHRAE 135.

D. Software and Firmware Operational Documentation: Include the following:

1. Software operating and upgrade manuals.
2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.
5. Software license required by and installed for BAS workstations and control systems.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Maintenance instructions and lists of spare parts for each type of control device and compressed-air station.
2. Interconnection wiring diagrams with identified and numbered system components and devices.
3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
5. Calibration records and list of set points.
6. Refer to 230010 for additional requirements.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with ASHRAE 135 for BAS system components.

D. All HVAC control system components shall be BACnet BTL 135.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.

B. System Software: Update to latest version of software at Project completion.

1.9 COORDINATION

A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.

B. Coordinate equipment with Division 27 Section "Clock Systems" to achieve compatibility with equipment that interfaces with that system.

C. Coordinate equipment with Division 26 Section "Network Lighting Controls" to achieve compatibility with equipment that interfaces with that system.

D. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.

E. Coordinate equipment with Division 26 Section "Electrical Power Monitoring and Control" to achieve compatibility of communication interfaces.

F. Coordinate equipment with Division 26 Section "Panelboards" to achieve compatibility with starter coils and annunciation devices.

G. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."

H. Coordinate with Commissioning Agent for Commissioning of systems in accordance with Commissioning Specifications, Commissioning Plan, and Drawings and specifications.

I. Coordinate with Test and Balance Company in accordance with Commissioning Specifications, Commissioning Plan, and Drawings and specifications.

1. The project’s DDC system shall be completed and confirmed in writing by the responsible contractor prior to final TAB activities taking place. The intent is to allow the TAB contractor to verify system operation in its final configuration and minimize inconsistencies introduced by changes to the DDC system.

2. The final TAB activities shall not proceed until the BAS system has been completed. Written confirmation and a copy of the current programming and graphics shall be provided to the College.

1.10 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Replacement Materials: One replacement diaphragm or relay mechanism for each unique valve motor.
2. Refer to 230010 for additional spare parts requirements.

3. Spare materials shall be provided as a part of this project. In addition to any requirements in the drawings and/or specifications, the following items shall be provided:

a. 5 of each type of temperature sensor
b. 1 of each type of humidity sensor
c. 1 of each type of CO2 or VOC sensor
d. 1 of each type of dry differential pressure sensor and/or switch
e. 1 of each type of wet differential pressure sensor and/or switch
f. 1 of each type of air flow measuring station
g. 1 of each type of CT
h. 1 of each type of actuator
i. 1 of each type of BAS controller
j. 1 of ANY critical of long lead items
k. 2 of each type of BAS controller
l. 1 extra of any BAS interface

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 CONTROL SYSTEM

A. Manufacturers:

1. Siemens
2. Trane
3. Automated Logic

B. BTL listed products, if available, must be provided.

C. Selected Controls System provider shall implement latest published revision of controller, server, and workstation firmware and software. This includes all work for updates and/or changes that are necessary or required to vendor's existing control equipment.

D. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, and accessories to control mechanical systems.

E. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.

1. Controls and Graphics shall be in accordance with Valencia College Controls standards, including but not limited to Hardware, software, software, programming, trending, alarming, remote monitoring, energy reports, daily reports, monthly reports, annual reports…).

F. The BAS shall be a web-enabled system with a secure interface. A static IP address and connectivity will be provided by Valencia College to utilize the web based interface with their campus system.

G. Control system shall include the following:

1. Building lighting control system specified in Division 26 Section "Network Lighting Controls."

    a. BMS contractor shall provide a digital signal to the network lighting controllers for operation of all lighting systems for the facility.
    b. BMS contractor shall provide a 7 day/365 days a year schedule for programming the operation of the lighting system.

2. Power Monitoring of Electric Water Heaters.
3. Domestic and Reclaim Water Metering.
4. Trending and Alarming required to implement any measurement and verification required by Part D of the IMPMV guidelines and measurement and verification plan.

5. Gateways and Integration as required for a complete system in accordance with drawings and specifications.

2.3 BAS EQUIPMENT

A. Operator Workstation: One PC-based microcomputer(s) with minimum configuration as follows:

1. Motherboard: With 8 integrated USB 2.0 ports, integrated Intel Pro 10/100 (Ethernet), integrated audio, bios, and hardware monitoring.
2. Processor: Intel Xeon Dual Core 2.8 GHz (64 bit)
3. Random-Access Memory: 32 GB, 1333 MHz, DDR3 SDRAM.
4. Graphics: Video adapter, minimum 1800 x 1200 pixels, 512 MB video memory, dual-monitor capable.
5. Monitor: 24 inches, LCD color, widescreen.
6. Keyboard: QWERTY, 105 keys.
7. Hard-Disk Drive: 1024 GB.
8. Optical Drive: 16X DVD+/-RW.
9. Media Drive: Internal 19-in-1 USB 2.0 Media Card reader
10. Mouse: Three button, optical with wheel.
11. Uninterruptible Power Supply: 2000 VA.
12. Operating System: Microsoft Windows 7 Professional.

B. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.

1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation or diagnostic terminal unit.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:

a. Global communications.
b. Discrete/digital, analog, and pulse I/O.
c. Monitoring, controlling, or addressing data points.
d. Software applications, scheduling, and alarm processing.
e. Testing and developing control algorithms without disrupting field hardware and controlled environment.

3. Standard Application Programs:

a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, antishort cycling, PID control, BAS with fine tuning, and trend logging.

b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
c. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
d. Remote communications.
e. Maintenance management.
f. Units of Measure: Inch-pound and SI (metric).

4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
5. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

C. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.

1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:

a. Global communications.
b. Discrete/digital, analog, and pulse I/O.
c. Monitoring, controlling, or addressing data points.

3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
4. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

D. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.

1. Binary Inputs: Allow monitoring of on-off signals without external power.
2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation.
5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA).
6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
7. Universal I/Os: Provide software selectable binary or analog outputs.

E. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:

1. Output ripple of 5.0 mV maximum peak to peak.
2. Combined 1 percent line and load regulation with 100-mic.sec. response time for 50 percent load changes.
3. Built-in overvoltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.

F. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:

1. Minimum dielectric strength of 1000 V.
2. Maximum response time of 10 nanoseconds.
3. Minimum transverse-mode noise attenuation of 65 dB.
4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

G. Third Party Devices: Third party devices shall be connected to building automation system through MS/TP communication bus at the fastest supported bps to the associated controller with the function in which they are being utilized.

1. The following devices shall be provided and connected to the Building Automation System with a BACnet Testing Laboratories BTL listed MS/TP communications card. If communication card is not available then an owner approved BTL Listed Proxy device or Non-BTL listed card may be used. Device object names must clearly indicate the object that is being represented or a proxy device may be required.

a. VFD’s
b. Electrical Main Meter
c. Electrical Submeters
d. Lighting Control Panels
e. Chilled Water Energy Meters
f. Domestic Water Meter
g. Irrigation Water Meter
h. Chemical Treatment System
i. Chillers
j. Solar Hot Water Control System.
k. Solar Hot Water Energy Meters

2.4 ELECTRONIC SENSORS

A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

B. Thermistor Temperature Sensors and Transmitters:

1. Manufacturers:

   a. Ebtron, Inc.
   b. I.T.M. Instruments Inc.
   c. RDF Corporation.

2. Accuracy: Plus or minus 0.5 deg F at calibration point.
3. Wire: Twisted, shielded-pair cable.
4. Insertion Elements in Ducts: Single point, 8 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft.
5. Averaging Elements in Ducts: 18 inches long, rigid; use where prone to temperature stratification or where ducts are larger than 10 sq. ft.
6. Insertion Elements for Liquids: Brass or stainless-steel socket with minimum insertion length of 2-1/2 inches.

7. Room Sensor Cover Construction: Manufacturer's standard locking covers.

   a. Set-Point Adjustment: Exposed.
   b. Set-Point Indication: Concealed.
   c. Thermometer: Concealed.
   d. Color: White.
   e. Orientation: Vertical.

8. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
9. Room Security Sensors: Stainless-steel cover plate with insulated back and security screws.

C. Humidity Sensors: Bulk polymer sensor element.

1. Manufacturers:

   a. BEC Controls Corporation.
   b. General Eastern Instruments.
   c. MAMAC Systems, Inc.
   d. ROTRONIC Instrument Corp.
   e. TCS/Basys Controls.
   f. Vaisala.

2. Accuracy: 2 percent full range with linear output.
3. Room Sensor Range: 20 to 80 percent relative humidity.
4. Room Sensor Cover Construction: Manufacturer's standard locking covers.

   a. Set-Point Adjustment: Concealed.
   b. Set-Point Indication: Concealed.
   c. Color: White.
   d. Orientation: Vertical.

5. Duct Sensor: 20 to 80 percent relative humidity range with element guard and mounting plate.
6. Outside-Air Sensor: 20 to 80 percent relative humidity range with mounting enclosure, suitable for operation at outdoor temperatures of minus 22 to plus 185 deg F.
7. Duct and Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.

D. Pressure Transmitters/Transducers:

1. Manufacturers:

   a. BEC Controls Corporation.
   b. General Eastern Instruments.
   c. MAMAC Systems, Inc.
   d. ROTRONIC Instrument Corp.
   e. TCS/Basys Controls.
   f. Vaisala.

2. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.

   a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
   b. Output: 4 to 20 mA.
   c. Building Static-Pressure Range: 0- to 0.25-inch wg.
   d. Duct Static-Pressure Range: 0- to 5-inch wg.

3. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig operating pressure; linear output 4 to 20 mA.
4. Water Differential-Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig operating pressure and tested to 300-psig; linear output 4 to 20 mA.
5. Differential-Pressure Switch (Air or Water): Snap acting, with pilot-duty rating and with suitable scale range and differential.
6. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; linear output 4 to 20 mA.

2.5 STATUS SENSORS

A. Status Inputs for Fans: Differential-pressure switch with pilot-duty rating and with adjustable range of 0- to 5-inch wg.

B. Status Inputs for Pumps: Differential-pressure switch with pilot-duty rating and with adjustable pressure-differential range of 8 to 60 psig, piped across pump.

C. Status Inputs for Electric Motors: Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.

D. Current Switches: Self-powered, solid-state with adjustable trip current, selected to match current and system output requirements.

2.6 FLOW MEASURING STATIONS

A. Air Flow Measuring Device: Provide where indicated multi-point thermal dispersion airflow traverse stations for continuous measurement of air volume. Each traverse station shall consist of a multiple array Dual “bead-in-glass” sensing locations. Air flow measurement station shall be sized to match actual duct size. Sensor density shall comply with manufactures recommendations (Density type) to insure specified accuracy in actual installation field conditions/location.

1. Air flow measurement station shall be + 2% of reading, with 0.25% repeatability.

a. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points at each AFM location:

1) Instaneous Airflow
2) Time weighted airflow average
3) Temperature

b. Acceptable Manufacture/Model:

1) Ebtron Gold Series - GTN116-PD
2) Or approved equal

B. Chilled Water Flow and Heating Hot Water Electromagnetic Flow BTU Meters: Provide chilled/hot water monitoring station consisting of a chilled/hot water flow meter, chilled/hot water supply and return water temperature sensors utilizing matching calibrated sensors.

1. The BCS shall monitor chilled water usage in "ton-hours" or "kiloton-hours", with an accuracy of plus or minus 0.75% with a turn down range from 0.1fps to 33 fps.

2. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points at each AFM location:

a. Acceptable Manufacture/Model:

1) Onicon F3500 with System 10 BTU Meter
2) Or approved equal

C. Chilled Water Flow and Heating Hot Water Electromagnetic Flow Meters: Provide chilled/hot water monitoring station consisting of a chilled/hot water flow meter.

1. The BCS shall monitor chilled water usage, with an accuracy of plus or minus 0.75% with a turn down range from 0.1fps to 33 fps.

2. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points at each AFM location:

a. Acceptable Manufacture/Model:

1) Onicon F3500 Insertion
2) Or approved equal

D. Domestic Water Flow:

1. Pulse Width Modulating Type (Mass Displacement)

2. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points:

a. Total Flow

3. Acceptable Manufacture:

a. Badger Meters, E-Series Meter with Bacnet Interface.
b. Or approved equal

E. Reclaimed Water Flow:

1. Pulse Width Modulating Type (Mass Displacement)

2. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points:

a. Total Flow

3. Acceptable Manufacture:

a. Badger Meters, Recodall
b. Or approved equal

2.7 THERMOSTATS

A. Manufacturers:

1. Erie Controls.
2. Danfoss Inc.; Air-Conditioning and Refrigeration Div.
3. Heat-Timer Corporation.
4. Sauter Controls Corporation.
5. tekmar Control Systems, Inc.
6. Theben AG - Lumilite Control Technology, Inc.

B. Thermistor Temperature Sensor

1. Prerential rate control to minimize overshoot and deviation from setpoint.
2. Short-cycle protection.
3. Sensor operating temperature From 32°F to 122°F (0°C to 50°C)
4. Storage temperature From -40°F to 185°F (-40°C to 85°C)
5. Storage/operating humidity range 5% to 95% relative humidity (RH), noncondensing
6. Thermistor accuracy 0.36°F at calibration point, 1%
7. Setpoint functional range 45°F to 90°F (7.2°C to 32.2°C)
8. Setpoint thumbwheel markings
9. 50°F to 85°F (in 5°F increments) with */** icons on thumbwheel
10. 11°C to 29°C (in 3°C increments) with */** icons on thumbwheel
11. Housing material Polycarbonate/ABS (suitable for plenum mounting), UV protection, UL 94: 5 VA flammability rating.
12. Local Ethernet connection.

2.8 HUMIDISTATS

A. Manufacturers:

1. MAMAC Systems, Inc.
2. ROTRONIC Instrument Corp.

B. Duct-Mounting Humidistats: Electric insertion, 2-position type with adjustable, 2 percent throttling range, 20 to 80 percent operating range, and single- or double-pole contacts.

2.9 CO2 SENSOR

A. Manufacturers:
1. Siemens Controls

B. CO2 effectively control C02 levels within a 0-2000 ppm range.

C. Non-Dispersive InfraRed (NDIR) sensor.

D. CO2 sensor shall be equipped with the following options:

1. Accuracy at 25°C ±30 ppm CO2 +3% of reading (includes repeatability)
2. Pressure dependence of output +1.6% of reading per kPa
3. Annual zero drift ±10 ppm
4. Recommended calibration interval None (auto-calibrated)
5. Response time < 3 minutes
6. Operating temperature From 32°F to 122°F (0°C to 50°C)
7. Storage temperature From -40°F to 158°F (-40°C to 70°C)
8. Humidity range 0–85% relative humidity (RH)
9. Airflow range 0–33 ft/s (0–10 m/s)
10. Output signals • OUT1 (V): 0–10 VDC
11. Resolution of analog outputs 2ppm CO2
12. Automatic self-diagnostics Diagnostic tools

2.10 ACTUATORS

A. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.

1. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
2. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
3. Nonspring-Return Motors for Valves Larger Than NPS 2-1/2: Size for running torque of 150 in. x lbf and breakaway torque of 300 in. x lbf.
4. Spring-Return Motors for Valves Larger Than NPS 2-1/2: Size for running and breakaway torque of 150 in. x lbf.
5. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft.: Size for running torque of 150 in. x lbf and breakaway torque of 300 in. x lbf.
6. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft.: Size for running and breakaway torque of 150 in. x lbf.

B. Electronic Actuators: Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.

1. Manufacturers:

   a. Belimo Aircontrols (USA), Inc.

2. Valves: Size for torque required for valve close off at maximum pump differential pressure.

3. Dampers: Size for running torque calculated as follows:

a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. of damper.
b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. of damper.
c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft of damper.
d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. of damper.
e. Dampers with 2- to 3-Inch wg of Pressure Drop or Face Velocities of 1000 to 2500 fpm: Increase running torque by 1.5.
f. Dampers with 3- to 4-Inch wg of Pressure Drop or Face Velocities of 2500 to 3000 fpm: Increase running torque by 2.0.

4. Coupling: V-bolt and V-shaped, toothed cradle.
5. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
6. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
7. Power Requirements (Two-Position Spring Return): 24-V ac.
8. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
9. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
10. Temperature Rating: Minus 22 to plus 122 deg F.
11. Temperature Rating (Smoke Dampers): Minus 22 to plus 250 deg F.
12. Run Time: 12 seconds open, 5 seconds closed.
13. Motorized dampers shall not share a common actuator unless the dampers are controlling the same airstream.

2.11 PRESSURE INDEPENDENT CHARACTERIZED CONTROL VALVES

A. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.

1. Pressure independent characterized ball control valves, Belimo or approved equal, shall be utilized for AHU’s CHW coils and FCU coils.

B. Manufacturer:

1. Belimo (Belimo Energy Valve)
2. Or approved equal.

C. Control Valves: Factory fabricated of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.

D. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional (except as noted).

E. Pressure Independent Control Valves 2” and smaller:

1. NPS 2 and Smaller: Forged brass body rated at no less than 360 PSI, stainless steel ball and stem, female NPT union or flanged ends, EPDM lubricated O-rings and TEFZEL characterizing disc.
2. Accuracy: The control valves shall accurately control the flow from 0 to 100% full rated flow with an operating pressure differential range of 5 to 50 PSID across the valve.
3. Flow Characteristics: Equal percentage/linear characteristics. (Ultrasonic flow meter with ± 5% of the actual flow)
4. Close-Off Pressure Rating: 200 PSI.
5. Supply and return temperature sensors with thermowells and pipe fittings.
6. All actuators shall be electronically programmed by use of external computer software for the adjustment of flow. Programming using actuator mounted switches or multi-turn actuators are not acceptable. Actuators shall be provided with an auxiliary switch to prove valve position.
7. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory with a single screw on a four-way DIN mounting-base.
8. The control valve shall require no maintenance and shall not include replaceable cartridges.
9. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
10. The use of pressure independent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is not acceptable.

F. Pressure Independent Control Valves 2-1/2” to 6”:

1. NPS 2-1/2 to 6”: Forged brass body rated at no less than 360 PSI, stainless steel ball and stem, flanged ends, EPDM lubricated O-rings and TEFZEL characterizing disc.
2. Accuracy: The control valves shall accurately control the flow from 0 to 100% full rated flow with an operating pressure differential range of 5 to 50 PSID across the valve.
3. Flow Characteristics: Equal percentage/linear characteristics. (Magnetic flow meter with ± 5% of the actual flow)
4. Close-Off Pressure Rating: 200 PSI.
5. Supply and return temperature sensors with thermowells and pipe fittings.
6. All actuators shall be electronically programmed by use of external computer software for the adjustment of flow. Programming using actuator mounted switches or multi-turn actuators are not acceptable. Actuators shall be provided with an auxiliary switch to prove valve position.
7. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory with a single screw on a four-way DIN mounting-base.
8. The control valve shall require no maintenance and shall not include replaceable cartridges.
9. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.

10. The use of pressure independent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is not acceptable.

2.12 CONTROL VALVES

A. Butterfly Valves: 200-psig, 150-psig maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.

1. Body Style: Wafer.
2. Disc Type: Aluminum bronze.
3. Sizing: 1-psig maximum pressure drop at design flow rate.
4. Manufacture : Belimo or approved equal.

2.13 DAMPERS

A. Manufacturers:

1. Air Balance Inc.
2. TAMCO (T. A. Morrison & Co. Inc.).
3. United Enertech Corp.
4. Greenheck
5. Ruskin

B. Dampers: AMCA-rated, parallel-blade design; 0.108-inch- minimum thick, galvanized-steel or 0.125-inch- minimum thick, extruded-aluminum frames with holes for duct mounting; damper blades shall not be less than 0.064-inch- thick galvanized steel with maximum blade width of 8 inches and length of 48 inches.

1. Secure blades to 1/2-inch- diameter, zinc-plated axles using zinc-plated hardware, with oil-impregnated sintered bronze blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
2. Operating Temperature Range: From minus 40 to plus 200 deg F.
3. Edge Seals, Standard Pressure Applications: Closed-cell neoprene.
4. Edge Seals, Low-Leakage Applications: Use inflatable blade edging or replaceable rubber blade seals and spring-loaded stainless-steel side seals, rated for leakage at less than 10 cfm per sq. ft. of damper area, at differential pressure of 4-inch wg when damper is held by torque of 50 in. x lbf; when tested according to AMCA 500D.
5. Outside, return, relief and exhaust air dampers shall be of low leakage proportional type with spring return and fail closed.

2.14 CONTROL CABLE

A. Electronic and fiber-optic cables for control wiring are specified in Division 27 Section "Communications Horizontal Cabling."

1. Electronic and fiber-optic cables for control wiring shall meet the following low voltage wiring requirements:

a. Input/Output = Green jacket, plenum rated with shield.

1) 18 awg, shielded, plenum rated 2-conductor.
2) Loop powered devices should be implemented using (2) two cables.

b. COMM = BACnet MS/TP Low Cap 100 ohm, 12.5pf/ft Blue jacket plenum rated with shield

1) 24 awg, shielded, plenum rated 2-conductor

c. Power (<50VAC/VDC) = Orange jacket plenum rated with shield
1) 18 awg, shielded, plenum rated 2-conductor

2.15 POWER MONITORING

A. Power Monitor Meters: Provide power monitors sized for the respective load and/or panel being monitored.

1. The BCS shall monitor power usage in "KWH", peak demand “KW”, instaneous power “KW” demand, voltage per phase.
2. Provide UL listed manufactures enclosure for assembly. NEMA 1 indoors, NEMA 3R outdoors.

3. Provide Bacnet interface for BMS system interface. BMS shall monitor the following points at each power monitor location:

a. KW
b. KWH
c. Peak KW
d. Voltage per Phase
e. Current

4. Acceptable Manufacture/Model:

a. Veris Power Meter system (Solid Core or split Core Style) with BACnet interface.

1) Veris E50 for single circuits
2) Veris E60 for MDP or distribution panel mains

b. Or approved equal

2.16 LAB CONTROLS

1. Basis of Design: Antec (Model PACE) (By Price)

   a. Or as approved by Owner

2. Input/Output (I/O) Configuration:

   a. Digital Outputs:

      1) 6 relay outputs SPDT (contact ratings: 5A @ 25OVAC)
      2) Removable Screw terminals
      3) Individual LED Indication of output status (color - “red’)

   b. Universal Inputs:

      1) 12 total

      2) Input Signals Supported (jumper selectable):

         a) Thermistor/Dry Contact.
         b) 0-10 VDC (scalable in software for other ranges)
         c) 0-20 mA (scalable in software for other ranges)
         d) 1K Platinum RTD

      3) Removable screw terminals
      4) 12-Bit A/D
      5) Selectable +5V or +24V voltage source (240 mA max)

   c. Universal Outputs:

      1) 6 total

      2) Analog Output Signals Supported:

         a) 0-10 V DC on all 6 outputs (scalable in software for other ranges)
         b) 0-10 VDC or 0-20 mA on 2 of the outputs

      3) Digital Output Signals - Each of the 6 outputs can be individually configured as digital outputs. They have the signal capacity
      4) to drive an external voltage relay device.

5) Removable screw terminals
6) Individual LED Indication (red - vary in intensity based on output signal status)

3. Power Requirements:

a. External Power Source - 24 VAC ± 15 %, 50-60 Hz, 20 VA.
b. Removable screw terminal (2-position) for power connection
c. LED Indication: Power (green), Run (green), and Error (red) LEDs

4. Communication Ports:

a. 4Ports

1) Open Protocol Port #1 - EIA-232/485/ARC 156 (jumper selectable)
2) Open Protocol Port #2 - Plug-in port for optional communications cards (LonWorks, Ethernet, Modem, etc.). Note: use of this plug-in port disables serial (232/485) communications at Port #1; however, ARC 156 communications may be active simultaneous to Port #2 usage.
3) Rnet Port - for connection to keypad/displays and/or intelligent sensors. This port also acts as the local laptop access port.
4) I/O Expansion Port (CAN-bus)

b. Removable Screw terminals
c. Transmit & Receive LEDs for each port
d. Rotary Address Switches
e. Protocol & Baud Rate selector DIP switch
f. Integrate to Fume hood autosash controller.

5. Size and Environmental Requirements:

a. Board Size (including metal cover): 11-3/4” wide x 5” high x 2” deep
b. Expander Board Size: 10-5/8” wide x 3” high x 2” deep (note: the expander boards can be mounted on top of the ENV IV controller to conserve panel space or they can be remotely mounted up to 500 feet away from the controller.)
c. Protection: Brushed aluminum, gull-wing metal
d. Temperature Range: -40 to 150 deg. F, 10-95% RH non-condensing
e. Agency Listings: UL, cUL, CE. FCC

6. Lab Air Control Valves:

a. Lab General Exhaust Valves:

1) Basis of Design (ANTEC VV) or approved equal.
2) Venturi Body and Cone

3) Body Material: Aluminum
4) Cone Material: Aluminum
5) Internal Hardware: 316L Stainless
6) Electronic actuator

b. Lab Hood Exhaust Valves:

1) Basis of Design (ANTEC VV) or approved equal.
2) Venturi Body and Cone
3) Body Material: Aluminum with PVDF Kynar Coating or equivalent
4) Cone Material: Aluminum with PVDF Kynar Coating or equivalent
5) Internal Hardware: 316L Stainless
6) Electronic actuator

c. Supply Air Valves:

1) Basis of Design: (ANTEC VFX with Hydronic Heat where scheduled) or approved equal.
2) Blade style: Precision Damper
3) Material: Aluminum
4) Insulation: Metal Liner double wall construction with closed cell insulation
5) AirFlow Measuring Station: Velocity Wing
6) Damper Shaft: Solid one Piece Shaft
7) Electronic actuator

8) Hydronic Heater:

a) Casing: Minimum 22 ga. galvanized steel.
b) Factory installed.
c) Gasketed access door.
d) Aluminum fins mechanical bonded to seamless copper tubes.
e) AHRI 410 Certified.

d. Refer to Design Drawings for Performance requirements.

7. See Fume hood specification for autosash controller being supplied with the Fume hoods. Fume hood controller shall be integrated with the Lab Controller to provide seamless operation between the two controller systems.

a. Fume Hood Controllers shall provide the following operation:

1) Occupancy Sensor at each hood.
2) Sash position at each hood.
3) Auto Sash actuator at each hood.
4) Sash obstruction sensor at each hood sash edge.

5) Hood airflow monitor, local digital indication, greenlight normal, redlight low flow, local low flow audible alarm, alarm silence (with adjustable silence time delay).
6) Exit door Pushbutton at each exit door, programmed to reduce the lab exhaust airflows to allow for safe egress for 20 sec (adjustable), then return to exhaust airflow control.

8. Lab Control system shall provide Automatic Airlfow tracking between lab exhaust and associated supply air, to perform the following:

a. Maintain the associated lab minimum air change rates when in occupied or unoccupied modes. (4 AC when unoccupied, minimum 10 AC when occupied. Adjustable.)
b. Maintain the associated exhaust airflow tracking to maintain the lab negative cfm offset at all times. (To ensure lab is negative to adjacent occupied spaces at all times.
c. Modulate fume hood exhaust airflows, based upon associated sash position.
d. Automatically open and close hood sash's based upon occupancy sensors.
e. Provide local over-ride pushbutton of auto-sash control (with adjustable over-ride timer)
f. Modulate and reduce hood airflows when hood is closed, to code allowed minimums.
g. Modulate lab Air valves to scheduled values.
h. Modulate reheat to maintain space temperature set-points. Reheat shall be controlled to maintain a discharge air temperature set-point which is to be reset upon the space temperature set-point and associated space temperature reading.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that power supply is available to control units and operator workstation.

3.2 INSTALLATION

A. Building Automation controllers can be organized into a hierarchy structure that allows for multiple IP addresses.

1. The only devices allowed at the IP level shall be those that meet or exceed the minimum BIBB requirements of the latest BTL listed B-BC class PICS.
2. All other devices must reside at a lower tier.

3. Any device that is dependent on another device for emergency operation, life safety, etc. must have a means of a direct I/O for the needed points.
4. All installations shall utilize one controller for each piece of equipment or system. Two AHU's cannot share a common controller. However, two pumps for a chilled water system can utilize a common controller.

B. The following framework shall be utilized for device addressing (DEVICE Instance) and network number:

1. Network number shall be comprised of 3 digit building number (551) followed by 2 digit network number. IP level devices shall be assigned a network number of 1.

2. The device ID shall be comprised of the 3 digit building number (551) followed by 2 digit network number (IP devices use 00) followed by 2 digit device number.

a. EXAMPLE: BLDG (XXX)

1) Devices on the IP level: xxx0001-xxx009
2) MSTP assignable network numbers: Xxx01-xxx99

3) MSTP assignable devices: xxx0101-xxx0199 for network xxx01

a) xxx0201-xxx0299 for network xxx02
b) xxx0301-xxx0399 for network xxx03continuing to
c) xxx9901-xxx9999 for network xxx99

4) MS/TP physical address shall be set to match the last 2-digits of the device ID
5) Building Numbers greater than 418 will be assigned an owner specified unique 3-digit number.

C. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.

D. Connect and configure equipment and software to achieve sequence of operation specified.

E. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices 48 inches above the floor.

1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.

F. Install automatic dampers according to Division 23 Section "Air Duct Accessories."

G. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.

H. Install labels and nameplates to identify control components according to Division 23 Section "Identification for HVAC Piping and Equipment."

I. Install hydronic instrument wells, valves, and other accessories according to Division 23 Section "Hydronic Piping."

J. Install duct volume-control dampers according to Division 23 Sections specifying air ducts.

K. Install electronic and fiber-optic cables according to Division 27 Section "Communications Horizontal Cabling."

3.3 ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. Install raceways, boxes, and cabinets according to Division 26 Section "Raceway and Boxes for Electrical Systems."

1. Controls power shall be connected to emergency power system. A UPS shall be provided for the operator workstation and any file serves, with a minimum of 30 minute capacity.

    a. Note: Terminal units with electric heat are not to be supplied with emergency power unless noted otherwise. (Therefore those controls will not be on emergency power, as the equipment is single point power connection.)
    b. Note: FCU’s units are not to be supplied with emergency power unless noted otherwise. (Therefore those controls will not be on emergency power, as the equipment is single point power connection.)

B. Install building wire and cable according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Install signal and communication cable according to Division 27 Section "Communications Horizontal Cabling."

1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.
2. Install exposed cable in raceway.
3. Install concealed cable in raceway.
4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.

7. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.

D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.

E. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
2. Test and adjust controls and safeties.
3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
4. Test each point through its full operating range to verify that safety and operating control set points are as required.
5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
6. Test each system for compliance with sequence of operation.
7. Test software and hardware interlocks.

C. BAS Verification:

1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
2. Check instruments for proper location and accessibility.
3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
4. Check instrument tubing for proper fittings, slope, material, and support.
5. Check installation of air supply for each instrument.
6. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
7. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
8. Check temperature instruments and material and length of sensing elements.
9. Check control valves. Verify that they are in correct direction.

10. Check BAS system as follows:

a. Verify that BAS controller power supply is from emergency power supply, if applicable.
b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
c. Verify that spare I/O capacity has been provided.
d. Verify that BAS controllers are protected from power supply surges.

D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

E. System verification: HVAC Controls: Refer to 230010-3.6 for additional requirements.

3.5 ADJUSTING

A. Calibrating and Adjusting:

1. Calibrate instruments.
2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.

4. Control System Inputs and Outputs:

a. Check analog inputs at 0, 50, and 100 percent of span.
b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
c. Check digital inputs using jumper wire.
d. Check digital outputs using ohmmeter to test for contact making or breaking.
e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.

5. Flow:

a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
b. Manually operate flow switches to verify that they make or break contact.

6. Pressure:

a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.

7. Temperature:

a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
b. Calibrate temperature switches to make or break contacts.

8. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.
9. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
10. Provide diagnostic and test instruments for calibration and adjustment of system.
11. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.
12. Refer to 230010-3.6 for additional calibration and adjustment requirements associated with prefunctional and functional testing.

B. Adjust initial temperature and humidity set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other than normal occupancy hours for this purpose.

3.6 PROCEDURE FOR HYDRONIC SYSTEMS

A. Equipment installed with pressure independent control valves shall not require hydronic balancing. (Equipment hydronic performance criteria is still required to be measured and documented for all equipment). Flow shall be verified and adjusted for the pressure independent valve assembly for field conditions using the pressure independent control valve manufacturer’s documented procedure for 25% of the total installed product. Exact locations of tested product to be coordinated with the commissioning agent.

3.7 MEASUREMENT & VERIFICATION

A. The following building systems will be measured and trended through the building automation. The contractor shall provide all necessary measuring devices and programming to accomplish the monitoring and trending of these systems. The monitoring and trending shall be polled every 5 minutes at a minimum.

1. Common area lighting systems shall be monitored with check meters at each lighting power panel at each floor.
2. Site lighting system is provided with check meters at the lighting power panel.

3. HVAC systems are provided with check meters at the each power panel at each floor.
4. Major motor loads are also trended through the BAS DDC. The hours of operation are recorded and the total power used is calculated by multiplying the operating hours by the measured brake horsepower noted in the commissioning and testing/balancing reports.
5. VAV box heaters are provided with check meters at the power panel at each floor. VAV box heaters are also trended through the BAS DDC system for operation and discharge air temperature to compare to the anticipated operation model.
6. VFD operation is trended through the BAS DDC as a percentage of full operation. At each unit with a VFD, the motor brake HP is recorded in the commissioning and testing/balancing reports. The energy reduction is calculated by multiplying the percentage of operation trend by the full load power.
7. Building cooling load is monitored through the BAS DDC through the building's BTU meter that will be provided. BTU meter will monitor flow in, by-pass flow, supply water temperature and return water temperatures.
8. Building cooling load will be trended through the BAS DDC for airside and waterside. The outside air temperatures and AHU discharge temperatures are recorded to document cooling loads within the building. The BTU meter information is trended to document cooling loads, also.
9. Building outside air is trended through the BAS DDC for outside air conditioning reductions. The outside air temperature/humidity, leaving ERU outside air temperature/humidity, stale air temperature/humidity and leaving ERU stale air temperature/humidity are all trended. Outside air flow and stale airflow are also trended. The airside BTU meter information is trended to document cooling/heating loads, also.
10. Hot water heating requires trending through the BAS system.
11. Domestic Water use is recorded by the main building water meter and trended by the BAS DDC system.
12. Reclaimed Water use is recorded by the reclaimed water meter to the building's plumbing system by the BAS DDC system.

3.8 DEMONSTRATION AND TRAINING

A. Provide 32 hours of instruction to be conducted at the project site with manufacturer's representative. The training shall be conducted at 4 sessions at 8 hour a piece. Contractor to also provide two sets of control operation manuals for use at the training session and then provide to the Owner after completion of the session.

3.9 COMMISSIONING

A. Refer to Commissioning Specifications, Section 018110, for related commissioning requirements.

B. Contractor shall provide all necessary support to the commissioning team to implement commissioning plan as outlined in Section 018110.

END OF SECTION 23 09 00

SECTION 23 31 13 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Double-wall rectangular ducts and fittings.
3. Single-wall round and flat-oval ducts and fittings.
4. Double-wall round and flat-oval ducts and fittings.
5. Sheet metal materials.
6. Duct liner.
7. Sealants and gaskets.
8. Hangers and supports.

B. Related Sections:

1. Section 230010 “Basic Mechanical Requirements”.
2. Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
3. Section 230700 “HVAC Insulation”
4. Section 233300 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

PERFORMANCE REQUIREMENTS

C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of the following products:

1. Liners and adhesives.

2. Sealants and gaskets.

B. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.

6. Items penetrating finished ceiling including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Perimeter moldings.

7. Refer to 230010

B. Welding certificates.

C. Field quality-control reports.

D. Duct Leakage Test Plan, Testing Forms, and evidence of each test being completed prior to scheduling verification with Valencia.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

PART 2 - PRODUCTS

2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. McGill AirFlow LLC.
2. Sheet Metal Connectors, Inc.
3. Pre-approved equal to above manufacturers' products.

B. Rectangular Ducts: Fabricate ducts with indicated dimensions for the inner duct.

C. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

D. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

E. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

F. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Maximum Thermal Conductivity: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
3. Coat insulation with antimicrobial coating.
4. Cover insulation with polyester film complying with UL 181, Class 1.

G. Inner Duct (acoustical applications): Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch-diameter perforations, with overall open area of 23 percent.

H. Inner Duct (exposed non-acoustical applications): Minimum 0.028-inch solid sheet steel.

I. Formed-on Transverse Joints (Flanges): Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Traverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

J. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 SINGLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Lindab Inc.
    b. McGill AirFlow LLC.
    c. SEMCO Incorporated.
    d. Pre-approved equal to above manufacturer’s products

B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).

C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Transverse Joints in Ducts Larger Than 48Inches in Diameter: Flanged.

D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Fabricate round ducts larger than 72inches in diameter with butt-welded longitudinal seams.
2. Fabricate flat-oval ducts larger than 48inches in width (major dimension) with butt-welded longitudinal seams.

E. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.4 DOUBLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Lindab Inc.
2. McGill AirFlow LLC.
3. SEMCO Incorporated.
4. Pre-approved equal to above manufacturer’s products

B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension) of the inner duct.

C. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on static-pressure class unless otherwise indicated.

1. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

a. Transverse Joints in Ducts Larger Than 48Inches in Diameter: Flanged.

2. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

a. Fabricate round ducts larger than 72inches in diameter with butt-welded longitudinal seams.
b. Fabricate flat-oval ducts larger than 48inches in width (major dimension) with butt-welded longitudinal seams.

3. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Maximum Thermal Conductivity: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
3. Coat insulation with antimicrobial coating.
4. Cover insulation with polyester film complying with UL 181, Class 1.

E. Inner Duct (acoustical applications): Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch-diameter perforations, with overall open area of 23 percent.

F. Inner Duct (exposed non-acoustical applications): Minimum 0.028-inch solid sheet steel.

2.5 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G90.
2. Finishes for Surfaces Exposed to View: Mill phosphatized.

C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G90.
2. Minimum Thickness for Factory-Applied PVC Coating: 4 mils thick on sheet metal surface of ducts and fittings, inside and outside surfaces.
3. Coating Materials: Acceptable to authorities having jurisdiction for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.

D. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.

E. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.

F. Aluminum Sheets: Comply with ASTM B 209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.

G. Factory- or Shop-Applied Antimicrobial Coating:

1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating shall be applied to the exterior surface.
2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
3. Coating containing the antimicrobial compound shall have a hardness of 2H, minimum, when tested according to ASTM D 3363.
4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
5. Shop-Applied Coating Color: White.
6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.

H. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

I. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.6 DUCT LINER

A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. CertainTeed Corporation; Insulation Group.
b. Johns Manville.
c. Knauf Insulation.
d. Owens Corning.

e. Maximum Thermal Conductivity:

1) Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
2) Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.

2. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-

resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.

3. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.

    a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Aeroflex USA Inc.
    b. Armacell LLC.
    c. Rubatex International, LLC

2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.

    a. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Insulation Pins and Washers:

1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized steel, aluminum, or stainless steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

D. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."

1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.

3. Butt transverse joints without gaps, and coat joint with adhesive.
4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
6. Apply adhesive coating on longitudinal seams.
7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.

8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:

    a. Fan discharges.
    b. Intervals of lined duct preceding unlined duct.
    c. Upstream edges of transverse joints in ducts where air velocities are higher than 1000 fpm or where indicated.

9. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.7 SEALANT AND GASKETS

A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

B. Water-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

C. Solvent-Based Joint and Seam Sealant (for use outdoors only):

1. Application Method: Brush on.

2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. VOC: Maximum 395 g/L.
10. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
11. Service: Outdoor.
12. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

F. Round Duct Joint O-Ring Seals:

1. Seal shall provide maximum 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for10-inch wg static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.8 HANGERS AND SUPPORTS

A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.

B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.

F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

H. Trapeze and Riser Supports:
1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.9 RESTRAINT DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.; a division of Cooper Industries.
2. Ductmate Industries, Inc.
3. Hilti Corp.
4. Kinetics Noise Control.
5. Loos & Co.; Cableware Division.
6. Mason Industries.
7. TOLCO; a brand of NIBCO INC.
8. Unistrut Corporation; Tyco International, Ltd.

B. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.

C. Restraint Cables: ASTM A 603, galvanized or ASTM A 492, stainless-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.

D. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

C. Install round and flat-oval ducts in maximum practical lengths.

D. Install ducts with fewest possible joints.

E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.

I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

J. Ducts located on the roof, shall have a pitched top to shed water, rain, and snow.

K. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

L. Where ducts pass through fire-rated interior partitions and/or exterior walls, install fire dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers.

M. Where ducts pass through fire/smoke-rated interior partitions and/or exterior walls, install combination fire dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers. Install a duct mount smoke detector within 5’ of the damper for activation.

N. Where ducts pass through smoke-rated interior partitions and/or exterior walls, install smoke dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for smoke dampers. Install a duct mount smoke detector within 5’ of the smoke damper for activation.

O. Where ducts connect to 2-hr shafts, install combination fire smoke dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers. Install a duct mount smoke detector within 5’ of the CFS damper for activation.

P. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

3.2 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 ADDITIONAL INSTALLATION REQUIREMENTS FOR COMMERCIAL KITCHEN HOOD EXHAUST DUCT

A. Install commercial kitchen hood exhaust ducts without dips and traps that may hold grease, and sloped a minimum of 2 percent to drain grease back to the hood.

B. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of 20 feet in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings. Locate access panel on top or sides of duct a minimum of 1-1/2 inches from bottom of duct.

C. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.

D. Install 2-hr listed duct fire wrap to allow zero clearance to combustibles, from hood to out of building in accordance with NFPA 96.

E. Install in accordance with IBC and NFPA 96.

3.4 DUCT SEALING

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Seal all ducts and all joints, regardless of pressure/seal class.

3.5 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: (Contractor shall coordinate with structural drawings prior to installation and layout.) Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

1. Where practical, install concrete inserts before placing concrete.
2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
5. If building is Post-Tension, Contractor shall x-ray prior to installing anchors, and coordinate anchor locations with x-rays and structural drawings.
6. Proposed hanger and support layout/spacing shall not exceed building structural limitations at each reaction/support location. Contractor shall provide additional supports as required to anchor and support in accordance with building design structural limits.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

D. Hangers Exposed to View: Threaded rod and angle or channel supports.

E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.

F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.6 RESTRAINT-DEVICE INSTALLATION

A. Select restraint devices with capacities adequate to carry present and future static and dynamic loads.

B. Install cables so they do not bend across edges of adjacent equipment or building structure.

C. Install cable restraints on ducts that are suspended with vibration isolators.

D. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

E. Drilling for and Setting Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.7 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Section 233300 "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.8 PAINTING

A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

3.9 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Leakage Tests:

1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.

2. Test the following systems:

a. Ducts with a Pressure Class 1-Inch wg or higher: Test representative duct sections, selected by Architect from sections installed, totaling no less than 50 percent of total installed duct area for each designated pressure class and each duct system type.
b. Smoke Control Ducts (i.e. Atrium): Test all ducts installed in accordance with FBC.

3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
4. Test for leaks before applying external insulation.
5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
6. Give seven (7) days' advance notice for testing.
7. Prior to the ductwork being leak and pressure tested, the TAB contractor shall sign off that devices are installed that are needed to properly test and balance the system.
8. Valencia intends to verify the successful completion of all ductwork leakage and pressure testing. The contractor shall be responsible for submitting a testing plan, testing forms, and evidence of each test being successfully completed prior to scheduling verification with Valencia. This shall be repeated for each section of ductwork that requires testing.

C. Duct System Cleanliness Tests:

1. Visually inspect duct system to ensure that no visible contaminants are present.

2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."

    a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.10 DUCT CLEANING

A. Clean new and existing duct system(s) before testing, adjusting, and balancing.

B. Use service openings for entry and inspection.

1. Create new openings and install access panels appropriate for duct static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 233300 "Air Duct Accessories" for access panels and doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
3. Remove and reinstall ceiling to gain access during the cleaning process.

C. Particulate Collection and Odor Control:

1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

D. Clean the following components by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.

7. Dedicated exhaust and ventilation components and makeup air systems.

E. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.

3.11 START UP

A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.12 DUCT SCHEDULE

A. Fabricate ducts with galvanized sheet steel except as otherwise indicated.

B. Supply Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:

   a. Pressure Class: Positive 2-inch wg.
   b. Minimum SMACNA Seal Class: A.

2. Ducts Connected to Constant-Volume Air-Handling Units:

   a. Pressure Class: Positive 2-inch wg.
   b. Minimum SMACNA Seal Class: A.

3. Ducts Connected to Variable-Air-Volume Air-Handling Units (for the first 50 feet) upstream of terminals:

a. Pressure Class: Positive 4-inch wg.
b. Minimum SMACNA Seal Class: A.

4. Ducts Connected to Variable-Air-Volume Air-Handling Units (beyond the first 50 feet) upstream of terminals:

a. Pressure Class: Positive 3-inch wg.
b. Minimum SMACNA Seal Class: A.

C. Return Ducts:

1. Indoor Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:

a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: B.

2. Indoor Ducts Connected to Air-Handling Units:

a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: B.

3. Outdoor Ducts:

a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.

D. Exhaust Ducts:

1. Ducts Connected to Fans Exhausting ASHRAE 62.1, Class 1 and 2 Air:
a. Pressure Class: Negative 2-inch wg.
b. Minimum SMACNA Seal Class: B if negative pressure, and A if positive pressure.

2. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.

a. Exposed to View: Type 304, stainless-steel sheet, No. 4 finish.
b. Concealed: Type 304, stainless-steel sheet, No. 2D finish.
c. Welded seams and joints.
d. Pressure Class: Positive or negative 3-inch wg.
e. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
f. SMACNA Leakage Class: 3.

3. Ducts Connected to Dishwasher Hoods:

a. Type 304, stainless-steel sheet.
b. Exposed to View: No. 4 finish.
c. Concealed: No. 2D finish.

d. Welded seams and flanged joints with watertight EPDM gaskets.
e. Pressure Class: Positive or negative 2-inch wg.
f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
g. SMACNA Leakage Class: 3.

E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:

a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.

2. Ducts Connected to Air-Handling Units:

a. Pressure Class: Positive or negative 2-inch wg.
b. Minimum SMACNA Seal Class: A.

F. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel.

2. PVC-Coated Ducts:

a. Exposed to Airstream: Match duct material.
b. Not Exposed to Airstream: Match duct material.

3. Stainless-Steel Ducts:

a. Exposed to Airstream: Match duct material.
b. Not Exposed to Airstream: Match duct material.

4. Aluminum Ducts: Aluminum.

G. Liner (Where indicated on Design Drawings):

1. Supply Air Ducts: Fibrous glass, Type I minimum 1 inch thick, and thickness to comply with minimum R-Value.
2. Return Air Ducts Fibrous glass, Type I minimum 1 inch thick, and thickness to comply with minimum R-Value.
3. Exhaust Air Ducts: Fibrous glass, Type I minimum 1 inch thick, and thickness to comply with minimum R-Value.
4. Transfer Ducts: Fibrous glass, Type I 1 inch thick.

H. Double-Wall Duct Interstitial Insulation:

1. Supply/Return/Exhaust Air Ducts: minimum 1-1/2 inchs thick, and thickness to comply with minimum R-4.2.

I. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."

   a. Velocity 1000 fpm or Lower:

      1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
      2) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

   b. Velocity 1000 to 1500 fpm:

      1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
      2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
      3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

   c. Velocity 1500 fpm or Higher:

      1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
      2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
      3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."

   a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.

      1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
      2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
      3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.

b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam or Welded.

J. Branch Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."

a. Rectangular Main to Rectangular Branch: 45-degree entry.
b. Rectangular Main to Round Branch: Conical spin in.

2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.

a. Velocity up to 1500 fpm: Conical tap.
b. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 23 31 13

SECTION 23 33 00 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Ceiling radiation dampers.
7. Smoke dampers.
8. Combination fire and smoke dampers.
9. Corridor dampers.
10. Flange connectors.
11. Duct silencers.
12. Turning vanes.
13. Remote damper operators.
14. Duct-mounted access doors.
15. Flexible connectors.
16. Flexible ducts.
17. Duct security bars.
18. Duct accessory hardware.

B. Related Requirements:

1. Section 233723 "HVAC Gravity Ventilators" for roof-mounted ventilator caps.
2. Section 283111 "Digital, Addressable Fire-Alarm System" for duct-mounted fire and smoke detectors and associated duct mount smoke detector.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.

B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.

1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:

a. Special fittings.
b. Manual volume damper installations.
c. Control-damper installations.
d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
e. Duct Access Doors.
f. Support and anchor details.
g. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved

1. Refer to 230010 for additional requirements.

B. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 MATERIALS

A. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G90.
2. Exposed-Surface Finish: Mill phosphatized.

B. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed ducts and standard 1-side brushed finish for exposed ducts.

C. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.

D. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.

E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.3 BACKDRAFT AND PRESSURE RELIEF DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. American Warming and Ventilating; a division of Mestek, Inc.
3. Cesco Products; a division of Mestek, Inc.
4. Greenheck Fan Corporation.
5. Lloyd Industries, Inc.
6. Nailor Industries Inc.

7. NCA Manufacturing, Inc.
8. Pottorff.
9. Ruskin Company.
10. Vent Products Company, Inc.

B. Description: Gravity balanced.

C. Frame: Hat-shaped, 0.063-inch- thick extruded aluminum, 0.03-inch-thick stainless steel], or 0.05-inch-thick stainless steel, with welded corners or mechanically attached and mounting flange.

D. Blades: Multiple single-piece blades, maximum 6-inch width, 0.025-inch-thick, roll-formed aluminum, or 0.050-inch-thick aluminum sheet with sealed edges.

E. Blade Action: Parallel.

F. Blade Seals: Extruded vinyl, mechanically locked or Neoprene, mechanically locked.

G. Blade Axles:

1. Material: Nonferrous metal, Stainless steel, or Aluminum.
2. Diameter: Minimum 0.20 inch.

H. Tie Bars and Brackets: Aluminum or Galvanized steel.

I. Return Spring: Adjustable tension.

J. Bearings: Synthetic pivot bushings.

K. Accessories:

1. Adjustment device to permit setting for varying differential static pressure.
2. Counterweights and spring-assist kits for vertical airflow installations.
3. Electric actuators.

4. Screen Mounting: Front mounted in sleeve.

a. Sleeve Thickness: 20 gage minimum.
b. Sleeve Length: 6 inches minimum.

5. Screen Material: Aluminum.
6. Screen Type: Insect.
7. 90-degree stops.

2.4 BAROMETRIC RELIEF DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. American Warming and Ventilating; a division of Mestek, Inc.
3. Cesco Products; a division of Mestek, Inc.
4. Greenheck Fan Corporation.
5. Lloyd Industries, Inc.
6. Nailor Industries Inc.
7. NCA Manufacturing, Inc.
8. Pottorff.
9. Ruskin Company.
10. Vent Products Company, Inc.

B. Suitable for horizontal or vertical mounting.

C. Frame: Hat-shaped, 0.063-inch- thick extruded aluminum, 0.03-inch-thick stainless steel], or 0.05-inch-thick stainless steel, with welded corners or mechanically attached and mounting flange.

D. Blades:

1. Multiple, 0.025-inch-thick, roll-formed aluminum or 0.050-inch-thick aluminum sheet.
2. Maximum Width: 6 inches.
3. Action: Parallel.
4. Balance: Gravity.

E. Blade Seals: Extruded vinyl, mechanically locked or Neoprene, mechanically locked.

F. Blade Axles: Nonferrous metal, Stainless steel, or Bronze.

G. Tie Bars and Brackets:

1. Material: Aluminum or Galvanized steel.
2. Rattle free with 90-degree stop.

H. Return Spring: Adjustable tension.

I. Bearings: Nonferrous metal, Stainless steel, or Bronze.

J. Accessories:

1. Flange on intake.
2. Adjustment device to permit setting for varying differential static pressure.
3. Counterweights and spring-assist kits for vertical airflow installations.

4. Electric actuators.

5. Screen Mounting: Front mounted in sleeve.

    a. Sleeve Thickness: 20 gage minimum.
    b. Sleeve Length: 6 inches minimum.
6. Screen Material: Aluminum.
7. Screen Type: Insect.
8. 90-degree stops.

2.5 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Air Balance Inc.; a division of Mestek, Inc.
    b. American Warming and Ventilating; a division of Mestek, Inc.
    c. Flexmaster U.S.A., Inc.
    d. McGill AirFlow LLC.
    e. Nailor Industries Inc.
    f. Pottorff.
    g. Ruskin Company.
    h. Trox USA Inc.
    i. Vent Products Company, Inc.

2. Standard leakage rating, with linkage outside airstream.
3. Suitable for horizontal or vertical applications.

4. Frames:

    a. Frame: Hat-shaped 0.094-inch-thick, galvanized sheet steel or 0.05-inch-thick stainless steel.
    b. Mitered and welded corners.
    c. Flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:

    a. Multiple or single blade.
    b. Parallel- or opposed-blade design.
    c. Stiffen damper blades for stability.
    d. Galvanized or Stainless-steel, 0.064 inch thick.
6. Blade Axles: Nonferrous metal.

7. Bearings:

a. Oil-impregnated bronze, Molded synthetic, or Oil-impregnated stainless-steel sleeve.
b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

8. Tie Bars and Brackets: Galvanized steel.
9. Accessories:

a. Include locking device to hold single-blade dampers in a fixed position without vibration.

B. Standard, Aluminum, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Air Balance Inc.; a division of Mestek, Inc.
b. American Warming and Ventilating; a division of Mestek, Inc.
c. McGill AirFlow LLC.
d. Nailor Industries Inc.
e. Pottorff.
f. Ruskin Company.
g. Trox USA Inc.
h. Vent Products Company, Inc.

2. Standard leakage rating, with linkage outside airstream.
3. Suitable for horizontal or vertical applications.
4. Frames: Hat-shaped, 0.10-inch-thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:

a. Multiple or single blade.
b. Parallel- or opposed-blade design.
c. Stiffen damper blades for stability.
d. Extruded-Aluminum Blades: 0.050-inch-thick extruded aluminum.

6. Blade Axles: Nonferrous metal.

7. Bearings:

a. Oil-impregnated bronze, Molded synthetic or Oil-impregnated stainless-steel sleeve.
b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

8. Tie Bars and Brackets: Aluminum.

9. Accessories:

   a. Include locking device to hold single-blade dampers in a fixed position without vibration.

C. Jackshaft:

1. Size: 0.5-inch or 1-inch diameter per manufacture requirements.
2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

D. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle made of 3/32-inch-thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

2.6 CONTROL DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
2. Arrow United Industries; a division of Mestek, Inc.
3. Cesco Products; a division of Mestek, Inc.
4. Greenheck Fan Corporation.
5. Lloyd Industries, Inc.
6. McGill AirFlow LLC.
7. Metal Form Manufacturing, Inc.
8. Nailor Industries Inc.
9. NCA Manufacturing, Inc.
10. Pottorff.
11. Ruskin Company.
12. Vent Products Company, Inc.
13. Young Regulator Company.

B. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.

C. Frames:

1. Hat, U, or Angle shaped.
2. 0.094-inch-thick, galvanized sheet steel or 0.05-inch-thick stainless steel.
3. Mitered and welded corners or Interlocking, gusseted corners.

D. Blades:

1. Multiple blade with maximum blade width of 6 inches
2. Opposed-blade design.
3. Galvanized-steel, Stainless steel, or Aluminum.
4. 0.064 inch thick single skin or 0.0747-inch-thick dual skin.
5. Blade Edging: Inflatable seal blade edging, or replaceable rubber seals.

E. Blade Axles: 1/2-inch-diameter; galvanized steel, stainless steel or nonferrous metal; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.

1. Operating Temperature Range: From minus 40 to plus 200 deg F.

F. Bearings:

1. Oil-impregnated bronze.
2. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
3. Thrust bearings at each end of every blade.

2.7 FIRE DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Arrow United Industries; a division of Mestek, Inc.
3. Cesco Products; a division of Mestek, Inc.
4. Greenheck Fan Corporation.
5. Nailor Industries Inc.
6. NCA Manufacturing, Inc.
7. Pottorff.
8. Prefco; Perfect Air Control, Inc.
9. Ruskin Company.
10. Vent Products Company, Inc.
11. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Type: Dynamic; rated and labeled according to UL 555 by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 or 4000-fpm velocity. (Velocity rating shall be above actual installed duct velocity.)

D. Fire Rating: As required.

E. Frame: Curtain type with blades outside airstream except when located behind grille where blades may be inside airstream; fabricated with roll-formed, 0.034-inch-thick galvanized steel; with mitered and interlocking corners.

F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

1. Minimum Thickness: 0.138 inch thick, as indicated, and of length to suit application.
2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

G. Mounting Orientation: Vertical or horizontal as indicated.

H. Blades: Roll-formed, interlocking, 0.024-inch-or 0.034-inch-thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch-thick, galvanized-steel blade connectors.

I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

J. Heat-Responsive Device: Replaceable, 165 deg F or 212 deg Frated, fusible links.

2.8 SMOKE DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
3. Greenheck Fan Corporation.
4. Nailor Industries Inc.
5. Pottorff.
6. Prefco; Perfect Air Control, Inc.
7. Ruskin Company.

B. General Requirements: Label according to UL 555S by an NRTL.

C. Smoke Detector: Integral, factory wired for single-point connection.

D. Frame: Hat-shaped, 0.094-inch-thick, galvanized sheet steel, with welded or interlocking, gusseted or mechanically attached corners and mounting flange.

E. Blades: Roll-formed, horizontal, interlocking or overlapping, minimum 0.034-inch-thick, galvanized sheet steel.

F. Leakage: Class I class.

G. Rated pressure and velocity to exceed design airflow conditions.

H. Mounting Sleeve: Factory-installed, minimum 0.039-inch-thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking.

I. Damper Motors: Modulating or two-position action as required. (Action shall meet design drawings sequence of operations.)

J. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
7. Electrical Connection: 115 V, single phase, 60 Hz or 24Vac as required.

K. Accessories:

1. Auxiliary switches for signaling, fan control, or position indication.
2. Test and reset switches and lights, operator station with damper remote mounted.

2.9 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
3. Greenheck Fan Corporation.
4. Nailor Industries Inc.

5. Pottorff.
6. Ruskin Company.

B. Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 or 4000-fpm velocity. (Velocity rating shall be above actual installed duct velocity.)

D. Fire Rating: As Required.

E. Frame: Hat-shaped, 0.094-inch-thick, galvanized sheet steel, with welded or interlocking, gusseted or mechanically attached corners and mounting flange.

F. Heat-Responsive Device: Resettable, 165 deg F rated, fire-closure device.

G. Heat-Responsive Device: Electric resettable device and switch package, factory installed, rated.

H. Smoke Detector: Provide within 5’ of Combination fire smoke damper. (Refer to 283111)

I. Blades: Roll-formed, horizontal, interlocking or overlapping, minumim 0.034-inch-thick, galvanized sheet steel.

J. Leakage: Class I class.

K. Rated pressure and velocity to exceed design airflow conditions.

L. Mounting Sleeve: Factory-installed, minimum 0.039-inch-thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking.

M. Master control panel for use in dynamic smoke-management systems.

N. Damper Motors: Two-position action.

O. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for

service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.

5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
7. Electrical Connection: 115 V, single phase, 60 Hz or 24Vac as required.

P. Accessories:

1. Auxiliary switches for signaling, fan control, or position indication.
2. Test and reset switches and lights, operator station with damper remote mounted.

2.10 FLANGE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Nexus PDQ; Division of Shilco Holdings Inc.
3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Description: [Add-on] [or] [roll-formed], factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

C. Material: Galvanized steel.

D. Gage and Shape: Match connecting ductwork.

2.11 TURNING VANES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. Elgen Manufacturing.
4. METALAIRE, Inc.
5. SEMCO Incorporated.
6. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.

C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."

E. Vane Construction: Single wall for ducts up to 12 inches wide and double wall for larger dimensions.

2.12 REMOTE DAMPER OPERATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Pottorff.
2. Ventfabrics, Inc.
3. Young Regulator Company.

B. Description: Cable system designed for remote manual damper adjustment.

C. Cable: Stainless steel.

D. Wall-Box Mounting: Recessed.

E. Wall-Box Cover-Plate Material: Painted Steel or polished Stainless steel.

2.13 DUCT-MOUNTED ACCESS DOORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
3. Ductmate Industries, Inc.
4. Elgen Manufacturing.
5. Flexmaster U.S.A., Inc.
6. Greenheck Fan Corporation.
7. McGill AirFlow LLC.
8. Nailor Industries Inc.
9. Pottorff.

10. Ventfabrics, Inc.
11. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2, "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."

1. Door:

a. Double wall, rectangular.
b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
c. Hinges and Latches: 1-by-1-inchbutt or piano hinge and cam latches.
d. Fabricate doors airtight and suitable for duct pressure class.

2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.

3. Number of Hinges and Locks:

a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
b. Access Doors up to 18 Inches Square: Continuous and two sash locks.
c. Access Doors up to 24 by 48 Inches: Continuous and two compression latches.
d. Access Doors Larger Than 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.

C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
2. Door: [Double wall with insulation fill with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set pressure to match pressure class, with field adjustment capability.
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: 1-inch-thick, fibrous-glass or polystyrene-foam board.

2.14 DUCT ACCESS PANEL ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Flame Gard, Inc.

3. 3M.

B. Labeled according to UL 1978 by an NRTL.

C. Panel and Frame: Minimum thickness 0.0528-inch carbon or 0.0428-inch stainless steel (match duct material type).

D. Fasteners: Stainless steel. Panel fasteners shall not penetrate duct wall.

E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.

F. Minimum Pressure Rating: 10-inch wg, positive or negative.

2.15 FLEXIBLE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. Elgen Manufacturing.
4. Ventfabrics, Inc.
5. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Materials: Flame-retardant or noncombustible fabrics.

C. Coatings and Adhesives: Comply with UL 181, Class 1.

D. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to two strips of 2-3/4-inch-wide, 0.028-inch-thick, galvanized sheet steel or 0.032-inch-thick aluminum sheets. Provide metal compatible with connected ducts.

E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 26 oz./sq. yd..
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 deg F.

F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.

1. Minimum Weight: 24 oz./sq. yd..
2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
3. Service Temperature: Minus 50 to plus 250 deg F.

G. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.

1. Minimum Weight: 16 oz./sq. yd..
2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F.

H. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.

1. Minimum Weight: 14 oz./sq. yd..
2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F.

2.16 FLEXIBLE DUCTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flexmaster U.S.A., Inc.
2. McGill AirFlow LLC.
3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.

B. Noninsulated, Flexible Duct: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound, spring-steel wire.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 210 deg F.

C. Insulated, Flexible Duct: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire; fibrous-glass insulation; [polyethylene] [aluminized] vapor-barrier film.

1. Pressure Rating: 4-inch wg positive and 0.5-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 175 deg F.
4. Insulation R-Value: Comply with ASHRAE/IESNA 90.1.

D. Flexible Duct Connectors:

1. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action or Nylon strap in sizes 3 through 18 inches, to suit duct size.
2. Non-Clamp Connectors: Not allowed.

2.17 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Install backdraft and/or control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.

D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

1. Install steel volume dampers in steel ducts.
2. Install aluminum volume dampers in aluminum ducts.

E. Set dampers to fully open position before testing, adjusting, and balancing.

F. Install test holes at fan inlets and outlets and elsewhere as indicated.

G. Install fire and smoke dampers according to UL listing.

H. Connect ducts to vibrating equipment with flexible duct connectors. Insulate flexible duct connectors with flexible insulating system.

I. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:

1. On both sides of duct coils.
2. Upstream and downstream from duct filters.

3. At outdoor-air intakes and mixed-air plenums.
4. At drain pans and seals.
5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
7. At each change in direction and at maximum 50-foot spacing.
8. Upstream from turning vanes.
9. Control devices requiring inspection or maintenance.
10. Elsewhere as indicated.

J. Install access doors with swing against duct static pressure.

K. Access Door Sizes (Access door size shall be coordinated with actual duct dimensions.):

1. One-Hand or Inspection Access: 12 by 12 inches.
2. Two-Hand Access: 12 by 12 inches.
3. Head and Hand Access: 16 by 20 inches.
4. Head and Shoulders Access: 24 by 24 inches.
5. Body Access: 24 by 24 inches.
6. Body plus Ladder Access: 24 by 24 inches.

L. Label access doors according to Section 230553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

M. Connect diffusers or light troffer boots to ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.

N. Connect flexible ducts to metal ducts with draw bands and sealed with mastic reinforced with fiberglass mesh.

O. Install duct test holes where required for testing and balancing purposes.

P. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.

2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 34 16 - CENTRIFUGAL HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: For each product.

1. Airfoil centrifugal fans.
2. Backward-inclined centrifugal fans.
3. Forward-curved centrifugal fans.
4. Plenum fans.
5. Plug fans.
6. Lab exhaust fans.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include rated capacities, furnished specialties, and accessories for each fan.
2. Certified fan performance curves with system operating conditions indicated.
3. Certified fan sound-power ratings.
4. Motor ratings and electrical characteristics, plus motor and electrical accessories.
5. Material thickness and finishes, including color charts.
6. Dampers, including housings, linkages, and operators.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Belts: One set(s) for each belt-driven unit.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AMCA Compliance:

1. Comply with AMCA performance requirements and bear the AMCA-Certified Ratings Seal.
2. Operating Limits: Classify according to AMCA 99.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 AIRFOIL CENTRIFUGAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acme Engineering & Mfg. Corp.
2. Chicago Blower Corporation.

3. Cincinnati Fan.
4. Greenheck.
5. Loren Cook Company.

B. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Housings:

1. Formed panels to make curved-scroll housings with shaped cutoff.
2. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
3. Spun inlet cone with flange.
4. Outlet flange.

D. Airfoil Wheels:

1. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange.
2. Heavy backplate.
3. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
4. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

E. Shafts:

1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Prelubricated and Sealed Shaft Bearings:

1. Self-aligning, pillow-block-type bearings.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

G. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

H. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

I. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: 1.5.
3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
4. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
6. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
7. Motor Mount: Adjustable for belt tensioning.

J. Accessories:

1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
2. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.
4. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.
5. Inlet Screens: Grid screen of same material as housing.
6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
7. Spark-Resistant Construction: AMCA 99.
8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.

2.3 BACKWARD-INCLINED CENTRIFUGAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acme Engineering & Mfg. Corp.
2. Aerovent; a Twin City Fan company.
3. Central Blower Company.
4. Chicago Blower Corporation.
5. Cincinnati Fan.
6. Greenheck
7. Howden Buffalo Inc.
8. Loren Cook Company.
9. New York Blower Company (The).

B. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Housings:

1. Formed panels to make curved-scroll housings with shaped cutoff.
2. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
3. Spun inlet cone with flange.
4. Outlet flange.

D. Backward-Inclined Wheels:

1. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blades, and fastened to shaft with set screws.
2. Welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate.

E. Shafts:

1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.

3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Prelubricated and Sealed Shaft Bearings:

1. Self-aligning, pillow-block-type ball bearings.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

G. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

H. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

I. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: 1.5.
3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
4. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
6. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
7. Motor Mount: Adjustable for belt tensioning.

J. Accessories:

1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
2. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.

4. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.
5. Inlet Screens: Grid screen of same material as housing.
6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
7. Spark-Resistant Construction: AMCA 99.
8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.

2.4 FORWARD-CURVED CENTRIFUGAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acme Engineering & Mfg. Corp.
2. Central Blower Company.
3. Greenheck
4. Howden Buffalo Inc.
5. Lau Industries.
6. New York Blower Company (The).

B. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Housings:

1. Formed panels to make curved-scroll housings with shaped cutoff.
2. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
3. Spun inlet cone with flange.
4. Outlet flange.

D. Forward-Curved Wheels:

1. Black-enameled or galvanized-steel construction with inlet flange, backplate, shallow blades with inlet and tip curved forward in direction of airflow.
2. Mechanically secured to flange and backplate; cast-steel hub swaged to backplate and fastened to shaft with set screws.

E. Shafts:

1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Prelubricated and Sealed Shaft Bearings:

1. Self-aligning, pillow-block-type ball bearings.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

G. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

H. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

I. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: 1.5.
3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
4. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
6. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
7. Motor Mount: Adjustable for belt tensioning.

J. Accessories:

1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
2. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.
4. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.
5. Inlet Screens: Grid screen of same material as housing.
6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
7. Spark-Resistant Construction: AMCA 99.
8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.

2.5 PLENUM FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aerovent; a Twin City Fan company.
2. Chicago Blower Corporation.
3. CML Northern Blower Inc.
4. Greenheck
5. Howden Buffalo Inc.
6. Loren Cook Company.

B. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Airfoil Wheels:

1. Single-width-single-inlet construction with smooth-curved inlet flange.
2. Heavy backplate.
3. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
4. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

D. Shafts:

1. Statically and dynamically balanced and selected for continuous operation at maximum-rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

E. Prelubricated and Sealed Shaft Bearings:

1. Self-aligning, pillow-block-type ball bearings.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

F. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

G. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

H. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: [1.5] [1.4] [1.3] [1.2].
3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
4. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
6. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
7. Motor Mount: Adjustable for belt tensioning.

I. Accessories:

1. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
2. Spark-Resistant Construction: AMCA 99.
3. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.

2.6 PLUG FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aerovent; a Twin City Fan company.
2. Chicago Blower Corporation.
3. Cincinnati Fan.
4. CML Northern Blower Inc.
5. Greenheck
6. Howden Buffalo Inc.
7. Loren Cook Company.
8. New York Blower Company (The).

B. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Airfoil Wheels:

1. Single-width-single-inlet construction with smooth-curved inlet flange.
2. Heavy backplate.
3. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
4. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

D. Shafts:

1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

E. Prelubricated and Sealed Shaft Bearings:

1. Self-aligning, pillow-block-type ball bearings.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

F. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

G. Grease-Lubricated Shaft Bearings:

1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Bearing Rating Life: ABMA 9 / ABMA 11, Ll0 at 50,000 hours.

H. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: 1.5.
3. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
4. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
6. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
7. Motor Mount: Adjustable for belt tensioning.

I. Accessories:

1. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
2. Spark-Resistant Construction: AMCA 99.
3. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.

2.7 LAB EXHAUST FANS

A. General:

1. Basis of Design: Greenheck or approved equal
2. Base fan performance at standard conditions (density 0.075 Lb. /ft3).
3. Fans selected shall be capable of accommodating static pressure and flow variations of +/-15% of scheduled values.
4. Each fan shall be belt driven.
5. Fans to be equipped with 316 stainless steel lifting lugs for corrosion resistance.
6. Fasteners exposed to corrosive exhaust shall be stainless steel.
7. Fan assembly shall be designed for a minimum of 125 MPH wind loading, without the use of guy wires.

B. Corrosion Resistant Coating:

1. All fan and system components (fan, nozzle, wind band, plenum) shall be corrosion resistant coated with LabCoat™, a two part electrostatically applied and baked, sustainable, corrosion resistant coating system; or Heresite P-413C. Standard finish color to be RAL 7023, concrete grey. All parts shall be cleaned and chemically prepared for coating using a multi-stage wash system which includes acid pickling that removes oxide, increases surface area, and improves coating bond to the substrate. The first powder coat applied over the prepared surface shall be a zinc rich epoxy primer (no less than 70% zinc) and heated to a gelatinous consistency (partial cure) at which the second powder coat of polyester resin shall be electrostatically applied and simultaneously be cured at a uniform temperature of 400°F. The coating system, a total thickness of up to 6 mils, is not affected by the UV component of sunlight (does not chalk), and has superior corrosion resistance to acid, alkali, and solvents. Coating system shall exceed 4000 hour ASTM B117 Salt Spray Resistance. Note that 10-20 mil thick wet coating systems pollute the environment (air and water), and that these manually applied coatings are not uniform over the impeller surface and can cause fan imbalance and vibration.

C. Fan Housing And Outlet:

1. Fan housing to be aerodynamically designed with high-efficiency inlet, engineered to reduce incoming air turbulence.
2. Fan housing shall be welded steel and meet specification section 2.15 for corrosion resistant coating. No uncoated metal fan parts shall be acceptable.
3. Fan housings that are fabricated of polypropylene or fiberglass that have lower mechanical properties than steel, have rough interior surfaces in which corrosive, hazardous compounds can collect, and / or which chalk and structurally degrade due to the UV component of the sunlight shall not be acceptable.
4. A high velocity conical discharge nozzle shall be supplied by the fan manufacturer and be designed to efficiently handle an outlet velocity of up to 6000 FPM. Discharge stack caps or hinged covers, impeding exhaust flow shall not be permitted.
5. Provide housing drain for removal of rain and condensation.
6. A bolted and gasketed access door shall be supplied in the fan housing allowing for impeller inspection or removal of impeller, shaft and bearings without removal of the fan housing.

D. Variable Nozzle:

1. Factory assembled fan discharge nozzle with variable discharge area capable of maintaining constant discharge velocity at variable fan volumes.
2. Nozzle housing and adjustable blade to be heavy gauge steel construction. Variable nozzle coating shall meet specification section 2.15 for corrosion resistant coating in the Laboratory Exhaust Fan specification.
3. Moveable discharge blade to include adjustable blade seals between the blade body and nozzle housing.
4. The adjustable discharge blade pivot points shall utilize sealed bearings that are located outside of the airstream.
5. The nozzle assembly to include a factory supplied and mounted modulating electrical actuator to adjust nozzle discharge area. Actuator to be enclosed within a weatherproof cover.
6. Modulating electric actuator is 24V.

E. Fan Housing And Bypass Plenum:

1. Exhaust fan inlet venturi to include factory supplied, non-invasive flow monitoring system with differential pressure transducer.
2. Exhaust fan and bypass plenum assembly to include isolation damper with airfoil blades. Isolation damper to use a 24V, two-position actuator.
3. Bypass plenum to include a bypass damper with modulating actuator controlled by building management system.

F. Electrical Controls:

1. Fan manufacturer to include a variable frequency drive with bypass mode (Refer to 230514 “Variable Frequency Motor Controllers”) and integral nozzle controls.
2. Variable frequency drive to be matched with fan motor voltage and horsepower rating.
3. Fan speed, amps, and CFM to be viewable at the variable frequency drive user screen.
4. Variable frequency drive to be mounted within NEMA 3R enclosure and be suitable for indoor or outdoor installation with a maximum operating temperature of 40 degrees Centigrade.
5. Fan motor to include shaft grounding protection device to eliminate induced bearing currents.
6. Serial communication with building management system and/or bypass damper controller to be: BACnet MS/TP EIA 485 (standard communication), analog VDC signal (standard communication) BACnet communication.

7. Variable frequency drive controls to be controlled through the building management system. Sequence of operation for the variable nozzle system to be coordinated with the fan manufacturer and system controls provider.

a. BAS system controls shall be provided with the following Hardwired BAS connections from the LEF controller:

1) Differential pressure Input to LEF Controller from BAS system – AO
2) LEF status - DI
3) LEF power – DI
4) LEF Start/Stop – DO
5) LEF differential pressure set-point reset to LEF Controller from BAS system – AO
6) LEF CFM: AI
7) LEF Discharge Nozel position: AI
8) Bypass Damper Command: AI
9) VFD Communications Bacnet Interface
10) LEF Controller BAS Bacnet Interface

b. BAS system shall provide a Plenum static pressure sensor and associated re-transmission of that reading the LEF controller noted above.

G. Fan Impeller:

1. Fan impeller shall be centrifugal, backward inclined, with non-stall characteristics. The impeller shall be electronically balanced both statically and dynamically per AMCA Standard 204.
2. Fan impeller shall be manufactured of aluminum (AMCA type B spark resistant), fully welded and meet specification section 2.15 for corrosion resistant coating.

H. Fan Bypass Air Plenum:

1. For constant volume systems, the fan shall be connected directly to the exhaust duct without the need of a bypass air plenum.
2. For variable volume systems, a bypass air plenum shall be provided as shown on drawings. The plenum shall be equipped with a bypass air damper and intake air hood with bird screen for introducing outside air at roof level upstream of the fan.
3. The plenum shall be constructed of fully welded steel, meet specification section 2.15 for corrosion resistant coating, and mount on roof curb as shown on the project drawings. Plenums that are fabricated of plastics or resins that are combustible and have mechanical properties less than steel shall not be acceptable.
4. The bypass air plenum shall be mounted on factory fabricated roof curb provided by the fan manufacturer, as shown on the project drawings (see section 2.5)
5. Fan designs that use inlet flexible connectors that can leak causing loss of lab exhaust shall not be accepted.
6. Bypass air dampers shall be opposed-blade design, and coated with up to 4 mils of Hi-Pro Polyester resin, electrostatically applied and baked.
7. A fan isolation damper, either gravity back draft or two position actuated, fabricated of steel or aluminum and coated with minimum 4 mils of Hi-Pro

Polyester resin, electrostatically applied and baked, shall be provided as shown on the project documents.

8. Blower / Plenum vibration isolation shall be limited to neoprene / cork vibration pads.

I. Bypass Air Plenum Curb:

1. Exhaust system manufacturer shall supply a structural support curb for the plenum, of specified height, as shown on the drawings.
2. Curb shall be fabricated of a minimum of 14 gauge of galvanized corrosion resistant coated steel and structurally reinforced.
3. Curbs shall be insulated.
4. When properly anchored to the roof structure, the standard curb / plenum / blower assembly shall withstand wind loads of up to 125 mph without additional structural support.

J. Fan Motors And Drive:

1. Motors shall be premium efficiency, standard NEMA frame, 1800 or 3600 RPM, Totally Enclosed Fan Cooled (TEFC) with a 1.15 service factor. A factory-mounted NEMA 3R disconnect switch shall be provided for each fan. Motor maintenance shall be accomplished without fan impeller removal or requiring maintenance personnel to access the contaminated exhaust components.
2. Drive belts and sheaves shall be sized for 200% of the motor horsepower, and shall be readily and easily accessible for service, if required. Drive shall consist of a minimum of two belts under all circumstances.
3. Fan shaft to be turned and polished of 1040 steel material as standard, coated with corrosion resistant coating.
4. Fan shaft bearings shall be Air Handling Quality, ball or roller pillow block type and be sized for an L-10 life of no less than 100,000 hours. Bearings shall be fixed to the fan shaft using concentric mounting locking collars, which reduce vibration, increase service life, and improve serviceability. Bearings that use set screws shall not be allowed.
5. All shaft bearings shall have extended lube lines with Zerk fittings.

2.8 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.9 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300,

"Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210/ASHRAE 51, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install centrifugal fans level and plumb.

B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.

C. Lift and support units with manufacturer's designated lifting or supporting points.

D. Equipment Mounting:

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

E. Curb Support: Install roof curb on roof structure, level and secure, according to "The NRCA Roofing and Waterproofing Manual," Low-Slope Membrane Roofing Construction Details Section, Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts." Install and secure centrifugal fans on curbs, and coordinate roof penetrations and flashing with roof construction. Secure units to curb support with anchor bolts.

F. Unit Support: Install centrifugal fans level on structural curbs or pilings. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

G. Isolation Curb Support: Install centrifugal fans on isolation curbs, and install flexible duct connectors and vibration isolation and seismic-control devices.

1. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
2. Comply with requirements in Section 230548.13 "Vibration Controls for HVAC for vibration isolation devices.

H. Install units with clearances for service and maintenance.

I. Label fans according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

B. Install ducts adjacent to fans to allow service and maintenance.

C. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. See Section 230593 "Testing, Adjusting, and Balancing For HVAC" for testing, adjusting, and balancing procedures.
10. Remove and replace malfunctioning units and retest as specified above.

D. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.4 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain centrifugal fans.

END OF SECTION 23 34 16

SECTION 23 36 00 - AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Shutoff, single-duct air terminal units.

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible".

1.4 SUBMITTALS

A. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.

1. Air terminal units.
2. Liners and adhesives.
3. Sealants and gaskets.

B. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Hangers and supports, including methods for duct and building attachment and vibration isolation.

C. Delegated-Design Submittal:

1. Materials, fabrication, assembly, and spacing of hangers and supports.
2. Design Calculations: Calculations for selecting hangers and supports.

D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.
2. Size and location of initial access modules for acoustic tile.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

E. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Instructions for resetting minimum and maximum air volumes.
2. Instructions for adjusting software set points.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

PART 2 - PRODUCTS

2.1 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Carrier
2. Price Industries.
3. Trane; a business of American Standard Companies.
4. Titus.

B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.

C. Casing: 0.034-inch steel, single wall.

1. Casing Lining: 22 gauge galvanized steel casing and valve with 1” foil faced backed insulation.
2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
3. Air Outlet: S-slip and drive connections.

4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
2. Damper Position: Normally open.

E. Attenuator Section: 0.034-inch steel sheet. (if required to comply with acoustic performance)

1. Lining: Adhesive attached, 3/4-inch-thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.

   a. Cover liner with nonporous foil.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

F. Velocity Sensors: Multipoint array with velocity sensors in air inlets.

G. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.

1. Access door interlocked disconnect switch.
2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
3. Nickel chrome 80/20 heating elements.
4. Airflow switch for proof of airflow.
5. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
6. Contactors and SCR control.

H. Electric Controls: Damper actuator and thermostat.

1. Damper Actuator: 24 V, powered closed, spring return open.
2. Thermostat: Wall-mounted electronic type with digital display, temperature display in Fahrenheit and Celsius, and space temperature set point.

I. Low Voltage Transformer: Box manufacturer shall provide transformers as necessary for control of air terminal units without electric heat.

J. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

2.2 PARALLEL FAN POWERED AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Carrier
2. Price Industries.
3. Trane; a business of American Standard Companies.
4. Titus.

B. Configuration: Volume-damper assembly and fan in parallel arrangement inside unit casing with control components inside a protective metal shroud.

C. Casing: 0.034-inch steel, single wall.

1. Casing Lining: 22 gauge galvanized steel casing and valve with 1” foil faced backed insulation.
2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
3. Air Outlet: S-slip and drive connections.
4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
5. Fan: Forward-curved centrifugal, located at plenum air inlet
6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
2. Damper Position: Normally open.

E. Velocity Sensors: Multipoint array with velocity sensors in air inlets.

F. Motor:

1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Type: Electronically commutated motor with local speed adjustment knob.

3. Fan-Motor Assembly Isolation: Rubber isolators.
4. Efficiency: Premium efficient.

G. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. Material: Pleated cotton-polyester media having 90 percent arrestance and 7 MERV.
2. Thickness: 1 inch.

H. Attenuator Section: 0.034-inch steel sheet.

1. Lining: Adhesive attached, 3/4-inch-thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.

a. Cover liner with nonporous foil.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

I. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.

1. Access door interlocked disconnect switch.
2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
3. Nickel chrome 80/20 heating elements.
4. Airflow switch for proof of airflow.
5. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
6. Contactors and SCR control.

J. Factory-Mounted and -Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source.

1. Control Transformer: Factory mounted for control voltage on electric and electronic control units with terminal strip in control box for field wiring of thermostat and power source.
2. Wiring Terminations: Fan and controls to terminal strip. Terminal lugs to match quantities, sizes, and materials of branch-circuit conductors. Enclose terminal lugs in terminal box that is sized according to NFPA 70.
3. Disconnect Switch: Factory-mounted, fuse type.

K. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.

L. Electric Controls: Damper actuator and thermostat.

1. Damper Actuator: 24 V, powered closed, spring return open.
2. Thermostat: Wall-mounted electronic type with digital display, temperature display in Fahrenheit and Celsius, and space temperature set point.

M. Low Voltage Transformer: Box manufacturer shall provide transformers as necessary for control of air terminal units without electric heat.

N. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

2.3 HANGERS AND SUPPORTS

A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.

B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

C. Steel Cables: Galvanized steel complying with ASTM A 603.

D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

E. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

F. Trapeze and Riser Supports: Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

2.4 SOURCE QUALITY CONTROL

A. Factory Tests: Test assembled air terminal units according to ARI 880.

1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

C. Install wall-mounted thermostats.

3.2 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

1. Where practical, install concrete inserts before placing concrete.
2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.

C. Hangers Exposed to View: Threaded rod and angle or channel supports.

D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS

A. Install piping adjacent to air terminal unit to allow service and maintenance.

B. Connect ducts to air terminal units according to Division 23 Section "Metal Ducts."

C. Make connections to air terminal units in accordance with manufactures minimum inlet straight length of duct diameter requirements. Contractor shall coordinate Terminal unit layout to comply with manufactures inlet requirements. Refer to manufactures installation guidelines for minimum inlet dimensions.

3.4 IDENTIFICATION

A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Air terminal unit will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
3. Verify that controls and control enclosure are accessible.
4. Verify that control connections are complete.
5. Verify that nameplate and identification tag are visible.
6. Verify that controls respond to inputs as specified.

3.7 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

B. Provide 4 hours of instruction to be conducted at the project site with manufacturer's representative. The training shall be conducted at 2 sessions at 2 hour a piece. Contractor to also provide two sets of control operation manuals for use at the training session and then provide to the Owner after completion of the session.

3.8 COMMISSIONING

A. Refer to Commissioning Specifications for related commissioning requirements.

B. Contractor shall provide all necessary support to the commissioning team to implement commissioning plan.

3.9 WARRANTY

A. The manufacturer shall provide a minimum 2 year parts and labor warranty.

END OF SECTION 23 36 00

SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Ceiling diffusers.
2. Ceiling Linear Slot Outlets.
3. Registers and Grilles.

B. Related Sections:

1. Division 08 Section "Operable Wall Louvers" and Section "Fixed Louvers" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
2. Division 23 Section "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.

2. Method of attaching hangers to building structure.
3. Size and location of initial access modules for acoustical tile.
4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
5. Duct access panels.

PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

A. Ceiling Diffusers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Anemostat Products; a Mestek company.
    b. Carnes.
    c. METALAIRE, Inc.
    d. Price Industries.
    e. Titus.

2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: Aluminum.
4. See Schedule on drawings for Finish, Face Style, Mounting, Pattern, and Accessories.

2.2 CEILING LINEAR SLOT OUTLETS

A. Linear Slot/Bar Diffusers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Anemostat Products; a Mestek company.
    b. Carnes.
    c. METALAIRE, Inc.
    d. Price Industries.
    e. Titus.

2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: Aluminum.
4. See Schedule on drawings for Finish, Face Style, Mounting, Pattern, and Accessories.

2.3 REGISTERS AND GRILLES

A. Adjustable Bar Register/Grilles:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anemostat Products; a Mestek company.
   b. Carnes.
   c. METALAIRE, Inc.
   d. Price Industries.
   e. Titus.

2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: Aluminum.
4. See Schedule on drawings for Finish, Face Style, Mounting, Pattern, Blade Arrangement, Frame, and Accessories.

2.4 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install diffusers, registers, and grilles level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13

SECTION 23 41 00 - PARTICULATE AIR FILTRATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Disposable panel filters.
2. Filter gages.
3. Bipolar Ionization

1.3 REFERENCES

A. Air-Conditioning and Refrigeration Institute:

1. ARI 850 - Commercial and Industrial Air Filter Equipment.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.

C. Military Standardization Documents:

1. MIL MIL-STD-282 - Filter Units, Protective Clothing, Gas-Mask Components, and Related Products: Performance-Test Methods.

D. Underwriters Laboratories Inc.:

1. UL 586 - High-Efficiency. Particulate, Air Filter Units.
2. UL 867 - Electrostatic Air Cleaners.
3. UL 900 - Air Filter Units.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.

B. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.

1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
3. Wiring Diagrams: For power, signal, and control wiring.

C. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:

1. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."
2. Comply with ASHRAE 52.1 for arrestance and ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.

C. Comply with NFPA 90A and NFPA 90B.

1.6 COORDINATION

A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

1.7 REPLACEMENT OF MATERIAL DURING CONSTRUCTION

A. Furnish extra materials that will replace filtration during and at the completion of construction.

1. During the construction phase, filters must be replaced when the pressure drop exceeds 1/2” of water column.

2. All filters will be replaced on the day of final completion. Two (2) additional sets of filters must be provided.

1.8 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Provide two complete sets of pre-filters for each filter bank.

PART 2 - GENERAL

2.1 DISPOSABLE PANEL FILTERS

A. Description: Factory-fabricated, dry, extended-surface filters with stainless steel holding frames.

B. Manufacturers:

1. Tridem.
2. Camfil-Farr.
3. American Air Filter.

C. Media: Synthetic glass fibrous material and other media pleated, UL Class II, 25-30 percent efficiency (MERV 8) formed into deep-V-shaped pleats and held by self-supporting wire grid.

1. Nominal Size: 24 x 24 inches.
2. Thickness: 1 or 2 inch.

D. Media and Media-Grid Frame: Nonflammable glass fiber, synthetics and other media to ensure adequacy for jet fuel.

E. Performance Rating:

1. Face Velocity: 500 fpm
2. Initial Resistance: 0.15 inch wg
3. Recommended Final Resistance: 0.50 inches wg.

F. Duct-Mounting Frames: Stainless steel with gaskets and fasteners, and suitable for bolting together into built-up filter banks.

1. Manufacturer:

a. Pyramid Filters,

b. Perkins Thermal Systems.
c. Guru Filtration System.

2.2 FILTER GAGES

A. Manufacturers:

1. Dwyer.
2. Trerice.
3. Weiss.

B. Direct Reading Dial: 3-1/2 inch diameter diaphragm actuated dial in metal case. Furnish vent valves, black figures on white background, front calibration adjustment, range 0-3.0 inch wg 2 percent of full scale accuracy.

C. Accessories: Static pressure tips with integral compression fittings, 1/4 inch plastic tubing, 2-way or 3-way vent valves.

2.3 BIPOLAR IONIZATION

A. Manufacturers

1. Aerisa.
2. BioClimatic
3. Global Plasma Solutions
4. Plasma Air International.

B. Performance Criteria

1. The bipolar ionization system shall be capable of controlling gas phase contaminants generated from human occupants as well as products of combustion of jet fuel.
2. Capable of reducing static space charges.
3. Capable of reducing common VOC’s encountered in schools, office buildings and commercial facilties.
4. Equipment shall be capable of performing in non condensing atmospheres at temperatures up to 140 degrees F.
5. Provide 5 year warranty.

C. Equipment Requirements

1. The bipolar ionization units shall include all power supplies, ion generating tubes, gaskets, indicators, switches, fuses, and accessories necessary for safe an deficient operation.

2. All duct mounted applications shall include a mounting frame permanently attached to the duct. Ionization units shall be attached to the mounting frame.
3. Ionization Tubes shall be UL or ETL listed and bear the UL or ETL mark.
4. The manufacturer shall provide ionization tubes of appropriate size and quantity for each air handling system to meet the requirements for the system.
5. All exposed metallic parts of ionization tubes shall be stainless steel.
6. Ionization units shall be suitable for duct mounting or air handling unit plenum mounting.
7. Ionization units shall be plenum rated per UL 2043.
8. Ionization unit output shall be user adjustable from approximately 50-100%. There shall be a minimum of five levels of adjustment.
9. An integral differential pressure switch shall be provided on duct mounted one- and two-tube units. Additional controls such as field mounted pressure switches or control relays shall be included as part of the ionization equipment scope.

D. Installation Requirements

1. Ionization units shall be installed per manufacturer's installation instructions.

E. Electrical Requirements:

1. The electrical power wiring to the ionization units shall be detached without the use of tools to facilitate servicing of the equipment.
2. Ionization units shall be available for 120 and 240 volt applications.
3. The maximum power required for multi tube ionization units shall be 50 watts.
4. The electrical contractor shall provide shall a junction box with single outlet within 4 feet of the ionization equipment.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install filters with felt, rubber, or neoprene gaskets to prevent passage of unfiltered air around filters.

B. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.

C. Do not operate fan system until temporary filters are in place. Replace temporary filters used during construction and testing, with clean set.

D. Install filter gages on filter banks with separate static pressure tips upstream and downstream of filters.

E. Install filters in accordance with manufacturer’s recommendations.

F. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.

G. Install filters in position to prevent passage of unfiltered air.

H. Coordinate filter installations with duct and air-handling-unit installations.

I. Provide maintenance training to University of Central Florida, as required.

3.2 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Air filter will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.3 CLEANING

A. After completing system installation and testing, adjusting, and balancing of air-handling and air-distribution systems, clean filter housings and install new filter media.

3.4 COMMISSIONING

A. Refer to Commissioning Specifications for related commissioning requirements.

B. Contractor shall provide all necessary support to the commissioning team to implement commissioning plan.

END OF SECTION 23 41 00

SECTION 23 74 13 - PACKAGED OUTDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section

1.02 SUMMARY

A. General: This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:

1. Direct-expansion cooling.
2. Outdoor- and return-air damper section.
3. Roof curbs

1.03 DEFINITIONS

A. DDC: Direct-digital controls.

B. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.

C. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

D. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

1.04 SUBMITTAL

A. General: Refer to paragraph entitled "SUBMITTAL" in Section 15010. Include the following data:

1. Manufacturers Literature:

a. Dimensional outline drawing showing the operating weights of the outdoor packaged equipment, the roof curb, all connection locations, and the distribution of the weight to the structure.

2. Performance Data:

a. Provide the following information for each type and size of packaged air conditioning unit:

(1) Sensible and total cooling capacities at the indicated design conditions.
(2) Total heating capacity at indicated design conditions.
(3) Airflow and airside pressure loss at design operating conditions.
(4) Motor horsepower (or Watts), voltage and phase

3. Installation Instructions:

a. Manufacturer's printed installation instructions for each type of packaged air conditioning unit indicated, including copies shipped with the equipment.

4. Maintenance Instructions:

a. Manufacturer's printed maintenance instructions for each type of packaged air conditioning unit indicated.

1.05 APPLICABLE STANDARDS

A. General: All equipment, material, accessories, methods of construction and reinforcement, finish quality, workmanship and installation shall be in compliance with the paragraph entitled "Code Compliance" in Section 15010.

B. Comply: With the National Fire Protection Association (NFPA) Standards and other Codes and Standards as adopted by the Local Authority having Jurisdiction.

C. NFPA: Insulation and adhesive shall meet the flame spread and smoke generation requirements of NFPA-90A, 2002 Revision.

D. NFPA 90 A & B: Installation of Air Conditioning and Ventilation Systems and Installation of Warm Air Heating and Air Conditioning Systems.

E. ASHRAE: Packaged units shall be designed to conform to ASHRAE 15-92.

F. UL and CSA: Units shall be UL Listed and CSA Certified as a total package.

G. NRCA: Roof curbs where indicated shall be designed to conform to NRCA Standards.

H. ARI: Capacities shall be rated in accordance with ARI Standard 210/240-89 or ARI Standard 360-86.

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
2. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. General: Each unit shall comply with the requirements as indicated above and the following additional specific requirements.

1. Manufacturer:

a. York
b. Daikin
c. Trane

B. General: The packaged equipment shall be specifically manufactured for outdoor applications. Capacity and energy efficiency shall not be less than indicated. The air entering the condenser shall be 115 degrees F. unless otherwise indicated. Each unit shall be factory assembled and factory tested.

C. Cabinet: The cabinet shall be constructed of 16 gauge double wall galvanized steel with foam injected insulation of thermal resistance R-13. Design of the cabinet shall allow access to compressor and all electrical connections. Asphalt or epoxy coating shall prevent water from reaching steel on the interior of the base bottom. Cabinet parts shall be cleaned and coated with zinc-phosphate or another suitable preparation, then painted with a baked enamel finish. All exterior hardware (nuts, bolts, screws, washers) shall be stainless steel. The roof of the cabinet shall be sloped to gutters to prevent rainwater from running down the sides of the unit.

D. Fans and Motors:

1. Condenser Fans: The condenser air fans shall be steel propeller type, dynamically balanced and direct-driven by a fan motor with pre-lubricated sealed ball bearings and built-in thermal overload protection. The condenser air discharge shall be provided with a vinyl coated or galvanized steel fan guard.
2. Evaporator Fan: The indoor fan shall be statically and dynamically balanced direct drive plenum and shall be made of galvanized steel. Blower wheel shall

be mounted on a solid steel shaft supported by sealed ball bearings or regreasable-type with lubrication lines extended to the outside of the cabinet. Blower motors shall have pre-lubricated sealed ball bearings. The fan assembly shall be completely isolated from vibration.

3. Fan Motor: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

E. Compressors:

1. Type: Scroll compressors, refer to drawings for quantity and type of compressors.
2. Mounting: Compressors shall be provided with neoprene isolators and internal spring mounting on independent dedicated rails for vibration isolation.

F. Coils: The condenser and evaporator coils shall be aluminum plate-finned formed on multiple rows of seamless copper tubing arranged in a staggered tube configuration and leak-tested to 300 psig. Exterior coils shall be protected by coil guards of galvanized or vinyl coated steel.

G. Condensate Drain Pan: The insulated condensate drain pan shall be stainless steel coated with corrosion-resistant elastomeric-based material. The insulation shall be a minimum of 1 inch thick fiberglass. Threaded pipe connections shall be provided on one side only and the pan shall slope toward the connection to prevent standing water.

H. Condensate Drain Pan: The insulated condensate drain pan shall be stainless steel. The insulation shall be a minimum of 1 inch thick fiberglass. Threaded pipe connections shall be provided on one side only and the pan shall slope toward the connection to prevent standing water.

I. Outdoor Air Intake: The outdoor air intake opening shall be covered by a rain hood with a 1/2" galvanized wire mesh bird screen. Provide motorized outside air damper.

J. Airflow Measurement shall meet requirements outlined in specification section 23 0993.

K. Refrigerant Components: Included in the HCFC-22 refrigerant circuit shall be a condenser fan cycling head pressure control, accumulator, filter-drier, high pressure safety control (manual-reset), low pressure safety control/loss of charge protector (auto-reset), dual gauge connections for high and low pressure readings, sight glass-moisture indicator, and thermal-expansion valve. The expansion valve shall have adjustable superheat and distributors to meter the refrigerant evenly to the evaporator refrigerant circuits. Provide Schrader-type valve assembly with threaded cap for both liquid and suction lines to permit field-testing and recharging.

L. Controls and Safeties:

1. General: Internally wired controls shall include the compressor anti-short cycle timer, fan, blower and compressor motor contactors or starters mounted in a gasketed sheet metal control panel. The control circuit shall include a 24-volt transformer and low voltage terminal board.
2. Cooling Control: Cooling shall be controlled by a factory-installed ambient thermostat. The compressor shall start on demand when the outside air temperature is above 25 degrees F.
3. Blower Operation: Blower operation shall be continuous. Leaving air temperature will be maintained by unloading the compressor.
4. Power Supply Safeties: Phase loss and low voltage safety monitor automatically stops the unit whenever a phase is lost, or when voltage level drops too low. Restart is automatic, with time delay when proper power supply conditions are restored.

M. Power Wiring: The unit shall be provided with factory-installed branch circuiting for a single point of termination requiring only one field connection for power wiring. Blower fans, compressor motor, and condenser fan circuits shall be individually fused.

N. Dampers: Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.

1. Damper Motor: Modulating with adjustable minimum position.
2. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IESNA 90.1, with bird screen and hood.

O. Filters: Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2

1. Pleated: Minimum 90 percent arrestance, and MERV 8 Pre-Filters.
2. Cartridge: Minimum 90 percent arrestance, and MERV 13 Final-Filters.

P. Accessories:

1. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open.
2. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.

Q. Roof Curbs:

1. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."
2. Curb Height: Minimum 24 inches
3. Roof curb shall be insulated with plenum for return path.

PART 3 - EXECUTION

3.01 GENERAL

A. Placement: The location shall be as shown; however, actual placement shall be verified using field measurements and data relating to the equipment accepted for actual installation on the project in order to avoid conflict with the structure and the access to or location of other equipment.

B. Clearance: Layout and carefully install units with sufficient clearances to permit proper maintenance. The space required shall be as recommended by the manufacturer including the space required for removal of the coils for maintenance. The outdoor intake shall be a minimum of 10 feet horizontal distance from any exhaust discharge or plumbing vent.

C. EMS Control Wiring: Install daisy-chain communications/control wiring link to each unit for energy management system interface. Coordinate with manufacturer for wiring termination location and requirements. Wiring shall be shielded twisted two pair copper conductor, minimum 18 gauge.

D. Coordination: Coordinate with ductwork, electrical connections and controls for a neat workmanlike installation and clear access for set-up and maintenance of unit.

E. Provide a trapped condensate drain piping system extending independently from each RTU to the nearest roof drain. Secure piping to roof with prefabricated weatherproof sleepers.

F. Secure RTU to roof curb and adhere to current hurricane codes regarding roof tie-in and wind resistance.

END OF SECTION 23 07 19

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 through 28 Specification Sections, apply to this Section.

1.2 SUMMARY

A. All electrical and associated work is shown and described in and on the following contract documents:

1. Contract Drawings.
2. Contract Specifications.
3. Working and shop drawings furnished by the contractor, subcontractors, installers, suppliers and vendors.
4. Any electrical work as required to complete the installation and testing of all equipment furnished under this contract and required by various safety codes.

1.3 MATERIALS

A. No materials of any kind shall be used that have not been approved by the Underwriters Laboratories, Inc., where UL provides such service, and each piece of equipment shall have marked thereon, where it can readily be observed, the name or trademark of the manufacturer.

B. Materials and equipment shall be the best of their several kinds and all work shall be performed in a neat, substantial and workmanlike manner, to the satisfaction of the Owner.

1.4 DEFECTIVE MATERIALS AND EQUIPMENT

A. Defective material and equipment or materials and equipment damaged in the course of installation or test shall be replaced or repaired in a manner meeting the approval of the Owner. All materials and workmanship shall be of the best quality and all work done in a thorough manner in strict accordance with the rules and regulations of the Fire Underwriters, the state, and power.

1.5 MATERIAL AND EQUIPMENT INSTALLATION

A. All items shall be installed in accordance with the manufacturer's recommendations. The Contractor shall furnish and install all material and hardware required for mounting and to provide a complete and functional installation, at no additional cost to the Owner.

1.6 CLEANING AND TOUCH-UP PAINTING

A. The premises shall be kept free from accumulation of waste material and rubbish. Upon completion of work, the contractor shall remove materials, scraps, and debris from the site. Scratches, scrapes, or chips in interior or exterior surfaces of devices shall be touched-up with finishes matching as nearly as possible the type and color of the original finish.

1.7 PROJECT CONDITIONS

A. Conditions Affecting Selective Demolition: The following project conditions apply:

1. Protect adjacent materials indicated to remain. Install and maintain dust and noise barriers to keep dirt, dust, and noise from being transmitted to adjacent areas. Remove protection and barriers after demolition operations are complete.

1.8 SEQUENCING AND SCHEDULING

A. Coordinate the shut-off and disconnection of electrical service with the Owner.

B. Notify the Owner at least 10 days prior to commencing demolition operations.

C. Coordinate door, barrier and wall demolition and replacement with respect for and Owner approval of area security requirements.

1.9 INSUFFICIENT INSTRUCTION

A. The Contractor shall furnish and install all materials and equipment that are obviously part of the complete electrical installation and without any additional charge to the Owner.

B. If, in the opinion of the Contractor, any work shown on the Drawings or called for under these Specifications is insufficiently specified or specified in such a manner as to make it impossible for him to produce first-class work which will meet the approval of the Owner, he shall refer same to the Owner before proceeding with the work and, if he fails to refer such instances to the Owner, no excuse for poor workmanship will be entertained.

1.10 FIELD ENGINEERING

A. Where existing conditions and dimensions are shown or indicated on the Contract Drawings, the information given is approximate only, and is not warranted by the Owner to be either complete or correct. The Contractor shall verify actual existing conditions and dimensions in the field before ordering materials or starting construction.

B. The Contract Drawings indicate the general location and arrangement of conduit,

wiring devices, equipment, and other products. The Contractor shall adjust the indicated locations (subject to approval in the field) as necessary to:

1. Comply with all applicable code requirements.
2. Permit access for construction, inspection, testing, operation, and maintenance.
3. Avoid conflict with pipes, mechanical equipment, structural openings (e.g., doors), and other obstructions, existing or provided under this contract, whether or not as shown on the Contract Drawings.
4. Produce a neat, workmanlike arrangement.

C. The Contractor shall determine the proper connection points for all power, control, and signal wiring, regardless of whether the connection points are in equipment furnished under this Contract or in existing equipment.

D. The Owner will make available to the Contractor any reference drawings it may have. However, the Owner does not guarantee the correctness, completeness, or availability of reference drawings. Should the Contractor choose to rely upon the reference drawings, he does so at his own risk.

E. The Contractor shall perform all field surveys, wire tracing, and other work required to ascertain the proper connection points for all wiring.

F. The Contractor shall coordinate the making and sealing of all holes through structure to accommodate electrical conduits and supports for electrical equipment, and shall submit working drawings thereof for the Owner's approval.

G. Use cable and conduit locating tools and devices to locate conduits in floor slabs and under the ground before core drilling and excavation.

1.11 CONTINUITY OF ELECTRICAL SERVICE AND TEMPORARY ELECTRIC CONNECTIONS

A. Written consent from the Owner must be obtained not less than 10 days prior to carrying out any portion of the work included in this Contract that requires interruption of electrical service.

B. All service shutdowns shall be scheduled and shall be part of the Project Construction Schedule.

C. The Owner reserves the right to revoke the granting of any shutdown whether scheduled or unscheduled at any time.

1.12 REMOVAL AND RELOCATIONS

A. Where existing materials and equipment are to be removed or relocated, all materials no longer used shall be removed unless otherwise directed by the Owner. Affected surfaces shall be repaired to conform to the type, quality, and finish of the surrounding

surface in a neat and work manlike manner.

B. Contractor shall provide circuit tags to identify both temporary and permanent power circuits. It is imperative that the phase rotation of all three phase motors is identified both before and after all modifications; this must be verified as complete prior to energizing. Label the phase rotation locally as CW or CCW for Owner use. Post an accurate temporary single line to aid emergency personnel during the course of the project.

C. Where existing switchgear units, power distribution boards, and control panels are to be removed or temporarily disconnected, the Contractor shall first identify and label all wiring which will be re-utilized. No wires shall be disconnected which have not been properly identified. Existing switch gear units, power distribution boards, and control panels shall be removed in an orderly fashion in order to minimize airport disruptions.

D. Provide working drawings, including plans, elevations, one-line diagrams and the like, in accordance with the contract documents.

1.13 ELECTRICAL REQUIREMENTS FOR REPLACEMENT OF EQUIPMENT

A. Where existing equipment is shown to be removed and replaced as part of the project scope, and electrical circuiting is to be re-used, Contractor shall be responsible for verifying/identifying the panel and circuit feeding the equipment, de-energizing the circuit during demolition and replacement, and, where the same circuit(s) are indicated to be re-used, megger testing the existing wiring, verifying the adequacy of the existing wiring and breaker, and megger testing the wiring prior to re-terminating and energizing. Any 600V wiring reading less that 5 Megohms shall be reviewed with Airport personnel for acceptance.

B. Where existing circuit breakers are re-used, provide secondary current injection testing to verify the performance of the existing breakers. For switchgear breakers, test to the settings provided by the Engineer.

C. All circuit breakers left unused after demolition and re-installation shall be marked as “Spare” in their respective panel, and all unused wiring removed from the conduit. Contractor is responsible for identifying all related circuits feeding each system being demolished, regardless of whether shown on the Contract drawings.

D. Where new equipment cannot be safely supplied by existing circuits, Contractor shall consult with Engineer for direction.

1.14 CONNECTIONS AND IDENTIFICATION OF CIRCUITS

A. All cables and wiring, underground and otherwise, furnished, installed and tested under this Contract shall be connected at “Source-end” and Load-end,” unless otherwise noted, to the satisfaction of the Owner.

B. Included in this Contract shall be all necessary approved terminal and terminating devices required for a complete and working installation, satisfactory to the Owner. Where conductors are to be terminated in equipment furnished by others, the Contractor shall obtain all required termination information from the Contractor furnishing the equipment and complete all terminations.

C. All wires and cables shall be banded with an identifying number at each end and pull boxes. The identifying number of each wire shall be determined at the point of circuit origin, and shall continue unchanged to the point of circuit termination. In general, the circuit numbering system shall conform to the terminal identification numbers of equipment furnished, such as switchboards, motor control centers, relay panels, control console, computer and the like.

PART 2 - PRODUCTS

2.1 CONCRETE/STRUCTURAL

A. General: Provide concrete and associated reinforcing steel for housekeeping pad under new unit substation and other equipment as indicated on drawings.

2.2 JOINT SEALERS

A. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.

B. Colors: As selected by the Owner from manufacturer's standard colors.

C. Fire-Resistant Joint Sealers: Two-part, foamed-in-place, silicone sealant formulated for use in through-penetration fire-stopping around cables, conduit, pipes, and duct penetrations through fire- rated walls and floors. Sealants and accessories shall have fire- resistance ratings indicated, as established by testing identical assemblies in accordance with ASTM E 814, by Underwriters' Laboratories, Inc., or other testing and inspection agency acceptable to authorities having jurisdiction.

1. Available Products: Subject to compliance with requirements, provide products by one of the following manufacturers or approved equal to meet the specifications:

a. "Dow Corning Fire Stop Foam," Dow Corning Corp.
b. "Pensil 851," General Electric Co.

2.3 MATERIALS

A. No materials of any kind shall be used that have not been approved by the Underwriters Laboratories, Inc., where UL provides such service, and each piece of equipment shall have marked thereon, where it can readily be observed, the name or trademark of the manufacturer.

B. Materials and equipment shall be the best of their several kinds and all work shall be performed in a neat, substantial and workmanlike manner, to the satisfaction of the Owner.

2.4 WARNING SIGNS

A. Furnish and install warning signs. They shall conform to the latest OSHA and NEC regulations.

2.5 NAMEPLATES

A. Nameplates shall be provided for all electrical items where identification is required.

B. Nameplates shall be black laminated plastic with white center, fastened with corrosion-resistant screws.

C. Nameplates with 1 inch high lettering shall be provided to identify all distribution and lighting panelboards, controls panels, motor control center and similar equipment.

D. See Section 260553 “Identification for Electrical Systems” for additional requirements.

2.6 RACEWAY AND CABLE TAGS

A. Raceway and cable tags shall be non-ferrous metal or laminated vinyl markers with designation pressure stamped on the tag and attached to the cables or raceways by means of self-locking nylon straps. Letter height shall not be less than 3/16 inch. For additional requirements, refer to Section 260553 “Identification for Electrical Systems.”

2.7 PAINTING

A. Provide painting for electrical items as specified in Section 099000 “Painting and coating.” Material to be painted shall include the following:

1. High Voltage Conduit- painted red with yellow stenciled circuit information
2. Exposed Conduit in Finished Areas- paint to match finished surfaces
3. Other items and areas as required by drawings and specifications

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting installation and application of joint sealer. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 GENERAL

A. Equipment/materials installed under this Section shall be fabricated, assembled, erected and placed in proper operating condition in full conformity with the Drawings, Specifications, engineering data, instructions, and recommendations of the equipment manufacturer unless exceptions are noted by the Owner.

B. Submit detailed shop and working drawings for all wiring to all devices/equipment mounted on the actuators and to all associated peripheral devices.

C. Provide adequate time for concrete curing, paint application and other surface preparation.

3.3 ELECTRICAL DEMOLITION

A. Equipment/materials to be demolished include panelboards, wiring and system electrics/local controls associated with demolition of mechanical systems.

B. Provide all required demolition as part of scope. Where major equipment such as panels or disconnect switches that are useable for spare parts or re-application at other locations, consult Airport personnel prior to disposal.

C. Where circuits in embedded conduit are being demolished, conduits are to be capped in a manner that precludes tripping and interference with other installed items.

D. Where circuits are to be taken out of service, the conductors are to be removed in their entirety back to the source panel. Where this is not possible, consult Airport personnel for alternatives.

E. Conduits taken out of service need not be physically removed, unless otherwise noted on contract drawings, provided they are in usable condition and there is no interference with other systems. Conduits left empty shall be labeled as spare and a pull string left inside.

3.4 INSTALLATION OF CONDUITS, FITTINGS, AND BOXES

A. All conduits shall be installed as required. The conduit system shall be installed complete with all accessories, fittings, and boxes, in an approved and workmanlike manner to provide proper raceways for electrical conductors.

B. The Contractor shall note that all conduit runs shown on the Contract Drawings are shown diagrammatically for the purpose of outlining the general method of routing the conduits to avoid interferences.

C. All exposed conduit shall be run parallel to or at right angles to walls or beams, and plumb on the walls.

D. As far as practicable, conduit shall be pitched slightly to drain to the outlet boxes or

otherwise installed to avoid trapping of condensate. Where necessary to secure drainage, a Crouse-Hinds Company type ECD, Universal, Appleton Electric Company ECDB, or equal breather-drain fitting shall be installed in the boxes or trapped conduit at low points. Conduit shall not be run through columns or beams unless so specifically detailed on the Contract Drawings.

E. Conduit system bends and offsets may be made in field using approved bending tools, but no deformed, split or crushed conduit will be permitted in the work. All bends in conduit over 1 inch in diameter shall be made with a pipe bending machine. No more than three quarter bends shall be made between any two pull boxes without permission of the Owner.

F. Conduits shall installed throughout structures in a complete system and must be so run that electrical conductors can be withdrawn and replaced at any time.

G. Where existing conduits are to be reused, they shall be cleaned using approved methods removing all obstructions or imperfection liable to injure the new conductor insulation.

H. Conduit to be built into structure shall be properly protected and suitably supported to prevent strains at joints or injury by building operations, and shall be thoroughly protected at all times from the entrance of water or other foreign matter by being well plugged when work is interrupted. If left dead ended, they shall be furnished with iron caps or pipe plugs.

I. The interior of all conduits conduit fittings, pull and junction boxes shall be carefully and thoroughly cleaned before and after erection.

J. Special care shall be taken to prevent conduits from becoming choked with cement or other debris.

K. No conduit smaller than 3/4 inch shall be used.

3.5 CONDUIT CONNECTIONS TO EQUIPMENT

A. The conduit system shall terminate at the terminal box or at the conduit connection point of electric motors, devices, and equipment. Terminations of conduits at such locations shall permit direct wire connections to the motors, devices, or equipment.

B. Conduit connections shall made with rigid conduit if the equipment is fixed and not subject to adjustment, mechanical movement, or vibration. Rigid conduit connections shall have union fittings, to permit removal of equipment without cutting or breaking the conduit.

C. Conduit connections shall be made with approved flexible metallic conduit if the equipment is subject to adjustment, mechanical movement, or vibration. Flexible conduit connections shall be watertight.

D. Contractor shall be responsible for all final connections of equipment provided, regardless of indication on drawings.

3.6 INSTALLATION - LOW VOLTAGE CABLES

A. All wires and cables pulled into ducts and conduits shall be carefully handled to avoid twists or kinks in the conductors, or damage to the sheaths and insulation. Lubricants will be permitted only where approved by the Owner. Wire and cable manufacturer's recommendations for allowable minimum bending radius and maximum pulling tension shall not be exceeded.

B. All conduits shall be swabbed to remove any debris or accumulated moisture before cables or wires are pulled in.

C. No splices will be permitted between terminals, except at approved junction or terminal box points, as required by code for pull lengths. Cables or wires shall be spliced by crimp type connectors.

D. All hardware, such as cable stanchions, racks, insulators, brackets, structural supports, wall inserts, cable and junction boxes, bolts, connectors, clamps, pulling eyes, fittings, and all other accessories for the installation of wires and cables in buildings, manholes, handholes and out doors shall be furnished and installed complete to provide a satisfactory operating installation.

E. Cable terminations and splices shall be made as recommended by the cable manufacturer for the particular cable and service conditions. Cables shall be terminated by lugs, cup washers, or pressure type connectors.

F. Spare cable ends shall be taped and coiled.

3.7 EQUIPMENT GROUNDING

A. Insulated copper conductors for equipment grounding shall be routed with all power conductors and shall be sized in accordance with the drawings. Where size is not indicated, refer to NEC Table 250-66 or 250-122 as appropriate. These conductors are required for all equipment connected under this Contract; including lighting fixtures, receptacles, and electrical equipment furnished by others, even if not shown on the Contract Drawings.

3.8 PAINTING OF EQUIPMENT

A. After shop fabrication, steel cabinets for switchgear, switches, transformers, distribution panelboards, lighting panelboards and power panelboards shall be thoroughly cleaned and given at least one coat of primer rust inhibitor. Interior finishes shall consist of at least one coat of light gray lacquer or enamel. Exterior finishes shall consist of at least two coats of medium dry gray water-resistant lacquer or enamel.

B. Prior to final completion of the work, the steel work shall be thoroughly cleaned and all scratches and abrasions shall be retouched with the same paint used for the shop finishing coats. Lighting fixtures shall be finished as specified.

3.9 SEALING OF CONDUITS

A. After cable has been installed and connected, conduit ends shall be sealed by non-hardening sealing compound into conduits to a minimum depth equal to the conduit diameter. This shall apply for all conduits at transformers, handholes, manholes, building entrance junction boxes, and for 1 inch and larger conduit connections to equipment.

3.10 ACCEPTANCE TESTS

A. Test all new and (existing) reused power conductors for insulation resistance and circuit breakers for performance as per NETA standards. Submit test report to the Owner.

B. This test shall consist of a complete coordination and functional check under simulated operating conditions, followed by a four-day operational test under actual operating conditions. All tests that are a part of this acceptance test shall be conducted in the presence of not less than two qualified representatives of the Owner, and shall be completed to the satisfaction of the Owner before final payment is made. All costs of equipment, tools, instrument, labor, etc., to make these tests to the satisfaction of the Owner, together with all necessary supervision by the Contractor and manufacturers’ service engineers, shall be borne by the Contractor.

C. Any defect in material, equipment, or workmanship furnished under this Contract, together with all inadequacies which may show up during the above tests, shall be promptly made good at the expense of the Contractor, and a new acceptance test shall be scheduled, subject to the same provisions as above described.

D. Engage an independent testing agency to conduct field quality control. Conduct infrared scanning after energizing loads. Provide test reports for review.

3.11 PREPARATION FOR AND APPLICATION OF JOINT SEALERS

A. Surface Cleaning for Joint Sealers: Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.

B. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

C. Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.

1. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
2. Comply with recommendations of ASTM C 790 for use of acrylic- emulsion joint sealants.

D. Tooling: Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

E. Installation of Fire-Stopping Sealant: Install sealant, including forming, packing, and other accessory materials, to fill openings around electrical services penetrating floors and walls, to provide fire-stops with fire-resistance ratings indicated for floor or wall assembly in which penetration occurs. Comply with installation requirements established by testing and inspecting agency.

3.12 ERECTION OF METAL SUPPORTS AND ANCHORAGE

A. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

END OF SECTION 260500

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Copper building wire rated 600 V or less.
2. Metal-clad cable, Type MC, rated 600 V or less.
3. Connectors, splices, and terminations rated 600 V and less.

1.3 DEFINITIONS

A. RoHS: Restriction of Hazardous Substances.

B. VFC: Variable-frequency controller.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Product Schedule: Indicate type, use, location, and termination locations.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

PART 2 - PRODUCTS

2.1 COPPER BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. General Cable Technologies
2. Okonite Company
3. Southwire Company
4. WESCO.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. RoHS compliant.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.

E. Conductor Insulation:
1. Type THHN and Type THWN-2: Comply with UL 83.
2. Type THW and Type THW-2: Comply with NEMA WC-70/ICEA S-95-658 and UL 83.

2.2 METAL-CLAD CABLE, TYPE MC

A. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.

B. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. AFC Cable Systems
2. General Cable Technologies
3. Okonite Company
4. Southwire Company

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

2. Comply with UL 1569.
3. RoHS compliant.
4. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Circuits:

1. Single circuit.

E. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.

F. Ground Conductor: Insulated.

G. Conductor Insulation:

1. Type TFN/THHN/THWN-2: Comply with UL 83.
2. Type XHHW-2: Comply with UL 44.

H. Armor: Steel, interlocked.

I. Jacket: PVC applied over armor.

2.3 CONNECTORS AND SPLICES

A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

1. 3M Electrical Products

2. ILSCO

3. O-Z/Gedney

4. Service Wire Co.

5. Thomas & Betts Corp.

B. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.

C. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.

1. Material: Copper.
2. Type: One hole with standard barrels.
3. Termination: Compression.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders & Branch Circuits: Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Exposed Feeders & Branch Circuits: Type THHN/THWN-2, single conductors in raceway.

B. Concealed Feeders & Branch Circuits in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN/THWN-2, single conductors in raceway.

C. Intercepted circuits (i.e. LP-A to LP-B): MC cable or THHN/THWN-2 single conductors in raceway; use of MC cable for this purpose shall require Engineering approval

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Complete raceway installation between conductor and cable termination points according to Section 260533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

E. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

3.4 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

3.5 IDENTIFICATION

A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."

B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.6 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.7 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 078413 "Penetration Firestopping."

3.8 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. After installing conductors and cables and before electrical circuitry has been energized, test conductors feeding the following critical equipment and services for compliance with requirements:

      a. UPS

   2. Perform each of the following visual and electrical tests:

      a. Inspect exposed sections of conductor and cable for physical damage and correct connection according to the single-line diagram.

b. Test bolted connections for high resistance using one of the following:

1) A low-resistance ohmmeter.
2) Calibrated torque wrench.
3) Thermographic survey.

c. Inspect compression-applied connectors for correct cable match and indentation.
d. Inspect for correct identification.
e. Inspect cable jacket and condition.
f. Insulation-resistance test on each conductor for ground and adjacent conductors. Apply a potential of 500-V dc for 300-V rated cable and 1000-V dc for 600-V rated cable for a one-minute duration.
g. Continuity test on each conductor and cable.
h. Uniform resistance of parallel conductors.

3. Initial Infrared Scanning: After Substantial Completion, but before Final Acceptance, perform an infrared scan of each splice in conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner. Correct deficiencies determined during the scan.

a. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
b. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

D. Cables will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports to record the following:

1. Procedures used.
2. Results that comply with requirements.
3. Results that do not comply with requirements, and corrective action taken to achieve compliance with requirements.

END OF SECTION 260519

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes grounding and bonding systems and equipment.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by NETA.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with UL 467 for grounding and bonding materials and equipment.

2.2 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Burndy; Part of Hubbell Electrical Systems.
2. ERICO; a brand of nVent.
3. ILSCO.
4. O-Z/Gedney; a brand of Emerson Industrial Automation.

5. Thomas & Betts Corporation; A Member of the ABB Group.

2.3 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.
4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

2.4 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

C. Bus-Bar Connectors: Mechanical type, cast silicon bronze, solderless compression-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

D. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.

E. Cable-to-Cable Connectors: Compression type, copper or copper alloy.

F. Conduit Hubs: Mechanical type, terminal with threaded hub.

G. U-Bolt Clamps: Mechanical type, copper or copper alloy, terminal listed for direct burial.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

3.2 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Armored and metal-clad cable runs.
5. UPS circuits.

3.3 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

C. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
2. Make connections with clean, bare metal at points of contact.
3. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.

D. Grounding system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

F. Report measured ground resistances that exceed the following values:
1. UPS and Panelboards Serving Electronic Equipment: 3 ohm(s).

G. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Engineer promptly and include recommendations to reduce ground resistance.

END OF SECTION 260526

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes secure support from the building structure for electrical items by means of hangers, supports, anchors, sleeves, inserts, seals, and associated fastenings.

1. Refer to other Division 26 sections for additional specific support requirements that may be applicable to specific items.

1.3 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Specification Sections.

1. Product data for each type of product specified
2. Hanger and support schedule showing manufacturer's figure number, size, spacing, features, and application for each required type of hanger, support, sleeve, seal, and fastener to be used.

B. Shop drawings indicating details of fabricated products and materials.

1.4 QUALITY ASSURANCE

A. Electrical Component Standard: Components and installation shall comply with NFPA 70 "National Electrical Code."

B. Electrical components shall be listed and labeled by UL, ETL, CSA, or other approved, nationally recognized testing and listing agency that provides third-party certification follow-up services.

C. Expansion anchors shall be compliant with requirements of the 2009 International Building Code (IBC).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers or approved equal to meet the specifications:

1. Slotted Metal Angle and U-Channel Systems:

   a. Allied Tube & Conduit
   b. GS Metals Corp.
   c. Kin-Line, Inc.
   d. Unistrut Diversified Products

2. Conduit Sealing Bushings:

   a. Cooper Industries, Inc.
   b. Killark Electric Mfg. Co.
   c. O-Z/Gedney
   d. Raco, Inc.
   e. Spring City Electrical Mfg. Co.
   f. Thomas & Betts Corp.

2.2 COATINGS FOR ALL SUPPORTING DEVICES

A. Coating for Indoor Locations: Galvanized steel.

2.3 MANUFACTURED SUPPORTING DEVICES

A. Raceway Supports: Clevis hangers, riser clamps, conduit straps, threaded C-clamps with retainers, ceiling trapeze hangers, wall brackets, and spring clamps.

B. Fasteners: Types, materials, and construction features as follows:

   1. Expansion Anchors: Stainless steel wedge or sleeve type.
   2. Toggle Bolts: All stainless steel springhead type.

C. Conduit Sealing Bushings: Factory-fabricated watertight conduit sealing bushing assemblies suitable for sealing around conduit, or tubing passing through concrete floors and walls. Construct seals with steel sleeve, malleable iron body, neoprene sealing grommets or rings, metal pressure rings, pressure clamps, and cap screws.

D. Cable Supports for Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug for nonarmored electrical cables in riser conduits. Provide plugs with number and size of conductor gripping holes as required to suit individual risers. Construct body of malleable-iron casting with hot-dip galvanized finish.

2.4 FABRICATED SUPPORTING DEVICES

A. General: Shop- or field-fabricated supports or manufactured supports assembled from U-channel components.

B. Steel Brackets: Fabricated of angles, channels, and other standard structural shapes. Connect with welds and machine bolts to form rigid supports.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install supporting devices to fasten electrical components securely and permanently in accordance with NEC requirements.

B. Coordinate with the building structural system and with other electrical installation.

C. Raceway Supports: Comply with the NEC and the following:

1. Conform to manufacturer's recommendations for selection and installation of supports.
2. Strength of each support shall be adequate to carry present and future load multiplied by a safety factor of at least four. Where this determination results in a safety allowance of less than 200 lbs, provide additional strength until there is a minimum of 200 lbs safety allowance in the strength of each support.
3. Install individual and multiple (trapeze) raceway hangers and riser clamps as necessary to support raceways. Provide U-bolts, clamps, attachments, and other hardware necessary for hanger assembly and for securing hanger rods and conduits.
4. Support parallel runs of horizontal raceways together on trapeze-type hangers.
5. Support individual horizontal raceways by separate pipe hangers. Spring steel fasteners may be used in lieu of hangers only for 1-1/2-inch and smaller raceways serving lighting and receptacle branch circuits above suspended ceilings only. For hanger rods with spring steel fasteners, use 1/4-inch-diameter or larger threaded steel. Use spring steel fasteners that are specifically designed for supporting single conduits or tubing.
6. Space supports for raceways in accordance with Table I of this section. Space supports for raceway types not covered by the above in accordance with NEC.
7. Support exposed and concealed raceway within 1 foot of an unsupported box and access fittings. In horizontal runs, support at the box and access fittings may be omitted where box or access fittings are independently supported and raceway terminals are not made with chase nipples or threadless box connectors.
8. In vertical runs, arrange support so the load produced by the weight of the raceway and the enclosed conductors is carried entirely by the conduit supports with no weight load on raceway terminals.

D. Vertical Conductor Supports: Install simultaneously with installation of conductors.

E. Miscellaneous Supports: Support miscellaneous electrical components as required to produce the same structural safety factors as specified for raceway supports. Install metal channel racks for mounting cabinets, panelboards, disconnects, control enclosures, pull boxes, junction boxes, transformers, and other devices.

F. In open overhead spaces, cast boxes threaded to raceways need not be supported separately except where used for fixture support; support sheet metal boxes directly from the building structure or by bar hangers. Where bar hangers are used, attach the bar to raceways on opposite sides of the box and support the raceway with an approved type of fastener not more than 24 inches from the box.

G. Sleeves: Install in concrete slabs and walls and all other fire- rated floors and walls for raceways. For sleeves through fire rated-wall or floor construction, apply UL- listed firestopping sealant in gaps between sleeves and enclosed conduits and cables in accordance with "Fire Resistant Joint Sealers" requirements.

H. Conduit Seals: Install seals for conduit penetrations of slabs on grade and exterior walls below grade and where indicated. Tighten sleeve seal screws until sealing grommets have expanded to form watertight seal.

I. Fastening: Unless otherwise indicated, fasten electrical items and their supporting hardware securely to the building structure, including but not limited to conduits, raceways, cables, cable trays, busways, cabinets, panelboards, boxes, transformers, disconnect switches, and control components.

3.2 TABLE I: SPACING FOR RACEWAY SUPPORTS

HORIZONTAL RUNS

Raceway Size (Inches)	No. of Conductors in Run	Location	RMC & EMT (1)
3/4	1 or 2	Flat ceiling or wall.	5
3/4	1 or 2	Where it is difficult to provide supports except at intervals fixed by the building construction.	7
¾ - 1	3 or more	Any location.	7
1 & larger	1 or 2	Flat ceiling or wall.	6
1 & larger	1 or 2	Where it is difficult to provide supports except at intervals fixed by the building construction.	10
1 & larger	3 or more	Any location.	10
Any	....	Concealed.	10

VERTICAL RUNS

Raceway Size (Inches)	No. of Conductors in Run	Location	RMC & EMT (1,2)

3/4	....		Exposed.	7
1,1-1/4		....	Exposed.	8
1-1/2 and larger	....		Exposed.	10
Up to 2		....	Shaftway.	14
2-1/2	....		Shaftway.	16
3 & larger	....		Shaftway.	20
Any	....		Concealed.	10

NOTES:

(1) Maximum spacing of supports (feet).
___ (2) Maximum spacings for IMC above apply to straight runs only. Otherwise the maximums for EMT apply.

___ Abbreviations:

___
___ RMC Rigid metallic conduit
___ EMT Electro-Metallic Tubing

END OF SECTION 260529

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal conduits and fittings.
2. Boxes, enclosures, and cabinets.

1.3 DEFINITIONS

A. ARC: Aluminum rigid conduit.

B. GRC: Galvanized rigid steel conduit.

C. IMC: Intermediate metal conduit.

D. EMT: Electric Metallic Tubing

1.4 ACTION SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

PART 2 - PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

A. Metal Conduit:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AFC Cable Systems; a part of Atkore International.
b. Allied Tube & Conduit; a part of Atkore International.

c. FSR Inc.
d. O-Z/Gedney; a brand of Emerson Industrial Automation.

2. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. GRC: Comply with ANSI C80.1 and UL 6.
4. ARC: Comply with ANSI C80.5 and UL 6A.
5. IMC: Comply with ANSI C80.6 and UL 1242.

6. EMT: Comply with ANSI C80.3 and UL 797.
7. FMC: Comply with UL 1; zinc-coated steel.
8. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

B. Metal Fittings:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. AFC Cable Systems; a part of Atkore International.
b. Allied Tube & Conduit; a part of Atkore International.
c. Electri-Flex Company.
d. FSR Inc.
e. O-Z/Gedney; a brand of Emerson Industrial Automation.

2. Comply with NEMA FB 1 and UL 514B.
3. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Fittings, General: Listed and labeled for type of conduit, location, and use.
5. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
6. Fittings for EMT:

a. Material: Steel.
b. Type: Setscrew or compression.
c. Die-cast is Not Acceptable.

7. Expansion Fittings: steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.

C. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Crouse-Hinds, an Eaton business.
2. EGS/Appleton Electric.
3. FSR Inc.
4. Hoffman; a brand of nVent.
5. Hubbell Incorporated.
6. O-Z/Gedney; a brand of Emerson Industrial Automation.

B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

E. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

F. Device Box Dimensions: 4 inches square by 2-1/8 inches deep.

G. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 with continuous-hinge cover with flush latch unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Indoors: Apply raceway products as specified below unless otherwise indicated:
1. Exposed, Not Subject to Physical Damage: EMT.
2. Concealed in Ceilings and Interior Walls and Partitions: EMT.
3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
4. Boxes and Enclosures: NEMA 250, Type 1.

B. Minimum Raceway Size: 3/4-inch trade size.

C. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. EMT: Use steel setscrew or compression, steel fittings. Comply with NEMA FB 2.10.
3. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

D. Install nonferrous conduit or tubing for circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

3.2 INSTALLATION

A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.

B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.

C. Do not install raceways or electrical items on any "explosion-relief" walls or rotating equipment.

D. Do not fasten conduits onto the bottom side of a metal deck roof.

E. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

F. Complete raceway installation before starting conductor installation.

G. Arrange stub-ups so curved portions of bends are not visible above finished slab.

H. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches of changes in direction.

I. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.

J. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated (exception UPS room). Install conduits parallel or perpendicular to building lines.

K. Support conduit within 12 inches of enclosures to which attached.

L. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

M. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch trade size and insulated throat metal bushings on 1-1/2-inch trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

N. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

O. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

P. Cut conduit perpendicular to the length. For conduits 2-inch trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.

Q. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

R. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

S. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service raceway enters a building or structure.
3. Conduit extending from interior to exterior of building.
4. Conduit extending into pressurized duct and equipment.
5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
6. Where otherwise required by NFPA 70.

T. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

U. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to top of box unless otherwise indicated.

V. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.

W. Locate boxes so that cover or plate will not span different building finishes.

X. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

Y. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

3.3 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.4 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies.

END OF SECTION 260533

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

D. Sleeves for Rectangular Openings:

1. Material: Galvanized sheet steel.
2. Minimum Metal Thickness:

    a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches, thickness shall be 0.052 inch.
    b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches, thickness shall be 0.138 inch.

2.2 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.

B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.

B. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

    a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint.
    b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed.

4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

C. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

D. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

END OF SECTION 260544

This Page Intentionally Left Blank.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Color and legend requirements for raceways, conductors, and warning labels and signs.
2. Labels.
3. Cable ties.
4. Signs.
5. Paint for identification.
6. Fasteners for labels and signs.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with NFPA 70.

B. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 COLOR AND LEGEND REQUIREMENTS

A. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.

1. Color shall be factory applied or field applied for sizes larger than No. 8 AWG if authorities having jurisdiction permit.
2. Colors for 208/120-V Circuits:

a. Phase A: Black.
b. Phase B: Red.
c. Phase C: Blue.

3. Color for Neutral: White.
4. Color for Equipment Grounds: Green.

B. Warning Label Colors:

1. Identify system voltage with black letters on an orange background.

C. Clear Working Space:

1. Shall comply with NFPA 70, Article 110.26, and Table 110.26(A)(1). Permanent Floor Marking shall be installed, identifying Clear Working Space.

D. Equipment Identification Labels:

1. Black letters on a white field.

2.3 LABELS

A. Self-Adhesive Labels: Polyester, thermal, transfer-printed, 3-mil-thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.

a. Brady Corporation.
b. Brother International Corporation.
c. emedco.
d. Ideal Industries, Inc.
e. Panduit Corp.

2.4 CABLE TIES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. HellermannTyton.
2. Ideal Industries, Inc.
3. Marking Services, Inc.
4. Panduit Corp.

B. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 Deg F according to ASTM D 638: 12,000 psi.

3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black, except where used for color-coding.

2.5 SIGNS

A. Laminated Acrylic or Melamine Plastic Signs:
   1. Engraved.
   2. Thickness:

      a. For signs up to 20 sq. in., minimum 1/16 inch thick.
      b. Engraved legend with black letters on white face.
      c. Self-adhesive.
      d. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.6 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 INSTALLATION

A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

B. Install identifying devices before installing acoustical ceilings and similar concealment.

C. Verify identity of each item before installing identification products.

D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

E. Apply identification devices to surfaces that require finish after completing finish work.

F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

G. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.

1. Secure tight to surface of conductor, cable, or raceway.

H. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

I. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

J. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:
1. "UPS."

K. Self-Adhesive Labels:

1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high label; where two lines of text are required, use labels 2 inches high.

L. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's written instructions.

M. Laminated Acrylic or Melamine Plastic Signs:
1. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high sign; where two lines of text are required, use labels 2 inches high.

N. Cable Ties: General purpose, for attaching tags, except as listed below:
1. In Spaces Handling Environmental Air: Plenum rated.

3.3 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits, More Than 30 A and 120 V to Ground: Identify with self-adhesive raceway labels.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

D. Accessible Fittings for Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive labels containing the wiring system legend and system voltage. System legends shall be as follows:
1. "UPS."

E. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use self-adhesive vinyl tape to identify the phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

F. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use self-adhesive labels with the conductor or cable designation, origin, and destination.

G. Control-Circuit Conductor Termination Identification: For identification at terminations, provide heat-shrink preprinted tubes with the conductor designation.

H. Auxiliary Electrical Systems Conductor Identification: Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

I. Workspace Indication: Apply floor marking tape to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

J. Equipment Identification Labels:

1. Indoor Equipment: Laminated acrylic or melamine plastic sign.
2. Equipment to Be Labeled:
   a. Enclosed circuit breakers.
   b. Contactors.
   c. Battery-inverter units.
   d. Battery racks.

e. UPS equipment.
f. Panelboards.

END OF SECTION 260553

This Page Intentionally Left Blank.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Surge protection devices.
3. Disconnecting and overcurrent protective devices.
4. Accessory components and features.
5. Identification.

1.3 ACTION SUBMITTALS

A. Product Data: For each switchboard, overcurrent protective device, surge protection device, ground-fault protector, accessory, and component.

1. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
6. Include schematic and wiring diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

a. Routine maintenance requirements for switchboards and all installed components.
b. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
c. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

B. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Handle and prepare switchboards for installation according to NECA 400.

1.8 FIELD CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:

1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

    a. Ambient Temperature: Not exceeding 104 deg F (40 deg C).
    b. Altitude: Not exceeding 6600 feet (2000 m).

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify Owner no fewer than five days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without Owner's written permission.
4. Comply with NFPA 70E.

1.9 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.10 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace switchboard enclosures, buswork, overcurrent protective devices, accessories, and factory installed interconnection wiring that fail in materials or workmanship within specified warranty period.

B. Manufacturer's Warranty: Manufacturer's agrees to repair or replace surge protection devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

2.2 SWITCHBOARDS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Eaton.
2. Siemens Industry, Inc., Energy Management Division.
3. Square D; by Schneider Electric.

B. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Comply with NEMA PB 2.

F. Comply with NFPA 70.

G. Comply with UL 891.

H. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

I. Nominal System Voltage: 480Y/277 V.

J. Main-Bus Continuous: 800 A.

K. Indoor Enclosures: Steel, NEMA 250, Type 1.

L. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

M. Barriers: Between adjacent switchboard sections.

N. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.

O. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

P. Removable, Hinged Rear Doors and Compartment Covers: Secured by standard bolts, for access to rear interior of switchboard.

Q. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

R. Pull Box on Top of Switchboard:

1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
2. Set back from front to clear circuit-breaker removal mechanism.
3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

S. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from the front of the switchboard.
2. Phase- and Neutral-Bus Material: Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections.
3. Tin-plated aluminum feeder circuit-breaker line connections.
4. Ground Bus: 1/4-by-2-inch- (6-by-50-mm-) hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit ground conductors.
5. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
6. Disconnect Links:

    a. Isolate neutral bus from incoming neutral conductors.
    b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
7. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
8. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

T. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

U. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

V. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
   1. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
   2. MCCB Features and Accessories:

      a. Standard frame sizes, trip ratings, and number of poles.
      b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material.
      c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
      d. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
      e. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
      f. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
      g. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

2.4 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NEMA PB 2.1.

1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's instructions.
2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
3. Protect from moisture, dust, dirt, and debris during storage and installation.
4. Install temporary heating during storage per manufacturer's instructions.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect the performance of the equipment.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install switchboards and accessories according to NEMA PB 2.1.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."

1. Install conduits entering underneath the switchboard, entering under the vertical section where the conductors will terminate. Install with couplings flush with the concrete base. Extend 2 inches (50-mm) above concrete base after switchboard is anchored in place.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to switchboards.
6. Anchor switchboard to building structure at the top of the switchboard if required or recommended by the manufacturer.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.

D. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

E. Install filler plates in unused spaces of panel-mounted sections.

F. Install overcurrent protective devices, surge protection devices, and instrumentation.

1. Set field-adjustable switches and circuit-breaker trip ranges.

G. Comply with NECA 1.

3.3 CONNECTIONS

A. Bond conduits entering underneath the switchboard to the equipment ground bus with a bonding conductor sized per NFPA 70.

B. Support and secure conductors within the switchboard according to NFPA 70.

C. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

D. Tests and Inspections:

1. Acceptance Testing:

a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within the

switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.

b. Test continuity of each circuit.

2. Test ground-fault protection of equipment for service equipment per NFPA 70.
3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
5. Perform the following infrared scan tests and inspections, and prepare reports:

   a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front panels so joints and connections are accessible to portable scanner.
   b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
   c. Instruments and Equipment:

      1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

6. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

E. Switchboard will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

3.7 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.8 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION 262413

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY:

A. Extent of panelboard, load-center and enclosure work, including cabinets and cutout boxes, is indicated by drawings and schedules, and as specified herein.

B. Types of panelboards and enclosures required for the project include the following:

1. Power-distribution panelboards.

C. Refer to other Division 26 sections for wires/cables, electrical boxes and fittings, and raceway work required in conjunction with installation of panelboards and enclosures.

1.3 SUBMITTALS:

A. Product Data: Submit manufacturer's data on panelboards and enclosures. All panels shall be UL listed.

B. Wiring Diagrams: Submit wiring diagrams for panelboards showing connections to electrical power feeders and distribution branches.

1.4 QUALITY ASSURANCE:

A. Installer's Qualifications: A firm with at least 3 years of successful installation experience on projects utilizing panelboards similar to those required for this project.

B. Codes and Standards:

1. Electrical Code Compliance: Comply with applicable local code requirements of the authority having jurisdiction.
2. UL Compliance: Comply with applicable requirements of UL 67, "Electric Panelboards," and UL's 50, 869, 486A, 486B, and 1053 pertaining to panelboards, accessories and enclosures. Provide panelboard units that are UL-listed and labeled.
3. Special-Use Markings: Provide panelboards, constructed for special-use, with appropriate UL markings that indicate that they are suitable for special type of use/application.
4. NEMA Compliance: Comply with NEMA Stds Pub/No. 250, "Enclosures for Electrical Equipment (1000 Volts Maximum)," Pub/No. PB 1, "Panelboards," and Pub/No. PB

1.1,"Instructions for Safe Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less."

1.5 SEQUENCING AND SCHEDULING:

A. Coordinate installation of panelboards and enclosures with installation of wires/cables, electrical boxes and fittings, and raceway work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers or approved equal to meet the specifications:

1. Eaton / Cutler- Hammer (Basis of Design)
2. Square D Co.
3. Siemens.

2.2 PANELBOARDS:

A. General: Except as otherwise indicated, provide panelboards, enclosures and ancillary components, of types, sizes, and ratings indicated, which comply with manufacturer's standard materials; with the design and construction in accordance with published product information; equipped with proper number of unit panelboard devices as required for complete installation. Where types, sizes, or ratings are not indicated, comply with NEC, UL and established industry standards for those applications indicated.

B. Overcurrent Protective Devices (OCPDs): Provide type, rating, and features as indicated. Tandem circuit breakers shall not be used. Multipole breakers shall have common trip. All OCPD’s above 250A shall have adjustable trip settings to aid in coordination.

C. Copper Equipment Ground Bus: Adequate for feeder and branch-circuit equipment ground conductors. Bonded to box.

D. Provision for Future Devices: Equip with mounting brackets, bus connections, and necessary appurtenances, for the OCPD ampere ratings indicated for future installation of devices.

E. Feed-Through Lugs: Sized to accommodate feeders indicated.

F. Double-Main Lugs: Sized to accommodate feeders indicated.

G. Provide piano hinge door-in-door covers on both the panel and distribution board enclosure fronts and the doors - typical for all panelboards.

H. Provide 25% space for future circuits.

I. Single pole circuit breakers shall not be ganged to form multiple pole breakers.

J. ”Series” rated equipment is not acceptable.

2.3 LIGHTING AND APPLIANCE BRANCH CIRCUIT PANELBOARDS

A. Branch OCPDs: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

B. Lighting and Appliance Panelboards General: Provide dead-front safety type lighting and appliance panelboards as indicated, with switching and protective devices in quantities, ratings, types and arrangements shown; with anti-burn solderless pressure type lug connectors approved for use with copper conductors; construct unit for connecting feeders at top of panel; equip with copper bus bars, full-sized neutral bar, with bolt-in type heavy-duty, quick-make, quick-break, single-pole circuit-breakers, with toggle handles that indicate when tripped. Provide suitable lugs on neutral bus for each outgoing feeder required; and provide bare uninsulated grounding bars suitable for bolting to enclosures. Select enclosures fabricated by same manufacturer as panelboards, which mate and match properly with panelboards.

C. Panelboard Enclosures: Provide galvanized sheet steel cabinet type enclosures, in sizes and NEMA types as indicated, code-gage, minimum 16-gage thickness. Construct with multiple knockouts and wiring gutters. Provide fronts with doors with flush locks and keys, all panelboard enclosures keyed alike, with concealed piano hinges for the door and enclosure front and door swings as indicated. Equip with interior circuit-directory frame, and card with clear plastic covering. Provide baked gray enamel finish over a rust inhibitor coating. Design enclosures for recessed mounting. Provide enclosures which are fabricated by same manufacturer as panelboards, which mate and match properly with panelboards to be enclosed.

1. Enclosure Type: NEMA 1.

D. Double-Width Panels: Where more than 42 poles are indicated or where otherwise indicated, provide two panelboards with a close-coupled nipple conduit, feed-thru lugs on the main panel and conduit and wire to match the incoming on the single line.

E. Doors: In panel front, with concealed hinges. Secure with flush catch and tumbler lock, all keyed alike.

F. Molded-Case Circuit Breakers: Provide factory-assembled, molded-case circuit breakers of frame sizes, characteristics, and ratings including RMS symmetrical interrupting ratings indicated. Select breakers with permanent thermal and instantaneous magnetic trip, and with fault-current limiting protection, ampere ratings as indicated. Construct with overcenter, trip-free, toggle-type operating mechanisms with quick-make, quick-break action and positive handle trip indication. Construct breakers for mounting and operating in any physical position, and operating in an ambient temperature of 40 deg C. Provide breakers with mechanical screw type removable connector lugs, AL/CU rated.

G. Panelboards shall be made by Eaton / Cutler Hammer or equal. Panelboards shall be rated

minimum 65,000 Ampere R.M.S. Symmetrical, for the 277/480 Volt panelboards, and 22,000 Ampere R.M.S. Symmetrical for the 120/208V panelboards.

H. Accessories: Provide panelboard accessories and devices including, but not necessarily limited to, time-delay type fuses, ground-fault protection units, etc., as recommended by panelboard manufacturer for ratings and applications indicated.

PART 3 - EXECUTION

3.1 EXAMINATION:

A. Examine areas and conditions under which panelboards and enclosures are to be installed, and notify Contractor in writing of conditions detrimental to proper completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION OF PANELBOARDS:

A. Install panelboards and enclosures as indicated, in accordance with manufacturer's written instructions, applicable requirements of NEC standards and NECA's "Standards of Installation," and in compliance with recognized industry practices to ensure that products fulfill requirements.

B. Ground Fault Protection: Install panelboard ground fault circuit interrupter devices in accordance with installation guidelines of NEMA 289, "Application Guide for Ground Fault Circuit Interrupters."

C. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque values for equipment connectors. Where manufacturer's torqueing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Stds 486A.

D. Fasten enclosures firmly to walls and structural surfaces, ensuring that they are permanently and mechanically anchored.

E. Provide properly wired electrical connections for panelboards within enclosures.

F. Fill out panelboard's circuit directory card upon completion of installation work.

G. Provision for Future Circuits at Flush Panelboards: Stub four 1-inch empty conduits from panel into accessible ceiling space.

3.3 GROUNDING:

A. Provide equipment grounding connections for panelboard enclosures as indicated. Tighten connections to comply with tightening torques specified in UL 486A to assure permanent and effective grounds.

3.4 TESTING

A. Prior to energization of electrical circuitry, check all accessible connections to manufacturer's tightening torque specifications.

B. Prior to energization of panelboards, check with ground resistance tester phase-to-phase and phase-to-ground insulation resistance levels to ensure requirements are fulfilled.

C. Prior to energization, check panelboards for electrical continuity of circuits, and for short-circuits.

3.5 ADJUSTING AND CLEANING:

A. Adjust operating mechanisms for free mechanical movement.

B. Touch-up scratched or marred surfaces to match original finishes.

END OF SECTION 262416

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Receptacles, receptacles with integral GFCI and associated device plates.
2. Snap switches.
3. Wall Plates

1.3 DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.

D. RFI: Radio-frequency interference.

E. TVSS: Transient voltage surge suppressor.

F. UTP: Unshielded twisted pair.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: List of legends and description of materials and process used for pre-marking wall plates.

C. Samples: One for each type of device and wall plate specified, in each color specified.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

1.7 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NFPA 70.

1.8 COORDINATION

A. Receptacles for Owner-Furnished Equipment: Match plug configurations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:

1. Cooper Wiring Devices; a division of Cooper Industries, Inc. (Cooper).
2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
3. Leviton Mfg. Company Inc. (Leviton).
4. Pass & Seymour/Legrand; Wiring Devices & Accessories (Pass & Seymour).

2.2 STRAIGHT BLADE RECEPTACLES

A. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

a. Cooper; 5351 (single), 5352 (duplex).
b. Hubbell; HBL5351 (single), CR5352 (duplex).
c. Leviton; 5891 (single), 5352 (duplex).

d. Pass & Seymour; 5381 (single), 5352 (duplex).

2.3 GFCI RECEPTACLES

A. General Description: Straight blade, non-feed-through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

a. Cooper; VGF20.
b. Pass & Seymour; 2095W.

2.4 SNAP SWITCHES

A. Comply with NEMA WD 1 and UL 20.

B. Switches, 120/277 V, 20 A:

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

a. Cooper; AH1221 (single pole), AH1222 (two pole), 1223 (three way), 1224 (four way).
b. Hubbell; CS1221 (single pole), CS1222 (two pole), CS1223 (three way), CS1224 (four way).
c. Leviton; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way).
d. Pass & Seymour; PS20AC1 (single pole), PS20AC2 (two pole), PS20AC3 (three way), PS20AC4 (four way).

2.5 WALL PLATES

A. Single and combination types to match corresponding wiring devices.

1. Plate-Securing Screws: Metal with head color to match plate finish.
2. Material for Finished Spaces: Smooth, high-impact thermoplastic
3. Material for Unfinished Spaces: Galvanized steel
4. Material for Damp Locations: Thermoplastic with spring-loaded lift cover, and listed and labeled for use in "wet locations."

B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant thermoplastic with lockable cover.

2.6 FINISHES

A. Color: Wiring device catalog numbers in Section Text do not designate device color.

1. Wiring Devices Connected to Normal Power System: White, unless otherwise indicated or required by NFPA 70 or device listing.

2. Wiring Devices Connected to Emergency Power System: Red, unless otherwise indicated or required by NFPA 70 or device listing.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Coordination with Other Trades:

1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.

4. Existing Conductors:

a. Cut back and pigtail, or replace all damaged conductors.
b. Straighten conductors that remain and remove corrosion and foreign matter.
c. Pig-tailing existing conductors is permitted provided the outlet box is large enough.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles to the right.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multi-gang wall plates.

3.2 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. Test Instruments: Use instruments that comply with UL 1436.
2. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.

B. Tests for Convenience Receptacles:

1. Line Voltage: Acceptable range is 105 to 132 V.
2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
3. Ground Impedance: Values of up to 2 ohms are acceptable.
4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
5. Using the test plug, verify that the device and its outlet box are securely mounted.
6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or

similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

END OF SECTION 262726

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Receptacle switches.
4. Shunt trip switches.
5. Molded-case circuit breakers (MCCBs).
6. Molded-case switches.
7. Enclosures.

1.3 DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. SPDT: Single pole, double throw.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include nameplate ratings, dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current ratings (interrupting and withstand, as appropriate).
4. Include evidence of a nationally recognized testing laboratory (NRTL) listing for series rating of installed devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.

6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

B. Shop Drawings: For enclosed switches and circuit breakers.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Include wiring diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Seismic Qualification Certificates: For enclosed switches and circuit breakers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
2. Altitude: Not exceeding 6600 feet (2010 m).

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: One year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Enclosed switches and circuit breakers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.2 GENERAL REQUIREMENTS

A. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single manufacturer.

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

D. Comply with NFPA 70.

2.3 NONFUSIBLE SWITCHES

A. Manufacturers

1. Eaton / Cutler Hammer products
2. Square D By Schneider Electric
3. Rockwell Automation by Allen Bradley

B. Type GD, General Duty, Three Pole, Single Throw, 600-V ac, 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Three Pole, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
5. Auxiliary Contact Kit: One NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
6. Hookstick Handle: Allows use of a hookstick to operate the handle.
7. Lugs: Compression type, suitable for number, size, and conductor material.
8. Service-Rated Switches: Labeled for use as service equipment.

2.4 RECEPTACLE SWITCHES

A. Manufacturers

1. Eaton / Cutler Hammer products
2. Square D By Schneider Electric
3. Legrand

B. Type HD, Heavy-Duty, Three Pole, Single-Throw Nonfusible Switch: 600-V ac, 20A; UL 98 and NEMA KS 1; horsepower rated, lockable handle with capability to accept three padlocks; interlocked with cover in closed position.

C. Interlocking Linkage: Provided between the receptacle and switch mechanism to prevent inserting or removing plug while switch is in the on position, inserting any plug other than specified, and turning switch on if an incorrect plug is inserted or correct plug has not been fully inserted into the receptacle.

D. Receptacle: Polarized, three-phase, four-wire receptacle (fourth wire connected to enclosure ground lug).

E. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.

3. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
4. Service-Rated Switches: Labeled for use as service equipment.

2.5 MOLDED-CASE CIRCUIT BREAKERS

A. Manufacturers

1. Eaton / Cutler Hammer products
2. SIEMENS
3. Square D By Schneider Electric
4. GE

B. Circuit breakers shall be constructed using glass-reinforced insulating material. Current carrying components shall be completely isolated from the handle and the accessory mounting area.

C. Circuit breakers shall have a toggle operating mechanism with common tripping of all poles, which provides quick-make, quick-break contact action. The circuit-breaker handle shall be over center, be trip free, and reside in a tripped position between on and off to provide local trip indication. Circuit-breaker escutcheon shall be clearly marked on and off in addition to providing international I/O markings. Equip circuit breaker with a push-to-trip button, located on the face of the circuit breaker to mechanically operate the circuit-breaker tripping mechanism for maintenance and testing purposes.

D. The maximum ampere rating and UL, IEC, or other certification standards with applicable voltage systems and corresponding interrupting ratings shall be clearly marked on face of circuit breaker. Circuit breakers shall be **100 percent rated or series rated as indicated on the Drawings**. Circuit breaker/circuit breaker combinations for series connected interrupting ratings shall be listed by UL as recognized component combinations. Any series rated combination used shall be marked on the end-use equipment along with the statement

E. MCCBs shall be equipped with a device for locking in the isolated position.

F. Lugs shall be suitable for 140 deg F (60 deg C) rated wire on 125-A circuit breakers and below 194 deg F (90 deg C) rated wire, sized according to the 167 deg F (75 deg C) temperature rating in NFPA 70.

G. Standards: Comply with UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents.

H. Thermal-Magnetic Circuit Breakers: Inverse time-current thermal element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

I. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

J. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

1. Instantaneous trip.
2. Long- and short-time pickup levels.
3. Long- and short-time time adjustments.
4. Ground-fault pickup level, time delay, and I-squared t response.

K. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

L. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

M. Ground-Fault Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

N. Ground-Fault Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

O. Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.
2. Lugs: Compression type, suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.
4. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
5. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

2.6 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: UL 489, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

B. Enclosure Finish: The enclosure shall be finished with gray baked enamel paint, electrodeposited on cleaned, phosphatized steel (NEMA 250 Type 1).

C. Conduit Entry: NEMA 250 Types 4, 4X, and 12 enclosures shall contain no knockouts. NEMA 250 Types 7 and 9 enclosures shall be provided with threaded conduit openings in both endwalls.

D. Operating Mechanism: The circuit-breaker operating handle shall be directly operable through the front cover of the enclosure (NEMA 250 Type 1) and directly operable through the dead front trim of the enclosure (NEMA 250 Type 3R). The cover interlock mechanism shall have an externally operated override. The override shall not permanently disable the interlock mechanism, which shall return to the locked position once the override is released. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.

E. Enclosures designated as NEMA 250 Type 4, 4X stainless steel, 12, or 12K shall have a dual cover interlock mechanism to prevent unintentional opening of the enclosure cover when the circuit breaker is ON and to prevent turning the circuit breaker ON when the enclosure cover is open.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Commencement of work shall indicate Installer's acceptance of the areas and conditions as satisfactory.

3.2 PREPARATION

A. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify Owner no fewer than seven days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without Owner's written permission.
4. Comply with NFPA 70E.

3.3 ENCLOSURE ENVIRONMENTAL RATING APPLICATIONS

A. Enclosed Switches and Circuit Breakers: Provide enclosures at installed locations with the following environmental ratings.

1. Indoor, Dry and Clean Locations: NEMA 250, Type 1

2. Outdoor Locations: NEMA 250, Type 3R
3. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4.
4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

3.4 INSTALLATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

C. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

D. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

E. Install fuses in fusible devices.

F. Comply with NFPA 70 and NECA 1.

3.5 IDENTIFICATION

A. Comply with requirements in Section 260553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform tests and inspections with the assistance of a factory-authorized service representative.

E. Tests and Inspections for Switches:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify that the unit is clean.
d. Verify blade alignment, blade penetration, travel stops, and mechanical operation.
e. Verify that fuse sizes and types match the Specifications and Drawings.
f. Verify that each fuse has adequate mechanical support and contact integrity.
g. Inspect bolted electrical connections for high resistance using one of the two following methods:

1) Use a low-resistance ohmmeter.

a) Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.

a) Bolt-torque levels shall be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.12.

h. Verify that operation and sequencing of interlocking systems is as described in the Specifications and shown on the Drawings.
i. Verify correct phase barrier installation.
j. Verify lubrication of moving current-carrying parts and moving and sliding surfaces.

2. Electrical Tests:

a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
b. Measure contact resistance across each switchblade fuseholder. Drop values shall not exceed the high level of the manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
c. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of

manufacturer's published data, use Table 100.1 from the NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.

d. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
e. Perform ground fault test according to NETA ATS 7.14 "Ground Fault Protection Systems, Low-Voltage."

F. Tests and Inspections for Molded Case Circuit Breakers:

1. Visual and Mechanical Inspection:

a. Verify that equipment nameplate data are as described in the Specifications and shown on the Drawings.
b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, grounding, and clearances.
d. Verify that the unit is clean.
e. Operate the circuit breaker to ensure smooth operation.
f. Inspect bolted electrical connections for high resistance using one of the two following methods:

1) Use a low-resistance ohmmeter.

a) Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.

a) Bolt-torque levels shall be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.12.

g. Inspect operating mechanism, contacts, and chutes in unsealed units.
h. Perform adjustments for final protective device settings in accordance with the coordination study.

2. Electrical Tests:

a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
b. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence

of manufacturer's published data, use Table 100.1 from the NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.

c. Perform a contact/pole resistance test. Drop values shall not exceed the high level of the manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.

d. Perform insulation resistance tests on all control wiring with respect to ground. Applied potential shall be 500-V dc for 300-V rated cable and 1000-V dc for 600-V rated cable. Test duration shall be one minute. For units with solid state components, follow manufacturer's recommendation. Insulation resistance values shall be no less than two megohms.

e. Determine the following by primary current injection:

1) Long-time pickup and delay. Pickup values shall be as specified. Trip characteristics shall not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
2) Short-time pickup and delay. Short-time pickup values shall be as specified. Trip characteristics shall not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
3) Ground-fault pickup and time delay. Ground-fault pickup values shall be as specified. Trip characteristics shall not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
4) Instantaneous pickup. Instantaneous pickup values shall be as specified and within manufacturer's published tolerances.

f. Test functionality of the trip unit by means of primary current injection. Pickup values and trip characteristics shall be as specified and within manufacturer's published tolerances.

g. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the shunt trip and close coils shall be as indicated by manufacturer.

h. Verify correct operation of auxiliary features such as trip and pickup indicators; zone interlocking; electrical close and trip operation; trip-free, anti-pump function; and trip unit battery condition. Reset all trip logs and indicators. Investigate units that do not function as designed.

i. Verify operation of charging mechanism. Investigate units that do not function as designed.

3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

4. Perform the following infrared scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

5. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

G. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

H. Prepare test and inspection reports.

1. Test procedures used.
2. Include identification of each enclosed switch and circuit breaker tested and describe test results.
3. List deficiencies detected, remedial action taken, and observations after remedial action.

3.7 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

END OF SECTION 262816

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes automatic transfer switches rated 600 V and less, including the following:

1. Remote annunciator and control system.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for transfer switches.
2. Include rated capacities, operating characteristics, electrical characteristics, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, details showing minimum clearances, conductor entry provisions, gutter space, and installed features and devices.
2. Include material lists for each switch specified.
3. Single-Line Diagram: Show connections between transfer switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.
4. Riser Diagram: Show interconnection wiring between transfer switches, bypass/isolation switches, annunciators, and control panels.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.
1. Features and operating sequences, both automatic and manual.

2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications:

1. Member company of NETA.

a. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.7 FIELD CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:

1. Notify Owner no fewer than five days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without Owner's written permission.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of transfer switch or transfer switch components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NEMA ICS 1.

C. Comply with NFPA 99.

D. Comply with NFPA 110.

E. Comply with UL 1008 unless requirements of these Specifications are stricter.

F. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

G. Tested Fault-Current Closing and Short-Circuit Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
2. Short-time withstand capability for three cycles.

H. Repetitive Accuracy of Solid-State Controls: All settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

I. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.62. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

J. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism. Switches for emergency or standby purposes shall be mechanically and electrically interlocked in both directions to prevent simultaneous connection to both power sources unless closed transition.

K. Neutral Switching: Where four-pole switches are indicated, provide overlapping neutral contacts.

L. Neutral Terminal: Solid and fully rated unless otherwise indicated.

M. Battery Charger: For generator starting batteries.

1. Float type, rated 10 A.
2. Ammeter to display charging current.
3. Fused ac inputs and dc outputs.

N. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

O. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, by color-code or by numbered or lettered wire and cable shrinkable sleeve markers at terminations. Color-coding and wire and cable markers are specified in Section 260553 "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
4. Accessible via front access.

P. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.2 CONTACTOR-TYPE AUTOMATIC TRANSFER SWITCHES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Cummins Power Generation.
2. Eaton.
3. Kohler Power Systems.
4. MTU Onsite Energy Corporation.

B. Comply with Level 1 equipment according to NFPA 110.

C. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are unacceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Contactor-style automatic transfer-switch units, rated 600 A and higher, shall have separate arcing contacts.
4. Conductor Connectors: Suitable for use with conductor material and sizes.
5. Material: Tin-plated aluminum.
6. Main and Neutral Lugs: Mechanical type.
7. Ground Lugs and Bus-Configured Terminators: Mechanical type.
8. Connectors shall be marked for conductor size and type according to UL 1008.

D. Automatic Open-Transition Transfer Switches: Interlocked to prevent the load from being closed on both sources at the same time.

1. Sources shall be mechanically and electrically interlocked to prevent closing both sources on the load at the same time.

E. Automatic Closed-Transition Transfer Switches: Connect both sources to load momentarily. Transition is controlled by programming in the automatic transfer-switch controller.

1. Fully automatic make-before-break operation when transferring between two available power sources.
2. Load transfer without interruption, through momentary interconnection of both power sources not exceeding 100 ms.
3. Initiation of No-Interruption Transfer: Controlled by in-phase monitor and sensors confirming both sources are present and acceptable.

a. Initiation occurs without active control of generator.
b. Automatic transfer-switch controller takes active control of generator to match frequency, phase angle, and voltage.

c. Controls ensure that closed-transition load transfer closure occurs only when the two sources are within plus or minus 5 electrical degrees maximum, and plus or minus 5 percent maximum voltage difference.

4. Failure of power source serving load initiates automatic break-before-make transfer.

F. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

G. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

H. Electric Switch Operation: Electrically actuated by push buttons designated "Normal Source" and "Alternative Source." Switch shall be capable of transferring load in either direction with either or both sources energized.

I. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval shall be adjustable from 1 to 30 seconds.

J. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

K. Automatic Transfer-Switch Controller Features:

1. Controller operates through a period of loss of control power.
2. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage shall be adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
4. Time Delay for Retransfer to Normal Source: Adjustable from zero to 30 minutes, and factory set for 10 minutes. Override shall automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
5. Test Switch: Simulate normal-source failure.
6. Switch-Position Pilot Lights: Indicate source to which load is connected.
7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.

    a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
    b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."

8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
9. Transfer Override Switch: Overrides automatic retransfer control so transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods shall be adjustable from 10 to 30 minutes. Factory settings shall be for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

    a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
    b. Push-button programming control with digital display of settings.
    c. Integral battery operation of time switch when normal control power is unavailable.

L. Large-Motor-Load Power Transfer:

1. In-Phase Monitor: Factory-wired, internal relay controls transfer so contacts close only when the two sources are synchronized in phase and frequency. Relay shall compare phase relationship and frequency difference between normal and emergency sources and initiate transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer shall be initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.
2. Motor Disconnect and Timing Relay Controls: Designated starters in loss of power scenario shall disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters shall be through wiring external to automatic transfer switch. Provide adjustable time delay between 1 and 60 seconds for reconnecting individual motor loads. Provide relay contacts rated for motor-control circuit inrush and for actual seal currents to be encountered.

2.3 TRANSFER SWITCH ACESSORIES

A. Remote Annunciator and Control System:

1. Source Limitations: Same manufacturer as transfer switch in which installed.
2. Include the following functions for indicated transfer switches:

    a. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.

b. Indication of switch position.
c. Indication of switch in test mode.
d. Indication of failure of digital communication link.
e. Key-switch or user-code access to control functions of panel.
f. Control of switch-test initiation.
g. Control of switch operation in either direction.
h. Control of time-delay bypass for transfer to normal source.

3. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically shall revert to standalone, self-contained operation. Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.
4. Remote Annunciation and Control Panel: Solid-state components. Include the following features:

a. Controls and indicating lights grouped together for each transfer switch.
b. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
c. Digital Communication Capability: Matched to that of transfer switches supervised.
d. Mounting: Flush, modular, steel cabinet unless otherwise indicated.

2.4 SOURCE QUALITY CONTROL

A. Factory Tests: Test and inspect components, assembled switches, and associated equipment according to UL 1008. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

B. Prepare test and inspection reports.

1. For each of the tests required by UL 1008, performed on representative devices, for emergency systems. Include results of test for the following conditions:

a. Overvoltage.
b. Undervoltage.
c. Loss of supply voltage.
d. Reduction of supply voltage.
e. Alternative supply voltage or frequency is at minimum acceptable values.
f. Temperature rise.
g. Dielectric voltage-withstand; before and after short-circuit test.
h. Overload.
i. Contact opening.
j. Endurance.
k. Short circuit.
l. Short-time current capability.
m. Receptacle withstand capability.
n. Insulating base and supports damage.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Floor-Mounting Switch: Anchor to floor by bolting.

1. Install transfer switches on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for seismic control devices specified in Section 260548.16 "Seismic Controls for Electrical Systems."
3. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.
4. Provide workspace and clearances required by NFPA 70.

B. Annunciator and Control Panel Mounting: Flush in wall unless otherwise indicated.

C. Identify components according to Section 260553 "Identification for Electrical Systems."

D. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

E. Comply with NECA 1.

3.2 CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to generator sets, control, and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

B. Wiring Method: Install cables in raceways and cable trays except within electrical enclosures. Conceal raceway and cables except in unfinished spaces.

1. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Connect twisted pair cable according to Section 260523 "Control-Voltage Electrical Power Cables."

G. Route and brace conductors according to manufacturer's written instructions and Section 260529 "Hangers and Supports for Electrical Systems." Do not obscure manufacturer's markings and labels.

H. Final connections to equipment shall be made with liquidtight, flexible metallic conduit no more than 18 inches (457 mm) in length.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. After installing equipment, test for compliance with requirements according to NETA ATS.
2. Visual and Mechanical Inspection:

    a. Compare equipment nameplate data with Drawings and Specifications.
    b. Inspect physical and mechanical condition.
    c. Inspect anchorage, alignment, grounding, and required clearances.
    d. Verify that the unit is clean.
    e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
    f. Verify that manual transfer warnings are attached and visible.
    g. Verify tightness of all control connections.
    h. Inspect bolted electrical connections for high resistance using one of the following methods, or both:

        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data.

    i. Perform manual transfer operation.
    j. Verify positive mechanical interlocking between normal and alternate sources.
    k. Perform visual and mechanical inspection of surge arresters.
    l. Inspect control power transformers.

        1) Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring, and overall general condition.
        2) Verify that primary and secondary fuse or circuit-breaker ratings match Drawings.
        3) Verify correct functioning of drawout disconnecting contacts, grounding contacts, and interlocks.

3. Electrical Tests:

a. Perform insulation-resistance tests on all control wiring with respect to ground.
b. Perform a contact/pole-resistance test. Compare measured values with manufacturer's acceptable values.
c. Verify settings and operation of control devices.
d. Calibrate and set all relays and timers.
e. Verify phase rotation, phasing, and synchronized operation.
f. Perform automatic transfer tests.
g. Verify correct operation and timing of the following functions:

1) Normal source voltage-sensing and frequency-sensing relays.
2) Engine start sequence.
3) Time delay on transfer.
4) Alternative source voltage-sensing and frequency-sensing relays.
5) Automatic transfer operation.
6) Interlocks and limit switch function.
7) Time delay and retransfer on normal power restoration.
8) Engine cool-down and shutdown feature.

4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

a. Check for electrical continuity of circuits and for short circuits.
b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
c. Verify that manual transfer warnings are properly placed.
d. Perform manual transfer operation.

5. After energizing circuits, perform each electrical test for transfer switches stated in NETA ATS and demonstrate interlocking sequence and operational function for each switch at least three times.

a. Simulate power failures of normal source to automatic transfer switches and retransfer from emergency source with normal source available.
b. Simulate loss of phase-to-ground voltage for each phase of normal source.
c. Verify time-delay settings.
d. Verify pickup and dropout voltages by data readout or inspection of control settings.
e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for one pole deviating by more than 50 percent from other poles.
g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

D. Coordinate tests with tests of generator and run them concurrently.

E. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

F. Transfer switches will be considered defective if they do not pass tests and inspections.

G. Remove and replace malfunctioning units and retest as specified above.

H. Prepare test and inspection reports.

I. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
2. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
3. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

3.4 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment.

B. Training shall include testing ground-fault protective devices and instructions to determine when the ground-fault system shall be retested. Include instructions on where ground-fault sensors are located and how to avoid negating the ground-fault protection scheme during testing and circuit modifications.

C. Coordinate this training with that for generator equipment.

END OF SECTION 263600

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, and other Division 26 Specification Sections, apply to this Section.

B. See drawings for lighting fixture schedules. Where there is a discrepancy in specifications between this section and the specified light fixture on the drawing, the drawing information shall be followed.

1.2 SUMMARY

A. Extent, location, and details of lighting fixture work are indicated on drawings and in schedules.

B. Types of lighting fixtures in this section include the following:

1. Fluorescent.
2. LED
3. HID

1.3 SUBMITTALS

A. General: Submit the following in accordance with conditions of Contract and Division 1 Specification Sections.

B. Product Data: Submit manufacturer's product data and installation instructions on each type interior and exterior building lighting fixture and component.

C. Shop Drawings: Submit layout drawings of lighting fixtures and their spatial relationship to each other. In addition, submit fixture shop drawings in booklet form with separate sheet for each fixture, assembled in "luminaire type" alphabetical or numerical order, with proposed fixture and accessories clearly indicated on each sheet. Drawings shall indicate complete details of fixture, including manufacturer's catalog numbers for sockets, ballasts, lightshields, lamps, lenses, metal gauges, type of wiring, finish color and texture. Ceiling system shop drawings shall indicate relationship between fixture and adjacent elements of structure (walls, columns, ducts, openings, etc.) Submit details indicating mounting methods.

D. A contractor submitted shop drawing for the lighting fixtures, stamped as Approved by the contractor, constitutes that the contractor has reviewed, coordinated and approved all information (number and quantity of switching devices, ceiling types, wiring schemes, etc.) on the Electrical and Architectural drawings.

1.4 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Firms regularly engaged in manufacture of lighting fixtures of sizes, types and ratings required, whose products have been in satisfactory use in similar service for not less than 5 years.
B. Codes and Standards:

1. Electrical Code Compliance: Comply with applicable local code requirements of the authority having jurisdiction and NEC Articles 220, 410, and 510 as applicable to installation, and construction of building lighting fixtures.
2. NEMA Compliance: Comply with applicable requirements of NEMA Stds Pub/No.'s LE 1 and LE 2 pertaining to lighting equipment.
3. IES Compliance.
4. UL Compliance: Comply with UL standards, including UL 486A, pertaining to lighting fixtures. Provide lighting fixtures and components that are UL-listed and labeled.
5. CBM Labels: Provide fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry the CBM label.

1.5 WARRANTY

A. The contractor shall warrant the completed lighting system wiring, equipment, lamps and ballasts to be free from inherent mechanical and electrical defects for a period of one (1) year from the date of Substantial Completion. Refer to Division 1 specifications for definition of Substantial Completion.

B. Contractors shall note that all equipment warranties, as described in the various sections of the Specifications, will begin after Substantial Completion. It will not make any difference when equipment is ordered, delivered or installed, warranties will commence after the letter of "Substantial Completion."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver lighting fixtures in factory-fabricated containers or wrappings, which properly protect fixtures from damage.

B. Store lighting fixtures in original packaging. Store inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, humidity, laid flat and blocked off ground.

C. Handle lighting fixtures carefully to prevent damage, breaking, and scoring of finishes. Do not install damaged units or components; replace with new.

1.7 SEQUENCING AND SCHEDULING

A. Coordinate with other work including wires/cables, electrical boxes and fittings, and raceways, to properly interface installation of lighting fixtures with other work. Coordinate depth of all lighting fixtures, to eliminate interference with all equipment above the ceiling, with mechanical contractor and general contractor

B. Sequence lighting installation with other work to minimize possibility of damage and soiling

during remainder of construction.

1.8 GENERAL

A. Furnish lighting fixtures, lighting equipment components, branch circuiting and lamps for a complete lighting system.

B. The ballast and all other parts shall be considered as components of the fixture, and it shall be the responsibility of the manufacturer of the fixture to furnish labor and material required to repair or replace any or all of the components that become defective during the guarantee period stated in this specification.

C. Location of fixtures on drawings is diagrammatic. Verify locations with reflected ceiling plans, or other reference data for final location and spacing in advance of installation. Examine space conditions and requirements for installation of fixtures. Coordinate installation of fixtures with other trades to avoid interferences.

D. Wiring channels and socket mountings shall be rigid and accurately made. Sockets shall hold lamps securely against normal vibration and maintenance handling. Socket contacts shall be silver plated. For rapid start lamps on single ballasts, furnish one grounding socket.

E. Provide approved support for each lighting fixture outlet.

F. For pendant-mounted fixtures furnish adjustable ball joint type hangers unless indicated otherwise.

G. Blemished, damaged, or unsatisfactory fixtures shall be replaced at the direction of the Engineer.

H. Reflector cones, aperture plates, and decorative elements of fixtures shall not be installed until completion of plastering, ceiling tile work, painting, and general clean-up in the area.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or alternatives of the quality necessary to meet the specifications. Manufacturer for each type of fixture are indicated in the fixture schedule.

2.2 FIXTURES

A. General: Provide lighting fixtures, of sizes, types and ratings indicated; complete with, but not limited to, housings, energy- efficient lamps, lamp holders, reflectors, energy efficient ballasts,

starters and wiring. Ship fixtures factory-assembled, with those components required for a complete installation. Design fixtures with concealed hinges and catches, with metal parts grounded as common unit, and so constructed as to dampen ballast generated noise. All High Intensity Discharge fixtures shall be equipped with high impact glass lenses.

B. Fluorescent Lamp Ballasts: Provide 120/277V universal voltage, low-energy, high - frequency electronic fluorescent lamp ballasts, capable of operating lamp types indicated.

1. The electronic ballast shall be provided with integral leads, color coded to ANSI standard C82.11 (latest version).
2. The electronic ballast's input current shall have a "Total Harmonic Distortion" (THD) of less than 10% when used with primary lamp.
3. The electronic ballast shall have a "Power Factor" greater than 98% when used with primary lamp.
4. The electronic ballast shall have a minimum ballast factor of 0.88.
5. The electronic ballast shall have a noise rating (Class A) or better.

C. The following type of the Fluorescent Lamp Ballasts shall be used: Osram/Sylvania or approved equal by Advance Transformer Co. or GE/Magnetek only.

D. LED Fixtures:

1. Exit signage shall be LED illuminated with a minimum life of 20,000 hours. Fixtures shall have field selectable directional arrows, and be suitable for wall or ceiling mounting. Where specified, provide dual face display. Mounting shall be universal for ceiling, wall or flag mounting.
2. Downlights shall utilize royal blue LED array with 4000K color temperature and minimum rated life of 50,000 hours per IESNA.
3. Linear fixtures shall utilize high brightness LEDs with 4000K color temperature and minimum rated life of 50,000 hours per IESNA.

E. Lamps:

1. All lamps within each source type, i.e., fluorescent, incandescent, mercury, quartz, shall be of the same manufacturer.
2. Provide fluorescent lamps of energy saving types as indicated. Use only energy saving fluorescent T8, instant start lamps. For 48" lamps, use only T8 Octron type lamps. Lamps shall be 4100k, minimum 85 CRI with minimum 2820 mean lumens and Extended Performance of 24,000 hours by Phillips or Osram Sylvania.

F. Lighting Fixture Schedule:

1. General: Various fixture types required are indicated on the drawings. Fixtures must comply with minimum requirements as stated herein. Review architectural drawings and specifications to verify ceiling types, modules, suspension systems appropriate to installation. In general, where so noted, substitutions for different type of fixture will be acceptable, based on Engineer's evaluation.
2. A contractor submitted shop drawing for the lighting fixtures, stamped as Approved by

the contractor, constitutes that the contractor has reviewed, coordinated and approved all information (number and quantity of switching devices, ceiling types, wiring schemes, etc.) on the Electrical drawings.

3. Model numbers are shown for information only. The written description for each fixture shall supersede the model number. It shall be the contractor's responsibility to verify all model numbers and quantities.
4. All final fixture finishes shall be selected by the Engineer prior to fixture approval. Contractor shall assume that the most costly finish will be selected for each fixture type – NO EXEPTIONS.
5. Refer to the contract drawings for the fixture schedule and fixture information.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions under which lighting fixtures are to be installed, and substrate for supporting lighting fixtures. Notify Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

3.2 INSTALLATION OF LIGHTING FIXTURES

A. Install lighting fixtures at locations and heights as indicated, in accordance with fixture manufacturer's written instructions, applicable requirements of NEC, NECA's "Standard of Installation," NEMA standards, and with recognized industry practices to ensure that lighting fixtures fulfill requirements.

B. Provide fixtures and/or fixture outlet boxes with hangers to properly support fixture weight. Submit design of hangers, method of fastening, other than indicated or specified herein, for review by Engineer.

C. Install flush mounted fixtures properly to eliminate light leakage between fixture frame and finished surface.

D. Provide plaster frames for recessed fixtures installed in other than suspended grid type acoustical ceiling systems. Brace frames temporarily to prevent distortion during handling.

E. Fasten fixtures securely to indicated structural supports; and ensure that pendant fixtures are plumb and level. Provide individually mounted pendant fixtures longer than 2 feet with twin stem hangers. Provide stem hanger with ball aligners and provisions for minimum one inch vertical adjustment. Mount continuous rows of fixtures with an additional stem hanger greater than number of fixtures in the row. Chain hung fixtures are not acceptable.

F. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Where manufacturer's torquing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Stds 486A and the National Electrical Code.

G. Support surface mounted fixtures greater than 2 feet in length at a point in addition to the outlet box fixtures stud.

3.3 INSTALLATION OF EXTERIOR LIGHTING FIXTURES

A. Install exterior lighting fixtures at locations and heights as indicated, in accordance with fixture manufacturer's written instructions, applicable requirements of NEC, NECA's "Standard of Installation,” NEMA standards, and with recognized industry practices to ensure that lighting fixtures fulfill requirements.

B. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Where manufacturer's torquing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Stds 486A and B, and the National Electrical Code.

C. Fasten electrical lighting fixtures and brackets securely to indicated structural supports, including poles/standards; and ensure that installed fixtures are plum and level.

D. The Electrical Contractor will furnish and install time clocks, photocell and multi-pole contactors to control the outdoor lighting circuits as shown on drawings.

3.4 TESTING

A. Replace defective and burned out lamps for a period of one year following the Date of Substantial Completion.

B. Furnish stock or replacement lamps amounting to not less than 12 lamps, of each type and size lamp used in each type fixture. Deliver replacement stock as directed to Owner's storage space.

3.5 ADJUSTING AND CLEANING

A. Clean lighting fixtures of dirt and construction debris upon completion of installation. Clean fingerprints and smudges from lenses.

B. Protect installed fixtures from damage during remainder of construction period.

3.6 GROUNDING

A. Provide equipment grounding connections for interior and exterior lighting fixtures as required. Tighten connections to comply with tightening torques specified in UL Std 486A to assure

permanent and effective grounds.

END OF SECTION 265100

SECTION 27 05 00 - COMMON WORK ELEMENTS FOR COMMUNICATIONS

PART 1 - GENERAL

STIPULATIONS

1.1 Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections and stipulated Specification Sections shall apply to this and all related Division 27 Specification Sections.

A. Related Specification Sections:

B.
1. Division 26 – Common Work Results for Electrical
2. Division 26 – Building Wire and Cable
3. Division 26 – Grounding and Bonding
4. Division 26 – Hangers and Supports
5. Division 26 – Conduit
6. Division 26 – Outlet Boxes
7. Division 26 – Pull & Junction Boxes
8. Division 26 – Underground Ducts & Raceways for Electrical Systems
9. Division 26 – Identification for Electrical Systems
10. 27 05 26 – Telecommunications Grounding and Bonding
11. 27 05 50 – Internet Protocol Television Distribution System (IPTV)
12. 27 10 00 – Structured Cabling System
13. 27 10 10 – Voice Over IP Telephone System
14. 27 10 15 – Wireless Local Area Network System
15. 27 11 00 – Communication Spaces and Equipment Rooms
16. 27 15 16 – Public Address System
17. 27 21 00 – Data Network Communication Equipment
18. 27 42 16 – Multi-User Flight Information Display System (MUFIDS)
19. 28 05 00 – Common Work Elements for ESS
20. 28 13 00 – Physical Access Control System

C.
21. 28 23 00 – Video Surveillance System
22. 28 31 00 – Digital Addressable Fire Alarm System

Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedule on the symbols and abbreviations sheet in the telecommunications systems drawing package. Not all device symbols as indicated may be required for the project.

D.
2. Because of the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location. Contractor shall coordinate exact location of all network systems and related components with all related Contract drawings, specifications and affected trades prior to submittal of shop drawings.

Abbreviations:

AGC: Automatic Gain Control
ACR Attenuation to Crosstalk Ratio.
ADA Americans with Disabilities Act

AHJ:	Authority Having Jurisdiction
AIDB	Airport Integrated Data Broker
AO	Airport Operations
APC	Automated Passport Control
ASTM	American Society for Testing Materials
ASIS	Formerly the American Society for Industrial Security, now known simply as ASIS International
ATP:	Acceptance Test Plan
AUI	Attachment Unit Interface.
AWS:	Advanced Wireless Service
A/V	Audio Visual Systems – For purposes of this specification section A/V systems shall include all Media Management, Video Broadcasting, Intercommunications (Paging/Public Address, Clock, Auxiliary Sound), Video Intercom, Emergency Communications, Mass Notification, Multi-User Flight Information Displays (MUFIDS), and Internet Protocol Television (IPTV).
BACnet	A communications protocol for building automation and control networks as outlined in ISO 16484-5 and ASHRAE/ANSI Standard 135.
BAS	Building Automation System
BDA:	Bi-Direction Amplifier
BIC	Baggage Input Console Device
BIDS	Baggage Information Display System. See also "MUFIDS."
BICSI	Building Industry Consultant Services International - International organization whose primary objective is to enhance the reputation and skills of companies and individuals employed in the telecommunications and security industries by ensuring that current and developing standards are maintained.
BIDS	Baggage Information Display System
BRS:	Broadband Radio Service
BTS:	Base Transceiver Station
CATV	Community Antenna Television
CBP	Customs and Border Protection
CDMA	Code Division Multiple Access
CEA	Consumer Electronics Association
CFR	Code of Federal Regulations
C/N	Carrier-to-Noise Ratio
CP	Consolidation Point - Local Interconnection Point between horizontal cables from the building IDF/MDF rooms and horizontal cables for the furniture drops.
CPU	Central Processing Unit
CSU	Channel Service Unit
CUPPS	Common Use Passenger Processing
CUSS	Common Use Self Service
CWDM	Coarse Wave Division Multiplexing

dB	Decibel
DAQ	Delivered Audio Quality
DAS	Distributed Antenna System
DDC	Direct Digital Controller / Device Display Controller
DMZ	Demilitarized Zone– A firewall configuration for securing local area networks (LANs).
DP	Demarcation Point - The point of interface between the Communications Networks, IPTV, any Auxiliary Systems, and the associated Service Providers or Public Utilities. Also see "EF." Shall also serve as the primary termination point for all incoming OSP cabling as well as the primary main grounding busbar for all communications systems. Refer to project documents for exact location and termination requirements.
DSS	(Electronic) Dynamic Signage System
DSU	Data Service Unit.
DWDM	Dense Wave Division Multiplexing
EBS	Educational Broadband Service
ECS	Emergency Communications System
EF	Entrance Facility. See also "DP."
ELFEXT	Equal Level Far End Crosstalk.
EME	Experiential Media Environment
EMI	Electromagnetic interference
EMT	Electrical Metallic Tubing – Also known as thin-wall conduit.
ER	Equipment Room – See also "MDF"
ESMR	Enhanced Specialized Mobile Radio
EVAC	UL Listed Emergency Voice Evacuation System. Not to be confused with the building Public Address/Intercom, Intercommunications and/or Mass Notification systems.
FAA	Federal Aviation Administration
FAAP	Remote Fire Alarm Annunciator Panel
FACP	Fire Alarm Control Panel
FAS	Fire Alarm System
FASI	Fire Alarm System Integrator
FCC	Federal Communications Commission
FEXT	Far End Crosstalk
FIDS	Flight Information Display System. See also "MUFIDS."
GFCI	Ground fault circuit interrupter
GIDS	Gate Information Display System. See also "MUFIDS."
GIW	Gate Input Workstation
GUI	Graphical User Interface – A specialized program employing graphical display maps of a facility and/or site which, also provides a manual user interface for all system functions and operations by utilizing control and annunciation icons from dedicated human machine interface terminals.

HMI	Human/Machine Interface – A Computer-operated, video control terminal complying with FCC Part 15 CFR Title 47, Subparts A and B, and shall utilize multiple dynamic GUI based displays for annunciation and control LCD flat panel computer monitor or display screen as defined by related specification sections.
HTML	Hypertext Markup Language
IAMS	Integrated Airport Management System
IATA	International Air Transport Association - The global trade association for the airline industry
IBC	International Building Code
ICT	Information Communications Technology
IDF	Intermediate Distribution Frame – The room/space that shall serve as the local termination point for all horizontal and backbone cabling. Also, shall be known as Equipment Room (ER), Horizontal Cross-Connect (HC) or Floor Distributor (FD).
IEEE	Institute of Electrical and Electronics Engineers
IO	I/O Input/Output
IP	Internet Protocol
IPTV	Internet Protocol Television
IR	Infrared
ISO	International Organization for Standardization
Lab	Computer, Science, and/or Education Laboratory.
LAN	Local Area Network
LCD	Liquid Crystal Display
LED	Light-Emitting Diode
LMR	Land Mobile Radio
LTE	Long Term Evolution (Commonly known as “4G”)
LV	Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power- limited circuits.
Mbps	Megabits per second.
MDF	Main Distribution Frame – The room/space that shall serve as the primary termination point for all backbone cabling to each IDF locations and horizontal connection point for local communication drops. May also serve as a local IDF location as well as the cross-connection and interconnection of all entrance cables from the DP for all PSTN and WAN connections. Also shall be known as Main Cross Connect (MC), Telecommunications Room (TR) and/or Campus Distributor (CD)
M-JPEG	Motion – Joint Photographic Experts Group
MPEG	Moving picture experts group.
MTBF	Mean Time Between Failures
MUFIDS	Multi-User Flight Information Display System
NEC	National Electric Code

NEMA	National Electrical Manufacturers Association
NEXT	Near End Crosstalk
NFPA	National Fire Protection Association
NMM	Network Management Module
NMS	Network Management System
NRTL	Nationally Recognized Testing Laboratory
NTSC	National Television System Committee.
NVR	Network Video Recorder
NVW	Network Video Workstation
OAR	Owner’s Authorized Representative
OSP	Outside Plant Cabling
OTDR	Optical Time Domain Reflectometer
PA	Public Address System
PCS	Personal Communications System
POS	Passive Optical Splitter
POTS	Plain Old Telephone Service
PSP	Physical Security Professional as registered by the American Society of Industrial Security-International (ASIS)
PSTN	Public Switched Telephone Network
RCDD	BICSI-accredited Registered Communications Distribution Designer
PSN	Public Safety Network
RFI	Radio-frequency interference / Request for Information
RGS	Rigid Galvanized Steel conduit: Galvanized steel tubing, with a tubing wall that is thick enough to allow it to be threaded.
RoF	Radio-over-Fiber
RoHS:	Restriction of Hazardous Substances
RSL	Received Signal Level
RSSI	Received Signal Strength Indication
RSRP	Reference Signal Receive Power
RS-232	An ANSI/TIA standard for asynchronous serial data communications protocol between terminal devices. This standard defines a 25-pin connector and certain signal characteristics for interfacing computer equipment.
RS-485	An ANSI/TIA multipoint communications protocol standard.
SCADA	Supervisory Control and Data Acquisition
SISO	Single-Input, Single-Output
SLA	Service Level Agreement
SMR	Specialized Mobile Radio
SMS	Security Management System / Short Message Service
SNIR	Signal-to-Noise Interference Ratio
SNMP	Simple Network Management Protocol
SOW	Statement of Work
STC	South Terminal Complex
TCP/IP	A standard protocol stack on which the Internet and data communications networks operate
TGB	Telecommunications Grounding Busbar – Located in each

IDF	Intermediate Distribution Frame – See also “TR”
TIA	Telecommunications Industry Association
TMGB	Telecommunications Main Grounding Busbar
TP	Transition Point – A location in the horizontal cabling where flat under carpet cable transitions to a horizontal cabling consolidation point (CP).
TR	Telecommunications Room -- See also “IDF”
TSA	Transportation Security Administration
TSB	Technical Service Bulletin
TVSS	Transient Voltage Surge Suppressor
UHD	Ultra High Definition
UPS	Uninterruptible Power Supply
UTP	Unshielded Twisted Pair
VDGS	Visual Docking Guidance System
VLAN	Virtual Local Area Network
VoIP	Voice Over IP telephone Network
VPN	Virtual Private Network– A technique made possible by switching technologies that permits the logical grouping of any number of network devices into one or more sub-networks.
VSS	Video Surveillance System
VSWR	Voltage Standing Wave Ratio
WAN	Wide Area Network
WAP	Wireless Access Point
WLAN	Wireless Local Area Network
WSP	Wireless Service Provider
10BASE2	10 Mbps data throughput over coaxial cable.
10BASE-T	10 Mbps data throughput over twisted pair cable.
10BAE-FL	10 Mbps data throughput over fiber.
100BASE-T	100 Mbps data throughput over twisted pair cable.
100BASE-TX	100 Mbps data throughput over Category 5 twisted pair or greater.
100BASE-FL	100 Mbps data throughput over fiber.
1K-BASE-T	1Gbps data throughput over Category 5 twisted pair or greater.
1K-BASE-LX/LH	1Gbps data throughput over 9-micron single mode fiber.
1K-BASE-ZX:	1Gbps data throughput over 8-micron single mode fiber.
10GBASE-T	10Gbps data throughput over Category 6A/6e twisted pair or greater.

Definitions:

1. Contract Documents: The documents consisting of the Form of Agreement between Authority and Contractor, Conditions of the Contract, (General, Supplementary, and other Conditions), Drawings, Specifications and all Addenda issued prior to the execution of the Contract.

E.

2. Contract Drawings: The drawings that form a part of the Contract Documents that provides the graphical representation of the project requirements intended design and/or performance criteria to be delivered by the Contractor.
3. Reference Drawings: A drawing and/or set of drawings produced by a proprietary supplier, manufacturer, subcontractor, or fabricator included in the Contract Documents for informational purposes, providing specific information related to the installation of related appurtenances, components, devices, hardware, products, and/or systems. Reference Drawings shall also include any Contract Drawings from prior bid packages that may have pertinent information or require coordination of trades related to this contract.
4. Shop Drawings: A drawing and/or set of drawings produced by the contractor, supplier, manufacturer, subcontractor, or fabricator as a detailed representation of the proper installation of the related, appurtenance, component, device, hardware, product, and/or system to be delivered in conformance to the requirements of the Contract Documents.
5. The Authority: Destin For Walton Beach Airport (VPS), Florida (Owner)
6. Furnish: Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
7. Install: Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
8. Provide: Furnish and install, complete and ready for the intended use.

1.2

A. SUMMARY

This Section contains the overall requirements associated with all Division 27 and related Division 28 Specification Sections, and includes the project design intent for all network communication cabling and equipment related to the installation of the following systems:

1. Structured Cabling System
2. VoIP Telephone System
3. Wireless Local Area Network (WLAN)
4. Multi-User Flight Information Display System (MUFIDS)
5. Internet Protocol Television Distribution System (IPTV)
6. Public Announcement System (PA)
7. Access Control System (ACS)
8. Video Surveillance System (VSS)

In addition, this section shall address all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications for all scopes of work related to network communication cabling for this project scope of work. Refer to related Division 26, 27 and 28 specification sections and all contract drawings for additional requirements.

B.

1. The Contractor shall manage and coordinate all technology, multimedia, control, garage and security system aspects of the project. This includes, but are not limited to, systems that are connected with Active Ethernet Network, or other types of communication and control equipment.
    a. The Contractor shall coordinate with the other Contractors to ensure all infrastructure and systems between buildings, including any connections to the existing Authority systems are completely coordinated and operational.
    b. The Contractor shall have overall responsibility for all design implementation, equipment and all technical support related to all technology scopes of work and shall ensure full coordination of all work as required to provide fully operational communications infrastructures and systems in accordance with all requirements of the Contract Documents and applicable Codes and Standards.
    c. The Contractor shall ensure the work including planning, installation, and commissioning of technology and multimedia systems are closely coordinated with the Authority.
    d. The Contractor shall be responsible for, at a minimum, the following tasks and activities:
        1) Project Management
        2) Schedule Management
        3) IT System Impact Analysis
        4) Staff Training/Development
        5) Performance Management
        6) Change Management
        7) Project Closeout
        8) Estimating
        9) Scheduling
        10) Weekly Status Meetings including look-ahead
        11) Cost Controls
        12) Status Reporting
        13) Contract Administration
        14) Document Review
        15) Contractor Change Order Review
        16) Trend & Variance Reporting
        17) Document Controls
        18) “As Built” Schedule Updates

2. All sub-contractors shall meet the minimum technical capabilities, certifications, and licensing requirements as defined by the “Quality Assurance” chapter as specified herein as well as all related specification sections.

C. It shall be the responsibility of the Contractor to furnish and install all necessary cabling, conduits/raceways, cable terminations, controls, systems, materials, devices, components, electrical power, equipment racks/cabinets and software as well as all appurtenances, programming, commissioning and testing necessary to deliver a complete and fully operational communications network infrastructures and systems as indicated by the contract documents.

D. The installation, performance, features, functions, software, licenses, and programming criteria as specified herein as well as all related drawings and Division 27 specification sections have been designed to offer the maximum system efficiency, ease of operation, occupant safety and the protection of equipment..

1. Any deviations from the specified criteria shall be documented, reviewed, and agreed to in writing by the Authority prior to submission of bids. Refer to Division 01, and all related Division 27 Specification Sections for any substitutions and/or project deviation requests.
    a. The required information shall include but not be limited to: reason for deviation, all differences in performance, operation, and function from the herein specified requirements, all benefits, and added features to the Authority as a result of the deviations and any additional incurred costs to the Authority for maintenance and long-term ownership.
    b. Failure to provide the Authority with the required information shall result in any shop drawing submissions being returned for non- conformance with the contract requirements.
2. The contractor and all sub-contractors for this work shall read and accept all of the General Conditions, Special Requirements, General Requirements, and all related specification sections and in the execution of all work shall be bound by all of the conditions and requirements therein.
    a. Prior to the submission of the Bid any discrepancies or inconsistencies noted within these specifications and/or the project drawings shall be brought to the immediate attention of the Authority.
    b. Where ambiguity exists between the project specifications and the contract drawings, the superior in system performance shall prevail, and shall be delivered by the Contractor at no additional expense to the project.

E. All device symbols are defined by the appropriate symbol schedules as indicated by the symbol and abbreviation drawing sheets for each discipline. The Contractor shall coordinate exact locations with all architectural, mechanical, electrical, reflected ceiling, furniture drawings and door hardware specifications as well as all affected trades prior to submittal of bids.

1. All symbols are shown on the contract drawings as close as possible to their intended location. Contractor shall coordinate the installation of all equipment, devices, controls, components, cabling conduits/raceways and integration of other systems with all affected trades and specified system sub-contractors. The contractor shall document all coordination requirements at the time of shop drawing submission.

2. Drawings for this work are diagrammatic and intended to convey the extent, general arrangement, and locations of the work. Because of the scale of the drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may or may not be shown on the contract drawings. Include all items where required by code and related specification sections for proper installation of all work.

Project specifications and drawings may not deal individually with every part, control, device, component, or appurtenance which may be required to produce the equipment performance for the specified system and/or as required for compliance with all specified systems integration.

F.
1. Include such items and components, as required, for complete operational systems as defined by the project documents, whether specifically indicated or not. The contractor shall be responsible for providing conduits/raceways, cable terminations, controls, systems, equipment, materials, devices, components, electrical power, equipment racks/cabinets, software, programming, commissioning, testing and all appurtenances as well as the integration of any ancillary systems or Authority provided equipment/components/systems.
2. Coordinate with other applicable trades in submittal of shop drawings and the installation of all systems. All shop drawings shall detail space conditions in order to accommodate other concerned trades, all equipment locations are subject to final review by the Authority.

G. All Division 27 scopes of work shall include the necessary labor, software, equipment, materials, devices, cabling, conduits and electrical power as well as the performance of all system programming, testing and commissioning as required to provide fully operational systems in accordance with all requirements of the project documents.
1. Coordinate the installation of all systems, equipment, components, materials, conduits, cabling, devices and all existing system modifications with the Authority prior to the submission of any shop drawings.
2. All Division 27 systems work shall include the labeling of all wire terminations and enclosure locations in accordance with the Division 27 Specifications. All wiring shall terminate on fixed terminal strips, punch blocks, or patch panels in accordance with all requirements of the project drawings and related specifications.
    a. No splices shall be permitted in underground maintenance holes and non-accessible junction boxes. All junction boxes containing any system splices shall be uniquely identified.
    b. All mounting heights and accessibility to all equipment requiring access by individuals with disabilities shall comply with ANSI A117.1 requirement.
    c. All equipment enclosures located outside or in all areas with high moisture or high humidity shall be NEMA 4X enclosures and rated for that application.

d. All devices, components, or equipment installed on the exterior of the facility shall be provided in accordance with all manufacturers' requirements to ensure the proper operation when exposed to the environmental conditions and/or average annual lowest temperature that can be anticipated for the geographic region of the facility.
e. All interior devices exposed to the general population shall be installed in secured equipment enclosures and installed in such a manner that resists tampering and/or removal without the use of specialized tools.

3. All work shall be neat in appearance, free of rough edges, scratches, blemishes, cracks and exposed gaps. All equipment shall be secured to the mounting surface, and fastened with hardware approved by the manufacturer and capable of supporting the rated load. All backbone/permanent cables within enclosures shall be neatly routed and tie wrapped at 6 inches on center. Patch cables shall be secured with hook-and-loop (Velcro) or wire management guides. All wire splices shall be terminated on terminal strips and/or soldered in place. Any splices utilizing wire nuts shall not be acceptable.

H. Use of Premises

1. The Contractors shall have limited use of premises for construction operations only as required to meet the scope of work as delineated by the Contract Documents.
2. The Contractor shall design, prepare, schedule, and coordinate all scopes of work without disruption of any existing system functions or the daily operation of the existing facility. All cabling and equipment shall be installed in such a manner that all new controls, equipment and/or devices shall be installed, programmed and tested prior to modification, switch over and/or disconnecting of any existing systems.
   a. Include all costs related to any phased construction methodologies having to do with the scope of work defined herein, including, but not limited to, all necessary temporary equipment, devices, components or systems as well as any labor costs associated with any installation, commissioning, testing demolition of any technology systems required to be performed after normal business hours of the facility.
   b. Prior to the disabling, modifications, switchover and/or demolition of any existing system components and/or cabling, all new system components, equipment, conduits, cabling, shall be in place, tested and fully operational.
   c. The contractor shall coordinate all installation activities so as not to disrupt the daily operations of the airport and shall include any costs related to a phased construction methodology where applicable. Installation activity and costs shall include but are not limited all necessary temporary equipment, devices, components or systems as well as any labor costs associated with any installation, commissioning, testing demolition of any systems required to be performed after normal business hours of the facility.
   d. Contractor shall coordinate all utility outages in writing with the Authority in advance.

3. Contractor shall plan, schedule and install all scopes of work in accordance with all requirements of the project construction schedule. Refer to related specification sections for additional information related to project scheduling and facility access.
   a. The contractor shall coordinate all installation and demolition activities so as not to disrupt the daily routine of the existing facility or negatively impact the integrity of the facility’s security and life safety measures.

Coordination

1. The Contractor shall coordinate with all other affected trades in the submittal of shop drawings and the installation of all equipment, devices, and systems. All shop drawings shall detail space conditions in order to accommodate other concerned trades, all equipment and device locations are subject to final review by the Authority.
   a. If installation of equipment, raceways, cable trays, and/or conduit is performed prior to coordination with all other trades, which interferes with work of other trades or the performance of the system, the contractor shall make necessary changes to correct the condition at no additional cost to the Authority.
   b. The structured cabling system shall provide for the support and connectivity of the Building Automation System (BAS). The Contractor shall coordinate with the work specified in Division 23 and Division 28 as required for the connectivity and proper integration of the BAS, all life safety and security system requirements in accordance with the Contract Documents.
   c. Provide all cabling, conduits, terminations, and programming to properly interface the BAS, fire alarm and access control systems with all related mechanical, elevator fire and security systems in accordance with all applicable life safety codes and/or in accordance with all requirements of the project drawings and related specifications.
   d. Coordinate with all affected systems providers to ensure the proper integration and performance requirements of all Division 28 systems as required by Code, Contract Documents, and the AHJ.
2. Where applicable, Contractor shall coordinate all service, rework, and relocation of existing utilities. Bid shall include all work required for any connections/interfacing with existing systems and/or utilities.
3. Refer to related specification sections for additional information.
   a. Contractor shall coordinate all work with vendors for rework, relocation, and addition of equipment and devices, including any modification to existing system infrastructure.
4. Coordinate all work involving tenant leased areas or equipment for rework, relocation, and addition of equipment and devices with the Authority.

REFERENCES

References to industry and trade association standards as well as all building codes are minimum installation requirements. The codes, standards and agencies listed below shall form a part of all related specification sections and all work shall comply with the latest adopted standards.

A. Authority Having Jurisdiction: The system shall comply with all applicable Codes, Ordinances and Standards as interpreted and enforced by the local authority having jurisdiction.

B. Local Adoption and Amendments: Follow the locally adopted version of all codes and standards. Where local jurisdictions or governments include amendments to codes including the National Electrical Codes, national health & safety codes, radio
C. frequency regulations, or other building codes, the Contractor shall follow the locally amended versions and amendments.

D. Publication Dates: Comply with published standards in effect as of date of the Contract Documents unless otherwise indicated.
1. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity.
2. Copies of applicable standards are not bound with the Contract Documents.
3. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

E. Where the contract drawings and specifications mandate a greater requirement or performance than those specified by any of the below referenced codes and standards, the Contract Documents shall then be the governing requirements for this project. The minimum codes and standards to be applied for this project shall be the following;
1. National Fire Protection Association (NFPA):
    a. NFPA-70: National Electrical Code (NEC)
    b. NFPA-72: National Fire Alarm and Signaling Code
    c. NFPA-75: Standard for the Protection of Information Technology Equipment
    d. NFPA 76: Standard for the Fire Protection of Telecommunications Facilities
    e. NFPA-101: Life Safety Code
    f. NFPA 1221: Standard for the Installation, Maintenance and Use of Emergency Services Communications Systems
    g. NFPA 780: Standard for the Installation of Lighting Protection Systems
2. American National Standards Institute (ANSI) / Telecommunications Industry Association (TIA):
    a. ANSI/TIA-455-61 FOTP-61: Measurement of Fiber or Cable Attenuation Using an OTDR
    b. ANSI/TIA-455-78 FOTP-78 / IEC 60793 Optical Fibers Part 1-40: Measurement Methods and Test Procedures, Attenuation
    c. ANSI/TIA-526-7: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Method A)

d. ANSI/TIA-526-14-C: Measurement of Optical Power Loss of Installed Multimode Fiber Cable Plant
e. ANSI/TIA-568-D.0 : Generic Telecommunications Cabling for Customer Premises
f. ANSI/TIA-568-D.1: Commercial Building Telecommunication Standard
g. ANSI/TIA-568-D.2: Balanced Twisted-Pair Telecommunication Cabling and Components Standard
h. ANSI/TIA-568-D.3: Optical Fiber Cabling Components
i. ANSI/TIA-569-D: Telecommunications Pathways and Spaces
j. ANSI/TIA-606-B: Administration Standard for Telecommunications Infrastructure
k. ANSI/TIA-607-C: Commercial Building Grounding and Bonding Requirements for Telecommunications
l. ANSI/TIA-758-B: Customer Owned Outside-Plant Telecommunications Infrastructure Standard
m. ANSI/TIA IS-811: Telephone Terminal Equipment, Performance and Interoperability for VoIP Feature Telephones.
n. ANSI/TIA-854: Full Duplex Ethernet Specification for 1000Mbps Operating Over Category 6 Balanced Twisted Pair Cabling
o. ANSI/TIA-862-A: Building Automation Systems Cabling
p. ANSI/TIA-1005-A: Telecommunications Infrastructure Standard for Industrial Premises
q. ANSI/TIA-1152: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling
r. ANSI/TIA-1183: Measurement Methods and Test Fixtures for Balun-Less Measurements of Balanced Components and Systems

3. Motorola
   a. R56 Standards and Guidelines for Communication Sites
4. Americans With Disabilities Act (ADA) 2014 ADAAG.
5. Underwriters Laboratories, Inc.:
   a. UL 486A: Wire connectors and soldering lugs for use with copper conductors
   b. UL 1449: Transient Voltage Surge Suppressors
   c. UL 1581: Standard for Electrical Wires, Cables, and Flexible Cords
   d. UL 1666: Standard for Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts
   e. UL 478: Standard for Electronic Data-Processing Units and Systems
   f. UL 83: Thermoplastic-Insulated Wires and Cables
   g. UL 910: Test Method for Fire and Smoke Characteristics of Cables Used in Air-Handling Spaces." Provide products which are UL-listed and labeled.
   h. UL 969: Standard for Marketing and Labeling.
   i. UL Certified: UL's LAN Cable Certification Program
6. International Code Council
   a. New Jersey Building Code (2015) Accessibility
   b. New Jersey Building Code (2015) Building
   c. New Jersey Building Code (2015) Energy Conservation

d. New Jersey Building Code (2015) Mechanical
e. New Jersey Building Code (2015) Plumbing

7. New Jersey Fire Prevention Code (2015)
8. Institute of Electrical and Electronic Engineers (IEEE)
   a. IEEE 802.1, Bridging and Management
   b. IEEE 802.3, Standard for Ethernet (2012 with published amendments)
   c. IEEE 802.11 Wireless LANs
9. NEMA/ICEA Compliance:
   a. WC-5 - "Thermoplastic-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy,"
   b. WC30 - "Color Coding of Wires and Cables," pertaining to control and signal transmission media.
10. Internet Networking Standards: Network hardware and software shall be able to communicate with the Internet and provide for the creation of IP based networks for the Agency. All supplied hardware shall comply with the following minimum standards and RFC’s as appropriate.
    a. RFC 950 - Internet Standard Sub-Netting Procedure
    b. RFC 1140 - Official Protocol Standards
    c. RFC 1156 - MIB Base for IP Networks
    d. RFC-1213 - MIB-II
    e. RFC-1757 - Remote Monitoring (RMON)
    f. RFC 1157 - Simple Network Management Protocol
    g. RFC 1720 - TCP/IP, OSI Compliant
    h. RFC 1918 - Address Allocation for Private Subnets
    i. RFC 1583 - OSPF, Version II
    j. RFC 1723 - RIP -II
11. ASTM Compliance: Comply with applicable requirements of D-2219 and D-2220. ASTM Compliance: Comply with applicable requirements of D-2219 and D-2220.
12. Building Industry Consulting Service International (BICSI)
    a. ANSI/BICSI-002, Data Center Design Standard and Recommended Practices
    b. Electronic Safety and Security Design Reference Manual (ESSDRM)
    c. Information Technology Systems Installation Manual (ITSIMM)
    d. Outside Plant Design Reference Manual (OSPDRM)
    e. Telecommunications Distribution Methods Manual (TDMM)
13. Safety Code for Elevators and Escalators – American Society of Mechanical Engineers (ASME 17.1).

F.

14. Federal Communications Commission:
    a. FCC Regulations Part 15 Title 47.
    b. FCC: Federal Communication Commission Part 68 as modified by Wiring Docket 88-57.

The following line items shall be defined as follows:

1. Headend and Software: Includes any servers, management/administrative software, software licenses, and components which serve the purpose of performing system-wide coordination, monitoring, data processing, control and other global functions. Refer to related specification sections for additional information.
2. Interfaces: Includes all hardware, software, wiring, cabling, programming, interface devices and appurtenances as required for communication between systems, or between a given system and an operator to provide the specified functionality. Refer to related specification sections for additional information.
3. Network Switch: Includes layer 2 (access / distribution) or layer 3 (core / router) network switches to connect a system to the Local Area Network (LAN). Refer to related specification sections for additional information.
4. Backbone Cable: The segment of the premises distribution system that provides connection between telecommunications spaces. Refer to specification section 27 10 00 for additional information.
5. Horizontal Cable: The segment of the premises distribution system that provides connectivity from communications rooms to field devices. Refer to specification section 27 10 00 for additional information.
6. Field Devices: Components of a system which are served by the system headend and are the network endpoint or “edge” device. Refer to individual specification sections for additional information.

1.4 SYSTEMS DESCRIPTIONS

A. At the minimum, the scopes of work covered by the Division 27 Specifications and the contract drawings shall include but are not limited to the systems described by the specification sections listed in 1.1.

B. This Section includes the requirements for all 27 Communications and 28 Electronic Safety and Security Systems. Requirements of this section shall apply to work described in Sections referenced in 1.1.

C. Additional System specific requirements may be included in the Sections referenced in 1.1. The Contractor shall meet the requirements in this Section in additional to those specific requirements for each System. Where common work results within this Section conflict with Sections listed in 1.1, the more stringent shall apply.

1.5 SUBMITTALS

A. In addition to all submittal requirements as stipulated by Division 01 and any related specifications sections, the Contractor shall provide all submittals in accordance with the following:
1. The Authority approvals shall be obtained for all equipment and material before delivery to the job site. Delivery, storage, or installation of equipment or material which has not had prior approval will not be permitted at the job site.

2. All submittals shall include adequate descriptive literature, catalog cuts, shop drawings, and other data necessary for the Authority to ascertain that the proposed equipment and materials comply with specification requirements. Catalog cuts submitted for approval shall be legible and clearly identify equipment being submitted.
3. Prior to any submission the contractor shall be responsible for performing the following quality control items to ensure compliance with all project requirements:
   a. Review all Shop Drawings and Product Data
   b. Review all field measurement criteria.
   c. Review all field construction criteria and methodologies.
   d. Review all catalog numbers and similar data.
   e. Review all coordination requirements of affected trades.
   f. Review conformance to all appropriate specification sections.
4. The Contractor shall have a registered RCDD professional review and seal shop drawings related to network designs, installations, testing, certifications, and structured cabling layouts for communications systems confirming that the proposed network infrastructure is in conformance with all stipulated standards and requirements as herein specified. Failure to provide RCDD sealed shop drawings shall result in all shop drawings being returned for resubmission without any reviews taking place.
5. The Authority’s review of the shop drawings and/or samples does not relieve the Contractor from compliance with the requirements of the Contract documents. Unless the Contractor has informed the Authority in writing of such deviation at the time of submission, has noted the deviation on the shop drawings, has given written approval of the specific deviation to the project document, all project requirements shall stand. The Authority’s review also does not relieve the Contractor from responsibility for any errors of omission in the submission of shop drawings and/or samples.
6. Submit all system testing, commissioning and startup procedures to be employed. Include all estimated times for performance of all tests, all test equipment and manpower necessary for testing.
7. Submit all sub-contractor qualifications and certifications in accordance with the requirements as specified elsewhere in this specification section.
8. Submit project schedule including, but not limited to, outlining the time frames for all equipment with long lead times for equipment deliveries; include all system commissioning, testing, and training time expectations. Project schedule shall be submitted as CPM schedule and shall utilize a software based project management program.

B.

In addition to items to be furnished and installed under this Contract, this project consists of items to be furnished and/or installed by the Authority and Authority Vendors. In order to provide for comprehensive review of all system designs by the Authority, the contractor shall obtain all items and related information required as part of standard submittals from the Authority and or Authority Vendor(s) for Vendor furnished equipment and submit them as part of the Contractor’s submittal packages for each system.

The Contractor shall schedule submittals to maintain the project schedule. For coordination requirements refer to Division 01 Specification Section, which outline basic submittal requirements and coordination. All Division 01 and related Specification Sections requirements shall be used in conjunction with all requirements as herein specified.

C.
1. Submittals shall be provided as a complete submission; no partial submissions will be accepted. Failure to provide a complete submission shall result in all submittals being returned for resubmission.
    a. In addition to all paper submission requirements as stipulated by Division 01 the Contractor shall also submit one complete set of electronic submittals in a PDF format.
2. No substituted equipment shall be reviewed without prior approval in accordance with the requirements of “substitutions” under Division 1 Specification Section.
3. Mark the submittals, "SUBMITTED UNDER SECTION__."
    a. Submittals shall be marked to show specification reference including the section and paragraph numbers.

D. All shop drawings shall be prepared using latest version of AutoCAD or REVIT, drawn accurately, and in accordance with the Authority’s Standards. The Contractor shall not reproduce the Contract Documents or copy standard information as the basis of the technical data, hand drawn mark-ups of the original project drawings shall not be acceptable. Failure to provide a complete set of “contractor prepared” installation drawings at the time of submittal shall result in all submittals being returned for resubmission.

1. Submission Packaging: The Contractor shall organize the submissions according to the following packaging requirements.
    a. Electronic Copy Submission: One complete set of electronic equipment data sheets and drawings submitted in PDF format and collated in two distinct files:
        1) Equipment Data Sheets, equipment schedules, alarm matrixes cable termination spread sheets, and all related pertinent information.
        2) Drawings including all site plans, floor plans, risers, point to point wiring, grounding, installation details and mounting elevations.

E.
    b. Hard Copy Submission: Submit hardcopies of all shop drawings and product datasheets in accordance with the requirements the of Division 01 Specifications

Software

1. The Contractor shall provide software submittals including manufacturer’s/developer’s documentation for each type of software used in the project. Documentation shall include, at a minimum:
    a. Complete description of software features, proposed options and functionality.
    b. Software version and revision identification.

c. Software manufacturer's contact information for technical support, including address, telephone numbers, fax numbers and e-mail/web URLs
d. Well-commented source code and an executable version for all custom and special purpose software. Source code shall be delivered in both hard copy and machinereadable formats on a media acceptable to the Authority. All compilers, case tools, utilities, etc. that are needed to create the executable code shall be included.

F. Delays
1. Contractor is responsible for any delays in job progress accruing directly or indirectly from late submissions or resubmissions of shop drawings, or product data.

G. Re-submittals
1. Submitted items, found unsuitable, rejected or returned for revision by the Authority, shall be reworked by the Contractor and resubmitted.
2. Review of Contractor's submittals by the Owner's Representative will be limited to examination of an initial submittal and one (1) resubmittal. The Authority reserves the right to obtain reimbursement from the Contractor for amounts paid to the Owner's Authorized Representative for evaluation of any additional resubmittals due to incomplete information or non-compliance to the project documents on the part of the Contractor. An incomplete submittal shall count as a submittal (either initial or a resubmitted as the case may be).

H. Shop Drawings
1. All shop drawings shall include sufficient information, clearly presented, to determine full compliance with all project drawings and specifications. At the minimum include the following information as applicable for review. Failure to provide all information listed below shall result in all shop drawing submittals being returned for resubmission:
a. All Building Floor and Site Plans.
b. All equipment, devices and components with manufacturer's name(s), model numbers,
c. All equipment, device and component electrical ratings and power requirements
d. All equipment, device, and component performance ratings.
e. All equipment /device battery calculations,
f. All equipment /device cable voltage drop calculations,
g. All dB losses for all fiber optic devices and cabling,
h. All dB losses for all coaxial cabling taps and devices
i. All Speaker taps, voltages and zoning
j. All equipment rack/cabinet layouts and rack/cabinet sizes.
k. All device-mounting elevations.
l. All device wiring details.
m. All grounding and bonding connections.
n. Complete point-to-point-wiring diagrams for all systems. Include all equipment and wiring termination schedules and/or matrices.

o. Equipment, devices, cabling, and work related to Authority and Authority-Vendor furnished and/or installed work.

2. Provide a complete set of “contractor prepared” installation drawings. Drawings at the minimum shall consist of all floor plans indicating all passive and active electronic component locations, field devices, device identifications, distribution racks, patch panels, control panels, auxiliary control panels, power supplies, conduits, cable trays, and cabling distribution, as well as all 120-volt electrical circuit locations and designations.
   a. Drawings shall be made at 1/8” = 1’-0” scale. Drawings shall include at the minimum the following:
      1) Detailed equipment layouts for all communications rooms. Coordinate all room layouts with affected trades.
      2) Floor plan drawings showing locations of all equipment, devices, equipment cabinets and/or rack locations. Identify type and sizes of all equipment cabinets and/or racks.
      3) All cable tray layouts, and conduit routing of all conduits 2 inches in diameter or greater.
      4) All equipment rack layouts showing locations of all rack mounted equipment items.
      5) System riser diagrams and single line drawings, showing detailed connections for all parts of the system, including wire numbers, terminal block numbers and layouts, and other designations and codings (point-to-point wiring diagrams). System performance measurements shall be documented as specified.
      6) Equipment wattage for each location and estimated BTU production.
      7) Detailed equipment layouts for all equipment consoles. Indicate all equipment locations, power connections, and installation details.
      8) All equipment mounting hardware/brackets and installation details, identify type size, load capacities of all mounting hardware/brackets; include all mounting and installation details, all space requirements, any special architectural modifications required.
      9) Outline drawings of all equipment cabinets/racks showing the relative position of all major components, all-wiring and grounding terminations. Include all panel, cabinet and/or rack dimensions.
      10) Point-to-point wiring diagrams for all cabling. Include all cable drop identification at edge device and at termination equipment. Include complete wiring termination schedules.
      11) All grounding and bonding termination points
      12) All electrical circuit numbers and distribution panel locations.
      13) Equipment, devices, cabling, and work related to Authority and Authority-Vendor furnished and/or installed work.

3. Provide a complete termination schedule of all communications device drop/outlet locations. Indicate on the installation drawings all device drops/outlet locations, termination room locations, unique identifications, cable types, cable distances and all pertinent data to properly evaluate the performance and capabilities of each cable run.
4. All drawings shall be prepared using an AutoCAD- or REVIT-based program; hand drawn mark-ups of the original Contract Drawings shall not be acceptable. Failure to provide a complete set of "contractor-prepared" shop drawings at the time of submittal shall result in all submittals being returned for resubmission.
5. Provide a sleeve layout for all penetrations through the Parking Garage post tensioned concrete structure. Coordinate with Structural, Mechanical, Plumbing, Electrical, and Fire Protection Contractors. Submit sleeve layout no later than eight weeks prior to forming the post tensioned concrete.
6. All shop drawings shall include related trades for coordination. Related trades include, but are not limited to architectural, structural, mechanical, electrical, plumbing, fire protection, interiors, FFE, signage, wayfinding, and similar elements.

Equipment Submittals:

I. 1. Sufficient information, clearly presented, shall be included to determine compliance with drawings and specifications.
   a. Include all equipment data sheets pertinent to equipment provided. All data sheets shall be highlighted and annotated indicating specific equipment and options supplied. Failure to provide the proper annotation of <u>all</u> equipment shall result in submittals being returned for resubmission.
2. Submit complete technical data necessary to evaluate the material and equipment. Include a complete technical specification for the submitted equipment, noting differences and adherence to this Section. Failure to provide the required data will result in all submittals being returned for resubmission.
3. Submit performance data, equipment ratings, cable requirements, control sequences, GUI based control panels, programming matrices, logic diagrams and all other descriptive data necessary to describe the installation and operations of the system being provided. Failure to provide the required data will result in all submittals being returned for resubmission.
4. Parts list, which shall include those replacement parts recommended by the equipment manufacturer, quantity of parts, current price, and availability of each

J. part.
5. Equipment, devices, cabling, and work related to Authority and Authority-Vendor furnished and/or installed work.

Maintenance and Operation Manuals: Submit in accordance with all requirements of Division 01 Specification Section and as herein specified.

1. Maintenance and Operation Manuals: Submit as required for systems and equipment specified in the technical sections. Furnish four copies, bound in hardback binders, (manufacturer's standard binders) or an approved equivalent. Furnish one complete manual as specified in the technical section but in no case later than prior to performance of systems or equipment test and furnish the remaining manuals prior to contract completion.

2. Inscribe the following identification on the cover: the words "Maintenance and Operations Manual”, include the name and location of the system, equipment, building, name of Contractor, and contract number. Include in the manual the names, addresses, and telephone numbers of each subcontractor installing the system or equipment and the local representatives for the system or equipment.
3. Provide a "Table of Contents" and assemble the manual to conform to the table of contents, with tab sheets placed before instructions covering the subject. The instructions shall be legible and easily read, with large sheets of drawings folded in.
4. Furnish (1) copy of all Maintenance and Operation Manuals in PDF format on DVD media or flash drive.
5. The manuals shall include:
   a. Internal and interconnecting wiring and control diagrams with data to explain detailed operation and control of the equipment.
   b. A control sequence describing start-up, operation, and shutdown.
   c. Description of the function of each principal item of equipment.
   d. Installation and maintenance instructions.
   e. Safety precautions.
   f. Diagrams and illustrations.
   g. Testing methods.
   h. Performance data.
   i. Pictorial "exploded" parts list with part numbers. Emphasis shall be placed on the use of special tools and instruments. The list shall indicate sources of supply, recommended spare parts, and name of servicing organization.
   j. Appendix; list qualified permanent servicing organizations for support of the equipment, including addresses and certified qualifications.
6. Approvals will be based on complete submission of manuals together with shop drawings.

1.6

A. QUALITY ASSURANCE

Quality Assurance services as described below shall be provided by the Contractor. The Authority will only provide Quality Assurance inspection.

1. Quality Assurance services described in this section are a portion of the quality assurance activities which may be necessary to achieve full compliance with the Contract Documents and are not intended to limit the activities of the contractor.
2. These provisions do not relieve the contractor of providing quality control services or other inspections to the Authority or authorities having jurisdiction over this project.
3. A quality assurance supervisor whose responsibility it is to ensure compliance with the contract documents shall be included in the quality assurance program. This person shall be assisted by other quality assistance staff as warranted by the specific construction activities and workload.
4. The Contractor’s Quality Assurance Supervisor shall submit signed Quality Assurance Summary reports to the Authority. These reports shall address both project progress and project quality control activity.

Quality Assurance Program

1. The Contractor shall establish a Quality Assurance Program to perform inspection and tests of all items of work. This Program shall insure conformance to applicable specifications and drawings with respect to the materials, codes, workmanship, construction, finish, functional performance, and identification.

B. This Program shall be established for all system rollout and phasing plan work performed under this Contract. The Contractor's Quality Assurance Program shall specifically include surveillance and tests required in the technical provisions of the specifications.

2. The Contractor shall describe its Quality Assurance Program in detail. Descriptions shall be given for at least the following:
   a. Organization
   b. Inspection
   c. Testing
   d. Documentation
   e. Administration
   f. Quality Awareness and Training
   g. Forms
   h. Schedules
   i. Submittals
3. Before the Contractor's Quality Assurance Program description is submitted, the Contractor shall meet with the Authority and discuss the Contractor's Quality Control Plan. The meeting shall develop a mutual understanding of the details of the plan, including the forms to be used for recording the quality assurance operations, inspections, administration of the plan for both on-site and off-site work, and the interrelationship of the Contractor and the Authority inspection. The Contractor shall prepare meeting minutes which shall be incorporated in

C. the Contractor's Quality Assurance plan.

Contractor qualifications: Each contractor or sub-contractor shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, testing and programming of all equipment being provided. These qualifications shall be submitted and approved by the Authority for all persons performing work on the system.

1. The contractor shall be capable of providing documented successful work experience of at least three (3) facilities of equivalent size and technical requirements utilizing the proposed equipment being provided. The contractor shall have on staff a minimum of one full time individual that holds a current RCDD registration.
   a. Experience shall be defined as the completion of the specific system being provided, with that system being successfully operated for its intended purpose for at least three (3) years.
   b. In addition to the above "Experience" shall also be defined as the completion of modifications and renovations to any associated system being provided in any existing occupied facility of this size and magnitude.
   c. For each facility submit the following:
      1) Name and location of facility

2) Date of Occupancy or beneficial use by Owner
3) Owner’s representative to contact and telephone number
4) Construction Manager or General Contractor
5) Project Architect or Engineer
6) Provide information on the installed locations with operational equipment
7) Registration number and expiration date of RCDD professional
8) Registration number and expiration date of Level II installer.

2. All information technology system work shall be certified in writing to the Authority by the contractor’s on-staff RCDD professional asserting that all communications network system shop drawings and structured cabling is in conformance with all appropriate NEC requirements, EIA/TIA standards, and all related specification sections.

D. Cable Installer Qualifications: The cable installation contractor shall demonstrate not less than three (3) years’ experience in the installation of structured cabling systems and shall have on staff a minimum of one full time member that holds a current BICSI level II installer credential.

1. NOTE: The installation of all communications cabling shall be under the direct supervision of a current BICSI level II installer who shall be knowledgeable in the following technical applications:
   a. The Routing and installation of shielded, unshielded, twisted pair, coaxial and fiber optic cables.
   b. Bonding and grounding of cable tray and equipment racks.
   c. Fusion splicing of fiber optic cabling.
   d. Testing copper conductors for electrical continuity.
   e. Testing and Certifying of UTP structured cabling for attenuation and worst case near end cross talk.
   f. Testing and Certifying of ALL fiber optic cabling employing an Optical Time Domain Reflectometer (OTDR) in accordance with TIA/EIA protocols.
   g. Testing and Certifying of coaxial cable networks for RF leakage
   h. Termination, connection, and testing of shielded and un- shielded twisted pair cable, coaxial cabling, and fiber optic cabling on all specified connectors, electrical protection blocks, termination blocks, and patch panels.

E.
   i. Generally accepted industry standards, as well as manufacturers written installation instructions, will be used for in-process quality control and final acceptance of the work installation.

Service Qualifications: All sub-contractors shall be a permanent service organization maintained and/or trained by the product manufacturer on the products being provided for this project.

1. The sub-contractors shall be (where required) properly licensed by the governing municipality to provide the services and work for the specific system being installed. In addition, all sub-contractors shall be capable of providing full service for the entire warranty period within an 8-hour response time upon notification of a service emergency.

Manufacturer’s Qualifications: The manufacturer shall regularly and presently produce, as one of the manufacturer's principal products, the equipment and materials specified for this project, and shall have manufactured the items for at least three years.

F.

1. Product Qualification: The Manufacturer's product shall have been in satisfactory operation, on three installations of similar size and type as this project, for approximately three years. The Authority reserves the right to require the Contractor to submit a list of installations where the products have been in operation for the specified period of time prior to approval of shop drawings.
    a. The manufacturers shall submit the appropriate documentation certifying that the installing sub-contractor is a qualified service provider of all manufacturers’ products being provided for this project.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Non-Compliance

G.

1. The Authority may notify the Contractor of any non-compliance with the foregoing requirements. The Contractor shall, after receipt of such notice, immediately take corrective action. Any notice, when delivered to the Contractor or its representative at the site of the work, shall be considered sufficient notice.
2. If the Contractor fails or refuses to comply promptly, the Authority may issue an order stopping all or part of the work until satisfactory corrective action has been taken. It is understood and agreed to the following:
    a. Time lost due to any such stop order is the responsibility of the Contractor.
    b. Costs to repair, replace or otherwise remedy the defective work are the responsibility of the Contractor.
    c. Costs incurred by the Authority to correct defective work shall be deducted from the total amount due the Contractor. An amount may be withheld from the payment due the Contractor to recoup expenses incurred by the Authority due to non-compliance.
3. In cases where implementation of the Quality Assurance Program does not comply with either the Contractor’s Quality Assurance Plan or the Contract Provisions, or where the Contractor fails to properly operate and maintain an effective Quality Assurance Program, the Authority may:
    a. Order the Contractor to replace ineffective or unqualified quality control personnel.
    b. Assign the Authority or contracted outside professional staff to carry out the functions and operations of the Contractor’s approved Quality Assurance Plan. Costs incurred by the Authority to operate a Quality Assurance Program or to otherwise remedy the Contractor’s non-compliance with quality-related provisions of the contract shall be deducted from the total amount due the Contractor.

1.7

DELIVERY, STORAGE AND HANDLING

In addition to the requirements below, refer to specific related specification sections for additional requirements.

A.
1. Contractor shall store all equipment and materials in a climate-controlled environment. Storage environment shall, at a minimum, comply with the following:
   a. Temperature not to exceed: -20˚ C to +70˚ C (-4˚ F to + 158˚ F)
   b. Relative humidity of 5% to 95%, non-condensing.
2. Where manufacturer’s storage requirements are more restrictive than those listed above, store such equipment and/or materials in compliance with all manufacturer’s requirements.
3. Do not store equipment or materials in areas where fire or explosion hazards exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers. Do not store equipment or materials in areas subject to corrosive agents, liquids or gasses.
4. Do not store equipment or materials in areas that contain potential water hazards (including, but not limited to, restrooms, kitchens, or mechanical spaces), or adjacent to liquid-carrying pipes.

B. Contactor shall store materials only in areas designated by the Authority.

C. The Contractor shall coordinate product delivery and movement to installation locations with the Authority within both on- and off-hour periods as required to minimize impact to the Airport operations.

D. The Contractor shall be responsible for product shipment, delivery and storage/staging/testing location onsite. The Contractor shall coordinate with the Authority regarding site readiness and refer to architectural drawings regarding placement.

E. The Contractor shall provide a security plan for approval by the Authority describing the methods, areas, and access for equipment. The plan shall include how equipment will be securely stored and accessed by the Contractor within communications rooms, MDFs, IDFs, control rooms, and similar spaces throughout construction.

1.8 RECORD DOCUMENTS

A. In addition to all general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections include the following project requirements;
1. Provide complete set of finalized copies of record documents prior to final acceptance of the project by the Authority in accordance with all requirements of Division 01 specification sections. At the minimum the record documents shall contain all information, data, and drawings as described in the “Submittals” paragraph of this specification section as well as all shop drawing requirements of related specification sections.

a. As-built documents shall be submitted in both paper and electronic media formats in the quantities as specified by Division 01 specification requirements.
   1) All electronic record drawings shall be prepared and submitted utilizing an AutoCAD- or REVIT-based program as manufactured by Autodesk. Where electronic documents are prepared using other than an AutoCAD or REVIT program manufactured by Autodesk, the contractor shall provide to The Authority the necessary software to electronically view the submitted documents.
   2) All electronic data sheets, control sequences, programming matrices and other descriptive data shall be provided in PDF formatted documents.
   3) Copies of all current system programming and associated software shall be provided on downloadable media formatted for the use in restoration all system operations and functionality in the event of a catastrophic failure.

1.9 OPERATION AND MAINTENANCE

A. Refer to specific related specification sections for requirements in addition to the following.

B. Provide complete set of operating and maintenance manuals in accordance with all requirements of Division 1 and related Division 27 specification sections. The manuals shall include all operational programming and maintenance information for the system being provided. Edit all manuals specific to the installation of the provided system; manufacturer’s documentation alone shall not be acceptable. Include all, manufacturer’s technical data sheets, programming matrixes and graphic screen representations.

C. Include all As-built drawing documentation of all systems. Drawings shall reflect all requirements of the “Submittals” and “Record Documents” paragraphs of this specification section.

D. Operations Manuals
   1. Provide a clear and concise sequence of operation that gives, in detail, the information required to properly operate all equipment and systems. Include detailed programming matrixes, indicating at the minimum all manual and automatic functions for all system, components and devices comprising the system being provided.

E. Maintenance Manuals
   1. Include maintenance instructions and other descriptive material as received from the manufacturer to enable designated personnel to maintain and test equipment.
   2. Include descriptions, specifications, layout drawings (showing component types and positions), and back-panel and assembly wiring diagrams.

3. Provide instructions for preventative maintenance procedures that include examinations, tests, adjustments and periodic cleaning.
4. Provide guidelines for isolating the causes of hardware malfunctions and for localizing faults.

SOFTWARE AGREEMENT

1.10 The Authority shall retain the ownership and access rights of the source code for all custom system programs and software specifically developed and/or modified as part of this project. Additionally, the Authority shall retain ownership of all software licenses for “off the shelf” software furnished and installed as part of this project.

A.
1. The contractor shall provide to the Authority complete copies of all current software programming and software licenses related to the operation of each system prior to final acceptance of the related Contract scopes of work.
   a. All programming shall include but not be limited to all device identifications, device descriptions, Programming Logic Matrices, all program access level passwords as well as all function and sub-function routines.
2. Programming and software copies shall be provided to the Authority on DVD digital formatted media or flash drive. In addition, the contractor shall provide a complete hard copy printout of all system programming and shall be included as part of closeout documentation for review by the Authority.

B. Software and firmware upgrade provisions shall be included as part of this specification requirement and shall include the automatic upgrades as required to maintain all software and firmware to the manufacturers most current revision on all system components installed and or modified as part of this project for duration of the warranty period. This upgrade policy shall require the contractor to install, test, and certify all software and firmware upgrades that become available from manufacturer for a period of one year from date of final acceptance to the expiration of the warranty.
1. Upgrading of software shall include all revised/new software, labor, testing certification as well as all licenses, software and all programming copies as described in the Record Documents paragraph of this section associated with the installation of all revised software.
2. These updates shall be accomplished in a timely manner, fully coordinated with the system operators, and incorporated into the operations/maintenance and software documentation manuals.
   a. One (1) scheduled final update shall be provided near the end of the warranty period, at which time the Contractor shall install and validate the latest released version of the Manufacturer’s software and firmware for all systems installed and/or modified for this project.
   b. All software changes shall be recorded in a log maintained in the unit control. An electronic copy of the most current software update shall be maintained within the log.

1) At a minimum, the contractor shall provide a description of the modification, when the modification occurred, and name and contact information of the individual performing the modification. The log shall be maintained in a white 3 ring binder and the cover marked “Software Change Log.”

3. Provide not less than thirty days' notice to the Authority to allow scheduling and access to system and to allow the Authority to upgrade computer equipment if necessary.

SPARE MATERIAL

1.11 In addition to all general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections refer to related Specification Sections “Extra Material” for specific requirements.

A. All spare materials shall be provided at the time of final acceptance of the project and a signed packing list shall be obtained at the time of delivery. At no time is the contractor to use the spare materials provided for this project to replace malfunctioning or damaged equipment and or components.

1.12 ENVIRONMENTAL CONDITIONS

A. Systems, components, devices materials, and equipment shall be capable of withstanding the environmental conditions of the space without mechanical or electrical damage or degradation of operating capabilities or performance.

1. Interior, Controlled Environment: System components, installed in temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 2 to 50 °C (36 to 122 °F) dry bulb and 20 to 90 percent relative humidity, non-condensing and shall utilize NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non-temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of -18 to 50 °C (0 to 122 °F) dry bulb and 20 to 90 percent relative humidity, non-condensing and shall be installed in NEMA 250, Type 4X enclosures.
3. Exterior Environment: System components, conduits and back-boxes installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of -34 to 50 °C (-30 to 122 °F) dry bulb and 20 to 90 percent relative humidity, condensing. Rated for continuous operation where exposed to rain as specified in NEMA 250, winds up to 137 km/h (85 mph) and snow cover up to 610 mm (24 in) thick shall utilize NEMA 250, Type 4X enclosures.
4. Hazardous Environment: System components, conduits and back- boxes located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

5. Corrosive Environment: System components, conduits, and back- boxes subjected to corrosive fumes, vapors, and wind-driven salt spray in coastal zones, shall utilize NEMA 250, Type 4X enclosures.
6. Submersible Environment: System components, conduits and back-boxes subjected to prolonged submersion in water, shall utilize NEMA 250, Type 6P enclosures.
7. Areas where equipment and devices may be subject to damage by the general population shall be installed in vandal resistant enclosures.
8. Console: All console equipment shall, unless noted otherwise, be rated for continuous operation under ambient environmental conditions of 15.6 to 29.4 °C (60 to 85 °F) and a relative humidity of 20 to 80 percent.

PART 2 - PRODUCTS

MANUFACTURED PRODUCTS

2.1 A. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, that meet and/or exceed the specified performance and features of the equipment and/or systems and for which replacement parts shall be readily available to the contractor and/or using agency. The equipment specified is based on the acceptable manufacturers listed. Where "or equal" is stated, equipment shall be equivalent in every way to that of the equipment specified, and subject to approval.

1. When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.
2. Acceptable manufacturers for each system shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.
    a. Manufacturers listed as acceptable shall not negate the contractors' responsibility for providing all equipment, devices, components, and/or systems, in accordance with all functions and performance requirements of the Contract Documents.
    b. Where manufacturer and/or manufacturer model numbers reference specific system components in the related specification sections, it is to establish the performance requirements and quality of the systems and components only.
        1) It is in no way an inference that the referenced model numbers are the manufacturer's current product and are the only acceptable components for this project unless specifically referenced as "no substitutions."
    c. Equivalent UL- listed equipment may be substituted for the approved manufacturers unless stipulated by other Specification Sections as "No Substitutions." All substitutions shall be submitted for approval by the Authority in accordance with all requirements of Division 01 Specification Sections and Chapter 1.4 "Submittals" chapter of this Specification Section.

1) Where systems and/or components are referenced as “no substitutions” the specific system and/or components shall be provided.
2) All substitutions shall comply with all requirements as specified above and all system performance standards shall be maintained.
3) The contractor shall stipulate the following information impacted by such a substitution.
   a) Any and all extensions in time impacted by the substitution.
   b) Any changes to the architectural or structural elements to the project
   c) Differences in operation and/or performance from intended system criteria.
4) Failure to provide the required substitution information shall result in “without consideration” the immediate rejection of the substituted equipment and/or systems.

3. Due to the rapid advancement and antiquation of hardware technology, the supplied hardware shall be the “contemporary technical and operational equivalent” of the specified hardware. The following requirements shall be met:
   a. Contemporary technical and operational equivalent shall be based on a comparison of technology at the time of publication to the technology at the time of ordering the equipment.
   b. Hardware shall be ordered as close to the actual installation date for a given phase as reasonable (i.e., latest responsible date). Final hardware approval and scheduled order date are at the sole discretion of the Authority.
   c. Hardware equivalence shall be based on both technical equivalence and operational equivalence.
   d. Contemporary technical equivalence shall be based on device performance and class specifications.
   e. Contemporary operational equivalence shall be based on industry standards and function.

B.

Equipment Assemblies and Components:

1. Components of an assembled unit need not be products of the same manufacturer.
   a. Manufacturers of equipment assemblies, which include components made by others, shall assume complete responsibility for the final assembled unit.
   b. Components shall be compatible with each other and with the total assembly for the intended service.

C.

   c. Constituent parts which are similar shall be the product of a single manufacturer.
   d. Factory wiring shall be identified on the equipment being furnished and on all wiring diagrams.

Compatibility and Interoperability of System Components and Devices

1. Where multiple components, devices, and/or systems are intended to be interconnected and components of a complete system in accordance with any related specification sections, it shall be the Contractor’s responsibility to verify interoperability and compatibility of said components, devices, and/or systems in full conformance to the specified performance criteria prior to the submission of shop drawings.
2. Where specified devices are found to be incompatible or incapable of performing as specified in a seamless manner, the contractor shall notify the Authority in writing prior to submission of shop drawings. Failure to properly identify such functional discrepancies shall not relieve the contractor from providing a complete and fully functional system in accordance with the requirements of all related specification sections.

D. Where Factory or Off-Premises Testing of any equipment, product or assembly is recommended by the product manufacturer or where specified as part of this section and/or any related specification section:

1. The Authority shall have the option of witnessing all factory tests. The Contractor shall notify the Authority at a minimum of thirty (30) working days prior to the performance of any factory or off-premises tests.
   a. Where the factory or assembly point for all off-premises testing is not within two (2) hours driving time from the project location, the contractor shall include as part of this project all per diem costs (travel, meals and lodging) for a minimum of two representatives from the Authority to witness all testing.
2. Provide four (4) copies of certified test reports containing all preliminary test data and testing procedures shall be furnished to the Authority prior to any final testing and not more than ninety (90) days after completion of any tests.
3. When equipment, product, or assembly fails to meet any factory or off-premises tests, retesting of equipment, product, or assembly shall be mandated, the manufacturer/contractor shall be liable for all additional expenses, including all expenses incurred by the Authority for witnessing the retesting of any equipment, product, or assembly.

3.1 PART 3 - EXECUTION

A. COORDINATION

Coordinate with all trades at the time of shop drawing submission detailing all space and/or room conditions. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of any system including but not limited to all equipment locations, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the Authority.

1. Coordinate exact location of all desktop/counter mounted equipment with the Authority, as well as all affected trades and tenants prior to the installation of any equipment and/or cabling.

2. Coordinate exact location(s) of all ceiling mounted cable, conduits, equipment, and/or devices with all architectural plans, reflected ceiling plans and affected trades prior to installation.
3. Equipment installations requiring coordination with other trades the contractor shall provide all templates, backboxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.
4. If installation of equipment, raceways, cable trays, J-hooks and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Authority.
5. Contractor to provide all component MAC addresses to the Authority in device labeled floor plans and spreadsheet form for Authority network configuration.

B. Prior to final programming of all systems review with the Authority all system features, functions, system operations and related operational programming for all systems provided.

C. Provide coordination with all system sub-contractors and trades for the proper installation of all equipment, components, and all integration requirements in order to provide fully operational systems in accordance with all applicable specification sections.

D. Each Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings and all other submissions shall be made available to the Authority upon request.

E. Coordinate the work of this contract with the work of the Authority and all Authority Vendors. Schedule all work to ensure that the work of the Authority and all Authority Vendors can proceed in accordance with the Project Schedule.

1. All communications room spaces including, but not limited to IDF, MDF and control rooms spaces shall be constructed and complete ahead of final project completion in order to allow the Authority and Vendors to complete additional work within these spaces. Refer to Section 01 01 00 for early completion requirements. Completion shall, at a minimum, include the following elements:
   a. The room shall be secured in accordance with the approved Security Plan described in 1.8 Delivery, Storage and Handling.
   b. The following work items relating specifically to these spaces shall be completed as part of this requirement:
      1) Architectural finishes
      2) Secure doors
      3) Electrical Power
      4) Grounding and Bonding
      5) Mechanical Systems
      6) Fire Suppression

7) Equipment Racks and Cabinets including, but not limited to complete installation, bonding and labeling. All work within equipment racks and cabinets shall be complete including, but not limited to installation and labeling of patch panels, patch cables, wire management, surge protectors, and similar work.
8) Structured Cabling System Backbone Cabling including, but not limited to complete installation, termination, testing, and labeling of any cabling and pathways within, terminating, or routing through the space. Work shall also include all terminations, cross-connects, securing, and fiber channeling for a complete and operational backbone system.
9) Final Cleaning

c. Notify the Authority upon completion of each communications room space to obtain written acceptance. Rooms shall not be considered complete until final written acceptance is issued by the Authority.

EQUIPMENT PROTECTION

3.2

A. Protect all materials, equipment, devices, or components permanently installed and/or stored on the job site. Protect all materials, equipment, cabling, devices, or components during construction and after installation. Provide appropriate protection of all materials, equipment, components, and/or devices until time of substantial completion. All materials, equipment, components and/or devices shall be protected during shipment and storage against any physical damage, dirt, moisture, cold, snow, wind or rain:

1. During installation, enclosures, racks/cabinets, equipment, controls, controllers, circuit protective devices, and other like items, shall be protected against entry of any foreign matter; and shall be vacuum cleaned both inside and outside before testing and operating and repainting if required.
2. Any materials, equipment, components and/or devices, stored on site, which have been deemed by the Authority to exhibit any indications of damage or exposure dust or moisture shall not be installed and shall returned to the source of supply for immediate replacement.
   a. The use of spare parts or the return of defective equipment for repair to mitigate the damage of defective materials, equipment, components, and/or devices shall not be acceptable. All materials, equipment, components, and/or devices shall be new and unused until final acceptance by the Design Professional.
3. Provide and apply protective material immediately upon receiving the products and maintain throughout the construction process.
   a. Painted surfaces shall be protected with factory installed removable heavy craft paper, sheet vinyl or equal.
   b. Any damaged paint on equipment and materials shall be refinished with the same quality of paint and workmanship as used by the manufacturer so repaired area is not obvious or detectable.

4. Failure to properly protect all materials, equipment, components and/or devices prior to final acceptance shall constitute sufficient cause for rejection of materials, equipment, components and/or devices should any defects, damage or degradation in performance is observed.

B. Seismic Performance: The Contractor shall furnish and install all equipment bracing, and anchoring rated for the seismic zone of the geographical area in which the project resides, and shall withstand the effects of earthquake motion and wind forces in accordance with the current editions of the IBC and ASCE/SEI 7. Refer to Refer to Division 01 and Division 26 – Hangers and Supports for additional seismic information and requirements.

1. Equipment shall include, but not be limited to, racks/cabinets, video monitors, TV’s, cable trays, conduits, junction boxes, and all associated appurtenances.

C. Immediately replace all malfunctioning materials, equipment, components, and/or devices with new unused products up until the time the Authority issues final acceptance of the system. The returning of any malfunctioning equipment, devices, and/or components to the manufacturer for repair and then reinstallation at the project site shall not be acceptable.

1. All replacement materials, equipment, components, and/or devices shall be factory new and not obtained from the Project’s spare parts inventory or use factory recycled products unless expressly identified by contractor prior to replacement and approved beforehand by the Authority.

3.3 WORK PERFORMANCE

A. Installation, final termination, testing, start-up and commissioning of all systems, system components and cabling infrastructures shall be under the direct supervision of the appropriate system contractor or sub-contractor. The sub-contractor shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, testing, commissioning, and programming of all equipment, devices, components, and/or systems being provided as part of this project.

B. Job site safety and worker safety is the responsibility of the Contractor. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials. Clean up all debris generated by installation activities. Keep all communications equipment rooms free of debris at all times.

C. Pre-installation Conferences: Include provisions to attend all pre-installation conferences at Project site in compliance with all requirements in Division 01 Specification Section and as herein specified. Review methods and procedures related to installation and operations of all communications systems, including, but not limited to, the following:

1. Inspect and discuss electrical and equipment roughing-in related to all communications systems as well as other preparatory work required to be performed by other trades.

2. Review and discuss all work, equipment deliveries, installation procedures, and related scopes as required to conform to the phased construction schedule.
3. Review sequence of operations for each type of system, control, cabling and/or integration to any systems and/or equipment provided by other trades.
4. Review and finalize construction schedule and verify availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
5. Review required start-up, testing, commissioning, and certifying procedures to be employed for each system and any impacts to other trades.

For work on existing facilities, arrange, phase, and perform work to assure the operation of all communications systems for other buildings and contiguous spaces at all times. Refer to Division 01 Specification Section for additional requirements.

D. All new work shall be installed and connected to existing work neatly and carefully. Disturbed or damaged work shall be replaced or repaired to its prior conditions, as required by Division 01 Specification Section.

E. Remove all unnecessary tools and equipment, unused materials, packing materials, and debris from each area where work has been completed unless designated for storage.

F. Coordinate the installation of all cabling, conduits/raceways and cable trays and equipment with applicable trades to ensure proper operation and function of all integrated systems in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

1. Coordinate with all trades at the time of shop drawing submission detailing all space and/or room conditions. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of any system, conduit, or cable tray including but not limited to all equipment locations, site conditions, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the Authority.
    a. Coordinate exact location of all desktop/counter/wall mounted equipment with the Authority and all affected trades prior to the installation of any equipment and/or cabling.
    b. Coordinate exact location(s) of all cable, conduits, equipment and/or devices installations with all architectural plans, site plans, reflected ceiling plans and affected trades prior to installation.
        1) Equipment installations requiring coordination with other trades the contractor shall provide all templates, back- boxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.

c. If installation of equipment, devices, cabling, raceways, cable trays and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Authority.

d. Prior to the final programming of any systems review with The Authority all system features, functions, system operations, network mapping, system integrated responses and all related programming as required for the proper operation of the respective communications systems.

H. The Contractor shall maintain a complete set of current and up to date set of shop drawings and equipment submissions at the job site at all times. The Shop drawings and all other submissions shall be marked up to reflect all as-built conditions and shall be made available for review by the Authority upon request.

I. The Contractor shall prepare the necessary documents required for installing, testing, and bringing each system online. Such documents include but are not limited to:

1. Project management and quality assurance plans
2. Testing plans
3. Component and system submittal documents
4. Installation plans
5. Component design plans
6. System user documentation
7. As-built drawings and documentation

J. The Contractor shall coordinate with the Authority to ensure each system meets the project requirements. The Contractor shall meet all applicable ADA requirements.

3.4

A. EQUIPMENT INSTALLATION

General

1. The Contractor shall provide all tools and test equipment required to install, verify, and test the installation and to determine that it meets the specifications. The Contractor shall furnish all necessary materials required to implement and to achieve the required work performance.
2. The Contractor shall install products detailed in the specifications, system requirements, drawings and Contractor designs including those purchased by the Contractor and those provided by other parties.
3. All equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specification shall be subject to the control and approval of the Authority.
4. All system equipment installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer’s requirements. Cable terminations at all equipment locations shall comply with all state and local electrical codes. All wiring shall test free from all grounds, shorts, stray voltages, and EMI.

5. Follow manufacturers' instructions for installing, components and adjusting all equipment and cabling. Submit two (2) copies of such instructions to the Authority before installing any equipment. Provide an additional copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.
6. Equipment location shall be as close as practical to locations as indicated on the contract drawings.
   a. Provide all equipment clearances in accordance with NEC requirements. Arrange equipment to facilitate unrestricted access for maintenance and service around all equipment, components, and/or cable terminations.
7. Where the Authority determines that the Contractor has installed equipment not conveniently accessible for operation and maintenance, the equipment shall be removed and reinstalled as directed at no additional cost to the project.
   a. "Conveniently accessible" is defined as being capable of being reached without the use of ladders, or without climbing or crawling under or over obstacles such as, but not limited to, motors, pumps, belt guards, transformers, piping, ductwork, conduit and raceways.
8. System/Hardware and mounting must comply with IBC Seismic Requirements.
9. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.
10. For equipment mounted in drawers or on slides, provide the interconnecting cables with a service loop of not less than three feet and ensure that the cable is long enough to allow full extension of drawer or slide.
11. The Contractor's quality assurance Inspector shall conduct a visual inspection of all installations to verify that the installations are in accordance with the project’s and manufacturer's specifications. Records of the inspections signed and dated by the Quality Assurance Inspector shall be provided to the Authority. Prior to any scheduled inspections the Authority representative shall be notified by the Contractor of any inspection(s) so they may witness.

B.

Software Installation

1. The Contractor shall test all custom and packaged “off-the-shelf” software in development, test, stage and production environments, and have successfully passed factory acceptance testing, prior to installation on-site.

C.

2. Contractor shall install and configure all software in accordance with the software manufacturer's installation instructions. Apply the latest patches and security updates, unless otherwise noted.

Hardware Installation

1. Final hardware selected and installation of hardware shall be coordinated with the Contractor. Additionally, the Contractor shall ensure the ventilation requirements for the all hardware components are met.
2. The Contractor shall install and inspect all hardware required in this specification in accordance with the manufacturer's installation instructions. Final placement of hardware is subject to the Authority approval.

3. The Contractor shall be responsible for any and all loss or damage in the shipment and delivery of all material until transfer of title to the Authority.
4. The Contractor shall obtain written permission from the Authority before proceeding with any work which requires cutting into or through any part of the building structures such as, but not limited to, girders, beams, concrete, carpeted or tiled floors, partitions or ceilings. The Contractor shall obtain written permission from the Authority before cutting into or through any part of the building structures where fireproofing or moisture proofing could be impaired. In any such case the Contractor shall be responsible for restoring the affected area to “like-new” condition or to a condition to match the existing conditions.
5. The Contractor shall take all steps necessary to ensure that all public areas remain clear or are properly marked during installation or maintenance.
6. The Contractor shall coordinate installation with the Authority to minimize disruption of existing business functions at the airport.
7. The Contractor shall place materials only in those locations that have been previously approved. Any other locations shall be approved, in writing, by the Authority.
8. The Contractor shall label all cabling and patch cords in accordance with the Authority approved labeling plan. Coordination with the Authority shall be performed, and all labeling shall be approved, prior to implementation.

D. System Startup

1. The Contractor shall not apply power to the system until after:
   a. System and components have been installed and inspected in accordance with the manufacturer's installation instructions.
   b. A visual inspection of the system components has been conducted to ensure that defective equipment items have not been installed and that there are no loose connections.
   c. System wiring has been tested and verified as correctly connected as indicated.
   d. All system grounding and transient protection systems have been verified as properly installed and connected, as indicated.
   e. Power supplies to be connected to the system and equipment have been verified as the correct voltage, phasing, and frequency as indicated.
   f. Satisfaction of the above requirements shall not relieve the Contractor of responsibility for incorrect installations, defective equipment items, or collateral damage due to Contractor work/equipment.

3.5 COMMUNICATIONS CABLING REQUIREMENTS

A. All wiring and cables shall be properly dressed and/or bundled with hook-and-loop (Velcro) tie-wraps or cable ties. Twisted wire, tape, rope, twine, phone wire and similar bits of debris usually available on site are not acceptable substitutes for proper securing hardware. All inter-rack cables and wiring must be properly routed, and where available, in cable trays. Overhead cables must be easily removed or reworked within the cable trays. Proper care must be taken to ensure that new cables added to the trays are not stressed or intertwined with existing cables. Overhead cables may not cross perpendiculars or be suspended in mid-air without supports.

B. Cabling shall be sized to support the appropriate communication system. All communications cable installations shall be in accordance with good engineering practices as established by the EIA, IEEE and the NEC. All cabling shall meet all state and local electrical codes. All cabling shall test free from all grounds, shorts, and EMI.

1. Contractors shall have the option to combine all cable home runs and conductors of same type and voltage “class” in accordance with NEC requirements unless specified elsewhere. Size all conduits and cable trays to meet the required fill ratios and install all conductors in accordance with NEC requirements and manufacturers recommendations.
    a. All communications cabling located above accessible suspended ceilings shall be installed in conduit.
    b. Cabling installed above hard ceiling spaces shall be installed in dedicated conduits.
    c. No exposed cabling will be acceptable in finished or occupied spaces of the facility without approval by the Authority.
    d. Any communications system cabling installed exterior to the building and/or all cabling being routed from the facility to any remote location external to the project location shall utilize OSP rated fiber optic cable installed in conduit system.
2. Do not install bruised, kinked, scored, deformed, abraded, or otherwise damaged cable. Do not splice cable between indicated terminations, taps, or junction points. Remove and discard cable where damaged during installation and replace it with new cable.
3. Ensure that all communications cabling supports (conduits, support grips, cable trays, and cable termination panels) are fully installed before proceeding with cable installation.
4. At no time shall any cables be installed and left unsupported, nor shall cables be tie-wrapped to any other supporting structure in lieu of specified cable supports. Do not tie-wrap or permanently affix cable bundles to approved cable supports.
    a. NOTE: Cable bundles shall not be cinched too tightly; all cable ties shall be hook-and-loop (“Velcro”) tie-wraps only.
5. The Contractor shall not permit any communications cabling to lie unprotected on the floor at any time. If cables must be left on any floor, protect the cables so that they may not be walked on or have any material or equipment placed or rolled on top. Replace all damaged cables from demarcation to termination point; no splicing of damaged cables shall be permitted.

6. Maintain manufacturers recommended minimum bend radiuses of all cabling. Do not stretch, stress, tightly coil, bend, or crimp cables. The Contractor shall keep all cabling out of the way of other trades during staging of any work. The contractor at the contractor's expense will replace all severely stressed or damaged cables, equipment, and materials as determined by the Authority.
7. No media, fiber or copper, shall be installed in lengths surpassing Standards based length requirements.
8. Wire and cable routing shown on the Contract Drawings is approximate unless dimensioned. Route wire and cable as required to meet Project conditions.
9. Where wire and cable routing is not shown, and destination only is indicated, determine exact routing and lengths required. Record actual routing on as-built for all conduit larger than one inch.

C. Unshielded Twisted Pair (UTP) and Shielded Twisted Pair (STP) Cable

1. All TCP/IP-based copper network cabling shall be Category 6 or Category 6a rated as noted and installed in conduit except within dedicated communications rooms. All communications raceway shall not contain any AC carrying conductors or non-associated communications network cables.
2. Refer to related specification sections for additional requirements related to Category 6 or 6a cabling types, and testing requirements.
    a. All horizontal data drops shall be terminated on Category-6 or 6a patch panels installed on the 19" equipment racks\cabinets.
    b. All data drops and backbone cabling installed above inaccessible ceiling spaces or areas containing no ceiling shall be installed in dedicated conduits. In no case shall cable be supported on ceiling tiles, T-bars, or tie- wrapped to any conduit or pipes.
        a) Category-6 cables shall not be cinched too tightly; all cable bundles at patch panel locations and in the field shall be VELCRO type tie-wraps only. Plastic wire ties shall not be accepted on any Category-6 or 6a cabling.
        b) Each network drop shall be a dedicated Category-6 or 6a cable and shall not exceed a maximum distance of 295 feet from the associated communications room termination panel to the furthermost data port for that network drop.
        c) Cable Support: Mechanically secure to the permanent building structure where not installed in raceway. Provide "J" hooks at regular intervals no greater than 5' apart depended appropriate to the cable bundle and size.
        d) Communications drops installed inside walls shall be installed in dedicated conduit terminating in a junction box at the jack location.
        e) Cable and wiring shall not lay loose on ceiling tiles or grids. Cable must be supported in all areas. Bridle rings or tie-wrapped supporting methods are not acceptable. Independent dedicated support must be used between conduit stub-ups and cable trays.

f) Install all cabling parallel and perpendicular to building lines and follow building structure. Use cable support equipment/hardware recommended by the manufacturer and/or as herein specified.
g) Provide all terminations, cross-connects, wire management, surge protectors, etc. for a complete and operational system.
h) Any data communications system cabling installed exterior to the building and/or being routed from the facility to any remote location external to the project location shall be outside rated (OSP) category-6 or 6a cable.

c. Ensure that all communications systems cabling supports (conduits, support grips, cable trays, and termination patch panels) are fully installed before proceeding with cable installation.

D. Fiber Optic Cabling

1. All fiber optic cabling shall be provided to meet the communications requirements for all network communications systems, at the minimum all fiber optic cabling shall be sized in accordance with the project documents. All fiber optic cabling shall be a minimum of 8.3/125µm OS2 type cabling. Multi-mode fiber optic cabling shall be unacceptable, unless for specific uses explicitly defined in the contract documents.
   a. All fiber optic cabling shall be a continuous segment from demarcation to termination point and shall be installed above accessible ceilings wherever possible. All fiber optic cabling shall be installed in dedicated conduits.
      1) Installation of all fiber optic cabling shall be in accordance with all guidelines established by the product manufacturer and all referenced industry standards.
      2) Special care shall be taken to avoid damage to the cable. While under pulling tension, the cable shall not be bent into a curve with a radius of less than twenty (20) times the cable diameter, or no less than manufacturers minimum.
      3) Pulling tension shall not exceed manufacturer's recommended maximum tensile load. Contractor shall utilize a winch with tension control or a "break- away" link designed to break away at or below the recommended maximum pulling tension.
      4) Use methods and lubricating compounds on cables and wires to prevent damage to material and products during roughing-in. Provide compounds that are not injurious to the cable and wire jackets that do not harden or become adhesive.
2. All exterior fiber optic cabling shall be rated for exterior outside plant (OSP) applications and installed in dedicated inner-duct conduit system, and routed in the exterior conduit ducts in accordance with the requirements of the contract documents. Outside plant cable not installed in conduit shall not extend more than fifty (50) feet into a building interior before terminating and transitioning to standard indoor fiber optic cable in accordance with the NEC.

3. Fiber optic cabling shall be provided as the primary media for any exterior network components installed remote to building, as well as all network communications links for all backbone communications.
   a. The contractor shall be responsible for the determination of actual segment lengths. Actual quantities will be calculated by the routing as indicated on the contract drawings and/or in the field based on existing conditions.
4. All splices shall be fusion type. Mechanical splices shall not be acceptable.
5. Refer to related specification sections for additional requirements related to fiber optic cabling types, sizes and testing requirements.

Hybrid (Conductive) Fiber Optic Cable

E. 1. Provide fiber optic cable with integrated copper conductors for electrical power distribution where indicated on the Contract Drawings. Fiber optic cabling shall meet all of the requirements listed under "Fiber Optic Cabling" above.

Non-Twisted Pair Copper Cable Terminations

F. 1. Splice, Taps and Terminations of all non-twisted pair copper cabling: Use numbered terminal strips in junction, pull and outlet boxes, terminal cabinets, and equipment enclosures. Tighten connections to comply with tightening torques specified in UL Standard 486A.
2. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturers published torque-tightening values for equipment connectors.
3. Rack and terminal cabinet wiring shall be neatly routed or bundled and routed along rack sides. All splices and connections shall be by plug, solder or screw terminal strips, etc. Splices shall not hang in racks or terminal cabinets.

G.

Conduits/Raceway/Cable Trays

1. Provide conduit and raceway systems for all communications networks as indicated below. Refer to all related specification sections for additional conduit and raceway information.
   a. Accessible suspended ceilings: Provide conduit stub-up from each outlet location to space above ceiling. All conduit stub-up shall include nylon bushing at exposed edge of conduit for protection of all cabling
   b. Exposed structure: Provide conduit run from each drop to a height of 12 feet to cable tray or j-hooks where provided.
   c. Vertical Wire runway shall be installed in dedicated conduits and shall be supported any /all risers between floors in closets or accessible locations; in no case shall any cable risers be unsupported.
   d. Cables entering all communications equipment rooms shall be supported with Cable tray from entrance to rack/cabinet location as indicated on the contract drawings and/or herein specified.
   e. Wire basket cable tray system shall be provided in all corridors as indicated on the contract drawings and installed as herein specified.

2. All conduits/raceways shall be concealed and shall be installed above accessible finished ceilings and/or in walls. Any conduits/raceways installed in areas requiring installation to be exposed, shall be installed as tight as possible to ceilings and at right angles to walls/building lines and shall not obstruct any access hatches, equipment service panels, lighting or other equipment and/or devices. No exposed conduits/raceways shall be installed without prior approval of the Authority.
   a. Where conduits cannot be concealed above ceilings or in walls and must be installed in finished or occupied areas of the building, all conduits shall be finished wire-mold type raceways or approved equal. Finished wire-mold type raceways shall not be installed without prior approval in writing by the Authority.
   b. Where any equipment and/or junction boxes are installed above non-accessible finished ceilings, the contractor shall provide access hatches listed for the intended application. Access hatches shall be located so that service access to the equipment and/or junction boxes is unimpeded.
      1) Access hatches shall not obstruct any equipment, service panels, lighting equipment, devices, or any architectural elements of the ceiling. At the time of submittals, the contractor shall submit all proposed access hatch locations for review by the Design Professional.
   c. All conduits/raceways shall be supported in accordance with NEC requirements and shall be affixed in such a manner that tampering and/or removal without the use of specialized tools shall be prevented.
   d. All conduits/raceways shall be installed in a manner that prevents tampering or removal when installed in areas exposed to the general population.
      1) Provide tamper-resistant installation utilizing “torx with peg” security-fastening devices for all conduits/raceways, equipment, devices and appurtenances in all areas accessible to the general population and/or areas subjected to tampering or vandalism.
   e. Interior raceways shall be a minimum 1 inch unless otherwise noted. Exterior raceways shall be a minimum 1 1/4-inch. Size all raceways and install conductors in accordance with NEC requirements. Fill ratio shall not exceed 40 percent for indoor raceways or exterior raceways.
      1) EMT conduit with compression fittings and/or MC cabling may be utilized in all inaccessible ceiling areas unless otherwise restricted by code.
      2) Threaded Rigid metal conduit shall be used on all exterior applications, stub-ups and all interior areas where concealed conduit requirements cannot be met and are exposed to tampering or damage by the general population.
         a) All areas considered being of high risk due to the nature of the occupancy or the need to protect and maintain the integrity of the cabling shall be installed in rigid threaded conduits.

f. Conduit expansion couplings shall be furnished and installed in all areas where expansion/contraction of structure may occur in order to couple two sections of a conduit runs to support longitudinal movement. The contractor shall refer to architectural drawings for exact locations of all building expansion joints.
   1) Conduit expansion couplings shall be consistent with the size the conduit being installed, shall be steel electrogalvanized, and shall meet all environmental and seismic conditions.
   2) Expansion couplings shall be weatherproof and approved for use indoors or outdoors without an external bonding jumper.
   3) Expansion couplings shall be UL Listed and approved for use in wet locations.
   4) Expansion couplings shall comply with UL 514B, CSA 22.2 No. 18 3-12, NEMA FB1.

g. Exterior raceways: PVC schedule 40 conduit at the minimum shall be utilized in all underground applications unless otherwise specified by related specification sections. The conduit shall be buried below the local frost line, but not less than 36” below grade. Warning flagging tape shall be buried 12” below grade to indicate the conduit routing location. Refer to related specification sections for additional requirements.
   1) All exterior conduits larger than 2” in diameter shall be provided with dedicated inner-duct conduit systems, segregated by network type (i.e. security, etc.) and shall include a minimum of one spare empty inner-duct per conduit.
   2) The Contractor shall have the option to utilize the same trench/routing location as other utilities. In no case shall any system conduits or duct banks be combined with other electrical utilities without providing the required separation between conduits as necessary to ensure the minimal transmission or conduction of any RF and/or EMI signals.

h. Outlet Boxes: shall be 4 x 4 x 2-1/8 inches deep with single gang reducer plate where required for all data outlet locations and single gang for wall mounted telephone locations.
   1) All outlet boxes shall be provided with single or dual gang device mud-rings flush to finished wall as required based on type and configuration of outlet and type of wall construction.
   2) Use deep masonry boxes at masonry construction. T-Bar hangers or other appropriate mounting hardware shall be utilized to support boxes mounted in the ceiling.

3. Cable Tray – Ladder Type: Provide cable trays in all communications rooms and closets for routing horizontal distribution and backbone communications cables. All cable trays shall be constructed of aluminum with two side rails and 9” rung spacing. Cable tray shall be complete will all materials, miscellaneous hardware and all appurtenances required for a complete cable distribution and support system.

a. All cable tray widths shall be sized according to the total number of cables to be supported within the various trays plus an additional 100% spare capacity for future expansion capability. At the minimum all cable trays installed in communications rooms and closets shall be a minimum of 24” wide by 4” deep, unless otherwise noted.

b. Install cable tray in a manner ensuring that all circuits fully comply with all ANSI/TIA/EIA standards.
   1) Maintain a minimum clearance of 24” between top of cable tray and ceiling structure or other equipment or raceway.
   2) Maintain a minimum clearance of 12” between bottom of cable tray and top ceiling grid or other equipment or raceway.
   3) Maintain a minimum clearance of 24” from all conduits or cables used for electrical power distribution.
   4) Maintain a minimum clearance of 12” between bottom of cable tray and top of equipment racks and/or cabinets
   5) Maintain a minimum clearance of 24” from fluorescent lighting. All Pathways shall cross perpendicular to fluorescent lighting and electrical power cables or conduits.
   6) Cable tray supports shall be attached to the structural ceiling or walls with hardware or other installation and support aids specifically designed for the cable tray and designed to support the cable tray’s weight and required cable weight and volume.
   7) Do not attach cable tray supports to ceiling support system or other mechanical support systems.
   8) Load span criteria: Install tray supports in accordance with the load criteria of L/240.
   9) Cable Trays shall be supported at 6-foot intervals.
   10) All Cable trays shall be installed without burrs, sharp edges, or projections, which may damage cable insulation.
   11) All lengths or sections of cable tray shall be bonded and grounded in accordance with NEC, EIA/TIA, IEEE.

c. Follow manufacturers' instructions for installing, components and adjusting all equipment and cabling. Submit two (2) copies of such instructions to the Architect before installing any equipment. Provide a copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.

4. Cable Tray - Basket Type
   a. Acceptable Manufacturers: subject to compliance with these specifications, wire cable trays and support systems as manufactured by:
      1) GS Metal Flex Tray series
      2) Triangle Electrical Products. Co.
      3) Eaton (formerly Cooper) B – Line Systems
   b. General

1) Provide wire cable tray where indicated by the contract documents; the contractor shall include all required types, sizes, necessary connector assemblies, clamp assemblies, connector plates, splice plates and splice bars. Construct units with rounded edges and smooth surfaces; in compliance with applicable standards; and with the following additional construction features.

c. Materials and Finishes specifications for each wire cable tray as follows:
   1) Electroplated Zinc: Straight sections shall be made from steel meeting the minimum mechanical properties of ASTM A510 and shall be electro-plated zinc in accordance with ASTM B633 SC2.
   2) Stainless Steel: Straight sections and accessories shall be made from AISI Type 304 Stainless Steel.
   3) Paint: Straight sections shall be painted “Computer White” over Electrodeposited Zinc.
   4) Pre-Galvanized Zinc: Wall brackets and other pre-galvanized accessories shall be coated with zinc in accordance with ASTM A653.
   5) Electro-Galvanized Zinc: Support accessories and miscellaneous hardware shall be coated in accordance with ASTM B633 SC3. All threaded components shall be coated in accordance with ASTM B633

d. Cable Tray Support System
   1) All straight section longitudinal wires shall be straight (with no bends).
   2) Wire cable tray shall be made of high strength steel wires and formed into standard 2 inch by 4-inch wire mesh pattern with intersecting wires welded together. All wire ends along wire cable tray sides (flanges) shall be rounded during manufacturing for safety of cables and installers.
   3) Wire cable tray sizes shall conform to the following nominal criteria:
      a) Straight sections shall be furnished in standard 120-inch lengths.
   4) Wire basket shall have at the minimum 4-inch usable loading depth by 16 inches wide.
      a) All fittings shall be field formed as needed.
      b) All splicing assemblies shall be the bolted type using serrated flange locknuts. Hardware shall be either yellow zinc dichromate in accordance with ASTM B633 SC2 or AISI Type 304 Stainless Steel.
      c) Wire basket supports shall be center support hangers, trapeze hangers or wall brackets as manufactured by Cooper B-Line, Inc. or Architect approved equal.
      d) Trapeze hangers or center support hangers shall be supported by 1/4 inch or 3/8-inch diameter rods.
      e) Special accessories shall be furnished as required to protect, support, and install a wire basket support system.
   5) Installation

a) Install wire cable tray where indicated on the contract drawings in accordance with manufacturers requirements and recognized industry practices (NEMA VE-2 2000). Ensure that the cable tray equipment complies with requirements of NEC, and applicable portions of NFPA 70 and NECA’s “Standards of Installation” pertaining to general Electrical installation practices.
b) Coordinate wire cable tray with other electrical work as necessary to properly interface installation of cable tray with other trades.
c) Provide sufficient space encompassing cable tray to permit access for installing and maintaining cables. Provide a minimum clearance of at least 6” clear AFC and 12” clear above cable tray.

H. Penetrations of Walls and Floors:

1. All wall/floor penetrations are to be sleeved and fire stopped with approved fire stopping material or sealant as applicable for the type of penetration. Coordinate all cable and conduit penetrations of building with all affected trades. Refer to all related specification sections for additional wall/floor penetration requirements.
   a. All penetrations of rated walls and floors shall be fire stopped in accordance with the ASTM and NFPA standards. Refer to related specification sections for additional requirements.
   b. Floor penetrations shall be sleeved with a minimum sleeve diameter of 4 inches. An additional penetration shall be provided for future use, sleeved, and capped and fire stopped as required.
   c. Coordinate size of wall penetration with conduit size, number of conductors. Comply with all NEC requirements.
   d. The fire rating of all penetrated walls, floors, and ceiling structures shall be strictly maintained. All penetrations shall be fire-stopped and sealed by the Contractor.
   e. Install fire-stopping in open penetrations and in the annular space of penetrations for fire rated barriers.
   f. Installation of fire-stops shall be performed by an applicator/installer qualified and trained by the manufacturer. Installation shall be performed in strict accordance with manufacturer’s detailed installation procedures.
   g. Installation of all fire-stopping shall be in accordance with fire test reports, fire resistance requirements, acceptable sample installations, manufacturer’s recommendations, local fire and building authorities, and applicable codes and shall be installed in a manner acceptable to the authority having jurisdiction.

3.6 ELECTRICAL POWER DISTRIBUTION

A. Refer to Division 26 specifications in addition to the following:

1. Primary power for all system controls, sub-control panels, processors, and power supplies shall be configured to switch to emergency backup power sources automatically when primary power is interrupted without degradation of any critical system functions.
2. All electrical power shall be hardwired to the panel. System components or panels employing the use of plug-in transformers, extension cords or cheater cords for the connection to electrical power shall not be acceptable.
3. Each equipment cabinet in all telecom equipment rooms shall be serviced by an L6-30 twist-lock receptacle. This receptacle will serve to connect to a rack-mount power distribution unit (PDU). This PDU will supply power to all equipment within the cabinet with 5R-20 receptacles.
4. Communications rooms shall require primary and secondary power sources to maintain functionality of security, life safety and selected IT systems in the event of a power failure. Uninterruptible power supplies (UPS) will be provided to provide "ride-through" power until the secondary power source comes online during an outage.

3.7 TRANSIENT VOLTAGE SUPPRESSION

A. Transient Voltage Surge Suppression: All cables and conductors extending beyond building façade (except nonconductive fiber optic cables) which serve as communications, control, or signaling circuits shall be protected against Transient Voltage surges and have Transient Voltage Surge Suppression (TVSS) protection.

1. The TVSS device shall be UL listed in accordance with Standard TIA 497B installed at each end. Lighting and surge suppression shall be a multi-strike variety and include a fault indicator.
2. Protection shall be furnished at the equipment and additional triple solid state surge protectors rated for the application on each wire line circuit shall be installed within 914.4 mm (3 ft) of the building cable entrance. Fuses shall not be acceptable for surge protection applications. All inputs and outputs shall be tested in both normal mode and common mode to verify there is no interference at the minimum surge suppression test shall meet the following criteria.
   a. All system power supplies serving exterior system components or devices shall be provided with the appropriate transient surge suppression protection on both the line side as well as the load side.
      1) A 10-microsecond rise time by 1000 microsecond pulse width waveform with a peak voltage of 1500 volts and a peak current of 60 amperes shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer's requirements.
      2) An 8-microsecond rise time by 20-microsecond pulse width waveform with a peak voltage of 1000 volts and a peak current of 500 amperes shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer's requirements.

3) Maximum series current: 2 AMPS. Provide units manufactured by Advanced Protection Technologies, model # TE/FA 10B or TE/FA 20B or approved equal.
4) Operating Temperature and Humidity: -40 to 85 degrees C (-40 to 185 degrees) shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer’s requirements.

GROUNDING AND BONDING

3.8 A. All electronic equipment, conduits, cable trays, racks/cabinets and cable shields shall be properly grounded and bonded in accordance with all requirements of ANSI/TIA 607-A, NEC 250 and IEEE 1100. Additionally, all communications room, IDF, and MDF room grounding and bonding shall be in accordance with all related specification sections and Motorola R56 Standards and Guidelines for Communications Sites (where Motorola radio equipment is installed).

1. A Telecommunications Grounding System shall be installed in all communications equipment rooms. Grounding system shall provide equalization of the grounding potentials between the building power system and the telecommunications main grounding bus-bar (TMGB) as well as all telecommunications grounding bus-bars (TGB). Grounding bus-bar shall provide the diversion of electrical transients from the telecommunications cables and to provide a safety ground for all equipment racks/cabinets, conduits, cable trays and cable shields as well as providing the required coupling to cancel and/or reduce transients.
   a. The TMGB and each TGB shall be provided where indicated on the drawings and shall provide an effective bonding connection to the nearest approved building grounding electrode (e.g., structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board’s equipment grounding busbar).
      1) The minimum bonding shall be #6 AWG copper conductor connected to the TMGB and all TGB’s. Connections shall be 2-hole NEMA type compression or exothermic welded connections.
2. All grounding connections shall provide the equalization of all grounding potentials between the building power system and the grounding terminations at the communications equipment in order to provide the diversion of electrical transients as well as providing the necessary coupling in order to cancel and/or reduce any voltage transients.
   a. Equipment Grounding: Metallic structures, equipment racks, cabinets and enclosures as well as all raceways, cable trays, junction boxes, outlet boxes, machine frames, and other conductive items shall be bonded and grounded.

b. Duct Banks and Manholes: Provide an insulated equipment grounding conductor in each duct containing any voltage conductors, sized per NEC except that minimum size shall be No. 2 AWG. Bond the equipment grounding conductors to the grounding bus, to all manhole hardware and ground rods, to the cable shielding grounding provisions for all cable splices, terminations and equipment enclosures.

c. Metallic Fences equipped with communications equipment: Fences shall be grounded with a ground rod at each fixed gate post and at each corner post.

1) Drive ground rods until the top is 300 mm (12 inches) below grade. Attach a No. 4 AWG copper conductor, by exothermic weld to the ground rods and extend underground to the immediate vicinity of fence post. Lace the conductor vertically into 300 mm (12 inches) of fence mesh and fasten by two approved bronze compression fittings, one to bond wire to post and the other to bond wire to fence.

2) Each gate section shall be bonded to its gatepost by a 3 by 25 mm (1/8 by one inch) flexible braided copper strap and ground post clamps. Clamps shall be of the anti- electrolysis type.

3. All connections of grounding conductors to ground rods, bus bars, rebar, structural members, pipes and fences, as well as splices of any ground conductors, shall be made by exothermic welds except where otherwise noted. All connections to bar lugs shall be exothermic weld or compression type connections. Bolted type connection of ground conductors may only be made where terminal lugs or blocks have been furnished and installed in equipment by the manufacturer.

a. Equipment grounding conductors shall be insulated stranded copper, except for sizes No. 10 AWG and smaller shall be solid copper. Insulation color shall be continuous green for all equipment grounding conductors, except that wire sizes No. 4 AWG and larger shall be permitted to be identified per the NEC.

1) At the minimum bonding connection shall be a #6 AWG copper conductor. All grounding shall provide an effective bonding connection between the protected equipment to the nearest approved building grounding electrode (structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board’s equipment grounding busbar). All bonding and grounding connections shall be NEMA type compression or exothermic welded connections.

3.9

A.

4. Refer to related specification sections for any additional grounding and bonding requirements.

EQUIPMENT IDENTIFICATION

Identify all system control, component and equipment cabinets using plastic laminate engraved (“lamicoid”) labels or approved equal. Firmly affix to the panel, device, and/or component. Refer to all related specification sections for additional requirements.

1. Nameplates shall be laminated black phenolic resin with a white core with engraved lettering, a minimum of 6 mm (1/4 inch) high. Secure nameplates with screws. Nameplates that are furnished by manufacturer as a standard catalog item or where other method of identification is herein specified. Dymo or Kroy tape adhesive-backed lettering shall not be acceptable.
2. Color-code all junction boxes and enclosures per NEC recommendations and Authority requirements. At the minimum provide all communications junction boxes as follows:
    a. Letter all pull boxes and junction boxes located in service areas, tunnels, above accessible ceilings and pipe chases with laminated black phenolic resin with a white core with engraved lettering, a minimum of 6 mm (1/4 inch) high. Secure nameplates with screws.
3. Permanently label all cabling at both ends with self-adhering plastic labels.
    a. Labeling: hand written labels are not acceptable. All labels shall be machine printed on clear or opaque tape, stenciled onto adhesive labels, or type written onto adhesive labels. The font shall be at least one-eighth inch (1/8") in height, block characters, and legible.
        1) The text shall be of a color contrasting with the label such that it may be easily read. If labeling tape is utilized, the width of the tape shall not exceed 3/8," and the font color shall contrast with the background.
        2) All data patch panels shall exhibit data drop numbers, in sequential order, for all workstations served by the associated network equipment.
        3) Each fiber optic cable segment shall be labeled at each end with its respective communications network identifier.
        4) Warning Tags: At each location where the fiber cable is exposed to human intrusion, it shall be marked with warning tags. These tags shall be yellow or orange in color, and shall contain the warning: "CAUTION FIBER OPTIC CABLE." The text shall be permanent, black, block characters, and at least 3/16" high.
            a) A warning tag shall be permanently affixed to each exposed cable or bundle of cables, at intervals of not more than five (5) feet. Any section of exposed cable which is less than five (5) feet in length shall have at least one warning tag affixed to it.

3.10 A.

4. Provide typewritten circuit directories installed in 3-ring binders with transparent page protectors in each control and sub control cabinet and/or equipment rack.

MAINTENANCE & SERVICE

General Requirements

1. The Contractor shall provide all services required and equipment necessary to maintain all communications systems associated with this project in fully operational state as specified after formal written acceptance of the system.

a. Provide all necessary material required for performing scheduled adjustments or other non-scheduled work. Impacts on facility operations shall be minimized when performing scheduled adjustments or other non-scheduled work. Refer to Division 01 specification section for additional requirements.
b. The adjustment and repair of the communications systems shall include all software and firmware updates on all computers, servers, CPUs, terminals, devices, communications and data transmission media (DTM), facility interface processors, signal transmission equipment and processors.
c. Test, inspect, and service each system on a quarterly basis (three month intervals) during the warranty period from the time of final acceptance. The contractor shall compare quarterly test results with the test results at the time of final acceptance.
    1) The contractor shall include as part of the quarterly test the calibration and/or adjustment of any device, component, and/or system that has deviated from the original test results at the time of final acceptance.
d. For each quarterly maintenance period, provide written notification to the Authority of the systems condition before and after service, the exact components that were tested and serviced, and overall status of the system.

B. Personnel

1. Service personnel shall be manufacturer certified in the maintenance, testing, and repair of the type of system and equipment provided for the project. Provide the Authority the name of the designated service representative, and of any change in personnel.
    a. The Authority shall be provided copies of system manufacturer certifications for all designated service representatives.
2. Schedule of all work to be performed during regular working hours, Monday through Friday, excluding federal holidays.

C. Emergency Service

1. The Authority shall initiate service calls whenever the system is not functioning properly. The Contractor shall provide the Authority with an emergency service center telephone number. The emergency service center shall be staffed 24 hours a day 365 days a year. The Authority shall have sole Authority for determining catastrophic and non-catastrophic system failures.
    a. For catastrophic system failures, the Contractor shall provide same day eight (8) hour service response with a defect correction time not to exceed sixteen (16) hours from arrival on site. Catastrophic system failures are defined as any system failure that the Authority determines will place the facility(s) at increased risk.
    b. For non-catastrophic failures, the Contractor within 1 business day with a defect correction time not to exceed 48 hours from time of notification.

D. Records & Logs

1. The Contractor shall maintain records and logs of each task and organize cumulative records for each component and for the complete system chronologically. A continuous log shall be submitted for all devices. The log shall contain all initial settings, calibration, repair, and programming data. Complete logs shall be maintained and available for inspection on site, demonstrating planned and systematic adjustments and repairs have been accomplished for the system.

Work Request

E.
1. The Contractor shall separately record each service call request, as received. The record shall include the serial number identifying the component involved, its location, date and time the call was received, specific nature of trouble, names of service personnel assigned to the task, instructions describing the action taken, the amount and nature of the materials used, and the date and time of commencement and completion.
2. The Contractor shall deliver a record of the work performed within five (5) working days after the work was completed.

System Modifications

F.
1. The Contractor shall make any recommendations for system modification in writing to the Authority. No system modifications, including operating parameters and control settings, shall be made without prior written approval from the Authority. Any modifications made to the system shall be incorporated into the operation and maintenance manuals and all related documentation.

3.11 WARRANTY

A. Warrant material and workmanship for a period as specified in Division 01 of the contract documents and all related specification sections. The warranty period shall commence from the date the Contactor received written notification of final acceptance from the Authority. At the minimum the contractor shall provide warranty provisions:

1. Warrant the replacement of defective components/materials and/or correct defective work when given notice by the Authority during the warranty period.
   a. At no time is the contractor to use the extra materials provided under the scope of this project to replace malfunctioning or damaged equipment and or components. The Contractor shall replace all malfunctioning or damaged equipment and or components with new. The repair and then reinstallation of malfunctioning or damaged equipment shall not be acceptable.

b. During the Warranty period, replace failed equipment per the terms specified in this section. As such, the Authority shall not be bound to the terms and conditions of the manufacturer’s warranty, pertaining to the replacement of failed equipment. In any situation, it is the Contractor/Vendor’s responsibility to keep the system operational during any hardware or software failures. Replacement equipment shall be provided to maintain operations while equipment manufacturer addresses warranty issues.
   1) Warranty replacements and repairs shall include any necessary shipping, handling and materials.
c. Establish a single point of contact for the Authority and provide any coordination responsibilities with manufacturers, suppliers, or contractors to resolve warranted issues and on all maintenance and service actions related to items included in the Warranty. Process and procedures for engaging technical support shall be developed and communicated to the Authority, Vendor.

2. Warranty excludes liability for consequential incidental, or special damages due to vandalism, misuse, or acts of god.
3. Onsite warranty response time by qualified technician shall be no more than 8 hours upon receipt of request from Authority, unless otherwise noted in related Division 27 specification sections.
4. Warranty repairs shall be provided to the Authority at no cost. This shall include but not limited to replacement of all defective components/materials, all labor charges, all travel costs and all vehicle charges.
5. Response time shall be 7 days a week / 24 hours a day / 365 days a Year.
6. Provide test, inspection, and service of each system on a semi-annual basis at six month intervals.
7. Contractor must provide verification that they maintain their principle base of operation along with the personnel that will be responsible for providing service within 3 hours driving time to the project site. This tenet of the warranty shall remain in effect for the life of the warranty.
8. All TCP/IP-based communications systems cabling and related appurtenances shall be provided with the manufacturer’s 25-year extended warranty in addition to all requirements above.

B. The Contractor shall, as a condition of final payment, execute a written warranty certifying all contract requirements have been completed in accordance with all requirements of the Contract Documents.

1. All system testing, commissioning, demonstration and training shall be performed prior to final system acceptance. All defects or damages due to faulty materials or workmanship shall be replaced without delay, to the satisfaction of the Authority’s Representative, at the Contractor's expense.
   a. The contractor shall provide written documentation of test results and stating what was done to correct any deficiencies. The first inspection shall occur 90 calendar days after the acceptance date. The last inspection shall occur 30 calendar days prior to the end of the warranty.

b. The warranty period shall be extended until the last inspection and associated corrective actions are complete. Where any equipment and/or labor covered by Contractor's or manufacturer's warranty, has been replaced, due to failure, the warranty period for any replaced equipment or restored work shall be reinstated for a period equal to the original warranty period, and commencing with the date of completion of the replacement or restoration work.

2. In the event any manufacturer customarily provides a warranty period greater than one (1) year, the Contractor's warranty shall be for the same duration for that component.

FIELD SERVICES

3.12 In addition to all testing requirements as specified by Division 01 specification section and all related Division 27 Specification Section, testing of all systems, sub-systems and cabling infrastructures shall be provided in accordance with all requirements of this section.

A.

B. Notify the Authority in writing, prior to the closing of any ceilings and ten (10) days advance of testing all system cabling to prevent delays in construction schedules.

C. Test all cabling to confirm that no grounds, shorts, sneak currents, RFI and EMI conditions exist prior to start-up and commissioning of all, components, devices, equipment and/or systems.

D. Before requesting a final inspection, the contractor shall perform a series of end to end installation performance tests. The contractor shall submit for approval by the Authority all test procedures to be employed, test result forms, and timetable for testing all fiber optic and UTP structured copper wiring.

E.

F. Acceptance of the simple test procedures discussed below is predicated on the contractor's use of the specified products including but not limited to, all Division 27 systems, sub-systems, system components, fiber optic cable, category structured cable, cross-connect blocks, patch panels, and outlet devices as specified by all related specification sections and installed in accordance the Contract documents, manufacturer’s recommended practices and all applicable codes, standards and industry practices. Acceptance of the completed installation for each system will be evaluated in the context of each of these factors.

Testing Requirements

1. Phases of Testing:
   a. Factory Acceptance Test (FAT) / Manufacturer’s Proof of Concept Test (as applicable)
   b. On-Site Performance Verification Testing
   c. On-Site Endurance Testing

2. Test Plan/Procedure: The Contractor shall provide six (6) hardcopies and an electronic copy of the test plan/procedures for each testing phase for the review and approval of the Authority. The test plan for each phase shall detail the objectives of all tests. The tests shall clearly demonstrate that the system and its components fully comply with the requirements specified herein. The test plan shall be provided at least forty-five (45) days prior to the scheduled start of each test. Test plans shall contain at a minimum:
   a. Functional procedures including use of any test equipment
   b. Test equipment is to be identified by manufacturer and model
   c. Interconnection of test equipment and steps of operation shall be defined
   d. Test records shall include test equipment serial number, calibration date and calibration certification of test equipment
   e. Expected results required to comply with specifications
   f. Traceability matrix referencing specification requirements with specific test procedures
   g. Record of test results with witness initials or signature and date performed
   h. Pass or fail evaluation with comments.
   i. The test procedures shall provide conformity to all specification requirements. Satisfactory completion of the test procedure is necessary as a condition of system acceptance.
   j. The Contractor's Quality Assurance organization shall review all formal test procedures prepared by the Contractor and deliverable under the contract to assure the tests cover all requirements and that there is a conformity between the conducted test, the test results and specification requirements.
   k. Documentation verification, both interconnects and functionality shall be part of the test. Where documentation is not in accordance with the installed system interconnect and operating procedures, the system shall not be considered accepted until the system and documentation correlate.
   l. All testing must be witnessed by the Authority. The Contractor shall cooperate fully in this regard.
3. Test Reports: The Contractor shall prepare, for each test, a test report document that shall certify successful completion of that test. Six (6) hardcopies and one electronic version of the test report shall be submitted to the Authority for review and acceptance within seven (7) days following each test. The test report shall contain, at a minimum:
      1) Commentary on test results.
      2) A listing and discussion of all discrepancies between expected and actual results and of all failures encountered during the test and their resolution.
      3) Complete copy of test procedures and test data sheets with annotations showing dates, times, initials, and any other annotations entered during execution of the test.
      4) Signatures of persons who performed and witnessed the test.

4. Test Resolution: Any discrepancies or problems discovered during these tests shall be corrected by the Contractor at no cost to the Authority. The problems identified in each phase shall be corrected and the percentage of the entire system re-tested determined by the Authority, before any subsequent testing phase is performed.

Factory Acceptance Testing

1. Test Setup Equipment: Equipment shall be actual products or identical models of products to those designated to be delivered and installed at the site. The following equipment shall be setup and used for conducting pre-delivery test:

G.

   a. Operator equipment associated with system.
   b. End devices and displays associated with system.
   c. Software associated with system.
   d. Administrative console equipment.
   e. Sufficient signal transmission media (STM) and associated equipment and accessories to provide a fully integrated system model. Include at least one of each type STM circuit.
   f. Number of field processors required for system to be installed at site.
   g. Enough load and data simulators to provide simulation of full load operational conditions as required by design. Loads shall be manually or software generated.
2. Preparation: Ensure that development of system is complete, required approvals of submittals have been obtained, and sufficient equipment procured to completely demonstrate and test system. Schedule pre-delivery test with Contractor at least 45 days prior to test:
3. Time: Prior to delivery of any equipment to site. Conduct on weekdays during standard business working hours.
4. Location: Manufacturer's plant or other location approved by the Authority.
5. Items to be tested shall be set up and performance verified prior to arrival of the Authority at test site.
6. Test: The purpose is to test the complete computer software package and equipment of the system and demonstrate that all specified features and performance criteria are met. All requirements of the specification shall be tested including, but not limited to:
   a. Functionality including reporting and response.
   b. System capacity.
   c. Hardware interaction.
   d. Hardware and software interaction.
   e. Demonstrate report generation.
7. Acceptance: Acceptance of system to perform sufficiently and provide specified functions shall be determined by the Authority witnessing the factory acceptance test. In addition to the Authority, testing shall be witnessed by up to two (2) additional Owners Authorized Representatives (OAR).
   a. Acceptance Criteria: Performance of system shall equal or exceed criteria stated in individual specification sections.

b. If system does not perform satisfactorily, the Contractor shall make corrections and modifications and schedule new test with the Authority. Compliance is at the sole discretion of the Authority. If compliance cannot be met, or is insufficient, the Authority shall have the right to terminate the contract.

8. Completion:
   a. At successful completion of test, dismantle equipment so as to prevent damage. Replace all defective or worn items.
   b. Re-pack in original containers all equipment to be delivered to site for installation. Mark on containers that items were used in factory test.
9. Reporting:
   a. Record all test procedures and results.
   b. Submit report in accordance with reporting requirements in General Testing Requirements Section.

H. Performance Verification Testing

1. Complete operational testing of all components and systems shall be witnessed by the Authority.
2. Schedule test with the Authority. Do not begin testing until:
   a. All systems have been installed and individually and jointly tested to ensure they are operating properly.
   b. Written permission from the Authority has been received.
3. Testing: As part of performance verification, test all components of system. The tests shall demonstrate system features.
4. Verification: Verify correct operation of the required system functionality as defined in these specifications.
5. Adjustment, Correction, and Completion:
   a. Correct deficiencies and retest affected components.
   b. Make necessary adjustments and modification to system after obtaining approval of the Authority.
   c. Completion: Performance verification test shall be complete when testing or retesting of each component has produced a positive result and has been approved in writing by the Authority.
6. Recording:
   a. Describe actual operational tests performed and equipment used and list personnel performing tests.
   b. Record in tabular form all test results, deficiencies, and corrective measures.
7. Termination
   a. Performance verification test shall be terminated by the Authority when:
      1) Individual systems, system components, subsystems, or cabling infrastructure fail to perform as specified.
      2) It is determined that a system or sub-system is missing any components or installation is not complete.
   b. Upon termination, corrective work shall be performed and performance verification test rescheduled with the Authority.
   c. Retesting shall be performed by Contractor at no additional expense.

d. Contractor shall continue to perform corrective actions and retest until system passes all tests to satisfaction of the Authority.

I. Endurance Testing

1. Provide personnel to monitor the system operation 24 hours per day, including weekends and holidays during endurance testing.
2. Start test after:
   a. Successful completion of performance verification testing.
   b. Training as specified has been completed.
   c. Correction of deficiencies has been completed.
   d. Receipt of written start notification from the Authority.
3. Monitor all systems during endurance testing. Coordinate monitoring with the Authority.
4. Recording: Record data on approved forms so as to provide a continuous log of systems performance. Include:
   a. Date and time for all entries.
   b. Name of individual making entry.
   c. Environmental conditions.
   d. Authority activities in process.
   e. Description of all alarm annunciations, responses, corrective actions, and causes of alarms. Classify as to type of alarm.
   f. Description of all equipment failures, including software errors.
   g. Description of all maintenance and adjustment operations performed on system.
   h. Daily and weekly tabulations.
   i. Daily entries of performance data shall be reviewed by the Authority's representative designated to observe monitoring of system.
5. The Authority may terminate testing at any time when any system, sub-system, system component or cabling infrastructure fails to perform as specified. Upon termination of testing, the Contractor shall commence an assessment period.

J. Adjustment, Correction, and Maintenance

1. During endurance testing make adjustments and corrections to system only after obtaining written approval of the Authority.
2. During endurance testing, perform required maintenance on systems including provision of replacement parts.

K. Final Inspection and Acceptance

1. After endurance testing is complete, review tabulated records with the Authority.
2. The Contractor will not be responsible for failures caused by:
   a. Outage of main power in excess of backup power capability provided that automatic initiation of all backup sources was accomplished and automatic shutdowns and restarts of systems performed as specified.
   b. Failure of any Authority furnished power, communications, and control circuits provided failure was not due to Contractor furnished equipment, installation, or software.
   c. Failure of existing Authority equipment provided failure was not due to Contractor furnished equipment, installation, or software.

3. When performance of integrated system does not fall within the above rates, determine cause of deficiencies, correct, and retest.
   a. When requested by the Authority, extend monitoring period for a time as designated by the Authority.
   b. Submit final report of endurance testing containing all recorded data.
4. The Contractor shall submit written certification that:
   a. The Contract Documents have been reviewed.
   b. All required as-built documentation has been submitted and approved by the Authority.
   c. The Project had been inspected for compliance with the Contract Documents.
   d. The Work has been completed in accordance with the Contract Documents.
   e. The equipment and systems have been tested and are shown operational in the presence of the Authority.
   f. The Project is completed, and is ready for final inspection.

3.13 TRAINING

A. General

1. By means of training classes augmented by individual instruction as necessary, the Contractor shall fully instruct the Authority’s designated staff in the operation, adjustment and maintenance of all products, equipment and systems. The Contractor shall be required to provide all training aids, e.g., notebooks, manuals. The Contractor shall provide an appropriate training area equipped with all required equipment. The location of the training area shall be coordinated with the Authority.
2. All training shall be completed a minimum of two weeks prior to system cut over. Training schedule shall support the various work shifts of airport and tenant personnel and shall be subject to the Authority approval.
3. Training shall be conducted by experienced and factory authorized personnel and supported by training aids. An adequate number and amount of training material shall be provided by the Contractor. The following is considered a minimum.
   a. Functional flow-charts, overall block diagrams, and descriptive material for all software;
   b. Schematic drawings for each of the hardware components;
   c. All procedure manuals, specification manuals, and operating manuals;
   d. Detailed as-built drawings.
4. Participants shall receive individual copies of technical manuals and pertinent documentation at the time the course is conducted. The courses shall be scheduled such that Authority personnel can participate in all courses (no overlap).
5. A final course schedule and syllabus shall be prepared by the Contractor for each course to be conducted for Authority personnel, and submitted for review at least four (4) weeks prior to the scheduled date of the course commencement.

6. Each course outline shall include, in addition to the subject matter, a short review of the prerequisite subjects (where appropriate); how this course fits into the overall training program; the objective; the standards of evaluation; and any other topics that will enhance the training environment.
7. Provide detailed video recordings in high quality digitally formatted media of all demonstration and training of all systems and system operations.
    a. Utilize remote microphones as may be required to ensure high quality audio of the recorded demonstrations.
    b. Permanently and professionally label all recorded materials and provide self-sealing plastic cases for each training session.
8. All training requirements identified are minimum requirements.

B. Types of Training

1. User Training: System users shall be instructed in all aspects of operations of the system, including the business intelligence tool and all reporting functions and shall conform to the following minimum requirements:
    a. Training classes shall be scheduled not less than 48 hours apart to allow The Authority’s User/Operators to familiarize themselves with all system operations.
        1) Basic Training: Provide twelve (12) hours of basic user training shall be provided (2-hour class repeated 6 times spaced over a two-week interval. User training shall be conducted at a location that is coordinated with the Authority.
        2) Advanced Training: Provide twelve (12) hours of advanced user training shall be provided (4-hour class repeated 3 times with six advanced users per class). User training shall be conducted at a location that is coordinated with the Authority.
        3) System Administrator Training: System Administrator Training shall be provided. System Administrator Training shall include both classroom work and field training.
        4) Software/Operational Training: Provide twenty-four (24) hours of software training (24 hours of training shall be repeated 1 time for 1 system administrator).
2. The Contractor shall structure each training course to describe all systems, software and applications as well as support programs. This course shall include a functional overview of the complete software and operations of each system. The course material must be presented in depth by a factory authorized instructor and shall covering in detail at the minimum all system functions, features rebooting and maintenance criteria.
3. Provide operation, parts, and maintenance manuals defining operation and troubleshooting methods of all systems and review with The Authority’s User/Operators as part of training demonstrations.
4. Provide detailed video recordings in high quality digitally formatted media of all demonstration and training of all systems and system operations.
    a. Utilize remote microphones as may be required to ensure high quality audio of the recorded demonstrations.

b. Permanently and professionally label all recorded materials and provide self-sealing plastic cases.

PROJECT CLOSEOUT REQUIREMENTS

In addition to all final close requirements as specified by Division 01, the Contractor shall comply with all requirements of this Section.

3.14

Final System Acceptance

A.
1. In addition to the requirements set forth in Division 01, the Contractor shall prepare and issue a Certificate of Project Completion, containing:

B.
   a. The date of project completion.
   b. A list of items that have been corrected by the Contractor.
   c. The time and date the Authority will assume possession of the system (transfer of ownership).
   d. The date that warranty begins.
2. The Authority will perform an inspection after receipt of written certification. The project completion inspection shall include, but not be limited to:
   a. The project's contracted work and any additional change orders.
   b. All equipment and systems tested and shown operational in the presence of the Authority.
3. After the inspection the Authority will prepare and submit to the Contractor, a list of items to be completed or corrected, as determined by the inspection, along with the designated timeframe for completion.
4. Should the Authority consider the work not to be complete, the Authority will immediately notify the Contractor, in writing, stating the reasons. The Contractor shall complete the work, and then send a second written notice to the Authority certifying that the Project is complete. The Authority shall then re-inspect the work upon Contractor's request at a scheduled re-inspection time.
   a. At any time, the Authority shall have the right to Contract with a third party in order to complete and/or inspect any work of which Contractor failed to

C.
   conform with the Contract requirements. All cost for this third party shall be borne by the original Contractor responsible for delivering the project.

Inspections

1. At the completion of the project and prior to final acceptance of the Work, provide evidence of final inspections and approvals to The Authority, in accordance with all requirements of the Contract Documents as well as required by the authorities having jurisdiction.
2. Authority approval is required prior to final system acceptance and payment.

END OF SECTION 27 05 00

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and all related Specification Sections, shall all apply to this Section.

B. Related Specification Sections:

1. Division 26 – Common Work Results for Electrical
2. Division 26 – Building Wire and Cable
3. Division 26 – Grounding and Bonding
4. Division 26 – Hangers and Supports
5. Division 26 – Conduit
6. Division 26 – Outlet Boxes

C. Reference Symbols:

1. Refer to specification Section 27 05 00 for additional information.

D. Abbreviations:

1. Refer to specification Section 27 05 00 for additional information.

E. Definitions:

1. Refer to specification Section 27 05 00 for additional information.

1.2 SUMMARY

A. In addition to all requirements stipulated in Specification 27 05 00, this section contains the overall requirements and design intent associated with the grounding and bonding of all

Division 27 infrastructures as it relates to the installation of the following communications, cabling, equipment and systems:

1. Premise Distribution System
2. VoIP Telephone System
3. Wireless Local Area Network (WLAN) and Bluetooth Wayfinding Beacons
4. Common Use Passenger Processing Systems
5. Common Use Self-Service Systems
6. Queue Management System
7. Multi-User Flight Information Display System (MUFIDS)
8. IP Master Antenna Television System
9. Global Positioning System (GPS)
10. Public Address / Paging / Emergency Communications System
11. Access Control System (ACS)
12. Video Surveillance System (VSS)

B. Additionally, this section also addresses all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications related to the grounding and bonding of all network communication cabling and equipment for this project. Refer to specification Section 27 05 00 for additional project requirements.

C. Use of Premises

1. Refer to specification Section 27 05 00 for additional information.

D. Coordination

1. Refer to specification Section 27 05 00for additional information.

1.3 SCOPE OF WORK

A. Refer to related Division 27 specification sections and "T" series drawings for all Division 27 project scopes of work including but not limited to all cabling infrastructures, network equipment, and connected systems when applying all grounding and bonding applications.

B. At the minimum, the scopes of work covered as herein specified shall include but are not limited to all necessary labor, equipment, material, cabling, commissioning, and testing as well as all appurtenances necessary for the proper installation and fully functional grounding and bonding system to support all Division 27 communications systems for this project.

1. Additional requirements of all related specification sections shall also apply. It shall be the Contractor's responsibility for full compliance with all requirements of 27 05 00 as well as all related specification sections as necessary to deliver complete and fully functional grounding and bonding infrastructure in accordance with the requirements of all Contract Documents.

1.4 REFERENCES

A. In addition to the references stipulated in Specification 27 05 00 the following shall also apply;

1.5 SYSTEM DESCRIPTION

A. Design Requirements

1. In addition to the requirements stipulated by specification Section 27 05 00 the following shall all apply in the design, and installation of all grounding and bonding applications;

    a. ANSI J-STD 607-B - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises.
    b. BICSI Telecommunications Distribution Methods Manual
    c. ANSI/NECA/BICSI 607 - Standard for telecommunications bonding and grounding
    d. NEC Article No. 250 - Grounding
    e. IEEE 1100 - Recommended Practices for Powering and Grounding Sensitive Electronic Equipment
    f. IEEE 142-82 - Recommended Practice for Grounding of Industrial and Commercial Power Systems

2. Bond the following items within the telecommunications grounding system.

    a. All communications system active equipment.
    b. All POU and surge protection equipment.
    c. Raised floor systems.
    d. Underfloor grounding grids (a.k.a. "supplemental bonding grids" or SBGs) for computer or telecommunications rooms.
    e. Metallic raceway systems, including metallic cable trays.
    f. Communications equipment enclosures (cabinets) or cross-connect frames.
    g. Broadband passive devices.
    h. Metallic splice cases.
    i. Metallic cable screens, armor or shields.
    j. All metal cable conduit.
    k. Electrical service panels in entrance facilities, telecommunications and equipment rooms.
    l. Wall and rack mounted grounding busbars.
    m. Exposed building steel that is within 6 feet of equipment racking systems.
    n. Building steel extending to earth in outside-plant.
    o. All related bonding accessories.
    p. Completely protect above-surface structures and equipment.
    q. Calculate system on the basis of existing soil resistivity.
    r. If cathodic protection for underground sewer pipe is installed ensure the pipe is not connected to the general grounding system, either directly through grounding cable or indirectly through grounded electrical devices connected to the pipe.

        1) Electrically isolate electrical devices from sewer pipe.

B. All electronic equipment, conduits, cable trays, racks/cabinets and cable shields shall be properly grounded and bonded in accordance with all requirements of ANSI/TIA 607-A, NEC 250 and IEEE 1100.

1. A Telecommunications Grounding System shall be installed in all communications equipment rooms. Grounding system shall provide equalization of the grounding potentials between the building power system and the telecommunications main grounding bus-bar (TMGB) as well as all telecommunications grounding bus-bars (TGB).

    a. Grounding bus-bar shall provide the diversion of electrical transients from the telecommunications cables and to provide a safety ground for all equipment racks/cabinets, conduits, cable trays and cable shields as well as providing the required coupling to cancel and/or reduce transients.

2. The TMGB and each TGB shall be provided where indicated on the drawings and shall provide an effective bonding connection to the nearest approved building grounding electrode (e.g., structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board's equipment grounding busbar.

    a. The minimum bonding shall be #6 AWG copper conductor connected to the TMGB and all TGB's. Connections shall be 2-hole NEMA type compression or exothermic welded connections.

        1) Metallic cable shield shall NOT be used as a Telecommunication Bonding Backbone (TBB).

        2) Interior water piping system shall NOT be used as a TBB.

3. All grounding connections shall provide the equalization of all grounding potentials between the building power system and the grounding terminations at the communications equipment in order to provide the diversion of electrical transients as well as providing the necessary coupling in order to cancel and/or reduce any voltage transients.

    a. The Contractor must provide accessible means to a direct electrical service ground, which is one of the best points for grounding communications systems. NEC Section 250.94 and 800.100 requires an intersystem bonding connection accessible at the electrical service equipment, such as:

        1) Approved external connection on the power service panel.

        2) Exposed metallic service raceway (using an approved bonding connector).

        3) Grounding electrode conductor.

    b. For grounding connectivity between buildings, rooms and/or spaces all bonding conductors are to be installed in dedicated conduits and conform to NFPA 70 fill ratios. All conduits shall be properly grounded end to end and all grounding conductors shall be sized in accordance with ANSI-J-STD-607-B.

1) Refer to the following Chart for minimum grounding conductor size and length requirements.

TBB Conductor Length Size vs.	
TBB/GE Linear Length	TBB/GE Size
Feet (m)	(AWG)
Less than 13' (4) 6	6
14–20' (4 -6)	4
21–26' (6–8)	3
27–33' (8–10)	2
34–41' (10–13)	1
42–52' (13–16)	1/0
53–66' (16–20)	2/0
37–84' (20–26)	3/0
85–105' (26–32)	4/0
*Reference ANSI-J-STD-607-B for more information.	

c. Equipment Grounding: All metallic structures, equipment racks, cabinets and enclosures as well as all raceways, cable trays, junction boxes, outlet boxes, machine frames, and other conductive items shall be bonded and grounded in accordance will applicable codes and standards.

d. Duct Banks and Manholes: Provide an insulated equipment grounding conductor in each duct containing any voltage conductors, sized per NEC except that minimum size shall be No. 2 AWG. Bond the equipment grounding conductors to the grounding bus, to all manhole hardware and ground rods, to the cable shielding grounding provisions for all cable splices, terminations and equipment enclosures.

e. Metallic Fences equipped with communications equipment: Fences shall be grounded with a ground rod at each fixed gate post and at each corner post.

1) Drive ground rods until the top is 300 mm (12 inches) below grade. Attach a No. 4 AWG copper conductor, by exothermic weld to the ground rods and

extend underground to the immediate vicinity of fence post. Lace the conductor vertically into 300 mm (12 inches) of fence mesh and fasten by two approved bronze compression fittings, one to bond wire to post and the other to bond wire to fence.

2) Each gate section shall be bonded to its gatepost by a 3 by 25 mm (1/8 by one inch) flexible braided copper strap and ground post clamps. Clamps shall be of the anti- electrolysis type.

4. All connections of grounding conductors to ground rods, bus bars, rebar, structural members, pipes and fences, as well as splices of any ground conductors, shall be made by exothermic welds except where otherwise noted. All connections to bar lugs shall be exothermic weld or compression type connections. Bolted type connection of ground conductors may only be made where terminal lugs or blocks have been furnished and installed in equipment by the manufacturer.

a. Equipment grounding conductors shall be insulated stranded copper, except for sizes No. 10 AWG and smaller shall be solid copper. Insulation color shall be continuous green for all equipment grounding conductors, except that wire sizes No. 4 AWG and larger shall be permitted to be identified per the NEC.

1) At the minimum bonding connection shall be a #6 AWG copper conductor. All grounding shall provide an effective bonding connection between the protected equipment to the nearest approved building grounding electrode (structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board's equipment grounding busbar). All bonding and grounding connections shall be NEMA type compression or exothermic welded connections.

5. Refer to related specification sections for any additional grounding and bonding requirements.
6. A Telecommunications Grounding System shall be installed in all communications equipment rooms. Grounding system shall provide equalization of the grounding potentials between the building power system and the telecommunications main grounding bus-bar (TMGB) as well as all telecommunications grounding bus-bars (TGB).

a. Grounding bus-bar shall provide the diversion of electrical transients from the telecommunications cables and to provide a safety ground for all equipment racks/cabinets, conduits, cable trays and cable shields as well as providing the required coupling to cancel and/or reduce transients.

1.6 SUBMITTALS

A. In addition to the submittal requirements as stipulated by Division 01, Specification Section 27 05 00 as well as all related specifications sections, the Contractor shall also conform with the following submittal requirements:

1. Product Data:

    a. Manufacturers catalog data and applicable special fabrication and installation details.
    b. Installation, terminating and splicing procedures.
    c. Instructions for handling and storage.
    d. Dimensions and weights of material.
    e. Conformance Certificate and Quality Assurance Release: Signed by Owner.
    f. Specifically identify products and include purchase order number, supplements, and item number where applicable. Indicate that requirements are met and identify approved deviations.
    g. Include recommended spare parts list for approval by Owner.

1.7 QUALITY ASSURANCE

A. In addition to the requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. The Contractor shall furnish and install only products of latest proven design, new and in current production. Use of obsolete components or out-of-production products shall not be acceptable.
2. All cable shall pass vertical tray flame test in accordance with IEEE 383-2.5 standards.

1.8 DELIVERY STORAGE AND HANDLING

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply.

1. Protect wire wood lagging or suitable barrier across the traverse of reels. Provide heat-shrink self-sealing end caps on cable.
2. Protect wire wood lagging or suitable barrier across the traverse of reels. Provide heat-shrink self-sealing end caps on cable.

1.9 RECORD DOCUMENTS

A. Refer to specification Section 27 05 00 for additional information.

1.10 OPERATIONS AND MAINTENANCE

A. Refer to specification Section 27 05 00 for additional information.

1.11 SOFTWARE AGREEMENT

A. Not Applicable

1.12 EXTRA MATERIAL

A. Not Applicable

1.13 ENVIRONMENTAL CONDITIONS

A. Refer to specification Section 27 05 00 for additional information.

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, that meet and/or exceed the specified performance and features of the equipment and/or systems and for which replacement parts shall be readily available to the contractor and/or Owner.
2. The equipment specified is based on the acceptable manufacturers listed. Where "or equal” is stated, equipment shall be equivalent in every way to that of the equipment specified, and subject to approval.

    a. When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.

3. Acceptable manufacturers for each system shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.

    a. Manufacturers listed as acceptable shall not negate the contractors’ responsibility for providing all equipment, devices, components, and/or systems, in accordance with all functions and performance requirements of the Contract Documents.

B. Manufacturers

1. Cable Manufacturers/Suppliers:

    a. Houston Wire and Cable Company
    b. Okonite Company
    c. Anixter

d. Graybar
e. CSC (Communication Supply Company)
f. Cablec Continental Cables Company
g. Pirelli Cable Corporation
h. Triangle Wire and Cable, Inc.

2. Ground Rod and Connector Manufacturers:

a. Copperweld
b. Thomas and Betts
c. Blackburn

3. Exothermic Connector Manufacturers:

a. Erico Products (Cadweld)
b. Burndy Corporation (Therm-O-Weld)
c. OZ Gedney

4. Grounding Connector Manufacturers

a. Thomas and Betts
b. Burndy Corporation
c. O.Z. Gedney
d. Panduit

5. Telecommunications Busbars:

a. Erico Products
b. Cooper B-Line
c. CPI Chatsworth
d. Panduit

C. Materials

1. Grounding Conductors: Bare or insulated copper AWG wire following ASTM-B3, ASTM-B8 and ASTM-B33, of following sizes:

a. A minimum of 6 AWG, stranded, insulated (green) copper conductor should be used for communications since this accommodates different code requirements and allows for future changes.
b. Metallic cable shield shall NOT be used as a Telecommunication Bonding Backbone (TBB).
c. Interior water piping system shall NOT be used as a TBB

2. Grounding Connectors: It is recommended that connectors should be one of the following:

a. Tin-plated copper

b. Copper
c. Copper alloy

3. Ground Rods: A minimum of 10 feet long, 3/4-inch diameter, copper-clad steel.

   a. Where single conductor insulated grounding conductors is required, furnish green color (or tape marking) insulation rated for 600 volts.

4. Telecommunications Main Grounding Busbar (TMGB):

   a. The TMGB shall be a predrilled copper busbar with standard NEMA bolt hole sizing and spacing for the type of connectors to be used. (Both holes in two holed lugs must be attached to busbar)
   b. The TMGB shall be sized for the immediate requirements and allow for 100% growth.
   c. The minimum busbar dimensions are .25" thick x 4" wide x 20" long.
   d. The busbar shall be electro-tin plated for reduced contact resistance.

5. Telecommunications Grounding Busbar (TGB):

   a. The TGB shall be a predrilled copper busbar with standard NEMA bolt hole sizing and spacing for the type of connectors to be used. (Both holes in two holed lugs must be attached to busbar)
   b. The TGB shall be sized for the immediate requirements and allow for 100% growth.
   c. The minimum busbar dimensions are .25" thick x 2" wide x 12" long.
   d. The busbar shall be electro-tin plated for reduced contact resistance.

6. Rack-Mounted Grounding Busbar (RMGB):

   a. The RMGB shall be a predrilled copper busbar with standard NEMA bolt hole sizing and spacing for the type of connectors to be used. (Both holes in two holed lugs must be attached to busbar)
   b. The TGB shall be sized for the immediate requirements and allow for 100% growth.
   c. The minimum busbar dimensions are 1/16" thick x 19" wide x 3/4" long.
   d. The busbar shall be electro-tin plated for reduced contact resistance.

PART 3 - EXECUTION

3.1 COORDINATION

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of the grounding and bonding of any cables, conduits, cable trays, or systems including but not limited to all equipment locations, communication room/spaces, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the County.

    a. Coordinate exact location of all desktop/counter mounted equipment with the County, as well as all affected trades and tenants prior to the installation of any required grounding or bonding conductors.
    b. Coordinate exact location(s) of all above ceiling grounding and bonding conductors, conduits, equipment, and/or devices with all architectural plans, reflected ceiling plans and affected trades prior to installation.
    c. Grounding and bonding installations requiring coordination with other trades the contractor shall provide all templates, backboxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.
    d. If installation of conductors, conduits, devices or components is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner.

2. Provide coordination with all system sub-contractors and trades the proper installation of all grounding and bonding conductors, equipment, or components, necessary to provide fully functional grounding and bonding systems in accordance with all applicable specification sections.

B. The Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings, equipment submissions and all other documents submitted for review shall be made available on site to the County upon request.

C. Coordinate any work scheduled to be provided by the County that impact the scope of work associated with the grounding and bonding requirements of this project. Schedule all work to ensure that the work of the Owner and all Owner Vendors can proceed in accordance with the Project Schedule.

3.2 PREPARATION

A. Complete site preparation and soil compaction before trenching and driving ground rods for underground use.

1. Verify exact location of stub-up points for grounding of equipment, fences and building or steel structures.
2. Verify wiring for all electrical equipment and/or systems is single conductor cable in conduit and each conduit contains a green-color insulated equipment-grounding

conductor connected to lighting system. If no ground conductor is present, install conductors as required.

3. All copper and copper alloy connections should be cleaned prior to connection.

3.3 EQUIPMENT PROTECTION

A. Refer to specification Section 27 05 00 for additional information.

3.4 WORK PERFORMANCE

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Coordinate the grounding and bonding of all cabling, conduits/raceways and cable trays and equipment with applicable trades to ensure proper conductivity and function of all grounding and bonding terminations in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

    a. Coordinate with all trades at the time of shop drawing submission detailing all conditions impacting the installation of any grounding and bonding conductors or components. The contractor shall coordinate with the appropriate trade all conditions impacting the grounding and/or bonding of any system, conduit, or cable tray including but not limited to all communications rooms, equipment locations, site conditions, and above ceiling spaces, to the satisfaction of all concerned trades, subject to final review by the County.

        1) Coordinate exact location of all desktop/counter/wall mounted equipment with the County and all affected trades prior to the installation of any grounding conductors.

        2) Coordinate exact location(s) of all grounding conductors, conduits, equipment and/or device installations with all architectural plans, site plans, reflected ceiling plans and affected trades prior to installation.
            a) Equipment installations requiring coordination with other trades the contractor shall provide all templates, back- boxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.

        3) If installation of any grounding or bonding devices, conductors, and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make

necessary changes to correct the condition at no additional cost to the County.

3.5 INSTALLATION

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, install all grounding and bonding scopes of work in accordance with manufacturer’s recommendations, approved submittals as well as all applicable codes and standards.

1. The Contractor shall provide all tools and test equipment required to install, verify, and test the installation and to determine that it meets the specifications. The Contractor shall furnish all necessary materials required to implement and to achieve the required work performance.
2. All equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specification shall be subject to the control and approval of the County.
3. Follow manufacturers' instructions for installing, all components and making all conductor terminations. Submit two (2) copies of such instructions to the County before installing any devices or conductors and grounding and bonding of any equipment. Provide an additional copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.
4. Grounding busbars and termination component locations shall be as close as practical to locations as indicated on the contract drawings.

    a. Provide all appropriate clearances in accordance with NEC requirements. Arrange busbars and termination components to facilitate unrestricted access for maintenance and service of all equipment, components, and/or conductor terminations.

5. Where the County determines that the Contractor has installed equipment not conveniently accessible for operation and maintenance, the equipment shall be removed and reinstalled as directed at no additional cost to the project.

    a. "Conveniently accessible" is defined as being capable of being reached without the use of ladders, or without climbing or crawling under or over obstacles such as, but not limited to, motors, pumps, belt guards, transformers, piping, ductwork, conduit and raceways.

6. Installation\Mounting of all grounding and bonding hardware, components, equipment and/or appurtenances must comply with the appropriate IBC Seismic requirements for the region.

    a. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.

7. For equipment mounted in drawers or on slides, provide the interconnecting grounding conductor where required. Grounding conductor shall be provided with a service loop of not less than three feet and ensure that the cable is long enough to allow full extension of drawer or slide.

B. All grounding and bonding installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer's requirements. Conductor terminations at all equipment locations shall comply with all state and local electrical codes. Test all grounding and bonding connections for continuity, resistance and errant current flow to ground immediately after termination.

1. Bonding conductors shall be routed with minimum bends or changes in direction and should be made directly to the points being bonded, and shall be one continuous run NO splices.
2. Bonding connections should be made by using:

   a. Double crimp connectors only for all horizontal runs (cabinets trays etc.). Use listed hardware that has been laboratory tested. For double crimp connectors use 2-hole type connector.
   b. Exothermic welding (per NEC) within the ground electrode system, for parts of a grounding system that are subject to corrosion or that must carry high currents reliably, or for locations that require minimum maintenance. Exothermic-weld to be used on the Telecommunications Bonding Backbone (TBB) conductor for all connections.

3. Install main ground loop minimum 18" (inches) below ground surface.
4. Drive grounding rods vertically, so at least 8 feet of rod is in contact with the soil. All connections shall be exothermic-weld. Install additional ground rods as required to pass resistance test.
5. Make connections only to dry surfaces with paint, rust, oxidation, scales, grease, dirt or other foreign material is removed. Ensure proper conductivity.
6. Make above-grade grounding connections with Exothermic-weld.

   a. Ground small groups of isolated equipment with No. 3/0 minimum insulated conductor connected to the main loop.

C. Equipment Grounding:

1. Make grounding connections to electrical equipment, vessels, mechanical equipment, equipment enclosure, relay racks, and ground rods in accordance with NEC.
2. Make grounding connections to tanks and vessels to integral structural supports or to existing grounding lugs or pads, and not to the body of the tank or vessel.

D. Telecommunications Raceway and Support Systems Grounding:

1. Bond and ground raceway, cable rack or tray and conduit together and permanently ground to the equipment grounding busbar. Connection to conduit may be with grounding bushing.

2. Connect ladder-type cable tray to grounding electrode system. Telecommunications cable tray that is in the same room, as the TGB shall be connected to the TMGB.
3. Bond and ground raceway at low voltage motor control centers or other low voltage control equipment, except conduit which is effectively grounded to sheet metal enclosure by bonding bushing or hubs need not be otherwise bonded.
4. Where only grounding conductor is installed in a metal conduit, bond both ends of conduit to grounding conductors.
5. Provide flexible "jumpers" around raceway expansion joints and across cable tray joints parted to allow for expansion and hinged cable tray connections. Provide copper bonding straps for steel conduit.

E. Telecommunications Grounding and Bonding Infrastructure:

1. Install the TMGB in the Telecommunications Entrance Facility (TEF) or Main Distribution Frame (MDF) as close to the panel-board as possible. The TMGB should also be located so that the bonding conductor is as short and straight as possible. Maintain clearances required by applicable electrical codes.
2. If a panel-board is not installed in the TEF or MDF, locate the TMGB near the backbone cabling and terminations.
3. The TMGB shall be insulated from its support with a recommended separation of 2 inches.
4. Connect the TMGB to the electrical service ground and telecommunications primary protectors.
5. The minimum Telecommunications Bonding Backbone (TBB) conductor size shall be No. 2 AWG. The TBB originates at the TMGB and extends throughout the building using the telecommunications backbone pathways, and connects to the TGB(s) in all telecommunication closets and equipment rooms.
6. Install the TGBs in the telecommunications closets and equipment rooms as close to the panel-board as possible. The TGB should also be located so that the bonding conductor is as short and straight as possible. Maintain clearances required by applicable electrical codes.
7. The TGB shall be insulated from its support with a recommended separation of 2 inches.
8. Properly bond and ground all communications cabinets, equipment racks, raceway, cable rack or tray, and conduit directly to TMGB or TGB.

    a. Daisy chaining of equipment is not permitted

9. Preparation: Copper and copper alloy connections shall be cleaned prior to connecting.
10. Bonding conductors shall be routed with minimum bends or changes in direction and should be made directly to the point being bonded. Change of direction shall be taken over as wide a radius as possible with a minimum radius of one foot.
11. Make connections only to dry surfaces with paint, rust, oxides, scales, grease and dirt removed. Ensure proper conductivity.
12. Grounding conductors, by gauge, shall be continuous, with splices, from a larger gauge feeder to the last frame or component served by the grounding lead (ex. 750 KCM to 500 KCM to 1/0, etc.).

a. C-Taps from Aisle equalizer to a frame can be the same gauge (ex. E.g., 6 AWG to 6 AWG).
b. Cable to Cable taps shall be made with exothermic weld, or listed compression connectors.

13. No aluminum conductors or connectors shall be used in any bonding and grounding system.
14. Ground bars not supplied as part of a standard assembly shall be copper or tinned copper.
15. Both ends of the grounding conductors shall be equipped with a printed destination label recording the far end termination. The label shall be applied within 6 inches of the termination and be visible from the floor.
16. All metallic items that interact electro-magnetically with Network/Telecommunications equipment shall have their framework bonded and grounded to the Telecommunications grounding system with a minimum #6 AWG grounding conductor. Example includes switch frames, power plants frames, battery stands, storage cabinets and other metallic objects, etc. "Daisy Chaining" or frame to frame connecting of these conductors is NOT permitted.
17. TMGB and TGB shall be stenciled and labeled per ACAA requirements. Refer to related specification section 27 05 53 for additional information related to identification and labeling of communication infrastructure.
18. Refer to "T" series drawings for applicable grounding and bonding details as well as all related specification sections for any additional information to all grounding and bonding requirements.

F. Fences and Gates located in the equipment rooms:

1. Ground all fences, fence posts and gates used in the segregation of any communications rooms to nearest TMGB or TGB in accordance with all requirements as herein specified.

G. Telecommunications Cable Armored and/or Shielded:

1. Terminate and ground shield of shielded control cable at one end only, preferably at the control panel end for instrument and communication cable and at the supply end for electronic power cables. Maintain shield continuity by jumping the ground shield across connection point where it is broken at junction boxes or other splice points.
2. Connect ground wire in power cable assemblies at each terminal point to a ground bus, if available, or to the equipment enclosure.

a. Do not extend these ground wires through "doughnut" CTs used for ground fault relaying, but do extend ground leads from stress cones. Ground power cable armor and shield at each terminal point.

3. Bond and ground exposed cable shields and metallic sheaths according to the manufacturer's guidelines. They should also be grounded as close as possible to the point of entrance.

4. Intra-building telecommunications cabling that is armored or has a metallic shield must be bonded to the building grounding system at each end.
5. The Contractor's quality assurance Inspector shall conduct a visual inspection of all grounding and bonding connections to verify that all installations and terminations are in accordance with the applicable code, standard and manufacturer's requirements. Record of all inspections shall be signed and dated by the Quality Assurance Inspector and provided to the County. Prior to any scheduled inspections, the County representative shall be notified by the Contractor of any inspection(s) so they may witness.

H. Hardware, Component or Equipment Installation

1. The Contractor shall install and inspect all hardware, materials, components, equipment and/or system installations in accordance with this and related specification sections as well as all applicable codes, standards and manufacturer's requirements. Location of all hardware, component or equipment installation shall be documented at the time of submittals and is subject to the County approval.
2. The Contractor shall be responsible for any and all loss or damage in the shipment, delivery and installation of all hardware, component or equipment until transfer of title to the Owner.
3. The Contractor shall obtain written permission from the County before proceeding with any work which requires cutting into or through any part of the building structures such as, but not limited to, girders, beams, concrete, carpeted or tiled floors, partitions or ceilings.

    a. The Contractor shall obtain written permission from the County before cutting into or through any part of the building structures where fireproofing or moisture proofing could be impaired.

        1) In any such case, the Contractor shall be responsible for restoring the affected area to "like-new" condition or to a condition to match the existing conditions.

4. The Contractor shall take all steps necessary to ensure that all construction or public accessible areas remain clear or are properly marked during installation or maintenance.
5. The Contractor shall coordinate installation with the County, to minimize disruption of existing functions at the airport.
6. The Contractor shall install hardware, component or equipment only in those locations that have been previously approved during the submittal review. Any other locations shall be approved, in writing, by the County prior to deviation from shop drawings or installation.
7. The Contractor shall label all hardware, components or equipment cabling in accordance with all requirements of specification section 27 05 53. Coordination of all labeling schemes shall be provided as part of the submittal process and shall be approved, prior to any implementation by County.

I. Conduits/Raceways

1. In addition to all requirements of Specification Section 27 05 00 as well as Specification Section 27 05 26 the Contractor shall provide the following as related to the installation of any grounding and bonding system. Refer to all related specification sections for additional conduit and raceway information.

    a. All conduits/raceways shall be concealed and shall be installed above accessible finished ceilings and/or in walls. Any conduits/raceways installed in areas requiring installation to be exposed, shall be installed as tight as possible to ceilings and at right angles to walls/building lines and shall not obstruct any access hatches, equipment service panels, lighting or other equipment and/or devices. No exposed conduits/raceways shall be installed without prior approval of the County.

        1) Where conduits cannot be concealed above ceilings or in walls and must be installed in finished or occupied areas of the building, all conduits shall be finished wire-mold type raceways or approved equal. Finished wire-mold type raceways shall not be installed without prior approval in writing by the County.

        2) Where any equipment and/or junction boxes are installed above non-accessible finished ceilings, the contractor shall provide access hatches listed for the intended application. Access hatches shall be located so that service access to the equipment and/or junction boxes is unimpeded.

            a) Access hatches shall not obstruct any equipment, service panels, lighting equipment, devices, or any architectural elements of the ceiling. At the time of submittals, the contractor shall submit all proposed access hatch locations for review by the Design Professional

        3) All conduits/raceways shall be supported in accordance with NEC requirements and shall be affixed in such a manner that tampering and/or removal without the use of specialized tools shall be prevented.

        4) All conduits/raceways shall be installed in a manner that prevents tampering or removal when installed in areas exposed to the general population.

            a) Provide tamper-resistant installation utilizing "torx with peg" security-fastening devices for all conduits/raceways, equipment, devices and appurtenances in all areas accessible to the general population and/or areas subjected to tampering or vandalism.

    b. Interior raceways shall be a minimum 1 inch unless otherwise noted. Exterior raceways shall be a minimum 1 1/4-inch. Size all raceways and install conductors in accordance with NEC requirements. Fill ratio shall not exceed 40 percent for indoor raceways or exterior raceways.

1) EMT conduit with compression fittings may be utilized in all inaccessible ceiling areas unless otherwise restricted by code.

2) Threaded Rigid metal conduit shall be used on all exterior applications, stub-ups and all interior areas where concealed conduit requirements cannot be met and are exposed to tampering or damage by the general population.

a) All areas considered being of high risk due to the nature of the occupancy or the need to protect and maintain the integrity of the cabling shall be installed in rigid threaded conduits.

c. Conduit expansion couplings shall be furnished and installed in all areas where expansion/contraction of structure may occur in order to couple two sections of a conduit runs to support longitudinal movement. The contractor shall refer to architectural drawings for exact locations of all building expansion joints.

1) Conduit expansion couplings shall be consistent with the size the conduit being installed, shall be steel electrogalvanized, and shall meet all environmental and seismic conditions.

2) Expansion couplings shall be weatherproof and approved for use indoors or outdoors without an external bonding jumper.

3) Expansion couplings shall be UL Listed and approved for use in wet locations.

4) Expansion couplings shall comply with UL 514B, CSA 22.2 No. 18 3-12, NEMA FB1.

d. Exterior raceways: PVC schedule 40 conduit at the minimum shall be utilized in all underground applications unless otherwise specified by related specification sections. The conduit shall be buried at a minimum 36" below grade. Warning flagging tape shall be buried 12" below grade to indicate the conduit routing location. Refer to related specification sections for additional requirements.

1) The Contractor shall have the option to utilize the same trench/routing location as other utilities. In no case shall any system conduits or duct banks be combined with other electrical utilities without providing the required separation between conduits as necessary to ensure the minimal transmission or conduction of any RF and/or EMI signals.

J. Penetrations of Walls and Floors:

1. Refer to specification Section 27 05 00 for additional information.

3.6 ELECTRICAL POWER DISTRIBUTION

A. Refer to specification Section 27 05 00 for additional information.

3.7 TRANSIENT VOLTAGE SUPPRESSION

A. Refer to specification Section 27 05 00 for additional information.

3.8 EQUIPMENT IDENTIFICATION

A. Refer to specification Section 27 05 00 for additional information.

3.9 MAINTENANCE AND SERVICE

A. Refer to specification Section 27 05 00 for additional information.

3.10 WARRANTY

A. Refer to specification Section 27 05 00 for additional information.

3.11 FIELD SERVICES

A. In addition to all testing requirements as specified by Division 01, Specification 27 05 00 as well as all related Division 27 Specification Sections, testing of all grounding and bonding functions shall be provided in accordance with the following requirements;

1. Notify the County in writing, prior to the closing of any ceilings and ten (10) days advance of testing all grounding and bonding connections to prevent delays in construction schedules.
2. Test all grounding and bonding conductors prior to start-up and commissioning of any, communications components, devices, equipment and/or systems.

B. Before requesting a final inspection, the contractor shall perform a series of end to end installation performance tests. The contractor shall submit for approval by the County all test procedures to be employed, test result forms, and timetable for testing all grounding and bonding connections.

C. Acceptance of the test procedures is predicated on the contractor's use of the specified products.

1. The grounding and bonding, of any sub-systems, system components, equipment, materials, and conductors shall be furnished and installed as herein specified as well as all related specification sections. All grounding and bonding shall be installed in accordance will the Contract documents, as well as all manufacturer's recommended practices, applicable codes, standards and industry practices.

2. Acceptance of the completed installation for each system will be evaluated in accordance with the following factors;

    a. Phases of Testing:

        1) On-Site Performance Verification Testing

        2) On-Site Final Acceptance Testing

3. Test Plan/Procedure: Refer to specification Section 27 05 00 for additional information.

4. Test Reports: Refer to specification Section 27 05 00 for additional information.
5. Test Resolution: Refer to specification Section 27 05 00 for additional information.

D. At the minimum, the testing of all grounding and bonding connections to any hardware, materials, components, equipment and/or systems shall include the following requirements;

1. Test grounding system before grid trenches are back-filled. Test for ground resistance after installation of underground grid and grounding connections.
2. Install ground access test wells at locations as required for testing, using a pipe surrounding the rod and connections with a cover placed on top at grade level.
3. Test system resistance at each test well using "Fall of Potential" method Per IEEE Standard No. 81-1983) with a maximum resistance of 5 ohms.
4. Upon completion of the electrical system, including all grounding, the Electrical Contractor shall test the system for stray currents, ground shorts, etc. Approved instruments, apparatus, service, and qualified personnel shall be utilized. If stray currents, shorts, etc., are detected, eliminate or correct as required. The test procedure shall be as follows:

    a. Open all main disconnects for the system being tested.
    b. Disconnect the system neutral from the service entrance or step-down transformer neutral connection.
    c. Connect a DC ohmmeter across the system neutral and equipment ground.

        1) An ohmmeter reading in excess of 100 ohms shall indicate that the system neutral and equipment ground are properly isolated.

        2) An ohmmeter reading less than 100 ohms shall indicate that the system contains ground shorts (stray currents) at some point along the system neutral.

    d. Grounded neutrals may be identified by disconnecting individual neutral conductors from the system, one at a time, while monitoring the ohmmeter.
    e. The systems shall be re-tested after correction of all ground shorts is complete.

E. Performance Verification Testing

1. Complete operational testing of all grounding and bonding hardware, materials, components, equipment and/or systems shall be witnessed by the County.
2. Schedule test with the County. Do not begin testing until:

    a. All systems have been installed and individually and jointly tested to ensure they are operating properly.
    b. Written permission from the County has been received.

3. Testing: As part of performance verification, test all hardware, materials, components, equipment and/or systems grounding and bonding terminations. The tests shall demonstrate functional connections of all hardware, materials, components, equipment and/or systems.
4. Verification: Verify correct grounding and bonding connections and functionality as required of all systems as defined in all related specifications sections.
5. Adjustment, Correction, and Completion:

    a. Correct deficiencies and retest affected grounding and bonding components.
    b. Make necessary adjustments and modifications to all grounding and bonding installations after obtaining approval of the County.

        1) Completion: Performance verification test shall be complete when testing or retesting of each component has produced a positive result and has been approved in writing by the County.

6. Recording:

    a. Describe actual operational tests performed and equipment used and list personnel performing tests.
    b. Record in tabular form all test results, deficiencies, and corrective measures.

7. Termination

    a. Performance verification test shall be terminated by the County when:

        1) Individual systems, system components, subsystems, or cabling infrastructure fail to perform as specified.

        2) It is determined that a system or sub-system is missing any components or installation is not complete.

    b. Upon termination, corrective work shall be performed and performance verification test rescheduled with the County.
    c. Retesting shall be performed by Contractor at no additional expense.
    d. Contractor shall continue to perform corrective actions and retest until system passes all tests to satisfaction of the County.

3.12 TRAINING

A. Refer to specification Section 27 05 00 for additional information.

3.13 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to specification Section 27 05 00 for additional information.

END OF SECTION

This page is intentionally left blank.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and all related Specification Sections, shall all apply to this Section.

B. Refer to Specification Section 27 05 00 for a complete list of related specification sections.

C. Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedule on the symbols and abbreviations sheet in the systems drawing package. Not all device symbols indicated may be required for the project.
2. Due to the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location. Contractor shall coordinate exact locations with all drawings and affected trades prior to submittal of shop drawings.
    a. The installing Contractor shall coordinate exact locations with all security and telecommunications drawings and site plan drawings as well as all affected trades prior to submittal of any shop drawings.

D. Abbreviations:

1. Refer to Specification Sections 27 05 00 for additional information.

E. Definitions:

1. Refer to Specification Section 27 05 00 for additional information.

1.2 SUMMARY

A. Refer to Specification Section 27 05 00 in addition to the following.

B. The intent of this specification is to establish a standard of quality, functionality, and features for the installation of an IP-based Television (IPTV) Distribution System throughout the entire new satellite concourse as indicated on the Contract Drawings and specified herein. The IPTV system shall distribute and display broadcast television content obtained from the Authority service provider, on video display monitors throughout the terminal. Should the Authority choose to select a different service provider prior to construction, the contractor shall coordinate with that provider. Additionally, the system shall be designed to support the services of a different service provider in the future.

C. It is the responsibility of the contractor to ensure that the installed system meets or exceeds every standard set forth in these specifications. The contractor shall provide all

TV outlets, conduits, fiber optic cabling and category 6 cabling as necessary to provide a complete and fully operational IP Master Antenna Broadcast Television (IPTV) distribution system.

D. Refer to Specification Sections 27 05 00 and 27 10 00 and for all TCP/IP based system cabling requirements.

E. The Contractor shall be responsible for providing all cabling, cable terminations, conduits/raceways, racks, cabinets, programming, commissioning, and testing of all network communications cabling in accordance with all related Division 27 Specification Sections.

1.3 REFERENCES

A. Refer to Specification Section 27 05 00 for requirements.

1.4 SYSTEMS DESCRIPTION

A. The IPTV system shall provide the display of broadcast/cable television channel feeds on selected flat panel display monitors in the satellite concourse. The system shall consist of IPTV tuner modules ("set top boxes") located at each IPTV display. Set top box make and model shall be as required by the Authority's service provider. Set top boxes shall obtain television content through the Local Area Network from the content provider's utility connection.

B. The terminal Local Area Network shall be configured to provide the appropriate routing and switching paths from the network service provider public wide area network (WAN) connection in the network to the set top boxes to be installed.

1.5 SUBMITTALS

A. Refer to Specification Section 27 05 00 for additional information.

1.6 QUALITY ASSURANCE

A. Refer to Specification Section 27 05 00 for additional information.

1.7 DELIVERY STORAGE AND HANDLING

A. Refer to Specification Section 27 05 00 for additional information.

1.8 RECORD DOCUMENTS

A. Refer to Specification Section 27 05 00 for additional information.

1.9 OPERATIONS AND MAINTENANCE

A. Refer to Specification Section 27 05 00 for additional information.

1.10 SOFTWARE AGREEMENT

A. Refer to Specification Section 27 05 00 for additional information.

1.11 SPARE MATERIAL

A. Refer to Specification Section 27 05 00 for additional information.

1.12 ENVIRONMENTAL CONDITIONS

A. Refer to Specification Section 27 05 00 for additional information.

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. Refer to Specification Section 27 05 00 for additional information.

2.2 SYSTEM REQUIREMENTS

A. The IPTV system shall support all channels made available by the service provider as part of the Authority’s subscription, with the capability to support additional channels in the future (minimum of 64 channels).

B. The IPTV system shall meet the following audio/visual formatting requirements

1. Support a minimum of 1920x1080-pixlel full HD resolution at 60Hz refresh rate, as well as other standard resolutions including 480i, 480p, 720p, and 1080i.
2. Support for standard compression formats including, but not limited to MPEG-1, MPEG-2, MPEG-4 Part 10 (AVC/H.264), and others as specified by the service provider.

C. Images and audio shall be free from pixilation, artifacts, noise and other undesirable audible and visual aberrations.

D. All system components shall be fully interoperable and permit future upgrades via software or firmware update.

2.3 FIELD DEVICES

A. Video Displays

1. Authority shall furnish and Contractor shall install LED-backlit LCD flat displays as shown on the contract documents. Displays shall be commercial/professional-grade, rated for 24/7 use and meet the following requirements:

   a. Panel Size: 55” Class Diagonal – 16:9 widescreen aspect ratio.
   b. Bezel: 0.9mm or less
   c. Panel Technology: In-Plane Switching (IPS)
   d. Native Resolution: 1920 x 1080 pixels (Full HD)
   e. Brightness: 700 cd/m2
   f. Contrast Ratio: 1400:1
   g. Dynamic Contrast Ratio: 500,000:1
   h. Viewing Angle (Degrees): 178H x 178V
   i. Color Depth: 1.06 Billion colors
   j. Response Time (Gray-To-Gray, Black & White): 8ms
   k. Duty Cycle: 24-7 Continuous Use
   l. Orientation: Portrait or Landscape
   m. Inputs: HDMI, DisplayPort, DVI-D, OPS, Analog RGB, RS-232C, RJ-45, USB3.0/2.0
   n. HDTV Formats: 720p, 1080i, 1080p
   o. Outputs: DisplayPort (1.2a/HDCP 1.3), audio, RS-232C, RJ-45
   p. Integrated Network/USB Media Player
   q. Remote Monitoring and Control GUI
2. Display shall be model 55VH7B as manufactured by LG or approved equal.

B. Set-Top Boxes

1. Authority shall furnish and Contractor shall install an IPTV set-top box tuner for each LCD television monitor. IPTV tuners shall meet the following requirements:

   a. AES 128/256 decryption capable.
   b. Support of network video-on-demand.
   c. Support for MPEG-1/2/4, H.264 and HD IPTV streams.
   d. IR remote control.
   e. Serial RS-232 control.
   f. HDMI video output.
   g. All service provider / carrier requirements.
   h. Mounting Hardware
2. Coordinate with the Authority and OAR for exact mounting locations of all LCD television monitors. Furnish and install mounts listed for the application and with sufficient load-bearing capacity to support the selected television monitors. Refer to the Contract Drawings for additional information.

C. Standard Mounts

1. Mounts shall meet the following requirements at a minimum:

a. Support 40” – 65” displays
b. Back-to-back mounting for (2) displays
c. Concealed mounting area for media player / set-top box equipment
d. Maximum Capacity: 300lb / 136kg
e. Mount shall be Peerless-AV model #DST965 or approved equal.

2.4 HARDWARE REQUIREMENTS

A. General

1. The IPTV, as defined in this document, shall include all configured hardware necessary to provide a complete and functional system. The Contractor shall supply all patch cables, power cords, displays, display mounting and attachments and video extension and processing equipment necessary to interconnect all system hardware.
2. All hardware and materials shall be new.
3. The hardware selected shall be standardized to maintain uniformity, warranty and spares optimization for the IPTV program.

B. IPTV hardware products shall include, but not be limited to:

1. 46/48” LCD Video Displays:

a. Basis of design manufacturer: NEC Displays

1) NEC P463 commercial Grade 24/7
2) NEC P484 commercial Grade 24/7

2. Additional LCD Video Display sizes:

a. TBD

3. Headend with TV signal Encoders/Decoders:

a. TBD

4. Video display mounting and attachment brackets:

a. Basis of design manufacturer: Peerless

1) Pop-out
2) Tilt

5. Power Supplies:

a. TBD

6. Power Inserter:

a. TBD

7. Head End Signal Splitters:

   a. TBD

8. Directional Couplers:

   a. TBD

9. Combiners:

   a. TBD

10. Passive Taps:

    a. TBD

11. Amplifiers:

    a. TBD

12. L Band Amplifiers:

    a. TBD

13. Antennae:

    a. TBD

14. Satellite Receivers:

    a. TBD

15. Multi-switch:

    a. TBD

16. IP Video Encoder:

    a. TBD

17. Set Top Boxes with ATSC Tuner with HDMI Outputs:

    a. TBD

18. HDMI Processors:

a. TBD

19. Fiber Optic Transceivers:

a. TBD

20. Coaxial Cable Types:

a. RG-6

1) TBD

b. RG-11

1) TBD

c. TBD

PART 3 - EXECUTION

3.1 COORDINATION

A. Refer to Specification Section 27 05 00 for additional information.

3.2 IPTV Programming and Content

A. The Contractor shall obtain from the County a list of TV signal resources and programming contents for the propose of presenting suitable contents for public viewing in an airport environment.

3.3 EQUIPMENT PROTECTION

A. Refer to Specification Section 27 05 00 for additional information.

3.4 WORK PERFORMANCE

A. Refer to Specification Section 27 05 00 in addition to the following:

B. Refer to related specification sections for additional project coordination requirements. In addition to the requirements defined in this specification section, the contractor shall coordinate and meet all requirements addressed in Division 26, Division 27 and Division 28 specification sections.

C. The Contractor shall provide all end-user cabling and connectivity components for interconnection of system equipment. This shall consist of, but not be limited to:

1. The installation of hybrid fiber optic/copper cabling from communications rooms (IDFs/MDFs) to all data outlets supporting IPTV set top boxes.
2. The installation of data outlets.
3. The installation of Category 6 UTP patch cords for interconnection from data outlets to set top boxes.
4. The installation of multimode, single mode fiber optic and Category 6 UTP patch cords in communications rooms to connect equipment associated with the IPTV system.

3.5 EQUIPMENT INSTALLATION

A. All system equipment installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer’s requirements. Cable terminations at all equipment locations shall comply with all state and local electrical codes. All wiring shall test free from all grounds, shorts, stray voltages and EMI.

B. In addition to all demonstration and training as specified by Division 01, Specification Section 27 05 00 and related Division 27 Specification Sections, system installation shall be provided in accordance with all requirements of this Section.

C. General

1. System/Hardware and mounting must comply with IBC Seismic Requirements. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.

3.6 COMMUNICATIONS CABLING REQUIREMENTS

A. Refer to Specification Section 27 05 00 for additional information.

3.7 ELECTRICAL POWER DISTRIBUTION

A. Refer to Specification Section 27 05 00 for additional information.

3.8 TRANSIENT VOLTAGE SUPPRESSION

A. Refer to Specification Section 27 05 00 for additional information.

3.9 GROUNDING AND BONDING

A. Refer to Specification Section 27 05 00 for additional information.

3.10 EQUIPMENT IDENTIFICATION

A. Refer to Specification Section 27 05 00 for additional information.

3.11 MAINTENANCE AND SERVICE

A. Refer to Specification Section 27 05 00 for additional information.

3.12 WARRANTY

A. Refer to Specification Section 27 05 00 for additional information.

3.13 FIELD SERVICES

A. Refer to Specification Section 27 05 00 for additional information.

3.14 TRAINING

A. Refer to specification Section 27 05 00 for additional information.

3.15 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to specification Section 27 05 00 for additional information.

END OF SECTION

PART 1 - GENERAL

1.1 STIPULATIONS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. Drawings and general provisions of the Contract, including Division 00 and Division 01 Specification sections apply to this Section.

C. Related Specification Sections:

1. Refer to Specification Section 27 05 00 for a complete list of related specification sections.

D. Reference Symbols:

1. Refer to Specification Section 27 05 00 for requirements.

E. Abbreviations:

1. Refer to Specification Section 27 05 00 for requirements.

F. Definitions:

1. Refer to Specification Section 27 05 00 for requirements.

1.2 SUMMARY

A. Refer to Specification Section 27 05 00 in addition to the following.

This section includes the requirements for provision and installation of Structured Cabling System including Outside Plant (OSP) backbone cabling and pathways, comprised of voice and data subsystems for the satellite concourse.

1.3 REFERENCES

A. Refer to Specification Section 27 05 00 for requirements.

1.4 SYSTEM DESCRIPTION

A. Furnish and install a complete Structured Cabling System including Outside Plant (OSP) backbone cabling system, including all necessary tools, materials, equipment, labor, and testing, to create a dynamic multi-product, vendor-agnostic environment including all cable, equipment, materials, and labor as required to provide, install and test a complete system. This system shall enable all County low voltage systems to be fully operational according to design specifications at project completion, complying with these specifications and all regulatory requirements. The system shall include but not be limited to:

1. Backbone Cabling: Fiber and copper cabling including inside and outside plant installations as required. All fiber and copper voice/data/systems cabling necessary for a complete and fully operational Structured Cabling System.
2. Backbone Pathway: Conform to ANSI/TIA-569D – 2015 using conduit, cable tray, backboards, etc. as indicated.
3. Outside Plant backbone cabling. To include buried conduit/duct bank cable and pathways as specified in project.
4. Intra-building pathways shall be installed so Main Communication Rooms are fed to Intermediate Distribution Frame (IDF) Rooms in combination star and ring

configuration or dual star configuration connecting IDF Rooms to the Main Communications Rooms.

5. Horizontal Pathway: Conform to ANSI/TIA-569D – 2015 using conduit, cable tray, backboards, cabinets, etc. as indicated. All cable is to be installed in conduit unless approved otherwise by County in writing as a response to a written request by a member of the Design/Project Team.
6. All references to cable installations within this document include complete installation specifications, including but not limited to: "installed, terminated, tested and administered".
7. All references to testing include complete testing procedures, including but not limited to: "results are to be recorded in the test device, printed and submitted in hardcopy and in electronic format". See details on testing.
8. Horizontal Cabling: Complete from Structured Cabling System Equipment to each outlet using cable (copper or fiber optics) as specified.
9. Outlets: Provide outlets as required. All cabling whether fiber optic or copper installed terminated and tested.
10. Raceways, outlet boxes, cabinets, identification, etc.: Conform to applicable sections in Division 26 and 27 specifications.
11. Cabinets and racks: Conform to applicable sections in these specifications.
    a. All cabinets shall have internal vertical and horizontal cable management panels.
    b. All racks shall have cable management components.
    c. Cabinet and rack installations shall have overhead cable tray installed.
    d. All cabinets shall have vented front doors, split vented rear doors, and vented side panels for adequate airflow for proposed equipment to be installed.
    e. All cabinets shall have locking front and rear doors.
    f. All cabinets and racks shall be furnished with a vertical rack bonding busbar.
12. Patch panels - Provide and install the required patch panels for fiber optic cables and copper cables. All fiber optic patch panels to have locking metal framed or metal covers with hasps (front and rear) for a padlock.
13. Surge suppression shall be provided on all cables entering or leaving the footprint of the building or exterior device subject to surge. See below section for additional surge suppression requirements.
14. Fireproofing equivalent to a one-hour rating shall be provided on all communications room penetrations.
15. Systems rooms overhead cable trays: all cable trays shall be mounted per manufacturers specifications complete with all hardware and rubber boots on ends. Corner or T-sections shall be provided with corner bracket sweep or a bend section.
16. All cable trays shall be a minimum of 12 inches from any source of EMI or other sources of electrical interference. The Contractor shall follow industry standards and best practices in maintaining proper separation from EMI and other sources of electrical interference.
17. All racks or cabinets shall be installed with overhead fiber optic trough system with an open channel design to protect and route fiber optic patch cords. Trough shall have downspouts and drop-outs over each rack side. Refer to drawings for side of ladder rack that fiber optic trough system shall be installed on.
18. All locations that have Fiber Optic (FO) or copper cabling mounted on Communication

Room walls shall have overhead cable ladder rack and overhead fiber optic trough system with an open channel design to protect and route fiber optic patch cords installed from any new racks or cabinets to wall or other existing rack(s) to create cable pathways. In addition, Communications Room walls shall have D-rings and/or other vertical and horizontal cable management to support cabling. Zip ties shall not be used as cable management.

19. All under floor cable pathways shall be completed as described above providing cable pathways between components, using under-floor system.
20. Transition pans with dividing fingers shall be furnished and installed on ladder rack above racks and equipment cabinets in quantities and locations as necessary to properly support and route copper cables and patch cords, including patch cords installed by County. Transition pans shall match racks (black) in color and be provided by the same manufacturer as the rack.
21. Backbone cable shall be secured by hook-and-loop (Velcro) cable ties on overhead rack and into fiber optic patch panels.
22. Backbone cables shall not be broken out of the cable jacket except within enclosures designed to protect and support cable breakouts.
23. All horizontal fiber and copper, and patch cords cable shall be secured by black Velcro wrap as necessary.

a. Velcro wrap shall be cut from 1 inch by 10-yard roll (industry standard supply) for cable bundles.
b. Individual black Velcro cable ties may be used where appropriate.
c. Velcro cable ties shall be solid black without any manufacturers name, logo, or other imprinted on wrap.

B. Coordinate all work related to equipment provided by the Owner and/or Owner's vendor(s).

1. Where new telephone, network, and other systems equipment provided by County is to be installed as a requirement in project, a systems meeting is required with the County no longer than three (3) weeks after Notice-To-Proceed is issued and thereafter on a monthly basis.
2. Monthly Systems meetings are required as necessary for successful coordination and completion of Owner provided equipment.

C. Provide all power, grounding, plywood backboards and complete raceway system. Refer to Division 26 for power and grounding requirements.

D. Complete Telecommunication Infrastructure element labeling according to ANSI/TIA 606 and County requirements as specified in this document.

1. Labeling format samples and required Telecommunication Infrastructure Record Administration forms are included in this specification document.
2. All Infrastructure Element labeling shall be complete and Telecommunications Infrastructure Administration Records shall be submitted prior to the infrastructure being put into use, at the same time all cable test records are submitted.

E. Completion of the PDS and OSP cabling system in its entirety is required by Substantial Completion inspection, including submission of system test report documents.

1. If County provided or Contractor provided equipment requires the use of systems cabling infrastructure to have any Electronic Systems operational for the project to

meet Substantial Completion inspection requirements the cabling infrastructure shall be complete and tested in its entirety according to a previously coordinated schedule providing reasonable and adequate time for Electronic Systems to be installed, tested and made operational.

2. No cabling infrastructure is to be put into use without being complete and fully tested according to these and Project Engineering specifications.

F. Where any active Electronic Systems are installed by any party requiring installation of fiber or copper patch cords, all patch cords shall be permanently and properly routed in the pathway created for same, and the patch cords shall be labeled on each end with source/destination..

1.5 SUBMITTALS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. Product data shall be submitted on all products used to complete the scope of work of this project, including but not limited to:

1. Catalog cut sheets.
2. Roughing-in diagrams
3. Proof of UL Listing. Indicate the UL listing, the UL classification, and NEC insulation type used for each type of cable to be used in installation of the Structured Cabling System. Provide a complete copy of the UL Test report substantiating that the cable meets ANSI/TIA requirements.
4. UL Verification of Category 6 and 6A equipment and material.
5. Installation instructions. Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation.
6. Manufacturers Certificate: Certify that products meet or exceed specified requirements.
7. Test results from manufacturer showing product has passed quality control tests at factory (specifically fiber optic cabling, as well as other applicable products.
8. Submit test reports from manufacturers', specifications and any other information necessary to determine compliance with material and equipment specified.
9. Operation and maintenance manuals.

C. Shop Drawings: Submit plan of building(s) and site showing pathways with all installed cables and pathways noted.

1. Shop Drawings for enclosures shall include plans, elevations, sections, and attachment details indicating sizes of equipment, their relationship, and clear space within the enclosure.
2. Detailed floor plan layouts and riser diagrams showing system components and their location, interconnections, wiring/cabling, and interface and connection with other disciplines.
3. Coordination Drawings in accordance with the requirements of Division 01.
4. Detailed data as requested by the County.
5. Point to point wiring diagrams and block diagrams of system to be installed.
6. Submit a detailed step by step testing procedure for any active components, component/ system functional checkout and test.

7. Coordination: Shop drawing plans shall include pathway routing, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
   Structural members in paths of pathway groups with common supports.
   HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

D. Detail drawings of each of the facilities' terminal boards/cabinets, and equipment rack elevations for all MDF and IDF locations.
   a.
   b.

E. Qualifications: Submit qualifications of system installer including but not limited to:

1. Contractor's license.
2. A list of a minimum of three (3) recently completed PDS projects of similar type and size with contact names and telephone numbers for each that the Contractor has performed within the last two (2) years.
3. Documentation of the Contractor's staff member(s) who are BICSI Certified Installation Technicians. The documentation shall be current copies of the certificate issued by BICSI.
4. A letter certifying the Contractor maintains an office within fifty (50) miles of the project location.
5. Proof of certification by the manufacturer(s): Documentation that the Contractor is an authorized and designated installer for the equipment manufacturers whose products he intends to install.
6. Technical resume of the Contractor's Project Manager and Field Supervisor documenting a minimum of five (5) years' experience installing Structured Cabling Systems.
7. Technical resume for any sub-contractor who will assist the PDS Contractor in performance of this work.
   a.
   b.
8. A list of test equipment proposed for use.
   c. For testing copper or metallic cabling components.
      For testing fiber optic cabling components.
   d. Include test certificate verifying that all test instruments have been calibrated by a factory authorized service agent within 12 calendar months immediately preceding the date of submittal.
   e. All testing equipment/instruments shall be manufactured by a company engaged in the manufacturing of test equipment specifically designed for the purposes specified herein. Test equipment required to satisfy the testing requirements of this project shall have been available for purchase from the submitted manufacturer for at least five consecutive years immediately preceding the submittal date.
      All test equipment/instruments submitted and used to satisfy the testing requirements of this project shall be current models manufactured by the submitted manufacturer. The equipment/instruments shall be currently in production at the time of submittal and fully supported by the manufacturer.

1.6 QUALITY ASSURANCE

A. Refer to Specification Section 27 05 00 for requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Refer to Specification Section 27 05 00 for requirements.

1.8 RECORD DOCUMENTS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. As-Built documents shall include updating and revising contract documents to record actual locations (as-installed) of all equipment, pull boxes, devices, IDF's, raceways, cabling, Telecommunication Outlets, and all Premise Distribution and all Outside Plant cable infrastructure components.

C. As-Built PDS and OSP riser diagrams shall be submitted.

D. All drawings required herein shall be in AutoCAD Latest Release or format required by Division 01 specifications.

E. Drawings required herein are in addition to those required under "OPERATION AND MAINTENANCE DATA."

F. Telecommunication Outlet label information sheet: An E size sheet(s) copy of the Electrical, Power or Systems project plan sheet that shows all Telecommunication outlets in office/building spaces with all TO final label information typed in by each TO symbol in each room shall be submitted to the County. This document shall be submitted by Substantial Completion Inspection or earlier. This sheet is required a minimum of three weeks prior to any need to have any voice/data jacks to be made active for any purpose.

1.9 OPERATION AND MAINTENANCE

A. Refer to Specification Section 27 05 00 in addition to the following.

B. O & M Manuals shall include:

1. A complete as-installed equipment list of active (powered) components, including Owner Furnished Equipment. Equipment shall be listed by room, with manufacturers' names, model numbers, serial numbers, and quantities of each item.
2. A complete and correct system schematic, showing detailed connections for all parts of the system, including cable numbers, terminal block numbers and layouts, and other designations and coding's (point-to-point wiring diagrams). System performance measurements shall be documented as noted elsewhere in this specification.
3. Riser diagrams showing as-installed conduit with pull boxes, outlet boxes, physical cable layouts, part numbers of cable types used, and number of circuits in each conduit.

a.
b. 4. Repair parts list for each major equipment item furnished.
c. 5. A list of spare repair parts provided by the Project with a copy of the Transmittal Sheet showing who took receipt of and where the spare parts are stored.

6. Service manuals for each major equipment item furnished.

Manual(s) shall be bound separately and labeled appropriately.
Include instructions for adjusting, operating, and extending the system
Manufacturer's warranties and operating instructions for each active equipment item furnished.

Recommended preventive maintenance procedures.

7. Test Data: record of results for all copper, metallic, and fiber optic cables installed and tested, or tested.

Test data shall be formatted according to ANSI/TIA 606 Administration Standards.

d. Test results shall be submitted in hard copy in three (3) ring binder and in electronic form (CD).

a. Include all fiber tests with performance graph from OTDR. Single Mode and Multi-Mode shall be OTDR tested. All fiber utilized for the installation of Project

b. Systems required by the project scope shall be tested whether or not the cable was installed by the Contractor.

c. 8. Data sheets showing all field labeling used for termination blocks, and cable (outside plant, backbone, riser and horizontal) runs.

9. Cable Data for all backbone (riser) and horizontal fiber and copper indicating type and use of cable installed by Contractor and to include:

Manufacturer's specification sheet.

Manufacturers performance and warranty sheet.

a. Date manufactured.
b. Part number.
c. Serial number.
d. Reel number.
e. Description.
f. Attenuation specifications.
g. Bandwidth specifications.
h.
i.

10. Complete equipment rack/cabinet layouts showing locations of all rack mounted patch panels, and equipment items.

1.10 SOFTWARE AGREEMENT

A. Refer to Specification Section 27 05 00 for requirements.

1.11 SPARE MATERIAL

A. Refer to Specification Section 27 05 00 for requirements in addition to the following.

B. Patch Cables – Category 6 Copper: Furnish spare CAT6 patch cables in a quantity equal to the number of terminated CAT6 patch panel ports in communications spaces (MDF/IDFs). Furnish an equal number of each of the following lengths (in meters): 1, 2, 3, 4, 5, 6, 7, 8 9, 10.

C. Patch Cables – Multimode/Singlemode Fiber: Furnish spare fiber patch cables in a quantity equal to the number of terminated fiber patch panel ports in communications spaces (MDF/IDFs). Furnish an equal number of each of the following lengths (in meters): 1, 2, 3, 4, 5, 6, 7, 8 9, 10.

1.12 ENVIRONMENTAL CONDITIONS

A. Refer to Specification Section 27 05 00 for requirements.

1.13 SUBSTANTIAL COMPLETION INSPECTION REQUIREMENTS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. These Substantial Completion requirements are additional to Drawings and general provisions of the Contract, including Division 00 and Division 01 Specification sections apply to this Section.

C. The Substantial Completion inspection shall cover all locations where PDS components and/or Systems have been installed and/or modified.

D. The Substantial Completion inspection shall be coordinated by the Contractor, and the County.

E. A separate PDS and Systems inspection may be requested by the County.

F. All cabling testing and labeling shall be completed by Substantial Completion Inspection, or prior to being put into service, whichever comes first.

G. All cabling test results' documents shall be submitted to the County.

H. All labeling documents shall be submitted to the, with a copy to the County.

I. If Owner provided or Contractor provided equipment requires the use of systems cabling infrastructure to have any Electronic Systems operational for the project to meet Substantial Completion inspection requirements the cabling infrastructure shall be complete and tested in its entirety according to a previously coordinated schedule providing reasonable and adequate time for Electronic Systems to be installed.

J. Where any active Electronic Systems are installed by any party requiring use of fiber or copper backbone or horizontal cables, the installation of fiber or copper patch cords shall be complete; all patch cords shall be permanently and properly routed in the pathway created for same, and the patch cords shall be labeled on each end with source/destination. must be demonstrated as complete by Substantial Completion inspection.

K. Where new or expansion Systems are installed using new or existing backbone or horizontal fiber strands, and other new or existing fiber strands becomes unused, all strands that became unused shall have their corresponding patch cords removed along the entire fiber cable route. All User ID cards information shall be erased or covered with white adhesive paper to indicate those strands are no longer in use. Marking out fields in User ID cards is prohibited. This shall be demonstrated during Substantial Completion inspection.

L. Telecommunication Outlet-to-Label space information sheet shall be provided:

1. An E size sheet(s) copy of the Power or Systems project plan sheet that shows all Telecommunication Outlets (TO) in office/building spaces, that has all TO final label information typed in by each TO symbol in each room is to be submitted to the County.
2. Two copies shall be submitted to the County.
3. This document shall be submitted by Substantial Completion Inspection or earlier. This sheet is required a minimum of three weeks prior to any need to have any voice/data jacks, dry pairs, or any outlet to be made active for any purpose.

PART 2– PRODUCTS

2.1 GENERAL

A. All equipment shall be new and unused. All components and systems shall be designed for uninterrupted duty. All equipment, materials, accessories, devices, and other facilities covered by this specification or noted on the contract drawings shall be the best suited for the intended use and a single manufacturer shall provide component assemblies.

B. Provide all components, equipment, parts, accessories and associated quantities required for complete installations and according to Manufacturers installation specifications. All components may not be specified herein.

C. All devices/components/products shall be suitable for use intended, and meet all stated performance requirements for PDS, OSP and Systems configurations specified in this document.

2.2 PATHWAYS/CONDUIT/RACEWAYS

A. General:

1. All pathways (conduit, raceways, wireways, pullboxes, outlet boxes, etc.) shall comply with applicable requirements of sections within these specifications.
2. All pathways (conduit, raceways, wireways, pull boxes, outlet boxes, etc.) shall comply with all requirements of ANSI/TIA-569D-2015.
3. Size: All horizontal pathways shall be minimum 1" conduit. Pathways shall be increased in size to properly accommodate number of cables to a maximum of 24 cables. Backbone conduits shall have at least 20% of installed innerduct pathways spare.
4. All conduits shall be sized and installed per NEC and ANSI/TIA specifications for intended use.
5. Size: All backbone conduit shall be a minimum 2" conduit.
6. Long Radius (sweep) bends shall be used for all fiber optic cable pathways, sized per NEC and ANSI/TIA specifications for intended use.
7. No pathway components shall be installed that force cables to exceed manufacturer's recommended bend radius during installation or when pulling of cable is complete.
8. For all horizontal pathways, there shall be no more than 180-degrees of total bend between any two pull points.
9. Pull-boxes shall not be used as direction changes but be used to pull straight through.
10. Where a pull-box is required with raceway(s) smaller than 1-1/4 trade size, an outlet box may be used as a pull-box.
    a.
    b.
11. Where a pullbox is used with raceway(s) of 1-1/4 trade size or larger, the pull box shall:
    Have a length of at least 8 times the trade size diameter of the largest raceway.
    Be individually labeled and installation location marked on As-Builts.
12. Metal flexible conduit shall not be used for PDS system.
13. Protective bushings: All backbone and horizontal conduits shall have plastic/nylon insulating bushings installed on all ends to protect cable.
14. All backbone and horizontal conduits shall have ground bonding bushings with lugs installed on ends that terminate in a communications room and be bonded to the Systems Ground Bus Bar with an insulated #6 AWG wire.
15. All conduit shall be labeled with source/destination at each end, and each main pull

box.

16. Pull Cords/Pull Tape: Install pull cords in all raceway runs including conduit and inner-ducts that are installed without cable (empty). Install a pull string or pull rope in all horizontal and backbone conduits and inner-ducts that have cable installed (used).
17. Boxes:

All outlet boxes, junction boxes, pull boxes, etc. shall comply with applicable sections of these specifications.

Outlet boxes shall be deep with a minimum size of 4-11/16" by 4-11/6" by 2-1/8" deep with a single gang sheetrock ring.

a. Boxes shall be sized as required by ANSI/TIA and NEC for cables, both fiber and copper (metallic), conduit and/or device installed.

b.

B. Rigid Steel Conduit:

c.

1. Conduit shall be seamless, hot dipped galvanized rigid steel.
2. Threads shall be cut and ends chamfered prior to galvanizing.
3. Galvanized to provide zinc coating fused to inside and outside walls of conduit.
4. Provide an enamel lubricating coating on the inside of the conduit.
5. Conduit shall conform to ANSI C80.1 and listed and labeled under UL 6.

C. Rigid Aluminum Conduit:

1. Conduit shall be seamless, 6063 alloy, T-1 temper.
2. Conduit shall conform to FS WW-C-581d, ANSI C80.1, and UL 6.
3. Pass bending, ductility, and thickness of zinc coating in ANSI C80.1.

D. Intermediate Metal Conduit:

1. Conduit shall be seamless, hot dipped galvanized rigid steel.
2. Threads shall be cut and ends chamfered prior to galvanizing.
3. Galvanizing shall provide zinc coating fused to outside walls of conduit.
4. Provide an enamel lubricating coating on the inside of the conduit.
5. Conduit shall be listed and labeled under UL 1242.

E. Electrical Metallic Tubing (EMT):

1. EMT fittings shall be formed steel compression ring type. Die cast fittings are not allowed.
2. EMT shall be UL listed and conform to NEC Article 300.22.
3. Shall be used inside buildings only.
4. Only manufactured fittings, transition adapters, terminators and fixed bends shall be used.
5. All transition junction and pull boxes, fittings terminators and adapters shall be a metallic material.

F. Raintight Sealing Hubs:

1. Two piece type with outer internally-threaded hub to receive conduit, inner locking ring with bonding screw, insulated throat, and V shaped ring or O-ring.
2. Manufacturers: Thomas & Betts H series or Bridgeport.

G. Conduit Bodies: Not Permitted.

H. Conduit Fittings:

1. All fittings shall be compression or threaded.
2. Fittings shall provide a secure connection for pulling communications cables.
3. Setscrew fittings are not permitted.
4. ANSI/NEMA FB 1; material to match conduit.
5. Couplings for rigid steel conduit and IMC to be single piece threaded, cadmium plated malleable iron.
6. Couplings for rigid aluminum conduit to be of aluminum construction, 6063 alloy.
7. Hubs for box connection to be two-piece with outer internally threaded hub to receive conduit and inner locking ring with bonding screw.
8. Expansion fittings shall allow for a minimum of four inches of movement and shall be similar to O-Z Gedney AX series, complete with bonding jumpers and hardware.

I. Non-metallic conduits are not permitted in above ground installations. Conversion fittings are required for non-metallic (below ground) to metallic (above ground) transitions.

J. Innerduct:

1. Application: Suitable for an indoor or duct bank installation within a riser system or backbone conduit for the support of telecommunications fiber optic cables.
2. Material, as specified on drawings for each application:
   a. Multi-cell flexible fabric.
   b. 3-cell flexible fabric or greater, as indicated on the drawings, for duct bank installation.
   c. 3-cell flexible fabric, riser rated, for indoor installation.

K. Pull Cord / Pull Tape:

1. Pre-lubricated, woven polyester, low friction, and high abrasion resistant yarn.
2. Minimum average tensile strength shall be 1250 lbs. for 2 inch and smaller conduits and innerduct.
3. Minimum average tensile strength shall be 1800 lbs. for conduits larger than 2 inches.

L. Pull Boxes, Junction Boxes, and Gutters:

1. All junction boxes, gutters and pull boxes shall comply with NEC Article 314.
2. All junction boxes, gutters and pull boxes shall meet the following minimum material requirements:
   a.
   b. 16-gauge steel or heavier.
   c. Seams shall be continuously welded and grounded smooth.
   d. External screws and clamps.
   e. External mounting feet (where possible).
   f. Oil-resistant gasket and adhesive.
   g. ANSI 61 gray polyester powder coating inside and out over phosphatized surface.
   UL 50 type 12.
3. All junction boxes, gutters and pull boxes shall be provided with bushings for conduits and/or cabling.
4. All junction boxes shall be provided with a hinged cover. Where clearances do not allow full opening of hinged cover, bolt on covers with captive nuts shall be provided.
5. All junction boxes, gutters and pull boxes shall be securely installed.

6. All junction boxes, gutters and pull box configurations and sizes for single and multiple conduit runs shall comply with ANSI/TIA 569.

M. Metal Wireways and Auxiliary Gutters:

1. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1 unless otherwise indicated, and sized according to NFPA 70.

Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

Comply with TIA-569-B.

a. 2. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with
b. wireways as required for complete system.

3. Wireway Covers: Hinged type unless otherwise indicated.
4. Finish: Manufacturer's standard enamel finish.

N. Boxes, Enclosures, and Cabinets:

1. General Requirements for Boxes, Enclosures, and Cabinets:

Comply with TIA-569-B.

a. Boxes, enclosures and cabinets installed in wet locations shall be listed for use
b. in wet locations.

2. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
3. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
4. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
5. Device Box Dimensions: 4-11/16” inches by 4-11/16” inches by 2-1/8 inches deep with mud ring.
6. Gangable boxes are not allowed.

a. 7. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

8. Cabinets:

b. NEMA 250, Type 1, galvanized-steel box with removable interior panel and
c. removable front, finished inside and out with manufacturer's standard enamel.
d. Hinged door in front cover with flush latch and concealed hinge.
e. Key latch to match panelboards.
f. Metal barriers to separate wiring of different systems and voltage.

Accessory feet where required for freestanding equipment.

a. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

O. b. Handholes and Maintenance Holes for Exterior Underground Cabling:

1. General Requirements for Handholes and Maintenance Holes:

Handholes and maintenance holes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.

Comply with TIA-569-B.

2. Polymer-Concrete Handholes and Maintenance Holes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced

with steel, fiberglass or a combination of the two.

a. Refer to drawings for handhole and maintenance hole sizes.
b. Standard: Comply with SCTE 77.
c. Configuration: Designed for flush burial with closed bottom unless otherwise indicated.
d. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and location.
e. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
f. Cover Legend: Molded lettering, “Communications”.
g. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
h. Handholes and maintenance holes 12 Inches Wide by 24 Inches Long and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.3 TERMINATION BACKBOARDS

A. Material: 3/4" A/C grade, Class A Flame Spread plywood.

B. Size: 8’ high by 4’ wide with multiple sections as shown drawings, unless otherwise noted or required in these specifications.

C. Finish: Paint terminal board with gray paint having a flame spread rating of Class A as a minimum. Do not paint over Class A flame spread information on plywood.

D. Install label on backboard with TTB# and Room#.

2.4 "SYSTEMS" AND "LOCAL" GROUND BUS

A. Ground Bus shall be copper and comply with applicable sections of these specifications.

B. Install minimum one copper ground bus with qty (12) pre-drilled 1/4” holes on isolating stand-offs of TTB backboard. Holes shall be configured to accept two-hole lugs.

C. Basis of Design: Chatsworth #10622-012 or approved substitution.

2.5 COMMUNICATION ROOMS AND SIMILAR SPACES

A. With the exception of cable management devices and rack/cabinet equipment below, devices shall be installed per requirements determined in the field by the Project Engineer and Contractor as required to neatly dress/organize cables in and out of rack/cabinets.

B. No metallic or fiber cables shall be unsupported, or potential patch cord routes be without a supported pathway.

C. Fiber optic patch cable pathways shall be routed and specifically constructed for protective fiber cable routing.

2.6 FLOOR MOUNT EQUIPMENT RACKS/CABINETS

A. Standard open racks (2-post):

1. Universal self-supporting all aluminum rack 84" H. x 19" W. x 3" D.
2. Standard for 19" rack mounted equipment.
3. Standard 3" x 1.25" aluminum upright channels, .125" thick.

4. Have mounting holes both sides (front and rear) of upright channels.
5. Panel Mounting Holes: #12-24 rolled threads in 5/8" - 5/8" x 1/2" hole pattern meeting ANSI/TIA-568 mounting space requirements.
6. Use heavy-duty assembly hardware.
7. Provide isolation pad between rack and floor.
8. Base Angles: 3-1/2" x 6" x 3/8" thick (pair) for bolting to floor with 3/8" expansion anchors.
9. Top Cross-Angles: 1-1/2" x 1-1/2" x 1/4" (pair).
10. Finish: Black.
11. All rack equipment mounting screws to be black clean thread type.
12. Rack Basis of Design: Chatsworth.
13. Acceptable substitutions:
    Homaco.
    Hubbell.

B. a. b. Cabinets:

1. Cabinets shall be sized according to Project design to meet the requirements of active and passive equipment that may be installed inside each cabinet.
2. Cabinets shall house all active electronics and meet the following minimum requirements:
    a. All cabinets, if installed in a contiguous fashion, shall have an inter-cabinet pathway installed at the top of cabinets for patch cables following ANSI/TIA guidelines for patch cord cable management.
    b. All cabinets shall have internal vertical and horizontal cable management panels.
    c. d. Cabinet installations shall have overhead cable tray installed.
    e. All cabinets shall have vented front and rear doors and side panels shall be solid for adequate airflow for proposed equipment to be installed.
    f. All cabinets shall have locking front and rear covers.
    Cabinets shall be provided with a full height ground bar. Refer to additional cabinet grounding requirements below.
3. Cabinets shall be full height.
4. a. All co-locating cabinets shall have same construction and keying characteristics of full height cabinets.
5. Cabinet Basis of Design: HP Pallet Intelligent Cabinet 842, 1075mm #BW917A.
6. Acceptable substitutions:
    Approved substitutions.

C. Rack and Cabinet Equipment

1. All rack equipment, wire managers, PDUs (power distribution units), etc. shall be black.
2. All racks/cabinets shall be provided with black equipment mounting screws.
3. Provide cable management devices (clamps, guides, supports, etc. as required to neatly dress/organize cables in and out of rack (or enclosure).
4. Provide horizontal and vertical (full rack height) cable management. Cable management fill rate shall not exceed 50% condition when all provided jacks are in use.

5. All Rack/Cabinet equipment shall be provided by the same manufacturer as the racks/cabinets with the following exceptions:
   Horizontal wire management.
   PDU.

D. Horizontal Cable Managers:

1. Horizontal wire managers shall have both front and rear channels with covers.
a. 2. Horizontal wire manager Basis of Design: Panduit WMPH3, or approved substitution.
b.

E. Vertical Cable Managers:

1. Racks:
   Each rack shall have one full-height double sided vertical cable manager on each side of each rack, 6" wide.
   a. Racks may share a vertical cable manager mounted between them when co-located.
   b. Basis of Design for rack vertical cable managers: Chatsworth 11729 series.
2. Cabinets:
   c. Each cabinet shall have one full-length vertical cable manager installed internally on each side.
   a. Vertical cable management shall be installed in rear of cabinet and provided by same manufacturer as the cabinet.
   b.

F. Jumper Tray:

1. Each rack shall have a jumper tray installed in the uppermost position.
2. Each cabinet shall have a jumper tray installed in the uppermost position.
3. Basis of Design for Jumper Tray: Chatsworth 12183 series.

G. Power Distribution Unit (PDU):

1. Refer to cabinet elevation drawings for PDU requirements at each equipment cabinet.
2. Surge protection to comply with UL 1449. For 330/400vac clamping voltage.
3. Basis of Design for PDU: APC.

H. a. b. Ground Bar:

1. Racks:
   c. Provide full height grounding strip for all rack mounted equipment.
   d. Racks shall have factory installed studs for crimp on ground lug at top and bottom of vertical rails.
   Connect to communication room TGB with minimum #6 THHN stranded wire; increase size of bonding cable to accommodate cable installations of excessive lengths per ANSI/TIA 607.
   All grounding connections shall utilize non reversible connectors and lugs.
2. Cabinets:
   a. Provide full height minus 6" ground bar.
   b. Mount in rear of cabinet and provide compression lug on top for connection to grounding system.
   c. Connect to communication room TGB with minimum #6 THHN stranded wire; increase size of grounding cable to accommodate any ground cable

installations of excessive lengths.

d. All grounding connections shall utilize non reversible connectors and lugs.

I. Miscellaneous: Provide all necessary accessories as required to support the placement of non-rack mountable equipment (e.g. termination blocks, fiber optic extenders, audio codecs, etc.) into cabinets.

2.7 LABELS

A. All Fiber Optic, metallic cable, TTBs (Telecom Spaces), Ground points, racks, cabinets, rack/cabinet-mounted equipment and cross-connects shall be identified and labeled according to ANSI/TIA 606 Administration Standards for Telecommunication Infrastructure of Commercial Buildings.

1. All label material shall be suitable for intended usage and environment, meeting the legibility, defacement and general exposure requirements listed in UL 969 for indoor and outdoor use. Where insert labels are used the insert label shall be covered with clear cover and shall be securely held in place under the normal operating conditions and usage to which the labeled infrastructure element is applied.
2. All items to be identified and labeled as listed above shall be labeled at the time they are installed.

B. Label printer shall be of the thermal transfer type capable of printing self-laminating labels of various size up to and including 1.5 inch by 1.5 inch printable area with a 4.5 inch self-laminating tail.

C. Label Printer Basis of Design: Brady BMP61 or approved equal.

D. In addition to color coding requirements specified in Division 26, Pathways, backbone fiber optic cables, and backbone metallic cable labels shall have a 1.5 inch by 1.5 inch printable area white in color with a 4.5 inch self-laminating clear tail.

1. Font shall be Arial Alt Mono 7 font size (11 point size).
2. Label shall have the ability to have 15 characters per line and 8 lines for a total of 120 characters.
3. Label Basis of Design: Brady P/N PTL-34-427 or approved equal, for inside use. For exterior use label shall follow the same character format, and meet the legibility, defacement, and general exposure requirements listed in UL 969.
4. The County reserves the right to modify the label characters and character layout providing label materials do not change, at no cost.
5. For all conduit or other pathways that have a diameter too large for the self-laminating label to over-wrap itself and fully laminate the printable area the label shall be changed to an insert type (tie-on is acceptable) and meet the exposure requirements in UL 969 for indoor and outdoor use. The insert label shall be covered with clear cover and shall be securely held in place under the normal operating conditions and usage to which the labeled infrastructure element is applied.

E. Cables which shall be labeled include, but are not limited to, backbone, horizontal, patch cords, line cords, and jumpers.

F. Contractor shall install all pathway and cable labels so they are visible and able to be read by a person standing on floor without moving cables, and if conduit/pathway, labels shall

not be obscured by other conduit, or components. Any additional types of labeling materials necessary to keep labels visible shall be provided by the Contractor and installed by the Contractor.

G. All metallic and fiber patch cords installed by Contractor or at direction of Contractor shall be labeled.

H. Pathways are defined but not limited to; any conduit, inner-duct, underground duct-bank, cabling troughs, pull boxes, and any materials or systems used to enclose cabling of any type.

I. All metallic/fiber horizontal cable and metallic/fiber patch cord labels shall have a 1 inch by 5 inch printable area white in color with a 1 inch self-laminating clear tail, labeled at each end.

1. Font shall be Arial Alt Mono, 7 font size (11 point size).
2. Label shall have the ability to have 15 characters per line and 2 lines for a total of 30 characters.
3. Label Basis of Design is Brady P/N PTL-31-427 or approved equal, for inside use. For exterior use label shall follow the same character format, and meet the legibility, defacement, and general exposure requirements listed in UL 969.

J. Equipment cabinet / Rack labeling

1. Provide phenolic nameplate fastened to top of racks and cabinets indicating rack / cabinet designation. Min 1" white text on black laminate.

2.8 CABLE TRAY/LADDER RACK

A. Ladder Rack (inside Communications Rooms):

1. Upper ladder rack shall be populated with horizontal and backbone copper and fiber cables and shall be mounted at 9' A.F.F., unless otherwise noted on communication room enlarged plans.
2. Lower ladder rack shall be populated with copper patch cables only and shall be mounted at 8' A.F.F., unless otherwise noted on communication room enlarged plans. No service loops are permitted inside ladder rack system.
3. Ladder rack shall be spaced off the wall 4" minimum to allow for cabling to pass vertically on wall.
4. Ladder rack width shall be 18" unless otherwise noted, refer to enlarged room plans.
5. 1-1/2" x 0.0625" wall rectangular tubing.
6. Cross members welded at maximum 12" intervals, ½" x 1".
7. Side mounted 6" cable guide/cable fence shall be mounted every other cross member, from same manufacturer as ladder rack.
8. Provide all accessories to support ladder rack from above and wall. Ladder rack shall not be supported from racks or cabinets. Supports shall be minimum 5/8" threaded rod.
9. Install ceiling supports as required, eliminating lateral movement.
10. All ladder rack mounted adjacent to walls shall be supported from the wall using brackets.
11. Supports shall be used as specified by the cable tray manufacturer for maximum loading characteristics of cable rack.

12. Provide supports as required by the manufacturer's installation guidelines.
13. Edges, fittings and hardware shall be finished free from burrs and sharp edges. Ends shall have rubber boots.
14. Fittings shall have not less than the load-carrying ability of straight tray sections and shall have manufacturer's minimum standard radius unless otherwise indicated.
15. Furnish swept elbows for all direction changes.
16. Bond together to form an electrically continuous path.
17. Provide grounding kit to bond together sections of cable tray.
18. Provide transition pans to be installed where required on cable tray.
19. Transition pans with dividing fingers shall be installed on ladder rack above racks, cabinets and all locations required for routing copper patch cords. Transition pans shall match racking (black) in color and provided by the same manufacturer as the cable rack.
20. Provide all warning labels as required by UL, NEC and NEMA.
21. Finish: Black, including all accessories.
22. Basis of Design: Chatsworth.
23. Approved Substitutions:
    a. Legrand.
    b. B-Line.
    c. Homaco.

2.9 FIBER OPTIC OPEN TROUGH SYSTEM (FIBER GUIDE/FIBER TRAY)

A. All overhead ladder rack shall have installed an overhead fiber optic trough system with an open channel design to protect and route fiber optic patch cords. Troughs shall have removable top covers. All components shall be yellow in color.

B. Fiber trough shall be configured to provide a pathway between all 2-post racks, all cabinets, and wall mounted equipment in same communications room.

C. Trough shall have rounded flair downspouts and drop outs over each rack corner and vertical cable manager of sufficient length to enter top rung of vertical cable manager.

D. Fiber Trough width shall be 6 inch minimum.

E. Fiber Trough system shall be supported by manufacturer provided support kit of threaded rod/single support arm method, whether supported by ladder rack or unistrut.

F. Fiber Trough system shall have all end caps and protective bushings.

G. Fiber Trough systems shall be sized to not exceed manufacturer recommended patch cord fill rate based on area fiber ports.

H. Fiber Optic Open Trough Basis of Design: Panduit Fiber Runner series.

I. Acceptable substitutions: None.

2.10 CABLE TESTER

A. Copper cable tester technology required: basis of design: Fluke DSX-8000, or approved equivalent.

1. Copper cable tester shall be manufactured by a company engaged in the manufacturing of copper cable testing/certification equipment, and such equipment shall have been available for purchase from the chosen manufacturer for at least five consecutive years immediately preceding any test conducted to satisfy the requirements of this project.
2. Copper cable tester shall be a current model as manufactured by the chosen manufacturer and shall be currently in production, and fully supported by the manufacturer at the time any test is conducted to satisfy the requirements of this project.
3. Copper cable tester shall be calibrated by a factory authorized service provider within the 12 calendar months immediately preceding any test conducted to satisfy the requirements of this project. A Certificate of Calibration from the factory authorized service provider, identifying the specific unit calibrated, the date it was calibrated and that the specified unit is approved for service, shall be made immediately available to the County or field inspectors upon request. The last calibration date of the testing equipment/instrument used shall be documented in the test results provided to the Owner at any time such results are provided.
4. Any test results submitted to the County or inspectors that were conducted by a copper cable tester that does not meet the requirements specified herein will be rejected by the Owner. The Contractor will be required to repeat the necessary tests on the impacted cables with an approved tester at no additional cost to the owner and without impacting the project schedule or the Owner's operations.

B. Fiber cable tester technology required: basis of design: Fluke Versiv, or approved equivalent.

1. Fiber cable tester shall be manufactured by a company engaged in the manufacturing of fiber cable testing/certification equipment, and such equipment shall have been available for purchase from the chosen manufacturer for at least five consecutive years immediately preceding any test conducted to satisfy the requirements of this project.
2. Fiber cable tester shall be a current model as manufactured by the chosen manufacturer and shall be currently in production, and fully supported by the manufacturer at the time any test is conducted to satisfy the requirements of this project.
3. Fiber cable tester shall be calibrated by a factory authorized service provider within the 12 calendar months immediately preceding any test conducted to satisfy the requirements of this project. A Certificate of Calibration from the factory authorized service provider, identifying the specific unit calibrated, the date it was calibrated and that the specified unit is approved for service, shall be made immediately available to the County or field inspectors upon request. The last calibration date of the testing equipment/instrument used shall be documented in the test results provided to the Owner at any time such results are provided.
4. Any test results submitted to the County or inspectors that were conducted by a fiber cable tester that does not meet the requirements specified herein will be rejected. The Contractor will be required to repeat the necessary tests on the impacted cables with an approved tester at no additional cost to the owner and without impacting the project schedule or the Owner's operations.

2.11 HORIZONTAL CABLING AND TERMINATION

A. Patch Panels:

1. Category 6 UTP Patch Panel:

Shall meet or exceed Category 6 rating for all components including but not limited to specifications within this document and as follows:

1) IEEE 802.3AF (POE).
2) IEEE 802.3AT (POE+).
3) IEEE 802.3BT (POE++ 60W).

a. Component certified to meet or exceed Category 6 standards.
Configuration: Modular RJ-45 non-keyed 8-position jack port to 110 printed circuit board, factory pre-wired, Category 6.
b. Wire Plan: EIA/TIA T568B.
c. Active Pins: 1 through 8.
Individual patch panel size not to exceed 48 ports.
d.
e. 1) One horizontal wire manager shall be installed for every 24 ports in patch panel configuration, between each patch panel(s).
f. Connection Hardware: IDC PCB (printed circuit board) mounted connector for 22-26 AWG.
g. Include strain relief bar.
h. UL listed and labeled.
i. Finish: Black.
j. Basis of Design: Optical Cable Corporation.
k. Approved Substitution:
l. 1) None.

a. 2. Category 6A STP Patch Panel:

Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:

1) IEEE 802.3AF (POE).
b. 2) IEEE 802.3AT (POE+).
c. 3) IEEE 802.3BT (POE++ 60W).
d. Component certified to meet or exceed Category 6A standards.
e. Configuration: Modular Shielded RJ-45 non-keyed 8-position jack port to 110
f. printed circuit board, factory pre-wired, Category 6A.
g. Wire Plan: ANSI/TIA T568B.
Active Pins: 1 through 8.
h. Must be backward compatible in all characteristics to Category 6 specifications.
i. Individual patch panel size not to exceed 48 ports.
j. 1) One horizontal wire manager shall be installed for every 24 ports in patch
k. panel configuration, between each patch panel(s).
l.
m. Connection Hardware: IDC PCB (printed circuit board) mounted connector for 22-26 AWG.
Include strain relief bar.
UL listed and labeled.
Quick Grounding bar design.
Provide strain relief on all cabling terminated in patch panel.
Provide shielded panel kit including bonding jumper.

Finish: Black.
Basis of Design: Optical Cable Corporation.
Approved Substitution:
1) None.

3. Category 6A UTP Patch Panel:
   a. Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:
      1) IEEE 802.3AF (POE).
      2) IEEE 802.3AT (POE+).
      3) IEEE 802.2BT (POE++ 60W).
   b. Component certified to meet or exceed Category 6A standards.
   c. Configuration: Modular RJ-45 non-keyed 8-position jack port to 110 printed circuit board, factory pre-wired, Category 6A.
   d. Wire Plan: ANSI/TIA T568B.
   e. Active Pins: 1 through 8.
   f. Must be backward compatible in all characteristics to Category 6A specifications.
   g. Individual patch panel size not to exceed 48 ports.
      1) One horizontal wire manager shall be installed for every 24 ports in patch panel configuration, between each patch panel(s).
   h. Connection Hardware: IDC PCB (printed circuit board) mounted connector for 22-26 AWG.
   i. UL listed and labeled.
   j. Quick Grounding bar design.
   k. Provide strain relief on all cabling terminated in patch panel.
   l. Provide shielded panel kit including bonding jumper.
   m. Finish: Black.
   n. Basis of Design: Optical Cable Corporation.
   o. Approved Substitution:
      1) None.

B. Telecommunications Outlets:

1. Telecommunication Outlet (TO):
   Provide all copper, metallic, and fiber optic cable as designed for Telecommunication Outlets indicated on the drawings.
   Provide Communication Outlet faceplates and jack modules for all type of cable media installed.
   Jacks/ports/faceplates shall be provided from the same manufacturer.
   All jacks installed in TO shall have colored bezel and dust shutter.
   The TO faceplate shall have six port positions and be white or as specified by design to match surrounding area décor.
      1) Faceplate shall have a recessed label area covered by a clear plastic lens, at top and bottom covering screws.
      2) Exception: when face plate is stainless steel.
   Manufacturers:
      1) Hubbell.
      2) Berk-Tek.

3) Or Approved equal.

2. Wall Phone Outlet:

Single port wall plates with mounting studs for wall telephone installed as specified and served by one (1) Category 6 cable.

Manufacturers

Approved Substitution:

1) Hubbell.

a. 2) Berk-Tek.

b. 3) Or approved equal.

c. 3. Floor Outlets:

Shall be designed with separate chambers for voice/data/electrical per NEC and ANSI/TIA specifications for dual service use.

a. Voice and data jacks and mounting hardware shall meet ANSI/TIA Category 6 requirements for intended use.

b. Voice and data jacks shall be recessed to protect cable ends when in use.

c. Floor boxes shall have retractable covers to protect debris from entering voice and data jacks. Cover shall be capable of closing while jacks are in use.

d. Manufacturers

e. 1) Legrand

2) Hubbell.

3) Or approved equal.

C. Telecommunications Modular Jacks:

1. Jacks and faceplates shall be by same manufacturer.

2. Jacks and modular patch panels shall be by same manufacturer.

a. 3. Category 6 UTP Jacks:

Meets ANSI/TIA-568-C.2 Category 6 specifications for all components including but not limited to specifications within this document and as follows:

1) IEEE 802.3AF (POE).

b. 2) IEEE 802.3AT (POE+).

c.

d. 3) IEEE 802.3BT (POE++ 60W).

Supports IEEE 1000GBASE-T Ethernet.

e. Tool-less design allows for simple, consistent, reliable terminations.

f.

g. Provide colored bezel for all jacks in accordance with Attachment 1 within this

h. specification section.

i. Accommodates 22-24 AWG conductors.

j. Modular interface: 750 mating cycles.

k.

l. 50µ-inch gold-plated contacts.

Zinc alloy housing.

1000 VDC Dielectric withstand.

500 MΩ insulation resistance.

UL 1863 Listed.

Manufacturers:

1) Hubbell.

2) Berk-Tek.

3) Or approved equal.

4. Category 6A STP Jacks:

Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:
1) IEEE 802.3AF (POE).
2) IEEE 802.3AT (POE+).
3) IEEE 802.3BT (POE++ 60W).
a. Meets ANSI/TIA-568-C.2 Category 6A specifications.
Meets ISO/IEC 11801:2002 AMENDMENT 2 Class EA specifications.
Supports IEEE 802.3an 10GBASE-T Ethernet.
Tool-less design allows for simple, consistent, reliable terminations.
b. Provide colored bezel for all jacks as follows:
c. 1) Orange for standard Category 6A outlets.
d. Shielded housing to ensures superior ANEXT performance.
e. Accommodates 22-24 AWG conductors.
f. Modular interface: 750 mating cycles.
g. 50µ-inch gold-plated contacts.
h. Zinc alloy housing.
i. 1000 VDC Dielectric withstand.
j. 500 MΩ insulation resistance.
k. UL 1863 Listed.
l. Basis of Design: Optical Cable Corporation UMJ Series.
m. Acceptable substitution:
n. 1) Hubbell.
o. 2) Berk-Tek.
p.

5. Fiber Optic Jacks:
a. Shall be modular style.
b. Shall be provided for MM or SM fiber cabling where required.
c. Dual LC or SC connector, as required by application.
d. Provide colored bezel for all jacks in accordance with Attachment 1 within this specification section.
e. Basis of Design: Optical Cable Corporation UMJ Series.
f. Acceptable substitution:
1) Hubbell.
2) Berk-Tek.

6. Category 6A UTP Jacks:
a. Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:
1) IEEE 802.3AF (POE).
2) IEEE 802.3AT (POE+).
3) IEEE 802.3BT (POE++ 60W).
b. Meets ANSI/TIA-568-C.2 Category 6A specifications.
g. c. Meets ISO/IEC 11801:2002 AMENDMENT 2 Class EA specifications.
h. d. Supports IEEE 802.3an 10GBASE-T Ethernet.
e. Tool-less design allows for simple, consistent, reliable terminations.
f. Provide colored bezel for all jacks as follows:
1) Orange for standard outlets.
Shielded housing to ensures superior ANEXT performance.
Accommodates 22-24 AWG conductors.

Modular interface: 750 mating cycles.
50µ-inch gold-plated contacts.
Zinc alloy housing.
1000 VDC Dielectric withstand.
500 MΩ insulation resistance.
i. UL 1863 Listed.
j. Basis of Design: Optical Cable Corporation UMJ Series.
k. Acceptable substitution:
l. 1) Hubbell.
m. n. 2) Berk-Tek.
o.

D. p. Horizontal Cable:

1. All cable shall be installed, terminated, and tested by Contractor.
2. All cable jacket and construction shall be applicable for the intended installation environment to maintain full manufacturer's warranty and industry standard expected life cycle, including but not limited to specifications within this document section.
3. All cable shall include additional accessories such as clamps, supports, mounting hardware, straps, anchoring structures, termination hardware, etc. necessary to provide an industry standard installation in all environments. Accessories to include but are not limited to specifications within this document section.
4. Terminate all horizontal cabling on rack mounted patch panels.
5. Horizontal Copper CAT6 UTP Data Cable.

a. Cable shall meet the following minimum requirements:
1) Support for Power-over-ethernet including:
a) IEEE 802.3AF (POE).
b) IEEE 802.3AT (POE+).
c) IEEE 802.3BT (POE++ 60W).
b.
c. Cable shall be four (4) pair copper unshielded twisted pair cable 23 gauge copper.
d. Cable shall exceed Cat 6 performance requirements and have guaranteed
e. performance to 400MHz.
f. Certified to UL Category 6.
Certified to ANSI/TIA Category 6 specifications.
g. Shall meet ANSI/TIA-568-C.2–2009+A1:2010, Balanced Twisted-Pair
h. Telecommunications Cabling and Components Standard, and current
i. performance specifications for Category 6 rated cable.
j. The cable shall have surface markings: Verified UL Category 6.
k. Cable color: Continuous green jacket.
l. Plenum rating: Where required cable shall be plenum rated and marked CMP or Plenum (UL) and meet UL-910 standards.
Cable may be non-plenum rated where installed in non-plenum spaces/areas.
Basis of Design: Superior Essex DataGain, Category 6 4 pair UTP cable.
Approved Substitution:
1) Mohawk - 6 LAN Plus.
2) Berk-Tek – Lanmark 1000.

6. Horizontal Copper CAT6A STP Data Cable.

Cable shall meet the following minimum requirements:

1) Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:
   a) IEEE 802.3AF (POE).
   b) IEEE 802.3AT (POE+).
   c) IEEE 802.3BT (POE++ 60W).

a.

2) Cable shall be four (4) pair copper shielded twisted pair cable 23 gauge copper.
3) Certified to UL Category 6A.
4) Certified to ANSI/TIA Category 6A specifications.
5) Shall meet ANSI/TIA-568-C.2–2009+A1:2010, Balanced Twisted-Pair Telecommunications Cabling and Components Standard, and current performance specifications for Category 6A rated cable.
6) The cable shall have surface markings: Verified UL Category 6A.
7) Cable color: Continuous orange jacket.
8) Plenum rating: Where required cable shall be plenum rated and marked CMP or Plenum (UL) and meet UL-910 standards.
9) Cable may be non-plenum rated where installed in non-plenum spaces/areas.
10) Basis of Design: Superior Essex 10Gain, Category 6A 4 pair STP cable.
11) Approved Substitution:
    a) Mohawk – GigaLAN 10.
    b) Berk-Tek -- LANmark-10G2.

7. Horizontal Fiber Optic Cabling:

a. Horizontal Fiber Optic Cable shall be Single Mode.

b. Refer to drawings for fiber strand count as specified.

c. Cables that provide additional fibers to replace defective fibers in the cable shall not be permitted.

d. Single-Mode Fiber Optic cable shall:

1) Be single mode 9 micron core diameter/125 micron cladding diameter.
2) Meet all applicable specifications for FDDI physical media.
3) Fiber used in cable shall:
   a) Support applications using a bandwidth in excess of 1 GHz.
   b) Meet ANSI/TIA 492 AAAA standard.
4) Interior building cables shall be tight buffered, non-gel-filled design.
5) Cable shall be plenum rated and marked OFNP (UL) and meet UL-910 standards.
6) Cable may be non-plenum rated where installed in non-plenum spaces/areas.
7) Cable used for multi-story building risers must be marked OFNR (UL) and meet UL 1666 flame test or be plenum cable as specified above.
8) Underground and exterior cables shall be loose tube, gel-filled design.
9) Loose Tube, gel-filled cables shall be cleaned and terminated according to Cable Manufacturer and specifications within this document.
10) The use of fan-out kits shall be required. The use of splice cases shall include splice trays.
11) Horizontal single-mode cable basis of design: Corning.

12) Acceptable substitution:
a) AFL.
b) Prysmian.

8. Horizontal Fiber Optic Cabling:

Horizontal Fiber Optic Cable shall be Multimode.

Refer to drawings for fiber strand count as specified.

Cables that provide additional fibers to replace defective fibers in the cable shall not be permitted.

e. Single-Mode Fiber Optic cable shall:

f. 1) Be single mode 62.5 micron core diameter/125 micron cladding diameter.

g. 2) Meet all applicable specifications for FDDI physical media.

h. 3) Fiber used in cable shall:
a) Support applications using a bandwidth in excess of 1 GHz.
b) Meet ANSI/TIA 492 AAAA standard.

4) Interior building cables shall be tight buffered, non-gel-filled design.

5) Cable shall be plenum rated and marked OFNP (UL) and meet UL-910 standards.

6) Cable may be non-plenum rated where installed in non-plenum spaces/areas.

7) Cable used for multi-story building risers must be marked OFNR (UL) and meet UL 1666 flame test or be plenum cable as specified above.

8) Underground and exterior cables shall be loose tube, gel-filled design.

9) Loose Tube, gel-filled cables shall be cleaned and terminated according to Cable Manufacturer and specifications within this document.

10) The use of fan-out kits shall be required. The use of splice cases shall include splice trays.

11) Horizontal single-mode cable basis of design: Corning.

12) Acceptable substitution:
a) AFL.

i. b) Prysmian

9. Horizontal Copper CAT6A UTP Data Cable.

Cable shall meet the following minimum requirements:

1) Shall meet or exceed Category 6A rating for all components including but not limited to specifications within this document and as follows:
a) IEEE 802.3AF (POE).
b) IEEE 802.3AT (POE+).
c) IEEE 802.3BT (POE++ 60W).

2) Cable shall be four (4) pair copper unshielded twisted pair cable 23 gauge copper.

3) Certified to UL Category 6A.

4) Certified to ANSI/TIA Category 6A specifications.

5) Shall meet ANSI/TIA-568-C.2–2009+A1:2010, Balanced Twisted-Pair Telecommunications Cabling and Components Standard, and current performance specifications for Category 6A rated cable.

6) The cable shall have surface markings: Verified UL Category 6A.

7) Cable color: Continuous orange jacket.

8) Plenum rating: Where required cable shall be plenum rated and marked CMP or Plenum (UL) and meet UL-910 standards.
9) Cable may be non-plenum rated where installed in non-plenum spaces/areas.
10) Basis of Design: Superior Essex 10Gain, Category 6A 4 pair UTP cable.
11) Approved Substitution:
a) Mohawk – GigaLAN 10.
b) Berk-Tek.

E. Lightning / Surge Suppression for Horizontal Copper Cables:

1. Lightning protection assembly shall be comprised of Chassis and Modules and shall be provided for all cabling terminating outside the building envelope or otherwise susceptible to surge.
2. Chassis shall be installed directly above or below the patch panel being protected.
3. Surge Protection Chassis:
Shall be high density, min ports per RU shall be 24.
All modules shall be serviceable from the front.
a. Modules shall be individual and field replaceable.
b. Chassis Basis of Design: APC #PRM24.
c. 4. Surge Protection Modules:
d. Modules shall be selected based on CATx cable being protected and/or signal type.
a. Modules shall be POE compliant and shall match required POE power requirement of cable being protected (30W, 60W or 100W).
b. Model Basis of Design: APC #PNETR6.
c.

F. Patch Cables:

1. Provide factory assembled patch cords sized to routing requirements.
2. Additional patch cable for specialty systems and equipment shall be provided as required to facilitate a complete and operational system.
3. Patch cords shall be constructed and provided by the same manufacturer that provided the data patch panels/termination hardware.
4. Patch cable shall match color and performance specifications of corresponding horizontal cable.

2.12 BACKBONE CABLING AND TERMINATION – FIBER OPTIC CABLE

A. Termination:

1. No service loops shall be permitted in overhead ladder rack for backbone cable.
2. Rack Mounted Modular Fiber Optic Patch Panels (FOPP)
FOPPs shall be stackable, with modular connector bulkhead panels.
Single Mode bulkhead connectors shall be designed strictly for single mode fiber.
Other sizes' fiber connector bulkheads shall be designed for specified fiber size and type only.
Side or rear cable entry.
Storage area designed internally to neatly store slack cable.
Hinge out patch/connector panels.

Each connector to have covers: single-mode shall be yellow, multi-mode shall be black.

Patch panel to consist of connectors as indicated on the project drawings:

1) FOPP bulkhead connectors shall be SC-APC.

Provide a clear separation between horizontal and backbone fiber optic cables.

g. Backbone fiber shall be in separate FOPPs than horizontal fiber.

h. When splice trays are required for termination of fiber they shall be of same manufacturer as FOPP and have brackets / provisions to securely and neatly stack inside the rear compartment of the FOPP. Trays shall be installed to allow future work in FOPP and serviceability of fiber cable.

i.

j. Provide with all required cable management and accessories for a complete installation.

Terminate all fiber cable with factory terminated pigtail assembly; splices shall be made in splice tray. Refer to additional Splice trays requirements below.

k.

l. 3. Fiber Splice Trays:

Fiber cable splice trays shall be used for all fiber cable terminations requiring spliced pigtails.

m. Splice cases installed without splice trays designed are prohibited.

n. Splice trays shall be tray type.

o. Splice trays shall be provided by same manufacturer as FOPP(s) installed.

p. All splices in tray shall be fusion type.

q.

B. Intra-Building Backbone/Riser Fiber Optic Cable:

1. Intra Building cable shall be used where cable is not required to leave the building or be installed below grade.
2. Intra-Building backbone/riser fiber optic cable shall be Single Mode.
3. Refer to drawings for fiber strand count as specified.
4. Cables that provide additional fibers to replace defective fibers in the cable shall not be permitted.

a.

b. 5. Single Mode Fiber Optic Cable Requirements:

c. Single mode 9 micron core diameter/125 micron cladding diameter.

Meet all applicable specifications for FDDI physical media.

d. Fiber used in cable shall:

e. 1) Support applications using a bandwidth in excess of 10 Gbps.

f. 2) Meet EIA/TIA 492 AAAA standard.

g. Interior building cables shall be tight buffered, non-gel-filled design.

h. Cable shall be plenum rated and marked OFNP (UL) and meet UL-910 standards.

Cable may be non-plenum rated where installed in non-plenum spaces/areas.

Cable used for multi-story building risers must be marked OFNR (UL) and meet UL 1666 flame test or be plenum cable as specified above.

Terminate tight buffer cables at connector panels with pre-terminated factory pig tail assemblies. Provide splice tray inside FOPP for splice between building cable and pigtail assembly provide service loop in splice tray cable management area for maintenance and service.

C. Inter-Building Backbone/Riser Fiber Optic Cable (OSP):

1. Inter Building cable shall be used where cable is required to leave the building or be installed below grade or in wet location.
2. Backbone/Riser Inter-Building Fiber Optic Cable shall be Single-mode.
3. Refer to drawings for fiber strand count as specified.
4. Cables that provide additional fibers to replace defective fibers in the cable shall not be permitted.
5. Single-Mode Fiber Optic Cable Requirements:

a. Single mode 9 micron core diameter/125 micron cladding diameter.
b. Meet all applicable specifications for FDDI physical media.
c. Fiber used in cable shall:
   1) Support applications using a bandwidth in excess of 10 Gbps.
   2) Meet EIA/TIA 492 AAAA standard.
d. Underground and exterior cables shall be loose tube, gel-filled design.
e. Loose Tube, gel-filled cables shall be Loose Tube, gel-filled cables shall be cleaned and terminated according to Cable Manufacturer and specifications within this document. The use of fan-out kits are required. The use of splice cases shall include splice trays.
f. Backbone single mode OSP cable basis of design: Corning.
g. Acceptable substitution:
   1) AFL.
   2) Prysmian.

D. Patch Cables:

1. Patch cables shall be provided in communications rooms for each FOPP termination, length shall be as required to reach any LAN switch, Passive Optical Network (PON) devices, active electronic device, and/or cabinet in same communications room.
2. The fiber optic cladding shall be covered by aramid yarn and an OFNR jacket. Specialty use patch cords shall have a jacket suitable for intended use.
3. Provided factory assembled patch cords with SC or LCAPC style connectors, coordinated with FOPP connector types, with ceramic ferrules length as required for routing.
4. Provide one (1) duplex patch cord for each Fiber Optic Patch Panel termination pair. Refer to Spare Material for additional information.
5. Patch cords shall be constructed and provided by the same manufacturer that provided the fiber patch panels/termination hardware.
6. Patch cable shall match color and performance specifications of corresponding backbone cable.
7. Patch cables shall be provided by the contractor.

2.13 ZONE ENCLOSURE

A. Description: Wall-mounted cabinets manufactured from steel sheet. Maximum equipment weight of 100 lb (45.4 kg) when secured to the structural wall with standard anchors.

B. Equipment Mounting Rails: Two pairs of equipment mounting rails shall provide 6U of rack-mount space.

C. Front Door: Solid and keyed.

D. Sides: Louvered near the top for inlet airflow with four 3/4 inch and 1-1/2 inch conduit knockouts for network cable access.

E. Bottom Panel: Vented for an exhaust fan with two 3/4 inch and 1-1/2 inch conduit knockouts for network cable access.

F. Top Panel: Solid removable top panel to provide access to internal equipment.

G. Rear Panel: 4 inches by 6 inches opening located near the bottom center of the cabinet for through-the-wall network cable access.

H. Electrical Connection: Single-gang 2 inch by 4-inch duplex electrical junction box for a single duplex electrical outlet

I. Color: Powder coat Black.

J. Accessories:

1. Fan Kit: Solid state temperature control variable fan speed with a 115 VAC, 60 Hz to 12 VDC power supply.
   Size: 4U, 65 CFM – 120 CFM (110 CMH – 204 CMH).
2. Power Outlet: Surge-suppressed duplex receptacle rated for 125 Volt, 15 Amps with two NEMA 5-15R outlets.
3. Fiber Slack Manager Panel: 19 inches wide rack-mount, 4U high and 2 inches deep in black.

a.

K. Accessibility: Zone enclosures shall be mounted so as to be accessible for maintenance without requiring the use of a step ladder or lift. Ceiling-mounted zone enclosures shall be unacceptable. Refer to specification section 27 05 00 for additional information regarding accessibility of equipment.

1. Acceptable Manufacturers: Chatsworth (CPI) – Thinline II
2. Middle Atlantic – HDR
3. Hubbell – ReBox
4. Or approved equal.

PART 3– EXECUTION

3.1 COORDINATION

A. Refer to Specification Section 27 05 00 for requirements.

3.2 EQUIPMENT PROTECTION

A. Refer to Specification Section 27 05 00 for requirements.

3.3 WORK PERFORMANCE

A. Refer to Specification Section 27 05 00 for requirements.

3.4 EQUIPMENT INSTALLATION

A. Refer to Specification Section 27 05 00 in addition to the following.

B. General Installation Requirements:

1. Provide any necessary screws, anchors, clamps, Velcro ties, raceway, grounding or other support hardware required to facilitate the proper installation of the Structured

Cabling System.

2. All cable, terminating hardware, cabinets, racks, and all PDS components shall include additional accessories such as clamps, supports, mounting hardware, straps, anchoring structures, termination hardware, etc. necessary to provide an industry standard installation in intended environments. Accessories include but are not limited to specifications within this document section.
3. Locate, install, and test the Structured Cabling System in accordance with the equipment manufacturer's written instructions; the latest editions of the National Electrical Code; the National Electrical Contractors’ Association publication "Standard of Installation," according to Regulatory and Reference Documents section of this document, and all applicable codes and standards referenced in this specification.
4. Furnish any special installation equipment or tools necessary to properly complete the Work. This may include, but not be limited to, testing equipment, communication devices, jack stands, cable winches, etc.
    a. Furnish to the Owner any specialty hand tools needed to access any covers, access hatches, or other Contractor installed enclosures.
    b. Provide above hand tools by Substantial Completion Inspection or earlier if deemed necessary by Owner or Project Manager.
    c. Label all Comm Room outer doors “Communication Room ###”.
5. Install equipment, cables, raceways and outlets as required to comply with all applicable requirements within this specification document as minimum installation requirements. Exceed this minimum requirement when called for herein or as required to ensure a fully operational PDS.
6. Install all electrical basic materials per applicable sections of these specifications.
7. Install all rack mountable equipment in equipment rack, except that furnished and installed by the County.
8. Install system cabinets/racks in locations shown; arrange to provide adequate cooling, ventilation and access.
9. Properly bond system per applicable sections of these specifications.
10. Support raceways, backboards, and cabinets under the provisions of these specifications and as required by manufacturer's instructions.
11. Install raceways and pathways to conform to applicable sections of these specifications.
12. Install PDS system wiring and raceways away from any surface that may become hot, including and not limited to, hot water piping and heating ducts.
13. Install PDS system wiring with at least 12 inches of separation from line voltage power wiring on parallel runs. Wiring crossing power circuits shall be at right angles. For metal enclosed electric light or power or Class 1 circuits, separation may be reduced as described in NEC 800-52 (a) (1). Increase separation if so required to comply with ANSI/TIA referenced standards.
14. Maintain proper separation between PDS system cables and all power and unshielded cables, as required to prevent noise, crosstalk, etc.
15. All horizontal voice and data cables shall be splice-free and homerun to the patch panel in the associated Telecommunications Room or zone enclosure as shown on the drawings.

3.5 EQUIPMENT RACKS/CABINETS:

A. Equipment Racks/Cabinets shall be installed where shown on the drawings and in accordance with the manufacturer's instructions.

B. Whether or not specifically shown on the drawings, all racks and cabinets shall be installed as specified within this document.

1. Each equipment rack shall have one full-length vertical wire manager installed on each side of the equipment rack.
2. Each row of terminating frames and cable racks shall be bonded to ground with a minimum #6 stranded THHN copper cable with a continuous green jacket.
3. Remove paint from grounding lug attachment points on each rack. Each grounding lug to be attached to rack via nut and bolt method.

a. Bonding cables within Communications Room to be installed separate route from all horizontal and backbone cabling, back to Telecommunications Grounding Busbar.
This separate pathway shall hang from ladder rack.

b. 4. When mounting any equipment in enclosure, provide width, height, hardware, etc. as required for complete and coordinated installation.

5. Horizontal wire managers are to be installed qty (1) for each 24 ports of modular copper cable patch panels.
6. For the maximum size allowed patch panel (48 ports) one horizontal wire manager to be installed above and one horizontal wire manager to be installed below.
7. Furnish and install blank plate covers in all empty equipment cabinet spaces.

3.6 TELECOMMUNICATION OUTLETS (TO)

A. Refer to Specification Section 27 05 00 in addition to the following.

B. Install cable to outlets for PDS where indicated on the drawings.

C. Install per applicable section of these specifications (i.e., outlet boxes, indoor service poles, floor boxes, wall phones, etc.).

D. Terminate all voice, data, and fiber optic cable on jacks wired per jack wiring details in Attachment One.

E. Install face plate on single-gang sheet rock ring. Label face plate per Attachment One.

F. All required cabling, outlet and faceplate labeling shall be completed at the time of installation.

G. All cable testing shall be complete before any cabling is put into use.

3.7 PATHWAYS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. General:

1. All raceways shall meet the applicable requirements of all of Divisions 26, 27, 28 Specifications, and all requirements within this specification document.
2. All raceways at terminal boards shall turn 90 degrees down and terminate at a point within 6 inches of termination board with appropriate plastic bushing, and grounding

hardware.

3. Raceway shall not be shared by power or any other electrical wiring that is not part of the low voltage PDS systems. PDS system cabling may be installed in underground pull boxes with other low-voltage systems provided:
   Installation meets/complies with all applicable codes and standards.
   PDS system cables shall be separated by at least 12 inches from any non-shielded wire/cable.
4. Raceway Bends:
   a. Bend raceway with minimum inside radius of 6 times the internal diameter.
   b. Increase bend radius to 10 times for raceway larger than 2 inch size. Provide proper bend for all changes of direction.
   a. Pull and splice boxes shall not be used in lieu of a direction change in raceway.
   b. Install raceways so no more than 180-degrees of total bend are present between any two pull points in any raceway section without pull box.
   c.
   d. 1) Install additional pull boxes as required to maintain maximum of 180-degrees in total bend between pull boxes and/or termination points.
      2) Label all raceway at both ends to indicate destination and PDS source room.
         a) Length of raceway and labeling/identification shall be fully documented in as-built drawings.
         b) As-built conduit/raceway marking nomenclature shall match exactly Identification Label format .
      3) Install polyester pull cord/pull tape in each conduit whether used or empty.
5. Pathways/raceways at terminal board locations shall be racked on a c-channel / strut channel (e.g. Unistrut / Kindorf) type rack secured to wall above and below terminal boards.

C. Penetrations/Fire Stop:

1. Make no penetration in floors, walls or ceilings without the prior consent of the County. It is the responsibility of the Contractor to firestop all rated walls, penetrations, and conduits affected to code compliant condition.
2. Where penetrations through acoustical walls or other walls for cable-ways have been provided, such penetrations shall be sealed in compliance with applicable code requirements and the Contract Documents.
3. Where penetrations through fire-rated walls for cableways have been provided, such penetrations shall be as required by code and the Contract Documents. Submit details of any special systems to be used.
4. Where conduit penetrates a fire rated wall, floor, etc., firestopping shall be provided and installed.
5. Provide permanent firestopping seals after cable installers have pulled risers and distribution cables.
6. Meet all requirements for UL assembly involved. Provide firestopping UL listed for assembly, conduit, and/or cable involved.

D. Sleeves:

1. Install rigid steel conduit sleeves with bushings on both ends at penetration of all

walls above ceilings. Stub-out each side of wall a minimum of 8 inches or as per design.

2. Install firestopping at sleeves and all rated firewall/smoke wall penetrations. Stub-out wall as required for routing. Firestopping assembly must comply with UL for wall routing, material and cable used.
3. Size sleeves as required by the NEC for cable installed, but in no case shall sleeve be less than 2 inch diameter, nor smaller than that required by "4)" below.
4. Sleeve size shall not be smaller than that required by ANSI/TIA-569, Table 4.1-1, "Conduit Sizing."

E. Cable Support:

1. Cable shall be supported in raceways according to this specification document.

F. Termination Locations:

1. Install vertical wireway to point within six (6) inches of each side of ceiling to facilitate ceiling penetrations.

2. Size wireway as required for cables and meet percent fill requirements of applicable codes/standards.
3. Provide bushings on each end of wireway, including grounding hardware, ground.

G. Telecommunication Outlet (TO) Horizontal Pathway:

1. Minimum size to be 1” C. Increase size of raceway to properly accommodate number of cables.

H. Backbone Conduit and Pathways (Intra-building or Inter-building):

1. Install raceways as required above under "General."
2. Minimum size: 2" C.
3. Increase size of conduit/raceway/pathway called for above if larger size is called for on drawings or larger size is required.
4. Conduit/raceway/pathway size shall not be smaller than that required by ANSI/TIA-569, Table 5.2-1, "Conduit Fill for Backbone Cable." Conduit size shall be based on type of cable and quantity of cables.
5. Install per applicable sections of these specifications and all applicable codes/standards.

I. Pull-boxes, Splice (Junction) Boxes, Outlet Boxes, Termination Enclosures:

1. Boxes shall be placed above accessible ceilings and in an exposed manner and location, and readily accessible. Boxes shall not be placed in a fixed false ceiling space unless immediately above a suitably marked and rated hinged access panel.

a. b. 2. Where cables can be exposed in pull boxes.

3. All pull boxes installed to serve more than two 1” conduits shall be labeled and marked on as-built drawings.
4. All backbone and horizontal pathways (no exception unless in writing from Owner) pull boxes shall be placed in conduit run where:
   The length is over 100 feet.
   Total of all bends exceeds 180 degrees.

There is a reverse bend.

Boxes shall be placed in a straight section of conduit and not used in lieu of a bend.

1) Every pull box shall have a hinged cover:
   a) Install appropriate access panel to allow cover to open.
   b) No backbone cabling shall rest on hinged cover when cover is closed. All cable shall have its own service loop coil support. No stick-on cable anchors are allowed.
2) The corresponding conduit ends shall be aligned with each other.
3) Conduit fittings shall not be used in place of pull boxes.
4) Backbone cable pull-boxes shall have kind of strut or equivalent secured to inside top to support cables' service loops.
5) No cable is to be supported by or strapped to another.

J. Horizontal Conduit and Pathways:

1. Size: Minimum pathway size to be 1" C.
2. Flexible conduit is not allowed.
3. Conduit type for location within Airport Property is per Division 27 specification requirements, Codes, and Regulatory and Reference documents specified within this document.
4. Outlet boxes shall be installed at locations shown on drawings per applicable codes/standards.
5. Where a pull box is required with raceway(s) smaller than 1-1/4 trade size, an outlet box may be used as a pull box.
6. Where a pull box is used with raceway(s) of 1-1/4 trade size or larger, the pull box shall:
   a. For straight pull through, have a length of at least 8 times the trade size diameter of the largest raceway.
   b. Have a distance between the nearest edges of each raceway entry enclosing the same conductor of at least: six times the trade size diameter of the raceway; or six times the trade size diameter of the larger raceway if they are of different sizes.
   c. For a raceway entering the wall of a pullbox opposite to a removable cover, have a distance from the wall to the cover of not less than the trade size diameter of the largest raceway plus 6 times the diameter of the largest conductor.
7. Where a splice box is used with raceway, it shall be sized per ANSI/TIA-569, Table 4.4-2, "Splice Box Sizing".
8. No box shall be smaller than that required by NEC 370-28 (a), (1) and (2).

3.8 TERMINATION BACKBOARDS

A. Terminal Boards:

1. Terminal boards shall be installed secure to wall with bottom of board at 6" above floor.
2. Install termination backboards plumb, and attach securely to building wall at each corner.
3. Finish paint termination backboards with durable gray paint having flame spread

rating of Class A prior to installation of any equipment on termination boards.

4. Mark all TTBs with TTB#.

3.9 COMMUNICATIONS CABLING REQUIREMENTS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. All cable shall include additional accessories such as clamps, supports, mounting hardware, straps, anchoring structures, termination hardware, etc. necessary to provide an industry standard installation in intended environments. Accessories to include but are not limited to specifications within this document.

C. All cable shall be kept on reels until it is installed. Do not roll or store cable reels without an appropriate underlay and the prior approval of the OAR. Cable on reels shall be handled, loaded, unloaded and transported by approved machinery equipped specifically for these operations.

D. Replace any cable found to be defective.

E. Do not install any Structured Cabling System cabling alongside any power circuit or device. Structured Cabling System cabling shall not share the same raceway, channel or sleeve with electrical circuits or devices.

F. Ensure, during installation, that the maximum pulling tensions and bend radii of the Structured Cabling System cabling (both backbone and horizontal) are not exceeded.

G. Install cables in accordance with manufacturer's instructions and ANSI/TIA 568.

H. All cables shall be installed as illustrated on the drawings except where necessary to avoid EMI sources or other obstacles.

1. The County must approve major deviations from the illustrated path in advance.
2. No splices unless specifically noted otherwise.
3. Provide adequate cable size and length for each backbone/riser run.

a. 4. All backbone cable shall be labeled at every location where the cable could be exposed.

This includes all pull boxes and pull through locations.

a. 5. Provide and install riser/backbone cable that meets performance requirements specified, and links all systems room locations indicated on Contract Documents.

6. Spare Cable (During Installation):

The following spare cable lengths are to be left at termination ends of conduits after termination is completed:

1) Main Distribution Frame (MDF) Rooms: Fiber and copper cables terminating MDF Rooms shall have enough spare cable length left to be routed to any point in the room from point of entrance to the room.

2) Intermediate Distribution Frame (IDF) Rooms: Fiber and copper cables terminating in the IDF Rooms shall have enough spare cable length left to be routed in industry standard workman like manner, from the point of entry into the systems room, to the farthest equipment rack or backboard, then down to the floor plus three (3) feet.

7. Telecommunications Outlets: At the TO's, cables shall terminate with a minimum of twelve (12) inches of spare cable length for copper and twenty-four (24) inches of

spare cable length for fiber.

8. Install all cables no closer than 12" from any cable installed for Structured Cabling System, power system cable/raceway, or fluorescent/ballasted light fixtures.
9. All PDS cable shall be installed in the appropriate raceway.
10. Provide protection for exposed cables where subject to damage.
11. All cables in systems rooms shall be routed in overhead cable ladder racks and dropped into the appropriate racks utilizing transition pans. All cables shall be properly secured to the cable tray, racks, or cabinets.
    a. All fiber cable shall be routed in raceway specifically designed for fiber, and separate from copper cables.
12. Cables shall be terminated to preserve wiring order consistently across all termination (jacks, patch panels, connector blocks and patch cords).

I. Ensure consistency. Corrections shall be made at no additional cost to the Owner.

J. Install appropriate cable to match application, i.e., plenum, riser, etc. All cables shall bear CMP and/or appropriate marking for the application in which they are installed.

K. Cables/raceways routed through rated walls; floors and assemblies shall be routed via appropriate fireproofing system as approved by UL.

L. Horizontal Cables Copper and Fiber:

1. Provide and install adequate number of cables and cable lengths for each horizontal run.
2. Horizontal cables shall be terminated on patch panels in rack(s) or fiber FOPP.
    a. Install one horizontal wire manager directly above or below every 24 ports of patch panel(s).
    b. Terminate all cabling in designate system patch panel where applicable. (i.e. WiFi, CCTV, DS, VMS). Refer to specific labeling requirements for dedicated patch panels.
3. Shall be labeled per Division 27 Specifications.
4. Horizontal cables shall be installed in a neat and orderly manner.
5. Horizontal cables shall be dressed in MFD and IDFs without tangle or inter-wrapping.
6. Termination of all horizontal station copper cables shall be by PDS contractor and shall be according to ANSI/TIA 568B wiring configuration, all fiber cables by termination methods specified within this document.

M. Backbone Fiber Optic Cable:

1. Install fiber optic cable from each IDF to MDF in innerduct within conduit.
2. Termination in respective fiber optic patch panel shall be via connectors as described in Part 2.
    a.
3. Provide minimum 15FT feet of slack (service loop) on both ends of each fiber optic cable.
4. Observe all manufacturer's specifications relative to cable bend radius and pulling tension.
    a. All fiber cables to be installed without splices except at pigtails in FOPP or at outlets.

N. Provide adequate quantities and supporting hardware to terminate the quantity of cable pairs and fiber strands in the MDF and all IDF's as required to comply with these specifications.

3.10 ELECTRICAL POWER DISTRIBUTION

A. Refer to Division 26 and Specification Section 27 05 00 for requirements.

3.11 TRANSIENT VOLTAGE SURGE SUPRESSION

A. Refer to Specification Section 27 05 00 for requirements.

3.12 GROUNDING AND BONDING

A. Refer to Division 26 and Specification Section 27 05 00 in addition to the following.

B. Provide and install complete bonding system as required to comply with all sections of these specifications and applicable codes and referenced standards.

C. Connect all rows of racks and cabinets to Telecommunications Ground Bus (TGB) with AWG #6 THHN green jacket.

1. Each row shall have its own ground cable as described above.

D. Connect all horizontal and backbone metal conduit (via grounding bushing) to TGB.

E. Connect cable shields to Rack Grounding Busbar (RGB).

F. Connect surge suppression equipment to TGB.

3.13 EQUIPMENT IDENTIFICATION

A. Refer to Specification Section 27 05 00 and Attachments to this section in addition to the following.

B. Labeling – General:

2. Cables, pathways, significant Junction Boxes, structured cabling system components etc. shall be labeled at each exposed and termination point and as detailed below at the time of installation. All conduit, pathways, innerducts, enclosures, pull boxes and wireways shall be labeled.
3. Provide and install printed labels for all conduit, pathways, cables, patch cords, frames racks, enclosures, pull boxes etc.
4. All labeling shall be in accordance with ANSI/TIA-606. UL and NEMA requirements.
5. All structured cabling system components must be easily identifiable for any person that may need to locate telecommunications equipment, facilities, or circuit information.
6.
7. Cable and equipment management shall be performed using an Administration Database program that track all telecommunications circuit components. All copper and fiber test results must be exportable into format to allow importing into Telecommunications Administration Database.
8. Hand written labels shall not be acceptable.

C. Patch Panels:

1. Provide Permanente phenoloc label on each "dedicated patch panels" located in the

upper left hand side indicating patch panel designation, system designation, and warning; see below example:

PP-01 CCTV ONLY (PP-xx yyyy ONLY) x=patch panel number, y=System type.

D. Racks / Cabinets:

1. All Racks and cabinets shall have phenolic label mounted to the top of each rack or
a. cabinet.
2. Labels shall be ¾" MIN letters and White lettering on black label.

E. Telecommunication Outlets (TOs):

1. All Telecommunication Outlets (TO) are to be labeled.

F. Cables and Pathways:

1. Cables that shall be labeled include but are not limited to backbone, horizontal, patch cords, line cords, and jumpers.
2. Labels shall be installed for all pathway and cable so they are visible and able to be read by a person standing on floor without moving cables, and if conduit/pathway, labels shall not be obscured by other conduit, or components. Any additional types of labeling materials necessary to keep labels visible shall be provided by the Contractor and installed by the Contractor.
3. All installed metallic and fiber patch cords shall be labeled.
4. Pathways are defined but not limited to; any conduit, inner-duct, underground duct-bank, wiring troughs, pull boxes, and any wiring systems used to enclose cabling of any type.
5. Any pathways or cables whose label format shall still be labeled in a similar format as directed by the County.
6. Cable and Pathway Labels shall be electronically generated by thermal transfer printer. All labels with all fields shall be delivered to the County electronically.
7. Cable and Pathway Labels shall be printed in ALL CAPITAL LETTERS. All components follow "End One" / "End Two" format and named for Inventory format following MCO standard GIS fields' structured labels. The County has the right to change field data and label structure without additional costs.
8. Cable and Pathway Labels shall be printed on adhesive tags no less than 2" in height and permanently placed, longitudinally or flagged. ALL LABELS MUST BE VISIBLE WHEN INSTALLED.
9. Cable and Pathway Labels shall be made of polyester or similar durable material with permanent adhesive characteristics typically found in telecommunication labels. Cable labels to be self-laminating. PER-PROJECT PRODUCTS USED ONLY AFTER SUBMITTALS ARE APPROVED BY the County.
10. Cable Labeling - Attached for easy access and visibility to the cable within 12" of entering the FOPP or terminating at Patch Panel.
11. Cable Labeling - Attached for easy access and visibility to the cable 12" – 16" before entering conduit or inner-duct pathway.
12. Cable Labeling - Attached for easy access and visibility to the cable on service loop on TTB for backbone cables.
13. When printing labels no line break shall fall in a data field. All line breaks to be after

nearest field separating character.

14. Pathway Labeling - Attached for easy access and visibility to conduit (occupied with cable or inner-duct). Shall be visible without movement.
15. Pathway Labeling - Attached for easy access and visibility to inner-duct (empty or occupied with cable) 12" – 16" before inner-duct enters conduit pathway.
16. Inner-duct and cables shall be labeled any time the inner-duct or cable is/can be exposed i.e. pull/junction boxes, manholes, and similar conditions.
17. Inner-ducts and cables shall be labeled in all pull-boxes, manholes, junction boxes. Labels to be minimum 4IN x 2IN, rated for outdoor use and permanently secured by one tie wrap at each end of label or as approved by the County.

G. The labeling scheme is to enable tracing data/circuit information flow between devices without physically tracing each cable, and will be used to identify the following communications infrastructure components and paths:

1. Where any active Electronic Systems are installed by any party requiring use of fiber or copper backbone or horizontal cables, the installation of fiber or copper patch cords shall be complete; all patch cords shall be permanently and properly routed in the pathway created for same, and the patch cords shall be labeled on each end with source/destination.
2. Each active device and its rack location.
3. Each patch panel, row and the associated active device.
4. Each active device cable and the device it is attached to at the other end.
5. Each dormant cable and its other end.
6. Each systems room cable and the systems room located at the other end.

H. All horizontal media (cable) shall be labeled at both ends indicating exact origination and destination information, using basis of design labeling method.

I. Any patch cords installed in MDFs, IDFs, or other rooms shall be labeled according to Division 27 specifications.

J. Passenger Boarding Bridge (PBB) Connectivity Infrastructure

1. The Technology Master Contractor shall label all cable provided by the PBB manufacturer as an extension of building premise distribution to technology and security devices located on the passenger boarding bridge in accordance with the Contract Documents. All points of PBB cabling transition and/or interface to building premise distribution shall be labeled per the PBB cable's identification.

a.

K. Telecommunications Infrastructure Administration Records:

7. Submit to the County for review and approval a proposed telecommunications infrastructure administration record format.

Upon approval and project completion, Tables shall be submitted in Hardcopy and electronic format.

1) Hardcopy to be submitted in 3 ring binder at same time as cable test records.
2) Electronic file to be submitted in Excel most current version..

3.14 MAINTENANCE AND SERVICE

A. Refer to Specification Section 27 05 00 for requirements.

3.15 WARRANTY

A. Refer to Specification Section 27 05 00 for requirements.

3.16 FIELD SERVICES

A. Refer to Specification Section 27 05 00 in addition to the following.

B. No fiber optic or copper cable shall be put into use without being successfully tested and the test results approved as submitted to the County.

1. All telecommunications cable provided by the passenger boarding bridge manufacturer as an extension of building premise distribution to technology and security devices located on the passenger boarding bridge shall be tested and submitted by the Division 27 Contractor.

C. Perform all testing where necessary or specified to assure a fully functional system. Repair or replace and retest components that fail performance standards.

D. Test all cables:

1. Provide all cable test results in both hardcopy and CD format.
2. The CD shall contain test results in tester native format and exported in comma delimited file.
3. All Test results shall be submitted in 3 ring binder with Project #, title, date, indicated on spine and front in no less than 24 font size Arial font.
4. All Binder labeling to be machine printed.
5. Multiple binders shall also be labeled as volume of total volume set, I.E. 1-3, 2-3, 3-3, etc.
6. Test instrument data fields shall exactly match component labeling, I.E. Telecommunication Outlets, FOPPs, etc., provide exact source/destination information for all media tested.

a.

a. 7. All copper backbone testing shall be in its own binder.
A divider shall be placed between each cable's test results.

8. All backbone fiber test results shall be in its own binder.
A divider shall be placed between each cable's test results.
9. All horizontal copper voice and data cable test results shall be together in a binder, with each Telecommunication Outlet's test results pages together and sequential.
10. Each volume/binder shall have Installing/Testing Contractors company information and warranty phone numbers to call for service.
11. Test results submittal shall include calibration certification, within twelve months of the test date, for the test equipment used by the Contractor.

E. Provide system verification and acceptance documentation signed and dated by the installer.

1. This documentation shall include test measurements and system calibrations performed for the entire system.
2. Sample system operations shall also be performed with actual hardware or using

Contractor provided test equipment and documented to verify that the system is operational and ready for acceptance.

3. This shall also establish the baseline performance of the system.

F. Fiber Optic Cable Testing:

1. Each fiber in every backbone inter-building and intra-building cable and every horizontal cable run shall undergo testing in accordance with Annex E of ANSI/TIA-568-C, including Tier 1 testing for length, polarity and Optical Return Loss (ORL), using an Optical Loss Test Set (OLTS), and the additional steps required for Tier 2 testing using an Optical Time Domain Reflectometer (OTDR). The test methods and configuration of equipment and test cords for both Tier 1 and Tier 2 tests shall be as detailed in ANSI/TIA-526-7-A.
2. Test results shall include a record of:
   a. Wavelength.
   b. Fiber type.
   c. Fiber and cable number.
   d. Measurement direction.
   e. Test equipment model and serial numbers
   f. Date.
   g. Reference setup.
   h. Operator (crew members).

G. Copper Category 6 or higher, UTP & STP Cable Testing:

1. Every cable and connector pin for each horizontal cable run from an MDF or IDF to a Telecommunication Outlet (TO) shall be tested up to 250 MHz for Category 6 rated operation:
   a. Continuity on each pin.
   b. Correct pin-pair orientation (wiremap).
   c. Propagation Delay (100 m).
   d. Skew (100 m).
   e. Near end crosstalk (NEXT value).
   f. Power Sum Near End Crosstalk (PSNEXT).
   g. dB loss (attenuation).
   h. Equal Level Far End Crosstalk (ELFEXT).
   i. Power Sum Equal Level Far End Crosstalk (PSELFEXT).
   j. Return loss.
   k. Cable length.
   l. Presence of AC voltage.
   m. The Category 6 cable shall be tested for the conformance to the specifications of ANSI/TIA 568-D Category 6.
   n. Should UTP cable type in project be changed to make use of updated cable technologies, testing of cable shall conform to latest industry standard and manufacturer's testing requirements to ensure cable has been correctly installed and is operating to specification.
   o. STP cabling shall include the following additional test requirements:
      1) Cable shield continuity
      2) Power Sum Alien Near-End Crosstalk (PSANEXT) test

3) Power Sum Attenuation-to-Alien-Crosstalk Ratio at the Far End (PSAACRF) test

Category 6A rated cable shall include the following additional requirements:

1) Perform all testing required for Category 6 rated cable up to a frequency of 500MHz for all Category 6A rated cable.

3.17 TRAINING

A. p. Refer to Specification Section 27 05 00 in addition to the following.

B. Training and orientation of installed structured cabling system and OSP components and active equipment shall be provided to the Owner.

1. Training instruction shall include any additional active Systems as required by Project.
2. Training shall cover all locations where structured cabling and/or Systems have been installed and or modified.

3.18 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to Specification Section 27 05 00 in addition to the following.

B. Upon completion of the aforementioned tests and before system commissioning and final acceptance, actual voice and data testing shall be performed.

C. The tests may be performed with existing equipment, if in place, or using contractor provided equipment or test equipment.

D. The tests shall be performed at Owner's discretion and on a sample basis (10% of installed Telecommunication Outlets, copper pairs, and fiber strands) on various portions of the network as determined by the County.

1. The tests shall be witnessed by the Contractor, and the County.

E. Demonstrate system to designated Owner personnel as required by applicable sections of these specifications.

1. Conduct walking tour of project.
2. Briefly describe function, operation, and maintenance of each component.
3. All pull-box covers shall be removed so Owner can inspect for proper installation of cable and labels.
4. Provide detailed operation and maintenance instruction and training.
5. Use submitted operation and maintenance manual as reference during demonstration and training.

END OF SECTION 27 10 00

PART 1 - GENERAL

1.1 STIPULATIONS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections and stipulated Specification Sections shall apply to this and all related Division 27 Specification Sections.

B. Related Specification Sections:

1. Refer to Specification Section 27 05 00 for a complete list of related specification sections.

C. Reference Symbols:

2. All device symbols are defined by the appropriate symbol schedule on the symbols and abbreviations sheet in the systems drawing package. Not all device symbols indicated may be required for the project.
3. Due to the scale of the drawings, symbols are shown on the drawings close as possible to the intended mounting location. The Contractor shall coordinate exact locations with all drawings and affected trades prior to submittal of shop drawings.
   a. The installing Contractor shall coordinate exact locations with all security and telecommunications drawings, site plan drawings as well as related Specification Sections of affected trades and systems prior to the submittal of any shop drawings.

D. Abbreviations:

1. Refer to Specification Section 27 05 00 for requirements.

E. Definitions:

1. Refer to Specification Section 27 05 00 for requirements.

1.2 SUMMARY

A. Refer to Specification Section 27 05 00 in addition to the following.

B. The intent of this specification is to establish a standard of quality, functions, and features for implementation of a TCP/IP-based VoIP System into the new Trenton-Mercer Airport terminal and locations and as indicated on the contract drawings and/or herein specified.

C. Contractor shall include all work, materials, infrastructure, equipment, software, licensing, programming, coordination with the County as required to provide a fully integrated and operational system as herein specified.

1. The installation, performance, features, functions, software and programming modifications as specified herein as well as all related specification sections have been designed to offer the maximum system efficiency for ease of operation, occupant safety and the protection of equipment as recommended by the County.
2. Prior to the submission of the Bid, any discrepancies or inconsistencies noted within these specifications and/or project drawings shall be brought to the immediate attention of the County.
   a. Any deviations from the specified criteria shall be documented, reviewed and agreed to in writing by the County prior to submission of bids. Refer to Division

01, and 27 05 00 Specification Section and 27 10 00 Specification Section for product substitutions.

1) The required information shall include but not limited to: reason for deviation, all differences in performance, operation, and function from the herein specified requirements, all benefits, and added features to owner as a result of the deviations and any additional incurred costs to owner for maintenance and long term ownership. The information shall adhere to the requirements found in Div. 01 and 27 05 00 specifications sections.
2) Failure to provide the County with the required information shall result in all shop drawing submissions being returned for non-conformance with the contract requirements.

3. It shall be the responsibility of the contractor to coordinate active and passive network electronics, electrical power, UPS units, and ensure that 3rd party equipment installed meets or exceeds every standard set forth in these specifications. Contractor shall be responsible for providing a complete and functional VoIP enterprise-based system, including all necessary telephone instruments, components, devices, servers, active and passive network electronics, electrical power, UPS units, software, programming, commissioning, testing and all appurtenances as well as the integration to all ancillary systems as necessary to provide a complete and fully operational system whether specifically included in this section or not.
   a. The system shall consist of, but not be limited to, all equipment, devices, servers, administrative workstations, network servers, telephone instruments, network communications equipment, power supplies, conduits, cabling, software, programming and all appurtenances as well as the integration of the facility’s Public Announcement System (PA), airport databases, and all related systems necessary to provide a complete operating TCP/IP based networked system in accordance with the contract documents.
      1) The Contractor shall have a registered RCDD professional review and seal all system shop drawings demonstrating industry standard design, installations and certifications of all structured cabling networks related to the installation and operation of the Voice over IP Telephone System and all related TCP/IP based electronic security systems.
      2) Refer to Specification Sections 27 05 00 and 27 10 00 for all TCP/IP based cabling requirements.

D. Contractor shall assume total system responsibility for providing all connections and cross-connections to:

1. The Incumbent Local Exchange Carrier, Competitive Local Exchange Carrier, Session Initiation Protocol providers (SIP), Internet Service Providers (ISP), SIP trunks, PRI circuits, inter-office ring, Central Office Lines (CO), or remote off premises communications by the County.
2. Contractor shall coordinate with the County for incoming services which may be implemented, added, or purchased prior to installation.

E. The Contract drawings and specifications may not deal individually with every part, control, device, software or programming, which may be required to produce the equipment and/or

system performance specified or as necessary for the installation and integration of all requirements of the Contract Documents.

1. The Contractor shall include all such items and components, as required, for the complete and operational installation of all system components as defined by the Contract Documents, whether or not specifically indicated and/or specified.
   a. Include such items, as required, for a complete operational system, whether or not specifically indicated.
   b. Coordinate with other applicable trades in submittal of shop drawings and the installation of all systems.
   c. Shop drawings shall detail space conditions to accommodate other concerned trades, subject to final review by the County.
   d. Provide all wiring, connections, patch cords at the telephony devices, within the closet, termination points to support all equipment, circuits and devices as well as all coordination and programming for the integration of all VoIP integration, and ancillary systems. Refer to the contract drawings and related Specification Sections for additional information.

F. All references to industry and trade association standards as well as all building codes are minimum installation requirements for this system. The codes, standards and agencies listed in Specification Section 27 05 00 shall form a part of this Specification Section and all work shall comply with the latest adopted standards.

   1. The publications listed in Specification Section 27 05 00 (including all amendments, addenda, revisions, supplement, and errata) shall form a part of this Specification Section to the extent referenced. The publications are referenced in the aforementioned Specification Section by the basic designation only.

G. The Contractor shall coordinate with County for initial deployment of the VoIP components which shall consist of, but not be limited to, the following:

   1. Installing all telephones accessory devices, and mountings throughout the facility.
      a. Installing telephones consist of distribution of desk phone, wall phones, installing mounts for each application, routing of patch-cord through telephone cable guides.
      b. Routing patch cable through furniture to reach voice and data outlet.
   2. The Contractor shall furnish and install all phones and accessories.
   3. Contractor shall coordinate with the County for computer generated labels that will be applied to the phone identifying its extension and computer generated labels on telephone soft key buttons. Furnish and install all telephone audible and visible enhancement equipment and connectivity that will reside with or on telephones. Refer to spec section Hardware Requirements for furnishing responsibility.
   4. (1) TTY phone shall be mounted at every bank of courtesy phones. Refer to drawings for additional requirements.
   5. Courtesy phone enclosure mounting. Contractor shall be responsible for mounting courtesy phone within ADA required enclosure.
   6. The Division 27 contractor shall install telephones to ADA requirements.

H. Contractor shall be responsible for all integration with the LAN and necessary configuration to provide the functionality described within this document. Any configuration shall be performed in coordination with and approval by the County.

1. Contractor shall furnish and install the following systems as part of the VoIP solution:
   a. All software, licensing, latest firmware and hardware components necessary for VoIP to function as specified.
   b. All required active network switches dedicated for the telephone switch.
   c. Cross connections and intra-connections to service provider incoming telecommunication trunk lines.
   d. System training as specified.
   e. System warranty as specified.
   f. System testing and acceptance plans as specified.

I. The Division 27 integrator shall be responsible for providing all equipment, devices, system components, final cable terminations, programming, commissioning, and testing of all VoIP Telephone components in accordance with all related Division 27 Specification Sections.

1.3 REFERENCES

A. Publications and standards listed in Specification Section 27 05 00 shall form a part of this specification to the extent referenced. The publications are referenced in the text by the basic designation only.

B. All references to industry and trade association standards as well as all building codes are minimum installation requirements for this system. The codes, standards and agencies listed in Specification Section 27 05 00 shall form a part of this Specification Section and all work shall comply with the latest adopted standards.

1. Where the Contract Documents mandate a greater requirement or performance than those specified by the aforementioned referenced codes and standards, the greater requirement shall be the governing design application for this project.

1.5 SYSTEMS DESCRIPTIONS

A. Refer to Specification Section 27 05 00 for requirements.

1.6 SUBMITTALS

A. In addition to all requirements as specified by Division 01 and Specification Section 27 05 00, the Telephone Equipment and components shall also be provided in accordance with the following requirements:

1. Shop drawings shall detail space conditions to accommodate other concerned trades.
2. Provide a complete signal flow diagram with connectivity component and connectivity identified.
3. Any new integration protocols, communications connectivity and interface components to the facility’s VoIP PBX system.

1.7 QUALITY ASSURANCE

B. Refer to Specification Section 27 05 00 for requirements.

4. The contractor shall be a manufacturer-certified installer with a minimum of 5 years experienced installing and maintain the submitted manufacturer’s equipment.

1.8 DELIVERY, STORAGE AND HANDLING

A. Refer to Specification Section 27 05 00 for requirements.

B. Contractor shall coordinate voicemail storage requirements with the County. Contractor shall furnish, install and configure a networked storage system for the voicemail system.

1.9 RECORD DOCUMENTS

A. Refer to Specification Section 27 05 00 for requirements.

1.10 OPERATIONS AND MAINTENANCE

A. Refer to Specification Section 27 05 00 for requirements.

1.11 SOFTWARE AGREEMENT

A. Refer to Specification Section 27 05 00 for requirements.

1.12 SPARE MATERIAL

A. All spare material shall be furnished by the Contractor. Refer to section 2.4.B for additional information.

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. Refer to Specification Section 27 05 00 for requirements:

2.2 SYSTEM CONFIGURATION REQUIREMENTS

A. Contractor shall coordinate with the County’s VoIP System configuration which shall include, but not limited to, the following:

1. The VoIP system shall have priority within a converged network for life safety.
2. Shared Tenant Services shall be implemented, whereas Authority programs, manages, and maintains all voice services for airlines, vendors, agencies (e.g. TSA), and satellite buildings.
3. The PBX programming between County and tenant services shall not overlap or configured to allow bypass, or interact across operational platforms. Each tenant VoIP partition shall operate as virtual standalone VoIP PBX systems.
4. Administration controls will be managed through the County.
5. Voice Recording Services shall follow the County’s current standards.
6. Courtesy phones shall only allow local call and shall block any calls to pay services numbers.
7. Code Blue phones located in the parking garage shall be configured to call as follows:
   a. Emergency Button shall call 911 direct.
   b. Assistance Button shall call Parking help desk with roll-over to the law enforcement officer (LEO) office if not answered by the Parking help desk
8. Coordinate programming of all telephone system auto attendant, call routing, extensions, grouping, hunt group, forwarding, ring forward, voicemail, DSS buttons, schedules (holiday, after hours, etc.) with the County..

2.3 SYSTEM AND SOFTWARE REQUIREMENTS

A. Provide all VoIP platform software and programming gas required for a fully-functional phone system.

B. All software licenses shall become property of the County at project completion.

2.4 HARDWARE REQUIREMENTS

A. Contractor shall install telephones system to meet or exceed the following requirements. The contractor coordinate and schedule deployment of hardware with the County.

1. Requirements TBD.

PART 3 – EXECUTION

3.1 COORDINATION

A. Refer to Specification Section 27 05 00 for requirements.

3.2 EQUIPMENT PROTECTION

A. The Contractor shall be responsible for protection of all materials, equipment, devices or components permanently installed and/or stored on the job site. Protect all materials, equipment, cabling, devices or components during construction and after installation. Provide appropriate protection of all materials, equipment, components and/or devices until time of substantial completion. All materials, equipment, components and/or devices shall be protected during shipment and storage against any physical damage, dirt, moisture, cold, snow or rain:

1. During installation, enclosures, racks\cabinets, equipment, controls, controllers, circuit protective devices, and other like items, shall be protected against entry of any foreign matter; and shall be vacuum cleaned both inside and outside before testing and operating and repainting if required.

2. Any materials, equipment, components and/or devices, stored on site which have been deemed by the County to exhibit or indicate damage, exposure to dust or moisture shall not be installed and shall be returned to the manufacturer for immediate replacement.
   a. The use of spare parts or the return of defective equipment after repair to mitigate the damage of defective materials, equipment, components and/or devices shall not be acceptable. All materials, equipment, components and/or devices shall be new and unused until final acceptance by the County.
3. The Contractor shall provide and apply protective material immediately upon receiving the products and maintain throughout the construction process.
   a. Painted surfaces shall be protected with factory installed removable heavy kraft paper, sheet vinyl or equal.
   b. Any damaged paint on equipment and materials shall be refinished with the same quality of paint and workmanship as used by the manufacturer so repaired areas is not obvious or detectable.
4. Failure to properly protect all materials, equipment, components and/or devices prior to final acceptance shall constitute sufficient cause for rejection of materials, equipment, components and/or devices should any defects, damage or degradation in performance is observed.

B. Immediately replace all malfunctioning materials, equipment, components and/or devices with new unused products up until the time the County issues final acceptance of the

system. The returning of any malfunctioning equipment, devices and/or components to the manufacturer for repair and then reinstallation at the project site shall not be acceptable.

1. All replacement materials, equipment, components and/or devices shall be factory new and not scavenged from the Project’s spare parts inventory or factory recycled products.

3.3 WORK PERFORMANCE

A. Refer to Specification Section 27 05 00 in addition to the following:

1. Refer to related Specification Sections for additional project coordination requirements. In addition to the requirements defined in this Specification Section, the contractor shall coordinate and meet all requirements addressed in Division 26, Division 27 and Division 28 Specification Section.
2. Supply all software and hardware necessary for the systems(s) to function as specified.
3. System Cabling Refer to specifications section 27 10 00 and section 27 10 05.
4. The Contractor shall prepare the necessary documents required for installing, testing, and bringing the VoIP online. Such documents include but are not limited to:
   a. Project management and quality assurance plans
   b. Testing plans
   c. Component and system submittal documents
   d. Installation plans
   e. Component design plans
   f. System user documentation
   g. As-built drawings and documentation
5. The Contractor shall coordinate with the County to ensure the system meets the requirements. The Contractor shall meet all ADA requirements.
6. The Voice over IP Telephone System (VoIP) shall support the entire airport terminal.

3.4 EQUIPMENT INSTALLATION

A. All system equipment installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer’s requirements. Cable terminations at all equipment locations shall comply with all state and local electrical codes. All wiring shall test free from all grounds, shorts, stray voltages and EMI.

B. Follow manufacturers' instructions for installing components and adjusting all equipment and cabling. Submit two (2) copies of such instructions to the County before installing any equipment. Provide an additional copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.

C. Equipment location shall be as close as practical to locations as indicated on the contract drawings.

1. Provide all equipment clearances in accordance with NEC requirements. Arrange equipment to facilitate unrestricted access for maintenance and service around all equipment, components and/or cable terminations.

D. Inaccessible Equipment:

1. Where the County determines that the Contractor has installed equipment not conveniently accessible for operation and maintenance, the equipment shall be

removed and reinstalled as directed at no additional cost to the project.

a. "Conveniently accessible" is defined as being capable of being reached without the use of ladders, or without climbing or crawling under or over obstacles such as, but not limited to, motors, pumps, belt guards, transformers, piping, ductwork, conduit and raceways.

3.5 INSTALLATION REQUIREMENTS

A. In addition to all demonstration and training as specified by Division 01, Specification Section 27 05 00 and related Division 27 Specification Sections, system installation shall be provided in accordance with all requirements of this Section.

B. General

1. System/Hardware and mounting must comply with IBC Seismic Requirements.
2. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.
3. The Contractor shall install all system components including furnished equipment in accordance with the manufacturer's instructions, NFPA 70, ANSI-C2 and shall furnish all cables, connectors, terminators, interconnections, services, and adjustments required for a complete and operable system.
4. Grounding shall be installed as necessary to prevent ground loops, noise, and surges from adversely affecting system operation.
5. For equipment mounted in drawers or on slides, provide the interconnecting cables with a service loop of not less than three feet and ensure that the cable is long enough to allow full extension of drawer or slide.
6. The Contractor's quality assurance Inspector shall conduct a visual inspection of all installations to verify that the installations are in accordance with the project’s and manufacturer's specifications. Records of the inspections signed and dated by the Quality Assurance Inspector shall be provided to the County. Prior to any scheduled inspections the County representative shall be notified by the Contractor of any inspection(s) so they may witness.
7. Phones:
   a. Phones shall be installed at desk and wall phone locations identified in the drawings.
   b. Desk phones shall have the patch cord routed through phone cable pathway allowing the desk phone to sit flush against the surface.
   c. Phones identified to be mounted on the wall brackets shall be installed and cable routed so that the phone bracket is securely attached to the wall plate studs.
   d. Courtesy phones shall be mounted per manufacturing installation requirements.
   e. Jet bridge phones shall be wall mounted at designated area. Contractor shall coordinate with jet bridge contractor for exact location.
8. Gateways:

   a. Gateways shall be mounted in the floor serving MDF and IDF’s unless otherwise noted.

   b. Gateways shall be mounted within a cabinet. Gateways shall be rack mounted where applicable. Gateways that cannot be mounted to cabinet rails shall reside on a cabinet mounted shelf. These gateways shall be consolidated and neatly place on the shelf.

C. Software Installation

1. The Contractor shall test all custom and packaged software in development and production environments, and have successfully passed factory acceptance testing, prior to installation on-site.

D. Hardware Installation

1. Final hardware selected and installation of hardware shall be coordinated with the Project Manager. Additionally, the Contractor shall ensure the ventilation requirements for the all hardware components are met.
2. The Contractor shall install and inspect all hardware required in this specification in accordance with the manufacturer's installation instructions. Final placement of hardware is subject to the County approval.
3. The Contractor shall be responsible for any and all loss or damage in the shipment and delivery of all material until transfer of title to the County.
4. The Contractor shall obtain written permission from the County before proceeding with any work which requires cutting into or through any part of the building structures such as, but not limited to, girders, beams, concrete, carpeted or tiled floors, partitions or ceilings. The Contractor shall obtain written permission from the County before cutting into or through any part of the building structures where fireproofing or moisture proofing could be impaired. In any such case the Contractor shall be responsible for restoring the affected area to “like-new” condition or to a condition to match the existing conditions.
5. The Contractor shall take all steps necessary to ensure that all public areas remain clear or are properly marked during installation or maintenance.
6. The Contractor shall place materials only in those locations that have been previously approved. Any other locations shall be approved, in writing, by the County.
7. The Contractor shall label all cabling and patch cords in accordance with the Division 27 specifications. Coordination with the County shall be performed, and all labeling shall be approved, prior to implementation.

E. System Startup

1. The Contractor shall not apply power to the system until after:
    a. System and components have been installed and inspected in accordance with the manufacturer's installation instructions.
    b. A visual inspection of the system components has been conducted to ensure that defective equipment items have not been installed and that there are no loose connections.
    c. System wiring has been tested and verified as correctly connected as indicated.
    d. All system grounding and transient protection systems have been verified as properly installed and connected, as indicated.
    e. Power supplies to be connected to the system and equipment have been verified as the correct voltage, phasing, and frequency as indicated.
    f. Satisfaction of the above requirements shall not relieve the Contractor of responsibility for incorrect installations, defective equipment items, or collateral damage as a result of Contractor work/equipment.

3.6 COMMUNICATIONS CABLING REQUIREMENTS

A. Refer to Specification Section 27 05 00 for requirements.

3.7 ELECTRICAL POWER DISTRIBUTION

A. Coordinate with the Division 26 contractor, the County prior to connections and/or modifications to the electrical distribution panels. Additional locations requiring electrical power by the specific products and/or integrator selected equipment shall be the responsibility of this Electrical Contractor to include as part of this project.

1. Primary power for all system controls, sub-control panels, processors, and power supplies shall be configured to switch to emergency backup power sources automatically when primary power is interrupted without degradation of any critical system functions.
2. All electrical power shall be hardwired to the panel. System components or panels employing the use of plug-in transformers, extension cords or cheater cords for the connection to electrical power shall not be acceptable.

3.8 TRANSIENT VOLTAGE SUPPRESSION

A. Refer to Specification Section 27 05 00 for requirements.

3.9 GROUNDING AND BONDING

A. Refer to Specification Section 27 05 00 for requirements.

3.10 EQUIPMENT IDENTIFICATION

A. Refer to Specification Section 27 05 00 for requirements.

3.11 MAINTENANCE & SERVICE

A. Refer to Specification Section 27 05 00 for requirements.

3.12 WARRANTY

A. Refer to Specification Section 27 05 00 for requirements.

3.13 FIELD SERVICES

A. Refer to Specification Section 27 05 00 for requirements.

3.14 TRAINING

A. Refer to Specification Section 27 05 00 for requirements.

3.15 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to Specification Section 27 05 00 for requirements.

END OF SECTION 27 10 10

PART 1 - GENERAL

STIPULATIONS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections and stipulated Specification Sections shall apply to this and all related Division 27 Specification Sections.

1.1

B. Related Specification Sections:

1. Refer to Specification Section 27 05 00 for a complete list of related specification sections.

C. Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedule on the symbols and abbreviations sheet in the systems drawing package. Not all device symbols indicated may be required for the project.
2. Because of the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location. Contractor shall coordinate exact locations with all drawings and affected trades prior to submittal of shop drawings.
    a. The installing Contractor shall coordinate exact locations with all security and telecommunications drawings and site plan drawings as well as all affected trades prior to submittal of any shop drawings.

D. Abbreviations:

1. Refer to Specification Section 27 05 00 for requirements.

E. Definitions:

1.2

1. Refer to Specification Section 27 05 00 for requirements.

SUMMARY

A. Refer to Specification Section 27 05 00 in addition to the following.

B. The intent of this specification is to establish a standard of quality, functionality, and features for the installation of a new Wireless Local Area Network System (WLAN) throughout the new satellite concourse ‘C’ for Destin Fort Walton Beach Airport. The WLAN shall provide wireless network connectivity to passengers, Authority staff and personnel, tenants, and other stakeholders as well as specified building systems in areas of the new satellite concourse ‘C’ for Destin Fort Walton Beach Airport identified in the Contract Documents.

C. Refer to the contract drawings for Wireless Access Point (WAP) and related device placement.

D. The Contract Drawings are diagrammatic in nature and reflect the design intent and approximate signal coverage and density. The Contractor shall generate an RF "heat map" model and submit to the County for approval in order to finalize WAP locations. Refer to SUBMITTALS within this Section for additional information.

SCOPE OF WORK

A. Refer to Specification Section 27 05 00 in addition to the following.

B. The Contractor shall furnish and install all cabling, cable terminations, conduits/raceways, racks, cabinets, commissioning, and testing of all network communications cabling and equipment in accordance with all related Division 27 Specification Sections.

1.3

a. The Contractor shall have a registered RCDD professional review and seal all system shop drawings demonstrating industry standard design, installations and certifications of all structured cabling networks related to the installation and operation of the Wireless Local Area Network System.

b. Refer to Specification Sections 27 05 00 and 27 10 00 and for all TCP/IP based system cabling requirements

REFERENCES

1.4

A. Refer to Specification Section 27 05 00 for requirements.

1.5 SYSTEMS DESCRIPTIONS

A. Refer to Specification Section 27 05 00 for requirements.

1.6

SUBMITTALS

A. Refer to Specification Section 27 05 00 for requirements in addition to the following.

B. The Contract Drawings detail typical mounting conditions and do not necessarily reflect all possible mounting configurations. The Contractor shall submit all WAP mounting details as part of Shop Drawings.

C. Mock-Ups

1. Prepare mockups for each wireless access point mounting type using approved mounting brackets and wireless access points. Mock-ups shall comply with the following requirements:

a. Demonstrate means of securing the WAP and bracket/housing to the structure.

b. Demonstrate the appearance and finish of the installed products.

2. Mock-Ups shall encompass the following:

a. Wall Mount: Construct a 2'x2' section of wall to match the actual mounting surface.

b. Ceiling Mount: For each mock-up, include a 2'x2' section of the ceiling finish to which WAP will be mounted. If the ceiling consists of prefabricated panels or tiles, utilize a tile or panel for the mock-up. If the WAP is to be mounted to a supporting grid or system, demonstrate attachment to the grid in the mock-up.

c. Specialized Mounts: For all other mounting conditions, construct a mock-up that demonstrates the structural and aesthetic features specified.

3. RF Coverage Modeling

a. Prior to the submission of shop drawings, the contractor shall perform an analysis of the coverage offered by the Wi-Fi antenna locations submitted in the shop drawings. Coverage prediction maps shall be submitted prior to the start of system installation, including any conduit installation to antenna locations. Installation shall not proceed until submittal has been approved by the Authority. All shop drawings shall reflect all WAP locations based on this RF Coverage Model. The RF Coverage Model shall establish the final design.

1.7 QUALITY ASSURANCE

A. Refer to Specification Section 27 05 00 for requirements.

1.8 DELIVERY STORAGE AND HANDLING

A. Refer to Specification Section 27 05 00 for requirements.

1.9 RECORD DOCUMENTS

A. Refer to Specification Section 27 05 00 in addition to the following:

1. Provide floor plans indicating the location of each WAP and unique identification number associated with MAC address and serial number of each device.

1.10

1.11 OPERATIONS AND MAINTENANCE

A. Refer to Specification Section 27 05 00 for requirements.

1.12 SOFTWARE AGREEMENT

A. Refer to Specification Section 27 05 00 for requirements.

1.13 SPARE MATERIAL

A. Refer to Specification Section 27 05 00 for requirements.

ENVIRONMENTAL CONDITIONS

A. Refer to Specification Section 27 05 00 for requirements.

PART 2 - PRODUCTS

MANUFACTURED PRODUCTS

A. Refer to Specification Section 27 05 00 for requirements.

SYSTEM REQUIREMENTS

2.1 A. The Contractor shall provide WLAN system configuration shall include, but not be limited to, the following:

2.2 1. All network configuration tasks including, but not limited to, assignment of IP addresses or configuration of DHCP as directed by the Authority.
2. Setup of system administrative features such as traffic monitoring, security/firewall settings, and other functions as directed by the Authority.
3. Configuration of public WLAN such that users encounter a seamless experience at the new replacement terminal.
4. Configuration of additional BSSIDs for various tenant users and stakeholders as directed by the County.
5. Adjustment of WAP locations, antenna orientation and configurations to achieve the desired signal coverage, throughput, and wayfinding functionality in areas of the terminal as specified in the contract documents. The Contractor shall continue to provide adjustments until performance is achieved to the satisfaction of the Authority at no additional cost to the County.

B. Contractor shall coordinate with the County to ensure proper, vendor-certified and approved configuration and performance of the WLAN in accordance with the manufacturer's published system and device documentation and all requirements of the Contract Documents.

2.3 SOFTWARE REQUIREMENTS

A. Refer to specification 27 05 00 for additional information.

2.4 B. Provide all WLAN management software as required for a complete and functional WLAN.

HARDWARE REQUIREMENTS

A. Wireless Access Points (WAPs)

1. Capabilities:

a. Access points shall be PoE (802.3at) compliant

b. Co-existence with emerging 5G technologies, IoT and cellular network offloading

c. Leverage Wi-Fi infrastructure to observe passenger flow and derive business analytics and Key Performance Indicators (KPIs)

d. Encryption: Advanced Encryption Standard (AES), Wi-Fi Protected Access 2 (WPA2), WPA, 802.11i, 802.11X

e. Wireless Standards: 802.11ax and backwards compatible with 802.11ac/n/g/a/b

2. Indoor Omnidirectional WAPs shall, at a minimum, meet the following feature requirements:

a. Dual radios, 2.4GHz and 5GHz frequency bands

b. Single-User, Multi-Input Multi-Output (SU-MIMO) and Multi-User, Multi-Input Multi-Output (MU-MIMO) with up-link and down-link support

c. 5GHz Radio transmission:

1) (2) or (4) spatial streams for up to 4 x 4 MIMO
2) SU-MIMO and DL MU-MIMO support
3) 3.6 Mbps to 4,803 Mbps (MCS0 to MCS11, NSS = 1 to 4, HE20 to HE160)

d. 2.4GHz Radio transmission:

1) (2) spatial streams SU-MIMO
2) SU-MIMO and DL MU-MIMO support
3) 3.6 Mbps to 574 Mbps (MCS0 to MCS11, NSS = 1 to 2, HE20 to HE40)

e. Maximum connected devices per radio: 256

f. Maximum number of BSSIDs: 16

g. Maximum aggregate transmit power: +24dBm (2.4GHz), +24dBm (5GHz)

3. Indoor Omnidirectional WAPs shall be Aruba, Cisco, or approved equal.

4. Outdoor Omnidirectional WAPs shall, at a minimum, meet the following feature requirements in addition to those listed under Indoor Omnidirectional WAPs above:

a. Operating Temperature: Temperature: -40° C to +70° C (-40° F to +158°F)

b. IP67 and NEMA 4X rated included housing

c. Outdoor Omnidirectional WAPs shall be Aruba, Cisco, or approved equal.

5. Outdoor Directional WAPs shall, at a minimum, meet the following feature requirements in addition to those listed under Outdoor Omnidirectional WAPs above:

a. Integrated directional antenna gain:

1) 6.3 dBi @ 2.4 GHz (90° Vertical x 90° Horizontal)
2) 6.5 dBi @ 5.x GHz (90° Vertical x 100° Horizontal)

b. Outdoor Omnidirectional WAPs shall be Aruba, Cisco or approved equal.

B. WLAN Controllers

1. WLAN Controllers shall provide the overall administration and management functionality for the WLAN. Controllers shall be designated as "master" and "slave" controllers depending on the logical and physical location of the controller within the system. At a minimum, controllers shall comply with the following requirements:

    a. Physical Form Factor & Connectivity

        1) 1RU rack mount enclosure
        2) (4) 10GBase-X SFP+ Ports
        3) (1) USB 2.0
        4) (1) RJ-45 Console Port
        5) Operating environment: 0 to 40 deg. Celsius, 5 to 95% relative humidity (non-condensing)

    b. Functionality

        1) Maximum connected WAPs: 2,000
        2) Maximum concurrent connected devices: 32,000
        3) Maximum supported VLANs: 4,094
        4) Maximum concurrent GRE tunnels (BSSIDs): 32,768
        5) Wired throughput (large packets): 40Gbps

2. Provide all SFP+ modules and accessories as required to connect the WLAN controllers to the County's PON.
3. WLAN controller shall be Aruba, Cisco, or approved equal.

C. WAP Housings

1. Contractor shall furnish and install housings as specified below.

    a. Right-angle Wall Mount Housing

        1) Wedge-shaped housing capable of mounting WAP on a wall in a horizontal orientation
        2) Direct mounting over standard data outlet/back box
        3) 18-Gauge steel, white powder coat
        4) Locking, hinged cover for access to rear of access point and data outlet
        5) Support for Aruba, Cisco WAPs or approved equal
        6) Oberon model 1012-00 or approved equal.

    b. Suspended Tile Ceiling Housing

        1) 2'x2' lay-in ceiling tile form factor
        2) Extra deep backbox with single-gang electrical knock-out for electrical box mounting above ceiling
        3) White ABS plastic dome
        4) 25lb load capacity
        5) Compatibility with Aruba, Cisco WAPs or approved equal
        6) Oberon model 1077-WA-T or approved equal.

    c. Outdoor Locations

        1) AP's mounted outdoors shall be manufactured with outdoor rated housings.

d. Other housing form factors as required to protect the WAP from the surrounding environment, restrict access to authorized personnel, and to match the surrounding architectural features. Housings shall be as manufactured by Oberon or approved equal.

PART 3 - EXECUTION

COORDINATION

A. Refer to Specification Section 27 05 00 for requirements.

3.1 EQUIPMENT PROTECTION

A. Refer to Specification Section 27 05 00 for requirements.

3.2 WORK PERFORMANCE

3.3 A. Refer to Specification Section 27 05 00 in addition to the following:

1. Refer to related specification sections for additional project coordination requirements. In addition to the requirements defined in this specification section, the Contractor shall coordinate and meet all requirements addressed in Division 26, Division 27 and Division 28 specification sections.
2. The Contractor shall supply all end-user cabling and connectivity components for interconnection of system equipment. This shall consist of, but not be limited to:
    a. The installation of hybrid fiber optic/copper cabling from communications rooms (IDFs/MDFs) to all ONTs supporting WAPs.
    b. The installation of Category 6 UTP patch cords for interconnection from ONTs to WAPs
    c. The installation of single mode fiber optic and Category 6 UTP patch cords in communications rooms to connect equipment associated with the WLAN.
3. At the time of shop drawing submission, the Contractor shall provide a wireless coverage heat map drawing documenting the overall RF design intent indicating maximum operating ranges between an WAP (fixed location) and mobile stations at a specified transmission power level. Include all adjacent wireless access channel assignments for each WAP.
    a. The heat map shall also identify potential coverage shortfalls due to multi-path, interference sources, and interference from other wireless installations.
    b. Prior to the installation of any wireless access point enclosures the Contractor shall conduct and document a real time RF site survey to determine the maximum operating range between an AP (fixed location) and mobile stations for a specified transmit power level. Survey shall also identify holes of coverage due to multi-path, interference sources, and interference from other wireless installations.

c. Final termination, and testing, of all data communications and wireless network equipment shall be under the direct supervision of the appropriate system integrator. The integrator shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, programming, testing, and commissioning, of all equipment, devices, components, and/or systems being provided as part of this project.

INSTALLATION REQUIREMENTS

A. Refer to Specification Section 27 05 00 for requirements in addition to the following:

1. The Contractor shall assign a unique device identifier associated with each device's MAC address and manufacturer serial number.

3.4

COMMUNICATIONS CABLING REQUIREMENTS

A. Refer to Specification Section 27 05 00 for requirements.

3.5

ELECTRICAL POWER DISTRIBUTION

3.6

A. Refer to Specification Section 27 05 00 for requirements

TRANSIENT VOLTAGE SUPPRESSION

3.7

A. Refer to Specification Section 27 05 00 for requirements.

3.8

GROUNDING AND BONDING

A. Refer to Specification Section 27 05 00 for requirements.

3.9

EQUIPMENT IDENTIFICATION

3.10

A. Refer to Specification Section 27 05 00 for requirements.

MAINTENANCE & SERVICE

3.11

A. Refer to Specification Section 27 05 00 for requirements.

3.12

WARRANTY

A. Refer to Specification Section 27 05 00 for requirements.

3.13

3.14

FIELD SERVICES

A. Refer to Specification Section 27 05 00 for requirements.

TRAINING

REFER TO SPECIFICATION SECTION 27 05 00 FOR REQUIREMENTS. PROJECT CLOSEOUT REQUIREMENTS

A. Refer to Specification Section 27 05 00 for requirements.

END OF SECTION 27 10 15

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and all related Specification Sections, shall all apply to this Section.

B. Related Specification Sections:

1. Refer to specification Section 27 05 00 for additional information.

C. Reference Symbols:

1. Refer to specification Section 27 05 00 for additional information.

D. Abbreviations:

1. Refer to specification Section 27 05 00 for additional information.

E. Definitions:

1. Refer to specification Section 27 05 00 for additional information.

1.2 SUMMARY

A. In addition to all requirements stipulated in specification 27 05 00 this section contains the overall requirements and design intent associated with all Division 27 requirements as it relates to the installation of equipment in the communication cabinet and equipment rooms to support the following systems:

1. Wireless Local Area Network (WLAN)
2. Multiuser Flight Information Display Systems (MUFIDS)
3. Distributed Antenna System (DAS) (Public Safety)
4. IPTV Distribution System
5. Public Announcement System (PA)
6. Building Lighting Controls
7. Access Control System (ACS)
8. Video Surveillance System
9. Digital Addressable Fire Alarm System

B. This section also addresses all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications related to the installation of all equipment cabinets and communications room fit-out for this project. Refer to specification Section 27 05 00 for additional project requirements.

10. All symbols are shown on the contract drawings as close as possible to their intended location. Contractor shall coordinate the installation of all equipment cabinets, communications room fit-out as well as the connection to all communications equipment, devices, controls, components, and integration of systems as herein specified. The contractor shall document all coordination requirements with all affected trades and sub-contractors at the time of shop drawing submission.
11. Drawings for this work are diagrammatic and intended to convey the extent, general arrangement, and locations of the work. Because of the scale of the drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may or may not be shown on the contract drawings. Include all items where required by code and related specification sections as required for the proper installation of all equipment cabinets and communications room fit-out scopes of work

B. Use of Premises

1. Refer to specification Section 27 05 00 for additional information.

C. Coordination

1. Refer to specification Section 27 05 00 for additional information.

1.3 SCOPE OF WORK

A. Refer to related Division 27 specification sections, Division 28 specifications sections, Division 26 specifications sections and Contract Drawings including all project scopes of work impacted by all horizontal cabling infrastructures, related to the connectivity of all network equipment, components and systems.

1. At the minimum, the scopes of work covered as herein specified shall include but are not limited to all necessary labor, equipment, material, cabling, conduits, commissioning, and testing as well as all appurtenances as required for the proper installation necessary to deliver fully functional horizontal cabling infrastructures in support of all related Division 26, Division 27 and Division 28 systems.
2. It shall be the Contractor's responsibility for full compliance with all requirements of 27 05 00 as well as all related specification sections as required to deliver all equipment cabinets and communications room fit-outs in accordance with the requirements of all Contract Documents.

a. It is the design intent for the design, furnish and install all equipment cabinets and communications room fit-outs as necessary to provide the required connectivity of the Structured Cabling System (SCS) supporting all data ports, VoIP telephones,

video displays, wireless access points, paging microphones, kiosks, cameras, as well as all ancillary and/or integrated systems.

a) Refer to Specification Section 27 05 00 for additional information related to all requirements for product substitutions and/or deviations for from the Contract Documents.

b. The Contractor shall furnish and install all equipment cabinets and communications room fit-outs to properly support the installation of all horizontal cabling, conduits/pathways, field devices, communication room fittings, equipment, grounding, cable terminations, connections to electrical power, testing and labeling, appurtenances and system integrations as herein specified as well as all related specification sections.

3. The County does not share MDF/IDF space with any other tenant and shall be separated by a physical barrier be it a fence or wall. All tenant and/or agency communication systems cabling and equipment shall be installed in non-County controlled areas segregated within the communications room space. This shall apply to all tenants and/or agencies that do not have a dedicated MDF or IDF space for their individual communications systems.

1.4 REFERENCES

A. Refer to specification section 27 05 00 for additional information.

1.5 SUBMITTALS

A. In addition to the submittal requirements as stipulated by Division 01, Specification Section 27 05 00 as well as all related specifications sections, the Contractor shall also conform with the following submittal requirements.

1. Contractor shall submit the proposed layout for each communications room in the airport. This should be in accordance with the drawings in for a "typical" room layout and is required for every room.
2. The contractor will need to submit proposed layout and as-build drawings that depict the complete layout of each communications room prior to implementation.
3. Shop Drawings and Systems cutover schedules for all services to be submitted and approved before implementation is started.
4. Record Drawings: Furnish Revit drawings of all installed equipment within each communications room.
5. Include spare parts list for approval by County.

1.6 QUALITY ASSURANCE

A. In addition to the requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

B. The Contractor shall furnish, erect, install, connect, clean, adjust, test and condition all manufactured articles, materials, and equipment, and place in service in accordance with the

manufacturer's directions and recommendations unless otherwise indicated by the Contract Documents.

1. Submit certified documentation that the following experience requirements are in conformance.

    a. Contractor Qualifications

        1) The contractor shall be certified by the manufacturer of the products, adhere to the engineering, installation and testing procedures and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
        2) Must be supervised on-site by a BICSI RCDD. Must demonstrate knowledge and compliance with all BICSI, TIA, UL, and NEC methods, standards and codes.
        3) All members of the installation team shall be certified by the manufacturer as having completed the necessary training to complete their part of the installation. Resumes of the entire team shall be provided along with documentation of completed training courses.
        4) The contractor shall provide five references for projects of equivalent scope, type and complexity of work completed within the last five years

1.7 DELIVERY, STORAGE AND HANDLING

A. Refer to specification Section 27 05 00 for additional information.

1.8 RECORD DOCUMENTS

A. In addition to the requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. All equipment cabinets and communications room fit-out designs as well as all related appurtenances shall be indicated on enlarged communication room layouts drawn to scale and provided accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions.

    a. Floor plans showing exact equipment cabinet and communications room locations as we as all related appurtenances and connected ancillary equipment and/or systems, shall be marked with cable identifiers. Refer to specification section 27 05 53 for additional information.

        1) A complete diagram of all cable tray, conduits and conduit sleeves equipment cabinets, grounding terminations, backboards and all appurtenances.

    b. All as-built Drawings and Documentation shall be reviewed, approved and stamped by Contractor's on-site RCDD prior to submission to County for final acceptance.

1.9 OPERATION AND MAINTENANCE

A. Refer to specification Section 27 05 00 for additional information.

1.10 AS-BUILT DRAWINGS

A. In addition to the requirements as herein stipulated under "Record Documents," and Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. All communications room layouts shall be placed on these plans so that all equipment cabinets, cable trays, grounding connections, backboards and all appurtenances are to scale and provide accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions. At the minimum include the following:

a. As-built Drawings and Documentation shall be reviewed, approved and stamped by Contractor's on-site RCDD.

1.11 SOFTWARE AGREEMENT

A. Not Applicable

1.12 EXTRA MATERIAL

A. Not Applicable

1.13 ENVIRONMENTAL CONDITIONS

A. Refer to specification Section 27 05 00 for additional information.

1.14 ENVIRONMENTAL CONDITIONS

A. Refer to specification section 27 05 00 for addition information.

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, that meet and/or exceed the specified performance and features of the equipment and/or systems and for which replacement parts shall be readily available to the contractor and/or County.

a. The equipment specified is based on the acceptable manufacturers previously listed. Where "or equal" is stated, equipment shall be equivalent in every way to that of the equipment specified, and subject to approval by the County.

1) When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.

2. Acceptable manufacturers for each component shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.

a. Manufacturers listed as acceptable shall not negate the contractors' responsibility for providing all equipment, components, and/or appurtenance in accordance with all requirements of the Contract Documents.

1) Where manufacturer and/or manufacturer model numbers reference specific system components in the related specification sections, it is to establish the performance requirements and quality of the systems and components only.

a) It is in no way an inference that the referenced model numbers are the manufacturer's current product and are the only manufacturer's acceptable components for this project unless specifically referenced as "no substitutions."

3. Identifiers, Labels and Labeling System

a. All Identification and Labeling shall follow Specification: 27 10 00 – Structured Cabling System.

4. Any deviation from the specification must be approved prior to the submission of shop drawings.

2.2 TWO-POST RACKS

A. Seven-foot double-sided, high cable density style relay rack shall comply with following specifications:

1. 19" rack width
2. Double-sided universal mounting spacing
3. #12-24 panel mounting holes
4. Conformance to TIA-310-D
5. Twin 2" x 2" top angles
6. Self-squaring with tapped assembly holes
7. Material: 6061-T6 aluminum alloy
8. Provide Horizontal and Vertical wire management
9. Finish: Black Finish
10. Part number: NetShelter AR201
11. Isolation kit for mounting

B. Power Distribution Units (PDU)

1. Provide two (2) PDU. The switched Rack Metered PDUs NEMA L6-30P input and NEMA L6-30R AP89410, Rack PDU 2G, Switched, ZeroU, 30A, 200/208V, (21) C13 & (3) C19.
2. All Cabinets/Rack are to have a 24-port standard RJ45 patch panel installed with 12 ports cabled back to the Horizontal cable cabinet on an iPatch panel.

2.3 FREE STANDING VERTICAL EQUIPMENT CABINETS

A. Manufacturer: Chatsworth F Series Gen 3 cabinets or County approved.

1. Refer to Specification Section 27 05 00 for all substitution requirements.

B. General

1. The work covered here consists of the furnishing of all necessary labor, supervision, materials, accessories, parts, equipment, and services to provide and install a complete freestanding equipment cabinet.
2. The standard freestanding equipment cabinets are defined to include, but not limited to, cabinet frames, cabinet front and rear doors, top and side panels.
3. All internal cabinetry hardware shall be 19-inch rack mountable.
4. Provide and install freestanding vertical cabinets, with hinge placement as indicated in the Drawings.
5. Provide vertical and horizontal wire management for all cabinets
6. All cabinets shall have padlock eyes installed on front and back cabinet doors.

    a. All Cabinets/Rack are to have a 24-port standard RJ45 patch panel installed with 12 ports cabled back to the Horizontal cable cabinet on an iPatch panel.

C. Standard Network Cabinet:

1. Cabinets shall be fully assembled by the manufacturer with the components listed below. Individual component part numbers provided for information only.

    a. Chatsworth part # TS1023813 – 45RU; 800mm W; 1075mm D; F Series Gen 3:

        1) 12-24 Tapped sliding rails / 2-pair
        2) Single perforated metal front door with swing latch w/padlock feature
        3) Double perforated metal rear door with swing latch w/padlock feature
        4) Network / One-piece / 4 cable openings
        5) Two solid two piece side panels
        6) 6-slide

            a) (4) Vertical Ring cable managers installed one on each corner (39087-E02)
            b) (2) Full height PDU brackets installed one each left and right rear corners of cabinet (39086-E03)

        7) Glacier white

            a) All Network cabinets to have 24 iPatch panel installed. Refer to related Specification 27 15 00 for additional information.

8) PDU Power Strips:

a) Core Switch Cabinet: Provide (2) Chatsworth Vertical eConnect Monitored Pro PDUs (Part # P4-1F0C3) Input NEMA L6-30P; Output (18) C13s and (6) C19s. And (1) Horizontal Metered Power Strip (Part # 13239-755) Input NEMA 5-20P; Output (12) NEMA 5-20R. (Part # 13239-755)
b) All other Network Cabinets: Provide (2) Chatsworth Vertical eConnect Monitored Pro PDUs L5-30P input; output (24) 5-20Rs (Part # P4-1D0A5)

9) Grounding Bus Bar:

a) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26

D. Standard Server Cabinet:

1. Cabinets shall be fully assembled by the manufacturer with the components listed below. Individual component part numbers provided for information only.

a. Chatsworth part # TS1023812 – 45RU; 600mm W; 1200mm D; F Series Gen 3

1) Square-punched rails / 2-pair
2) Single perforated metal front door with swing latch w/padlock feature
3) Double perforated metal rear door with swing latch w/padlock feature
4) Server / Two -piece / 4 cable openings
5) Two solid two piece side panels
6) 6-slide
7) (4) Vertical Ring cable managers installed one on each corner (39087-E02)
8) (2) Full height PDU brackets installed one each left and right rear corners of cabinet (39086-E03)
9) Glacier white

a) All Server cabinets to have 24 patch panel installed. See Specification 27 15 00 PDU

b. PDU Power Strips:

1) Server Cabinet: Provide (4) Chatsworth Vertical eConnect Switched Pro PDUs Input NEMA L6-30P; Output (18) C13s and (6) C19s. (Part # P6-1F0C3).

c. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

E. Data Center Network cabinet:

1. Cabinets shall be fully assembled by the manufacturer with the components listed below. Individual component part numbers provided for information only.

a. Chatsworth part # TS1023649 – 45RU; 800mm W; 1200mm D; F Series Gen 3

1) 12-24 Tapped sliding rails / 2-pair
2) Single perforated metal front door with swing latch w/padlock feature
3) Single Solid metal rear door with swing latch w/padlock feature
4) Vertical Exhaust Duct System 34in-60in H (863mm-1523mm)
5) Network / One-piece / 4 cable openings
6) Two solid two piece side panels
7) 6-slide
8) (4) Vertical Ring cable managers installed one on each corner (39087-E02)
9) (2) Full height PDU brackets installed one each left and right rear corners of cabinet (39086-E03)
10) Bottom Panel Installed
11) Air Detector Installed
12) No Casters
13) No Leveling Feet
14) Glacier white

a) All Network cabinets to have 24 iPatch panel installed. See Specification 27 15 00

b. PDU Power Strips:

1) Data Center Switch Cabinet: Provide (2) Chatsworth Vertical eConnect Switched Pro PDUs Input NEMA L6-30P; Output (18) C13s and (6) C19s. (Part # P6-1F0C3)
2) In addition, provide: (1) Horizontal Metered Power Strip Input NEMA 5-20P; Output (12) NEMA 5-20R. (Part # 13239-755).

c. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

F. Data Center Server Cabinet:

1. Cabinets shall be fully assembled by the manufacturer with the components listed below. Individual component part numbers provided for information only.

a. Chatsworth part # TS1023645 – 45RU; 600mm W; 1200mm D; F Series Gen 3

1) Square-punched rails / 2-pair
2) Single perforated metal front door with swing latch w/padlock feature
3) Single Solid metal rear door with swing latch w/padlock feature
4) Vertical Exhaust Duct System 34in-60in H (863mm-1523mm)
5) Server / Two -piece / 4 cable openings
6) Two solid two piece side panels
7) 6-slide
8) (4) Vertical Ring cable managers installed one on each corner (39087-E02)
9) (2) Full height PDU brackets installed one each left and right rear corners of cabinet (39086-E03)
10) Bottom Panel Installed

11) Air Detector Installed
12) No Casters
13) No Leveling Feet
14) Glacier white

a) All cabinets to have 24 patch panel installed. See Specification 27 15 00 PDU

b. PDU Power Strips:

1) Server Cabinet: Provide (4) Chatsworth Vertical eConnect Switched Pro PDUs Input NEMA L6-30P; Output (18) C13s and (6) C19s (Part # P6-1F0C3)

c. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

2.4 Standard Wall Mount Equipment Cabinet:

A. Manufacturer: APC or County approved.

1. Refer to Specification Section 27 05 00 for all substitution requirements

a. NetShelter part # AR100HD-WX swing-out 13 RU wall mount cabinet

1) External Dimensions: 25.75"H x 23"W x 24.25"D.
2) Internal Dimension: 22.75"H x 19"W x 19"D.
3) Net Weight: 94 lbs. (42.74 kg)
4) Weight Capacity (static load): 200 lbs. (90.91 kg.)
5) Minimum Mounting Depth: 9.45 in. (240 mm.)
6) Rack Height: 13U.
7) Color: Black.
8) Standards: TIA-310-D.

b. PDU Power Strips:

1) Provide: (1) Horizontal Metered Power Strip Input NEMA 5-20P; Output (12) NEMA 5-20R. (Manufacturer Recommended).

c. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

2.5 Co-location Cabinets

A. Three compartment Co-Location equipment cabinet

1. Manufacturer: Chatsworth Part #TS1034205 Rev B or County approved.

a. Dimensions – 23.62” W x 31.49 D

b. 12-24 Tapped sliding rails / 2-pair
c. Single perforated metal front doors (with beam) per compartment
d. Single perforated metal rear door per compartment; swing handle latches, with hasp lock
e. Standard top panel
f. Glacier white finish

1) All cabinets to have 24 patch panel installed. See Specification 27 15 00 PDU

g. PDU Power Strips:

1) Cabinet: Provide: (1) Horizontal Metered Power Strip Input NEMA 5-20P; Output (12) NEMA 5-20R. (Part # 13239-755).

h. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

B. Two compartment Co-Location equipment cabinet

1. Manufacturer: Chatsworth Part #TS1034203 Rev B or County approved.

a. Dimensions – 29.22" W x 31.49 D
b. 12-24 Tapped sliding rails / 2-pair
c. Single perforated metal front doors (with beam) per compartment
d. Single perforated metal rear door per compartment; swing handle latches, with hasp lock
e. Standard top panel
f. Glacier white finish

1) All cabinets to have 24 patch panel installed. See Specification 27 15 00 PDU

g. PDU Power Strips:

1) Cabinet: Provide: (1) Horizontal Metered Power Strip Input NEMA 5-20P; Output (12) NEMA 5-20R. (Part # 13239-755).

h. Grounding Bus Bar:

1) Provide Rack-Mounted Ground Bar. Refer to Specification 27 05 26.

2.6 WALL BACKBOARDS

A. In addition to all requirements as stipulated by Specification Section 27 05 00 the following shall also apply:

1. All walls in telecommunication rooms (MDF/IDF's, Tenant etc.) will be covered with ¾ inch plywood installed in 4 x 8 sheets.
2. Plywood shall be A/C grade or better void-free with A grade side facing out.

3. Plywood shall be and either fire-rated or treated on all sides with at least 2 coats of fire-resistant light-colored paint. Fire-retardant plywood is also generally acceptable.
4. Plywood to be installed 6 inches above finished floor or raised deck.

2.7 IDENTIFIERS, LABELS AND LABELING SYSTEM

A. All Identification and Labeling shall follow Specification: Section 27 05 53. Any deviations from the specification must be approved prior to the submission of shop drawings in accordance with all requirements of specification Section 27 05 00.

PART 3 - EXECUTION

3.1 COORDINATION

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of communications cabinets, appurtenances as well as all equipment room layouts. including but not limited to all equipment locations, grounding connections, cable trays, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the County.

a. At the minimum, the Contractor shall verify the following requirements prior to the installation of any equipment.

1) At the time of shop drawing submission, the Contractor shall demonstrate that coordination with all affected trades was performed. Failure to properly document these coordination requirements as part of the shop drawing submission shall result in all shop drawings being returned for resubmission;
2) Coordinate the installation of any structural reinforcement and/or blocking of all studded walls as required to properly install and support the installation of all wall mounted communications equipment cabinets.

b. Where communications rooms are shared with cabling, equipment/systems, of any Tenants, and/or Agencies that appropriate physical separation barriers have been installed.
c. That all conduits, raceways, and boxes are properly laid out in accordance with BISCI recommended practices, ANSI/TIA 569B standards, and the Contract Documents.
d. All fire suppression and alarm systems have been properly planned for and have been incorporated in the overall communications room layouts.
e. All ceiling protrusions have been placed to assure a minimum clear height of 8 feet 6 inches to provide space over the equipment frames for cables and suspended racks
f. All communication room doors shall meet the following minimum requirements;

1) All doors are a minimum of 3 feet wide by 6 feet, 7 inches tall.

a) If it is anticipated that large equipment will be delivered to the MDF, 6 feet wide by 7 feet, 5 inches tall shall be required.

2) All doors are keyed separately from other facility keys.

a) In addition, all doors shall be equipped with electronic access control and shall limited to only IT personnel and authorized vendors.

3) All Doors shall open outward and be lockable.
4) Access shall allow for future equipment changes.
5) Doors shall be fire rated for a minimum of one hour, or more as required by local Authority Having Jurisdiction (AHJ).

g. Signage is consistent with Destin Fort Walton Beach Airport System
h. The communications room floor is sealed concrete or tile to minimize dust and static electricity. (Carpet shall be strictly prohibited).
i. All HVAC systems are capable of providing environmental conditioning (24 hours per day, 365 days per year)

1) Heating, ventilation, and air conditioning sensors and control equipment are located in the MDF/IDF.
2) Positive air pressure differential is maintained with respect to surrounding areas.
3) The room temperature is between 64°F and 75°F, with a relative humidity between 30% and 55%.
4) Contractor shall provide heat load analysis for all equipment cabinets at the time of shop drawing submission.

j. Energy Efficient Lighting with occupancy sensor has been included in each communications room layout.

1) Lighting to provide a minimum equivalent of 50 foot-candles when measured three feet above finished floor.
2) All light fixtures shall be mounted a minimum of 8 feet, 6 inches above the finished floor
3) All light switches are located near the entrance of the MDF/IDF.
4) Power for the lighting is from the same circuits as power for the telecommunications equipment.
5) Emergency lighting has properly been placed that an absence of primary lighting will not hamper emergency exit.

k. Each MDF/IDF equipment cabinet is equipped with a minimum of two dedicated electrical circuits appropriately sized for equipment to be installed.

1) Separate duplex 120V AC convenience outlets (for tools, test sets, etc.) have been installed at 18 inches above the finished floor at 6-foot intervals around perimeter walls.
2) All duplex outlets are on non-switched circuits and they shall be identified and labeled.

3) Each MDF/IDF room is provided with an electrical ground on a 4-inch or larger busbar as defined by NEC Article 250-71(b). The busbar shall be mounted 6 feet, 6 inches above the finished floor. Refer to Specification Section 27 05 26 for additional information.

l. All walls of MDF/IDF are lined with Trade Size 3/4-inch AC-grade plywood, 8 feet high. Plywood mounted vertically starting 6 inches above finished floor, securely fastened to the wall-framing members and is fire treated and painted with two coats fire-retardant paint.

m. That any MDF/IDF room is not located in any place that may not be subject to water or steam infiltration, humidity from nearby water or stream, heat, and any other corrosive atmospheric or environmental conditions.

n. That any MDF/IDF room is not located near electrical power supply transformers, motors, generators, x-ray equipment, radio transmitters, induction heating devices, and other potential sources of electromagnetic interference.

1) That any MDF/IDF room does not share space in or be located near or below electrical closets, boiler rooms, washrooms, janitorial closets, and storage rooms.

2. Coordinate exact location of all equipment with the County, as well as all affected trades and Tenants prior to the installation of any required horizontal cabling infrastructures, as well as all appurtenances.

a. Coordinate exact location(s) of all horizontal cabling infrastructures, as well as all appurtenances, conductors, conduits, cable trays, equipment, and/or devices with all architectural plans, reflected ceiling plans and affected trades prior to installation.

b. All horizontal cabling infrastructures, as well as all appurtenance installations requiring coordination with other trades the contractor shall provide all templates, backboxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.

c. If installation of conductors, conduits, devices or components is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the County.

1) Verify liquid-carrying pipes are not installed in or above any IDF/MDF that has active electronic equipment. Do not proceed with installation in affected areas until removed

3. Provide coordination with all system sub-contractors and trades the proper installation of all horizontal cabling infrastructures, as well as all appurtenances necessary to provide fully functional horizontal cabling infrastructures in accordance with all applicable specification sections.

B. The Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings, equipment submissions and all other documents submitted for review shall be made available on site to the County upon request.

1. Coordinate any work scheduled to be provided by County that impact the scope of work associated with the horizontal cabling infrastructures requirements of this project. Schedule all work to ensure that the work of the County can proceed in accordance with the Project Schedule.

3.2 PREPARATION

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Verify raceways, cable trays, boxes, are properly installed in accordance with specification sections 27 05 28 and all related specification sections.
2. Verify backboards are properly installed.
3. Verify telecommunications grounding system is properly installed and tested following Section 27 05 26.
4. Verify all structural reinforcement and/or blocking of all studded walls as required to properly install and support the installation of all wall mounted communications equipment cabinets.
5. Verify liquid-carrying pipes are not installed in or above any IDF/MDF that has active electronic equipment. Do not proceed with installation in affected areas until removed.
6. Verify that all fire proofing has been applied to all structural steel prior to the commencement of any work.

3.3 EQUIPMENT PROTECTION

A. Refer to specification Section 27 05 00 for additional information.

3.4 WORK PERFORMANCE

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Final termination, and testing, of all horizontal cabling infrastructure connections in any equipment cabinets shall be under the direct supervision of the appropriate system integrator. The integrator shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, testing, and commissioning, of all equipment, devices, components, and/or systems being provided as part of this project.

a. For rack mounted equipment cabinets, the Contractor shall run power cables, control cables, and high-level cables on the left side of an equipment rack as viewed from the rear. The contractor shall run other cables on the right side of an equipment rack as viewed from the rear.

1) For equipment mounted in drawers or on slides, provide the interconnecting cables with a service loop of not less than three feet and ensure that the cable is long enough to allow full extension of drawer or slide.

b. All racks and cabinets shall be floor mountable by design and permanently fixed to the floor with bolt-down kits. Manufacturer's procedures for floor mounting should be followed. Multiple racks and cabinets shall be connected together directly or indirectly via horizontal cable management hardware as indicated by drawings.

1) A minimum of 2 feet shall be left at the end of the row of equipment bays. A minimum of 5 feet between walls and equipment bays will allow space for wall mounted copper cable terminations and the required 36" distance from equipment for work space.

B. Job site safety and worker safety is the responsibility of the Contractor. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials. Clean up all debris generated by installation activities. Keep all areas free of debris at all times.

C. Pre-installation Conferences: Include provisions to attend all pre- installation conferences at Project site in compliance with all requirements in Division 01 Specification Section and as herein specified. Review methods and procedures related to installation and operations of all communications equipment cabinets, including, but not limited to, the following:

1. Review all Coordination requirements as herein specified related to all MDF/IDF room layouts responsible by other trades.
2. Review electrical and equipment roughing-in related to all horizontal cabling infrastructures as well as other preparatory work required to be performed by other trades.
3. Review all structural reinforcement and/or blocking of all studded walls as required to properly install and support the installation of all wall mounted communications equipment cabinets.
4. Review all work, equipment deliveries, installation procedures, and related scopes as required to conform to the phased construction schedule.
5. Review and finalize construction schedule and verify availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
6. Review required testing, and certifying procedures to be employed for each backbone, horizontal or grounding infrastructure connections prior to termination in any equipment cabinets or enclosures.

D. All new work shall be installed neatly and carefully disturbed or damaged work shall be replaced or repaired to its prior conditions, as required by Division 01 Specification Section.

E. Remove all unnecessary tools and equipment, unused materials, packing materials, and debris from each area where work has been completed unless designated for storage.

F. Coordinate the installation of all horizontal cabling entrances, conduits/raceways, conduit sleeves, cable trays as well as all appurtenances and equipment with the applicable trades to

ensure proper connectivity, functions and system performances in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

1. Coordinate with all trades at the time of shop drawing submission detailing all conditions impacting the installation of communications equipment cabinets, cable trays, conduits, cable entrances, conduit sleeves, all appurtenances as well as all communication room layouts.

    a. The contractor shall coordinate with the appropriate trade all conditions impacting the installation any cabinet, conduit, cable tray or conduit sleeve including but not limited all communications rooms, equipment locations, to the satisfaction of all concerned trades, subject to final review by the County.

        1) Coordinate exact location(s) of all horizontal cabling entrances, infrastructures, conduits, equipment and/or device installations with all architectural plans, site plans, reflected ceiling plans and affected trades prior to installation.

            a) Equipment installations requiring coordination with other trades the contractor shall provide all templates, back- boxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.

    b. If installation of any communications equipment cabinets and/or related appurtenances is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the County.

G. The Contractor shall maintain a complete set of current and up to date set of shop drawings and equipment submissions at the job site at all times. The Shop drawings and all other submissions shall be marked up to reflect all as-built conditions and shall be made available for review by the County upon request.

H. The Contractor shall prepare the necessary documents required for installing, all equipment cabinets and communications room layouts. Such documents include but are not limited to:

1. Project management and quality assurance plans
2. Testing plans
3. Component and system submittal documents
4. Installation plans
5. Component design plans
6. System user documentation
7. As-built drawings and documentation

I. The Contractor shall coordinate with the County to ensure that all equipment cabinets and communication room layouts meet the project requirements. The Contractor shall meet all ADA requirements.

3.5 INSTALLATION

A. Install in accordance with all requirements of the Contract Documents, specification section 27 05 00, all related specification sections, manufacturer's instructions and approved submittal data.

1. All installation shall be done in conformance with ANSI/TIA 568B standards, BICSI methods, Industry standards and cabinet manufacturer's installation guidelines.
2. The installation of all communication equipment cabinets shall comply with all applicable national and local codes pertaining to low voltage cable system installations.
3. The contractor shall adhere to the installation schedule of the general contractor and shall attend all construction meetings scheduled by the general contractor.
4. Upon structural completion of the communications room(s) and prior to the installation of any communications equipment or supporting devices inside the room, the CMAR shall consult the County in order to:

    a. Perform construction administration activities to compare as-built configuration to the design.
    b. Observe all "not-to-design" compliance issues and issue corrective advisement of actions.
    c. Upon completion of 1 and 2 above, the Communications Designer shall mark with masking tape the general layout of the equipment placement.

5. Vertical Cabinet Installation

    a. All Cabinets shall be properly positioned, leveled, ganged, anchored, grounded and powered.
    b. All Cabinets shall be populated in accordance with the requirements of the Contract Drawings and shall include but not limited to all termination hardware, equipment, proper patch cord lengths, and power outlets.
    c. Install and anchor all vertical equipment cabinets to floor following in accordance with the requirements of the Contract Drawings and manufacturer's instructions.
    d. All cabinets shall be properly ganged in each bay in accordance with the requirements of the Contract Drawings.
    e. All cabinet doors shall be configured as shown in accordance with the requirements of the Contract Drawings.
    f. All cabinets shall be properly labeled per specification 27 05 53.
    g. After final acceptance of the cabinets, coordinate with County to replace key/lock with silver barrel on front and back doors.
    h. All horizontal cable infrastructure installations shall comply with the following:

        1) Cables shall be neatly routed and properly secured.
        2) Minimum bending radius for copper cables shall not be exceeded.
        3) Closures shall be properly mounted and secured.
        4) Refer to Specification Section 27 13 00 and 27 15 00 for additional information.

i. All enclosures, entry and exit cabling shall be labeled per specification 27 05 53, easily visible from the finished floor.

6. Seismic Performance: The Contractor shall furnish and install all equipment bracing, and anchoring rated for the seismic zone of the geographical area in which the project resides, and shall withstand the effects of earthquake motion and wind forces in accordance with the current editions of the IBC and ASCE/SEI 7. Refer to Division 01 and Division 26 – Hangers and Supports for additional seismic information and requirements.

B. County or their designated representative shall randomly perform unannounced, on-site reviews during the installation. In addition, this person shall perform a final inspection and a complete review of the test results before the installation is accepted.

1. Upon completion of the installation, Contractor shall prepare as-built documentation of the entire SCS. This documentation shall be prepared in accordance with all requirements as herein specified as well as all requirements of Specification Section 27 05 00 and related specification sections of the of the Contract Documents.

C. Penetrations of Walls and Floors:

1. Refer to specification Sections 27 05 00 for additional information

3.6 ELECTRICAL POWER DISTRIBUTION

A. Refer to specification Section 27 05 00 for additional information.

3.7 TRANSIENT VOLTAGE SUPPRESSION

A. Refer to specification section 27 05 00 for additional information.

3.8 GROUNDING AND BONDING

A. Refer to specification Section 27 05 26 for all project grounding and bonding requirements.

3.9 EQUIPMENT IDENTIFICATION

A. In addition to all requirements as stipulated by Division 01 refer to related specification Section 27 05 53 for all labeling and identification requirements.

3.10 MAINTENANCE AND SERVICE

A. General Requirements

1. In addition to all associated requirements of 27 05 00 the following shall also apply.
2. After formal written acceptance of all horizontal cabling infrastructures the Contractor shall provide all services required to maintain all horizontal cabling infrastructures systems in fully operational state for the warranty period as specified by Division 01 as well as all related specification sections

a. Provide all necessary labor, materials and related appurtenances as required for performing scheduled adjustments or other non-scheduled work. Impacts on facility operations shall be minimized when performing scheduled adjustments or other non-scheduled work related to the installation and termination of all horizontal cabling infrastructures. Refer to Division 01 specification section for additional requirements.

3.11 WARRANTY

A. Refer to specification Section 27 05 00 for additional information.

3.12 FIELD SERVICES

A. In addition to all requirements as specified by Division 01, specification 27 05 00 as well as all related Division 27 Specification Sections, for the proper installation of all communication cabinets, associated appurtenances and communication room layouts. At the minimum, all scopes of work shall include but limited to the following requirements;

1. Test all grounding and bonding conductors prior to start-up and commissioning of any, horizontal cabling infrastructures, communications components, devices, equipment and/or systems.
2. Contractor Requirements

a. Contractor shall provide sufficient skilled labor to complete the installation and verification of conformance to all installation requirements related to communication equipment cabinets and communications room layout.

1) Contractor shall have a minimum of three years' experience installing communications equipment cabinets and associated appurtenances. All installers assigned by the Contractor to the installation shall be certified by the factory to install and test the provided products.

3. Adjustment, Correction, and Completion:

a. Correct deficiencies and retest all affected horizontal cabling infrastructures as well as all appurtenances.

1) Make necessary adjustments and modifications to all backbone and riser infrastructure installations after obtaining approval of the County

a) Completion: Performance verification test shall be complete when testing or retesting of each component has produced a positive result and has been approved in writing by the County or authorized representative.

b. Acceptance Requirements

1) Contractor's RCDD shall warrant in writing that 100% of the installation meets all requirements of Division 01, Specification 27 05 00 as well as all requirements as herein specified.

3.13 DEMOLITION

A. In addition to all requirements of Division 01, Specification Section 27 05 00 and all related specification sections the following shall apply.

1. The contractor shall be responsible for maintaining all communications service to areas of the building scheduled to remain in service during the period of renovation.
2. Where removal is indicated in Drawings, remove communications cable from termination point back to originating communications room, MDF or tenant communications room. Coordinate removal at all terminating blocks, panels cross-connects and patch cables with County prior to commencement of any work.
3. Demolition and removal of cabling shall not impact the operation of active systems.
4. Unless otherwise noted, discard all removed cable, patch cables and cross-connects. Except where re-routing of cable is specified in by the Contract Documents, do not reuse cable.
5. Remove all loose unterminated cabling to source found above ceiling, under floor or in wall.
6. All Demo shall include ALL Abandoned cables shall be removed in accordance with NEC 800.25.

3.14 TRAINING

A. General

1. Not Applicable

3.15 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to specification Section 27 05 00 for additional information.

END OF SECTION 27 11 00

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions, of the Standard Contract Requirements for the Okaloosa County, Florida; General, Supplementary and Special Provisions to the Standard Contract, as well as Division 01 and all related Specification Sections, shall all apply to this Section.

B. Related Specification Sections:

1. Division 26 – Common Work Results for Electrical
2. Division 26 – Low Voltage Electrical Power Conductors and Cables
3. Division 26 – Grounding and Bonding for Electrical Systems
4. Division 26 – Hangers and Supports for Electrical Systems
5. Division 26 – Raceways and Boxes for Electrical Systems
6. Division 26 – Identification for Electrical Systems
7. Division 27 – Common Work Results for Communications Systems
8. Division 27 – Network Communications Systems

C. Reference Symbols

1. Because of the scale of the drawings, Public Address (PA) System integration, and connectivity objects are shown on drawings as close as possible to their mounting locations. Contractor shall coordinate the exact location of all systems, system integration, and network connectivity, with all related drawings, specification sections and affected manufacturers, prior to submittal of any shop drawings.

D. Abbreviations:

1. Refer to Specification Section 270500 and 271100 for additional information.

E. Definitions:

1. Refer to Specification Section 270500 for additional information.

1.2 SUMMARY

A. The intent of this specification is to establish a standard of quality, configuration, and operational requirements for the upgrades and modifications to the existing Public Address (PA) System. It shall be responsibility of the successful Contractor for the furnishing of all necessary system designs, installation, programming, licenses, commissioning, testing, and certifications in accordance with the requirements of the Contract documents.

B. All new equipment shall be as manufactured by Peavey MediaMatrix, and shall be part of the Peavey MediaMatrix family of products, no approved equal.

1. The overall scope of this project is the integration of the new Satellite Concourse 'C' Public Address system with the existing Peavey MediaMatrix Public Address system as indicated on the Contract Drawings.

    a. All amplifier frames, ambient noise sensor collectors, digital paging microphones and other related PA devices shall be connected back to the communications room as indicated on the contract drawings. New network switches shall connect to the existing network back to the existing PA system as indicated on the contract drawings.
    b. All new functional controls and operational features shall be replicated in the existing PA system.

C. In addition, the scope of work shall include but is not limited to all system components, active electronics, conduits, cabling, servers, software, software licenses, and all appurtenances as necessary to deliver a properly installed, fully operational Public Address (PA) system in accordance with all requirements of the Contract Documents.

D. The functional integration of the various systems shall include the capability to provide remote annunciation and control functions as herein described. Refer to the Contract drawings for additional information regarding system types and locations.

E. It shall be this Contractor's responsibility to sub-contract with the current PA System provider/integrator to provide all necessary coordination, equipment, and programming modifications to properly facilitate the full and seamless integration of the new Satellite Concourse 'C' PA system with the existing Peavey MediaMatrix PA system. Contact Michael Dimartinis of Elite Audio LLC at (856) 227-6800.

    1) The Contractor shall fully review and test to the satisfaction of DOA engineering and Owner's Representative that the new programming associated with the functionality of the existing TACS system has been properly replicated and is fully operational prior to downloading any programming to the new TACS equipment.

F. It shall be the Contractor's responsibility to become familiar with all existing conditions, system configurations, and program functions of the existing PA system prior to the commencement of any work. Refer to the Contract drawings for additional information.

G. The installation, performance, features, functions, software, and programming criteria, as specified herein, as well as all related specification sections, has been designed to offer the maximum system efficiency, ease of operation, occupant safety and the protection of equipment, as recommended by the Owner's Representative.

1. Any deviations from the specified criteria shall be documented, reviewed, and agreed to in writing by the Owner's Representative, prior to submission of bids. Refer to Division 01, and all related specification sections for product substitutions.

2. It is the responsibility of the contractor to ensure that the installed system meets or exceeds every standard set forth in these specifications. The contractor shall furnish all necessary system components and appurtenances, including, but not limited to, all necessary programming, licenses, testing, commissioning and certifications, as required, to provide a complete and fully operational PA system, whether specifically included in this section, or not.

    a. In addition, the Contractor shall provide all necessary modifications to the existing PA communications network, for the proper integration of all existing equipment to remain.
    b. The PA system and all related system integrations shall be furnished to the Owner as a complete, seamlessly operating, and fully functional system in full compliance with all contract document requirements.

3. The systems shall be complete, with all equipment as indicated on the contract drawings and/or described herein. The contractor shall turn over to the Owner a complete and fully operational communications network infrastructure, as required, to properly integrate, in a seamless manner, the new Satellite Concourse ‘C’ PA system.

    a. The system communications network shall, at the minimum, support the following network communications standards and protocols;

        1) 100Base-TX/FX, Fast Ethernet (IEEE802.3u).
        2) 1000Base-T, Gigabit Ethernet over twisted-pair copper (IEEE802.3ab)
        3) 1000Base-X, Gigabit Ethernet over fiber optic (IEEE802.3z).
        4) 10 BASE-F, 10 Mbit/s Ethernet over fiber optic (IEEE802.3j)
        5) Related Protocols:

            a) TCP/IP (IETF STD 1)
            b) CobraNet
            c) DANTE

4. Communications Network Infrastructure Requirements:

    a. Refer to specification sections 270500 and 271100

1.3 REFERENCE STANDARDS

A. Refer to Specification Section 270500 for additional information.

1.4 SUBMITTALS

A. In addition to all “Submittal” requirements specified in Division 01, Specification Section 270500 and all requirements by related specification sections, the Contractor shall also conform to all requirements of this section.

1. Provide a detail operational narrative of all paging and control functions of the PA system.
2. Provide a listing of user log-in options and associated user matrices.

3. Provide a preliminary list of all on-screen operator functions, emergency response instructions and help menus.
4. Alternatives to the basis of design may be submitted for Owner Representative’s approval.
5. Failure to provide all required documentation in accordance with ALL related specification requirements at the time of shop drawing submission shall result in all submittals returned for non-compliance to the contract requirements.

1.5 QUALITY ASSURANCE

A. In addition to all “Quality Assurance” requirements specified in Division 01, Specification Section 270500 and all requirements by related specification sections, the Contractor shall also conform to all requirements of this section.

B. Contractor’s Qualifications:

1. Firms regularly engaged in the installation of Audio Paging and Announcement systems of a similar scale and complexity and that have three (3) years of installation and programming experience with systems similar to that required for this project. The Contractor shall have been actively engaged in installing, maintaining, and operating similar systems and services as outlined in this document.
2. Provide references to include client names, phone numbers, and a summary of project details. These references will be checked, and the clients will be asked questions relative to the performance of your company.
3. Provide verification that installation personnel responsible have been properly trained to install the products described in this Section.
4. Provide full time project manager with a minimum of ten (5) years' experience in the installation and programming of audio paging systems and related infrastructure. Project manager shall be assigned for the duration of the project and shall not be replaced without written consent from the Owner.

C. Manufacturer’s Qualifications:

1. Firms regularly engaged in development of products of the types and capacities required for this project; whose products have been in satisfactory use in similar service for not less than three (3) years.

D. All work shall be performed in accordance with the applicable manufacturer’s installation instructions, and requirements. In addition, all work, testing and commissioning shall be in conformance with all requirements of the Contract Documents, applicable Codes and Standards, as well as all requirements of the following authorities having jurisdiction:

1. Destin-Fort Walton Beach Airport (VPS)
2. VPS- IT Standards if applicable
3. Fort Walton, Florida
4. Okaloosa County

E. Coordinate all operational provisions of the PA system, programming and operational features and functions.

1. Prior to finalization of any programming the Contractor shall review, with VPS and Owner’s Representative, the following:

    a. System integration methodologies
    b. All audio paging functions
    c. All system configuration, monitoring, and troubleshooting functions
    d. Utility screens, user interface screens, on-screen operator functions

2. Failure to provide this review, prior to final programming, shall result in the Contractor making all changes requested by VPS and the Owner’s Representative at no additional cost to the project.

1.6 RECORD DOCUMENTS

A. Provide the Owner with a complete set of record drawings, in accordance with all requirements of Division 01 and Specification Section 270500.

1.7 INTELLECTUAL PROPERTY

B. Refer to Specification Section 270500.

1.8 SOFTWARE AGREEMENT

A. In addition to the requirements found in Division 01 and Specification Section 270500, the Contractor shall also conform to the requirements of this section.

B. Included as part of the scope of work for this project, the Owner shall retain ALL ownership and access rights to all PA system programming.

1. The contractor shall provide to the Owner’s Representative complete copies of all PA system software, system programming, and all software licenses related to the PA system, prior to final acceptance. Programming shall include, but not be limited to, all device identifications, device descriptions, logic matrices, all program access level passwords, as well as all function and sub-function routines.

1.9 EXTRA MATERIAL

A. In addition to all “Extra Material” requirements as specified by Division 01, Specification Section 270500 and all requirements by related specification sections, the Contractor shall also conform to all requirements of this section.

B. Provide Owner:

1. Digital Microphones – Two (2) of each type installed under this project.
2. Amplifier Module (T6472L) – Two (2)
3. Speakers – Two (2) of each type installed under this project.
4. Any other devices required for this system to function properly – Tw (2) of each type installed under this project.

PART 2 – PRODUCTS

2.1 GENERAL

A. Provide all necessary PA system components, servers, and software and software upgrades in conformance with the performance requirements of these and all related Specifications. The PA system shall be provided in accordance with manufacturers’ recommendations in order to meet all system performance criteria, configured to provide a user-friendly operating platform in a seamless manner.

B. Acceptable products:

1. MediaMatrix – Peavey, no approved equal.

2.2 SYSTEM PERFORMANCE

A. Technology – This system shall utilize the latest in digital audio, video and networking technology. The entire system shall be digital and not utilize combinations of analog and digital circuits. At the first point of connection to the system, microphones and other program sources shall be digitized and remain in the digital domain until the final power amplifiers. Systems that use multiple stages of analog/digital quantization are not acceptable.
2. The system shall be entirely software driven. No analog controls may exist anywhere in the system that could allow unauthorized adjustments or users.
3. Microprocessors shall manage and control all system functions and hardware including microphone communication stations, announcement queuing, telephone interfaces, distribution of emergency announcements, local announcements, terminal announcements, background music distribution, announcement recording, and messaging.

B. System Architecture – The system shall feature distributed processing, with one or more virtual Announcement Control System (vACS) software controllers. The vACS controller shall provide a network-centric architecture to minimize central head-end equipment. This will eliminate the possibility of complete system failure should catastrophic failure happen in any one room or area. This distributed topology will also allow for local interface terminations with other systems, rather than the need to route connections to a centralized head-end location. As an alternate, the vACS, and optional Enterprise and MS SQL may be installed in virtualized environment for high availability architecture. Failed or abnormal performance of any active system component shall generate a fault to the fault reporting system.

C. Ethernet Network – The entire system shall operate on a single Ethernet network. The network shall be designed using a hierarchical star configuration with a Gigabit backbone between all core, intermediate, and edge switches. In shared network environments, the Paging System shall be isolated from other broadcast traffic on a separate VLAN. Multiple VLAN’s may be required depending on the ultimate system size and the manufacturer’s recommendations. The network shall be designed and installed using recognized industry practice and tested in accordance with ANSI/TIA/EIA 568B-1, 2, and 3.

D. Software – All system software for every system component shall be integrated into a single enterprise-class application utilizing a common database.

1. The entire system shall be programmed, controlled, and monitored by use of a single software application provided by the manufacturer of the system. Systems that require opening different applications provided by differing manufacturers to setup, control, or monitor system operations are not acceptable.
2. Set up of announcement control, messaging, signal processing, and amplifier control functions shall utilize graphically oriented objects and a common tree-view for the entire system. When expanded completely, the left portion of the window shall show a tree view of the vACS nodes controlling each area of the facility (i.e. individual concourses, terminals, gates, etc. or as applicable). Each expanded view shall include the functional setup parameters for each vACS, microphone communications station, integrated digital power amplifier system, and visual display device. These include but are not limited to microphone communications station setup, zone & zone group setup, user and user group setup, permanent digital record and playback (PDRP) configuration, audio monitor and testing setup, zone equalization, ambient analysis setup and power amplifier control.

E. Password Security – System access to setup workstations, servers, and remote access shall require an authenticated username and password. Access to microphone communications stations may require an optional user ID and PIN. Each user ID and PIN shall allow for up to 8 characters. The password server shall allow assignment of users to employer user groups for restricted access to appropriate functions and areas.

F. Announcement Distribution – The system shall provide for distribution of announcements and messages to each zone of the system. A zone is defined as the smallest addressable area of speaker coverage. The system shall prevent a single zone from receiving more than one announcement or message at a time. No announcement or message shall be lost or discarded due to coordination or priority preemption unless configured as such through the business rules programming. For initial programming configure the systems as follows:
   1. Program material sent to zones (i.e. Background Music) shall be ducked during any announcement or message.
   2. A local or multi-local zone group announcement shall not delay a terminal announcement from playing, but it shall interrupt and override the terminal announcement in the zones that have been assigned to its use.
   3. Multiple emergency announcements may be made at one time if no zone conflicts for that class of announcement exist. Regardless of zone announcements, emergency announcements immediately suspend all other zone activity in the effected zones until completed or cancelled.

G. Priority Levels – Announcements and messages shall be processed and distributed based on defined levels of priority. A minimum of (256) priority levels shall be available. Initial priority levels shall be assigned as follows:

1. Not Assigned
2. Emergency Live Announcements
3. Emergency Messages
4. Not Assigned
5. Local Announcements and Messages
6. Not Assigned
7. Terminal Announcements and Messages
8. Not Assigned
9. Not Assigned
10. Program Material (Background Music)

H. Signal Routing – The system shall provide for simultaneous routing of the following traffic.
   1. Each Announcement Control System (vACS) Instance or LAN segment shall route up to 240 paging stations and 32 message channels to up to 512 zone outputs. Routing is limited only by the number of CobraNet channels that are dynamically assigned. No announcements shall be routed through the servers or announcement controllers unless being stored for delayed playback.
   2. The system shall distribute (8) program (BGM) channels assignable to any zone output.
   3. The system shall distribute and monitor audio from any monitor point to the requested monitoring speaker station.
   4. All routing of signals shall be on the digital audio network.
   5. All switching shall be quiet with no audible switching transients, clicks or pops.
   6. The system shall route unlimited visual announcements to the display devices.

I. Announcement Properties – Each Announcement shall be configurable with announcement properties. These include:

   1. Announcement Gain
   2. Priority Level
   3. Time to wait in a ready state.
   4. Time to Warn for cutoff.
   5. Maximum Length
   6. Maximum Wait in busy queue
   7. Activate with only partial resources.
   8. Preempt All
   9. Continue with some zones Preempted
   10. Preemption Zone Kill
   11. Recover Zones as available
   12. Ducking
   13. Zone Mute
   14. Emergency

J. Multi-Local Zone Groups – The system shall have the ability to program multi-local zone groups for each microphone communications station. These zone groups shall be pre-established groups of relational zones that are commonly accessed from those stations. A single number entry (common to every station for that relationship) shall be used to access those zone groups.

K. User Groups - The system shall provide for editable user group assignments that control user access. User groups are sets of zone assignments within the facility. Zone groups may be selected by user groups based on approved access. User groups shall be available to users at microphone communication stations based on their authenticated membership in a user group and password/PIN.

L. Logging – When a dedicated or virtual system server is included in the system topology, and the server has been loaded with Enterprise software, the Logging System portion of the software shall provide complete logging/archival for the following (4) types of system activity:

1. User Activity Log – This feature shall record all log in and out activity by time and date and record event descriptions for each. This includes all changes made to the system setup configuration.
2. ACS Announcement Log – This feature shall record all events in the system including all announcements and messages that play. It shall include the user logged in, announcement type, time and date, originating station, destination zone(s) and length.
3. Communications Station Security Log – This feature logs the status of communications stations. It shall include the user, users' company (airline), station name and status
4. Fault Logger – This feature shall log all system faults. It shall include type and location fault, time and date of fault, time and date of restoration, and applicable test data. Faults shall be assignable to fault classifications and configurable for prioritized delivery.
5. Should the system configuration require only a single vACS controller, and no dedicated or virtual system server, log entries and archives will be held in volatile RAM, with all entries being lost upon loss of system power. Periodic external archiving of system logs should be performed if permanent log storage is required.

M. System Capacity – Each system shall provide for up to (32) vACS nodes. Each vACS node shall provide support for up to (240) microphone communications stations, (480) expansion microphone stations and over (500) zones. Any microphone communication station may be assigned to any combination of zones in the system.

N. Audio Specifications

1) Frequency Response ± 0.5 dB 20Hz to 20kHz
2) Total Harmonic Distortion (THD) < .05% @ Rated Amplifier Output 20Hz to 20kHz
3) Noise Referenced to Input -120 dBu 20Hz to 20kHz
4) Signal-to-Noise >90dB
5) Maximum Latency – From Communications Station to Power Amps through (3) Network Switches 11.9 ms

O. Messaging Servers – The messaging system (Digital Record and Playback (DRP) shall be integral to the function of the vACS and be integral to a vACS controller or reside on the network as a message server appliance.

1) (8) Channels of Recording and (8) Channels of Playback shall be simultaneously available in each message server. Each vACS LAN or VLAN segment can support up

to four message servers. Each channel shall provide a minimum of 130 seconds of recording. Times shall be configurable based on announcement type.

2) When a communications station or workstation initiates an announcement, the system shall dynamically assign a communications channel (CobraNet), and assign it to an open DRP channel. The announcement shall be played if the mic switch is released prior to the end of the record time. If the mic switch is pressed and held during a 5 second (or as programmed) silence period, the announcement shall be cancelled. The announcement will playback automatically, to the selected zone group, in its assigned queue position.

3) Messages shall be stored in non-volatile memory and have a minimum capacity of 20,000 minutes.

4) The system shall support minimum of (8) languages.

5) The system shall support minimum of (3) types of messages. Each message shall have an audio and visual element to provide visual paging that duplicates the audio in the designated zones. The audio and visual elements shall start together and maintain continuous synchronization through the duration of the message.

6) Some messaging may require the use of a dedicated or virtual system database server, and Enterprise software. Contractor shall confirm the necessary hardware required for each type of message to be utilized.

   (a) Standard Messages – These are standard single file (take) messages of following categories. Standard messages may be assigned to any zone or zone group and may be initiated by any assigned communications station or scheduled for play by the system clock.

      1. Emergency announcements and instructions.
      2. Public service announcements (no parking, no smoking, etc.)
      3. Regulatory (do not leave bags unattended, etc.)
      4. Other institutional messages.

   (b) Assembled Messages - Assembled messages shall allow audio message “takes” or phrases to be “assembled” in real time to create a complete message. Assembled messages shall allow dynamic information provided by the user or a database to be included within the message to provide for specific information or instructions. The user shall have the ability to “build announcements” using stored takes utilizing the built-in editing system. Takes shall be professionally recorded human voices and edited to allow assembly in any random order. Each message shall be up to 30 takes long. The following messages shall be assembled:

      1. Flight boarding sequence announcements.
      2. Flight arrival, bag claim, and delay announcements.
      3. Gate changes or other gate operations.
      4. Delayed flight or canceled announcements.
      5. Provide message libraries for English, (add others if applicable)

P. FAS Ambient Noise Analysis and Control – The system shall include the capability to automatically adjust the volume levels in each zone based on changes in the ambient noise levels in those zones.

1) Each zone that includes a sensor within its boundaries shall have automatic control.

2) The system shall automatically null announcement or program material for that zone to prevent “runaway” or inaccurate volume tracking and shall provide smooth unobtrusive control.

3) Software shall allow for setup of the following parameters.

(a) Automatic, slaved to an automatic channel, or fixed modes.

(b) Configuration of one to four sensors for control of a zone and control of multiple zones from one or more grouped sensors.

(c) Control of threshold, maximum gain allowed and scaling ratio.

(d) Software shall provide for real time monitoring of sensor levels, program levels, output levels and gain changes.

(e) System shall provide for automatic setup of zones using the integrated system messaging.

Q. System Equalization - The system shall provide for frequency response equalization for each speaker zone output.

1) Filter types shall allow notch, high pass, or low pass.

2) Filters shall have a Q range of 0.055 to 33.

3) Provide (9) filters for each zone output.

R. Automatic Backup Amplifier Switching – The system shall include backup amplifier switching in the event of the failure of a power amplifier.

1) The system shall automatically detect failure or abnormal operation of a power amplifier and replace it with a spare amplifier without operator initiation.

2) One spare power amplifier shall be installed for each (8) installed amplifiers.

3) The spare amplifiers shall be only be powered up when they are transferred into service. The system shall detect a failure, power up the spare amplifier, and complete the transfer for restored operation within 2 seconds of an amplifier failure.

S. Monitoring System - Provide the capability for complete integrated aural and signal level monitoring of the system at designated monitor points. This capability shall be available for selection at each system workstation for level monitoring and at each monitor speaker location for aural monitoring. Audio routing shall be automatic from any monitor point to any listening point.

1) Selection shall be instantaneous and not introduce pops or other audio noise.

2) Provide monitor points for each direct digital input, local analog input, ambient channel output, equalizer output, amplifier input, amplifier output, and speaker zone (plus end-of-line).

3) Provide capability to select an announcement or message in progress from the main activity screen and select monitor points for that activity during the announcement or message.

4) Provide a dynamic multi-channel VU monitoring screen selectable for each T9160 Mainframe. The screen shall include calibrated VU meter bars, channel status, signal presence, and fault status for each of the (16) channels. The screen shall also indicate status of the backup amplifier channels.

T. Testing System – The system shall provide for self-diagnostics that operate in real time under software control.

1) This self-testing shall include testing of any combination of communications stations, direct digital input, local analog input, ambient channel output, equalizer output, amplifier input, amplifier output, and speaker zone (plus end-of-line).

2) The system shall be capable of testing to a resolution of 0.5 dB.

3) Manual or programmed audible frequency self-testing shall be available as well as an inaudible (20 kHz) test designed to exceed the requirements of NFPA 72.

4) All testing must be capable of operating simultaneously with normal system operations including test setup. Systems that disrupt or play audible test tones to more than a single zone at a time are not acceptable.

5) Each speaker line shall include end of line monitoring to confirm continuity in accordance with NFPA72. Any fault in a speaker line shall be reported within 2 minutes.

6) Each speaker line shall be tested for Ground Fault Interruption (GFI) on both sides of the balanced speaker cabling. This testing shall be available without applying power to the amplifier to verify cabling integrity prior to powering.

7) All test results shall be reported to the fault reporting system.

2.3 ANNOUNCEMENT CONTROL SYSTEM (VACS)

A. The system shall consist of one or more Virtual Announcement Control System controllers. Each vACS shall be designed and distributed to allow continued announcement and standard message operation in the event of failure of the system server, or communication to other vACS nodes.

1) Announcement Controller – The Announcement Controller shall manage all primary operations of the ACS including paging communication stations, audio routing, message management and Ethernet communications. It shall include an on-board solid-state hard drive as well as flash memory for fail safe emergency message playback. The Controller shall accept standard VoIP protocols via two (2) native, simultaneous connections, and shall accommodate eight (8) additional inputs when separate third-party media converters are included. The physical and software controller shall be as recommended by the manufacturer.

2) Power Supplies – The server/controller shall be powered with individual 12-volt power supplies. Each power supply module shall be capable of providing 4 amps of power to each Device.

3) For each IED 1150 server, provide a backup IED 1150 Lifeline Backup Server, configured to seamlessly take over primary server functionality in the event of a primary server failure.

B. System Software (Server/Controller) – Each vACS Announcement Controller will be loaded with system software that will enable it to manage up to 240 digital microphone paging stations, and over 500 zone outputs.

1) System Software will include capability to interface/control other digital system components such as power amplifiers and logic devices.

2) Software shall be licensed with an annual license fee which includes support and updates.

3) Latest software shall be by MediaMatrix, no approved equal.

C. Ambient Analysis Sensor Collector – The ambient analysis sensor collector shall accept inputs from the ambient analysis sensors, process their data, and transmit the data to the appropriate amplifier system.

1) Connection to the system shall be via a 100BaseT Ethernet port.

2) The collector shall be rack mounted in 1RU and accept inputs from up to 32 ambient noise sensors.

3) The collector shall be powered through the PoE Ethernet Port.

4) The Ambient Analysis Sensor Collector shall be by Bogen or as recommended by the PA system manufacturer.

D. Ambient Analysis Sensor – The Ambient Analysis Sensors shall detect ambient noise levels in respective speaker zones. Noise levels shall be processed using an A-weighted curve and converted to a DC waveform for transmission to the Ambient Analysis Sensor Collector.

1) The Ambient Analysis Sensor shall be Bogen model ANS501 or as recommended by the PA system manufacturer.

E. Integrated Digital Power Amplifier System (IDPAS) – The Integrated Power Amplifier System shall provide DSP processing and power amplification for up to (4) zones in a single modular mainframe.

1) Digital Audio Network Interface – The network interface shall receive (32) dynamic assigned audio channels from the vACS via the Ethernet Network. Control for the IDPAS and monitoring shall be included on the network. The NIC shall provide dual outputs to support a redundant network.

2) Zone Manager – The IDPAS shall provide zone management for (4) channels as directed by the vACS. Channel management shall be structured to utilize the minimum channels necessary on the network to support paging, messaging and background music activity for any combination of zones.

3) DSP Processing – The IDPAS shall include digital signal processing for (4) channels of audio. Each channel shall include (9) bands of parametric equalization, time delay, ambient analysis control, (7) monitoring points, and (7) testing points. Complete setup and control software shall be integrated within the Enterprise Software and available

on the network for configuring, controlling, monitoring, and testing the DSP for each channel.

4) Ambient Analysis and Control – The Ambient Analysis System shall adjust signal levels in response to either ambient noise levels or computer commands. The system shall operate in real time and shall not be a “sample and hold” system. The system shall include an automatic calibration sequence. All setup, configuration and monitoring controls shall be software based with the ability for multiple sensors averaged to control a single channel(s) or for a single sensor to control multiple channels. The sensors shall utilize control signaling and levels that allow co-locating with the speaker cable for cable routing efficiency. Three modes of operation shall be possible:

   (a) Automatic – Changes attenuation levels in response to noise levels reported by remote sensors.

   (b) Slaved – Changes attenuation levels based on remote sensors of an automatic channel.

   (c) Fixed – Fixed attenuation as set by the computer and user.

5) Internal Monitoring – Each IDPAS shall include in internal audio monitoring buss with software selected switching. This monitor shall allow selection of a monitor point from the control software to allow visual and audio monitoring of the channel network input, channel direct input, ambient channel output, EQ output, amplifier input, amplifier output, and speaker load monitor for each of the (4) channels. This feature shall operate simultaneously and independent of the automatic testing.

6) Automatic Testing – The automatic testing system shall locally test and process audio test signals through the IDPAS. These tests may be done manually on demand for any single test point as well as globally in the mainframe on a completely automated basis during the day. The test points duplicate those of the monitoring points above with a testing resolution of 0.5 dB.

7) The Integrated Amplifier Mainframe shall be the Peavey Ci 30x4 amplifier, no approved equal.

F. Limited Function Digital Microphone Stations – Limited function microphone stations shall have (4) selection buttons. The station shall be a network appliance with control and CobraNet audio communicating on the audio network. Connection to the system shall be 100BaseT with power provided by a PoE switch port. Microphones shall be handheld and utilize a magnetic mount. Microphones shall include a line amplifier in the microphone shell to eliminate microphone signal levels beyond the microphones. Stations shall be provided in surface wall-mounted (2-gang) or desktop versions as noted on the drawings and based on the mounting situation required.

1) Wall-Mounted Microphone Station – Peavey RMP-2 (with handheld microphone); no approved equal.

2) Desktop Microphone Station – Peavey Pagematrix 4 (with desktop base and handheld microphone); no approved equal.

G. Microphone Communication Station Enclosures - For station mounting locations requiring desktop, angled vertical, or angled horizontal, provide factory enclosures to match the finish of the station. Enclosures shall be non-metallic and include rubber feet.

2.4 UNINTERRUPTABLE POWER SUPPLY (UPS)

A. Provide dedicated UPS units in conformance with the performance requirements of all PA system equipment in each communications or audio equipment room rack. The UPS shall be provided in accordance with all manufacturer recommendations in order to meet all system performance requirements. Additionally, the UPS shall meet the following minimum requirements:

1. 19” rack-mounted unit providing a minimum of 2150VA / 1650W power with sufficient internal and/or external battery packs to provide 7 minutes of runtime at full load and 15 minutes of runtime at half load.
2. Line interactive with Automatic Voltage Regulation (AVR).
3. Minimum (8) NEMA 5-20R receptacles.
4. UL listed for use on audio/visual equipment and capable of providing protection against of blackouts, voltage fluctuations, and transient surges.
5. Support for remote monitoring and configuration of UPS via integrated network connection.
6. Equipped with built-in audible alarm and front panel LED/LCD display to indicate status of line power, battery power, battery low/replace, voltage regulation and load level.
7. Power Input:

    a. 80VAC – 145VAC
    b. 60 Hz +/- 3Hz (Auto-Sensing0
    c. Resettable Thermal Fuse

8. Power Output;

    a. 120VAC / 2150VA / 1650W Minimum
    b. Pure Sine Wave
    c. 57 – 63Hz (60Hz nominal)
    d. 4ms Transfer Time, Line to Battery / Battery to Line (typ.)
    e. Overload Prottection

9. Total Harmonic Distortion (THD), Battery Backup: 1.5% @ 60% Load / 5.2% @ 100% Load
10. Surge Protection: Line-Neutral 381 joules @ 270V Clamp Voltage
11. UPS shall be Middle Atlantic 2200R-8IP or approved equal.
12. Provide external battery expansion, Middle Atlantic MAP-EBPR or approved equal.

2.5 NETWORK SWITCHES

A. Network switches shall be commercial-grade units with lifetime warranties. The switches shall be equipped with GBIC/SFP modules and ports as required to provide a Gigabit Backbone and 100BaseT ports for each device. All switches shall be managed and be full non-blocking. The switches shall include QoS, Spanning Tree, have a minimum of 32mb of memory and be capable of PoE/PoE+. Switches providing 100BaseT ports for Collectors and Communications Stations shall include PoE/PoE+ ports as required, or provide rack mounted Mid Span Power devices.

B. Edge Switches shall be Cisco 3850 Catalyst Series or latest model with Gigabit and Port Modules as required, no approved equal.

1. Provide all programming of all network switches. Coordinate with VPS-IT for specific programming requirements and IP address schema.

PART 3 – EXECUTION

3.1 EQUIPMENT PROTECTION

A. Comply with all requirements of specification section 270500.

1. Examine all physical and environmental conditions, equipment and device locations, auxiliary system connectivity requirements impacting the installation of all network systems and report any unsatisfactory conditions in writing to the Owner’s Representative.

3.2 WORK PERFORMANCE

A. In addition to all requirements as specified by Specification Section 270500 the network communications systems shall also be provided in accordance with the following requirements:

1. Prior to the final commissioning and\or programming of any network communications components, the Contractor shall provide a review with the Owner’s Representative addressing all network integrations, programming and related operational connectivity.

a. Failure to provide this review and get final sign-off prior to programming shall result in any costs related to changes requested by the Owner’s Representative as not being charged to the project.

3.3 EQUIPMENT/CABLE INSTALLATION AND REQUIREMENTS

A. In addition to all requirements as specified by Specification Section 270500 the network communications systems shall also be provided in accordance with the following requirements:

1. All system cabling shall be of the type, size, and specification as required by all contract documents as well as stipulated by all codes and standards as specified by specification section 270500.
2. All network communications cabling shall utilize Category-6 UTP cables and installed in accordance with the requirements of specification section 270500. All network cabling conduits shall not contain any AC carrying conductors or non-associated network communications cables within the cable raceways\conduits or cable bundles.

a. In addition, all structured cabling associated with the installation of any network communications system shall comply with all requirements of EIA\TIA standards for the proper installation, termination and testing of all

fiber optic and Category-6 UTP cabling.

b. Contractor shall provide all equipment, components, devices, hardware, equipment racks\cabinets, patch panels, and all appurtenances necessary to provide fully operational network communications systems utilizing a UTP cabling topography. Coordinate all structured cabling with all trades and contractors prior to shop drawing submission.

3. All serial communications cabling shall utilize 16 AWG, 4 pair shielded twisted (STP) cables and installed in accordance with the requirements of specification section 270500. All serial cabling conduits shall not contain any AC carrying conductors or non-associated network communications cables within the cable raceways\conduits or cable bundles.

3.4 TRANSIENT VOLTAGE SUPPRESSION

A. Comply with all requirements of specification section 270500.

3.5 GROUNDING AND BONDING

A. Comply with all requirements of specification section 270500.

3.6 EQUIPMENT IDENTIFICATION

A. Comply with all requirements of specification section 270500.

3.7 MAINTENANCE & SERVICE

A. Comply with all requirements of Division 01 and specification section 270500.

3.8 WARRANTY

A. In addition to all “Warranty” requirements as specified by Division 01, Specification Section 270500 and all requirements by related specification sections the Contractor shall also conform to all requirements of this section.

1. Provide a 5-year extended manufacturers’ warranty on each HMI central processor units provided as part of this project.
2. Provide a 5-year extended manufacturers’ warranty on each Touch Screen monitor provided as part of this project.
3. Provide a 2-year extended manufacturers’ warranty on each HMI UPS unit.

B. Provide all manufacturers extended cable warranties based on matching wire to component compatibility requirements. All cable warranties shall be in effect for a period of not less than 20 years.

1. The warranty must include the following statements regarding the cabling system:

a. "That all communications networks have been certified and will support and conform to ANSI/TIA-568-C specifications covering any current or future application which supports transmission over a properly constructed and horizontal cabling system premises network which meets the channel and/or

basic link performance as described in ANSI/TIA-568-C."

b. “That all communications networks are free from defects in material or faulty workmanship."

3.9 FIELD SERVICES

A. Comply with all requirements of Specification Section 270500.

3.10 TRAINING

A. Comply with all requirements of Division 01 and specification section 270500.

B. Documentation:

1. Contractor shall provide documentation to include all test results and as-built drawings, test results shall be computer generated and shall include all trace reports indicating each pair tested in accordance with all requirements of specification section 270500.

a. One Hard Copy shall also be provided to the Owner’s Representative. Software for viewing the test results shall also be provided in the soft copy package.

C. Final Acceptance

1. Acceptance of all network communications systems, by the Owner’s Representative, shall be based on the results of testing, functionality, and the receipt of documentation. The testing, of all UTP cabling, fiber segments and all serial data cables must meet the criteria established in the specification sections 270500.
2. The Contractor must demonstrate to the Owner’s Representative that 1000 Mbps data signals can be successfully transmitted, bi-directionally, from the layer II switch to and from a minimum of 10% of individual data drops on each floor, witness tested by the Owner’s Representative. The number of data drop locations to be tested shall be determined by Owner’s Representative. With regard to documentation, all required documentation shall be submitted to Owner’s Representative.

D. As-Built Documentation:

1. Contractor shall provide clean copies of the technology drawings depicting all as-built conditions for all data drop locations, cable routing and identification, patch panel, data switch port terminations, component layouts and all information as required by Division 01 specification section.

END OF SECTION 271500

THIS PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and all related Specification Sections, shall all apply to this Section.

B. Related Specification Sections:

1. Refer to specification Section 27 05 00 for additional information.

C. Reference Symbols:

1. Refer to specification Section 27 05 00 for additional information.

D. Abbreviations:

1. Refer to specification Section 27 05 00 for additional information.

E. Definitions:

1. Refer to specification Section 27 05 00 for additional information.

1.2 SUMMARY

A. In addition to all requirements stipulated in Specification 27 05 00 this section contains the overall requirements and design intent associated with all Division 27 requirements as it relates to the installation of all data network communications equipment as required to provide fully functional and operational Local Area Network (LAN) including but not limited to all active components and interfaces in support of the following system applications:

1. Data Communications Premise Distribution System
2. VoIP Telephone System
3. Airline data and telecommunications demarcations
4. Wireless Local Area Network (WLAN)
5. Dynamic Wayfinding and Signage Displays
6. IPTV Distribution System
7. Multiuser Flight Information Display System (MUFIDS)
8. Public Announcement Systems (PA)
9. Access Control System (ACS)
10. Video Surveillance System
11. Digital Addressable Fire Alarm System

B. This section also addresses all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications related to the installation of all data communications equipment for this project. Refer to specification Section 27 05 00 and all related specification sections for additional project requirements.

1. All symbols are shown on the contract drawings as close as possible to their intended location. Contractor shall coordinate the installation of all, devices, controls, components, and integration of systems as herein specified related to the all data network communications equipment in support of provide fully functional and operational Local Area Network (LAN). The contractor shall document all coordination requirements with all affected trades and sub-contractors at the time of shop drawing submission.
2. Drawings for this work are diagrammatic and intended to convey the extent, general arrangement, and locations of the work. Because of the scale of the drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may or may not be shown on the contract drawings.

    a. Include all materials, equipment, components, devices and appurtenances where required by code all related specification sections as required for the proper installation of all data network communications equipment as required to deliver in first class operational condition a fully functional LAN whether specifically indicated or not.

C. Use of Premises

1. Refer to specification Section 27 05 00 for additional information.

D. Coordination

1. Refer to specification Section 27 05 00 for additional information.

1.3 SCOPE OF WORK

A. Refer to related Division 27 Specification Sections and contract drawings, Division 28 Specifications Sections as well as all contract drawings and Division 26 specifications sections as required to deliver all project scopes of work related to the installation of all data network communications equipment.

1. At the minimum, the scopes of work covered as herein specified shall include but are not limited to all necessary labor, equipment, material, cabling, conduits, commissioning, and testing as well as all appurtenances as required for the proper installation necessary to deliver fully functional horizontal cabling infrastructures in support of all related Division 26, Division 27 and Division 28 systems.
2. It shall be the Contractor's responsibility for full compliance with all requirements of 27 05 00 as well as all related specification sections as required for the proper installation of all data and wireless network communications equipment as required

to deliver fully operational systems in accordance with the requirements of all Contract Documents.

a. It is the design intent for the design, furnish and install all data network communications equipment as necessary to provide the required connectivity of the Structured Cabling System (SCS) in support of all data ports, VoIP telephones, video displays, wireless access points, paging microphones, kiosks, cameras, as well as all ancillary and/or integrated systems.

1) Standard products: Equipment and materials shall be standard products of a manufacturer regularly engaged in the manufacture of telecommunications cabling products and shall be the manufacturer’s latest standard design in satisfactory use for at least one year prior to bid opening.

a) Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components.

b. The Contractor shall furnish and install all data and wireless network communications equipment as well as all horizontal and backbone cabling, conduits/pathways, cable terminations, field devices, communication room fittings, equipment, grounding, connections to electrical power, testing and labeling, appurtenances and system integrations necessary to deliver all scopes of work as herein specified, all related specification sections and in accordance with the Contract Drawings.

3. Perform all work, coordination, systems integration, engineering design, and testing, and shall provide all products required in order to ensure fully operative systems and proper installation of all equipment. System operability and proper installation shall be verified via completion of the acceptance test plan.

a. The Contractor shall install all system components, equipment, and appurtenances in accordance with the manufacturer's instructions, and adjustments required for a complete and operable system.
b. All grounding shall be installed in accordance with all requirements of Specification Section 270526 as necessary to preclude ground loops, noise, and surges from adversely affecting system operation.

B. General LAN Requirements

1. The LAN configuration shall utilize a combination of active and passive network equipment, comprising of core Router and network switches. The configuration shall star out to individual edge level devices located throughout the premises in designated areas. Multimode and Single Mode Fiber Optic Cable shall be the primary mode of connectivity, with CAT 6 cabling used as required. Refer to Specification Section 27 10 00 for backbone and riser cabling requirements.

1) The data network communications system shall perform as designed providing a minimum of 10/100/1000 Mbps to each end user device and 10Gbps from edge switch to core switch on the backbone.

2. All LAN equipment shall provide Internet Protocol (IP) switching across all types of network technologies and topologies, including Ethernet, Fast Ethernet and Gigabit Ethernet.

a. The LAN architecture shall be based on 10 Gbps between the core networking switch located in the MDF and the edge level networking equipment located in the IDFs. In addition, the edge level equipment shall be dual homed to the separate core devices where applicable.

1) Network equipment shall support full-duplex connectivity on links (10Base-TX, 100Base-TX, 1000Base-TX, 100Base-F/TX, and 1000Base-FX).
2) All fiber interfaces on network switches must support Digital Optical Monitoring (DOM) feature.

b. Each active device shall be accessible from a network, console or auxiliary RS-232 port. A configuration specialist shall be able to enter supervisory mode and change default configurations as appropriate for required operation of special system components.
c. Each active device shall be capable of generating Simple Network Management Protocol (SNMP) or SNMP3 alarms. The device shall be respondent to RMON inquiries from an expert level network management inquirer.
d. All network equipment shall be compliant to physical and operational parameters. The equipment shall be capable of responding to SNMP, SNMP3 and/or RMON network management program calls from the Network Management System.
e. Network equipment shall provide multimedia and multicast support through use of Protocol Independent Multicast (PIM), Internet Group Management Protocol (IGMP).
f. All network equipment shall be Virtual Local Area Network (VLAN) compatible based on both port and MAC addresses. VLAN assignments shall be configurable from a centralized administrative console.

1) Network equipment shall support automated VLAN creation and administration capabilities.

a) Network equipment shall not require re-configuration of end-station network interface cards or network interface card drivers to accommodate intra-VLAN and inter-VLAN traffic.

3. Network equipment shall support port mirroring. This shall be done by sending frames directly from a specified port to another switch port or from an external network analyzer.

a. Network equipment for use in the main MDF and TRs shall belong to one family of product. The equipment must allow for common sparing of all Interface Processor Modules and all Supervisor Modules.

4. All active LAN devices shall include all software as required for interconnectivity. All active devices shall have fully functional network management options installed.

1.4 REFERENCES

A. Refer to 27 05 00 for additional information.

1.5 SYSTEM DESCRIPTION

A. Refer to Specification Section 27 05 00 for additional information.

1.6 SUBMITTALS

A. In addition to the submittal requirements as stipulated by Division 01, Specification Section 27 05 00 as well as all related specifications sections, the Contractor shall also conform with the following submittal requirements:

1. Submit technical and operations manuals.

a. Manuals shall describe function, operation, and programmable parameters for each card and port for each device to be installed.
b. Manuals shall include required maintenance to be performed.
c. Manuals shall describe function, operation, and programmable parameters for each card and port for each device to be installed.
d. Manuals shall include required maintenance to be performed.
e. Manuals shall be suitable for the training of future personnel by the County, and for use as a reference for current County personnel in performing work assignments.

2. For each active device installed, provide a printed configuration including a printout of the device as displayed on the network management system. Printed configuration parameters for each port on the device shall accompany the written report.

a. Provide all calculations and/or analysis to support design and engineering decisions as specified in Submittals

3. An implementation schedule listing dates for LAN equipment installations for approval by the County. The dates of LAN equipment installations shall be in accordance with dates for installation of the various special systems and users.

a. It is incumbent upon the LAN implementers to include the dates for special system and user installs into the schedule.

4. Provide Cable Plant interconnectivity chart showing all fiber patch panels and individual identifiers for each fiber associated with the interconnectivity of each network device.
5. Include spare parts list for approval by Owner.

1.7 QUALITY ASSURANCE

A. In addition to the requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

B. The Contractor shall furnish, erect, install, connect, clean, adjust, test and condition all data communications equipment, materials, components and all required appurtenances. The Contractor shall be responsible to program and place in service all network communications equipment to meet the performance requirements in accordance with all related specification sections, manufacturer’s directions and recommendations unless otherwise indicated by the Contract Documents.

1. Submit certified documentation that the following experience requirements are in conformance.

a. Contractor Qualifications

1) The contractor shall be certified by the manufacturer of the products, adhere to the engineering, installation and testing procedures and utilize the authorized manufacturer components and distribution channels in provisioning this Project.
2) Must be supervised on-site by a BICSI RCDD. Must demonstrate knowledge and compliance with all BICSI, TIA, UL, and NEC methods, standards and codes.
3) All members of the installation team shall be certified by the manufacturer as having completed the necessary training to complete their part of the installation. Resumes of the entire team shall be provided along with documentation of completed training courses.
4) The contractor shall provide five references for projects of equivalent scope, type and complexity of work completed within the last five years.

1.8 DELIVERY, STORAGE AND HANDLING

A. Refer to specification Section 27 05 00 for additional information.

1.9 RECORD DOCUMENTS

A. Refer to specification Section 27 05 00 for additional information.

1.10 OPERATION AND MAINTENANCE

A. Refer to specification Section 27 05 00 for additional information.

1.11 SOFTWARE AGREEMENT

A. In addition to all requirements as stipulated herein refer to Specification Section 27 05 00 for additional requirements:

1. Software License

a. Required software licenses shall be identified and supplied by the Contractor. Licenses shall be "Site Licenses" which shall cover all equipment installed now or in the future.
b. All software licenses and warranties shall be registered in the name of Destin Fort Walton Beach Airport System.

1.12 EXTRA MATERIAL

A. Not Applicable

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, that meet and/or exceed the specified performance and features of the equipment and/or systems and for which replacement parts shall be readily available to the contractor and/or Owner.

a. Equipment Manufacturers:

1) LAN Equipment: Unless otherwise specified, furnish products manufactured by Cisco Systems, Tellabs, Zhone or approved equal..
2) Uninterruptible Power Supply (UPS): Eaton or Owner Approved Substitution.
3) Workstations: Reference Specification 272200 – PC, Laptop and Server Equipment.
4) Network Printers: Reference Specification 272200 - PC, Laptop and Server Equipment.
5) For cabinets/racks and cabling infrastructure: Reference Specification 271100 – Cabinets and Equipment Rooms.
6) Courtesy Phone: CEECO or Owner Approved Substitution.

b. The equipment specified is based on the acceptable manufacturers listed. Where "or equal” is stated, equipment shall be equivalent in every way to that of the equipment specified, and subject to approval by County.

1) When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.

2. Acceptable manufacturers for each component shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.

a. Manufacturers listed as acceptable shall not negate the contractors’ responsibility for providing all equipment, components, and/or appurtenance in accordance with all requirements of the Contract Documents.

1) Where manufacturer and/or manufacturer model numbers reference specific system components in the related specification sections, it is to establish the performance requirements and quality of the systems and components only.

a) It is in no way an inference that the referenced model numbers are the manufacturer’s current product and are the only manufacturer’s acceptable components for this project unless specifically referenced as “no substitutions.”

3. Identifiers, Labels and Labeling System

a. All Identification and Labeling shall follow Specification: 27 10 00 for Identification and Labeling of Communication Infrastructure.

4. Any deviation or substitution from the specification must be approved prior to the submission of shop drawings. Refer to Specification Section 27 05 00 for all product substitution requirements.

2.2 LAN MANAGEMENT

A. All networking equipment shall interface into a network monitoring system for administering and troubleshooting the system.

1. Windows 2003 Server Standard and Enterprise Editions with 2 Intel Xeon CPU at 3.66 GHz, 4 GB RAM memory, 8 GB swap space, and 80GB disk space.

B. CiscoWorks LAN Management Solution (LMS) suite 4.0. CiscoWorks Device Fault Manager

1. CiscoWorks Campus Manager
2. CiscoWorks Resource Manager Essentials
3. CiscoWorks Internetwork Performance Monitor

4. CiscoWorks CiscoView
5. CiscoWorks Common Services

LAN HARDWARE REQUIREMENTS

A. All equipment shall be rack mountable in standard 19-inch racks. Contractor is responsible for providing fans, shelves, drawers, special power wiring, ground connections, and adapters of any kind necessary to accommodate the system installation, operation, testing, or maintenance. Contractor shall provide the appropriate factory or custom rack mount adapters for all equipment installed in the equipment rack, whether specifically itemized or not. Contractor shall cover unused slots using blank panels.

2.3

1. Fiber and Copper Patch Cords – Adequately sized fiber and copper patch cords shall be provided for each installed port in the LAN under Section 27 10 00, "Horizontal Media Infrastructure."

B. Core Networking Equipment

1. The core layer networking equipment shall be located in the MDF as shown in the contract drawings.
2. The chassis shall accommodate a minimum of nine (9) interface modules and provide connectivity to mixed network topologies. The use of a chassis is to support networking topologies without the use of external bridges or routers. The chassis shall have redundant power supplies, in the form of hot-swappable modules which can equally share the chassis power load. If one power supply fails the system shall notify the network manager and also provide a display on the front of the chassis. The chassis shall support quality of service through support of IP Precedence, Resource Reservation Protocol (RSVP), and 802.1p.
3. The switch backplane shall provide a minimum of 1440 Gbps switching fabric on the network bus.
4. The chassis shall include sufficient Gigabit Ethernet (single mode fiber) ports to support connectivity plus 10% spare ports. At the minimum, the Contractor shall provide twenty-four (24) Gigabit Ethernet (single mode fiber) ports.

    a. The chassis shall support:

        1) Redundant supervisor modules.
        2) Hot swappable line cards.
        3) Layer 2 and Layer 3 IP switching.
        4) Up to 240 10/100/1000 Ethernet ports.
        5) Support broadcast suppression.
        6) Support IGMP snooping and pruning.

    b. The core switching equipment shall be based on the Cisco Catalyst 6509 platform and shall at the minimum include in sufficient quantities to support all project connectivity the following modules:

1) Two (2) Supervisor 1440 modules with integrated fabric, Multi-layer Switching Feature Card 4 (MSFC4) and Policy Feature Card 4 (PFC4).
2) Fabric-enabled Gigabit Ethernet module(s) shall be provided with sufficient quantity of SFP ports to support all connectivity requirements for core to core and core to distribution switch uplinks.

    a) All SFP ports shall be provided with Long Wavelength / Long Haul (1000Base LX/LH) SFPs (single-mode).

3) Fabric-enabled, inline power 48-port 10/100/1000Base TX module(s) to provide connectivity for the Layer 3 switch ports.
4) Network Analysis Module.
5) Intrusion Detection Module.
6) Firewall Services Module.
7) Two (2) 6000W AC power supplies.

C. Distribution Switch Equipment (Edge Level)

1. The Contractor shall provide all edge level networking equipment and shall be located in all MDF/IDF, Telecommunications Closets and Telecommunication Enclosures unless otherwise noted on the contract drawings. At the minimum, all edge level networking equipment shall meet the following requirements;

    a. The devices shall provide a minimum of 10 Gbps switching.
    b. The device shall include a module(s) with the appropriate RJ45 Category 6 UTP 10/100/1000BaseTX ports to support all connectivity port requirements to meet the intent of Contract Drawings and all related specification sections.

        1) All edge level networking equipment shall have the capability to "stack" with additional devices to increase the available port count.
        2) All edge switches/ PON equipment shall have power over ethernet (PoE) capability.

    c. The edge level devices shall have the capability to simultaneously accommodate a minimum of two Gigabit Ethernet uplinks and 24 10/100/1000 VoIP Ethernet ports.
    d. The devices shall support the bonding and trunking of Fast Ethernet and Gigabit Ethernet ports.
    e. The edge level switching equipment shall be Cisco Catalyst WS-C3650-24PS - 640 WAC or Owner approved substitution. Refer to specification section 27 05 00 for all substitution requirements.

        1) Use 24 port switch if 16 ports or less are active. Upgrade to the 48-port switch (WS-C3650-48FD - 1025 WAC) if more than 16 ports are active.

D. UPS HARDWARE REQUIREMENTS

1. Where a communication room or closet is not connected to a building-wide uninterruptable power supply (UPS) the Contractor shall provide a rack-mounted

UPS in equipment cabinet in any Communications Room, Closet or Enclosure that houses any LAN equipment.

a. The rack mounted UPS shall have an output capacity of 5KVA per cabinet. The rack mounted UPS shall be sized to provide connected system with a runtime of 7.5 minutes at full load or 15 minutes at half load. The UPS shall be sized to provide secondary power to allow connected systems to seamlessly transition to emergency generator power in the event of primary power loss. The UPS shall be connected to a generator-backed circuit.

    1) If specified UPS cannot be installed due to space restraints a smaller UPS (Eaton 5PX1500RTN) can be substituted for Owner approved substitution. Refer to specification section 27 05 00 for all substitution requirements prior to submission of shop drawing.

        a) Any substituted UPS unit shall meet all installation, runtime requirements and environmental requirements as herein specified for any consideration of approval.

b. The UPS interface port shall have an RS-232 communications port and a 10/100 Base-T Ethernet for LAN management. Include optional environmental probe (Eaton part # 42R4317).
c. The control panel shall have a LED status display for load and battery bar-graphs in addition to replace battery and overload indicators.
d. The Output Connections shall include as a minimum one NEMA L6-30R, two NEMA L6-20R, and eighteen NEMA 5-15R.
e. Input connection shall be nominal 208 V via L6-30P plug.
f. Include software and interface card to provide Web/SNMP management through 10/100Base-T Ethernet port. Management software shall include the following attributes:

    1) Shall allow complete configuration of the UPS devices from a remote location
    2) Shall provide periodic UPS self-tests
    3) Shall provide full control over UPS transfer settings
    4) Shall provide user name and password security
    5) Shall log all power events with a description

2. The UPS unit shall be Eaton 9PX5KTF5 5000VA RM 5U 208V series with Web / SNMP Management Card for Ethernet and optional environmental probe, Owner approved substitution. Refer to specification section 27 05 00 for all substitution requirements prior to submission of shop drawing.

2.4

LAN PERFORMANCE REQUIREMENTS

A. The wired system shall perform as designed providing a minimum of 10/100/1000 Mbps to each end user device and 10Gbps from edge switch to core switch on the backbone.

IDENTIFIERS, LABELS AND LABELING SYSTEM

A. All Identification and Labeling shall follow Specification: Section 27 10 00. Any deviations from the specification must be approved prior to the submission of shop drawings in accordance with all requirements of specification section 27 05 00.

2.5

PART 3 - EXECUTION

COORDINATION

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

3.1

1. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of the data communications and wireless network equipment, appurtenances as well as all equipment cabinet layouts including but not limited to all equipment cabinet locations, grounding connections, cable terminations, electrical power, WAP enclosures to the satisfaction of all concerned trades, subject to final review by the County.

    a. At the minimum, the Contractor shall verify the following requirements prior to the installation of any equipment.

        1) At the time of shop drawing submission, the Contractor shall demonstrate that coordination with all affected trades was performed. Failure to properly document these coordination requirements as part of the shop drawing submission shall result in all shop drawings being returned for resubmission;
        2) Coordinate the installation of any structural reinforcement or architectural modifications as required to properly install and support the installation of all wall mounted wireless enclosures.

    b. All data communications and wireless network equipment as well as all appurtenances shall comply with all installation and construction requirements of the Federal Communications Commission.

2. The Contractor shall install all system components including furnished equipment, and appurtenances in accordance with the manufacturer's instructions, and adjustments required for a complete and operable system.

    a. The County IT Representative shall perform final configuration of the network equipment. This includes, but is not limited to: VLAN configuration, IP addressing schemas, final port assignments, and trunking/bonding configurations. The installation contractor shall ensure that the proper documentation is provided to assist in the final system configuration.

3. The Contractor shall coordinate exact location of all data communications and wireless network equipment as well as all appurtenances with the County, as well

as all affected trades and Tenants prior to the installation of any components and termination of all backbone and horizontal cabling infrastructures, as well as all appurtenances.

a. If installation of any data communications and wireless network equipment or any appurtenances is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner.

B. The Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings, equipment submissions and all other documents submitted for review shall be made available on site to the County upon request.

1. Coordinate any work scheduled to be provided by Owner or Owner’s Vender that impact the scope of work associated with the horizontal cabling infrastructures requirements of this project. Schedule all work to ensure that the work of the Owner and all Owner Vendors can proceed in accordance with the Project Schedule.

C. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. Verify raceways, cable trays, boxes, are properly installed in accordance with specification sections 27 05 00 and all related specification sections.
2. Verify backboards are properly installed.
3. Verify telecommunications grounding system is properly installed and tested following Section 27 05 26.
4. Verify all structural reinforcement and/or blocking of all studded walls as required to properly install and support the installation of all wall mounted communications equipment cabinets.
5. Verify liquid-carrying pipes are not installed in or above any IDF/MDF that has active electronic equipment. Do not proceed with installation in affected areas until removed.
6. Verify that all fire proofing has been applied to all structural steel prior to the commencement of any work.

3.2

3.3 EQUIPMENT PROTECTION

A. Refer to specification Section 27 05 00 for additional information.

WORK PERFORMANCE

A. In addition to all requirements as stipulated by Specification Section 27 05 00 as well as all related specifications sections, the following shall also apply:

1. The Contractor shall develop a detailed network map to be utilized as a road map during the implementation of the LAN. This map shall show all segments, all interconnects between segments and all active network devices. This network map shall not include the individual nodes interconnected to each concentrator, but will have the modules, interfaces, protocols, addresses and other identifying features for each concentrator and other active device.

    a. The Contractor shall also develop a Cable Plant interconnectivity chart showing all fiber patch panels and individual identifiers for each fiber associated with the interconnectivity of each network device.

B. Job site safety and worker safety is the responsibility of the Contractor. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials. Clean up all debris generated by installation activities. Keep all areas free of debris at all times.

C. Pre-installation Conferences: Include provisions to attend all pre- installation conferences at Project site in compliance with all requirements in Division 01 Specification Section and as herein specified. Review with County all methods and procedures related to installation, programming and testing of all data communications and wireless network equipment, including, but not limited to, the following:

1. Review all Coordination requirements as herein specified related to all MDF/IDF room layouts responsible by other trades.
2. Review electrical and equipment roughing-in related to all horizontal cabling infrastructures as well as other preparatory work required to be performed by other trades.
3. Review all work, equipment deliveries, installation procedures, and related scopes as required to conform to the phased construction schedule.
4. Review and finalize construction schedule and verify availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
5. Review required start-up, programming, endurance testing, and certifying procedures to be employed for all data communications and wireless network equipment.

D. For work on existing facilities, arrange, phase, and perform work to assure the operation of all systems for other buildings and contiguous spaces at all times. Refer to Division 01 Specification Section for additional requirements.

E. Remove all unnecessary tools and equipment, unused materials, packing materials, and debris from each area where work has been completed unless designated for storage.

F. Coordinate the installation of all data communications and wireless network equipment with the County and any applicable trades to ensure proper installation, connectivity, function and equipment performances in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

1. Coordinate with all trades at the time of shop drawing submission detailing all conditions impacting the installation of all wireless access equipment, components and all appurtenances.

    a. If installation of any wireless communications components and/or related appurtenances is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner.

G. The Contractor shall maintain a complete set of current and up to date set of shop drawings and equipment submissions at the job site at all times. The Shop drawings and all other submissions shall be marked up to reflect all as-built conditions and shall be made available for review by the County upon request.

H. The Contractor shall prepare the necessary documents required for installing, all equipment cabinets and communications room layouts. Such documents include but are not limited to:

1. Project management and quality assurance plans
2. Testing plans
3. Endurance testing procedures
4. Component and system submittal documents
5. Installation plans
6. Component design plans
7. System user documentation
8. As-built drawings and documentation

3.4 EQUIPMENT INSTALLATION

A. Install in accordance with all requirements of the Contract Documents, specification section 27 05 00, all related specification sections, manufacturer’s instructions and approved submittal data.

1. All installation shall be done in conformance with ANSI/TIA 568B standards, BICSI methods, Industry standards, in addition to all data communications and wireless network equipment manufacturer’s installation guidelines.
2. The installation of all data communications and wireless network equipment shall comply with all County standards as well as all applicable national and local codes pertaining to low voltage cable system installations.

    a. Refer to specification Section 27 05 00 and 27 10 00 for additional information related proper cable infrastructure installation and terminations.
    b. All Identification and Labeling shall follow Specification: 27 10 00 Structured Cabling System. Any deviation from the specification must be approved by County IT prior to installation.

3. The contractor shall adhere to the installation schedule of the general contractor and shall attend all construction meetings scheduled by the general contractor.
4. Upon structural completion of the communications room(s) and prior to the installation of any data communications network equipment inside the room, the CMAR shall consult the County in order to:

    a. Perform construction administration activities to compare as-built configuration to the design.
    b. Observe all "not-to-design" compliance issues and issue corrective advisement of actions.
    c. Upon completion of 1 and 2 above, the Communications Designer shall mark with masking tape the general layout of the equipment placement.

5. Seismic Performance: The Contractor shall furnish and install all wireless communications equipment bracing, and anchoring rated for the seismic zone of the geographical area in which the project resides and shall withstand the effects of earthquake motion and wind forces in accordance with the current editions of the IBC and ASCE/SEI 7. Refer to Division 01 and Division 26 – Hangers and Supports for additional seismic information and requirements.

B. Owner or their designated representative shall randomly perform unannounced, on-site reviews during the installation of any data communications and wireless network equipment. In addition, this person shall perform a final inspection and a complete review of the test results before the installation is accepted.

1. Upon completion of the installation, Contractor shall prepare as-built documentation of the entire SCS. This documentation shall be prepared in accordance with all requirements as herein specified as well as all requirements of Specification Section 27 05 00 and related specification sections of the of the Contract Documents.

C. Penetrations of Walls and Floors:

1. Refer to specification Section 27 05 00 for additional information.

3.5

COMMUNICATIONS CABLING REQUIREMENTS

3.6

A. Refer to specification Section 27 05 00 for additional information.

ELECTRICAL POWER DISTRIBUTION

3.7

A. Refer to specification Section 27 05 00 for additional information.

TRANSIENT VOLTAGE SUPPRESSION

A. Refer to specification Section 27 05 00 for additional information.

GROUNDING AND BONDING

A. Refer to specification Section 27 05 26 for all project grounding and bonding requirements.

3.8 EQUIPMENT IDENTIFICATION

A. In addition to all requirements as stipulated by Division 01 refer to related specification Section 27 05 00 for all labeling and identification requirements.

3.9

MAINTENANCE AND SERVICE

A. General Requirements

3.10

1. In addition to all associated requirements of 27 05 00 the following shall also apply.
2. After formal written acceptance of the installation of all data communications and wireless equipment the Contractor shall provide all services required to maintain all data communications and wireless network equipment in fully operational state for the warranty period as specified by Division 01 as well as all related specification sections

    a. Provide all necessary labor, materials and related appurtenances as required for performing scheduled adjustments or other non-scheduled work. Impacts on facility operations shall be minimized when performing scheduled adjustments or other non-scheduled work related to the installation and termination of all horizontal cabling infrastructures. Refer to Division 01 specification section for additional requirements.

3.11

WARRANTY

3.12 B. Refer to specification Section 27 05 00 for additional information.

FIELD SERVICES

A. In addition to all requirements as specified by Division 01, Specification 27 05 00 as well as all related Division 27 Specification Sections, for the proper installation of all data communication and wireless network equipment.

1. At the minimum, all scopes of work shall include but limited to the following requirements;

    a. Test all grounding and bonding conductors prior to start-up and commissioning of any, horizontal cabling infrastructures, communications components, devices, equipment and/or systems.

B. Endurance Testing

1. A system endurance test shall be provided for all application-based systems to ensure whether the application, programming or cabling infrastructure can withstand the anticipated processing and performance capabilities based on the system’s current functional loads.

    a. Provide sufficient personnel to monitor the endurance testing on a continuous 24 hours per day basis, including weekends and holidays for a period a of not less than seven (7) days.
    b. Coordinate and schedule endurance test with County a minimum of twenty-one (21) days prior to the commencement of the test

2. Start test after:

    a. Successful completion of performance verification testing.
    b. Training as specified has been completed.
    c. Correction of deficiencies has been completed.
    d. Receipt of written start notification from the County.

3. Monitor all systems during endurance testing. Coordinate monitoring with the County.
4. Recording: Record data on approved forms so as to provide a continuous log of systems performance. Include:

    a. Date and time for all entries.
    b. Name of individual making entry.
    c. Environmental conditions.
    d. Owner activities in process.
    e. Description of all alarm annunciations, responses, corrective actions, and causes of alarms. Classify as to type of alarm.
    f. Memory consumption to determine potential failures or risk
    g. Description of all equipment failures, including software errors.
    h. Description of all maintenance and adjustment operations performed on system.
    i. Daily and weekly tabulations.
    j. Daily entries of performance data shall be reviewed by the Owner’s representative designated to observe monitoring of system.

5. The County may terminate testing at any time when any system, sub-system, system component or cabling infrastructure fails to perform as specified. Upon termination of testing, the Contractor shall commence an assessment period.

C. Adjustment, Correction, and Maintenance

1. During endurance testing, make adjustments and corrections to system only after obtaining written approval of the Owner or authorized representative.
2. During endurance testing, perform required maintenance on systems including provision of replacement parts.

D. Final Inspection and Acceptance

1. After endurance testing is complete, review tabulated records with the County.
2. The Contractor will not be responsible for failures caused by:

    a. Outage of main power in excess of backup power capability provided that automatic initiation of all backup sources was accomplished and automatic shutdowns and restarts of systems performed as specified.
    b. Failure of any Owner furnished power, communications, and control circuits provided failure was not due to Contractor furnished equipment, installation, or software.
3. When performance of integrated system does not fall within the above rates, determine cause of deficiencies, correct, and retest.

    a. When requested by the County, extend monitoring period for a time as designated by the Owner or authorized representative.
    b. Submit final report of endurance testing containing all recorded data.

4. The Contractor shall submit written certification that:

    a. The Contract Documents have been reviewed.
    b. All required as-built documentation has been submitted and approved by the County.
    c. The Project had been inspected for compliance with the Contract Documents.
    d. The Work has been completed in accordance with the Contract Documents.
    e. The equipment and systems have been tested and are shown operational in the presence of the County.
    f. The Project is completed and is ready for final inspection.

E. Contractor Requirements
1. Contractor shall provide sufficient skilled labor to complete the installation and verification of conformance to all installation requirements related to communication equipment cabinets and communications room layout.

    a. Contractor shall have a minimum of three years' experience installing communications equipment cabinets and associated appurtenances. All installers assigned by the Contractor to the installation shall be certified by the factory to install and test the provided products.

2. Adjustment, Correction, and Completion:

    a. Correct deficiencies and retest all affected horizontal cabling infrastructures as well as all appurtenances.

        1) Make necessary adjustments and modifications to all backbone and riser infrastructure installations after obtaining approval of the County

            a) Completion: Performance verification test shall be complete when testing or retesting of each component has produced a

positive result and has been approved in writing by the Owner or authorized representative.

b. Acceptance Requirements

1) Contractor’s RCDD shall warrant in writing that 100% of the installation meets all requirements of Division 01, Specification 27 05 00 as well as all requirements as herein specified.

TRAINING

A. Refer to specification Section 27 05 00 for additional information.

3.13

PROJECT CLOSEOUT REQUIREMENTS

A. Refer to specification Section 27 05 00 for additional information.

3.14

END OF SECTION 27 21 00

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and all related Specification Sections, shall all apply to this Section.

B. Related specification sections:

1. Refer to Specification Section 27 05 00 for additional information.

C. Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedule on the symbols and abbreviations sheet in the systems drawing package. Not all device symbols indicated may be required for the project.
2. Due to the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location. Contractor shall coordinate exact locations with all drawings and affected trades prior to submittal of shop drawings.

a. The installing Contractor shall coordinate exact locations with all security and telecommunications drawings and site plan drawings as well as all affected trades prior to submittal of any shop drawings.

D. Abbreviations:

1. Refer to Specification Section 27 05 00 for additional information.

E. Definitions:

1. Refer to Specification Section 27 05 00 for additional information.

1.2 SUMMARY

A. The MUFIDS described herein includes the requirement for compatible functionality, software and hardware to post contents within the project spaces including, but not limited to display flight, baggage, gate, airline branding and visual paging information.

B. The Contractor shall be responsible for providing all equipment, devices, system components, patch cables, installing, programming and development of display contents, commissioning, and testing of all displays and equipment in accordance with all related Division 27 Specification Sections.

1. All software and hardware shall be commercially available off-the-shelf (COTS) type.

C. The scope of work shall include all hardware software and programming required to implement the MUFIDS platform and shall include all work, materials, infrastructure, equipment, software, network interfaces, and programming as required to provide physical interface for full connectivity. Additionally, the contractor shall provide the following as part of the MUFIDS scope.

1. Power coordination with other trades as required for display locations.
2. Millwork and structural attachment coordination with other trades as required.
3. Construction scheduling and tasks required to support of project coordination.

1.3 REFERENCES

A. Refer to Specification Section 27 05 00 for requirements.

1.4 SYSTEMS DESCRIPTIONS

A. Refer to Specification Section 27 05 00 for additional information.

1.5 SUBMITTALS

A. Refer to Specification Section 27 05 00 for additional information.

1.6 QUALITY ASSURANCE

A. Refer to Specification Section 27 05 00 for additional information.

1.7 DELIVERY STORAGE AND HANDLING

A. Refer to Specification Section 27 05 00 for additional information.

1.8 RECORD DOCUMENTS

A. Refer to Specification Section 27 05 00 for additional information.

1.9 OPERATIONS AND MAINTENANCE

A. Refer to Specification Section 27 05 00 for additional information.

1.10 SOFTWARE AGREEMENT

A. Refer to Specification Section 27 05 00 for additional information.

1.11 EXTRA MATERIAL

A. Refer to Specification Section 27 05 00 for additional information.

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. Refer to Specification Section 27 05 00 for additional information.

2.2 MUFIDS DISPLAY TYPES AND CONFIGURATION REQUIREMENTS

A. MUFIDS Display Requirements:

1. General:

a. The Contractor shall coordinate location of displays and other devices with structural elements, electrical power, architectural millwork, to plan locations, attachments, accessibility, and operations for each display planned for the Project spaces.

B. MUFIDS Displays planned for the Project Spaces shall include the following display types and contents:

1. Curbside Drop Off Point Displays – Airline branding, dual sided, exterior rated, LED dynamic signage. Minimum 8-inch character height. Monochrome or full color.
2. Ticket Counter Overhead Displays - Airline branding and ticketing information located over ticketing counters - 55" LCD flat panels.
3. Ticket Counter Backwall Displays - Airline branding and ticketing information located behind ticketing counters - 55" LCD flat panels.
4. Video Bank Displays - Arrival / Departure / Visual Paging / Mass Notification -5 screen Banks of 55" LCD flat panels.
5. TSA SSCP queuing spaces -TSA wait times and -3-1-1 types passenger information on screening process.
6. Additional display types and locations -TBD.

C. Video Processors: The MUFIDS shall use small form factor "Intel NUC" type video processors provisioned with latest software and hardware configuration MUFIDSMUFIDS. The video processors shall be provided in dedicated 1:1 for each display planned for in the project.

D. Dynamic Signage Signaling: LED dynamic signage will be communicated with standard Ethernet signaling (802.3) using either copper or fiber optic cabling. Fiber optic interface

to dynamic signage will require close coordination with passive cable plant and network switch design and installation.

E. The Contractor shall be responsible for integration of the MUFIDS with the new replacement terminal Local Area Network (LAN).

2.3 SYSTEM AND SOFTWARE REQUIREMENTS

A. General Requirements

1. The Contractor shall furnish and install all equipment, component and appurtenances as required for a fully functional MUFIDS. The displays and processors planned for the new spaces in the project shall require provision of software, software licenses, programming and integration.

B. Software

A. Refer to Specification Section 27 05 00 for requirements.

C. Software Licenses

A. Refer to Specification Section 27 05 00 for requirements.

2.4 HARDWARE REQUIREMENTS

A. General

1. The MUFIDS, as defined in this document, shall include all configured hardware necessary for full operability. The Contractor shall supply all patch cables, power cords, displays, display mounting attachment hardware, and video processors equipment necessary to interconnect all system hardware. All hardware and materials shall be new.
2. The hardware selected shall be "standardized to maintain uniformity, warranty and spares optimization for the MUFIDS program.

B. MUFIDS hardware products shall include, but not be limited to:

1. 55" LCD Video Displays:

a. Basis of design manufacturer: NEC Displays

1) NEC P463 commercial Grade 24/7
2) NEC P484 commercial Grade 24/7

2. Video Processors:

a. Basis of design manufacturer: Intel

1) Intel NUC 8iXXX

3. Video display mounting and attachment brackets:

a. Basis of design manufacturer: Peerless

1) Pop-out
2) Tilt

4. LED Dynamic Signage Displays

a. Basis of design manufacturer: Daktronics

1) AF Series LED Signage
2) GS Series LED Signage

PART 3 - EXECUTION

3.1 COORDINATION

A. Refer to Specification Section 27 05 00 for additional information.

3.2 EQUIPMENT PROTECTION

A. Protect all materials, equipment, devices or components permanently installed and/or stored on the job site. Protect all materials, equipment, cabling, devices or components during construction and after installation, provide appropriate protection of all materials, equipment, components and/or devices until time of substantial completion. All materials, equipment, components and/or devices shall be protected during shipment and storage against any physical damage, dirt, moisture, cold, snow or rain:

1. During installation, enclosures, racks\cabinets, equipment, controls, controllers, circuit protective devices, and other like items, shall be protected against entry of any foreign matter; and shall be vacuum cleaned both inside and outside before testing and operating and repainting if required.

3.3 WORK PERFORMANCE

A. In addition to the requirements of Specification Section 27 05 00, comply with the following:

1. Refer to related specification sections for additional project coordination requirements. In addition to the requirements defined in this Specification Section,

the contractor shall coordinate and meet all requirements addressed in Division 26, Division 27 and Division 28 Specification Section.

3.4 EQUIPMENT INSTALLATION

A. All system equipment installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer's requirements. Cable terminations at all equipment locations shall comply with all state and local electrical codes. All wiring shall test free from all grounds, shorts, stray voltages and EMI.

3.5 INSTALLATION REQUIREMENTS

A. In addition to all demonstration and training as specified by Division 01, Specification Section 27 05 00 and related Division 27 Specification Sections, system installation shall be provided in accordance with all requirements of this Section.

B. General

1. System/Hardware and mounting must comply with IBC Seismic Requirements.
2. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.

3.6 COMMUNICATIONS CABLING REQUIREMENTS

A. Refer to Specification Section 27 05 00 for additional information.

3.7 ELECTRICAL POWER DISTRIBUTION

A. Comply with the requirements of Specification Section 27 05 00.

3.8 TRANSIENT VOLTAGE SUPPRESSION

A. Comply with the requirements of Specification Section 27 05 00.

3.9 GROUNDING AND BONDING

A. Comply with the requirements of Specification Section 27 05 00.

3.10 EQUIPMENT IDENTIFICATION

A. Refer to specification Section 27 05 00 for additional information.

3.11 MAINTENANCE AND SERVICE

A. Refer to specification Section 27 05 00 for additional information.

3.12 WARRANTY

A. Refer to specification Section 27 05 00 for additional information.

3.13 FIELD SERVICES

A. Refer to specification Section 27 05 00 for additional information.

3.14 TRAINING

A. Refer to specification Section 27 05 00 for additional information.

3.15 PROJECT CLOSEOUT REQUIREMENTS

A. Refer to specification Section 27 05 00 for additional information.

END OF SECTION 27 42 16

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 Specification Sections and stipulated Specification Sections shall apply to this section.

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

C. Related Sections:

1. Division 07 – Through-penetration Firestop Systems
2. Division 08 – Door Hardware
3. Division 26 – Common Work Results for Electrical
4. Division 26 – Low Voltage Electrical Power Conductors and Cables
5. Division 26 – Grounding and Bonding for Electrical Systems
6. Division 26 – Hangers and Supports for Electrical Systems
7. Division 26 – Raceways and Boxes for Electrical Systems
8. Division 26 – Identification for Electrical Systems
9. Division 27 – Section Common Work Results for Communications Systems
10. Division 27 – Network Communications System
11. Division 28 – Physical Access Control System (PACS)
12. Division 28 – Video Surveillance System (VSS)
13. Division 28 – Fire Alarm System

D. Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedules. Because of the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location.

    a. Contractor shall coordinate exact locations with all architectural drawings, mechanical, electrical drawings, reflected ceiling and furniture plans, door hardware specifications as well as all affected trades prior to submittal of any shop drawings.

E. Abbreviations:

1. ACG: Automatic Gain Control
2. ACR: Attenuation to Crosstalk Ratio.
3. ACS: Access Control System
4. ADA: Americans with Disabilities Act
5. AHJ: Authority Having Jurisdiction
6. ASTM: American Society for Testing Materials
7. ASIS American Society for Industrial Security
8. ATP: Acceptance Test Plan
9. AUI: Attachment Unit Interface.
10. AWS: Advanced Wireless Service
11. A/V: Audio Visual Systems – For purposes of this specification section A/V

systems shall include all Media Management, Video Broadcasting, Intercommunications (Paging/Public Address, Clock, Auxiliary Sound), Video Intercom, Emergency Communications, Mass Notification, Master Antenna (MATV) and Distance Learning Systems

12. AVI: Audio Visual Systems Integrator: Shall be a qualified contractor experienced in the installation and certification of A/V systems. The AVI contractor shall be responsible for the design, testing, and certification of all audio/visual systems including, but not limited to: Intercommunications, TV Distribution, Audio/Visual, Master Antenna and Bi-Directional Antenna systems as well as all structured cabling systems supporting these technologies.
13. BACnet: A communications protocol for building automation and control networks as outlined in ISO 16484-5 and ASHRAE/ANSI Standard 135.
14. BAS: Building Automation System
15. BDA: Bi-Direction Amplifier
16. BICSI: Building Industry Consultant Services International - International organization whose primary objective is to enhance the reputation and skills of companies and individuals employed in the telecommunications and security industries by ensuring that current and developing standards are maintained.
17. BRS: Broadband Radio Service
18. BTS: Base Transceiver Station
19. CATV: Community Antenna Television
20. CDMA: Code Division Multiple Access
21. CEA: Consumer Electronics Association
22. CFR: Code of Federal Regulations
23. C/N: Carrier-to-Noise Ratio
24. CP: Consolidation Point - Local Interconnection Point between horizontal cables from the building IDF/MDF rooms and horizontal cables for the furniture drops.
25. CPU: Central Processing Unit
26. CSU: Channel Service Unit
27. CWDM: Coarse Wave Division Multiplexing
28. dB: Decibel
29. DAQ: Delivered Audio Quality
30. DAS: Distributed Antenna System
31. DDC: Direct Digital Controller / Device Display Controller
32. DGP: Data Gathering Panel – A component of the Physical Access Control System (PACS) located at each door or portal location that communicates, stores and processes information received from readers, reader modules, input modules, and output modules with the Security Management System CPU and software.
33. DIB: Door Interface Box
34. DMZ: Demilitarized Zone– A firewall configuration for securing local area networks (LANs).
35. DP: Demarcation Point - The point of interface between the Communications Networks, MATV, any Auxiliary Systems, and the associated Service Providers or Public Utilities. Also known as Entrance Facility. Shall also serve as the primary termination point for all incoming OSP cabling as well as the primary main grounding bus-bar for all communications systems. Refer to project documents for exact location and termination

requirements.

36. DSU: Data Service Unit.
37. DWDM: Dense Wave Division Multiplexing
38. EBS: Educational Broadband Service
39. EIA: Electronic Industries Alliance
40. ELFEXT: Equal Level Far End Crosstalk.
41. EMI: Electromagnetic interference.
42. EMT: Electrical Metallic Tubing – Also known as thin-wall conduit.
43. ESMR: Enhanced Specialized Mobile Radio
44. EVAC: UL Listed Emergency Voice Evacuation System. Not to be confused with the building Public Address/Intercom, Intercommunications and/or Mass Notification systems.
45. FAAP: Remote Fire Alarm Annunciator Panel
46. FACP: Fire Alarm Control Panel
47. FAS: Fire Alarm System
48. FASI: Fire Alarm System Integrator
49. FCC: Federal Communications Commission
50. FEXT: Far End Crosstalk.
51. GFCI: Ground fault circuit interrupter.
52. GIW: Gate Input Workstation
53. GUI: Graphic User Interface – A specialized program employing graphical display maps of a facility and/or site which, also provides a manual user interface for all system functions and operations by utilizing control and annunciation icons from dedicated human machine interface terminals.
54. HMI: Human/Machine Interface – A Computer-operated, video control terminal complying with FCC Part 15 CFR Title 47, Subparts A and B, and shall utilize multiple dynamic GUI based displays for annunciation and control LCD flat panel computer monitor or display screen as defined by related specification sections.
55. IATA: International Air Transport Association - The global trade association for the airline industry
56. IBC: International Building Code
57. ICT: Information Communications Technology – For purposes of this specification section ICT shall include all communications systems including but not limited to all Data, Telephone, BAS, Intercommunications (Paging/Public Address), TV Distribution Systems (MATV) and Audio-Visual Systems (A/V) Surveillance Systems and IP based Access Control.
58. ICTI: Information Communications Technology Integrator – Shall be a qualified contractor experienced in the installation and certification of all data, telecommunications. The ICTI shall be responsible for the design, testing, and certification of Data, Telephone communications systems and all structured cabling systems supporting these technologies.
59. IDF: Intermediate Distribution Frame – The room/space that shall serve as the local termination point for all horizontal and backbone cabling. Also shall be known as Equipment Room (ER), Horizontal Cross-Connect (HC) or Floor Distributor (FD).
60. iEDN: Integrated Enhanced Digital Network
61. IEEE: Institute of Electrical and Electronics Engineers
62. IFP: Intelligent Field Panel

63. IO: I/O Input/Out – Commonly associated with dry contact relay-based digital integration.
64. IP: Internet Protocol
65. IR: Infrared
66. ISO: International Organization for Standardization
67. LAN: Local Area Network
68. LCD: Liquid Crystal Display
69. LED: Light-Emitting Diode
70. LMR: Land Mobile Radio
71. LTE: Long Term Evolution
72. LV: Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
73. MATV: Master Antenna Television: Shall include all TV and media management distribution cabling, termination jacks, head-end components, equipment racks, amplifiers, projection equipment, and video monitoring devices as defined by the project drawings and related specification sections.
74. Mbps: Megabits per second.
75. MDF: Main Distribution Frame: The room/space that shall serve as the primary termination point for all backbone cabling to each IDF locations and horizontal connection point for local communication drops. May also serve as a local IDF location as well as the cross-connection and interconnection of all entrance cables from the DP for all PSTN and WAN connections. Also, shall be known as Main Cross Connect (MC), Telecommunications Room (TR) and/or Campus Distributor (CD)
76. M-JPEG: Motion – Joint Photographic Experts Group
77. MPEG: Moving Picture Experts' Group.
78. MTBF: Mean Time Between Failure
79. NEC: National Electric Code
80. NEMA: National Electrical Manufacturers Association
81. NEXT: Near End Crosstalk
82. NFPA: National Fire Protection Association
83. NMM: Network Management Module
84. NMS: Network Management System
85. NRTL: Nationally Recognized Testing Laboratory
86. NTSC: National Television System Committee.
87. NVR: Network Video Recorder
88. NVW: Network Video Workstation
89. OAR: Owner's Authorized Representative
90. OSP: Outside Plant – All cabling associated with building services supporting the incoming service connections to Service Providers, Public Utilities, and Wide Area Networks.
91. OTDR: Optical Time Domain Reflectometer
92. PA/PG/ECS: Public Address / Paging / Emergency Communications System.
93. PCS: Personal Communications System
94. POTS: Plain Old Telephone Service – Analog Telephone Circuit used for the connection of fax machines, BAS and FAS communications devices and shall be wired upstream of the facility's telephone switch.
95. PSP: Physical Security Professional as registered by the American Society of

Industrial Security-International (ASIS)

96. PSTN: Public Switched Telephone Network – Connection to local telephone utility providing local telephony communications service.
97. RCDD: BICSI-accredited Registered Communications Distribution Designer
98. PSN: Public Safety Network
99. RFI: Radio-frequency interference / Request for Information
100. RGS: Rigid Galvanized Steel conduit: Galvanized steel tubing, with a tubing wall that is thick enough to allow it to be threaded.
101. RoF: Radio-over-Fiber
102. RoHS: Restriction of Hazardous Substances
103. RSL: Received Signal Level
104. RSRP: Reference Signal Receive Power
105. RS-232: A TIA/EIA standard for asynchronous serial data communications protocol between terminal devices. This standard defines a 25-pin connector and certain signal characteristics for interfacing computer equipment.
106. RS-485: A TIA/EIA standard for multipoint communications protocol.
107. SCADA: Supervisory Control and Data Acquisition – A system used to monitor and control the operation and status of facility systems scattered over wide geographic areas.
108. SISO: Single-Input, Single-Output
109. SMR: Specialized Mobile Radio
110. SMS: Security Management System – A system incorporating security alarms, door controls, emergency intercoms/paging, duress alarms, and surveillance systems all integrated through a single operating platform, providing centralized command and control capability for the various systems via dedicated human machine interface terminals.
111. SMS: Short Message Service
112. SNIR: Signal-to-Noise Interference Ratio
113. SNMP: Simple Network Management Protocol
114. SOW: Statement of Work
115. TCP/IP: A standard protocol stack on which the Internet and data communications networks operate
116. TGB: Telecommunications Grounding Busbar – Located in each IDF
117. TIA: Telecommunications Industry Association
118. TMGB: Telecommunications Main Grounding Busbar – Located at the building DP/MDF
119. TP: Transition Point – A location in the horizontal cabling where flat under carpet cable transitions to a horizontal cabling consolidation point (CP).
120. TSB: Technical Service Bulletin
121. TVSS: Transient Voltage Surge Suppressor
122. UPS: Uninterruptible Power Supply
123. UTP: Unshielded Twisted Pair
124. VLAN: Virtual Local Area Network
125. VoIP: Voice Over IP telephone Network
126. VPN: Virtual Private Network– A technique made possible by switching technologies that permits the logical grouping of any number of network devices into one or more sub- networks.
127. VSS: Video Surveillance System
128. VSWR: Voltage Standing Wave Ratio

129. WAN: Wide Area Network
130. WAP: Wireless Access Point
131. WLAN: Wireless Local Area Network

F. Definitions:

1. Contract Documents: The documents consisting of the Form of Agreement between Owner and Contractor, Conditions of the Contract, (General, Supplementary, and other Conditions), Drawings, Specifications and all Addenda issued prior to the execution of the Contract.
2. Contract Drawings: The drawings that form a part of the Contract Documents that provides the graphical representation of the project requirements intended design and/or performance criteria to be delivered by the Contractor.
3. Reference Drawings: A drawing and/or set of drawings produced by a proprietary supplier, manufacturer, subcontractor, or fabricator included in the Contract Documents for informational purposes, providing specific information related to the installation of related appurtenances, components, devices, hardware, products, and/or systems. Reference Drawings shall also include any Contract Drawings from prior bid packages that may have pertinent information or require coordination of trades related to this contract.
4. Shop Drawings: A drawing and/or set of drawings produced by the contractor, supplier, manufacturer, subcontractor, or fabricator as a detailed representation of the proper installation of the related, appurtenance, component, device, hardware, product, and/or system to be delivered in conformance to the requirements of the Contract Documents.
5. Owner: Destin-Fort Walton Beach Airport

1.2 SUMMARY

A. This Section contains the overall requirements associated with all Division 28 Specification Sections, and includes the project design intent for all system cabling and equipment related to the installation of the following systems:

1. Access Control System (ACS)
2. Video Surveillance System (VSS)
3. Addressable Fire Alarm System

B. In addition, this section shall address all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications for all scopes of work related to network communication cabling for this project scope of work. Refer to related Division 14, 21, 23, 26, 27 and 28 specification sections and all contract drawings for additional information.

1. The Electronic Security System Integrator (ESSI) shall be sub-contractors to the Contractor. This integrator shall have overall responsibility for all system layouts, equipment and all technical support related to all Division 28 scopes of work and shall ensure full coordination of all work as required to provide fully operational systems in accordance with all requirements of the Contract Documents, applicable Codes and Standards.

a. The Contractor shall provide all systems in accordance with the Division 28 specifications, and all related drawings and specification sections, all of which shall form in part and/or in whole what is herein known as the Contract Documents.
b. All sub-contractors shall meet the minimum technical capabilities, certifications, and licensing requirements as defined by the "Quality Assurance" chapter as specified herein as well as all related specification sections.

1) All TCP/IP-based systems cabling shall be furnished under this Division 28 scopes of work and shall installed and tested in accordance with the requirements of specification section 27 05 00 and all related Division 27 specifications.

2. The Fire Alarm System Integrator (FASI) shall be a sub-contractor to the Contractor. This integrator shall have overall responsibility for all system layout, equipment and all technical support related to all Division 28 scopes of work and shall ensure full coordination of all work as required to provide fully operational systems in accordance with all requirements of the Contract Documents, applicable Codes and Standards.

c. The Contractor shall provide all systems in accordance with the Division 28 specifications, and all related drawings and specification sections, all of which shall form in part and/or in whole what is herein known as the Contract Documents.
d. All sub-contractors shall meet the minimum technical capabilities, certifications, and licensing requirements as defined by the "Quality Assurance" chapter as specified herein as well as all related specification sections.

3. It shall be the responsibility of the Contractor to provide all necessary cabling, electrical power, controls, processing equipment, devices, components, cable terminations, equipment racks/cabinets, software, programming, testing, commissioning and all appurtenances as required to provide complete and fully operational systems in accordance with all requirements of the Contract Documents.

C. The installation, performance, features, functions, software and programming criteria as specified herein as well as all related drawings and Division 28 specification sections have been designed to offer the maximum system efficiency, ease of operation, occupant safety and the protection of equipment as recommended by the Owner and Owner's Authorized Representative (OAR).

1. Any deviations from the specified criteria shall be documented, reviewed, and agreed to in writing by The Owner prior to submission of bids. Refer to Division 01, and all related Division 28 specification sections for any substitutions and/or project deviation requests.

a. The required information shall include but not be limited to: reason for deviation, all differences in performance, operation, and function from the herein specified requirements, all benefits, and added features to the Owner and OAR as a result of the deviations and any additional incurred costs to the Owner for maintenance and long-term ownership.
b. Failure to provide the Owner and OAR with the required information shall result in any shop drawing submissions being returned for non- conformance with the contract requirements.

2. The contractor and all sub-contractors for this work shall have read all of the General Conditions, Special Requirements, General Requirements, and all related specification sections and in the execution of all work shall be bound by all of the conditions and requirements therein.

a. Prior to the submission of the Bid any discrepancies or inconsistencies noted within these specifications and/or the project drawings shall be brought to the immediate attention of the Owner and OAR.
b. Where ambiguity exists between the project specifications and the contract drawings, the superior in system performance, shall prevail, and shall be delivered by the Contractor at no additional expense to the project.

B. All device symbols are defined by the appropriate symbol schedules as indicated by the symbol and abbreviation drawing sheets for each discipline. The Contractor shall coordinate exact locations with all architectural, mechanical, electrical, reflected ceiling, furniture drawings and door hardware specifications as well as all affected trades prior to submittal of bids.

1. All symbols are shown on the contract drawings as close as possible to their intended location. Contractor shall coordinate the installation of all equipment, devices, controls, components, cabling conduits/raceways and integration of other systems with all affected trades and specified system integrators. The contractor shall document all coordination requirements at the time of shop drawing submission.
2. Drawings for this work are diagrammatic and intended to convey the extent, general arrangement, and locations of the work. Because of the scale of the drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may or may not be shown on the contract drawings. Include all items where required by code and related specification sections for proper installation of all work.

D. Project specifications and drawings may not deal individually with every part, control, device, software or programming, which may be required to produce the equipment and/or system performance specified or as necessary for the installation and/or integration of any systems in accordance with all requirements of the Contract Documents.

1. The contractor shall include all equipment, materials, components, and appurtenances where required by code, by manufacturers' recommendations, and all related Contract Documents in order to ensure proper installation operation and integration of all components, equipment, devices and/or systems.

a. Include such items and components, as required, for complete operational systems as defined by the project documents, whether or not specifically indicated. The Contractor shall be responsible for providing conduits/raceways, cabling, cable terminations, controls, systems, equipment, materials, devices, components, electrical power, software, programming, commissioning, testing and all appurtenances. Additionally, the Contractor shall provide the integration of ancillary systems and/or Owner provided equipment/components/systems where indicated on the Contract drawings.

2. The contractor shall be responsible for providing all wiring, conduits, backboxes and terminations for all equipment devices and systems. In addition, the contractor shall be responsible for providing all coordination, programming, testing, commissioning and certification of all equipment, devices and/or systems as required for the proper integration and operation all related systems in accordance with the requirements of the Contract Documents.

3. The Contractor shall coordinate with all ESS scopes of work with the Division 27 integrator, fire alarm and security system Contractor and sub-contractors as well as all other applicable trades and sub-contractors in the submittal of shop drawings and the installation of all equipment, devices, and systems. All shop drawings shall detail space

conditions in order to accommodate other concerned trades, all equipment and device locations are subject to final review by the Owner and OAR.

a. If installation of equipment, raceways, cable trays, and/or conduit is performed prior to coordination with all other trades, which interferes with work of other trades or the performance of the system, the contractor shall make necessary changes to correct the condition at no additional cost to the Owner and OAR.

4. The contractor shall coordinate the installation of all cabling and conduits for all Division 28 systems with all applicable trades, equipment providers, and related system integrators to ensure proper operation and function of all systems, devices, components, equipment, and/or systems integration.

a. The fire alarm and access control systems shall provide the proper interface to the building automation system as required for proper operation of all life safety functions as indicated by the contract documents.
b. Provide all cabling, conduits, terminations, and programming to properly interface the fire alarm and access control systems with all related mechanical, elevator and security systems in accordance with all applicable life safety codes and/or in accordance with all requirements of the project drawings and related specifications.
c. The ESSI and FASI sub-contractors shall coordinate with all applicable systems contractors to ensure the proper integration and performance requirements of all Division 28 systems as required by Code, Contract Documents, and the AHJ.

E. All Division 28 scopes of work shall include the necessary labor, software, equipment, materials, devices, cabling, conduits and electrical power as well as the performance of all system programming, testing and commissioning as required to provide fully operational system in accordance with all requirements of the project documents.

1. The Contractor shall furnish and install all software, and system components as well as all necessary modifications and programming changes for the proper installation of all Video Surveillance and Physical Access Control system components as required to insure continuity of operations between all electronic security systems.

F. All Division 28 systems work shall include the labeling of all wire terminations and enclosure locations. All wiring shall terminate on fixed terminal strips, punch blocks, or patch panels in accordance with all requirements of the project drawings and related specifications.

1. No splices shall be permitted in underground maintenance holes and non-accessible junction boxes. All junction boxes containing any system splices shall be uniquely identified.

G. All mounting heights and accessibility to all equipment requiring access by individuals with disabilities shall comply with ANSI A117.1 requirement.

1. All equipment enclosures located outside or in all areas with exposure to the weather or in high humidity areas shall be NEMA 4X enclosures and rated for that application.
2. All devices, components, or equipment installed on the exterior of the facility shall be provided in accordance with all manufacturers' requirements to ensure the proper operation when exposed to the environmental conditions and/or average annual lowest temperature that can be anticipated for the geographic region of the facility.
3. All interior devices exposed to the general population shall be installed in secured equipment enclosures and installed in such a manner that resists tampering and/or removal without the use of specialized tools.

H. All work shall be neat in appearance, free of rough edges, scratches, blemishes, cracks and exposed gaps. All equipment shall be secured to the mounting surface and fastened with hardware approved by the manufacturer and capable of supporting the rated load. All cables within enclosures shall be neatly routed and tie wrapped at 6 inches on center. All wire splices shall be terminated on terminal strips and/or soldered in place. Any splices utilizing wire nuts shall not be acceptable.

I. Use of Premises

1. The Contractors shall have limited use of premises for construction operations only as required to meet the scope of work as delineated by the Contract Documents.
2. The Contractor shall design, prepare, schedule, and coordinate all scopes of work without disruption of any existing system functions or the daily operation of the existing facility. All cabling and equipment shall be installed in such a manner that all new controls, equipment and/or devices shall be installed, programmed and tested prior to modification, switch over and/or disconnecting of any existing systems.
    a. Include all costs related to any phased construction methodologies having to do with the scope of work defined herein, including, but not limited to, all necessary temporary equipment, devices, components or systems as well as any labor costs associated with any installation, commissioning, testing demolition of any technology systems required to be performed after normal business hours of the facility.
    b. Prior to the disabling, modifications, switchover and/or demolition of any existing system components and/or cabling, all new system components, equipment, conduits, cabling, shall be in place, tested and fully operational.
3. Contractor shall plan, schedule and install all scopes of work in accordance with all requirements of the project construction schedule. Refer to related specification sections for additional information related to project scheduling and facility access.
    a. The contractor shall coordinate all installation and demolition activities so as not to disrupt the daily routine of the facility or negatively impact the integrity of the facility's security and life safety measures.

B. Coordination

1. The Contractor shall coordinate with all Division 27 integrator, Division 28 Contractors, and sub-contractors as well as all other applicable trades in the submittal of shop drawings and the installation of all equipment, devices, and systems. All shop drawings shall detail space conditions in order to accommodate other concerned trades, all equipment and device locations are subject to final review by the Owner and OAR.
    a. If installation of equipment, raceways, cable trays, and/or conduit is performed prior to coordination with all other trades, which interferes with work of other trades or the performance of the system, the contractor shall make necessary changes to correct the condition at no additional cost to the Owner and OAR.
    b. The Fire Alarm and Access Control Systems shall provide the proper interface to the Building Automation System (BAS) as required for proper operation of all smoke control and life safety functions in accordance with Contract documents.
        1) Provide all cabling, conduits, terminations, and programming to properly interface the fire alarm and access control systems with all related mechanical, elevator and security systems in accordance with all applicable life safety codes and/or in accordance with all requirements of the project

drawings and related specifications.

c. The ESSI and FASI sub-contractors shall coordinate with all applicable systems Contractors to ensure the proper integration and performance requirements of all Division 28 systems as required by Code, Contract Documents, and the AHJ.

2. Where applicable, the Contractor shall coordinate all service, rework, and relocation of existing utilities prior to bid. Bid shall include all work required for any connections/interfacing with existing systems.

a. Contractor shall coordinate all work with vendors for rework, relocation, and addition of equipment and devices, including any modification to existing system infrastructure.

3. Coordinate all work involving tenant leased areas or equipment for rework, relocation, and addition of equipment and devices, including any modification to existing system infrastructures with the Owner and ORA.

1.3 REFERENCES

A. References to industry and trade association standards as well as all building codes are minimum installation requirements. The codes, standards, and agencies listed below shall form a part of all related specification sections and all work shall comply with the latest adopted standards.

B. Where the contract drawings and specifications mandate a greater requirement or performance than those specified by any of the below referenced codes and standards, the Contract Documents shall then be the governing requirements for this project. The minimum codes and standards to be applied for this project shall be the following;

1. National Fire Protection Association:

a. NFPA-70: National Electrical Code
b. NFPA-72: National Fire Alarm and Signaling Code
c. NFPA – 90A Standard for the Installation of Air-Conditioning and Ventilating Systems
d. NFPA – 92B Standard for Smoke Management Systems in Malls, Atria, and Large Spaces
e. NFPA-101: Life Safety Code
f. NFPA – 415 Standard on Airport Terminal Buildings, Fueling Ramp Drainage, + Loading Walkways
g. NFPA -731: Standard for the Installation of Electronic Premises Security Systems

2. Federal Communications Commission:

a. FCC Regulations Part 15 Title 47.

3. International Code Council

a. International Building Code – International Code Council
b. International Mechanical Code – International Code Council
c. Accessible and Usable Buildings and Facilities (A117.1)

4. Institute of Electrical and Electronic Engineers (IEEE)

a. IEEE 802.3 - "Carrier Sense Multiple Access with Collision Detection," and all applicable supplements a through af”.
b. IEEE 802.3.u-100 - “Base T/100-Base-TX, Fast Ethernet”

c. IEEE 802.3.z - "Gigabit Ethernet"
d. IEEE 802.3. ab - "1000 Base T"
e. IEEE 802.3.ae - "10 Gigabit Ethernet"
f. IEEE 802.3.af - "Data Terminal Equipment (DTE) Power via Media Dependent Interface (MDI) that"
g. IEEE 802.11.b/g/n/ac - "Wireless Transmission Standard"
h. IEEE 802.11.af - "Power over Ethernet"

5. American Society of Mechanical Engineers (ASME 17.1) – Safety Code for Elevators and Escalators

7. TSA - Innovation and Concept Supplemental Information V1.0

1.4 SYSTEMS DESCRIPTIONS

A. At the minimum, the scopes of work covered by the Division 28 specifications and the contract drawings shall include but are not limited to the following systems. Refer to related drawings and specifications for additional information.

1. The Division 28 integrator shall be responsible for providing the proper design, installation, termination, programming, testing, commissioning, certification, modifications of all security systems. Include the integration of all related Division 28 systems in accordance with the Contract documents. Refer to all related project drawings and specifications for additional information.

B. The Contractor shall design, install, program and certify all Access Control System (ACS), servers, central processors, local door controllers, auxiliary power supplies, card readers, client workstations, electrical power, and all appurtenances in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.

1. At the minimum include the following;

a. Provide all related servers, central processors, local door controllers, components, cabling, conduits, materials, electrical power, programming, testing, certifications and all appurtenances as required for the installation of a complete and fully operational Access Control System (ACS). The ESSI shall provide all of the above in accordance with all applicable life safety codes, building codes, as well as all related specification sections, drawings and manufacturers recommendations.
b. All Access Control controls and devices, cabling as well as all remote sub-systems and/or control panels shall be supervised against unauthorized access, intentional or accidental tampering, deterioration of wiring or connections and operation failures. Any of the above conditions shall result in an audible and visual indication at all client workstations, network command terminals and UL listed communications equipment.
c. Provide all necessary 120 VAC circuits as required to provide proper operation of all system components. All 120 VAC circuits shall be provided from the nearest emergency circuit distribution panel.
d. The ESSI shall include the integration and programming of all electronic door hardware, fire alarm, video surveillance, network connectivity, in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.

e. The ESSI shall include the integration and wire of all electronic door hardware, in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications. Coordinate with Division 08 provider.
f. Furnish and install duress buttons where located on the Contract Drawings
g. All PACS cabling shall be installed in dedicated raceways unless otherwise specified. All TCP/IP based access control system cabling shall be Category-6 installed in accordance with all requirements of related specification section 27 0 500 and related Division 27 specification section.

C. The Contractor shall design, install, program and certify all Video Surveillance System (VSS) servers, recording components, cameras, video monitors, power supplies, active electronic (Layer 2 Layer 3 switches) UPS Units, electrical power and all appurtenances in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.

1. At the minimum include the following;

a. Provide all related devices, components, cabling, conduits, materials, programming, testing, certifications and all appurtenances as well as all emergency power as required for complete and fully operational TCP/IP based Video Surveillance and Exit Breach System. The ESSI shall provide all of the above in accordance with all applicable electrical codes, communication standards, building codes, related specification sections, drawings and manufacturers recommendations.
b. Provide all necessary 120 VAC circuits as required to provide proper operation of all system components. All 120 VAC circuits shall be provided from the nearest emergency circuit distribution panel.
c. The ESSI shall include the monitoring of all access-controlled doors and duress button locations in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.
d. Provide all documentation, testing, commissioning and certifications in accordance with all requirements of the Contract Documents.
h. All VSS Cabling shall be installed in dedicated raceways unless otherwise specified. All TCP/IP based access control system cabling shall be Category-6 installed in accordance with all requirements of related specification section 27 05 00 and related Division 27 specification section.

D. The Contractor shall design, install, program and certify all Fire Alarm controls, processing components, initiating devices, notification appliances, annunciators, power supplies, electrical power and all appurtenances in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.

1. At the minimum include the following;

a. Provide all related devices, components, cabling, conduits, materials, programming, testing, certifications and all appurtenances as well as all emergency power as required for complete and fully operational fire alarm system. The ESSI shall provide all of the above in accordance with all applicable electrical codes, building codes, related specification sections, drawings and manufacturers recommendations.
b. Provide all necessary 120 VAC circuits as required to provide proper operation of all system components. All 120 VAC circuits shall be provided from the nearest emergency circuit distribution panel.

c. The ESSI shall include the integration and programming of all electronic door hardware, in accordance with all applicable codes, manufacturers' requirements, project drawings and specifications.
d. Provide all documentation, testing, commissioning and certifications in accordance with all requirements of the Contract Documents.
e. Refer to all related specification sections for additional system requirements.

1.5 SUBMITTALS

A. In addition to all submittal requirements as stipulated by Division 01 and any related specifications sections, the Contractor shall provide all shop drawing submittals in accordance with the following:

1. The Owner and OAR approvals shall be obtained for all equipment and material before delivery to the job site. Delivery, storage, or installation of equipment or material which has not had prior approval will not be permitted at the job site.
2. All submittals shall include adequate descriptive literature, catalog cuts, shop drawings, and other data necessary for the Owner and OAR to ascertain that the proposed equipment and materials comply with specification requirements. Catalog cuts submitted for approval shall be legible and clearly identify equipment being submitted.
3. Prior to any submission the contractor shall be responsible for performing the following quality control items to ensure compliance with all project requirements:

    a. Review all Shop Drawings and Product Data
    b. Review all field measurement criteria.
    c. Review all field construction criteria and methodologies.
    d. Review all catalog numbers and similar data.
    e. Review all coordination requirements of affected trades.
    f. Review conformance to all appropriate specification sections.

4. The ESSI shall have a registered RCDD professional review and seal shop drawings related to network designs, installations, testing, certifications, and structured cabling layouts for communications systems confirming that the proposed network infrastructure is in conformance with all stipulated standards and requirements as herein specified. Failure to provide RCDD sealed shop drawings shall result in all shop drawings being returned for resubmission without any reviews taking place.
5. The Owner and/or OAR's review of the shop drawings and/or samples does not relieve the Contractor from compliance with the requirements of the Contract documents. Unless the Contractor has informed the Owner and/or OAR in writing of such deviation at the time of submission, has noted the deviation on the shop drawings, has given written approval of the specific deviation to the project document, all project requirements shall stand. The Owner and/or OAR's review also does not relieve the Contractor from responsibility for any errors of omission in the submission of shop drawings and/or samples.

    a. All project requirements shall stand. The review and acceptance of shop drawings does not relieve the Contractor from responsibility for delivering the project in accordance with Contract documents due to errors of omission in the submission of shop drawings and/or samples.

6. Submit all system testing, commissioning and startup procedures to be employed. Include all estimated times for performance of all tests, all test equipment and manpower

necessary for testing.

7. Submit all integrator qualifications and certifications in accordance with the requirements as specified elsewhere in this specification section.
8. Submit project schedule outlining the time frames for all equipment with long lead times for equipment deliveries; include all system commissioning, testing, and training time expectations. Project schedule shall be submitted as CPM schedule and shall utilize a software-based project management program.

B. The Contractor shall schedule submittals in order to maintain the project schedule. For coordination requirements refer to Division 01 Specification Section, which outline basic submittal requirements and coordination. All Division 01 and related specification sections requirements shall be used in conjunction with all requirements as herein specified.

1. Submittals shall be provided as a complete submission; no partial submissions will be accepted. Failure to provide a complete submission shall result in all submittals being returned for resubmission.
    a. In addition to all paper submission requirements as stipulated by Division 01 the Contractor shall also submit one complete set of electronic submittals in a PDF format.
2. No substituted equipment shall be reviewed without prior approval in accordance with the requirements of “substitutions” under Division 1 specification section.
3. Mark the submittals, "SUBMITTED UNDER SECTION_____."
    a. Submittals shall be marked to show specification reference including the section and paragraph numbers.

C. All shop drawings shall be prepared using latest version of AutoCAD or REVIT, drawn accurately, and in accordance with the Owner’s Standards. The Contractor shall not reproduce the Contract Documents or copy standard information as the basis of the technical data, hand drawn mark-ups of the original project drawings shall not be acceptable. Failure to provide a complete set of “contractor prepared” installation drawings at the time of submittal shall result in all submittals being returned for resubmission.

1. Submission Packaging: The Contractor shall organize the submissions according to the following packaging requirements.
    a. Electronic Copy Submission: One complete set of electronic equipment data sheets and drawings submitted in PDF format and collated in two distinct files:
        1) Equipment Data Sheets, equipment schedules, alarm matrixes cable termination spread sheets, and all related pertinent information.
        2) Drawings including all site plans, floor plans, risers, point to point wiring, grounding, installation details and mounting elevations.
    b. Hard Copy Submission: Submit hardcopies of all shop drawings and product datasheets in accordance with the requirements the of Division 01 specifications.

D. DELAYS:

1. Contractor is responsible for any delays in job progress accruing directly or indirectly from late submissions or resubmissions of shop drawings, or product data.

E. RE-SUBMITTALS:

1. Review of Contractor's submittals by the Owner's Authorized Representative (OAR) will be limited to examination of an initial submittal and one (1) resubmittal. The Owner and/or OAR reserves the right to obtain reimbursement from the Contractor for amounts paid to the OAR for evaluation of any additional resubmittals due to incomplete information or non-compliance to the project documents on the part of the Contractor. An incomplete submittal shall count as a submittal (either initial or a resubmitted as the case may be).

F. SHOP DRAWINGS:

1. All shop drawings (paragraph 1.1, E, 4.) shall include sufficient information, clearly presented, to determine full compliance with all project drawings and specifications. Include the following information for review; failure to provide all information listed below shall result in all shop drawing submittals being returned for resubmission:

   a. Include manufacturer's name(s), model numbers,
   b. All equipment /device electrical ratings and power requirements
   c. All equipment /device performance ratings.
   d. All conduit and cable size, type and routing
   e. All standby battery and wiring voltage drop calculations
   f. All equipment rack, panels and cabinet layouts, rack/cabinet sizes.
   g. All equipment and device-mounting elevations.
   h. All device wiring details.
   i. Complete point-to-point-wiring diagrams for all systems. Include all equipment and wiring termination schedules and/or matrixes.

2. Provide a complete set of "contractor prepared" installation drawings. Drawings at the minimum shall consist of all floor plans indicating all passive and active electronic component locations, field devices, device identifications, distribution racks, patch panels, control panels, auxiliary control panels, power supplies, conduits, cable trays, and cabling distribution, as well as all 120-volt electrical circuit locations and designations.

   a. CAD Drawings shall be made at 1/8" = 1'-0" scale. Drawings shall include at the minimum the following:

      1) Detailed equipment layouts for all communications rooms. Coordinate all room layouts with affected trades.
      2) Floor plan drawings showing locations of all equipment, devices, equipment cabinets and/or rack locations. Identify type and sizes of all equipment cabinets and/or racks.
      3) All cable tray layouts, and conduit routing of all conduits 2 inches in diameter or greater.
      4) All equipment rack layouts showing locations of all rack mounted equipment items.
      5) System riser diagrams and single line drawings, showing detailed connections for all parts of the system, including wire numbers, terminal block numbers and layouts, and other designations and codings (point-to-point wiring diagrams). System performance measurements shall be documented as specified.
      6) Equipment wattage for each location and estimated BTU production.
      7) Detailed equipment layouts for all equipment consoles. Indicate all

equipment locations, power connections, and installation details.

8) All equipment mounting hardware/brackets and installation details, identify type size, load capacities of all mounting hardware/brackets; include all mounting and installation details, all space requirements, any special architectural modifications required.
9) Outline drawings of all equipment cabinets/racks showing the relative position of all major components, all-wiring and grounding terminations. Include all panel, cabinet and/or rack dimensions.
10) Point-to-point wiring diagrams for all cabling. Include all cable drop identification at edge device and at termination equipment. Include complete wiring termination schedules.
11) All grounding and bonding termination points
12) All electrical circuit numbers and distribution panel locations.

3. All drawings shall be prepared using an AutoCAD- or REVIT-based program; hand drawn mark-ups of the original Contract Drawings shall not be acceptable. Failure to provide a complete set of "contractor-prepared" shop drawings at the time of submittal shall result in all submittals being returned for resubmission.

G. EQUIPMENT SUBMITTALS:

1. Sufficient information, clearly presented, shall be included to determine compliance with drawings and specifications.

   a. Include all equipment data sheets pertinent to equipment provided. All data sheets shall be highlighted indicating specific equipment model number, options and accessories supplied. Failure to provide the proper annotation of <u>all</u> equipment shall result in submittals being returned for resubmission.

2. Submit complete technical data necessary to evaluate the material and equipment. Include a complete technical specification for the submitted equipment, noting differences and adherence to this Section. Failure to provide the required data will result in all submittals being returned for resubmission.
3. Submit performance data, equipment ratings, cable requirements, control sequences, copies of all preliminary GUI screens (graphic maps), programming matrixes, logic diagrams and all other descriptive data necessary to describe the installation and operations of the systems being provided. Failure to provide the required data will result in all submittals being returned for resubmission.

H. MANUALS:

1. Submit simultaneously with the shop drawings, one complete operating and maintenance manual for the Owner and OAR reference. The manual shall include all operational programming and maintenance information for the system being provided; edit all manuals specific to the installation of the provided system and include all manufacturer's technical data sheets, programming matrixes and graphic screen representations.

   a. Provide a clear and concise <u>sequence of operation</u> that gives, in detail, the information required to properly operate all equipment and systems. Include detailed programming matrixes, indicating at the minimum all manual and automatic functions for all systems, components and devices comprising the system being provided.

b. Provide a complete lesson plan outlining the allocated time, methods and training procedures to be employed for training of the Owner's personnel in all functions, features and programming of the systems provided. Include number of training manuals, visual aids and training videos that will be utilized during the course of this training.

1.6 QUALITY ASSURANCE:

A. Installation, final cable termination, programming, start-up testing, certification and commissioning of all systems, system components, equipment and/or devices shall be under the direct supervision of the appropriate system integrator. This integrator shall be an accredited and authorized distributor of the equipment manufacturer for the equipment being provided and shall be capable of offering a service contract for system maintenance at completion of the project warranty period.

B. Qualifications for the Contractor: Documented successful work experience of at least three (3) facilities of equivalent size and technical requirements utilizing the technology proposed.

1. For each facility, list:

a. Name and location of facility.
b. Date of Occupancy by Using Agency.
c. Using Agency's representative to contact and telephone number.
d. Construction Manager or General Contractor.
e. Architect or Engineer.
f. Provide information on the installed locations with operational equipment.

C. Qualifications for System Integrators: Documented successful work experience of at least three (3) facilities of equivalent size and technical requirements utilizing the equipment proposed to be used.

1. For each facility, list:

a. Name and location of facility.
b. Date of Occupancy by Using Agency.
c. Using Agency's representative to contact and telephone number.
d. Construction Manager or General Contractor.
e. Architect or Engineer.
f. Provide information on the installed locations with operational equipment.

D. Each System Integrator shall have no less than 3 years of documented work experience on projects of equivalent size and similar scope, utilizing products provided by that contractor.

1. "Experience" is defined as the completion of the specific system being provided, with that system being successfully operated by the Using Agency for its intended purpose for at least one year.
2. In addition to the above, "Experience" shall also be defined as the completion of modifications and renovations to any associated system being provided in any existing occupied facility of this size and magnitude.

a. NOTE: The installation, programming, commissioning and testing of the fire alarm system shall be under the direct supervision of a current NICET Level IV fire alarm specialist who shall be knowledgeable in the following technical applications:

1) The Routing and installation of shielded, unshielded, twisted pair, coaxial and fiber optic cables.
2) Bonding and grounding of cabling, device, and equipment racks.
3) Fusion splicing of fiber optic cabling.
4) Testing copper conductors for electrical continuity.
5) Termination, connection, and testing of shielded and un-shielded twisted pair cable, coaxial cabling and fiber optic cabling on all specified connectors, electrical protection blocks, termination blocks and patch panels.
6) Generally accepted industry standards, NFPA 72 as well as manufacturers written installation instructions, will be used for in-process quality control and final acceptance of the work installation.

b. The Contractor shall provide registration number and expiration date of NICET level III installer assigned to the project.

E. All system integrators shall be (where required by jurisdiction) properly licensed by the governing municipality to provide the services and work of the specific system being provided. In addition, all system integrators shall be capable of providing full service for the entire warranty period within a 2-hour response time upon notification of a service emergency.

F. Pre-performance Conferences: Include provisions to attend all pre-performance conferences at Project site in compliance with all requirements in Division 01 "Project Meetings." Review methods and procedures related to installation and operations of all safety and security systems, including, but not limited to, the following:

1. Inspect and discuss electrical and control system roughing-in related to all safety and security systems as well as other preparatory work required to be performed by other trades.
2. Review sequence of operations for each type of system, controls and/or integration to any systems and/or equipment provided by other trades
3. Review and finalize construction schedule and verify availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
4. Review required start-up, testing, commissioning and certifying procedures to be employed for each system and any impacts to other trades.

G. Each equipment manufacturer shall be an ISO 9001 certified company and meet the requirements of BS EN9001: ANSI/ASQC Q9001-1994.

H. All security equipment and components must have transient protection in compliance with all NEC, IEEE 472 and UL 365 requirements. Where any circuits leave the building, additional transient protection must be provided for each circuit. Devices must be UL listed under standard #497B (Isolated Loop Protectors).

1.7 DELIVERY, STORAGE AND HANDLING

A. Protect all materials, equipment, devices or components permanently installed and/or stored on the job site. Protect all materials, equipment, devices or components during construction and after installation, provide protection of equipment until time of substantial completion.

1. Any materials, equipment, devices or components, stored on site which have been deemed by the Owner and OAR to exhibit any indications of damage or exposure dust or moisture shall not be installed and shall require in the immediate replacement at the contractor's expense.

2. Provide and apply appropriate protective material immediately upon receiving all materials, equipment, devices or components and maintain protection throughout the construction process.
3. Keep all materials, equipment, devices or components clean and dry, elevating equipment above ground and floor.
4. Take precautions to protect materials, equipment, devices or components from damage due to painting, fire proofing or other construction related debris.

1.8 RECORD DOCUMENTS

A. In addition to all requirements of Division 01 and related Division 28 specification sections, provide complete detailed, as-built drawings depicting the completed installation of all systems.

1. Drawings shall at the minimum include but not limited to:

a. All control equipment locations
b. All field devices
c. All junction and pull box locations.
d. All Equipment cabinet layouts and component locations.
e. All point to point wiring diagrams.
f. All conduit routing and sizes.
g. All system riser diagrams depicting the logical and functional relationship of all components, devices, equipment and controls.
h. All system performance data, equipment ratings and voltage requirements.
i. All control sequences, programming matrixes, flow diagrams and all other descriptive data necessary to describe the overall system operation and performance.

2. All as-built documentation shall be provided to the Owner and OAR for review prior to turn over to Owner. As-built documents shall be submitted in both paper and electronic media formats in the quantities as specified by Division 01 requirements.

a. All electronic drawings shall be prepared and submitted utilizing an AutoCAD- or REVIT-based program as manufactured by Autodesk. Where electronic documents are prepared using other than an AutoCAD or REVIT program manufactured by Autodesk, the contractor shall provide to the Owner the necessary software to electronically view the submitted documents.
b. All electronic data sheets, control sequences, programming matrixes and other descriptive data shall be provided in PDF formatted documents.

3. All junction boxes containing any system splices shall be uniquely identified in the field and indicated on the as-built drawings with corresponding schedule identifying all related splices at the specific junction box locations.

1.9 OPERATION AND MAINTENANCE

A. Provide complete set of operating and maintenance manuals in accordance with all requirements of Division 01 and related Division 28 specification sections. The manual shall include all operational programming and maintenance information for the system being provided, edit all manuals specific to the installation of the provided system and include all,

manufacturer's technical data sheets, programming matrixes and graphic screen representations.

1. Provide a clear and concise sequence of operation that gives, in detail, the information required to properly operate all equipment and systems. Include detailed programming matrixes, indicating at the minimum all manual and automatic functions for all system, components, and devices comprising the system being provided.

B. Include all As-built drawing documentation of all systems. Drawings shall reflect all requirements of paragraphs 1.5 and 1.8 of this specification section. Provide a clear and concise sequence of operation that gives, in detail, the information required to properly operate all equipment and system controls.

1.10 SOFTWARE AGREEMENT

A. Included as part of the scope of work for this project the Owner shall retain ALL Ownership and access rights of all system programs and software associated with all systems installed and/or modified as part of this project.

1. The contractor shall provide to Owner complete copies of all current software programming and software licenses related to the operation of each system prior to final acceptance of the related Contract scopes of work.

a. All programming shall include but not be limited to all device identifications, device descriptions, Programming Logic Matrixes, all program access level passwords as well as all function and sub-function routines.

2. Programming and software copies shall be provided to Owner DVD or Flash Drive digital formatted media. In addition, the contractor shall provide a complete hard copy printout of all system programming and shall be included as part of closeout documentation for review by the Owner and OAR.

B. Upgrade Software Service: Included in the cost of this project shall be an automatic software upgrade policy, which shall maintain all software to latest version on all new and existing system components installed and or modified as part of this project. This upgrade policy shall require the contractor to install, test and certify all software upgrades that become available from manufacturer for a period of one year from date of final acceptance.

1. Upgrading of software shall include all revised/new software, labor, testing certification as well as all licenses, software and all programming copies as described in paragraph 1.11, A, of this section for the installation any new and/or revised software.
2. Provide not less than thirty days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.11 EXTRA MATERIALS

A. Refer to related specification section "Extra Material" for specific requirements.

1. All Extra materials shall be provided at the time of final acceptance of the project and a signed packing list shall be obtained at the time of delivery.
2. At no time is the contractor to use the extra materials provided for this project to replace malfunctioning or damaged equipment and or components prior to final acceptance.

PART 2 – PRODUCTS

A. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, that meet and/or exceed the specified performance and features of the equipment and/or systems and for which replacement parts shall be readily available to the system integrator and/or using agency.

1. When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.
2. Acceptable manufacturers for each system shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.

a. Manufacturers listed as acceptable shall not negate the contractors' responsibility for providing all equipment, devices, components, and/or systems, in accordance with all functions and performance requirements of the Contract Documents.
b. Where manufacturer and/or manufacturer model numbers reference specific system components in the related specification sections, it is to establish the performance requirements and quality of the systems and components only.

1) It is in no way an inference that the referenced model numbers are the manufacturer's current product and are the only acceptable components for this project unless specifically referenced as "no substitutions."

c. The Contractor shall provide the manufacturers' most current product that shall meet and/or exceed the specified performance and features of the equipment and/or systems.
d. Equivalent UL- listed equipment may be substituted for the approved manufacturers unless stipulated by other specification sections as "No Substitutions." All substitutions shall be submitted for approval by the Owner and OAR in accordance with all requirements of Division 01 specification sections and Chapter 1.4 "Submittals" chapter of this specification section.

1) Where systems and/or components are referenced as "no substitutions" the specific system and/or components shall be provided.
2) All substitutions shall comply with all requirements as specified above and all system performance standards shall be maintained.
3) The contractor shall stipulate the following information impacted by such a substitution.

a) Any and all extensions in time impacted by the substitution.
b) Any changes to the architectural or structural elements to the project
c) Differences in operation and/or performance from intended system criteria.

4) Failure to provide the required substitution information shall result in "without consideration" the immediate rejection of the substituted equipment and/or systems.

B. Equipment Assemblies and Components:

1. Components of an assembled unit need not be products of the same manufacturer.

a. Manufacturers of equipment assemblies, which include components made by others, shall assume complete responsibility for the final assembled unit.

b. Components shall be compatible with each other and with the total assembly for the intended service.
c. Constituent parts which are similar shall be the product of a single manufacturer.
d. Factory wiring shall be identified on the equipment being furnished and on all wiring diagrams.

C. Compatibility and Interoperability of System Components and Devices

1. Where multiple components, devices, and/or systems are intended to be interconnected and components of a complete system in accordance with any related specification sections, it shall be the Contractor's responsibility to verify interoperability and compatibility of said components, devices, and/or systems in full conformance to the specified performance criteria prior to the submission of shop drawings.
2. Where specified devices are found to be incompatible or incapable of performing as specified in a seamless manner, the contractor shall notify the Owner and OAR in writing prior to submission of shop drawings. Failure to properly identify such functional discrepancies shall not relieve the contractor from providing a complete and fully functional system in accordance with the requirements of all related specification sections.

D. Where Factory or Off-Premises Testing of any equipment, product or assembly is recommended by the product manufacturer or where specified as part of this section and/or any related specification section:

1. The Owner and OAR, shall have the option of witnessing all factory tests. The Contractor shall notify the Owner and OAR at a minimum of thirty (30) working days prior to the performance of any factory or off-premises tests.

a. Where the factory or assembly point for all off-premises testing is not within two (2) hours driving time from the project location, the system integrator shall include as part of this project all per diem costs (travel, meals and lodging) for a minimum of two representatives from the Owner and OAR to witness all testing.

2. Provide four (4) copies of certified test reports containing all preliminary test data and testing procedures shall be furnished to the Owner and OAR prior to any final testing and not more than ninety (90) days after completion of any tests.
3. When equipment, product, or assembly fails to meet any factory or off-premises tests, retesting of equipment, product, or assembly shall be mandated, the manufacturer/integrator shall be liable for all additional expenses, including all expenses incurred by the Owner and OAR for witnessing the retesting of any equipment, product, or assembly.

PART 3 – EXECUTION

3.1 COORDINATION

A. Coordinate with all trades at the time of shop drawing submission detailing all space and/or room conditions. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of any system including but not limited to all equipment locations, ceilings, lighting fixtures, fire protection piping and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the Owner and OAR.

1. Coordinate exact location of all desktop/counter mounted equipment with the Owner, OAR and affected trades prior to the installation of any equipment and/or cabling.

2. Coordinate exact location(s) of all ceiling mounted cable, conduits, equipment and/or devices with all architectural plans, reflected ceiling plans and affected trades prior to installation.
3. Equipment installations requiring coordination with other trades the contractor shall provide all templates, backboxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.
4. If installation of equipment, raceways, cable trays, J-hooks and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner.

B. Prior to final programming of all systems review with the Owner and OAR all system features, functions, system operations and related operational programming for all systems provided.

C. Provide coordination with all system integrators and trades for the proper installation of all equipment, components and all integration requirements in order to provide fully operational systems in accordance with all applicable specification sections.

D. Each Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings and all other submissions shall be made available to the Owner and OAR upon request.

3.2 EQUIPMENT PROTECTION

A. Protect all materials, equipment, devices, or components permanently installed and/or stored on the job site. Protect all materials, equipment, cabling, devices, or components during construction and after installation. Provide appropriate protection of all materials, equipment, components, and/or devices until time of substantial completion. All materials, equipment, components and/or devices shall be protected during shipment and storage against any physical damage, dirt, moisture, cold, snow, wind or rain:

1. During installation, enclosures, racks/cabinets, equipment, controls, controllers, circuit protective devices, and other like items, shall be protected against entry of any foreign matter; and shall be vacuum cleaned both inside and outside before testing and operating and repainting if required.
2. Any materials, equipment, components and/or devices, stored on site, which have been deemed by the Owner and OAR to exhibit any indications of damage or exposure dust or moisture shall not be installed and shall returned to the source of supply for immediate replacement.
    a. The use of spare parts or the return of defective equipment for repair to mitigate the damage of defective materials, equipment, components, and/or devices shall not be acceptable. All materials, equipment, components, and/or devices shall be new and unused until final acceptance by the Owner and OAR.
3. Provide and apply protective material immediately upon receiving the products and maintain throughout the construction process.
    a. Painted surfaces shall be protected with factory installed removable heavy kraft paper, sheet vinyl or equal.
    b. Any damaged paint on equipment and materials shall be refinished with the same

quality of paint and workmanship as used by the manufacturer so repaired area is not obvious or detectable.

4. Failure to properly protect all materials, equipment, components and/or devices prior to final acceptance shall constitute sufficient cause for rejection of materials, equipment, components and/or devices should any defects, damage or degradation in performance is observed.

B. Seismic Performance: The Contractor shall furnish and install all equipment bracing, and anchoring rated for the seismic zone of the geographical area in which the project resides, and shall withstand the effects of earthquake motion and wind forces in accordance with the current editions of the IBC and ASCE/SEI 7. Refer to Refer to Division 01 and Division 26 – Hangers and Supports for additional seismic information and requirements.

1. Equipment shall include, but not be limited to, racks/cabinets, video monitors, TV's, cable trays, conduits, junction boxes, and all associated appurtenances.

C. Immediately replace all malfunctioning materials, equipment, components, and/or devices with new unused products up until the time the Owner and OAR issues final acceptance of the system. The returning of any malfunctioning equipment, devices, and/or components to the manufacturer for repair and then reinstallation at the project site shall not be acceptable.

1. All replacement materials, equipment, components, and/or devices shall be factory new and not obtained from the Project's spare parts inventory or use factory recycled products unless expressly identified by contractor prior to replacement and approved beforehand by the Owner and OAR.

D. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials.

E. Clean up all debris generated by installation activities. Keep all telecommunications, server and/or security electronic rooms free of debris at all times.

3.3 WORK PERFORMANCE

A. Installation, final termination, testing, start-up and commissioning of all systems, system components and cabling infrastructures shall be under the direct supervision of the appropriate system integrator. The integrator shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, testing, commissioning, and programming of all equipment, devices, components, and/or systems being provided as part of this project.

B. Job site safety and worker safety is the responsibility of the Contractor. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials. Clean up all debris generated by installation activities. Keep all communications equipment rooms free of debris at all times.

C. Pre-installation Conferences: Include provisions to attend all pre- installation conferences at Project site in compliance with all requirements in Division 01 specification section and as herein specified. Review methods and procedures related to installation and operations of all communications systems, including, but not limited to, the following:

1. Inspect and discuss electrical and equipment roughing-in related to all communications systems as well as other preparatory work required to be performed by other trades.
2. Review and discuss all work, equipment deliveries, installation procedures, and related scopes as required to conform to the phased construction schedule.

3. Review sequence of operations for each type of system, control, cabling and/or integration to any systems and/or equipment provided by other trades
4. Review and finalize construction schedule and verify availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
5. Review required start-up, testing, commissioning, and certifying procedures to be employed for each system and any impacts to other trades.

D. For work on existing facilities, arrange, phase, and perform work to assure the operation of all communications systems for other buildings and contiguous spaces at all times. Refer to Division 01 specification section for additional information.

E. All new work shall be installed and connected to existing work neatly and carefully. Disturbed or damaged work shall be replaced or repaired to its prior conditions, as required by Division 01 specification sections.

F. Coordinate the installation of all cabling, conduits/raceways and cable trays and equipment with applicable trades to ensure proper operation and function of all integrated systems in accordance with all related specification sections. Refer to Division 01 specification section for additional project coordination requirements.

1. Coordinate with all trades at the time of shop drawing submission detailing all space and/or room conditions. The contractor shall coordinate with the appropriate trade all conditions impacting the installation of any system, conduit, or cable tray including but not limited to all equipment locations, site conditions, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the Owner and OAR.

    a. Coordinate exact location of all desktop/counter/wall mounted equipment with the Owner and OAR and all affected trades prior to the installation of any equipment and/or cabling.
    b. Coordinate exact location(s) of all cable, conduits, equipment and/or devices installations with all architectural plans, site plans, reflected ceiling plans and affected trades prior to installation.

        1) Equipment installations requiring coordination with other trades the contractor shall provide all templates, back- boxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.

    c. If installation of equipment, devices, cabling, raceways, cable trays and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner and OAR.
    d. Prior to the final programming of any systems review with the Owner and OAR all system features, functions, system operations, network mapping, system integrated responses and all related programming as required for the proper operation of the respective communications systems.

G. The Contractor shall maintain a complete set of current and up to date set of shop drawings and equipment submissions at the job site at all times. The Shop drawings and all other submissions shall be marked up to reflect all as-built conditions and shall be made available for review by the Owner and OAR upon request.

3.4 EQUIPMENT INSTALLATION

A. All system equipment installations shall be in accordance with good engineering practices, NEC, local building codes, and all manufacturer's requirements. Cable terminations at all equipment locations shall comply with all state and local electrical codes. All wiring shall test free from all grounds, shorts, stray voltages, and EMI.

B. Follow manufacturers' instructions for installing, components and adjusting all equipment and cabling. Submit two (2) copies of such instructions to the Owner and OAR before installing any equipment. Provide an additional copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.

C. Equipment location shall be as close as practical to locations as indicated on the contract drawings.

1. Provide all equipment clearances in accordance with NEC requirements. Arrange equipment to facilitate unrestricted access for maintenance and service around all equipment, components, and/or cable terminations.

D. Inaccessible Equipment:

1. Where the Owner and OAR determines that the Contractor has installed equipment not conveniently accessible for operation and maintenance, the equipment shall be removed and reinstalled as directed at no additional cost to the project.

a. "Conveniently accessible" is defined as being capable of being reached without the use of ladders, or without climbing or crawling under or over obstacles such as, but not limited to, motors, pumps, belt guards, transformers, piping, ductwork, conduit and raceways.

3.5 CABLE INSTALLATION

A. All system wiring and equipment installations shall be in accordance with good engineering practices and by all IEEE, EIA, NEC and manufacturer's requirements. All wiring shall comply with all state and local electrical codes.

1. Prior to the start-up and commissioning of any component, device, equipment and/or system, the contractor shall test and document that all cabling contains no grounds, shorts, sneak currents, RFI and EMI conditions.
2. Any video, security and communications cable running parallel to electrical cables not installed in conduits shall be separated by a minimum of 12" inches.
3. Any video, security and communications cable cables which must cross-high voltage electrical cables or conduits shall do so at 90-degree angles.
4. Do not leave any system cabling unprotected on the floor at any time. If cables must be left on any floor, protect the cables so that they may not be walked on or have any material or equipment placed or rolled on top. Replace all damaged cables from demarcation to termination point; no splicing of damaged cables shall be permitted.
5. Maintain manufacturer's recommended minimum bend radius of the cables at all times. Do not stretch, stress, tightly coil, bend or crimp the workstation cables when leaving them out of the way of other trades during the staging of the work. The contractor at the contractor's expense will replace all severely stressed cables.

B. All access control system cabling is to be concealed above ceilings and installed in "dedicated" conduits. All conduits shall be supported above ceilings to the building structure and shall not contain any AC carrying conductors or non-associated system cables.

1. Provide all access control cabling in accordance with all manufacturers' requirements.

    a. All security conductors shall be twisted pair, minimum 16 AWG unless otherwise required by code, equipment manufacturer and/or noted elsewhere. Refer to related specification sections for additional information.
    b. Twisted pair, minimum 14-gauge wire, shall be utilized for control of electrical and motorized doors and gates unless otherwise required by code, equipment manufacturer and/or noted elsewhere. Refer to related specification sections for additional information.

C. All Video surveillance system cabling is to be concealed above ceilings and installed in dedicated conduits. All conduits shall be supported above ceilings to the building structure and shall not contain any AC carrying conductors or non-associated system cables within the cable bundles. Provide all Video surveillance system cabling in accordance with all manufacturers' requirements, at the minimum all cabling shall conform to the following:

1. All cabling associated with the installation of the Video surveillance system shall utilize Category-6 UTP cables. Refer to related specification section 270500 and 271100 for additional information related to the proper installation of Category-6 UTP cables.
2. Any video surveillance system cabling installed exterior to the building and/or all cabling being routed from the facility to any remote location external to the project location shall be fiber optic cable. Refer to Division 27 specifications for additional information.
3. Coordinate all system cabling with system provider prior to shop drawing submission.

D. All fire alarm system cabling is to be concealed above ceilings and installed in "dedicated" conduits. All conduits shall be supported above ceilings to the building structure and shall not contain any AC carrying conductors or non-associated system cables.

1. Provide all fire alarm cabling in accordance with all manufacturers' requirements.

    a. All initiating circuits shall be twisted shielded pair, minimum 16 AWG unless otherwise required by code, equipment manufacturer and/or noted elsewhere. Refer to related specification sections for additional information.
    b. Twisted pair, minimum 14-gauge wire, shall be utilized for all notification appliance circuits as well as control of all HVAC equipment, Elevators, motorized doors and gates unless otherwise required by code, equipment manufacturer and/or noted elsewhere. Refer to related specification sections for additional information.

E. All Fiber optic cabling shall be provided in accordance with all manufacturers' recommendations for the proper operation of the connected systems and/or devices. Fiber optic cabling shall be configured as 8.3/125 single mode or 62.5/125 multimode fiber optic cable as indicated on the drawings. Provide number of fiber strands in hybrid cable in accordance with the contract drawings and/or specifications.

F. All fiber optic cabling shall be installed in dedicated conduits. Refer to related specification sections for additional information.

1. Fiber optic cabling shall be provided as the primary communications and control media for all exterior and remote building surveillance cameras, all network communications links for security and fire alarm systems in accordance with the Contract Documents. Each fiber optic link shall be comprised of dedicated transmitter and receiver shall be

capable of providing video/data/communication transmissions for a minimum of 1,280 feet. Refer to related specification sections for all additional Fiber optic-cabling requirements.

2. Conductive fiber optic cable shall be provided where shown on the contract drawings for all exterior system components requiring control and/or power capabilities in the support of their operation, include all necessary surge protection and grounding for conductive cabling.

G. All conduits/raceways shall be installed in a manner that prevents tampering or removal when installed in areas exposed to the general population.

1. Provide tamper-resistant installation utilizing "torx with peg" security-fastening devices for all conduits/raceways, equipment, devices and appurtenances in all areas accessible to the general population and/or areas subjected to tampering or vandalism.

H. Conduits/raceways shall be concealed and shall be installed above finished ceilings and/or in walls. Any conduits/raceways installed in areas requiring installation to be exposed, shall be installed tight to ceilings at right angles to walls and shall not obstruct any access hatches, equipment service panels, lighting or other equipment and/or devices.

1. Where conduits/raceways cannot be concealed above accessible ceilings or in walls or where installed in finished areas such as offices, occupied rooms, or other spaces were exposed conduits would impact the aesthetics of that space, all conduits shall be installed in finished metal wire-mold type raceways.
2. All conduits and locations shall be reviewed and accepted by the Owner and OAR prior to installation. No exposed cabling or EMT type conduits will be acceptable in any finished or occupied spaces of the facility without the prior approval by the Owner and OAR.
3. Where any equipment and/or junction boxes are installed above finished ceilings, the contractor shall provide access hatches listed for the intended application. Access hatches shall be located so that service access to the equipment and/or junction boxes is unimpeded.
4. Access hatches shall not obstruct any equipment, service panels, lighting equipment, devices or any architectural elements of the ceiling. At the time of submittals, the contractor shall submit all proposed access hatch locations for review by the Owner and OAR.

I. Interior raceways shall be a minimum 3/4 inches unless otherwise noted. Exterior raceways shall be a minimum 1-inch. Size all raceways and install conductors in accordance with NEC requirements. Conduit fill ratio shall not exceed 40 percent for all raceways.

1. EMT conduit with compression fittings and/or MC cabling may be utilized in all inaccessible ceiling areas unless otherwise restricted by code.
2. Threaded Rigid metal conduit shall be used on all exterior applications and all interior accessible areas where concealed conduit requirements cannot be met and are exposed to the general population as well as any areas that may be subject to tampering by the general population. Submit drawings, diagrams and information for review by the Owner and OAR at the time of shop drawing submissions for all exterior and exposed conduit installations.
3. Conduit expansion couplings shall be provided in all areas where expansion/contraction may occur to couple together two sections of a conduit run subject to longitudinal movement. The contractor shall refer to architectural drawings for exact locations of all building expansion joints. Conduit expansion couplings shall be consistent with the size

the conduit being installed, shall be steel electrogalvanized, and shall meet all environmental and seismic conditions.

a. Expansion couplings shall be weatherproof and approved for use indoors or outdoors without an external bonding jumper.
b. Expansion couplings shall be UL Listed and approved for use in wet locations.
c. Expansion couplings shall comply with UL 514B, CSA 22.2 No. 18 3-12, NEMA FB1.

4. PVC schedule 40 conduit shall be utilized in all underground applications. The conduit shall be buried at a minimum 36" below grade. Detectable warning tape shall be buried 12" below grade to indicate the conduit routing location. Rigid conduit (RGS) shall be utilized on all stub-ups.
5. The Contractor shall have the option to utilize the same trench/routing location as other utilities. In no case shall any system conduits or duct bank be combined with other electrical utilities. The contractor shall provide hand holes as required dedicated for each system cabling. Provide drainage to all underground hand holes. Splices in hand holes are unacceptable.
6. All raceways shall be supported in accordance with NEC requirements and shall be affixed in such a manner that tampering and/or removal by the general population without the use of specialized tools shall be prevented.
7. All wall/floor penetrations are to be sleeved and fire stopped with approved fire stopping material. Coordinate all cable and conduit penetrations of the structure with all trades. Refer to related Division 07 specification section for additional information.

J. Follow manufacturers' instructions for installing, components and adjusting all equipment and cabling. Submit two (2) copies of such instructions to the Owner and OAR before installing any equipment. Provide a copy of such instructions at the equipment during any work on the equipment. Where no instructions are included with the equipment, follow accepted industry practices and workmanlike installation standards.

K. Keep all items protected before and after installation, with dust and water proof barrier materials. It shall be the contractor's responsibility to ensure the integrity of these protective measures throughout the course of the project.

L. At all times during the construction, the Contractor shall protect all equipment and cabling from damage.

1. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials.
2. Clean up all debris generated by installation activities. Keep all telecommunications and security electronic rooms free of debris at all times.
3. Deliver to the Owner two sets of all special tools specifically needed for proper operation, adjustment, and maintenance of cable and cable termination hardware installed under this Contract.
4. Upon project completion, test all cabling and provide all as-built drawings and documentation as defined herein and/or specified elsewhere

M. All trade personnel shall be qualified to perform the work activities and be knowledgeable of the following:

1. The Routing and installation of shielded, unshielded, twisted pair, coaxial and fiber optic cables.
2. Bonding and grounding of cable trays, conduits and equipment racks.

3. Fusion splicing of fiber optic cabling.
4. Testing conductors for electrical continuity.
5. Testing of all copper conductors for attenuation and worst case near end cross talk.
6. Testing conductor insulation.
7. Termination, connection, and testing of shielded and unshielded twisted pair cable, coaxial cabling and fiber optic cabling on all specified connectors, electrical protection blocks, termination blocks and patch panels.
8. Generally accepted industry standards, as well as manufacturers written installation instructions, will be used for in process quality control and final acceptance of the work installation.

N. Contractors shall have the option to combine all home runs and conductors of same type and voltage class in accordance with NEC requirements unless specified elsewhere. Size all conduits and install all conductors in accordance with NEC requirements and manufacturers recommendations.

1. Protect all cabling exiting the building against lightning-induced surges. All signaling, communications and data cables exiting the building shall have surge protection circuits installed at each end that meet the IEEE 472 surge withstand capability test and the electrical transient tests established in UL 365. Fuses shall not be used for surge protection.

O. Penetrations of Walls and Floors.

1. All penetrations of walls and floors shall be fire stopped in accordance with the ASTM and NFPA. Refer to Division 07 and related specification sections for additional information.
2. Floor penetrations shall be sleeved with a minimum sleeve diameter of 4 inches. An additional penetration shall be provided for future use, sleeved and capped and fire stopped as required.
3. Coordinate size of wall penetration with conduit size, number of conductors. Comply with all NEC requirements.
4. The fire rating of all penetrated walls, floors, and ceiling structures shall be strictly maintained. All penetrations shall be fire stopped and sealed by the Contractor.
5. Install fire-stopping in open penetrations and in the annular space of penetrations for fire rated barriers.
6. Installation of fire-stops shall be performed by an applicator/installer qualified and trained by the manufacturer. Installation shall be performed in strict accordance with manufacturer's detailed installation procedures.
7. Installation of all fire-stopping shall be in accordance with fire test reports, fire resistance requirements, acceptable sample installations, manufacturer's recommendations, local fire and building authorities, and applicable codes and shall be installed in a manner acceptable to the AHJ.

3.6 ELECTRICAL POWER DISTRIBUTION

A. All 120/208VAC emergency electrical power shall be provided by this Contractor from the nearest emergency distribution panel as required for the proper operation of all communications systems, devices and/or components.

1. Coordinate with the Division 26 contractor, Owner and OAR prior to connections and/or modifications to the electrical distribution panels. Additional locations requiring electrical power by the specific products and/or integrator selected equipment shall be the

responsibility of this Contractor to include as part of this project.

a. Primary power for all system controls, sub-control panels, processors, and power supplies shall be configured to switch to emergency backup power sources automatically when primary power is interrupted without degradation of any critical system functions.
b. All electrical power shall be hardwired to the panel. System components or panels employing the use of plug-in transformers, extension cords or cheater cords for the connection to electrical power shall not be acceptable.
c. If no spare 20A/1P circuits are available for use, the contractor shall provide a new subpanel adjacent to the existing panel. Remove (3) 20A/1P breakers and replace with a 60A/3P breaker to feed the subpanel.
d. Subpanel shall be 60A MLO with 18 circuits. Reconnect the (3) 20A/1P circuits to this new panel. Extend branch wiring as required. The Contractor shall size feeder to subpanel per the national electric code.

3.7 TRANSIENT VOLTAGE SUPPRESSION

A. Transient Voltage Surge Suppression: All cables and conductors extending beyond building façade, except nonconductive fiber optic cables, which serve as communications, control, or signaling circuits shall be protected against Transient Voltage surges and have Transient Voltage Surge Suppression (TVSS) protection.

1. The TVSS device shall be UL listed in accordance with Standard TIA 497B installed at each end. Lighting and surge suppression shall be a multi-strike variety and include a fault indicator.
2. Protection shall be furnished at the equipment and additional triple solid state surge protectors rated for the application on each wire line circuit shall be installed within 914.4 mm (3 ft) of the building cable entrance. Fuses shall not be acceptable for surge protection applications. All inputs and outputs shall be tested in both normal mode and common mode to verify there is no interference at the minimum surge suppression test shall meet the following criteria.

    a. All system power supplies serving exterior system components or devices shall be provided with the appropriate transient surge suppression protection on both the line side as well as the load side.

        1) A 10-microsecond rise time by 1000 microsecond pulse width waveform with a peak voltage of 1500 volts and a peak current of 60 amperes shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer's requirements.
        2) An 8-microsecond rise time by 20-microsecond pulse width waveform with a peak voltage of 1000 volts and a peak current of 500 amperes shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer's requirements.
        3) Maximum series current: 2 AMPS. Provide units manufactured by Advanced Protection Technologies, model # TE/FA 10B or TE/FA 20B or approved equal.
        4) Operating Temperature and Humidity: -40 to 85 degrees C (-40 to 185 degrees) shall be the minimum performance requirements. Provide surge suppression in accordance with all manufacturer's requirements.

3.8 GROUNDING AND BONDING

A. Refer to related electrical specification sections and drawings for any additional grounding and bonding requirements.

B. At the minimum all electronic equipment, conduits, cable trays, racks/cabinets control panels, and cable shields shall be properly grounded and bonded in accordance with all requirements of EIA/TIA 607-A, NEC 250 and IEEE 1100, and all related specification sections.

1. All electronic equipment, conduits, cable trays, racks/cabinets and cable shields shall be properly grounded and bonded in accordance with all requirements of EIA/TIA 607-A, NEC 250 and IEEE 1100. In addition, all system grounding shall conform to all grounding requirements of Motorola R56 Standards and Guidelines for Communications Sites if and where identified as applicable to this project.

   a. All grounding connections shall provide the equalization of all grounding potentials between the building power system and the grounding terminations at the equipment in order to provide the diversion of electrical transients as well as providing the necessary coupling in order to cancel and/or reduce any voltage transients.
   b. The minimum bonding connection shall be a #6 AWG copper conductor. All grounding shall provide an effective bonding connection between the protected equipment to the nearest approved building grounding electrode (structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board's equipment grounding busbar). All bonding and grounding connections shall be NEMA type compression or exothermic welded connections.
   c. Equipment Grounding: Metallic structures, equipment racks, cabinets and enclosures as well as all raceways, cable trays, junction boxes, outlet boxes, machine frames, and other conductive items shall be bonded and grounded.
   d. Duct Banks and Manholes: Provide an insulated equipment grounding conductor in each duct containing any voltage conductors, sized per NEC except that minimum size shall be No. 2 AWG. Bond the equipment grounding conductors to the grounding bus, to all manhole hardware and ground rods, to the cable shielding grounding provisions for all cable splices, terminations and equipment enclosures.
   e. Metallic Fences equipped with communications equipment: Fences shall be grounded with a ground rod at each fixed gate post and at each corner post.

      1) Drive ground rods until the top is 300 mm (12 inches) below grade. Attach a No. 4 AWG copper conductor, by exothermic weld to the ground rods and extend underground to the immediate vicinity of fence post. Lace the conductor vertically into 300 mm (12 inches) of fence mesh and fasten by two approved bronze compression fittings, one to bond wire to post and the other to bond wire to fence.
      2) Each gate section shall be bonded to its gatepost by a 3 by 25 mm (1/8 by one inch) flexible braided copper strap and ground post clamps. Clamps shall be of the anti- electrolysis type.

1. All connections of grounding conductors to ground rods, bus bars, rebar, structural members, pipes and fences, as well as splices of any ground conductors, shall be made by exothermic welds except where otherwise noted. All connections to bar lugs shall be exothermic weld or compression type connections. Bolted type connection of ground conductors may only be made where terminal lugs or blocks have been furnished and installed in equipment by the manufacturer.

a. Equipment grounding conductors shall be insulated stranded copper, except for sizes No. 10 AWG and smaller shall be solid copper. Insulation color shall be continuous green for all equipment grounding conductors, except that wire sizes No. 4 AWG and larger shall be permitted to be identified per the NEC.

1) At the minimum bonding connection shall be a #6 AWG copper conductor. All grounding shall provide an effective bonding connection between the protected equipment to the nearest approved building grounding electrode (structural steel) as well as to the local power distribution panel grounding system (e.g., ac branch circuit panel board's equipment grounding busbar). All bonding and grounding connections shall be NEMA type compression or exothermic welded connections.

3.9 EQUIPMENT IDENTIFICATION

A. Identify all system controls, components and equipment cabinets using plastic laminate engraved ("lamicoid") labels or approved equal. Firmly affix to the panel, device, and/or component. Refer to all related specification sections for additional information.

1. Nameplates shall be laminated black phenolic resin with a white core with engraved lettering, a minimum of 6 mm (1/4 inch) high. Secure nameplates with screws. Nameplates that are furnished by manufacturer as a standard catalog item or where other method of identification is herein specified. Dymo or Kroy tape adhesive-backed lettering shall not be acceptable.
2. Color-code all junction boxes and enclosures per NEC recommendations. At the minimum provide all communications junction boxes as follows:

a. Color for Security circuits - Yellow.
b. Color for Fire Alarm circuits – Red
c. Letter all pull boxes and junction boxes located in service areas, tunnels, above accessible ceilings and pipe chases with laminated black phenolic resin with a white core with engraved lettering, a minimum of 6 mm (1/4 inch) high. Secure nameplates with screws.

1) Example: Security "SEC" Circuit Number SEC-126.
Engraved laminated plastic tags shall be used for identification and securely fastened in accordance with all project requirements.

3. Permanently label all cabling at both ends with self-adhering plastic labels.

a. Labeling: hand written labels are not acceptable. All labels shall be machine printed on clear or opaque tape, stenciled onto adhesive labels, or type written onto adhesive labels. The font shall be at least one-eighth inch (1/8") in height, block characters, and legible.

1) The text shall be of a color contrasting with the label such that it may be easily read. If labeling tape is utilized, the width of the tape shall not exceed 3/8," and the font color shall contrast with the background.
2) All data patch panels shall exhibit data drop numbers, in sequential order, for all workstations served by the associated network equipment.
3) Each fiber optic cable segment shall be labeled at each end with its respective communications network identifier.
4) Warning Tags: At each location where the fiber cable is exposed to human

intrusion, it shall be marked with warning tags. These tags shall be yellow or orange in color and shall contain the warning: "CAUTION FIBER OPTIC CABLE." The text shall be permanent, black, block characters, and at least 3/16" high.

(a) A warning tag shall be permanently affixed to each exposed cable or bundle of cables, at intervals of not more than five (5) feet. Any section of exposed cable which is less than five (5) feet in length shall have at least one warning tag affixed to it.

4. Provide typewritten circuit directories installed in 3-ring binders with transparent page protectors in each control and sub control cabinet and/or equipment rack.

3.10 MAINTENANCE & SERVICE

A. Test and service the system on a quarterly basis during the warranty period.

1. For each quarterly maintenance period, provide written notification to the Owner of the systems condition before and after service, the exact components that were tested and serviced, and overall status of the system.

3.11 WARRANTY

A. Warrant material and workmanship for a period as specified in General Conditions and Division 01 of the Contract Documents and related specification sections. At the minimum the contractor shall provide warranty provisions:

1. Warrant the replacement of defective components/materials and/or correct defective work when given notice by the Owner and OAR during the warranty period.
2. Warranty excludes liability for consequential incidental, or special damages due to vandalism, misuse, or acts of God.
3. Onsite warranty response time by qualified technician shall be within 4 hours upon receipt of request from Owner.
4. Warranty repairs shall be provided to the Owner at no cost. This shall include but not limited to all repairs and/or replacement of defective components/materials, all labor charges, all travel costs and all vehicle charges.
5. Response time shall be 7 days a week / 24 hour a day / 365 days a year.
6. Contractor must provide verification that they maintain their principle base of operation along with the personnel that will be responsible for providing service within 4 hours driving time to the project site. This tenet of the warranty shall remain in effect for the life of the warranty.

3.12 FIELD SERVICES

A. In addition to all testing requirements as specified by Division 01 specification section and all related Division 28 specification sections, testing of all systems, sub-systems and cabling infrastructures shall be provided in accordance with all requirements of this section.

B. Notify the Owner and OAR in writing, prior to the closing of any ceilings and ten (10) days advance of testing all system cabling to prevent delays in construction schedules.

1. Test all cabling to confirm that no grounds, shorts, sneak currents, RFI and EMI conditions exist prior to start-up and commissioning of all, components, devices, equipment and/or systems.

a. Before requesting a final inspection, the contractor shall perform a series of end to end installation performance tests. The contractor shall submit for approval by the Owner and OAR all test procedures to be employed, test result forms, and timetable for testing all fiber optic and UTP structured copper wiring.
b. Acceptance of the simple test procedures discussed below is predicated on the contractor's use of the recommended products including but not limited to, fiber optic cable, category structured cable, cross-connect blocks, patch panels, and outlet devices specified and adherence to the inspection requirements and practices set forth. Acceptance of the completed installation will be evaluated in the context of each of these factors.

C. Acceptance of the simple test procedures discussed below is predicated on the contractor's use of the specified products including but not limited to, all Division 28 systems, sub-systems, system components, fiber optic cable, category structured cable, cross-connect blocks, patch panels, and outlet devices as specified by all related specification sections and installed in accordance the Contract documents, manufacturer's recommended practices and all applicable codes, standards and industry practices. Acceptance of the completed installation for each system will be evaluated in the context of each of these factors.

D. General

1. Phases of Testing:
2. Factory Acceptance Test (FAT) / Manufacturer's Proof of Concept Test (as applicable)
3. On-Site Performance Verification Testing
4. On-Site Endurance Testing
5. Test Plan/Procedure: The Contractor shall provide six (6) hardcopies and an electronic copy of the test plan/procedures for each testing phase for the review and approval of the Owner and OAR. The test plan for each phase shall detail the objectives of all tests. The tests shall clearly demonstrate that the system and its components fully comply with the requirements specified herein. The test plan shall be provided at least forty-five (45) days prior to the scheduled start of each test. Test plans shall contain at a minimum:

a. Functional procedures including use of any test equipment
b. Test equipment is to be identified by manufacturer and model
c. Interconnection of test equipment and steps of operation shall be defined
d. Test records shall include test equipment serial number, calibration date and calibration certification of test equipment
e. Expected results required to comply with specifications
f. Traceability matrix referencing specification requirements with specific test procedures
g. Record of test results with witness initials or signature and date performed
h. Pass or fail evaluation with comments.
i. The test procedures shall provide conformity to all specification requirements. Satisfactory completion of the test procedure is necessary as a condition of system acceptance.
j. The Contractor's Quality Assurance organization shall review all formal test procedures prepared by the Contractor and deliverable under the contract to assure the tests cover all requirements and that there is a conformity between the conducted test, the test results and specification requirements
k. Documentation verification, both interconnects and functionality shall be part of the test. Where documentation is not in accordance with the installed system interconnect and operating procedures, the system shall not be considered accepted until the system and documentation correlate.

l. All testing must be witnessed by the Owner and OAR. The Contractor shall cooperate fully in this regard.

m. Test Reports: The Contractor shall prepare, for each test, a test report document that shall certify successful completion of that test. Six (6) hardcopies and one electronic version of the test report shall be submitted to the Owner and OAR for review and acceptance within seven (7) days following each test. The test report shall contain, at a minimum:

1) Commentary on test results.
2) A listing and discussion of all discrepancies between expected and actual results and of all failures encountered during the test and their resolution.
3) Complete copy of test procedures and test data sheets with annotations showing dates, times, initials, and any other annotations entered during execution of the test.
4) Signatures of persons who performed and witnessed the test.

6. Test Resolution: Any discrepancies or problems discovered during these tests shall be corrected by the Contractor at no cost to the Owner and OAR. The problems identified in each phase shall be corrected and the percentage of the entire system re-tested determined by the Owner and OAR, before any subsequent testing phase is performed.

B. Factory Acceptance Testing

1. Test Setup Equipment: Equipment shall be actual products or identical models of products to those designated to be delivered and installed at the site. The following equipment shall be setup and used for conducting pre-delivery test:

a. Operator equipment associated with system.
b. End devices and displays associated with system.
c. Software associated with system.
d. Administrative console equipment.
e. Sufficient signal transmission media (STM) and associated equipment and accessories to provide a fully integrated system model. Include at least one of each type STM circuit.
f. Number of field processors required for system to be installed at site.
g. Enough load and data simulators to provide simulation of full load operational conditions as required by design. Loads shall be manually, or software generated.

2. Preparation: Ensure that development of system is complete, required approvals of submittals have been obtained, and sufficient equipment procured to completely demonstrate and test system. Schedule pre-delivery test with Project Manager at least 45 days prior to test:
3. Time: Prior to delivery of any equipment to site. Conduct on weekdays during standard business working hours.
4. Location: Manufacturer's plant or other location approved by the Owner and OAR.
5. Items to be tested shall be set up and performance verified prior to arrival of the Owner and OAR at test site.
6. Test: The purpose is to test the complete computer software package and equipment of the system and demonstrate that all specified features and performance criteria are met. All requirements of the specification shall be tested including, but not limited to:

a. Functionality including reporting and response.
b. System capacity.

c. Hardware interaction.
d. Hardware and software interaction.
e. Demonstrate report generation.

7. Acceptance: Acceptance of system to perform sufficiently and provide specified functions shall be determined by the Owner and OAR witnessing the factory acceptance test. In addition to the Owner, testing shall be witnessed by up to two (2) additional Owners Authorized Representatives (OAR).

   a. Acceptance Criteria: Performance of system shall equal or exceed criteria stated in individual specification sections.
   b. If system does not perform satisfactorily, the Contractor shall make corrections and modifications and schedule new test with the Owner and OAR. Compliance is at the sole discretion of the Owner and OAR. If compliance cannot be met, or is insufficient, the Owner and OAR shall have the right to terminate the contract.

8. Completion:

   a. At successful completion of test, dismantle equipment so as to prevent damage. Replace all defective or worn items.
   b. Re-pack in original containers all equipment to be delivered to site for installation. Mark on containers that items were used in factory test.

9. Reporting:

   a. Record all test procedures and results.
   b. Submit report in accordance with reporting requirements in General Testing Requirements Section.

C. Performance Verification Testing

1. Complete operational testing of all components and systems shall be witnessed by the Owner and/or OAR.
2. Schedule test with the Owner and OAR. Do not begin testing until:

   a. All systems have been installed and individually and jointly tested to ensure they are operating properly.
   b. Written permission from the Owner and OAR has been received.

3. Testing: As part of performance verification, test all components of system. The tests shall demonstrate system features.
4. Verification: Verify correct operation of the required system functionality as defined in these specifications.
5. Adjustment, Correction, and Completion:

   a. Correct deficiencies and retest affected components.
   b. Make necessary adjustments and modification to system after obtaining approval of the Owner or authorized representative.
   c. Completion: Performance verification test shall be complete when testing or retesting of each component has produced a positive result and has been approved in writing by the Owner or authorized representative.

6. Recording:

   a. Describe actual operational tests performed and equipment used and list personnel performing tests.
   b. Record in tabular form all test results, deficiencies, and corrective measures.

7. Termination

   a. Performance verification test shall be terminated by the Owner and OAR when:

      1) Individual systems, system components, subsystems, or cabling infrastructure fail to perform as specified.
      2) It is determined that a system or sub-system is missing any components or installation is not complete.

   b. Upon termination, corrective work shall be performed, and performance verification test rescheduled with the Owner and OAR.
   c. Retesting shall be performed by Contractor at no additional expense.
   d. Contractor shall continue to perform corrective actions and retest until system passes all tests to satisfaction of the Owner and OAR.

D. Endurance Testing

1. Provide personnel to monitor the system operation 24 hours per day, including weekends and holidays during endurance testing.
2. Start test after:

   a. Successful completion of performance verification testing.
   b. Training as specified has been completed.
   c. Correction of deficiencies has been completed.
   d. Receipt of written start notification from the Owner and OAR.

3. Monitor all systems during endurance testing. Coordinate monitoring with the Owner and OAR.
4. Recording: Record data on approved forms so as to provide a continuous log of systems performance. Include:

   a. Date and time for all entries.
   b. Name of individual making entry.
   c. Environmental conditions.
   d. Owner activities in process.
   e. Description of all alarm annunciations, responses, corrective actions, and causes of alarms. Classify as to type of alarm.
   f. Description of all equipment failures, including software errors.
   g. Description of all maintenance and adjustment operations performed on system.
   h. Daily and weekly tabulations.
   i. Daily entries of performance data shall be reviewed by the Owner's representative designated to observe monitoring of system.

5. The Owner and OAR may terminate testing at any time when any system, sub-system, system component or cabling infrastructure fails to perform as specified. Upon termination of testing, the Contractor shall commence an assessment period.

E. Adjustment, Correction, and Maintenance

1. During endurance testing make adjustments and corrections to system only after obtaining written approval of the Owner or authorized representative.
2. During endurance testing, perform required maintenance on systems including provision of replacement parts.

F. Final Inspection and Acceptance

1. After endurance testing is complete, review tabulated records with the Owner and OAR.
2. The Contractor will not be responsible for failures caused by:

   a. Outage of main power in excess of backup power capability provided that automatic initiation of all backup sources was accomplished, and automatic shutdowns and restarts of systems performed as specified.
   b. Failure of any Owner furnished power, communications, and control circuits provided failure was not due to Contractor furnished equipment, installation, or software.
   c. Failure of existing Owner equipment provided failure was not due to Contractor furnished equipment, installation, or software.

3. When performance of integrated system does not fall within the above rates, determine cause of deficiencies, correct, and retest.

   a. When requested by the Owner and OAR, extend monitoring period for a time as designated by the Owner or authorized representative.
   b. Submit final report of endurance testing containing all recorded data.

4. The Contractor shall submit written certification that:

   a. The Contract Documents have been reviewed.
   b. All required as-built documentation has been submitted and approved by the Owner and OAR.
   c. The Project had been inspected for compliance with the Contract Documents.
   d. The Work has been completed in accordance with the Contract Documents.
   e. The equipment and systems have been tested and are shown operational in the presence of the Owner and OAR.
   f. The Project is completed and is ready for final inspection.

3.13 TRAINING

A. General

1. By means of training classes augmented by individual instruction as necessary, the Contractor shall fully instruct the Owner's designated staff in the operation, adjustment and maintenance of all products, equipment and systems. The Contractor shall be required to provide all training aids, e.g., notebooks, manuals. The Contractor shall provide an appropriate training area equipped with all required equipment. The location of the training area shall be coordinated with the Owner.
2. All training shall be completed a minimum of two weeks prior to system cut over. Training schedule shall support the various work shifts of the Owner's personnel and shall be subject to the Owner and OAR approval.
3. Training shall be conducted by experienced and factory authorized personnel and supported by training aids. An adequate number and amount of training material shall be provided by the Contractor. The following is considered a minimum.

   a. Functional flow-charts, overall block diagrams, and descriptive material for all software;
   b. Schematic drawings for each of the hardware components;
   c. All procedure manuals, specification manuals, and operating manuals;
   d. As-built drawings.

4. Participants shall receive individual copies of technical manuals and pertinent documentation at the time the course is conducted. The courses shall be scheduled such that Owner personnel can participate in all courses (no overlap).
5. A final course schedule and syllabus shall be prepared by the Contractor for each course to be conducted for Owner personnel and submitted for review at least four (4) weeks prior to the scheduled date of the course commencement.
6. Each course outline shall include, in addition to the subject matter, a short review of the prerequisite subjects (where appropriate); how this course fits into the overall training program; the objective; the standards of evaluation; and any other topics that will enhance the training environment.
7. Provide detailed video recordings in high quality digitally formatted media of all demonstration and training of all systems and system operations.
    a. Utilize remote microphones as may be required to ensure high quality audio of the recorded demonstrations.
    b. Permanently and professionally label all recorded materials and provide self-sealing plastic cases for each training session.
8. All training requirements identified are minimum requirements.

B. Types of Training

1. User Training: System users shall be instructed in all aspects of operations of the system, including the business intelligence tool and all reporting functions and shall conform to the following minimum requirements:
    a. Training classes shall be scheduled not less than 48 hours apart to allow The Owner's User/Operators to familiarize themselves with all system operations.
        1) Basic Training: Provide twelve (12) hours of basic user training shall be provided (2-hour class repeated 6 times spaced over a two-week interval. User training shall be conducted at a location that is coordinated with the Owner.
        2) Advanced Training: Provide twelve (12) hours of advanced user training shall be provided (4-hour class repeated 3 times with six advanced users per class). User training shall be conducted at a location that is coordinated with the Owner.
        3) System Administrator Training: System Administrator Training shall be provided. System Administrator Training shall include both classroom work and field training.
        4) Software/Operational Training: Provide Twenty-Four (24) hours of software training (24 hours of training shall be repeated 1 time for 1 system administrator).
2. The Contractor shall structure each training course to describe all systems, software and applications as well as support programs. This course shall include a functional overview of the complete software and operations of each system. The course material must be presented in depth by a factory authorized instructor and shall covering in detail at the minimum all system functions, features rebooting and maintenance criteria.
3. Provide operation, parts, and maintenance manuals defining operation and troubleshooting methods of all systems and review with The Owner's User/Operators as part of training demonstrations.

4. `Provide detailed video recordings in high quality digitally formatted media of all demonstration and training of all systems and system operations.

   a. Utilize remote microphones as may be required to ensure high quality audio of the recorded demonstrations.
   b. Permanently and professionally label all recorded materials and provide self-sealing plastic cases.

3.14 PROJECT CLOSEOUT REQUIREMENTS

A. In addition to all final close requirements as specified by Division 01, specification section and related specification sections the Contractor shall provide all requirements of this section.

B. Final System Acceptance

1. In addition to the requirements set forth in Division 01, the Contractor shall prepare and issue a Certificate of Project Completion, containing:

   a. The date of project completion.
   b. A list of items that have been corrected by the Contractor.
   c. The time and date the Owner will assume possession of the system (transfer of ownership).
   d. The date that warranty begins.

2. The Owner and OAR will perform an inspection after receipt of written certification. The project completion inspection shall include, but not be limited to:

   a. The project’s contracted work and any additional change orders.
   b. All equipment and systems tested and shown operational in the presence of the Owner and OAR.

3. After the inspection, the Owner and OAR will prepare and submit to the Contractor, a list of items to be completed or corrected, as determined by the inspection, along with the designated timeframe for completion.
4. Should the Owner or OAR consider the work not to be complete, the Owner or OAR will immediately notify the Contractor, in writing, stating the reasons. The Contractor shall complete the work, and then send a second written notice to the Owner and OAR certifying that the Project is complete. The Owner and OAR shall then re-inspect the work upon Contractor’s request at a scheduled re-inspection time.

   a. At any time, the Owner shall have the right to Contract with a third party in order to complete and/or inspect any work of which Contractor failed to conform with the Contract requirements. All cost for this third party shall be borne by the original Contractor responsible for delivering the project.

C. Inspections

1. At the completion of the project and prior to final acceptance of the Work, provide evidence of final inspections and approvals to The Owner, in accordance with all requirements of the Contract Documents as well as required by the authorities having jurisdiction.

   a. Owner approval is required prior to final system acceptance and payment.

END OF SECTION 280500

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. UTP cabling.
2. Multimode optical fiber cabling.
3. Singlemode optical fiber cabling.
4. RS-232 cabling.
5. RS-485 cabling.
6. Identification products.

1.3 DEFINITIONS

A. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.

B. EMI: Electromagnetic interference.

C. IDC: Insulation displacement connector.

D. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.

E. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).

F. UTP: Unshielded twisted pair.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

1. For coaxial cable, include the following installation data for each type used:

a. Nominal OD.

b. Minimum bending radius.
c. Maximum pulling tension.

B. Shop Drawings: Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:

1. Vertical and horizontal offsets and transitions.
2. Clearances for access above and to side of cable trays.
3. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
4. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

C. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.

D. Source quality-control reports.

E. Field quality-control reports.

F. Maintenance Data: For wire and cable to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1. Testing Agency's Field Supervisor: Currently certified to supervise on-site testing.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical loss test set.

2. Test optical fiber cable on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector; include the loss value of each. Retain test data and include the record in maintenance data.
3. Test each pair of UTP cable for open and short circuits.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install UTP, optical fiber, and coaxial cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 PATHWAYS

A. Support of Open Cabling: NRTL labeled for support of Category 6 cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.

1. Support brackets with cable tie slots for fastening cable ties to brackets.
2. Lacing bars, spools, J-hooks, and D-rings.
3. Straps and other devices.

B. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems. Flexible metal conduit shall not be used.

1. Outlet boxes shall be no smaller than 2 inches wide, 3 inches high, and 2-1/2 inches deep.

2.2 UTP CABLE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Belden CDT Inc.; Electronics Division.
2. Berk-Tek; a Nexans company.
3. CommScope, Inc.
4. Mohawk; a division of Belden CDT.
5. Nordex/CDT; a subsidiary of Cable Design Technologies.
6. Superior Essex Inc.
7. SYSTIMAX Solutions; a CommScope, Inc. brand.

8. Tyco Electronics/AMP Netconnect; Tyco International Ltd.

B. Description: 100-ohm, 4-pair UTP, formed into 4-pair, binder groups covered with a thermoplastic jacket.

1. Comply with ICEA S-90-661 for mechanical properties.
2. Comply with TIA/EIA-568-B.1 for performance specifications.
3. Comply with TIA/EIA-568-B.2, Category 5e.
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:

a. Communications, General Purpose: Type CM or CMG.
b. Communications, Plenum Rated: Type CMP, complying with NFPA 262.
c. Communications, Riser Rated: Type CMR, complying with UL 1666.
d. Communications, Limited Purpose: Type CMX.
e. Multipurpose: Type MP or MPG.
f. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.
g. Multipurpose, Riser Rated: Type MPR, complying with UL 1666.

2.3 UTP CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Hubbell Premise Wiring.
2. KRONE Incorporated.
3. Leviton Voice & Data Division.
4. Panduit Corp.
5. Siemon Co. (The).

B. General Requirements for Cable Connecting Hardware: Comply with TIA/EIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.

C. Patch Cords: Factory-made, four-pair cables in 48-inch lengths; terminated with eight-position modular plug at each end.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure Category 5e performance. Patch cords shall have latch guards to protect against snagging.
2. Patch cords shall have color-coded boots for circuit identification.

2.4 OPTICAL FIBER CABLE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Berk-Tek; a Nexans company.
2. CommScope, Inc.
3. Corning Cable Systems.
4. General Cable Technologies Corporation.
5. Mohawk; a division of Belden CDT.
6. Superior Essex Inc.
7. SYSTIMAX Solutions; a CommScope, Inc. brand.

B. Description: Multimode and Single mode, nonconductive, tight buffer, optical fiber cable.

1. Comply with ICEA S-83-596 for mechanical properties.
2. Comply with TIA/EIA-568-B.3 for performance specifications.
3. Comply with TIA/EIA-492 for detailed specifications.
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:

    a. General Purpose, Nonconductive: Type OFN or OFNG.
    b. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
    c. Riser Rated, Nonconductive: Type OFNR, complying with UL 1666.
    d. General Purpose, Conductive: Type OFC or OFCG.
    e. Plenum Rated, Conductive: Type OFCP, complying with NFPA 262.
    f. Riser Rated, Conductive: Type OFCR, complying with UL 1666.

5. Conductive cable shall be steel armored type.
6. Maximum Attenuation:

    a. Multimode: 3.50 dB/km at 850 nm; 1.5 dB/km at 1300 nm.
    b. Single mode: 0.03 db/km at 1310 nm; 0.02 db/km at1550 nm

C. Jacket:

1. Jacket Color: Orange for Multimode, Yellow for Single mode.
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA/EIA-598-B.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches.

2.5 OPTICAL FIBER CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ADC.
2. Corning Cable Systems.
3. Hubbell Premise Wiring.
4. Nordex/CDT; a subsidiary of Cable Design Technologies.
5. Siemon Co. (The).

B. Patch Cords: Factory-made, dual-fiber cables in 36-inch lengths.

C. Cable Connecting Hardware:

1. Comply with Optical Fiber Connector Intermateability Standards (FOCIS) specifications of TIA/EIA-604-2, TIA/EIA-604-3-A, and TIA/EIA-604-12. Comply with TIA/EIA-568-B.3.
2. Quick-connect, simplex and duplex, Type SC connectors. Insertion loss not more than 0.75 dB.
3. Type SFF connectors may be used in termination racks, panels, and equipment packages.

2.6 RS-232 CABLE

A. Standard Cable: NFPA 70, Type CM.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Polypropylene insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. PVC jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Plastic insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. Plastic jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.7 RS-485 CABLE

A. Standard Cable: NFPA 70, Type CM.

1. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.8 IDENTIFICATION PRODUCTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Brady Corporation
2. HellermannTyton.
3. Kroy LLC.
4. Panduit Corp.

B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

C. Comply with requirements in Division 26 Section "Identification for Electrical Systems."

2.9 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-B.1.

C. Factory test UTP cables according to TIA/EIA-568-B.2.

D. Factory test multimode optical fiber cables according to TIA/EIA-526-14-A and TIA/EIA-568-B.3.

E. Factory sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.

F. Cable will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF PATHWAYS

A. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.

B. Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.

C. Install manufactured conduit sweeps and long-radius elbows whenever possible.

3.2 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA/EIA-568-B.1.
2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.

8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2.
2. Do not untwist UTP cables more than 1/2 inch from the point of termination to maintain cable geometry.

D. Optical Fiber Cable Installation:

1. Comply with TIA/EIA-568-B.3.
2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.

E. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA/EIA-569-A for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches

4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches

3.3 GROUNDING

A. For communications wiring, comply with ANSI-J-STD-607-A and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

3.4 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Visually inspect UTP and optical fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA/EIA-568-B.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross connection.

    a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

4. Optical Fiber Cable Tests:

    a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:

        1) Multimode Link Measurements: Test at 850 or 1300 nm in 1 direction according to TIA/EIA-526-14-A, Method B, One Reference Jumper.

2) Attenuation test results for links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA/EIA-568-B.1.

D. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

E. End-to-end cabling will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

PART 4 - CONTRACTORS QUALITY CONTROL REQUIREMENTS

4.1 GENERAL

A. Comply with applicable provisions of Division 1 Section "Quality Requirements" for requirements for Contractor’s Quality Control Program.

END OF SECTION 280513

PART 1 – GENERAL

1.1 Related documents

A. Project drawings and general provisions of the Contract, including but not limited to all; General and Supplementary Conditions, Division 01 and all related specification sections shall apply to this section.

B. Related Sections:

1. Division 08 – Door Hardware
2. Division 26 – Common Work Results for Electrical
3. Division 26 – Low Voltage Electrical Power Conductors and Cables
4. Division 26 – Grounding and Bonding for Electrical Systems
5. Division 26 – Hangers and Supports for Electrical Systems
6. Division 26 – Raceways and Boxes for Electrical Systems
7. Division 26 – Identification for Electrical Systems
8. Division 27 – Common Work Results for Communications Systems
9. Division 27 – Network Communications Systems
10. Division 28 – Common Work Results for Safety and Security Systems
11. Division 28 – Video Surveillance System
12. Division 28 – Addressable Fire Alarm System

C. Reference Symbols:

1. All device symbols are defined by the appropriate symbol schedules. Because of the scale of the drawings, symbols are shown on drawings as close as possible to the mounting location.

a. Contractor shall coordinate exact locations of all equipment with all site plan and architectural floor plan drawings as well as related specification sections for all affected systems and prior to submittal of any shop drawings.

D. Abbreviations:

1. Refer to specification Section 28 05 00 for additional information.

E. Definitions:

1. Refer to specification Section 28 05 00 for additional information.

1.2 SUMMARY

A. The intent of this specification is to establish a standard of quality, functions, and features for the installation and modifications necessary support the extension of the existing Genetec Access Control System (ACS) currently serving the Destin-Fort Walton Beach Airport (VPS) as indicated on the contract drawings and/or herein specified.

1. The contractor shall be responsible for providing all system layout, installation, cabling, conduits, devices, processors, power supplies and appurtenances. The contractor shall include all software revisions, existing programming modifications, commissioning, testing, and certifications necessary to provide a

complete and fully operating TCP/IP-based Access Control System for the new Satellite Concourse 'C' facility in accordance with the Contract Documents and/or as herein specified.

a. The new Satellite Concourse 'C' system shall be an extension of the existing Airport ACS and shall be sized to provide full seamless integration of the existing ACS platform.

1) Expansion and reprogramming of the existing Genetec system shall include all software revisions and server modifications as required to fully integrate the new Satellite Concourse 'C' ACS with the Airport wide physical access control network.

2. The installation, performance, features, functions, software and programming modifications as specified herein have been designed to offer the maximum system efficiency ease of operation, and occupant safety as required to maintain operational continuity of the existing Genetec system serving the Airport Campus.

a. The Contractor shall furnish and install all system components, hardware and software as herein specified. The system shall be an extension of the Authority's existing Access Control system and shall be seamlessly integrated and provide full functionality at both the Facility and the Airport ACS network.

1) The system will utilize distributed intelligent processing through the deployment of strategically located remote Intelligent Field Panels (IFP). All system panels will function as an extension of the existing airport-wide Genetec System.
2) The ACS serving the new Satellite Concourse 'C' will consist of, but not be limited to, all IFP Processors, remote Door Interface Box (DIB), smart card readers, smart card readers w/keypads, biometric/smart card readers, input devices, output devices, network communications equipment, power supplies, conduits, and cabling and will be connected back the existing Genetec server located in the Main Terminal building.
3) All IFP's will be 485 serial-based protocol and terminated in the nearest ACS IFP processor located installed in the nearest communication room and will be fully integrated with the existing VPS access control system network

3. Any deviations from the specified criteria shall be documented, reviewed and agreed to in writing by the Owner and Owner's Authorized Representative (OAR) prior to submission of bids. Refer to Division 01, and 28 05 00 specification section for product substitutions.

a. The required information shall include but not limited to: reason for deviation, all differences in performance, operation, and function from the herein specified requirements, all benefits, and added features to owner as a result of the deviations and any additional incurred costs to owner for maintenance and long-term ownership.

1) Failure to provide the Owner and OAR with the required information shall result in all shop drawing submissions being returned for non-conformance with the contract requirements.

2. It shall be the responsibility of the contractor to ensure that the installed system meets or exceeds every standard set forth in these specifications. The contractor shall be responsible for providing a complete and functional enterprise-based system, including all necessary components, devices, electrical power, software,

programming, commissioning, testing and all appurtenances as well as the integration to all ancillary systems as necessary to provide a complete and fully operational system whether specifically included in this section or not.

a. The system shall consist of, but not be limited to, all equipment, devices, remote central processors, card readers, remote door controllers panels (DCP), door lock and auxiliary power supplies, card readers, conduits, cabling, software, programming, integration of door hardware (provided by Division 08) and all appurtenances.

b. In addition, the integration of the facility's Fire Alarm System, Elevator Cars and related systems necessary to provide a complete operating TCP/IP based ACS shall be in accordance with the contract documents.

3. The ACS network shall be configured as a dedicated TCP/IP network. All structured cabling (horizontal and backbone) as well all system devices shall be installed in dedicated conduits.

a. The Contractor shall have a registered RCDD professional review and seal all system shop drawings demonstrating conformance to all Division 27 specification requirements, industry standard design, installation and certifications of any structured cabling networks related to the installation and performance of the TCP/IP based Physical Access Control System, as well related electronic security and any ancillary systems.

1) Refer to Specification section 27 05 00 and all related Division 27 specification sections for all cable installation, shop drawing requirements, and testing of all TCP/IP based cabling infrastructures.

B. The installation of the ACS shall comply with the applicable sections of NFPA-70 National Electrical Code (Article 760). The system shall be electrically supervised and monitor the integrity of all conductors. In addition, the system shall meet all applicable requirements of NFPA 72 for the integration to Protected Premises Signaling Systems, NFPA 731 for the Installation of Electronic Premises Security Systems.

1. The contractor and all sub-contractors for this work shall have read all of the General Conditions, Special Requirements, General Requirements and all applicable related specification sections and in the execution of all work shall be bound by all of the conditions and requirements therein.

C. Prior to the submission of the Bid, any discrepancies or inconsistencies noted within these specifications and/or project drawings shall be brought to the immediate attention of the Owner and Owner's Authorized Representative (OAR).

1. All equipment symbols are shown on drawings as close as possible to their intended location. Contractor shall coordinate the installation of all equipment, devices, controls, cabling and integration of any systems with all affected trades and system integrators. The Contractor shall document all coordination requirements at the time of shop drawing submissions.

2. The Contract Drawings for this work are diagrammatic and intended to convey the extent, general arrangement and locations of the work. Because of the scale of these drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may not be shown.

a. The contractor shall include all equipment, materials, components, device, controls and all appurtenances where required by code, by manufacturers'

recommendations, and all related Contract Documents in order to ensure proper installation operation and integration of all components, equipment, devices and/or systems.

D. The Contract drawings and specifications may not deal individually with every part, control, device, software or programming, which may be required to produce the equipment and/or system performance as necessary for the proper installation and integration of all door hardware and systems in accordance with all requirements of the Contract Documents.

1. The Contractor shall include all such items and components, as required, for the complete and operational installation of all system components as defined by the Contract Documents, whether or not specifically indicated and/or specified.

a. Include such items, as required, for a complete operational system, whether or not specifically indicated.
b. Coordinate with other applicable trades in submittal of shop drawings and the installation of all systems.
c. Shop drawings shall detail space conditions to accommodate other concerned trades, subject to final review by the Owner and OAR.
d. If installation of equipment, raceways, cable trays and/or conduit is performed prior to coordination with other trades, which interferes with work of other trades, make necessary changes to correct the condition at no additional cost to the Owner.
e. The contractor shall be responsible for providing all wiring, connections to all equipment, circuits and devices as well as all coordination and programming for the integration of all electronic door hardware, ancillary systems impacting the operation of PACS. Refer to the contract drawings and related specification sections for additional information.

E. Use of Premises

1. Refer to specification section 28 05 00 for addition information.

a. The Contractor is reminded that this is and will continue to be an operating Aviation facility. It shall be the Contractor's responsibility to become completely familiar with all existing conditions, cable terminations, and life safety systems in this facility in order to ensure proper and seamless installation and integration of all ACS system components and communications networks and cabling.

F. Coordination

1. Refer to specification section 28 05 00 for addition information.

1.2 SYSTEMS DESCRIPTION

A. All references to industry and trade association standards as well as all building codes are minimum installation requirements for this system. The codes, standards and agencies listed in specification section 28 05 00 shall form a part of this specification section and all work shall comply with the latest adopted standards.

1. The publications listed in specification Section 28 05 00 (including all amendments, addenda, revisions, supplement, and errata) shall form a part of this specification section to the extent referenced. The publications referenced in the related specification section is by the basic designations only.

a. Where the contract drawings and/or specification sections mandate a greater requirement or performance than those specified by the referenced codes and standards, the greater shall then be the governing requirements for this project. Refer to specification Section 28 05 00 for all minimum codes and standards to be applied for this project.

B. The ACS shall be modular in construction for ease of expansion and service. The system shall include all necessary equipment, components, central processors, modules, devices, integration of door hardware (provided by Division 08), TCP/IP based remote intelligent field panels (IFP), electrical power, existing system software revisions, programming modifications, commissioning and testing as necessary to provide a complete fully operational system.

1. The ACS shall include the full operational integration of all doors, garage doors, gates, and related systems where indicated on the contract drawings and/or as herein specified.
2. All ACS card readers shall employ OSDP with secure channel in accordance with SIA standards for OSDP performance and shall support the operation of Owner-issued existing contactless smart card technology.
3. Any software upgrades to the existing ACS shall support the importation of the Owner's existing identification and informational databases to permit the population of authentication and access rights for all of the Owner's employees.

a. Where the provided software upgrades do not support third party database importation the Contractor shall include in their bid all labor costs for the manual programming of all authentication and access rights to be performed by the Contractor's personnel.

4. The ACS shall also include the complete operational integration of the Siemens Siveillance video surveillance systems in accordance with the requirements of this specification section and all related specification sections.
5. All access-controlled doors shall be fully integrated with the new Satellite Concourse 'C' Siemens fire alarm system for automatic release of all electronic locking mechanisms in accordance with the requirements of the IBC Chapter 10, and NFPA 101 Chapter 7 and NFPA 72.

a. Access controlled egress doors shall automatically unlock upon activation of any manual pull station, automatic smoke detector, sprinkler water flow switch or special hazard suppression system per the IBC and NFPA requirements.

C. All ACS components shall be on replaceable panels and/or modules to accommodate functional changes when required. All system wiring and components shall be fully supervised so as to annunciate a trouble signal if removed or disconnected.

D. The contractor shall be responsible for providing all wiring, connections to all equipment, circuits and devices as well as all coordination and programming for the integration of all ancillary systems impacting the operation of the access control system. Refer to the contract drawings and related specification sections for additional information.

1. Note: The access control system shall be based on TCP/IP protocols and shall be configured as a dedicated structured cabled LAN. The Contractor shall furnish and install all necessary patch panels, all peripheral network components, as well as all Category-6 UTP, fiber optic cabling and appurtenances in accordance with all

requirements of the Contract documents. Refer to specification Section 21 05 00 and related Division 27 specification section for additional information related to network communications equipment, cabling requirements and testing.

2. The contractor shall assume total system responsibility for providing all inter-building wiring, any connections to the stations local and wide area networks (for remote off premises communications by the Owner, any Authority provided common carrier network equipment, integration of any Authority provided systems, equipment, and/or databases as it relates to the operation of the access control system.

1.3 REFERENCES

A. All references to industry and trade association standards as well as all building codes are minimum installation requirements for this system. The codes, standards and agencies listed in specification Section 28 05 00 shall also form a part of this specification section and all work shall comply with the latest adopted standards.

1. The publications listed in specification Section 28 05 00 (including all amendments, addenda, revisions, supplement, and errata) shall form a part of this specification section to the extent referenced. The publications are referenced in the aforementioned specification section by the basic designation only.
2. Where the contract drawings and\or specification sections mandate a greater requirement or performance than those specified by the aforementioned referenced codes and standards in section 28 05 00, shall then be the governing requirements for this project. Refer to specification Section 28 05 00 for all minimum codes and standards to be applied for this project.

1.4 SYSTEMS DESCRIPTION

A. Refer to specification Section 28 05 00 for additional information.

1.5 SUBMITTALS

A. In addition to all requirements as specified by specification Section 28 05 00 the access control system shall also be provided in accordance with the following requirements:

1. Provide a complete termination schedule of all door locations; indicate on the construction drawings door identifications corresponding with schedule.
2. Provide a complete alarm matrix for all door locations, indicate all associated alarm call-ups and camera pre-sets for every camera indicated on the contract drawings, include the related device activation and/or event for each pre-set and alarm call-up.
3. Provide a complete video surveillance camera integration schedule (where included) indicating each camera position relevant to door input location as well as a diagram indicating each termination position in the appropriate equipment cabinet intelligent system controller and/or remote door controller panel.
4. Provide a complete integration schedule indicating all ancillary system locations as well as a diagram indicating each termination position in the appropriate equipment cabinet intelligent system controller and/or remote door controller panel.
5. All integration protocols, communications connectivity and interface components to all, fire alarm, intrusion detection, emergency call, local door management alarm and video surveillance systems as well as any ancillary systems.

a. Wiring diagrams shall indicate all wiring for each field device as well as all wiring interconnections between each device and all controls and/or associated equipment, in addition, all electrical power connections with electrical circuit numbers shall be indicated to all equipment requiring electrical power.

B. Additional Submittals for Access Control Systems (ACS)

1. IFP/DIB point-to-point wiring terminations and programming matrices shall include, at the minimum, the following information:

a. IFP/DIB panel number
b. First reader number
c. First monitor point number
d. IFP/DIB input or output location
e. IFP/DIB chain number
f. IFP/DIB cabinet tamper input number
g. IFP/DIB power failure input number
h. Number of monitor points reserved for expansion
i. Number of control points (relays) reserved for expansion boards
j. System Numbers for Card Readers
k. System Numbers for Monitor Point Inputs
l. System Numbers for Control Points (Relays)
m. Next IFP/DIB or input module First Monitor Point Number
n. Next IFP/DIB or output module First Control Point Number
o. Cable ID Number
p. Description Field (Room Number)
q. Description Field (Device Type i.e.: In Reader, Out
r. Reader, etc.)
s. Description Field
t. IFP/DIB Input Location

1.6 QUALITY ASSURANCE

A. In addition to all requirements as specified by Specification Section 28 05 00 the Access Control system shall also be provided in accordance with the following requirements:

1. The access control system equipment manufacturer shall be an ISO 9001 certified company and meet the requirements of BS EN9001: ANSI/ASQ Q9001-1997.
2. All control equipment must have transient protection to comply with UL864 requirements. Where security circuits leave the building, additional transient protection must be provided for each circuit. Devices must be UL listed under standard #497B (Isolated Loop Protectors).

a. Refer to specification section 28 05 00 for additional information related to the installation of all surge and transient protection requirements.

3. The Electronic Security Systems Integrator (ESSI) shall be an established security alarm provider, duly licensed to provide security systems within in the municipality of the project location and is an authorized distributor of the equipment supplied for this project with full manufacturer's warranty privileges.
4. Installation and start-up of all systems shall be under the direct supervision of the ESSI. The system supplier shall be an accredited and authorized distributor of the equipment manufacturer of all equipment being provided and be prepared to offer a service contract for system maintenance at completion of the guarantee period.
5. The contractor shall show satisfactory evidence, upon request, that the equipment

supplier maintains a fully equipped service organization capable of furnishing adequate inspection and service to the system. The supplier shall maintain at his facility the necessary spare parts in the proper proportion as recommended by the manufacturer to maintain and service the equipment being supplied.

6. Electronic Security System Integrator shall coordinate the installation and wiring terminations for all doors equipped with electronic security protection. Refer to related electronic security system drawings and Divisions 08 and related Division 28 specification sections.

1.7 SPARE PARTS

A. Provide the following:
1. One (1) reader of each type used as a spare.
2. One (1) access control/alarm monitoring processor as a spare.
3. One (1) reader interface module for each type used as a spare.
4. One (1) power supply of each type used as a spare
5. One (1) factory box for each component, addressed to the manufacturer to facilitate factory return for repair authorizations.
6. Written procedure for obtaining return authorizations. (If not required, state so in writing.)

1.8 DELIVERY, STORAGE AND HANDLING

A. Refer to specification Section 28 05 00 for additional information

1.9 RECORD DOCUMENTS

A. Comply with all requirements of specification Section 28 05 00.

1.10 SOFTWARE AGREEMENT

A. Comply with all requirements of specification Section 28 05 00.

1.11 OPERATIONS AND MAINTENANCE

A. Comply with all requirements of specification Section 28 05 00.

1.12 EXTRA MATERIAL

A. Not Used

PART 2 - PRODUCTS

2.1 MANUFACTURED PRODUCTS

A. Comply with all requirements of specification section 28 05 00.

2.2 MANUFACTURERS

A. Acceptable manufacturers for this project, providing full compliance with this specification section and all requirements of specification 28 05 00 shall be as follows:
1. Genetec as Maintained by Authority
2. No Substitutions shall be accepted.

B. Manufacturers listed as acceptable shall not negate the contractor's responsibility for providing the ACS system in accordance with all functions and performance requirements of this specification.

2.3 SYSTEM DESCRIPTION

A. The contractor shall provide a fully operational TCP/IP enterprise based access control system (ACS). The scope of work shall include, but not be limited to, the furnishing and installation of all, access control system components, devices and equipment, connectivity to all door hardware, client work stations, cabling, conduits, and all appurtenances as required to meet the design and performance requirements as indicated on the contract drawings and/or as herein specified.

1. The Contractor shall provide the necessary integration of all door hardware (furnished under Division 08 specification), fire alarm systems, surveillance system cameras, as well as all system programming and training required to provide a fully operating system as indicated on the contract drawings and/or as herein specified.

B. The ACS shall communicate with all network servers, intelligent field panels (IFP) and local door interface box (DIB), client workstations residing on the access control systems' dedicated network by LAN/WAN connections utilizing standard TCP/IP communications protocols.

C. The system software shall take full advantage of its multi-tasking capabilities, allowing downloads of cardholder data as well as any server information to occur simultaneously while monitoring and receiving alarms from the field hardware.

1. Downloading database changes shall not interfere with any output control, access decisions, alarm monitoring, traces, or any other required function of the field hardware and alarm monitoring client workstation. Communications between the system client workstation(s) and the servers shall be interleaving so that all alarms will still report to any client workstation while downloads are occurring.
2. In the event of loss and then restoration of communications between the primary network server, database synchronization between the primary server and each remote Intelligent Field Panel (IFP) and/or local door interface box (DIB) shall be fast and efficient.

a. Every change made to the primary database shall establish a time/date stamp for the change. Once communications have been restored, database synchronization shall occur immediately and without System Operator intervention. The time-date stamp shall be compared with any changes in the system database, hardware configuration, events, or output control commands and the system shall log which changes occurred after the off-line event.

1) Any changes made to the Access Control system database while the system was off-line shall also be simultaneously downloaded to all IFP and DIB panels integrated to the system.

D. The ACS shall allow access to authorized personnel within pre-determined areas of the site, based on time and/or authorization levels. The basis of this design is to incorporate a CPU driven system with proximity card access, and to accommodate multiple door locations as well as future expansion.

E. The ACS shall provide all functions and features as herein specified, including but not limited to the following capabilities:

1. Provide the ability to regulate access through specific doors and gates to secured

areas of the facility and provide computer generated color employee and visitor credentials.

2. Shall be provided with the functional capability to automatically and/or manually call-up pre-selected video surveillance cameras, seamlessly retrieve recorded and/or stored digital video of activities from the video surveillance system.
3. Shall utilize a single seamlessly integrated relational database for all functionality. This integration shall be provided with one operating environment. The systems operating environment shall be the fully multi-tasking multi-threading and compatible with Microsoft Windows, UNIX, and LINUX operating systems.
4. The ACS shall utilize web enabled client applications capable of running on independent client operating systems including Windows, UNIX, and LINUX platforms. The web-enabled applications shall utilize the same common database as the other system modules.
5. The system shall be written so that all system modules (access control, alarm monitoring, ID Management, visitor management, digital video, etc.) are at the minimum developed and built from a unified 32-bit source code set. There absolutely shall not be a separate source code bases for the individual modules of the system.
6. The ACS shall perform all Security Management Systems (SMS) functions utilizing Human Machine Interface (HMI) terminals or Client Workstations. The HMI shall provide the principle operation platform for the control and monitoring of individual security devices, doors/gates, video surveillance cameras.
7. All Client Workstations shall employ Graphic User Interface based software (GUI) that graphically indicates all building floor/site plans and depicts all access-controlled doors, intrusion alarmed doors, and Surveillance cameras. The security management systems programming shall facilitate simple user-friendly operation and allow operators to graphically interact with the ACS.

    a. The ACS shall also include a Threat Level Management feature that allows an operator to make system-wide security changes by simply changing one parameter based on pre-set threat levels.
    b. The Threat Level feature shall provide a minimum of 5 levels that can be custom configured to change from any level to any other level shall cause execution of a series of commands to make changes to security settings including, but not limited to:

        1) Door lock and unlock status; multi-factor user authentication (i.e. card+PIN, etc.); disabling certain readers or reader groups; triggering outputs or output groups; etc.
        2) The Threat Level feature shall provide an option that requires authorized operators to input their username and password to elevate to selected levels.
        3) The Threat Level feature shall provide an option that allows an authorized operator to select an ICON on the HMI that will release magnetic hold open device on all ACS doors and automatically lock down the facility.

2. All client workstations and all remote panels residing on the network shall connect to, and monitor, all field hardware devices, such as card readers, IFP's and all integrated systems. Administrative tasks including but not limited to defining asset information, access groups, time zones, configuring digital video devices, generating reports, configuring graphic maps shall be user configurable.

a. Any client workstations shall be capable serving as both the credential creation and data input client terminal for authentication and access management functions for the system. In addition, any workstation on the network shall also capable serving as the visitor management workstation to allow for the enrollment of visitors and the scheduling of visits.

b. Any off-site client workstations shall allow for any combination of system functions and operations to be available or from any remote IP and/or dial-up client workstation that is licensed to do so. All system data must reside on a single database on the network and must be accessible in real time to all system workstations connected to the network. This shall allow for automatic change propagation to all client workstations on the system as well as a common database to consolidate all information and allow for better disaster recovery.

3. The ACS shall be fully expandable to support an unlimited number of individual modules or integrated client workstations. All access control field hardware, including access control network servers IFP's and DIB's, shall be connected to all access control system workstations on the network. All workstations shall utilize Windows, UNIX, or LINUX based software as their principle operating system.
4. The ACS shall be designed to support any industry standard thermal dye transfer ID card printer with a certified industry standard Windows, UNIX, or LINUX drivers. The system shall also support any ink jet, laser, or dot matrix printer with a Microsoft certified industry standard driver for the operating system being provided.
5. The ACS shall provide full seamless operational control and monitoring of all integrated video intercom stations and video surveillance systems.

F. Any user programmed alarm event shall cause the access control system client workstation(s) to provide an audible and visual alarm requiring the operator to acknowledge the event and enter via the keyboard to generate a historical entry and a print-out a report of the event and cause.

G. All remote client workstation(s) and servers shall be provided where indicated on the contract drawings and/or as herein specified and shall meet or exceed the requirements specified herein as well as all requirements of the access control system manufacturer.

1. All primary and remote client workstation(s) and servers shall be connected to dedicated UPS units sized to provide a minimum of 15 minutes operating time.

H. Coordinate the interface to life safety systems with the appropriate trades. Electronic locks shall not inhibit egress in the event of any emergency.

I. All ACS remote IFP's and DIB's shall seamlessly integrate with the primary access control existing network server. In addition, the remote panels shall integrate all associated door position switches, egress devices and integral proximity card reader and electric door locking hardware, as well as any hydraulic barricades, parking gates, garage doors and vehicle loop detectors. The programming at the existing access control network servers shall make the final determination of access granted and denials. All system output programs assigned via control-by-event interlock programming to be activated by valid access indication shall be executed, and the associated system outputs shall be activated.

1. All IFP's processors shall be equipped at a minimum with 16 MB of on-board memory and shall support 2 door, 4 door, 8 door or 16 door configurations as well

as providing a stand-alone dry contact remote I/O capability and shall employ OSDP with secure channel communications protocol between panel and card reader in accordance with SIA standards for OSDP performance.

2. All DIB's processors shall be equipped at a minimum with 4 MB of on-board memory and shall support 2 door, 4 door, 8 door or 16 door configurations as well as providing a stand-alone dry contact remote I/O capability and shall employ OSDP with secure channel communications protocol between panel and card reader in accordance with SIA standards for OSDP performance.

J. All Intelligent Field Panels (IFP) and remote Door Interface Boxes (DIB) shall be provided with an integral power supply and battery charger designed to charge required amp hour batteries in order to support up to 24-hours of standby system operation.

K. The ACS must be designed to perform a wide variety of functions as part of a Total Security Management Solution.

1. Provide the at the minimum the following system modules and/or functions shall be provided as part of the system installation:

a. Access Control.
b. Alarm Monitoring.
c. ID Management.
d. Digital Video.
e. Remote Access Level Management.
f. Third Party Interfaces.
g. System Administration.
h. Importation of Third-Party Data Bases and Photographs
i. Screen/Forms Creation.
j. Graphical Map Creation.
k. Application Programming Interfaces.
l. Data Import.
m. Bi-Directional Data Exchange.
n. Threat Management Functionality.
o. Video Surveillance Camera Call-up and Control

L. The system shall be capable of logging and storing minimum of 800 events in an alarm log and 800 events in trouble log. These events shall be stored in a battery protected random access memory.

1. The minimum trouble events shall be stored in the system Historical Trouble Log

a. Trouble conditions.
b. Trouble Acknowledgment.
c. Invalid Attempt.
d. Door Ajar Time out Indication.
e. Trouble Historical log cleared.

M. Time Schedule Operations:

1. Provide a minimum 256-time schedules. Time schedules are to be used for:

a. Arm/disarming of any input.
b. On/off state of any output.
c. Instructional text in response to alarms.
d. Change in state/status of any previous operator commands.
e. Enable/disable card readers and/or PIN keypads.
f. Authorized access periods.

N. User Data Base:

1. Provide as a minimum the following fields and character space for card user identification:

   a. Card Number: 9 digits.
   b. Keypad PIN: Up to 6 digits.
   c. User Time Zone: Minimum of 63.
   d. Facility Office Code: 0-99.
   e. User Number: 9 alphanumeric.
   f. Username: 32 alphanumeric.
   g. User Address: Street - 25 alphanumeric.
   h. User Address: City and Street - 25 alphanumeric.
   i. Issue Date: MMDDYY.
   j. Card Activation Date: MMDDYY.
   k. Card Deactivation Date: MMDDYY.
   l. Department/Division: 6 alphanumeric.
   m. Work-Shift Number: 1, 2, 3.
   n. Telephone Number: 12 numeric.
   o. Car Tag Number: 12 numeric.
   p. Personnel Status: 1 alphanumeric (employee, visitor, contractor, maintenance).
   q. A minimum of 50 user definable personal data fields.

O. Event Levels:

1. As a minimum, the system shall be capable of no less than six (6) different event levels.

P. Site Coding:

1. N/A. All access control cards shall be provided by the Owner

Q. Auto-Lock-Up:

1. The System shall support a Bulk Cardholder functionality that will allow an administrator to sort and select multiple cardholders, after selection various data fields including access codes, inactive date, badge type, etc. can be edited, saved and downloaded to all ISP's and DCP's, in order to facilitate the possibility of zeroing out the user time zones voiding card access entries.

2.1 MATERIALS

A. Comply with all requirements of specification section 28 05 00.

2.2 PERFORMANCE REQUIREMENTS

A. The Access Control System shall provide five (5) area control features: Hard Anti-passback, Soft Anti-passback, Timed Anti-passback, Two Person Control, and Occupancy Limit. Area control shall be a security method of preventing a person from passing their badge to another person for dual entry into a single location utilizing one card.

1. Hard Anti-passback

   a. The Hard Anti-passback feature shall require that a badge always be used to enter and exit an area. The controlled areas shall have both entry and exit card readers at all portals. Areas shall be logically defined under the system, and area control shall not be required at all areas of the facility to be utilized.
   b. Hard Anti-passback shall work in the following manner. A cardholder must

present his/her badge at the entry card reader of the area that the person wishes to enter. Once access has been granted into the area, the cardholder cannot present the badge to another entry card reader within the same area without first presenting his/her badge to the respective exit card reader of that area. Should a cardholder attempt to use any other card reader in the same area besides the occupied area's exit card reader once access has been granted to that area, the cardholder shall be denied access and an alarm shall be reported to the alarm monitoring client workstation.

c. Nested control areas (areas inside areas) shall be definable with a minimum of 64 entry and exit card readers. It shall be possible to have an area within an area and/or multiple areas that are independent of each other in which Hard Anti-passback rules shall apply.

2. Soft Anti-passback

a. The Soft Anti-passback feature shall require that a badge be used to enter and exit an area. The controlled areas shall have both entry and exit card readers at all portals. Areas shall be logically defined under the system, and area control shall not be required at all areas of the facility to be utilized.

b. Soft Anti-passback shall work in the following manner. A cardholder must present his/her badge at the entry card reader of the area that the person wishes to enter. Once access has been granted into the area, the cardholder cannot present his/her badge to another entry card reader within the same area without first presenting his/her badge to the respective exit card reader of that area.

c. It shall be possible to have an area within an area and/or multiple areas that are independent of each other.

1) Should a cardholder attempt to use another card reader in the same area besides the occupied area's exit card reader, the cardholder shall be allowed access. (If that cardholder has the appropriate authorizations to the new area), and an alarm shall be reported to the alarm monitoring client workstation.

2) The following summary criteria shall apply under Hard or Soft Anti-passback:

a) Initially (Time 0) all cardholders are reset to Area 0.

b) Any cardholder shall enter a controlled area any time after Time 0 by presenting a badge to a system entry card reader.

c) A cardholder shall not exit the controlled area unless he has entered the area presenting a badge to the system entry card reader.

d) A cardholder shall not enter the controlled area a second time unless the cardholder has exited that area previously.

e) A cardholder shall be able to enter through any entry card reader and exit through any exit card reader of a single controlled area.

f) These options include a "forgiveness" feature that will allow the System Administrator to reset the anti- passback of all cardholders to Time 0 Area 0, either through a manual override or a time zone command.

g) The system shall provide an anti-passback exempt option for

privileged or VIP cardholders. Cardholders with this option will not have anti-passback rules applied to them.

h) The system shall also have a "forgiveness" feature that will allow the System Administrator to assign "one free pass" to an individual cardholder. This will allow the System Administrator to reset the anti-passback of an individual cardholder to Time 0 Area 0.

3. Timed Anti-passback

a. Timed Anti-Passback shall allow the System Administrator to decide how long after a cardholder has swiped their badge that they will have to wait before the same badge will be accepted again at the same card reader. This helps prevent multiple swipes by an individual to allow access to others through turnstile doors.

4. Two Person Control

a. Two Person Rule shall be provided to restrict access to certain areas unless there are two (2) cardholders present. This restricts individuals from being alone in restricted or highly secure areas. When an area is configured for Two Person Rule, the following criteria shall prevail:

1) The card reader will grant access only if two valid cardholders (with authorized access levels) swipe their badges one after the other. In the event that a second authorized card is not presented within 10 seconds of the first authorized badge, the card reader shall reset and the first card will have to be swiped again.
2) Once 2 people occupy an area, individual access shall be granted.
3) Individual exit shall be permitted until an area is occupied by only 2 cardholders at which point the Two Person Rule applies for exit.

5. Occupancy Limit

a. Occupancy Limit shall restrict the number of cardholders that will be present in an area at any given time. The Occupancy Limit area shall be able to be defined by the System Administrator to limit up to 999,999 cardholders to be in that area at any given time. Once the occupancy limit has been reached, a cardholder must swipe out of the exit card reader before the next cardholder may enter. Each area for which Occupancy Limit is enabled shall be definable with up to 64 entry/exit card readers.

B. A valid read at any door, shall provide a valid access indication on the client workstation(s) and cause the door to unlock with the following exceptions:

1. A heightened security condition exists within the facility.
2. Individual does not have authorization to enter the protected space.

C. A valid read at selected exterior door locations shall provide a valid access indication on the client workstation(s) and cause the door to unlock, with the following exceptions:

1. A heightened security condition exists within the facility.
2. Individual does not have authorization to enter the facility after hours.

D. At a predetermined time, according to the days of the week, excluding holidays the access control system shall have the capability to automatically disarm the intrusion detection system open and close parking garage doors. All selected door-

locking mechanisms shall remain functional. Coordinate with the Owner and OAR all operational requirements for this feature.

E. Each individual door must have the capability of being assigned a Door Open Too Long (DOTL) Program that will initiate an alarm to the operator that the door has been left unsecured or has remained open longer than the user defined and programmed time interval.

F. Make provisions to permit operator to "shunt" an individual door alarm if appropriate operator level is utilized for reasons of frequent use or trouble; cause the following to occur:

1. Client workstation(s) will display door as zoned out of system.
2. Historical data logger will record to memory: time, date, location, operator that is signed on, and event as "shunted."
3. Journal printer will print activity.

G. Any user programmed alarm event shall cause the access control system, Client workstation(s) to provide an audible and visual alarm requiring the operator to acknowledge the event and enter via the keyboard a report of the event and cause.

2.3 POWER SUPPLIES (Door Lock and Auxiliary)

A. Provide as required UL listed power supplies with battery backup in sufficient quantities to ensure proper operation of the system and all electronic locking hardware. Power supplies shall be 12/24 volts as required to support all power requirements associated with all electronic door locking mechanisms, ancillary system controls and all manufacturers recommendations. The auxiliary power supply units shall at the minimum meet the following requirements

1. The power supplies shall size to provide power for all access control system communications equipment, electronic door locks, and/or remote ancillary panels.

a. Coordinate with door hardware provider for all electrical requirements associated with all electronic door locking mechanisms. Provide voltage drop calculations for each door locking circuit at the time of shop drawing submission.

2. The power supply shall be rated at a minimum of 6.0 amps continuous of regulated 12/24-volt power as required by the manufacturer recommendations. It shall include an integral charger designed to charge required amp hour batteries in order to support 24-hour standby power for all alarm, processor and door lock operations
3. The auxiliary power supplies shall include power limited circuitry, per 2003 UL standards and shall be UL listed for fire alarm system integration.

2.4 AUTHENTICATION CONTROL DEVICES

A. Contactless Readers

1. Furnish and install contactless and combination contactless\keypad type card readers as indicated on the Contract drawings. All contactless readers shall be ISO 14443A compliant and shall be compatible with the existing Genetec ACS and shall employ OSDP with secure channel communications protocol in accordance with SIA standards for OSDP performance between card reader and processor panel
   a. SmartCard Reader with Keypad (SCRK) - HID multiCLASS™ SE RPK40 keypad card reader.
   b. SmartCard Reader (SCR) - HID multiCLASS™ SE RP40 card reader.

2.5 DOOR CONTROL DEVICES

A. Request to Exit Device

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

a. In addition to causing the release of the door lock, the unit shall cause the bypassing of the door contact for a period of time as determined by the Owner and OAR.

B. Door By-Pass Switches

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

a. The door by-pass switches shall be provided for all delayed egress hardware and magnetic lock equipped doors and mounted at 48 inches on center AFF and within 5 feet of the door. Coordinate with hardware contractor and Owner's Representative for exact locations.

C. Door Position Switch/Door Contact

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

D. Magnetic Door Locks (MAG Lock)

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

E. Electric Door Strike

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

F. Magnetic Door Holder

1. Supplied and installed under the Door Hardware specification section 087100. Wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

G. Door Lock Power Supplies

1. Supplied under the Door Hardware specification section 087100. Installed and wired by Division 26 Contractor. Coordinate with door hardware provider for exact device type, quantities, wiring requirements and locations.

PART 3 – EXECUTION

3.1 COORDINATION

A. Comply with all requirements of specification section 28 05 00.

3.2 EQUIPMENT PROTECTION

A. Comply with all requirements of specification section 28 05 00.

1. Examine all physical and environmental conditions, door hardware specifications, equipment locations and wide area network connectivity requirements impacting the installation of the systems and report any unsatisfactory conditions in writing to the Owner and Design Professional.

3.3 INSTALLATION

A. Comply with all requirements of specification section 28 05 00.

3.4 WORK PERFORMANCE

A. In addition to all requirements as specified by Specification Section 28 05 00 the Access Control system shall also be provided in accordance with the following requirements:

1. Prior to final programming of the access control system coordinate with the Owner and OAR, all GUI based graphic screen updates, and video surveillance system integrations, all alarm functions as well as all operational features for the entire system. The contractor shall provide to the Owner and OAR a functional demonstration of all system graphics and operational features and functions prior to final programming.
2. This demonstration shall be performed on site and shall include an operational demonstration of the system for this facility. The functional demonstration shall include but not limited to, all door alarm and control functions, surveillance camera alarm call- ups as well as all automatic and manual threat level system responses.
    a. Failure to provide the required coordination with the Owner shall require the contractor to provide any and all system modifications and programming changes necessary to meet the requirements of the Owner at no additional costs to the project.

3.5 EQUIPMENT INSTALLATION

A. In addition to all requirements as specified by specification section 28 05 00 the ACS shall also be provided in accordance with the following requirements:

1. All TCP\IP based physical access control system network cabling shall utilize Category-6 UTP cables and installed dedicated conduits in accordance with the requirement of specification section 27 05 00 and related Division 27 specifications. All cabling shall not contain any AC carrying conductors or non-associated system cables within the cable raceways\conduits or cable bundles.
    a. All ACS cabling installed on the exterior to the building and/or all cabling being routed from the facility to any remote location external in the project shall be utilize fiber optic cable and installed in dedicated conduits.
    b. Contractor shall provide equipment, components, devices, hardware, patch panels and all appurtenances necessary to provide a fully operational system utilizing a UTP cabling topography. Coordinate all system cabling with system provider prior to shop drawing submission.
2. In addition to all power requirements stipulated in specification section 28 05 00 and the related Chapters of this specification sections, all electrical power for remote system components shall be obtained from dedicated power supplies. All

120-Volt electrical power for any ACS components and\or devices shall be provided from the nearest appropriate emergency electrical distribution panels. System components employing the use of plug-in transformers for power shall not be acceptable.

a. All system power supplies serving exterior system components or devices shall be provided with the appropriate transient surge and suppression protection on both the line side as well as the load side. Refer to specification section 28 05 00 for additional requirements.

B. Installation of all equipment and devices that pertain to other work in the contract shall be closely coordinated with the appropriate trade contractors.

3.6 CABLE INSTALLATION AND REQUIREMENTS

A. Comply with all requirements of specification section 28 05 00.

3.7 COMMUNICATIONS CABLING REQUIREMENTS

A. Comply with all requirements of specification section 28 05 00.

3.8 ELECTRICAL POWER DISTRIBUTION

A. Comply with all requirements of specification section 28 05 00.

3.9 TRANSIENT VOLTAGE SUPPRESSION

A. Comply with all requirements of specification section 28 05 00.

3.10 GROUNDING AND BONDING

A. Comply with all requirements of specification section 28 05 00.

3.11 EQUIPMENT IDENTIFICATION

A. Comply with all requirements of specification section 28 05 00.

3.12 MAINTENANCE & SERVICE

A. Comply with all requirements of specification section 28 05 00.

3.13 WARRANTY

A. Comply with all requirements of specification section 28 05 00.

3.14 FIELD SERVICES

A. TESTING

1. In addition to all requirements as specified by Specification Section 28 05 00 the access control system shall also comply with the following requirements:

a. The completed access control system shall be fully tested in accordance with all requirements of NFPA 731. Upon completion of a successful testing, the contractor shall so certify in writing to the Owner and OAR all was completed, tested, certified and left in first class operational condition, include all completed NFPA 731 certification and test reports.

b. The service of a competent, factory-trained engineer or technician

authorized by the equipment manufacturer shall be provided to technically supervise installation and participate during initial system programming, start-up, final testing, and assist in the final acceptance testing as well as Owner demonstrations.

c. At the minimum all acceptance testing, demonstrations and training shall include, but not be limited to the following:

1) Security Device Monitoring/Control Functions.
2) Door Monitoring/Control Functions.
3) HMI GUI map Integration and Functionality
4) Automatic and Manual Threat Level Operations.
5) Video Surveillance System Integration and Operations
6) Video Surveillance Camera Alarm Call-up Functions
7) IDS and Emergency Call System Integration and Operations
8) Third Party Database Import Functions.
9) Network Connectivity
10) Seamless Integration of all doors and gates
11) All programming and operational functions and features as herein specified.
12) Cable Supervision System (random points to be selected by the Owner and/or OAR).

d. Demonstrate each system and subsystem. The demonstration shall include, but not be limited to the following:

1) Designate actual location of each component of a system or subsystem and demonstrate its function and its relationship to other components within the system.
2) Demonstrate the operation of all client servers, door interlock and bypass functions, camera call-up operations, graphic map functions, administration set-up, configurations and operations, badging functions and operations, emergency operations and system reboot procedures.
3) Demonstrate all systems and subsystems operations by actual "LOCK/UNLOCK, ARM/DISARM" cycling showing how to work controls, how to reset devices, how to replace fuses and emergency operating/operations procedures.

e. Upon final inspection, a factory-trained and certified representative of the equipment manufacturer shall demonstrate to the Owner that the system functions properly in every respect and is in full compliance with the contract documents. This requirement is in addition, to all testing requirements listed in specification Section 28 05 00 and related specification sections.

3.15 TRAINING

A. Comply with all requirements of specification section 28 05 00.

END OF SECTION 28 13 00

SECTION 282300 - VIDEO SURVEILLANCE SYSTEM – CAMERAS

PART 1. GENERAL

1.1 SUMMARY

A. This Section specifies requirements for video cameras, including associated equipment and accessories for video surveillance, including the following:

1. Cameras
2. Lenses
3. Housings
4. Mounting hardware
5. And all other accessories and equipment necessary for a complete camera installation.

1.2 CONSTRUCTION AND PERFORMANCE REQUIREMENTS

A. All System components shall be compatible with the existing VPS Siemens Siveillance video surveillance system. The equipment shall meet all current VPS standards for CCTV operation.

B. The electrical and electronic hardware, structural materials, and equipment housings, required for fully operational, integrated, real-time System hardware shall operate on a twenty-four (24) hour per day, seven (7) day per week basis.

C. The Contractor shall furnish only new components in current manufacturing production, manufactured to meet requirements specified herein, and free from characteristics and defects, which affect appearance, or serviceability or that renders equipment unsuitable for the intended purpose or for the initial spare parts inventory. As the spare parts inventory becomes depleted over time, due to replacement of System components, or at the discretion of the Authority, the Contractor shall have failed System components repaired or reconditioned by the manufacturer in order to replenish the spare parts inventory. The Mean Time Between Failures (MTBF) for each category of System component shall not be less than 80,000 hours.

D. The components as manufactured, furnished, and installed shall conform to the requirements of NFPA 70, all local codes, and all other publications referenced in this Section.

E. Equipment Environmental Conditions: The equipment specified in this Section shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 32 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing. NEMA 250, Type 1 enclosure unless otherwise shown on the Contract Drawings.

2. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 3 enclosure unless otherwise shown on the Contract Drawings.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 105 mph (137 km/h) Use Type 4X enclosures unless otherwise shown on the Contract Drawings.

1.4 QUALITY ASSURANCE

A. Qualifications
1. Retain the services of an experienced Systems Integrator and Installer to furnish all specified components who can demonstrate a minimum of 5 years of continuous experience and technical expertise in performing video surveillance work comparable in size and complexity, and whose installation and integration work was performed skillfully in a satisfactory manner and on time, and meets the following:
   a. Shall be of established reputation and experience in Video Surveillance Systems, and shall be qualified by the manufacturers of the equipment to install, service and maintain each manufacturer's equipment.
2. Retain the services of personnel certified by the equipment manufacturer to: assist in the installation of the equipment; check the installation before the equipment is placed into operation; assist in the performance of field tests; assist in the hardware configuration, and train the Authority operations and maintenance staff in the care, operation, troubleshooting and maintenance of the equipment.

a. The certified personnel shall have at least 5 years experience and in-depth knowledge of the equipment to be used in the installation, testing, and start-up of the equipment under this Section. The manufacturer's sales and marketing personnel will not be accepted as manufacturer's certified personnel.

1.5 DELIVERY, STORAGE AND HANDLING

A. Protect all equipment against damage during transit and storage. All equipment shall be shimmed, braced, blocked, and tied down to prevent distortion or other damage during transportation.

B. All materials shall be delivered in unopened factory packaging and shipping materials. Labels shall be affixed that clearly identify the manufacturer. Product name, Contract Number, storage requirements and any other special handling instructions.

C. All materials shall be properly stored and handled to prevent deterioration or damage due to moisture, weather, temperature, corrosion, contaminants, dirt, vandalism or other causes.

D. Deliver all equipment to the construction sites. If equipment is delivered to an off-site location prior to placement and installation at the construction site, transport the equipment from the off-site storage facility to the construction site, and properly store, handle and secure the equipment at the off-site storage location.

E. After delivery at the construction site, a field inspection of the equipment shall be made by the Contractor in the presence of the Engineer. If any equipment has been damaged or for any reason does not comply with the requirements hereof, the Contractor will be notified in writing by the Engineer, and the Contractor shall replace the equipment at no additional cost to the Authority even though this equipment may have been previously inspected and approved for shipment. Do not install replaced equipment until after receipt of the Engineer's written approval.

1.6 WARRANTY

A. Furnish a minimum one (1) year manufacturer's replacement warranty for all devices and equipment. All devices shall have a warranty against defects in materials and workmanship for a one-year period commencing on the Base Date and ending on the first anniversary of the Base Date. (Base Date is defined to be the day of Authority's acceptance of the completion of the 30-day Operational Testing specified herein). The warranty shall cover all components, parts, installations, and assemblies. The warranty shall cover labor to trouble shoot, repair, reprogram, replace defective components, and travel to and from the location where the equipment resides.

1.7 SUBMITTALS

A. Submit the following in accordance with the requirements of "Shop Drawings, Catalog Cuts, and Samples" of Division 1 - GENERAL PROVISIONS:

B. Qualifications Package

1. Furnish the name and address of the System Integrator

2. Submit a list of a minimum of three installations, at least one of which shall be located in the United States, which shall have included work, comparable in type, size and complexity. Said installations shall be in satisfactory operation for the last three consecutive years, at minimum. Furnish references and current contact information for each project.
3. Furnish references and current contact information for each project.
4. Furnish the resumes of all key project management, integration and installation personnel.
5. Furnish certifications of training of key personnel in the installation and maintenance of the major equipment manufacturers
6. Approval of qualification information is required prior to transmittal of any further submittals of this Section.

C. Catalog Cuts
1. CCTV Cameras
2. CCTV Camera Mounts
3. CCTV Camera Lenses
4. CCTV Camera Power Supplies (If applicable)
5. Wire, Cable and connectors associated with the installation of the system.

D. Shop Drawings
1. Bill of Materials as per the approved catalog cuts
2. System Block Diagram
3. Detailed System Wiring Diagrams, indicating all field terminal block numbers
4. Device matrices/Schedule
5. Complete, comprehensive, single-line diagrams, including all equipment, devices and cabling completely identified
6. All “red line” drawings.
7. Wire, cable, conduit and connectors
8. Enclosure and device installation details
9. Terminal block connection diagrams for all system components.
10. Detail drawings, which clearly illustrate the typical mounting configuration of each major equipment item. While some drawing details may be "typical," the drawings shall illustrate the installation detail of each unique application.
11. Detailed schematic drawings of all custom work, circuitry, and interfaces to equipment or systems not in Contract Work.
12. Fabrication ship drawings for all custom equipment.
13. Elevation drawings showing all CCTV related equipment locations and dimensions. These drawings shall also include wiring and power requirements.
14. Detailed information and drawings concerning grounding, lightning, and surge suppression.
15. Engineering calculations concerning wire sizes to ensure that the proper cable sizes have been provided.

16. Equipment Schedules and or details which define all the equipment used within the System.
17. Cameras Field of View still image confirming camera location and position.

E. Operations and Maintenance Manuals

1. Complete sets of system manuals shall be submitted explaining all system capabilities and options, including but not limited to the installation, set-up, operation and maintenance of all equipment furnished as Work of this Section, in accordance with this Section. Submittal shall be furnished in both hardcopy and digital format.

F. System Configuration Submittals

1. A minimum of 30 days before the start of the system programming, submit the complete system configuration information for the approval of the Engineer including, but not limited to, tables, schedules device matrices, screen shots and similar documentation and information to include, but not be limited to: cameras, encoders, decoders. Include information on standard operating and alarm coupled frame rates and resolution of the encoders and decoder video streaming configuration, and all additional system operation and configuration information necessary for the completion of the integration and full system operation.
2. Prepare and submit requests for programming information relating to response instructions, device numbers, and any/all special programming information.
   a. The request shall be in writing to the Engineer a minimum of four weeks prior to commencement of programming the system. As part of the request, the Programmer shall provide descriptive information of what is to be reported by the System for each device, and identify all required questions which require a response in order to complete the System's programming.
3. Request A list of all IP addressable equipment at least 60 days before the start of equipment addressing, to be coordinated with the Engineer.
4. Certification from the manufacturer representative that all systems and components have been installed in accordance with their direction and requirements.

G. Acceptance Testing

1. Submit comprehensive Acceptance Test Plans that describe all the activities and tasks associated with testing of the System in accordance with the requirements of this Section. The test plan shall include a comprehensive description of the Site Acceptance, Final Acceptance and Operational Acceptance testing to be performed.
2. Furnish the following:
   a. Preliminary Test Reports
   b. Factory Acceptance Test Plan
   c. Factory Acceptance Test Results
   d. Final Site Acceptance Test Plan
   e. Final Site Acceptance Test Results
   f. 30 day operational Test

g. 30 day operational test results

h. A test and certification reports for all twisted pair Ethernet and fiber optic cables installed as Work of this Section.

3. Upon completion of 30 day Operational Acceptance Testing submit:

a. As-Built Drawings and Shop Drawings, which reflect actual locations and actual wiring details of system equipment and all revisions to the Work of this Section. One set shall be printed on reproducible mylar.

b. Hardware Documentation shall be provided in hard copy and digital format.

c. A hard copy back-up of all database and configuration settings.

d. Electronic backup of all software, database and configuration settings to allow for system recovery and restoration.

e. A detailed outline of the training information as described in this Section.

H. Certification from the manufacturer representative that all systems and components have been installed in accordance with their direction and requirements.

1.8 SPARE PARTS

A. Furnish 5 percent spare parts, or a minimum of one, whichever is greater, of each component.

B. Submit a list of recommended spare parts, including quantities for approval.

C. After approval of spare parts list, and prior to start of operational Acceptance Testing, furnish spare parts to the Authority.

PART 2. PRODUCTS

2.1 MANUFACTURERS

A. Refer to Camera Schedule on Contract drawings for manufacturer and model of cameras, lenses and associated equipment.

2.2 GENERAL REQUIREMENTS

B. Provide video communications between the points of surveillance, the location(s) of storage, and the location(s) of the connected security workstations and CCTV monitor(s) specified herein or on the Contract Drawings.

1. Cameras: The number of CCTV cameras to be supplied shall be as shown on the Contract Drawings.

2. Configuration: The configuration of the CCTV communications system shall conform to IEEE 802.3, with signals provided at standard Ethernet TCP/IP levels (+/- 2.5 volts).

B. CCTV cameras shall be powered via a network switch using an industry accepted Power-over-Ethernet (PoE, POE+) method as described in IEEE Standards 802.3af and IEEE 802.3at unless otherwise shown on the Contract Drawings.

C. All electrical materials and equipment for which there are established UL standards shall bear the UL label.

D. Cables

1. Refer to custom Specification Section 271000 for video, control and communication cable requirements.

E. The Contractor shall verify proper camera operation with the Engineer, including but not limited to field-of-view, direction, pan-tilt-zoom, video storage, and bandwidth usage.

F. The Contractor shall coordinate with the Engineer any work related to the VPS Network. Contractor shall notify the Engineer of the quantity, type, and location of network connections (number of ports) that will be required to connect the installed CCTV cameras to the existing VPS CCTV system. Contractor shall provide switched data ports from new Ethernet switches & bandwidth requirements for the network equipment to the existing VPS CCTV system.

G. The Contractor shall be responsible for all field verification and coordination of dimensions and camera lens type for optimal field of view and ease of adjustment with the entity manufacturing the equipment. Any change in equipment shall be submitted to the Engineer for approval prior to equipment purchase.

2.3 CAMERAS

A. Pan/Tilt/Zoom IP Camera

1. Cameras shall be enclosed in a standard housing. Housings shall be complete with all accessories as specified on the Contract Drawings and as specified below.
   a. The camera shall be a discreet camera dome system consisting of a dome drive with a variable speed/high speed pan/tilt drive unit with continuous 360° rotation.
   b. Camera shall have a weather resistant aluminum die cast with a sunshield of ASA resin coating. The dome shall be clear polycarbonate resin.
2. PTZ and Fixed cameras shall be day/night, high performance, wide dynamic range. Each camera shall include the features specified below:
   a. PTZ camera Specifications:
      (1) 1/3 type CMOS sensor
      (2) 30x Optical Zoom with extra zoom up to 90x
      (3) Resolution: Full HD up to 30 images per second
      (4) Lens: f/1.6 motorized ~ Close (9.0 mm ~ 22.0 mm optical)
      (5) Horizontal Angle of View: 33° (wide) ~ 13.8° (tele
      (6) Light Sensitivity:
         (a.) Color: 0.15 lux
         (b.) B/W: 0.018 lux
      (7) Day/Night capabilities
      (8) Wide Dynamic Range: 133dB typical (Super Dynamic: ON, Light Control: Indoor)

(9) Iris Control: Auto iris with manual override
(10) Digital noise reduction
(11) Basis of design: Axis model P5655-E PTZ Network Camera

b. Fixed camera Specifications:
(1) 1/3 type CMOS sensor
(2) 2.4X Optical Zoom that extends to 7.2X with extra zoom
(3) Up to 4X Digital Zoom controlled by browser GUI
(4) Resolution: Selectable up to 1920 x 1080 at 30 images per second
(5) Lens: f/1.6 motorized ~ Close (9.0 mm ~ 22.0 mm optical)
(6) Horizontal Angle of View: 30.9° (wide) ~ 105.4° (tele)
(7) Light Sensitivity:
(a.) Color: 0.04 lux
(b.) B/W: 0.01 lux
(8) Day/Night capabilities
(9) Wide Dynamic Range: 133dB typical (Super Dynamic: ON, Light Control: Indoor)
(10) Iris Control: Auto iris with manual override
(11) Digital noise reduction
(12) Basis of Design: Axis model Q3517LVE 5MP and Q3515-LVE 1080P Network Cameras

c. Multi-Sensor 180/360 Degree Camera Specifications:
(1) 1/2.5 type CMOS sensor
(2) 12X Digital Zoom
(3) Up to 12X Digital Zoom controlled by browser GUI
(4) Resolution: Selectable up to 1920 x 1080 at 30 images per second
(5) Maximum Streams: 3 simultaneous streams
(6) Field of View: 180° (Horizontal) / 180° (Veritcally) / 180° (Diagonally)
(7) Light Sensitivity:
(a.) Color: 0.6 lux
(b.) B/W: 0.01 lux
(8) Day/Night capabilities
(9) Wide Dynamic Range: Above 60 dB
(10) Digital noise reduction
(11) Basis of Design: Axis model Q3708-PVE Network Camera

d. Minimum Video Specifications:
(1) Video encoding: H.264 and MJPEG
(2) Transmissions for two streams can be individually set in the same compression method (for H.264)
(3) Frame rate: Up to 30 images per second
(4) Available Resolutions:

(a.) 2 mega pixel aspect ratio [16:9] : 1920 x 10800 / 640 x 360 / 320 x 180

(b.) 1.3 mega pixel aspect ratio [16:9] : 1280 x 720 / 640 x 360 / 320 x 180

(c.) 1.3 mega pixel aspect ratio [4:3] : 1280 x 960 / 640 x 480 / 320 x 240

(5) Supported Protocols: TCP/IP, UDP/IP (Unicast, Multicast), UPnP, DNS, DHCP, RTP, RTSP, NTP, IPv4, IPv6, SNMP, HTTP, HTTPS, SMTP, FTP,

e. Electrical Specifications

(1) RJ-45 port for 10Base-T/ 100Base-TX

(2) Input power: PoE+ IEEE 802.3at compliant or 24VAC external power supply.

f. Dome Drive Specifications

(1) Pan movement: 360º continuous pan rotation

(2) Pan speed: Variable between 300º/second continuous pan

(3) Vertical tilt: Unobstructed tilt of -15º to 195º

(4) Manual control speed: Pan speed of 0.065º to 120º per second up to 256 steps; tilt operation shall range from 0.065º to 120º per second up to 256 steps.

(5) Automatic preset speed: Pan speed up to 300º per second and a tilt speed of up to 300º per second

(6) Presets: 256 positions

g. Back Box and Lower Dome

(1) Pendant, Standard

(2) Connection to dome drive: Quick, positive mechanical and electrical disconnect without the use of any tools

(3) Installation: Quick-mount wall, or pendant

(4) Cable entry: Through 1.5-inch NPT fitting

(5) Operating Temperatures:

(a.) PoE+ Power source: –30C° to 55°C (-22°F to 131°F). 90% or less humidity (without condensation).

(b.) 24VAC Power source:–50°C to 55°C (-58°F to 131°F) with limitations

(6) Construction: Aluminum

2.4 Camera Mounts

A. Furnish and install an appropriate mount for each camera being furnished and installed under this Contract. Mounting details on drawings are suggestive in nature. Refer to manufacturer's recommended mounting types for each location.

B. Survey the camera locations and submit different mounting methods as required by field conditions.

C. Furnish and install conduit adapters and related items as required.

D. Camera mounts shall provide a non-vibrating, adjustable support for camera and enclosure with wire routing accessibility.

E. Cameras shall be mounted to the wall, or other structure using a pendant, wall, or gooseneck mount as shown in the Contract Drawings. Contractor shall coordinate mounts with surrounding areas and submit all mounting details for approval.

F. Camera mounts shall be outdoor rated, corrosion resistant, and utilize tamper proof hardware.

2.5 Camera Power Systems

A. All CCTV cameras shall be powered via a network switch using an industry accepted Power-over-Ethernet (PoE) and Power-over-Ethernet Plus (PoE+) method as described in IEEE Standards 802.3af and 802.3at.

2.6 PoE Ethernet Switches

A. All cameras shall be routed back to a Network switch as shown on the Contract Drawings.

B. Cisco switches shall be furnished and installed by the Contractor and programmed by the Authority. Contractor shall provide all required mounting hardware and wiring.

PART 3. EXECUTION

3.1 INSTALLATION

A. Video Surveillance equipment installation shall include:

1. Conduit and raceways
2. Wiring and cabling
3. Verification of equipment power requirements
4. Equipment and device circuiting
5. All necessary device licenses
6. Anchoring and securing of equipment
7. Restoration of finishes incidental to the installations

B. Video Surveillance Camera Installation:

1. Install all System equipment and materials in accordance with the manufacturer's recommendations, the approved shop drawings, and the requirements of this Section and the Contract Drawings.
2. Verify all finished surface dimensions and materials and coordinate junction and mounting box type and cover with camera mounting bracket accordingly. Review camera mounting back boxes, brackets and concealed cable feeds to camera housing with the Engineer prior to installation of camera back box, to ensure adequate blocking is provided for structurally sound installation and appropriate bracket/dome housing mounting.

3. Locate all equipment which must be serviced, operated, or maintained in fully accessible positions, especially when located in concealed locations. If required, for better accessibility, Contractor shall coordinate the installation with the trade in which the access door will be mounted to furnish access doors for this purpose. All access doors shall be approved by the Engineer.
4. Camera installation and field-of-view adjustment: All cameras shall be located, position confirmed, rotated and calibrated to provide for optimal fields of view. Prior to installation, each camera location, lens setting and mounting type shall be field-confirmed, by generation of a still image (screen shot from a camera and lens configuration identical to that proposed- on a pole, with laptop to capture a picture of the intended field of view) to be submitted for approval before the camera mount and conduit is installed at each location.
5. Minor equipment location deviations from the Contract Drawings may be made to allow for better accessibility, but all such deviations shall be approved by the Engineer prior to any work being performed.
6. Aim, adjust, align, focus, and perform all necessary system set-ups to achieve required viewing image performance.
7. The Contractor shall be responsible for all field verification and coordination of dimensions and camera lens size for optimal field of views with the entity manufacturing the equipment. Any lens changes required to achieve the desired field of view shall not present any additional cost to the Authority.
8. Ensure that no conductive path exists between the shield of the video cable and the chassis of the associated video equipment. Configure all cable connections and video equipment mounting to eliminate ground loop distortion. Add differential ground loop correctors, clamper amplifiers, or other suitable equipment, as required to achieve distortion-free imaging and recording.

C. Miscellaneous Video Surveillance Installation Requirements:
1. All hardware, such as shields, nuts, bolts, washers, and shims, shall be stainless steel, minimum Type 304.
2. Leave at least 10-feet of adequate cable slack at camera outlets and at equipment racks and cabinets to allow proper servicing of equipment.
3. Provide self-tapping set screw at threaded pipe joints.

D. Contract Drawings are diagrammatic in nature and exact routing requirements vary slightly with different manufacturers and job conditions. The Contract Drawings represent a schematic depiction of the CCTV System conduit, cable tray, and wire network layout for the system equipment specified. Final conduit, cable tray and wire quantity, size, and arrangement, as well as final routing and placement shall be based on system equipment, manufacturer's engineering requirements, field coordination with other trade work, existing building conditions and as a result of other trade equipment which must be connected to. Exact installation shall be submitted on shop drawings to be approved by the Engineer.

E. Contractor shall field verify length of any Ethernet cable does not exceed 300 ft. If a Power-over-Ethernet (PoE) extender is used, Contractor shall ensure each Ethernet cable segment does not exceed 300ft. PoE extenders may only be used where shown on the Contract Drawings or otherwise approved by the Engineer.

1. PoE extenders shall not be daisy-chained together. Only one (1) PoE extender may be used per camera.
2. PoE extender shall be installed in a NEMA 4X box concealed from public view.
3. Provide an access hatch in the architectural ceiling to service the PoE extender.
4. PoE extender locations shall be documented in the associated CCTV field cabinet to assist maintenance personnel with troubleshooting.

F. Carefully coordinate the Work of this Section with all affected trades.

G. Coordinate all cable, conduit and device identifiers with the Engineer. Ensure uniformity and interrelation of identifiers. Avoid identifier duplication.

H. All equipment shall be installed according to Specifications Sections 260526 Grounding and Bonding requirements.

3.2 TESTING:

A. Manufacturer's Field Service: Engage personnel certified by the equipment manufacturer to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Acceptance Testing shall be divided into three distinct phases as follows:

1. Factory Acceptance Testing
   a. Conduct a factory test for the components encompassing the specified system a minimum of 30 days in advance of the earliest, approved, scheduled installation date. Submitted test results shall clearly demonstrate the system components are meeting the requirements of this Section.
2. Final Acceptance Testing
   a. Conduct an onsite inspection and test immediately following the complete installation of the system, to demonstrate compliance with the requirements of this Section. Test shall be performed in presence of the Engineer in order to clearly demonstrate the system is meeting the requirements of this Section.
3. 30 Day Operational Testing
   a. The Authority will conduct a 30 day operational or “burn in” test with the assistance of the Contractor immediately following the successful completion of the Final Acceptance Test, to demonstrate compliance with the requirements of this Section. Test shall clearly demonstrate the system meets the requirements of this Section.

C. Contractor shall develop a full test procedure in coordination with Siemens Inc. Submit to the Engineer for approval.

3.3 OPERATION AND MAINTENANCE MANUALS

A. Provide 6 hard copies of all maintenance and operations manuals to the Engineer in a three ring binder. Provide 2 soft copies on DVD/Thumb Drive of all maintenance and operations manuals.

3.4 TRAINING

A. Contractor shall provide all required material for all new equipment furnished under this contract.

3.5 MAINTENANCE

A. Contractor is responsible to provide all maintenance of equipment while system is installed on temporary structures. Maintenance will continue when installed in the final location until final acceptance of the equipment. All other requirement as indicated in the contract documents and drawings also apply.

END OF SECTION

PART 1 - GENERAL

RELATED DOCUMENTS

A. Project drawings and general provisions of the Contract, including but not limited to all General and Supplementary Conditions, Division 01 and all related specification sections shall apply to this section.

1.1 B. Related Specification Sections:

1. Division 26 – Common Work Results for Electrical
2. Division 26 – Building Wire and Cable
3. Division 26 – Grounding and Bonding
4. Division 26 – Hangers and Supports
5. Division 26 – Conduit
6. Division 26 – Outlet Boxes
7. Division 26 – Pull & Junction Boxes
8. Division 26 – Underground Ducts & Raceways for Electrical Systems
9. Division 26 – Identification for Electrical Systems
10. Division 28 – Common Work Elements for Electronic Safety and Security Systems
11. Division 28 – Physical Access Control

C. Reference Symbols:

1. Refer to specification section 28 05 00 for addition information.

D. Abbreviations:

1. Refer to specification section 28 05 00 for addition information.

E. Definitions:

1.2 1. Refer to specification section 28 05 00 for addition information.

SUMMARY

A. This Section includes basic design requirements for the installation of a new Siemens FV2050 Desigo fire alarm system with voice evacuation. Including all necessary modifications to the existing Siemens fire alarm network and as required to fully integrate the new fire alarm system with the existing Airport fire alarm platform in accordance with all requirements of the Contract Documents and as herein specified.

1. The addressable Fire Alarm System shall at the minimum include sufficient control panel(s), fire fighters control station, remote annunciator(s), remote transponder panels (RTP), manual stations, automatic fire detectors, control and monitoring devices, amplifiers, notification appliances, cabling, conduits, and appurtenances as well as all necessary labor, programming, commissioning and testing as required for the installation of complete fully operating fire alarm system serving the new Satellite Concourse ‘C’ as well as for the proper integration with the existing Airport site-wide fire alarm platform.

a. The Contractor shall include all necessary labor, equipment, materials, software and programming modifications in connection with the modifications to the existing Siemens fire alarm network as required to fully and seamlessly integrate all new Satellite Concourse ‘C’ fire alarm system with the existing fire alarm platform in accordance with all requirements of the Contract Documents and as herein specified.

2. The basis of design shall be the Siemens FV2050 Desigo Intelligent Addressable Fire Alarm System with Voice Evacuation in order to ensure Airport wide compatibility. The system shall be installed in accordance with the Contract Documents and wired, connected, and left in first class operating condition.

a. No substitutions to the Siemens Fire Alarm system shall be accepted.

B. In addition to the above, the fire alarm system shall also include the integration of the following ancillary systems in accordance with all requirements of the Contract Documents as well as all applicable codes and standards.

1. Wet and Dry Pipe Sprinkler Systems
2. Pre-Action Sprinkler Systems
3. Kitchen Suppression Systems
4. HVAC Shutdown
5. Smoke Exhaust and Stair Tower Pressurization Systems
6. Building Management System (BMS)
7. Elevator Phase I Fire Fighters Operations
8. Access-Controlled Egress Doors
9. Siemens Graphic User Interface Computers
10. Automatic Smoke Doors and Shutters
11. Access Controlled Doors

C. The intent of this specification is to establish a standard of quality, function and features. It is the responsibility of the Contractor to ensure that the proposed products meet or exceed every standard set forth in these specifications. This contractor shall be responsible for providing a complete functional system including all necessary components whether specifically included in this section or not.

D. In addition, this section also addresses all requirements for submittals, quality assurance, product handling, record documents, project conditions, installation, system performance, demonstrations, testing, and certifications related to the installation of the fire alarm system for this project. Refer to specification section 28 05 00 for additional project requirements.

1. All symbols are shown on the contract drawings as close as possible to their intended location. Contractor shall coordinate the installation of all conduits, cabling, devices, controls, components, and integration of systems as herein specified. The Contractor shall document all coordination requirements with all affected trades and sub-Contractors at the time of shop drawing submission.

2. Drawings for this work are diagrammatic and intended to convey the extent, general arrangement, and locations of the work. Because of the scale of the drawings, certain basic items such as access panels, conduits, cabinet sizes, penetration sleeves, pull boxes, back-boxes and junction boxes may or may not be shown on the contract drawings. Include all items where required by code and related specification sections as required for the proper installation of all backbone and riser infrastructure scopes of work.

E. Use of Premises

1. Refer to specification section 28 05 00 for addition information.

a. The Contractor is reminded that this is and will continue to be an operating Aviation facility. It shall be the Contractor's responsibility to become completely familiar with all existing conditions, cable terminations, and life safety systems in this facility in order to ensure proper and seamless installation and integration of all communications networks and cabling.

F. Coordination

1. Refer to specification section 28 05 00 for addition information.

SCOPE OF WORK

1.3 A. Refer to related Division 28 specification sections and “Fire Alarm” series drawings for the proper installation of the new Fire Alarm System serving the new Satellite Concourse ‘C’ of the Destin Fort Walton Beach Airport (VPS).

1. In addition, refer to related Division 28 specifications sections, all related “Fire Alarm” series drawings as required to include all project scopes of work impacted by the installation of any related systems and infrastructures associated with all project scopes of work impacted by the installation of the Fire Alarm System.

a. At the minimum, the scopes of work covered as herein specified shall include but are not limited to all necessary coordination, labor, equipment, materials, cabling, commissioning, programming and testing as required for the proper integration of any Division 14, Division 21, Division 23, Division 26, Division 27 and related all Division 28 systems impacted by the installation of the fire alarm system.

2. All scopes of work covered as herein specified shall include but are not limited to all necessary labor, equipment, materials, cabling, conduits commissioning, and testing as well as all appurtenances as required for the proper installation necessary to deliver fully functional fire alarm system.

a. It shall be the Contractor’s responsibility for full compliance with all
1.4 requirements of 28 05 00 as well as all related Division 14, 21, 23, 26, and Division 28 Specification sections necessary to fully integrate the fire alarm system in accordance with all requirements of all Contract Documents and applicable codes and standards.

REFERENCES

A. In addition to the references as stipulated by Specification Section 28 05 00 as well as all related specifications sections, the Contractor shall also conform with the following requirements:

1. Approvals

a. The system and all components shall have the proper listing and/or approval from the following nationally recognized agencies:

1) UL-Underwriters Laboratories Inc
2) FMG- Factory Mutual Global

b. The fire alarm control panel shall meet UL Standard 864 (Control Units)
c. The system shall be listed by the referenced national agencies as suitable for fire extinguishing releasing applications.

SUBMITTALS

1.5 A. In addition to the submittal requirements as stipulated by Division 01, Specification Section 28 05 00 as well as all related specifications sections, the Contractor shall also conform with the following submittal requirements:

1. The Contractor shall provide an identical submission to all authorities having jurisdiction for review and permitting. Include copies of all annotated Shop Drawings sealed by registered engineer indicating all information as defined by Specification Section 28 05 00 to facilitate proper review. Resubmit if required to make requested clarifications or revisions to obtain final AHJ approval and permits.

a. On receipt of comments from authority and prior to the start of any construction, submit to the Owner and OAR for review, a complete copy of all AHJ approved drawings. Failure to comply with this requirement shall extend all liabilities to this Contractor for any modifications necessary to the system in order to obtain a Certificate of Occupancy.

2. Provide a complete set of shop drawings. Drawings shall include sufficient information, clearly presented, to determine full compliance with all project drawings and specifications as well as required by NFPA 72. Include the following information for review, failure to provide all information listed below shall result in all shop drawing submittals being returned for resubmission:

a. All equipment manufacturers' names and model numbers.
b. All equipment /device electrical ratings and power requirements.
c. All battery calculations for all control panels, remote panels and auxiliary power supplies integrated with the fire alarm system.
d. Voltage drop calculations for all initiating, notification and auxiliary circuits.
e. Component layouts, mounting elevations and installation details for all control panels, remote transponder panels and auxiliary power supply panels,
f. Typical device wiring details of all equipment, devices and integrated systems and/or equipment.
g. Complete point-to-point-wiring diagrams for all equipment, devices and integration with all systems and/or equipment associated with the installation, operation and/or connection to the fire alarm system.

h. Integration and connectivity of the following systems;

1) Wet and Dry Pipe Sprinkler Systems
2) Deluge Sprinkler Systems
3) Kitchen Suppression Systems
4) HVAC Shutdown
5) Building Management System (BMS)
6) Automatic Smoke Doors
7) Elevator Phase I Fire Fighters Operations
8) Access-Controlled Egress Doors
9) Siemens Graphic Computers

3. Wiring diagrams shall indicate wiring for each field device and all interconnections between each device and all controls and/or associated equipment.
4. Provide a complete set of Contractor prepared detailed construction drawings. Drawings at the minimum shall consist of building floor plans indicating all fire alarm device locations, device addresses, control panels, auxiliary panels' remote annunciator and/or control panels.

a. Failure to provide a complete set of detailed construction drawings at the time of shop drawing submittal shall result in all submittals being returned for resubmission.

5. Include all equipment data sheets pertinent to all equipment provided. All data sheets shall be highlighted indicating specific equipment supplied. Failure to provide proper annotation of all devices at the time of shop drawing submittal shall result in all submittals being returned for resubmission.

a. Include all performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocities, temperatures, and humidity possible when air-handling system is operating.

6. Provide a complete clear and concise sequence of operation that gives, in detail, all information describing all system functions, features and operations.

a. Include detailed programming matrixes for all system devices, equipment, controls and all systems integrated with the fire alarm system. The sequence of operations shall at the minimum include all manual and automatic functions, all system operations, all instructions for the resetting and disabling of all system controls, field devices and integrated system interfaces.
b. Include detailed alarm programming matrixes for all field devices, system components and all associated systems integrated with the fire alarm system.

1.6 B. The Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings, equipment submissions and all other documents submitted for review shall be made available on site to the Owner and OAR upon request.

QUALITY ASSURANCE

A. In addition to the requirements as stipulated by Specification Section 28 05 00 as well as all related specifications sections, the following shall also apply:

1. The fire alarm equipment provider shall employ technicians on site to provide system certification and programming and testing in accordance with NFPA 72 requirements and shall be fully licensed to provide fire alarm systems within the municipality of the project and shall be NICET certified (minimum Level III Fire Alarm Technology).

DELIVERY, STORAGE AND HANDLING

A. Refer to specification section 28 05 00 for addition information.

OPERATION AND MAINTENANCE

1.7

A. Refer to specification section 28 05 00 for addition information.

1.8 RECORD DOCUMENTS

A. In addition to all requirements as specified by Specification Section 28 05 00 the fire
1.9 alarm system shall also be provided in accordance with the following requirements:

1. Provide a complete set of as-built drawings incorporating all final installation and field conditions. Drawings shall an exact representation of all shop drawings maintained on site.

a. The drawings shall clearly indicate the differences between original shop drawing submissions and final as-built conditions. Contractor shall annotate all changes as result of OAR directed changes the project and/or resulting from coordination with affected trades.

2. Provide a complete and current copy of all fire alarm system programming in accordance with all requirements of the paragraph 1.11 of this specification.

3. Chapter 1.5 of this section shall form the basis of all information necessary to deliver a complete set of Record Documents which shall be required for final
1.10 acceptance of the completed fire alarm installation.

SOFTWARE AGREEMENT

A. Included as part of the scope of work for this project the Owner shall retain ALL ownership and Access rights to the complete programming for the system as installed. Any manufacturer that restricts ownership and/or licensing rights of the system programming installed at the Owner's premises or claims that the system programming is protected by proprietary ownership by the installing Contractor the product and/or manufacturer shall be deemed unacceptable for this project:

1. The Contractor shall provide to Owner a complete copy of all system programming prior to final acceptance of the system. Programming shall include but not limited to all device identifications, device descriptions, and all programming access level passwords as well as all function routines and sub-function routines.

a. Programming copies shall be provided to Owner on a digitally formatted media in addition, the Contractor shall provide a complete hard copy printout of all system programming and shall be included as part of close-out documentation for review by the Owner and OAR.

1) Failure to provide Owner and OAR at the time of project close out, complete copies of all fire alarm system programming shall result in the entire fire alarm system being declined for final acceptance.

b. Upgrade Software Service: Included in the cost of this project shall be an automatic software upgrade policy, which shall maintain all software to latest version. This upgrade policy shall require the Contractor to install and program all software upgrades that become available from manufacturer for a period of one year from date of final acceptance:

1) Upgrading of software shall include all revised/new software, labor, testing recertification as well as all licenses and all programming copies as described in sub-paragraph “A” of this section for use of any new and/or revised software.

a) Provide not less than thirty days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary

EXTRA MATERIAL

1.11 A. Not Used

SYSTEM DESCRIPTION

1.12 A. The Addressable Fire Alarm System shall perform, and function as herein specified and shown on the contract drawings. The system shall be wired, connected, and left in first class operating condition in accordance with all applicable life safety codes, related specification sections and manufacturer requirements.

1. The fire alarm system shall be an active/interrogative type system where each remote transponder and/or addressable device is repetitively scanned, causing a signal to be transmitted to the Concourse’s main Fire Alarm Control Panel (FACP), all Fire Alarm Remote Annunciator Panels (FAAP) and the primary and secondary Siemens GUI based Graphic Computers.
2. At the minimum, the fire alarm system shall report to all above locations indicating any alarm, trouble and supervisory condition from all fire alarm initiating and notification devices. In addition, all remote Data Gathering Panels (DGP), Amplifiers Battery conditions and/or all associated circuits are currently functional. Change of any condition shall result in the transmission of a signal at the FACP, FAAP and all GUI’s .

a. The fire alarm system shall allow for loading and editing special instructions and operating sequences as required. The system shall be capable of onsite programming to accommodate system expansion and facilitate changes in operation.

1) All software operations shall be stored in a non-volatile programmable memory within the fire alarm control panel. Loss of primary and secondary power shall not erase the instructions stored in memory. Alarm signals arriving at the main FACP shall not be lost following a primary power failure (or outage) until the alarm signal is processed and recorded.

b. Full flexibility for selective input/output control functions based on ANDing, ORing, NOTing, timing, and special coded operations shall also be incorporated in the resident software programming of the system.

1) Resident software shall allow for full configuration of initiating circuits so that additional hardware shall not be necessary to accommodate changes in system function and performance.
2) Resident software shall also allow for configuration of indicating appliance and control circuits so that additional hardware shall not be necessary to accommodate changes.

c. The system shall have the capability of recalling alarms and trouble conditions in chronological order for the purpose of recreating an event in history.

SYSTEM OPERATION

A. The system fire alarm operation subsequent to the alarm activation of any manual station, automatic detection device, sprinkler flow switch or FM-200 or Deluge or sprinkler pre-action control shall be as follows:

1.13

1. Display all alarm location information at the Fire Alarm Control Panel.
2. Display all alarm location information on all annunciator panels. (FACP, FFCS, FAAP and all GUI’s)
3. All alarm notification appliances shall sound simultaneous throughout all protected spaces in accordance with respective zoning, until silenced by the appropriate switch at the fire alarm control panel and shall meet the following performance criteria.

a. A pre-announcement tone shall be provided followed by a field programmable digitized custom evacuation message, on the floor of the alarm, the floor below and the floor above if such floors exist.
b. A simultaneous message shall be delivered via all alarm speakers installed on the remaining floors indicating the requirement for occupants of these floors to remain alert for further instructions.
c. A simultaneous message shall be delivered via all alarm speakers installed in stairways and elevators informing occupants of the imminent shutdown of elevator circuits and the expected high traffic load in the stairwells.
d. An automatic announcement or tone evacuation signal shall be capable of interruption by the operation of the system microphone to give voice evacuation instructions overriding the pre-programmed sequences.
e. Status lights next to speaker selection switches on the control panel shall indicate speaker circuit selection.
f. Audible signals shall be silenced from the fire alarm control panel by an alarm silence switch. Visual signals shall be programmed to flash until system reset or alarm silencing, as required by the AHJ.

4. All visual synchronized notification appliances, (Xenon Strobes) shall operate throughout the protected premises, in a synchronized cadence until the system is reset.

a. Visual signals shall be programmed to flash until system reset or alarm silencing, as required by the AHJ.

5. The activation of any smoke or sprinkler water flow initiating device sprinkler deluge panel in addition to all requirements herein specified as part of the fire alarm sequence of operations shall also cause the release of all magnetically held open or electronically locked doors in accordance with NFPA 72 and IBC requirements.
    a. Coordinate with the door hardware provider and the physical access control provider for the proper connection and integration of all electronically controlled doors.
6. The alarm activation of any duct-mounted smoke sensor in addition to fire alarm sequence of operations shall initiate HVAC shut-down in accordance with NFPA 72, IMC and NFPA 90A. Exception where HVAC unit is part of the engineered smoke control system.
    a. Where an engineered smoke control system is provided the activation of any building smoke control system will be based on a signal provided to the UUKL listed Building Automation System (BAS) from the Fire Alarm System.
        1) The activation of any automatic area smoke detector, heat detector or sprinkler waterflow device will automatically cause a fire alarm relay contact closure at the appropriate Direct Digital Controller (DDC) connected to the BAS to engage and activate all mechanical smoke control operations.
        2) In addition to the above the DDC shall also provide a positive feedback signal to the fire alarm system indicating that all smoke control operations have been fully engaged. All Fire Alarm Control Panels, remote Annunciators and GUI’s shall display a status indication of the current smoke control mode of operation.
    b. Coordinate with Division 23 Contractor for the proper integration of all mechanical systems associated with the operation and supervision of all HVAC and building smoke control operations.
7. Display all system activities along with time and date of occurrence on all system printers and network command center terminals where provided as part of this project.
8. System activity on the FACP shall retain the information, along with time and date of occurrence in history storage log.
9. Any alarm activation of the building fire alarm system shall immediately cause the disconnection/ disengagement of all A/V systems and bring up all house lighting in all spaces protected by a voice evacuation system.
10. All system output programs assigned via control-by-event interlock programming to be activated by the particular point in alarm shall be executed, and the associated system outputs shall be activated.
11. The alarm activation of any elevator lobby, top of shaft, elevator pit and/or machine room smoke detector shall, in addition to fire alarm sequence of operations, cause the elevator cabs to be recalled according to the following sequence in accordance with NFPA 72 and ASME 17.1 requirements:
    a. If the alarmed sensor is on any floor other than the main level of egress, the elevator cabs shall be recalled to the main level of egress.

b. If the alarmed sensor is on the main egress level, the elevator cabs shall be recalled to the predetermined alternate recall level as determined by the local authority having jurisdiction.
c. The alarm activation of any elevator shaft and/or machine room heat detector shall activate a "shunt trip breaker" discontinuing operation of elevator power:
d. Operating temperature for all elevator shaft and machine room heat detectors shall be rated at 135 degrees fixed temperature and shall be installed within 18" of every sprinkler head. Coordinate with sprinkler Contractor for exact quantity and location of all sprinkler heads.

12. The fire alarm system shall monitor the following alarm and supervisory conditions: PUMP RUNNING, PUMP FAIL and PHASE REVERSAL for all electric fire pumps provided as part of this project and/or PUMP RUNNING, PUMP FAIL and Low Fuel for all diesel fire pumps provided as part of this project:

    a. The Contractor shall coordinate with fire protection Contractor for the proper integration of the fire alarm system and fire pump controller in accordance with NFPA 72 and NFPA 20 requirements. Refer to fire protection drawings for exact location and number of fire pump controllers.

13. All access-controlled doors in the path of egress shall be integrated with building fire alarm in accordance with the requirements of the IBC Chapter 10, and NFPA 101 Chapter 7. Access controlled egress doors shall automatically unlock upon activation of any manual pull station, automatic smoke detector, sprinkler water flow switch or special hazard suppression system per the IBC and NFPA requirements.
14. Where permitted by the authority having jurisdiction the activation of any system smoke sensor shall initiate an Alarm Verification operation, whereby the panel will reset the activated detector and wait for a second alarm activation. If, within one (1) minute after resetting, a second alarm is reported from the same or any other smoke detector, the system shall process the alarm as described previously. If no second alarm occurs within one minute the system shall resume normal operation. The Alarm Verification shall operate only on smoke detector alarms. Other activated initiating devices shall be processed immediately. Device, zone or group of zones shall select the alarm verification operation:

    a. The control panel shall have the capability to display the number of times (tally) a zone has gone into a verification mode. Should this smoke verification tally reach a pre-programmed number, a trouble condition shall occur.
    b. Alarm verification zones shall be able to be divided into separate groups whereby only verification zones from the same group will confirm the first activation and cause the alarm sequence to activate.

15. The control panel shall have a dedicated supervisory service LED and a dedicated supervisory service acknowledge switch.

    a. The activation of any standpipe, PIV valve or sprinkler valve supervisory (tamper) switch shall activate the systems supervisory audible signal and illuminate the LED at fire alarm control panel, remote annunciators and printers. A clear differentiation between valve tamper activation and opens and/or grounds on the initiation circuit wiring shall be provided:

1) Pressing the Supervisory Service Acknowledge Key will silence the supervisory audible signal while maintaining the Supervisory Service LED "on" indicating the off-normal condition.
2) Restoring the valve to the normal position shall cause the Supervisory Service LED to extinguish, indicating restoration to normal.
3) All supervisory location information shall be displayed on all remote LCD annunciators, network command terminals and printers where provided as part of this project.
4) A supervisory signal shall be transmitted to an approved central monitoring station.

SYSTEM SUPERVISION

A. The system shall contain addressable inputs/outputs. The alarm activation of any initiation circuit shall not prevent the subsequent alarm operation of any other initiation circuit.

1.14

1. There shall be a supervisory initiation circuit for connection of all sprinkler supervisory valves (tamper). Device activation shall cause a supervisory alarm condition at the control panel.

a. There shall be the required number of independently supervised and independently fused notification appliance circuits for audible and visual notification devices. Disarrangement conditions of any circuit shall not affect the operation of other circuits.
b. Each independently supervised circuit shall include a discrete readout to indicate disarrangement conditions per circuit.
c. The incoming electrical power to the system shall be supervised so that any power failure must be audibly and visually indicated at the control panel. A green "power on" LED shall be displayed continuously while incoming power is present.
d. The system batteries shall be supervised so that a low battery condition or disconnection of the battery shall be audibly and visually indicated at the control panel.
e. The system modules shall be electrically supervised for module placement. Should a module become disconnected the system trouble indicator shall illuminate and the audible trouble signal shall sound.
f. The system shall have provision for disabling and enabling all circuits, and/or devices individually for maintenance or testing purposes.

1.15

g. All trouble indications in addition to above shall display all trouble location information on all remote LCD annunciators, network GUI command terminals and printers.

SYSTEM POWER REQUIREMENTS

A. All control panels, transponder panels and remote auxiliary power supplies shall receive 120 VAC emergency power via a dedicated fused disconnect circuit from the nearest emergency power distribution panel.

1. All control panels, amplifiers and remote auxiliary power supplies shall be provided with sufficient battery capacity to operate the entire system upon loss of normal 120VAC power in a normal supervisory mode for a period of twenty-four (24) hours, with fifteen (15) minutes of alarm activation available at the end of the 24-hour period.
2. The system shall automatically transfer to the standby batteries upon power failure. All battery charging, and recharging operation shall be automatic. Batteries, once discharged, shall recharge at a rate to provide a minimum of 70% capacity within 12 hours.
   a. All circuits requiring system-operating power shall be 24 VDC and shall be individually fused at the control panel.
   b. All control equipment must have transient protection to comply with UL864 requirements. Where Fire Alarm circuits leave the building, additional transient protection must be provided for each circuit. Devices must be UL listed under standard #497B (Isolated Loop Protectors).

ENVIRONMENTAL CONDITIONS

A. Refer to specification section 28 05 00 for addition information.

1.16

PART 2 - PRODUCTS

MANUFACTURED PRODUCTS

2.1

A. In addition to all requirements as stipulated by Specification Section 28 05 00 as well as all related specifications sections, the following shall also apply:

1. Materials and equipment furnished shall be of current production of the manufacturer and shall meet and/or exceed the specified performance and features of the equipment and/or systems as herein specified and replacement parts shall be readily available to the Contractor and/or Owner.

   a. The equipment specified is based on the acceptable manufacturers listed. Where "or equal” is stated, equipment shall be equivalent in every way to that of the equipment specified, and subject to approval.

      1) When more than one unit, device, or component of the same class of equipment is required, such units, devices, or components shall be the product of a single manufacturer.

2. Acceptable manufacturers for the fire alarm voice evacuation system shall be as specified and shall be provided in full compliance with the requirements of this and all related specification sections and contract drawings.

   a. Where manufacturer and/or manufacturer model numbers reference specific system components in the related specification sections, it is to establish the performance requirements and quality of the systems and components only.

      1) It is in no way an inference that the referenced model numbers are the manufacturer’s current product and are the only manufacturer’s acceptable components for this project unless specifically referenced as “no substitutions.”

B. Approved Manufacturer

1. Siemens Desigo FV2050 as Maintained by Siemens
2. No Substitutions shall be accepted

C. Fire Alarm Control Panel

1. Control Panel construction shall be modular with solid state, microprocessor-based electronics. It shall display only that primary controls and displays essential to operation during a fire alarm condition. Keyboards or keypads shall not be required to operate the fire alarm control during a fire alarm condition.

   a. At a minimum, the following primary controls shall be visible through a front access panel:

      1) Eighty-character liquid crystal display.
      2) Individual red system alarm LED.
      3) Individual yellow supervisory service LED.
      4) Individual yellow trouble LED.
      5) Green "power on" LED.
      6) Alarm Acknowledge Key.
      7) Supervisory Acknowledge Key.
      8) Trouble Acknowledge Key.
      9) Alarm Silence Key.
      10) System Reset Key.

   b. The following secondary control switches shall be available behind the access panel:

      1) City Box disconnect/switch (Central Station Connection)
      2) Manual evacuation (drill)
      3) Elevator Shunt Trip bypass
      4) Spare

   c. At a minimum, the control panel shall provide the following:

      1) Setting of time and date.
      2) Lamp Test.
      3) Alarm, trouble, and abnormal condition listings.
      4) Enabling and disabling of each monitor point separately.
      5) Activation and deactivation of each control point separately.
      6) Multiple operator access levels.
      7) Walk Test enable/disable.
      8) Running diagnostic functions.
      9) Displaying software revision level.
      10) Displaying historical logs.
      11) Displaying card status.
      12) Point listing.

   d. For maintenance purposes, the following lists shall be available from the point lists menu:

      1) All points list by address.
      2) Monitor point list.
      3) Auxiliary control list.

4) Scrolling through menu options or lists shall be accomplished in a self-directing manner. These controls shall be located behind an access panel.

e. Primary Keys, LED's and LCD Display:

1) The control panel shall have at the minimum a 2-line x 80-character liquid crystal display, which shall be backlit for enhanced readability. So as to conserve battery standby power, it shall not be lit during an AC power failure unless an alarm condition occurs or there is keypad activity.
2) The display shall support both upper and lower-case letters. Lowercase letters shall be used for soft key titles and prompting the user. Uppercase letters shall be used for system status information. A cursor shall be visible when entering information.

f. The control panel shall automatically perform a daily self-test on each sensor. Checking the electronics in the sensor's base ensures the accuracy of the values being transmitted to the control panel. A sensor which fails the self-test will cause a "Self-Test Abnormal" trouble condition at the control panel. Systems requiring a manually initiated self-test by an operator shall not be acceptable.

g. An operator at the control panel, having a proper access level, shall have the capability to manually access the following information for each sensor:

1) Primary status
2) Device type
3) Present average value
4) Present sensitivity selected
5) Peak detection values
6) Sensor range (normal, dirty, etc.)

h. An operator at the control panel, having a proper access level, shall have the capability to manually control the following for each sensor:

1) Clear peak detection values
2) Enable or disable the point
3) Clear verification tally
4) Control a sensor's relay driver output

i. It shall be possible to program the control panel to automatically change the sensitivity settings of each sensor based on time-of-day and day-of-week. (For example, to be more sensitive during unoccupied times and less sensitive during occupied periods.) There shall be seven sensitivity settings available for each sensor.

j. Under normal condition the front panel shall display a "System is Normal" message and the current time and date.

k. Should an abnormal condition be detected the appropriate LED (Alarm, Supervisory, or Trouble) shall flash. The panel audible signal shall pulse for alarm conditions and sound steady for trouble and supervisory conditions.

l. The LCD shall display the following information relative to the abnormal condition of a point in the system:

1) 80-character custom location label.
2) Type of device (i.e. smoke, pull station, water flow).
3) Point status (i.e. alarm, trouble).

m. Acknowledgment for each abnormal condition shall be (PER NFPA 72 Requirements):

1) Pressing the appropriate acknowledge button shall display the first unacknowledged condition in the appropriate list (either alarm, supervisory, or trouble), and require another acknowledge button. Press to acknowledge only the displayed point.
2) After all points have been acknowledged, the LCD's shall glow steady and the Sonalert will be silenced. The total number of alarms, supervisory and trouble conditions shall be displayed along with a prompt to review each list chronologically. An end of list message “END of LIST” shall indicate the end of the list.

n. Alarm Silencing:

1) Should the "Alarm Silence" button be pressed all audible alarm signals shall cease operation.

o. System Reset:

1) The SYSTEM RESET button shall be used to return the system to its normal state after an alarm condition has been remedied. The LCD display shall step the user through the reset process with simple English Language messages. Messages, "SYSTEM RESET IN PROGRESS" will first be displayed followed by the message, "SYSTEM RESET COMPLETED", and finally, "SYSTEM IS NORMAL", should all alarm conditions be cleared.
2) Should the alarm condition continue the message, "SYSTEM RESET IN PROGRESS", will be followed by the message, "SYSTEM RESET ABORTED", and the system will remain in an abnormal state. System control relays shall not reset. The Sonalert and the Alarm LED will be on. The display will indicate the total number of alarms and troubles present in the system along with a prompt to use the ACK keys to review the points. These points will not require acknowledgment if they were previously acknowledged.

p. Function Keys:

1) Additional function keys shall be provided to access status data for the following points:

a) Initiating device circuits.
b) Indicating appliance circuits.
c) Auxiliary Relays.
d) All other input/output points.

2) The following data shall be available:

a) Primary State of point
b) Zone, PID, and Card type information

c) Current priority of outputs
d) Disable/enable status
e) Verification tallies of initiating devices
f) Automatic/Manual Control Status of output points
g) Acknowledge status

q. History Logging:

1) The system shall be capable of logging and storing 300 events in an alarm log and 300 events in trouble log. These events shall be stored in a battery protected random access memory. Each recorded event shall include the time and date of that event's occurrence.

2) The following Historical Alarm Log events shall be stored:

a) Alarms
b) Alarm Acknowledgment
c) Alarm Silence
d) System Reset
e) Alarm Historical log cleared

3) The following Historical Trouble Log events shall be stored:

a) Trouble conditions
b) Supervisory Alarms
c) Trouble Acknowledgment
d) Supervisory Acknowledgment
e) Alarm Verification tallies
f) Walk Test Results
g) Trouble Historical log cleared

r. LED Supervision:

1) All slave module LED's shall be supervised for burnout or disarrangement. Should a problem occur the LCD shall display the module and LED location numbers to facilitate location of that LED.

s. System Trouble Reminder:

1) Should a trouble condition be present within the system and the audible trouble signal silenced, the trouble signal shall resound at preprogrammed time intervals to act as reminder that the fire alarm system is not 100% operational. Both the time interval and the trouble reminder signal shall be programmable to suit the Owner's application.

t. Access Levels:

1) There shall be a minimum of four (4) access levels with level 4 being the highest level. Level 1 action shall not require a pass code. Pass codes shall consist of up to ten (10) digits. Changes to pass codes shall only be made by authorized personnel.

2) In order to maintain security when entering a passcode, the digits entered will not be displayed but a cursor will move along filling the position with an x to indicate that the digit has been accepted. All key presses will be acknowledged by a local audible sound.

3) When a correct pass code is entered, the message "Access Granted" shall be displayed. The new access level shall be in effect until the operator manually logs out or the keypads have been inactive for (10) minutes.

4) Should an invalid code be input, the operator shall be notified with the message, "ERROR...INCORRECT PASS CODE", and shall be allowed up to three chances to enter a valid code. After three unsuccessful tries, the message, "ACCESS DENIED", shall be displayed. The level shall not be altered, and the operator shall no longer be in the menu option.

5) Access to a level will only allow the operator to perform all actions within that level plus all actions of lower levels, not higher levels.

6) The following keys/switches shall have access levels associated with them:

a) Alarm Silence
b) System Reset
c) Set Time/Date
d) Manual Control
e) On/Off/Auto Control
f) Disable/Enable
g) Clear Historical Alarm Log
h) Clear Historical Trouble Log
i) Walk Test
j) Change Alarm Verification

7) Acknowledge keys shall also require privileged access to acknowledge points. If the operator presses an (ACK) key with insufficient access, an error message will be displayed. The points will scroll with (ACK) key presses to view the points on the list, but the points will not get acknowledged in the database.

2. Addressable Peripheral Network

a. Communication with addressable devices:

1) The system must provide communication with initiating and control devices individually. All of these devices will be individually annunciated at the control panel. Annunciation shall include the following conditions for each point:

a) Alarm
b) Trouble
c) Open
d) Short
e) Device missing/failed
f) Device Type

b. All addressable devices shall have the capability of being disabled or enabled individually from the main fire alarm control panel and all remote annunciator panels.

c. Up to a maximum of 127 addressable devices may be multi-dropped from a single Initiating Device Circuit. Systems that do not support field reprogramming to add or delete devices are unacceptable.

d. Format:

1) The communication format must be a completely digital poll/response protocol and shall be configured as NFPA Class A wiring no t-tapping of the circuit wiring shall be accepted. A high degree of communication reliability must be obtained by using parity data bit error checking routines for address coded and check sum routines for the data transmission portion of the protocol. Systems that do not utilize full digital transmission protocol are not acceptable.

e. Identification of Addressable Devices:

1) Each addressable device must be uniquely identified by an address code entered on each device at time of installation. Systems requiring special device programming instruments are acceptable providing a spare programming instrument is provided to the Owner at no additional cost.

a) The use of jumpers to set address will not be acceptable due to the potential of vibration and poor contact. Device identification schemes that do not use uniquely set addresses but rely on electrical position along the communication channel are unacceptable. The system must verify that the proper type device is in place and matches the desired software configuration.

f. Wiring Type, Distances, Survivability, and Configurations:

1) Wiring types will be approved by the equipment manufacturer. The system shall allow at a minimum a line distance of up to 2,500 feet to the furthest addressable device on a Class A circuit. To minimize wire routing and to facilitate future additions no t-tapping of the communications channel will be accepted.

g. Alphanumeric Annunciator:

1) Provide Remote Fire Alarm Annunciator Panel(s) where indicated on drawings and/or as required by the authority having jurisdiction.

a) At the minimum, the Contractor shall provide fire alarm annunciator panels at all main building entrances, building command centers, main fire alarm control panel, and all areas as otherwise indicated by the contract drawings.

2) The remote fire alarm annunciator panel shall be a supervised, backlit LCD alphanumeric display containing a minimum of eighty (80) characters for alarm annunciation in clear English text.

3) The remote annunciator shall display all alarm and trouble conditions from either the network node or the complete network.
4) A minimum of 10 remote annunciator panels may be connected to a specific (terminal mode) EIA 485 interface. To total number remote annunciator panels shall not reduce the annunciation capacity of the system. Each LCD shall include vital system wide functions such as, system acknowledge, silence and reset.
5) LCD display annunciator shall mimic the local control panel 80-character display or network annunciator and shall not require special programming.
6) All LCD annunciators installed shall be provided with locking door or keyed enable switch. All LCD annunciators installed, as surface mounted devices shall also be mounted on a color-coordinated manufacturer’s listed surface back-box.

D. Fire Fighter Control Station (FFCS)

1. The Fire Fighters Control Station located at the FACP and at remote locations where indicated on the drawings shall contain all equipment required for all audio control, alarm annunciation (FAA), signaling and supervisory functions. The FFCS shall include speaker zone controls and indication, digital voice message units and microphones. The FFCS at the minimum shall perform the following functions:

a. Operate as a supervised multi-channel (minimum 3 channels) emergency voice communication system with simultaneous broadcasting to all speaker circuits.

1) Audibly and visually annunciate the active or trouble conditions for all visual, and speaker zones.

a) Audibly and visually annunciate any trouble condition of tone generators and digital message units as required for normal operation of the system.
b) Provide all-call activities through activation of a single control switch. Operation shall activate all visual, and voice evacuation circuits.
c) Provide automatic, digitally recorded voice messages and tones which may be Field programmed through the microphone. (Contractor shall coordinate with AHJ, Owner and Architect for the proper message and required language(s) for all pre-recorded messages.)
d) Provide manual control and indication of all visual, and speaker circuits.

2) The Fire Fighter Control Stations (FFCS) shall provide all control and status interfaces to the emergency voice communication system with the capability of transmitting simultaneous prerecorded voice messages to all voice evacuation protected spaces.

3) Actuation of any alarm-initiating device shall also cause prerecorded messages to sound over voice evacuation protected spaces on the system. Speaker zoning shall be configured so that a dedicated speaker zone shall be capable of broadcasting a prerecorded evacuation message while adjacent zones spaces, and/or floor above/floor below simultaneously broadcast an alert tone and a separate and discrete emergency notification message. Each evacuation and emergency notification message shall be repeated four (4) times:

   a) Prior to programming the evacuation zoning and prerecorded messages, coordinate with the Local Authority Having Jurisdiction, Owner and Architect for final programming approval.

4) The FFCS shall be provided with an integral Digital Message Generator with a capacity of up to 60 seconds. The Digital Message Generator shall be capable of simultaneous broadcasting of primary and two secondary messages (30 seconds each). These messages shall be field programmable without the use of additional equipment and shall be capable of consecutive bilingual messages. In addition, the system shall be provided with built-in alert tone generators with steady, slow whoop, high/low and chime tone and shall also be field programmable.

5) Each FFCS shall be equipped with a built-in microphone, which shall be capable of providing both All-Call and Selective paging to all speaker zones.

6) Each FFCS shall have the following voice evacuation controls and indicators to allow for proper operator control:

   a) All Call LED
   b) On-Line LED
   c) All Call Switch
   d) Selective Speaker Zone Controls
   e) Local Speaker Volume Control
   f) Fire Fighters Telephone Circuit Controls
   g) Local (Test) Speaker

7) All speaker zone control switches shall include dedicated visual indication of active and trouble status for each speaker zone on the system and shall include dedicated selective control switches to manually activate or deactivate each speaker zone in the system.

E. Audio Amplifiers:

1. All Audio Amplifiers shall provide Audio Power at a minimum of 70 Volts (RMS) for distribution to all speaker circuits on the system and shall be fully supervised with battery back-up.

a. Audio amplifiers and tone generating equipment shall be electrically supervised for abnormal conditions and shall consist of low current, solid-state integrated circuits, with audio input, amplified output supervision and automatic switched back-up amplifiers, (if primary amplifiers should fail). Failure of any one amplifier in the system shall not degrade system performance in any way. All amplifiers shall be powered from a local dedicated primary emergency power circuit and equipped with a dedicated standby battery power:

1) All Fire Alarm system amplifiers shall be sized to provide the minimum wattage levels for each alarm speaker as indicated on the contract drawings and/or herein specified. All “Primary” and “Back-up” amplifiers shall be sized to a maximum of 75% of their rated capacity providing a minimum of 25% spare capacity for future expansion or increased power output requirements.
2) Multiple audio amplifiers may be mounted in the transponder or in the main fire alarm control panels, either to supply incremental audio power, or to function as an automatically switched backup amplifier(s).
3) The audio amplifier shall include an integral power supply, and shall provide the following controls and indicators:

a) Normal Audio Level LED
b) Incorrect Audio Level LED
c) Brownout LED
d) Battery Trouble LED
e) Amplifier Trouble LED
f) Audio Amplifier Gain Adjust

4) Adjustment of the correct audio level for the amplifier shall not require any special tools or test equipment

F. Peripheral Devices

1. Addressable Device Types:

a. General:

1) The system control panel must be capable of communicating with the types of addressable devices specified below. Addressable devices will be located as shown on the drawings. The system shall have "individual" device addressability. Each system device shall have its own address.
2) All smoke/heat sensors shall be listed to UL Standard 268 and shall be documented compatible with the control equipment to which they are connected. The sensors shall be listed for both ceiling and wall mount applications.

3) Each smoke/heat sensor base shall contain an LED that will flash each time it is scanned by the control panel (once every 4 seconds). When the control panel determines that a sensor is in an alarm or a trouble condition, the control panel shall command the LED on that sensor's base to turn on steady indicating the abnormal condition. Sensors, which do not provide a visible indication of an abnormal condition, shall not be acceptable.
4) All smoke/heat sensor bases, where shown on the plans as required, shall be provided with a relay driver and/or local sounder base output that is to be controlled either automatically or manually from the control panel.
5) Each smoke/heat Sensor shall contain a magnetically actuated test switch to provide for easy alarm testing at the sensor location.
6) All sensors shall be scanned by the control panel for its type identification to prevent inadvertent substitution of another sensor type. The control panel shall operate with the installed device but shall initiate a "Wrong Device" trouble condition until the proper type is installed or the programmed sensor type is changed.
7) All sensors' electronics shall be immune from false alarm caused by EMI and RF.

b. Addressable Pull Box (manual station):

1) Addressable pull boxes shall, on command from the control panel, send data to the panel representing the state of the manual switch and the addressable communication module status. They shall use a key operated test-reset lock and shall be designed so that after actual emergency operation, they cannot be restored to normal use except by the use of a key.
2) All operated stations shall have a positive, visual indication of operation and utilize a key type reset. Stations that utilize a special wrench or Allen key shall not be accepted.
3) Manual stations shall be constructed of Lexan with clearly visible operating instructions provided on the cover. The word FIRE shall appear on the front of the stations in raised letters, 1.75 inches (44 mm) or larger. Manual stations where indicated on the contract drawings, as institutional type stations shall be UL listed for that type of application.
4) Furnish and install clear Lexan protective covers w/self-contained horn on all manual pull stations where indicated on contract drawings as “protected with wire guards”. All protective covers shall be UL listed for the application.
5) All manual pull stations installed, as surface mounted devices shall be mounted on a color-coordinated manufacturer’s listed surface back-box. All manual pull stations installed in locations exposed to the weather or installed in wet/damp locations shall be listed for that application and mounted on manufacturer’s back-box listed for weatherproof applications.

c. Intelligent Photoelectric Smoke Detector:

1) The intelligent smoke detectors shall use the photoelectric (light-scattering) principal to measure smoke density and shall, on command from the control panel, send data to the panel representing the analog level of smoke density.
2) Furnish and install wire guards on all smoke detectors, where indicated on contract drawings. All wire guards shall be UL listed for the application.

d. Intelligent Duct Smoke Detectors:

1) The intelligent duct smoke detectors shall be photoelectric and listed by Underwriters’ Laboratories, Inc. Each smoke sensor and air duct housing shall be self-compensating for the effects of air velocity (from 300 to 4,000 FM), temperature, humidity and atmospheric pressure. It shall not be necessary to field adjust the sensitivity to compensate for the above effects. Each smoke sensor shall utilize solid state components and be equipped with an integral alarm indicating LED, which shall flash when the smoke sensor is activated.

a) In addition, each duct smoke detector shall be equipped with a programmable form “C” remote relay with contacts rated at 3 AMPS, 120 VAC resistive or 24 VDC resistive and wired for fan shut down requirements and or other related smoke control functions as required by code.

2) Duct smoke detectors shall be capable of a programming format that permits a supervisory signal to be transmitted to the fire alarm control panel while providing a latched relay state on the fan control interface until reset of the fire alarm control panel.
3) Each duct-smoke detector shall be provided with a remote test station and remote alarm-indicating lamp in accordance with all requirements of NFPA 72. All remote test stations shall be key operated and shall be installed at 5 feet above finished floor. Remote indicating lamps can be integral to the remote test or can be stand-alone devices. Remote indicating lamps that are stand-alone devices shall be listed for use with the duct smoke detector and can be mounted on wall or ceilings.

a) Duct-smoke detectors shall be provided and wired by the Division 26 Contractor and installed by the Division 23 Contractor. Refer to Division 23 documents for additional information regarding location and quantities of detectors.

e. Weather Proof Duct Smoke Detectors

1) Provide weather proof duct detectors at all locations at roof top Air Handler Units where supply/return air ducts penetrate roof and insufficient space is available below roof to install duct detectors in accordance with NFPA 72 and IBC Mechanical Code.

a) The weather proof duct smoke detectors shall be photoelectric and listed by Underwriters’ Laboratories, Inc for exterior environments from 32 F to 155 F at a relative humidity of 10% to 85% condensation. Each smoke sensor shall be self-compensating for the effects of air velocity (from 100 to 4,000 FM). Each smoke sensor shall utilize solid state components and be equipped with an integral alarm indicating LED, which shall flash when the smoke sensor is activated.

b) In addition, each duct smoke detector shall be equipped with 2 sets of form C Alarm contacts rated at 10A and 1 set of form C Trouble contacts rated at 10A. The duct smoke detector shall be wired to an addressable monitor module which shall provide all alarm and trouble indications to the main fire alarm control panel. All fan shut functions shall be accomplished by the installation of a dedicated addressable control module. Smoke detector shall be model SSU-SL02000-P or approved equal.

c) Duct smoke detector housing shall be a NEMA 3R weather proof enclosure UL listed for that application. The duct-smoke detector housing shall be provided integral heater listed for use with duct detector housing and required air sampling tubes sized for the application. The integral heater kit shall be module OP-001 as manufactured by Space Age Electronics. The weather proof duct detector housing shall be model SSU-WP-2000 as manufactured by Space Age Electronics or approved equal.

2) All Duct-smoke detectors shall be provided and wired by the Division 26 Contractor and installed by the Division 23 Contractor. Refer to Division 23 documents for additional information regarding location and quantities of detectors.

f. Intelligent Thermal Detectors:

1) Thermal detectors where indicated on the drawings shall be intelligent addressable devices rated at 135 degrees Fahrenheit (58 degrees Celsius) and have a rate-of-rise element rated at 15 degrees F (9.4 degrees C) per minute. It shall connect via two wires to the fire alarm control panel signaling line circuit.

2) Furnish and install wire guards on all heat detectors, where indicated on contract drawings. All wire guards shall be UL listed for the application.

g. Conventional Thermal Detectors:

1) Thermal detectors were indicated as conventional detectors on the drawings shall be rated at 135 degrees Fahrenheit (58 degrees Celsius) and have a rate-of-rise element rated at 15 degrees F per minute. It shall connect via an addressable zone module to the fire alarm control panel signaling line circuit. Maximum number of devices permitted any single IDC circuit shall be 15 devices per addressable zone module and shall be provided in only areas indicated by the contract documents or identified as zoned conventional devices on the fire alarm riser diagram.
2) Thermal detectors were indicated as conventional detectors fixed temperature on the drawings shall be rated at 194 degrees Fahrenheit. It shall connect via an addressable zone module to the fire alarm control panel signaling line circuit. Maximum number of devices permitted on any single IDC circuit shall be 15 devices per addressable zone module and shall be provided in only areas indicated by the contract documents or identified as zoned conventional devices on the fire alarm riser diagram.

h. Addressable Dry Contact Monitor Module:

1) Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional alarm initiating devices such as sprinkler water flow switches, pressure switches, sprinkler control valves and conventional heat detectors and/or any N.O. dry contact device to fire alarm system SLCs.
2) The monitor module shall mount in a 4-inch square (101.6 mm square), 2-1/8 inch (54 mm) deep electrical box.
3) The IDC zone shall be suitable for Style D or Style B operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.
4) For difficult to reach areas, the monitor module shall be available in a miniature package and shall be no larger than 2-3/4-inch (70 mm) x 1-1/4-inch (31.7 mm) x 1/2 inch (12.7 mm). This version need not include Style D or an LED.

i. Two Wire Detector Monitor Module:

1) Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional 2-wire smoke detectors or alarm initiating devices (any N.O. dry contact device).
2) The two-wire monitor module shall mount in a 4-inch square (101.6 mm square), 2-1/8 inch (54 mm) deep electrical box or with an optional surface back-box.
3) The IDC zone may be wired for Class A operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.

j. Addressable Control Module:

1) Addressable control modules shall be provided to supervise and control the operation of conventional NACs of compatible, 24 VDC polarized audio/visual notification appliances and/or fan shutdown and other auxiliary control functions, in which case the control module shall be configured to operate as a dry contract relay.
2) The control module shall mount in a standard 4-inch square (101.6 mm square), 2-1/8 inch (54 mm) deep electrical box, or to a surface mounted back-box.
3) The control module NAC may be wired for Class A with up to 1 amp of inductive A/V signal, or 2 amps of resistive A/V signal operation, or as a dry contact (Form-C) relay. The relay coil shall be magnetically latched to reduce wiring connection requirements, and to ensure that 100% of all auxiliary relay or NACs may be energized at the same time on the same pair of wires.
    a) A separate supervised power circuit from the main fire alarm control panel or from a supervised shall provide Audio/visual power, UL listed remote power supply.
    b) The control module shall be suitable for pilot duty applications and rated for a minimum of 0.6 amps at 30 VDC.

k. Batteries:
    1) The batteries shall be sealed Gel Cell type, 12-volt nominal.
    2) The battery shall have sufficient capacity to power the complete fire alarm system and all ancillary control units in their entirety for not less than 24 hours plus fifteen minutes of continuous operation of all system notification appliances upon any loss of normal AC power.

l. Combination Speaker/Strobe Assembly (Ceiling/Wall Mounted):
    1) Furnish and install where indicated on drawings combination “synchronized” 70 Volt (RMS) multi-tap speaker/strobe audio/visual notification appliances (White in Color). The horn unit shall produce a minimum sound pressure level of 88db at 10 feet and shall be UL listed for fire alarm use. The strobe lens shall be clear, and the housing engraved, “FIRE”. The Contractor shall be responsible for providing the required candela rating for each strobe light based on the device location in accordance with all requirements of NFPA 72 and UL 1971.
    2) Furnish and install wire guards on all Horn/Strobe units, where indicated on contract drawings. All wire guards shall be UL listed for the application.
    3) All horn/strobe devices installed, as surface mounted devices shall be mounted on a color-coordinated manufacturer’s listed surface backbox. All horn/strobe devices installed in locations exposed to the weather or installed in wet/damp locations shall be listed for that application and mounted on manufacturer’s backbox listed for weatherproof applications.

m. Trumpet Horn Unit Assembly:

1) Furnish and install where indicated on drawings 70 VMS trumpet horn notification appliances (White in Color). The horn unit shall produce a minimum sound pressure level of 88db at 10 feet and shall be UL listed for fire alarm use.
2) Furnish and install wire guards on all Horn units, where indicated on contract drawings.
3) All horn devices installed, as surface mounted devices shall be mounted on a color-coordinated manufacturer's listed surface backbox. All horn devices installed in locations exposed to the weather or installed in wet/damp locations shall be listed for that application and mounted on manufacturer's backbox listed for weather proof applications.

n. Speaker Taps

1) Wall Mounted Speakers - Offices/Common Areas – 1 Watt
2) Wall Mounted Speakers - Corridor/Stair Towers – 1/2 Watt
3) Ceiling Mounted Speakers Offices/Common Areas – 1 Watt
4) Ceiling Mounted Speakers - Corridors – 1/2 Watt
5) Trumpet Speakers – Mechanical, Electrical, Baggage Handling Spaces – 15 Watts

o. Visual Flashing Strobe (Ceiling/Wall Mounted):

1) Furnish and install where indicated on drawings "synchronized" strobe notification appliances (White in Color) installed as either flush ceiling or wall mounted units in accordance with the Contract Drawings. The strobe lens shall be clear, and the housing engraved, "FIRE". The Contractor shall be responsible for providing the required candela rating for each strobe light based on the device location in accordance with all requirements of NFPA 72 and UL 1971.
2) Furnish and install wire guards on all Strobe units, where indicated on contract drawings.
3) All strobe devices installed, as surface mounted devices shall be mounted on a color-coordinated manufacturer's listed surface back-box. All strobe devices installed in locations exposed to the weather or installed in wet/damp locations shall be listed for that application and mounted on manufacturer's back-box listed for weatherproof applications.
4) Proper installation and spacing shall be in accordance with all NFPA 72 requirements and manufacturers recommendations. In addition to the locations indicated on the contract documents the Contractor shall be responsible for determining exact placement of all devices and shall locate and install all devices based on NFPA 72 requirements for visual candela ratings and shall be coordinated with Architectural drawings.

3.1

PART 3 - EXECUTION

COORDINATION

A. Coordinate the installation of all fire alarm components, equipment, devices, cabling, conduits and related appurtenances, with the applicable trades to ensure proper connectivity, functions and/or system integrations in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

1. Coordinate with all trades at the time of shop drawing submission detailing all conditions impacting the installation of all components, equipment, devices, cabling, conduits and related appurtenances. The Contractor shall coordinate with the appropriate trade all conditions impacting the installation any system, conduit, or cable tray including but not limited all communications rooms, equipment locations, site conditions, and above ceiling spaces, to the satisfaction of all concerned trades, subject to final review by the Owner and OAR.

B. In addition to all requirements as stipulated by Specification Section 28 05 00 as well as all related specifications sections, the following shall also apply:

1. The Contractor shall coordinate with the appropriate trade all conditions impacting the installation of fire alarm, as well as all appurtenances and/or system integrations including but not limited to all equipment locations, ceilings, lighting fixtures, fire protection piping, and ductwork layouts to the satisfaction of all concerned trades, subject to final review by the Owner and OAR.

a. Coordinate exact location of all desktop/counter/wall mounted equipment with the Owner and OAR, as well as all affected trades and tenants prior to the installation of any fire alarm system panels, controls, annunciators and all appurtenances.
b. Coordinate exact location(s) of all fire alarm system panels, controls, annunciators, as well as all appurtenances, conductors, conduits, equipment, and/or devices with all architectural plans, reflected ceiling plans and affected trades prior to installation.
c. All fire alarm system controls, panels, annunciators and/or devices as well as all appurtenance installations requiring coordination with other trades the Contractor shall provide all templates, backboxes and equipment anchor bolts for mounting or flush mounting preparation, (e.g. pedestals or other devices requiring mounting on walls, concrete pads or other materials). Coordinate delivery of templates and equipment anchor bolts to preclude any delay in the construction schedule or the work of the affected trade.
d. If installation of any fire alarm conductors, conduits, controls, panels, annunciators’ devices and/or appurtenances is performed prior to coordination with other trades, which interferes with work of other trades or operation and maintenance of the facility, make necessary changes to correct the condition at no additional cost to the Owner.

2. Coordinate the installation of all fire alarm components, equipment, devices, cabling, conduits and related appurtenances, with the applicable trades to ensure proper connectivity, functions and/or system integrations in accordance with all related specification sections. Refer to Division 01 Specification Section for additional project coordination requirements.

3. Coordinate with all trades at the time of shop drawing submission detailing all conditions impacting the installation of all components, equipment, devices, cabling, conduits and related appurtenances. The Contractor shall coordinate with the appropriate trade all conditions impacting the installation any system, conduit, or cable tray including but not limited all communications rooms, equipment locations, site conditions, and above ceiling spaces, to the satisfaction of all concerned trades, subject to final review by the Owner and OAR.

C. Pre-installation Conference: Attend all pre-installation conferences at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to the proper installation of the fire alarm system, including, but not limited to, the following:

1. Inspect and discuss electrical and control system roughing-in related to installation of the fire alarm system as well as all preparatory work as required to be performed by other trades related to the seamless integration of the following systems;

   a. Wet and Dry Pipe Sprinkler Systems
   b. Deluge Sprinkler Systems
   c. Kitchen Suppression Systems
   d. HVAC Shutdown
   e. Building Management System (BMS)
   f. Automatic Smoke Doors
   g. Elevator Phase I Fire Fighters Operations
   h. Access-Controlled Egress Doors
   i. Siemens Graphic Computers

2. Review all sequence of operations related to the integration of the fire alarm system, building smoke control, deluge and pre-action sprinkler systems.
3. Review and finalize construction schedule, project phasing and availability of materials, installation personnel, equipment, and any preparatory work by other trades needed to make progress and avoid delays.
4. Review required start-up, testing, commissioning and certifying procedures to be employed for the fire alarm system and any impacts to other trades.

D. The Contractor shall maintain a complete set of current and up to date shop drawings and equipment submissions at the job site at all times. Shop drawings, equipment submissions and all other documents submitted for review shall be made available on site to the Owner and OAR upon request.

1. Coordinate any work scheduled to be provided by Owner or Owner’s Vender that
3.2 impact the scope of work associated with integration of the fire alarm system according to all requirements of this project. Schedule all work to ensure that the
3.3 work of the Owner and all Owner Vendors can proceed in accordance with the Project Schedule.

EQUIPMENT PROTECTION

A. Refer to specification section 28 05 00 for additional information.

WORK PERFORMANCE

A. In addition to all requirements as stipulated by Specification Section 28 05 00 as well as all related specifications sections, the following shall also apply:

1. Installation, final termination, and testing, of all fire alarm system and all related components, equipment, devices, cabling, conduits and related appurtenances shall be under the direct supervision of the appropriate system integrator. The integrator shall be an accredited and authorized distributor of the appropriate equipment manufacturer and shall be fully certified in the installation, testing, and commissioning, of all elements of the fire alarm system being provided as part of this project.

B. Job site safety and worker safety is the responsibility of the Contractor. Ensure that safe access and egress from all work areas is maintained during movement and installation of materials. Clean up all debris generated by installation activities. Keep all areas free of debris at all times.

C. For work on existing facilities, arrange, phase, and perform work to assure the operation of all systems for other buildings and contiguous spaces at all times. Refer to Division 01 Specification Section for additional requirements.

D. Remove all unnecessary tools and equipment, unused materials, packing materials, and debris from each area where work has been completed unless designated for storage.

E. The Contractor shall prepare the necessary documents required for installing, testing, and bringing each system online. Such documents include but are not limited to:

1. Project management and quality assurance plans
2. Testing plans
3. Component and system submittal documents
4. Installation plans
5. Component design plans
6. System user documentation
7. Record Drawings and documentation

3.4 INSTALLATION

A. In addition to all requirements as specified by specification section 28 05 00 the fire alarm system shall also be provided in accordance with the following requirements:

1. All fire alarm system wiring shall be installed in strict compliance with all the provisions of NEC-Article 760 A and C, Power-Limited Fire Protective Signaling Circuits or if required may be reclassified as non-power limited and wired in accordance with NEC-Article 760. Upon completion, the Contractor shall so certify in writing to the Architect of such compliance.

a. All fire alarm system wiring shall be installed in dedicated conduits or raceways. Refer to specification Section 28 05 00 and related Division 26 specification sections for additional information.

3.5 b. The Contractor shall clean all dirt and debris from the inside and the outside of the fire alarm equipment after completion of the installation.

B. Penetrations of Walls and Floors:

1. Refer to specification Section 28 05 00 for additional information.

ELECTRICAL POWER DISTRIBUTION

A. Refer to specification Section 28 05 00 for additional information.

TRANSIENT VOLTAGE SUPPRESSION

A. Refer to specification Section 28 05 00 for additional information.

GROUNDING AND BONDING

A. Refer to specification Section 28 05 00 for all project grounding and bonding requirements.

3.6

EQUIPMENT IDENTIFICATION

3.7

A. In addition to all requirements as stipulated by Division 01 refer to related specification Section 27 0553 for all labeling and identification requirements.

3.8 MAINTENANCE AND SERVICE

A. General Requirements

3.9

1. In addition to all associated requirements of 28 05 00 the following shall also apply.
2. After formal written acceptance of all fire alarm system components, equipment, devices, cabling, conduits and related appurtenances, the Contractor shall provide all services required to maintain the system in fully operational state for the warranty period as specified by Division 01 as well as all related specification sections

    a. Provide all necessary labor, materials and related appurtenances as required for performing scheduled adjustments or other non-scheduled work. Impacts on facility operations shall be minimized when performing scheduled adjustments or other non-scheduled work related to the installation and termination of all backbone and riser infrastructures. Refer to Division 01 specification section for additional requirements.

3.10

WARRANTY

A. Warrant material and workmanship for a period as specified in Division 01 of the contract documents as well as all requirements of specification section 28 05 00, related specification sections and as well as herein specified. The warranty period shall commence from the date the Contactor received written notification of final acceptance from the Owner and/or OAR. At the minimum, the Contractor shall provide the following warranty provisions:

1. Warrant the replacement of all defective equipment, materials, components, or systems components/materials and/or correct all defective work when given notice by the Owner and OAR during the warranty period.

    a. At no time is the Contractor to use the extra materials provided under the scope of this project to replace malfunctioning or damaged equipment, material, components, or systems. The Contractor shall replace all malfunctioning or damaged equipment and or components with new.

        1) The repair and then reinstallation of malfunctioning or damaged equipment shall not be acceptable.

b. During the Warranty period, replace failed materials, components or workmanship per the terms specified in this section as well as Division 01, 28 05 00 and any related specification sections. The Owner and OAR shall not be bound to the terms and conditions of the manufacturer’s warranty, pertaining to the replacement of failed equipment. In any situation, it is the Vendor’s responsibility to keep the system operational during any hardware or software failures. Replacement equipment shall be provided to maintain operations while equipment manufacturer addresses warranty issues.

1) Warranty replacements and repairs shall include any necessary shipping, handling and materials.

2. Warranty excludes liability for consequential incidental, or special damages due to vandalism, misuse, or acts of god.
3. Onsite warranty response time by qualified technician shall be no more than 8 hours upon receipt of request from Owner, unless otherwise noted in related Division 27 specification sections.
4. Warranty repairs shall be provided to the Owner at no cost. This shall include but not limited to replacement of all defective components/materials, all labor charges, all travel costs and all vehicle charges.
5. Response time shall be 7 days a week / 24 hour a day / 365 day a Year.
6. Provide test, inspection, and service of each system on a semi-annual basis at six-month intervals.
7. Contractor must provide verification that they maintain their principle base of operation along with the personnel that will be responsible for providing service within 3 hours driving time to the project site. This tenet shall remain in effect for the life of the warranty.

B. The Contractor shall, as a condition of final payment, execute a written warranty certifying all fire alarm system components, equipment, devices, cabling, conduits and related appurtenances have been completed in accordance with all requirements of the Contract Documents.

1. All system testing, commissioning and demonstration shall be performed prior to final system acceptance. All defects or damages due to faulty materials or workmanship shall be replaced without delay, to the satisfaction of the Owner’s Representative, at the Contractor's expense.
   a. The Contractor shall provide written documentation of all test results and stating what was done to correct any deficiencies. The first inspection shall occur 90 calendar days after the acceptance date. The last inspection shall occur 30 calendar days prior to the end of the warranty.
   b. The warranty period shall be extended until the last inspection and associated corrective actions are complete. Where any equipment and/or labor covered by Contractor's or manufacturer's warranty, has been replaced, due to failure, the warranty period for any replaced equipment or restored work shall be reinstated for a period equal to the original warranty period, and commencing with the date of completion of the replacement or restoration work.

3.11

FIELD SERVICES

A. In addition to all testing requirements as specified by Division 01, specification 28 05 00 as well as all related Division 27 Specification Sections, testing of all fire alarm components, equipment, devices, cabling, conduits and related appurtenances shall be provided in accordance with the following requirements;

1. Notify the Owner and OAR in writing, prior to the closing of any ceilings and ten (10) days advance of testing all backbone and riser infrastructures to prevent delays in construction schedules.
2. Test all grounding, bonding, surge suppression, initiating, audio and network circuits prior to start-up and commissioning of any, fire alarm system components, equipment, devices, cabling, ancillary system integrations and all related appurtenances.

B. Contractor Requirements

1. Contractor shall provide sufficient skilled labor to complete testing within a reasonable test period.
2. Contractor shall have a minimum of three years’ experience installing and testing structured fire alarm systems. All installers assigned by the Contractor to the installation shall be certified by the factory to install and test the provided products.
3. Contractor is responsible for supplying all of required test equipment necessary to perform all acceptance testing in accordance with all requirements of the Contract Documents.
4. Contractor is responsible for submitting complete acceptance documentation as defined as herein specified. No fire alarm installations shall be considered complete until all test results have been completed, submitted and approved by Owner and OAR.

C. Before requesting a final inspection, the Contractor shall perform a series of end to end installation performance tests. The Contractor shall submit for approval by the Owner and OAR all test procedures to be employed, test result forms, and timetable for testing all system components, equipment, devices, cabling, and related appurtenances connections.

D. Acceptance of the test procedures is predicated on the Contractor's use of the specified products.

1. The fire alarm system shall be furnished and installed as herein specified as well as all related specification sections. All fire alarm components, equipment, devices, cabling, conduits and related appurtenances shall be installed in accordance will the Contract documents, as well as all manufacturer’s recommended practices, applicable codes, standards and industry practices.

2. Acceptance of the completed installation for each system will be evaluated in accordance with the following factors;

   a. Phases of Testing:

      1) On-Site Performance Verification Testing
      2) On-Site Final Acceptance Testing.

E. Testing:

1. In addition to all requirements as specified by Specification Section 28 05 00 the fire alarm system shall also comply with the following requirements:

   a. The completed fire alarm system shall be fully tested in accordance with all NFPA 72 testing and certification requirements.

      1) Upon completion of a successful testing, the Contractor shall so certify in writing to the Owner and OAR all testing was completed, certified and left in first class operational condition, the Contractor shall submit to the Owner and OAR for review all completed NFPA 72 certification, calibration and test reports witnessed and signed by the AHJ prior to final acceptance.

         a) In addition, the Contractor shall provide to the Owner and OAR written documentation of all testing, cleaning, threshold settings, and sensitivity readings for each automatic smoke-sensing device within the system.

   b. The service of a competent, factory-trained engineer or NICET Level III technician authorized by the equipment manufacturer and licensed by the state shall be provided to technically supervise installation and participate during initial system start-up, final testing and assist the Authority Having Jurisdiction during final acceptance testing.

F. Demonstrations

1. In addition to all requirements of Division 01 and Specification Section 28 05 00 the fire alarm system shall also comply with the following requirements:

   a. At the final inspection, a factory-trained representative of the equipment manufacturer shall demonstrate to the Owner and Architect that the system functions properly in every respect and is in full compliance with the contract documents. This requirement is in addition, to all testing requirements listed in specification section 28 05 00 and related specification sections.

      1) The Contractor shall provide a typewritten framed "Sequence of Operation." Posted at the main fire alarm control panel and at all remote annunciator panel locations.

      2) Provide written notification to the Owner and Architect of the systems condition before and after service, exact components that were tested, detector sensitivity readings, battery conditions and overall status of the system.

3.12

TRAINING

A. In addition to all requirements of Division 01, Specification section 28 05 00 and all related specification sections the following shall apply;

3.13

1. At the minimum review of functional and operations changes to the existing Siemens platform. Coordinate with Owner in advance all review dates and schedules to allow Owner to have all selected personnel in attendance.

PROJECT CLOSEOUT REQUIREMENTS

A. In addition to all final close requirements as specified by Division 01, Specification Section 28 05 00 Specification Section, the Contractor shall comply with all requirements of this Section.

B. Final System Acceptance

1. In addition to the requirements set forth in Division 01, the Contractor shall prepare and issue a Certificate of Project Completion, containing:

   a. The date of project completion.
   b. A list of items that have been corrected by the Contractor.
   c. Date final acceptance was provided to the Contractor by Owner and OAR
   d. The time and date the Owner will assume possession of the system (transfer of ownership).
   e. The date that warranty begins.

2. The Owner and OAR will perform an inspection after receipt of written certification. The project completion inspection shall include, but not be limited to:

   a. The project’s contracted work and any additional change orders.
   b. All equipment and systems tested and shown operational in the presence of the Owner and OAR.

3. After the inspection, the Owner and OAR will prepare and submit to the Contractor, a list of items to be completed or corrected, as determined by the inspection, along with the designated timeframe for completion.

4. Should the Owner or OAR consider the work not to be complete, the Owner or OAR will immediately notify the Contractor, in writing, stating the reasons. The Contractor shall complete the work, and then send a second written notice to the Owner and OAR certifying that the Project is complete. The Owner and OAR shall then re-inspect the work upon Contractor’s request at a scheduled re-inspection time.

   a. At any time, the Owner shall have the right to Contract with a third-party necessary to complete and/or inspect any work of which Contractor failed to meet the Contract requirements. All costs for this third party shall be borne by the original Contractor responsible for delivering the project.

C. Inspections

1. In addition to all requirements of Division 01 and Specification Section 28 05 00 the fire alarm system shall also comply with the following requirements:

   a. At the completion of the project and prior to final acceptance of the Work, provide evidence to the Owner and OAR of all final tests, inspections, certifications and approvals of the Authorities Having Jurisdiction.

2. Owner approval is required prior to final system acceptance and payment.

END OF SECTION

SECTION 31 31 16 - TERMITE CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General conditions provisions of the contract including contractual conditions, and division 1 specifications.

1.2 SUMMARY

A. This Section includes the following for termite control:

1. Soil treatment.

1.3 DEFINITIONS

A. EPA: Environmental Protection Agency.

B. PCO: Pest control operator.

1.4 SUBMITTALS

A. Product Data: Treatments and application instructions, including EPA-Registered Label.

B. Product Certificates: Signed by manufacturers of termite control products certifying that treatments furnished comply with requirements.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Soil Treatment Application Report: After application of termiticide is completed, submit report for Owner's record information, including the following as applicable:

1. Date and time of application.
2. Moisture content of soil before application.
3. Brand name and manufacturer of termiticide.
4. Quantity of undiluted termiticide used.

5. Dilutions, methods, volumes, and rates of application used.
6. Areas of application.
7. Water source for application.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: A pest control operator who is licensed according to regulations of authorities having jurisdiction to apply termite control treatment in jurisdiction where Project is located.

B. Regulatory Requirements: Formulate and apply termiticides, and label with a Federal registration number, to comply with EPA regulations and authorities having jurisdiction.

C. Independent Testing: Independent testing laboratory shall certify that treatment meets the requirements.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: To ensure penetration, do not treat soil that is water saturated. Do not treat soil while precipitation is occurring. Comply with EPA-Registered Label requirements and requirements of authorities having jurisdiction.

1.7 COORDINATION

A. Coordinate soil treatment application with excavating, filling, and grading and concreting operations. Treat soil under footings, grade beams, and ground-supported slabs, before construction.

1.8 WARRANTY

A. Special Warranty: Written warranty, signed by applicator and Contractor certifying that termite control work, consisting of applied soil termiticide treatment, will prevent infestation of subterranean termites. If subterranean termite activity or damage is discovered during warranty period, re-treat soil and repair or replace damage caused by termite infestation.

1. Warranty Period: Five years from date of Substantial Completion.

a. Provide optional renewal on the same terms.

B. Should damage occur during the guarantee period, the Contractor shall make repairs to structurally damaged surfaces to a dollar value based on the size of the building.

1.9 MAINTENANCE SERVICE

A. Continuing Service: Provide a proposal for continuing service, including monitoring, inspection, and re-treatment for occurrences of termite activity, from applicator to Owner, in the form of a standard continuing service agreement, starting on the date of Substantial Completion. State services, obligations, conditions, and terms for agreement period and for future renewal options.

PART 2 - PRODUCTS

2.1 SOIL TREATMENT

A. Termiticide: Provide an EPA-registered termiticide complying with requirements of authorities having jurisdiction, in a soluble or emulsible, concentrated formulation that dilutes with water or foaming agent, and formulated to prevent termite infestation. Use only soil treatment solutions that are not harmful to plants. Provide quantity required for application at the label volume and rate for the maximum termiticide concentration allowed for each specific use, according to the product's EPA-Registered Label.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for moisture content of the soil, interfaces with earthwork, slab and foundation work, landscaping, and other conditions affecting performance of termite control. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with the most stringent requirements of authorities having jurisdiction and with manufacturer's written instructions for preparing substrate.

1. Remove all extraneous sources of wood cellulose and other edible materials such as wood debris, tree stumps and roots, stakes, formwork, and construction waste wood from soil and around foundations.

B. Soil Treatment Preparation: Remove foreign matter and impermeable soil materials that could decrease treatment effectiveness on areas to be treated. Loosen, rake, and level soil to be treated, except previously compacted areas under slabs and footings.

1. Termiticides may be applied before placing compacted fill under slabs if recommended by termiticide manufacturer.

3.3 APPLICATION, GENERAL

A. General: Comply with the most stringent requirements of authorities having jurisdiction and with manufacturer's EPA-Registered Label for products.

3.4 APPLYING SOIL TREATMENT

A. Application: Mix soil treatment termiticide solution to a uniform consistency. Provide quantity required for application at the label volume and rate for the maximum specified concentration of termiticide, according to manufacturer's EPA-Registered Label, to the following so that a continuous horizontal and vertical termiticidal barrier or treated zone is established around and under building construction. Distribute the treatment evenly.

1. Slabs-on-Grade: Under ground-supported slab construction, including footings, building slabs, and attached slabs as an overall treatment. Treat soil materials before concrete footings and slabs are placed.
2. Foundations: Adjacent soil including soil along entire inside perimeter of foundation walls, along both sides of interior partition walls, around plumbing pipes and electric conduit penetrating slab, and around interior column footers, piers, and chimney bases; and along entire outside perimeter, from grade to bottom of footing. Avoid soil washout around footings.
3. Masonry: Treat voids.
4. Penetrations: At expansion joints, control joints, and areas where slabs will be penetrated.

B. Avoid disturbance of treated soil after application. Keep off treated areas until completely dry.

C. Protect termiticide solution, dispersed in treated soils and fills, from being diluted until ground-supported slabs are installed. Use waterproof barrier according to EPA-Registered Label instructions.

D. Post warning signs in areas of application.

E. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities following application.

END OF SECTION 31 31 16

THIS PAGE INTENTIONALLY LEFT BLANK

Item P-610

Concrete for Miscellaneous Structures

DESCRIPTION

610-1.1 This item shall consist of concrete and reinforcement, as shown on the plans, prepared and constructed in accordance with these specifications. This specification shall be used for all concrete other than airfield pavement which are cast-in-place.

MATERIALS

610-2.1 General. Only approved materials, conforming to the requirements of these specifications, shall be used in the work. Materials may be subject to inspection and tests at any time during their preparation or use. The source of all materials shall be approved by the Resident Project Representative (RPR) before delivery or use in the work. Representative preliminary samples of the materials shall be submitted by the Contractor, when required, for examination and test. Materials shall be stored and handled to ensure preservation of their quality and fitness for use and shall be located to facilitate prompt inspection. All equipment for handling and transporting materials and concrete must be clean before any material or concrete is placed in them.

The use of pit-run aggregates shall not be permitted unless the pit-run aggregate has been screened and washed, and all fine and coarse aggregates stored separately and kept clean. The mixing of different aggregates from different sources in one storage stockpile or alternating batches of different aggregates shall not be permitted.

a. Reactivity. Fine aggregate and coarse aggregates to be used in all concrete shall have been tested separately within six months of the project in accordance with ASTM C1260. Test results shall be submitted to the RPR. The aggregate shall be considered innocuous if the expansion of test specimens, tested in accordance with ASTM C1260, does not exceed 0.08% at 14 days. If the expansion either or both test specimen is greater than 0.08% at 14 days, but less than 0.20%, a minimum of 25% of Type F fly ash, or between 40% and 55% of slag cement shall be used in the concrete mix.

If the expansion is greater than 0.20%, the aggregates shall not be used, and test results for other aggregates must be submitted for evaluation; or aggregates that meet P-501 reactivity test requirements may be utilized.

610-2.2 Coarse aggregate. The coarse aggregate for concrete shall meet the requirements of ASTM C33 and the requirements of Table 4, Class Designation 5S; and the grading requirements shown below, as required for the project.

Coarse Aggregate Grading Requirements

Maximum Aggregate Size	ASTM C33, Table 3 Grading Requirements (Size No.)
1 1/2 inch	467 or 4 and 67
1 inch	57
¾ inch	67
½ inch	7

610-2.2.1 Coarse Aggregate susceptibility to durability (D) cracking. Not used.

610-2.3 Fine aggregate. The fine aggregate for concrete shall meet all fine aggregate requirements of ASTM C33.

610-2.4 Cement. Cement shall conform to the requirements of **ASTM C150** Type **I or II**.

610-2.5 Cementitious materials.

a. Fly ash. Fly ash shall meet the requirements of ASTM C618, with the exception of loss of ignition, where the maximum shall be less than 6%. Fly ash shall have a Calcium Oxide (CaO) content of less than **[** 15% **]** and a total available alkali content less than 3% per ASTM C311. Fly ash produced in furnace operations using liming materials or soda ash (sodium carbonate) as an additive shall not be acceptable. The Contractor shall furnish the previous three most recent, consecutive ASTM C618 reports for each source of fly ash proposed in the concrete mix, and shall furnish each additional report as they become available during the project. The reports can be used for acceptance or the material may be tested independently by the RPR.

b. Slag cement (ground granulated blast furnace (GGBF)). Slag cement shall conform to ASTM C989, Grade 100 or Grade 120. Slag cement shall be used only at a rate between 25% and 55% of the total cementitious material by mass.

610-2.6 Water. Water used in mixing or curing shall be from potable water sources. Other sources shall be tested in accordance with ASTM C1602 prior to use.

610-2.7 Admixtures. The Contractor shall submit certificates indicating that the material to be furnished meets all of the requirements indicated below. In addition, the RPR may require the Contractor to submit complete test data from an approved laboratory showing that the material to be furnished meets all of the requirements of the cited specifications. Subsequent tests may be made of samples taken by the RPR from the supply of the material being furnished or proposed for use on the work to determine whether the admixture is uniform in quality with that approved.

a. Air-entraining admixtures. Air-entraining admixtures shall meet the requirements of ASTM C260 and shall consistently entrain the air content in the specified ranges under field conditions. The air-entrainment agent and any water reducer admixture shall be compatible.

b. Water-reducing admixtures. Water-reducing admixture shall meet the requirements of ASTM C494, Type A, B, or D. ASTM C494, Type F and G high range water reducing admixtures and ASTM C1017 flowable admixtures shall not be used.

c. Other chemical admixtures. The use of set retarding, and set-accelerating admixtures shall be approved by the RPR. Retarding shall meet the requirements of ASTM C494, Type A, B, or D and set-accelerating shall meet the requirements of ASTM C494, Type C. Calcium chloride and admixtures containing calcium chloride shall not be used.

610-2.8 Premolded joint material. Premolded joint material for expansion joints shall meet the requirements of ASTM D1751 or ASTM D1752**.**

610-2.9 Joint filler. The filler for joints shall meet the requirements of Item P-605, unless otherwise specified.

610-2.10 Steel reinforcement. Reinforcing shall conform to one of the following requirements:

Steel Reinforcement

Reinforcing Steel	**ASTM A615, ASTM A706, ASTM A775, ASTM A934**
Welded Steel Wire Fabric	**ASTM A1064, ASTM A884**
Welded Deformed Steel Fabric	**ASTM A1064**
Bar Mats	**ASTM A184 or ASTM A704**

610-2.11 Materials for curing concrete. Curing materials shall conform to one of the following:

Materials for Curing

Waterproof paper	**ASTM C171**
Clear or white Polyethylene Sheeting	**ASTM C171**
White-pigmented Liquid Membrane-Forming Compound, Type 2, Class B	**ASTM C309**

CONSTRUCTION METHODS

610-3.1 General. The Contractor shall furnish all labor, materials, and services necessary for, and incidental to, the completion of all work as shown on the drawings and specified here. All machinery and equipment used by the Contractor on the work, shall be of sufficient size to meet the requirements of the work. All work shall be subject to the inspection and approval of the RPR.

610-3.2 Concrete Mixture. The concrete shall develop a compressive strength of 4000 psi in 28 days as determined by test cylinders made in accordance with ASTM C31 and tested in

accordance with ASTM C39. The concrete shall contain not less than 470 pounds of cementitious material per cubic yard. The water cementitious ratio shall not exceed 0.45 by weight. The air content of the concrete shall be 5% +/- 1.2% as determined by ASTM C231 and shall have a slump of not more than 4 inches as determined by ASTM C143.

610-3.3 Mixing. Concrete may be mixed at the construction site, at a central point, or wholly or in part in truck mixers. The concrete shall be mixed and delivered in accordance with the requirements of ASTM C94 or ASTM C685.

The concrete shall be mixed only in quantities required for immediate use. Concrete shall not be mixed while the air temperature is below 40°F without the RPRs approval. If approval is granted for mixing under such conditions, aggregates or water, or both, shall be heated and the concrete shall be placed at a temperature not less than 50°F nor more than 100°F. The Contractor shall be held responsible for any defective work, resulting from freezing or injury in any manner during placing and curing, and shall replace such work at his expense.

Retempering of concrete by adding water or any other material is not permitted.

The rate of delivery of concrete to the job shall be sufficient to allow uninterrupted placement of the concrete.

610-3.4 Forms. Concrete shall not be placed until all the forms and reinforcements have been inspected and approved by the RPR. Forms shall be of suitable material and shall be of the type, size, shape, quality, and strength to build the structure as shown on the plans. The forms shall be true to line and grade and shall be mortar-tight and sufficiently rigid to prevent displacement and sagging between supports. The surfaces of forms shall be smooth and free from irregularities, dents, sags, and holes. The Contractor shall be responsible for their adequacy.

The internal form ties shall be arranged so no metal will show in the concrete surface or discolor the surface when exposed to weathering when the forms are removed. All forms shall be wetted with water or with a non-staining mineral oil, which shall be applied immediately before the concrete is placed. Forms shall be constructed so they can be removed without injuring the concrete or concrete surface.

610-3.5 Placing reinforcement. All reinforcement shall be accurately placed, as shown on the plans, and shall be firmly held in position during concrete placement. Bars shall be fastened together at intersections. The reinforcement shall be supported by approved metal chairs. Shop drawings, lists, and bending details shall be supplied by the Contractor when required.

610-3.6 Embedded items. Before placing concrete, all embedded items shall be firmly and securely fastened in place as indicated. All embedded items shall be clean and free from coating, rust, scale, oil, or any foreign matter. The concrete shall be spaded and consolidated around and against embedded items. The embedding of wood shall not be allowed.

610-3.7 Concrete Consistency. The Contractor shall monitor the consistency of the concrete delivered to the project site; collect each batch ticket; check temperature; and perform slump tests on each truck at the project site in accordance with ASTM C143.

610-3.8 Placing concrete. All concrete shall be placed during daylight hours, unless otherwise approved. The concrete shall not be placed until the depth and condition of foundations, the adequacy of forms and falsework, and the placing of the steel reinforcing have been approved by the RPR. Concrete shall be placed as soon as practical after mixing, but in no case later than one

(1) hour after water has been added to the mix. The method and manner of placing shall avoid segregation and displacement of the reinforcement. Troughs, pipes, and chutes shall be used as an aid in placing concrete when necessary. The concrete shall not be dropped from a height of more than 5 feet. Concrete shall be deposited as nearly as practical in its final position to avoid segregation due to rehandling or flowing. Do not subject concrete to procedures which cause segregation. Concrete shall be placed on clean, damp surfaces, free from running water, or on a properly consolidated soil foundation.

610-3.9 Vibration. Vibration shall follow the guidelines in American Concrete Institute (ACI) Committee 309R, Guide for Consolidation of Concrete.

610-3.10 Joints. Joints shall be constructed as indicated on the plans.

610-3.11 Finishing. All exposed concrete surfaces shall be true, smooth, and free from open or rough areas, depressions, or projections. All concrete horizontal plane surfaces shall be brought flush to the proper elevation with the finished top surface struck-off with a straightedge and floated.

610-3.12 Curing and protection. All concrete shall be properly cured in accordance with the recommendations in American Concrete Institute (ACI) 308R, Guide to External Curing of Concrete. The concrete shall be protected from damage until project acceptance.

610-3.13 Cold weather placing. When concrete is placed at temperatures below 40°F, follow the cold weather concreting recommendations found in ACI 306R, Cold Weather Concreting.

610-3.14 Hot weather placing. When concrete is placed in hot weather greater than 85ºF, follow the hot weather concreting recommendations found in ACI 305R, Hot Weather Concreting.

QUALITY ASSURANCE (QA)

610-4.1 Quality Assurance sampling and testing. Concrete for each day's placement will be accepted on the basis of the compressive strength specified in paragraph 610-3.2. The RPR will sample the concrete in accordance with ASTM C172; test the slump in accordance with ASTM C143; **[** test air content in accordance with ASTM C231; **]** make and cure compressive strength specimens in accordance with ASTM C31; and test in accordance with ASTM C39. The QA testing agency will meet the requirements of ASTM C1077.

The Contractor shall provide adequate facilities for the initial curing of cylinders.

610-4.2 Defective work. Any defective work that cannot be satisfactorily repaired as determined by the RPR, shall be removed and replaced at the Contractor's expense. Defective work includes, but is not limited to, uneven dimensions, honeycombing and other voids on the surface or edges of the concrete.

METHOD OF MEASUREMENT

610-5.1 Concrete shall be considered incidental and no separate measurement shall be made.

BASIS OF PAYMENT

610-6.1 Concrete shall be considered incidental and no separate payment shall be made.

END OF ITEM P-610

Item F-162

Chain-Link Fence

DESCRIPTION

162-1.1 This item shall consist of furnishing and erecting a chain-link fence in accordance with these specifications, the details shown on the plans, and in conformity with the lines and grades shown on the plans or established by the RPR.

MATERIALS

162-2.1 Fabric. The fabric shall be woven with a 9-gauge galvanized steel wire in a 2-inch mesh and shall meet the requirements of ASTM A392.

162-2.2 Barbed wire. Barbed wire shall be 2-strand 12-1/2 gauge **zinc-coated]** wire with 4-point barbs and shall conform to the requirements of ASTM A121, Class 3, Chain Link Fence Grade.

162-2.3 Posts, rails, and braces. Line posts, rails, and braces shall conform to the requirements of ASTM F1043 or ASTM F1083 as follows:

- Galvanized tubular steel pipe shall conform to the requirements of Group IA, (Schedule 40) coatings conforming to Type A, or Group IC (High Strength Pipe), External coating Type B, and internal coating Type B or D.
- Roll Formed Steel Shapes (C-Sections) shall conform to the requirements of Group IIA, and be galvanized in accordance with the requirements of ASTM F1043, Type A.
- Hot-Rolled Shapes (H Beams) shall meet the requirements of Group III, and be galvanized in accordance with the requirements of ASTM F1043, Type A.
- Composite posts shall conform to the strength requirements of ASTM F1043 or ASTM F1083. The strength loss of composite posts shall not exceed 10% when subjected to 3,600 hours of exposure to light and water in accordance with ASTM G152, ASTM G153, ASTM G154, and ASTM G155.

The dimensions of the posts, rails, and braces shall be in accordance with Tables I through VI of Federal Specification RR-F-191/3.

162-2.4 Gates. Gate frames shall consist of **galvanized steel pipe** and shall conform to the specifications for the same material under paragraph 162-2.3. Gate frames shall be as specified in Item F-165 – Cantilever Gates for Chain Link Fence. The fabric shall be of the same type material as used in the fence.

162-2.5 Wire ties and tension wires. Wire ties for use in conjunction with a given type of fabric shall be of the same material and coating weight identified with the fabric type. Tension wire shall be 7-gauge marcelled steel wire with the same coating as the fabric type and shall conform to ASTM A824.

All material shall conform to Federal Specification RR-F-191/4.

162-2.6 Miscellaneous fittings and hardware. Miscellaneous steel fittings and hardware for use with **zinc-coated** steel fabric shall be of commercial grade steel or better quality, wrought or cast as appropriate to the article, and sufficient in strength to provide a balanced design when used in conjunction with fabric posts, and wires of the quality specified herein. **All steel fittings and hardware shall be protected with a zinc coating applied in conformance with ASTM A153.** Barbed wire support arms shall withstand a load of 250 pounds applied vertically to the outermost end of the arm.

162-2.7 Concrete. Concrete shall have a minimum 28-day compressive strength of 3000 psi.

162-2.8 Marking. Each roll of fabric shall carry a tag showing the kind of base metal (steel, aluminum, or aluminum alloy number), kind of coating, the gauge of the wire, the length of fencing in the roll, and the name of the manufacturer. Posts, wire, and other fittings shall be identified as to manufacturer, kind of base metal (steel, aluminum, or aluminum alloy number), and kind of coating.

CONSTRUCTION METHODS

162-3.1 General. The fence shall be constructed in accordance with the details on the plans and as specified here using new materials. All work shall be performed in a workmanlike manner satisfactory to the RPR. **The Contractor shall layout the fence line based on the plans.** The Contractor shall span the opening below the fence with barbed wire at all locations where it is not practical to conform the fence to the general contour of the ground surface because of natural or manmade features such as drainage ditches. The new fence shall be permanently tied to the terminals of existing fences as shown on the plans. The Contractor shall stake down the woven wire fence at several points between posts as shown on the plans.

The Contractor shall arrange the work so that construction of the new fence will immediately follow the removal of existing fences. The length of unfenced section at any time shall not exceed 300 feet. The work shall progress in this manner and at the close of the working day the newly constructed fence shall be tied to the existing fence.

162-3.2 Clearing fence line. Clearing shall consist of the removal of all stumps, brush, rocks, trees, or other obstructions that will interfere with proper construction of the fence. Stumps within the cleared area of the fence shall be grubbed or excavated. The bottom of the fence shall be placed a uniform distance above ground, as specified in the plans. When shown on the plans or as directed by the RPR, the existing fences which interfere with the new fence location shall be removed by the Contractor as a part of the construction work unless such removal is listed as a separate item in the bid schedule. All holes remaining after post and stump removal shall be refilled with suitable soil, gravel, or other suitable material and compacted with tampers.

The cost of removing and disposing of the material shall not constitute a pay item and shall be considered incidental to fence construction.

162-3.3 Installing posts. All posts shall be set in concrete at the required dimension and depth and at the spacing shown on the plans.

The concrete shall be thoroughly compacted around the posts by tamping or vibrating and shall have a smooth finish slightly higher than the ground and sloped to drain away from the posts. All posts shall be set plumb and to the required grade and alignment. No materials shall be installed on the posts, nor shall the posts be disturbed in any manner within seven (7) days after the individual post footing is completed.

Should rock be encountered at a depth less than the planned footing depth, a hole 2 inches larger than the greatest dimension of the posts shall be drilled to a depth of 12 inches. After the posts are set, the remainder of the drilled hole shall be filled with grout, composed of one part Portland cement and two parts mortar sand. Any remaining space above the rock shall be filled with concrete in the manner described above.

In lieu of drilling, the rock may be excavated to the required footing depth. No extra compensation shall be made for rock excavation.

162-3.4 Installing top rails. The top rail shall be continuous and shall pass through the post tops. The coupling used to join the top rail lengths shall allow for expansion.

162-3.5 Installing braces. Horizontal brace rails, with diagonal truss rods and turnbuckles, shall be installed at all terminal posts.

162-3.6 Installing fabric. The wire fabric shall be firmly attached to the posts and braced as shown on the plans. All wire shall be stretched taut and shall be installed to the required elevations. The fence shall generally follow the contour of the ground, with the bottom of the fence fabric no less than one inch or more than 4 inches from the ground surface. Grading shall be performed where necessary to provide a neat appearance.

At locations of small natural swales or drainage ditches and where it is not practical to have the fence conform to the general contour of the ground surface, longer posts may be used and multiple strands of barbed wire stretched to span the opening below the fence. The vertical clearance between strands of barbed wire shall be 6 inches or less.

162-3.7 Electrical grounds. Electrical grounds shall be constructed **at 500 feet intervals.]** The ground shall be accomplished with a copper clad rod 8 feet long and a minimum of 5/8 inches in diameter driven vertically until the top is 6 inches below the ground surface. A No. 6 solid copper conductor shall be clamped to the rod and to the fence in such a manner that each element of the fence is grounded. Installation of ground rods shall not constitute a pay item and shall be considered incidental to fence construction. The Contractor shall comply with FAA-STD-019, Lightning and Surge Protection, Grounding, Bonding and Shielding Requirements for Facilities and Electronic Equipment, paragraph 4.2.3.8, Lightning Protection for Fences and Gates, when fencing is adjacent to FAA facilities.

162-3.8 Cleaning up. The Contractor shall remove from the vicinity of the completed work all tools, buildings, equipment, etc., used during construction. All disturbed areas shall be seeded per T-901.

END OF ITEM F-162

Item D-701

Pipe for Storm Drains and Culverts

DESCRIPTION

701-1.1 This item shall consist of the construction of pipe culverts and storm drains in accordance with these specifications and in reasonably close conformity with the lines and grades shown on the plans.

MATERIALS

701-2.1 Materials shall meet the requirements shown on the plans and specified below. Underground piping and components used in drainage systems for terminal and aircraft fueling ramp drainage shall be noncombustible and inert to fuel in accordance with National Fire Protection Association (NFPA) 415.

701-2.2 Pipe. The pipe shall be of the type called for on the plans or in the proposal and shall be in accordance with the following appropriate requirements:

AASHTO M252 Standard Specification for Corrugated Polyethylene Drainage Pipe

AASHTO M294 Standard Specification for Corrugated Polyethylene Pipe, 12- to 60-in. Diameter

701-2.3 Joint mortar. Pipe joint mortar shall consist of one part Portland cement and two parts sand. The Portland cement shall conform to the requirements of ASTM C150, Type I. The sand shall conform to the requirements of ASTM C144.

.

CONSTRUCTION METHODS

701-3.1 Excavation. The width of the pipe trench shall be sufficient to permit satisfactory jointing of the pipe and thorough tamping of the bedding material under and around the pipe, but it shall not be less than the external diameter of the pipe plus 12 inches on each side. The trench walls shall be approximately vertical.

The Contractor shall comply with all current federal, state and local rules and regulations governing the safety of men and materials during the excavation, installation and backfilling operations. Specifically, the Contractor shall observe that all requirements of the Occupational Safety and Health Administration (OSHA) relating to excavations, trenching and shoring are strictly adhered to. The width of the trench shall be sufficient to permit satisfactorily jointing of the pipe and thorough compaction of the bedding material under the pipe and backfill material around the pipe, but it shall not be greater than the widths shown on the plans trench detail.

Where rock, hardpan, or other unyielding material is encountered, the Contractor shall remove it from below the foundation grade for a depth of at least 8 inch or 1/2 inch for each foot of fill over the top of the pipe (whichever is greater) but for no more than three-quarters of the nominal

diameter of the pipe. The excavation below grade should be filled with granular material to form a uniform foundation.

Where a firm foundation is not encountered at the grade established, due to soft, spongy, or other unstable soil, the unstable soil shall be removed and replaced with approved granular material for the full trench width. The RPR shall determine the depth of removal necessary. The granular material shall be compacted to provide adequate support for the pipe.

The excavation for pipes placed in embankment fill shall not be made until the embankment has been completed to a height above the top of the pipe as shown on the plans.

701-3.2 Bedding. The bedding surface for the pipe shall provide a foundation of uniform density to support the pipe throughout its entire length.

a. Rigid pipe. The pipe bedding shall be constructed uniformly for the full length of the pipe barrel, as required on the plans. The maximum aggregate size shall be 1 in when the bedding thickness is less than 6 inches, and 1-1/2 in when the bedding thickness is greater than 6 inches. Bedding shall be loosely placed uncompacted material under the middle third of the pipe prior to placement of the pipe.

b. Flexible pipe. For flexible pipe, the bed shall be roughly shaped to fit the pipe, and a bedding blanket of sand or fine granular material shall be provided as follows:

Flexible Pipe Bedding

Pipe Corrugation Depth		**Minimum Bedding Depth**	
inch	**mm**	**inch**	**mm**
1/2	12	1	25
1	25	2	50
2	50	3	75
2-1/2	60	3-1/2	90

c. Other pipe materials. For PVC, polyethylene, polypropylene, or fiberglass pipe, the bedding material shall consist of coarse sands and gravels with a maximum particle size of 3/4 inches. For pipes installed under paved areas, no more than 12% of the material shall pass the No. 200 sieve. For all other areas, no more than 50% of the material shall pass the No. 200 sieve. The bedding shall have a thickness of at least 6 inches below the bottom of the pipe and extend up around the pipe for a depth of not less than 50% of the pipe's vertical outside diameter.

701-3.3 Laying pipe. The pipe laying shall begin at the lowest point of the trench and proceed upgrade. The lower segment of the pipe shall be in contact with the bedding throughout its full length. Bell or groove ends of rigid pipes and outside circumferential laps of flexible pipes shall be placed facing upgrade.

Paved or partially lined pipe shall be placed so that the longitudinal center line of the paved segment coincides with the flow line.

Elliptical and elliptically reinforced concrete pipes shall be placed with the manufacturer's reference lines designating the top of the pipe within five degrees of a vertical plane through the longitudinal axis of the pipe.

701-3.4 Joining pipe. Joints shall be made with (1) cement mortar, (2) cement grout, (3) rubber gaskets, (4) plastic gaskets, (5) coupling bands.

Mortar joints shall be made with an excess of mortar to form a continuous bead around the outside of the pipe and shall be finished smooth on the inside. Molds or runners shall be used for grouted joints to retain the poured grout. Rubber ring gaskets shall be installed to form a flexible watertight seal.

a. Concrete pipe. Concrete pipe may be either bell and spigot or tongue and groove. Pipe sections at joints shall be fully seated and the inner surfaces flush and even. Concrete pipe joints shall be sealed with rubber gaskets meeting ASTM C443 when leak resistant joints are required. Concrete pipe joints shall be sealed with butyl mastic meeting ASTM C990 or mortar when soil tight joints are required. Joints shall be thoroughly wetted before applying mortar or grout.

b. Metal pipe. Metal pipe shall be firmly joined by form-fitting bands conforming to the requirements of ASTM A760 for steel pipe and AASHTO M196 for aluminum pipe.

c. PVC, Polyethylene, or Polypropylene pipe. Joints for PVC, Polyethylene, or Polypropylene pipe shall conform to the requirements of ASTM D3212 when leak resistant joints are required. Joints for PVC and Polyethylene pipe shall conform to the requirements of AASHTO M304 when soil tight joints are required. Fittings for polyethylene pipe shall conform to the requirements of AASHTO M252 or ASTM M294. Fittings for polypropylene pipe shall conform to ASTM F2881, ASTM F2736, or ASTM F2764.

701-3.5 Embedment and Overfill. Pipes shall be inspected before any fill material is placed; any pipes found to be out of alignment, unduly settled, or damaged shall be removed and re-laid or replaced at the Contractor's expense.

701-3.5-1 Embedment Material Requirements

a. Concrete Pipe. Embedment material and compaction requirements shall be in accordance with the applicable Type of Standard Installation (Types 1, 2, 3, or 4) per ASTM C1479. If a concrete cradle or CLSM embedment material is used, it shall conform to the plan details.

b. Plastic and fiberglass Pipe. Embedment material shall meet the requirements of ASTM D3282, A-1, A-2-4, A-2-5, or A-3. Embedment material shall be free of organic material, stones larger than 1.5 inches in the greatest dimension, or frozen lumps. Embedment material shall extend to 12 inches above the top of the pipe.

c. Metal Pipe. Embedment material shall be granular as specified in the contract document and specifications, and shall be free of organic material, rock fragments larger than 1.5 inches in the greatest dimension and frozen lumps. As a minimum, backfill materials shall meet the requirements of ASTM D3282, A-1, A-2, or A-3. Embedment material shall extend to 12 inches above the top of the pipe.

701-3.5-2 Placement of Embedment Material

The embedment material shall be compacted in layers not exceeding 6 inches on each side of the pipe and shall be brought up one foot above the top of the pipe or to natural ground level, whichever is greater. Thoroughly compact the embedment material under the haunches of the

pipe without displacing the pipe. Material shall be brought up evenly on each side of the pipe for the full length of the pipe.

When the top of the pipe is above the top of the trench, the embedment material shall be compacted in layers not exceeding 6 inches and shall be brought up evenly on each side of the pipe to one foot above the top of the pipe. All embedment material shall be compacted to a density required under Item P-152.

Concrete cradles and flowable fills, such as controlled low strength material (CLSM) or controlled density fill (CDF), may be used for embedment provided adequate flotation resistance can be achieved by restraints, weighing, or placement technique.

It shall be the Contractor's responsibility to protect installed pipes and culverts from damage due to construction equipment operations. The Contractor shall be responsible for installation of any extra strutting or backfill required to protect pipes from the construction equipment.

701-3.6 Overfill

Pipes shall be inspected before any overfill is in place. Any pipes found to be out of alignment, unduly settled, or damaged shall be removed and relaid or replaced at the Contractor's expense. Evaluation of any damage to RCP shall be evaluated based on AASHTO R73.

Overfill material shall be place and compacted in layers as required to achieve compaction to at least 95 percent standard proctor per ASTM D698 . The soil shall contain no debris, organic matter, frozen material, or stones with a diameter greater than one half the thickness of the compacted layers being placed.

701-3.7 Inspection Requirements

An initial post installation inspection shall be performed by the RPR no sooner than 30 days after completion of installation and final backfill. Clean or flush all lines prior to inspection.

Incorporate specific inspection requirements for the various types of pipes beneath the general inspection requirements.

Flexible pipes shall be inspected for rips, tears, joint separations, soil migration, cracks, localized buckling, settlement, alignment, and deflection. Determine whether the allowable deflection has been exceeded by use of a laser profiler for internal pipe diameters of 48 inches or less, or direct measurement for internal pipe diameters greater than 48 inches. Laser profile equipment shall utilize low barrel distortion video equipment. Deflection of installed pipe shall not exceed the limits provided in the table below, as a percentage of the average inside diameter of the pipe.

Maximum Allowable Pipe Deflection

Type of Pipe	**Maximum Allowable Deflection (%)**
Corrugated Metal Pipe	5
Concrete Lined CMP	3
Thermoplastic Pipe	5
Fiberglass	5

If deflection readings in excess of the allowable deflection are obtained, remove the pipe with excessive deflection and replace with new pipe. Repair or replace any pipe with cracks exhibiting displacement across the crack, bulges, creases, tears, spalls, or delaminations. The report for flexible pipe shall include as a minimum, the deflection results and final post installation inspection report. The inspection report shall include: a copy of all video taken, pipe location identification, equipment used for inspection, inspector name, deviation from design line and grade, and inspector's notes.

END ITEM D-701

Item D-751

Drainage Structures

DESCRIPTION

751-1.1 This item shall consist of construction of manholes, catch basins, inlets, and inspection holes, in accordance with these specifications, at the specified locations and conforming to the lines, grades, and dimensions shown on the plans or required by the RPR.

MATERIALS

751-2.1 Brick. The brick shall conform to the requirements of ASTM C32, Grade MS.

751-2.2 Mortar. Mortar shall consist of one part Portland cement and two parts sand. The cement shall conform to the requirements of ASTM C150, Type I. The sand shall conform to the requirements of ASTM C144.

751-2.3 Concrete. Plain and reinforced concrete used in structures, connections of pipes with structures, and the support of structures or frames shall conform to the requirements of Item P-610.

751-2.4 Precast concrete pipe manhole rings. Precast concrete pipe manhole rings shall conform to the requirements of ASTM C478. Unless otherwise specified, the risers and offset cone sections shall have an inside diameter of not less than 36 inches nor more than 48 inches. There shall be a gasket between individual sections and sections cemented together with mortar on the inside of the manhole. Gaskets shall conform to the requirements of ASTM C443.

751-2.5 Corrugated metal. Corrugated metal shall conform to the requirements of American Association of State Highway and Transportation Officials (AASHTO) M36.

751-2.6 Frames, covers, and grates. The castings shall conform to one of the following requirements:

a. ASTM A48, Class 35B: Gray iron castings

b. ASTM A47: Malleable iron castings

c. ASTM A27: Steel castings

d. ASTM A283, Grade D: Structural steel for grates and frames

e. ASTM A536, Grade 65-45-12: Ductile iron castings

f. ASTM A897: Austempered ductile iron castings

All castings or structural steel units shall conform to the dimensions shown on the plans and shall be designed to support the loadings, aircraft gear configuration and/or direct loading, specified.

Each frame and cover or grate unit shall be provided with fastening members to prevent it from being dislodged by traffic but which will allow easy removal for access to the structure.

All castings shall be thoroughly cleaned. After fabrication, structural steel units shall be galvanized to meet the requirements of ASTM A123.

751-2.7 Steps. The steps or ladder bars shall be gray or malleable cast iron or galvanized steel. The steps shall be the size, length, and shape shown on the plans and those steps that are not galvanized shall be given a coat of asphalt paint, when directed.

751-2.8 Precast inlet structures. Manufactured in accordance with and conforming to ASTM C913.

CONSTRUCTION METHODS

751-3.1 Unclassified excavation.

a. The Contractor shall excavate for structures and footings to the lines and grades or elevations, shown on the plans, or as staked by the RPR. The excavation shall be of sufficient size to permit the placing of the full width and length of the structure or structure footings shown. The elevations of the bottoms of footings, as shown on the plans, shall be considered as approximately only; and the RPR may direct, in writing, changes in dimensions or elevations of footings necessary for a satisfactory foundation.

b. Boulders, logs, or any other objectionable material encountered in excavation shall be removed. All rock or other hard foundation material shall be cleaned of all loose material and cut to a firm surface either level, stepped, or serrated, as directed by the RPR. All seams or crevices shall be cleaned out and grouted. All loose and disintegrated rock and thin strata shall be removed. Where concrete will rest on a surface other than rock, the bottom of the excavation shall not be disturbed and excavation to final grade shall not be made until immediately before the concrete or reinforcing is placed.

c. The Contractor shall do all bracing, sheathing, or shoring necessary to implement and protect the excavation and the structure as required for safety or conformance to governing laws. The cost of bracing, sheathing, or shoring shall be included in the unit price bid for the structure.

d. All bracing, sheathing, or shoring involved in the construction of this item shall be removed by the Contractor after the completion of the structure. Removal shall not disturb or damage finished masonry. The cost of removal shall be included in the unit price bid for the structure.

e. After excavation is completed for each structure, the Contractor shall notify the RPR. No concrete or reinforcing steel shall be placed until the RPR has approved the depth of the excavation and the character of the foundation material.

751-3.2 Concrete structures. Concrete structures which are to be cast-in-place within the project boundaries shall be built on prepared foundations, conforming to the dimensions and shape indicated on the plans. The construction shall conform to the requirements specified in Item P-610. Any reinforcement required shall be placed as indicated on the plans and shall be approved by the RPR before the concrete is placed.

All invert channels shall be constructed and shaped accurately to be smooth, uniform, and cause minimum resistance to flowing water. The interior bottom shall be sloped to the outlet.

751-3.3 Precast concrete structures. Precast concrete structures shall be furnished by a plant meeting National Precast Concrete Association Plant Certification Program or another RPR approved third party certification program.

Precast concrete structures shall conform to ASTM C478. Precast concrete structures shall be constructed on prepared or previously placed slab foundations conforming to the dimensions and locations shown on the plans. All precast concrete sections necessary to build a completed

structure shall be furnished. The different sections shall fit together readily. Joints between precast concrete risers and tops shall be full-bedded in cement mortar and shall: (1) be smoothed to a uniform surface on both interior and exterior of the structure or (2) utilize a rubber gasket per ASTM C443. The top of the upper precast concrete section shall be suitably formed and dimensioned to receive the metal frame and cover or grate, or other cap, as required. Provision shall be made for any connections for lateral pipe, including drops and leads that may be installed in the structure. The flow lines shall be smooth, uniform, and cause minimum resistance to flow. The metal or metal encapsulated steps that are embedded or built into the side walls shall be aligned and placed in accordance to ASTM C478. When a metal ladder replaces the steps, it shall be securely fastened into position.

751-3.4 Inlet and outlet pipes. Inlet and outlet pipes shall extend through the walls of the structures a sufficient distance beyond the outside surface to allow for connections. They shall be cut off flush with the wall on the inside surface of the structure, unless otherwise directed. For concrete or brick structures, mortar shall be placed around these pipes to form a tight, neat connection.

751-3.5 Placement and treatment of castings, frames, and fittings. All castings, frames, and fittings shall be placed in the positions indicated on the plans or as directed by the RPR, and shall be set true to line and elevation. If frames or fittings are to be set in concrete or cement mortar, all anchors or bolts shall be in place before the concrete or mortar is placed. The unit shall not be disturbed until the mortar or concrete has set.

When frames or fittings are placed on previously constructed masonry, the bearing surface of the masonry shall be brought true to line and grade and shall present an even bearing surface so the entire face or back of the unit will come in contact with the masonry. The unit shall be set in mortar beds and anchored to the masonry as indicated on the plans or as directed by the RPR. All units shall set firm and secure.

After the frames or fittings have been set in final position, the concrete or mortar shall be allowed to harden for seven (7) days before the grates or covers are placed and fastened down.

751-3.5 Installation of steps. The steps shall be installed as indicated on the plans or as directed by the RPR. When the steps are to be set in concrete, they shall be placed and secured in position before the concrete is placed. When the steps are installed in brick masonry, they shall be placed as the masonry is being built. The steps shall not be disturbed or used until the concrete or mortar has hardened for at least seven (7) days. After seven (7) days, the steps shall be cleaned and painted, unless they have been galvanized.

When steps are required with precast concrete structures they shall meet the requirements of ASTM C478. The steps shall be cast into the side of the sections at the time the sections are manufactured or set in place after the structure is erected by drilling holes in the concrete and cementing the steps in place.

When steps are required with corrugated metal structures, they shall be welded into aligned position at a vertical spacing of 12 inches.

Instead of steps, prefabricated ladders may be installed. For brick or concrete structures, the ladder shall be held in place by grouting the supports in drilled holes. For metal structures, the ladder shall be secured by welding the top support to the structure and grouting the bottom support into drilled holes in the foundation or as directed by the RPR.

751-3.6 Backfilling.

a. After a structure has been completed, the area around it shall be backfilled with approved material, in horizontal layers not to exceed 8 inches in loose depth, and compacted to the density required in Item P-152. Each layer shall be deposited evenly around the structure to approximately the same elevation. The top of the fill shall meet the elevation shown on the plans or as directed by the RPR.

b. Backfill shall not be placed against any structure until approved by the RPR. For concrete structures, approval shall not be given until the concrete has been in place seven (7) days, or until tests establish that the concrete has attained sufficient strength to withstand any pressure created by the backfill and placing methods.

c. Backfill shall not be measured for direct payment. Performance of this work shall be considered an obligation of the Contractor covered under the contract unit price for the structure involved.

751-3.7 Cleaning and restoration of site. After the backfill is completed, the Contractor shall dispose of all surplus material, dirt, and rubbish from the site. Surplus dirt may be deposited in embankments, shoulders, or as approved by the RPR. The Contractor shall restore all disturbed areas to their original condition. The Contractor shall remove all tools and equipment, leaving the entire site free, clear, and in good condition.

SECTION 15051

BURIED WATER AND SANITARY SEWER PIPING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Scope:

1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to install and test all buried piping, fittings, and specials. The Work includes, but is not limited to, the following:
   a. All types and sizes of buried piping, except those specified under other Sections or other contracts.
   b. Piping beneath structures.
   c. Supports, restraints, and thrust blocks.
   d. Pipe encasements.
   e. Work on or affecting existing piping.
   f. Testing.
   g. Cleaning and disinfecting.
   h. Installation of all jointing and gasketing materials, specials, flexible couplings, mechanical couplings, harnessed and flanged adapters, sleeves, tie rods, and all other Work required to complete the buried piping installation.
   i. Incorporation of valves, meters and special items shown or specified into the piping systems as required and as specified in the appropriate Division 15 Sections.
   j. Unless otherwise specifically shown, specified, or included under other Sections, all buried piping Work required, beginning at the outside face of structures or structure foundations and extending away from structure.

B. Coordination:

1. Review installation procedures under other Sections and other contracts and coordinate with the Work that is related to this Section.
2. Section 15051 specifies the installation of all buried piping materials specified in Section 15052. Coordinate with this Section.

C. Related Sections:

1. Section 02220, Excavation and Backfill.
2. Section 03300, Cast-In-Place Concrete.
3. Section 09900, Painting.
4. Division 15, Sections on Piping, Valves and Appurtenances.

1.2 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies:

1. Comply with requirements of NFPA Standard No. 24 for "Outside Protection"

where applicable to water pipe systems used for fire protection.

2. Comply with requirements of UL, FM and other jurisdictional authorities, where applicable.
3. Refer to the General and Supplementary Conditions regarding permit requirements for this Project.

B. Reference Standards: Comply with applicable provisions and recommendations of the following, except as otherwise shown or specified.

1. ASTM D 2321, Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe.
2. ASTM D 2774, Practice for Underground Installation of Thermoplastic Pressure Piping.
3. AWWA C105, Polyethylene Encasement for Ductile-Iron Piping for Water and Other Liquids.
4. AWWA C111, Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
5. AWWA C600, Installation of Ductile-Iron Water Mains and Their Appurtenances.
6. AWWA C606, Grooved and Shouldered Joints.
7. AWWA C651, Disinfecting Water Mains.
8. AWWA M23, PVC - Design and Installation.
9. ASCE MOP No. 37, Design and Construction of Sanitary and Storm Sewers.
10. NFPA 24, Private Fire Service Mains and Their Appurtenances.

1.3 SUBMITTALS

A. Shop Drawings: Submit for approval the following:

1. Full details of piping, specials, manholes, joints, harnessing and thrust blocks, and connections to existing piping, structures, equipment and appurtenances.

B. Tests: Submit description of proposed testing methods, procedures and apparatus. Prepare and submit report for each test.

C. Certificates: Submit certificates of compliance with referenced standards.

D. Record Drawings:

1. Submit record drawings prior to the time of Substantial Completion.

1.4 PRODUCT STORAGE AND HANDLING

A. Handle all pipe, fittings, specials and accessories carefully with approved handling devices. Do not drop or roll material off trucks. Do not otherwise drop, roll or skid piping.

B. Store pipes and fittings on heavy wood blocking or platforms so they are not in contact with the ground.

C. Unload pipe, fittings and specials opposite to or as close to the place where they are to be installed as is practical to avoid unnecessary handling. Keep pipe interiors completely free from dirt and foreign matter.

D. Inspect delivered pipe for cracked, gouged, chipped, dented or other damaged material and immediately remove from site.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Approved pipe materials are listed in the Piping Schedule. Refer to applicable Sections for material specifications.

B. General:

1. Marking Piping:

a. Clearly mark each piece of pipe or fitting with a designation conforming to those shown on the laying schedule.

b. Cast or paint material, type and pressure designation on each piece of pipe or fitting 4 inches in diameter and larger.

c. Pipe and fittings smaller than 4 inches in diameter shall be clearly marked by manufacturer as to material, type and rating.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General:

1. Install piping as shown, specified and as recommended by the manufacturer.

2. If there is a conflict between manufacturer's recommendations and the Drawings or Specifications, request instructions from OCWS before proceeding

3. All trench excavations shall be inspected by OCWS prior to laying pipe. Notify OCWS in advance of excavating, bedding and pipe laying operations.

4. Minimum cover over piping shall be 3 feet unless otherwise shown or approved by OCWS.

5. Earthwork required is specified in the applicable Sections of Division 2.

6. Excavation in excess of that required or shown and which is not authorized by OCWS shall be replaced at CONTRACTOR'S expense with approved granular material. It shall be furnished, placed and compacted in accordance with the requirements of the applicable Section of Division 2.

B. Manufacturer's Installation Specialist:

1. Provide the services of a competent installation specialist of the pipe manufacturer when pipe laying commences for the following:

a. Thermoplastic pipe.

2. Retain installation specialist at the site until competency of the pipe laying crew has been satisfactorily demonstrated.

C. Separation of Sewers and Potable Water Pipe Lines:

1. Horizontal and Vertical Separation:

a. Wherever possible, existing and proposed potable water mains and service lines, and sanitary and storm sewers shall be separated horizontally by a clear distance of not less than 10 feet.

b. If local conditions preclude a clear horizontal separation of not less 10 feet, the installation will be permitted provided the potable water main is in a

separate trench or on a undistributed earth shelf located on one side of the sewer and at an elevation so the bottom of the potable water main is at least 18 inches above the top of the sewer.

c. Exception:

1) Where it is not possible to provide the minimum horizontal and vertical separation described above, both the potable water main and sewer must be constructed of cement lined ductile iron slip-on or mechanical joint pipe complying with public water supply design standards of the agency. Both pipes shall be pressure tested in accordance with the requirements of the buried piping schedule, but in no case less than 150 psi, to assure water tightness before backfilling.

D. Crossings:

a. Provide a minimum vertical distance of 18 inches between the outside of the potable water main and the outside of the sewer when a sewer or drain must cross over a potable water main.

b. Center one full length section of potable water main over the sewer so that the sewer joints will be equidistant from the potable water main joints.

c. Provide adequate structural support where a potable water main crosses under a sewer to maintain line and grade.

d. Exceptions:

1) Where it is not possible to provide the minimum horizontal and vertical separation described above, both the potable water main and sewer must be constructed of cement lined ductile iron pipe. Both pipes shall be pressure tested in accordance with the requirements of the buried piping schedule, but in no case less than 150 psi, to assure water tightness before backfilling.

2) Encase either potable water main or sewer in a watertight carrier pipe, which extends 10 feet on both sides of the crossing, measured perpendicular to the potable water main.

E. Plugs:

1. Temporarily plug installed pipe at the end of each day's work or other interruption to the installation of any pipe line. Plugging shall prevent the entry of animals, liquids or persons into the pipe or the entrance or insertion of deleterious materials.
2. Install standard plugs into all bells at dead ends, tees or crosses. Cap all spigot ends.
3. Fully secure and block all plugs and caps installed for pressure testing to withstand the specified test pressure.
4. Where plugging is required for phasing of the Work or for subsequent connection of piping, install watertight, permanent type plugs.

F. Bedding Pipe: Bed pipe as specified below and in accordance with the details shown.

1. Trench excavation and backfill, and bedding materials shall conform to the requirements of Section 02200, as applicable.
2. Where the existing bedding material is deemed unsuitable by OCWS, remove and replace it with approved granular materials.
3. Where pipe is installed in rock excavation, provide a minimum of 3 inches of crushed stone or gravel under pipes smaller than 4 inches in diameter and a

minimum of 6 inches of crushed stone or gravel under pipes 4 inches in diameter and larger.

4. Excavate trenches below the pipe bottom by an amount shown and specified. Remove all loose and unsuitable material from the trench bottom.
5. Carefully and thoroughly compact all pipe bedding with hand held pneumatic compactors.
6. Do not lay pipe until OCWS approves the bedding condition. If a conflict exists obtain clarification from OCWS before proceeding.
7. No pipe shall be brought into position until the preceding length has been bedded and secured in its final position.

G. Laying Pipe:

1. Conform to manufacturer's instructions and requirements of the standards listed below, where applicable:
   a. Ductile Iron Pipe: AWWA C600, AWWA C105.
   b. Thermoplastic Pipe: ASTM D 2774.
   c. ASCE Manual of Practice No. 37.
2. Install all pipe accurately to line and grade shown unless otherwise approved by OCWS. Remove and relay pipes that are not laid correctly.
3. Slope piping uniformly between elevations shown.
4. Ensure that ground water level in trench is at least 6 inches below bottom of pipe before laying piping. Do not lay pipe in water. Maintain dry trench conditions until jointing and backfilling are complete and protect and keep clean water pipe interiors, fittings and valves.
5. Start laying pipe at lowest point and proceed towards the higher elevations, unless otherwise approved by OCWS.
6. Place bell and spigot pipe so that bells face the direction of laying, unless otherwise approved by OCWS.
7. Excavate around joints in bedding and lay pipe so that the barrel bears uniformly on the trench bottom.
8. Deflections at joints shall not exceed 75 percent of the amount allowed by the pipe manufacturer.
9. For thermoplastic piping, snake piping in trench to compensate for thermal expansion.
10. Carefully examine all pipe, fittings and specials for cracks, damage or other defects while suspended above the trench before installation. Immediately remove defective materials from site.
11. Inspect interior of all pipe and fittings and completely clean all dirt, gravel, sand, debris or other foreign material from pipe interior and joint recesses before it is moved into the trench. Bell and spigot mating surfaces shall be thoroughly wire brushed, and wiped clean and dry immediately before the pipe is laid.
12. Field cut pipe, where required, with a machine specially designed for cutting piping. Make cuts carefully, without damage to pipe or lining, and with a smooth end at right angles to the axis of pipe. Cut ends on push-on joint shall be tapered and sharp edges filed off smooth. Flame cutting will not be allowed.
13. Blocking under piping will not be permitted unless specifically approved by OCWS for special conditions. If permitted, conform to requirements of AWWA C600.

14. Touch up protective coatings in a satisfactory manner prior to backfilling.
15. CONTRACTOR shall notify OCWS in advance of backfilling operations.
16. On steep slopes, take measures acceptable to OCWS to prevent movement of the pipe during installation.
17. Thrust Restraint: During the installation of the pipe, thrust blocks, tied joints, or proprietary restrained joint systems shall be provided wherever required for thrust restraint. Thrust restraint shall conform to the applicable requirements of Article 3.2.

H. Polyethylene Encasement:
1. Provide polyethylene encasement for ductile iron piping to prevent contact between the pipe and surrounding bedding material and backfill.
2. Polyethylene may be supplied in tubes or in sheet material.
3. Polyethylene encasement materials and installation shall be in accordance with the requirements of AWWA C105.

I. Jointing Pipe:
1. Ductile Iron Mechanical Joint Pipe:
   a. Wipe clean the socket, plain end and adjacent areas immediately before making joint. Make certain that cut ends are tapered and sharp edges are filed off smooth.
   b. Lubricate the plain ends and gasket with soapy water or an approved pipe lubricant, in accordance with AWWA C111, just prior to slipping the gasket onto the plain end of the joint assembly.
   c. Place the gland on the plain end with the lip extension toward the plain end, followed by the gasket with the narrow edge of the gasket toward the plain end.
   d. Insert the pipe into the socket and press the gasket firmly and evenly into the gasket recess. Keep the joint straight during assembly.
   e. Push gland toward socket and center it around pipe with the gland lip against the gasket.
   f. Insert bolts and hand tighten nuts.
   g. Make deflection after joint assembly, if required, but prior to tightening bolts. Alternately tighten bolts 180 degrees apart to seat the gasket evenly. The bolt torque shall be as follows:

Pipe Size (inches)	Bolt Size (inches)	Range of Torque (ft-lbs)
3	5/8	45-60
4-24	3/4	75-90
30-36	1	100-120
42-48	1-1/4	120-150

2. Ductile Iron Push-On Joint Pipe:
   a. Prior to assembling the joints, the last 8 inches of the exterior surface of the spigot and the interior surface of the bell shall be thoroughly cleaned with a wire brush, except where joints are lined or coated with a special protective lining or coating.

b. Rubber gaskets shall be wiped clean and flexed until resilient. Refer to manufacturer's instructions for procedures to ensure gasket resiliency when assembling joints in cold weather.

c. Insert gasket into joint recess and smooth out the entire circumference of the gasket to remove bulges and to prevent interference with the proper entry of the spigot of the entering pipe.

d. Immediately prior to joint assembly, apply a thin film of approved lubricant to the surface of the gasket, which will come in contact with the entering spigot end of pipe. CONTRACTOR may, at his option, apply a thin film of lubricant to the outside of the spigot of the entering pipe.

e. For assembly, center spigot in the pipe bell and push pipe forward until it just makes contact with the rubber gasket. After gasket is compressed and before pipe is pushed or pulled all the way home, carefully check the gasket for proper position around the full circumference of the joint. Final assembly shall be made by forcing the spigot end of the entering pipe past the rubber gasket until it makes contact with the base of the bell. When more than a reasonable amount of force is required to assemble the joint, the spigot end of the pipe shall be removed to verify the proper positioning of the rubbergasket. Gaskets, which have been scoured or otherwise damaged, shall not be used.

f. Maintain an adequate supply of gaskets and joint lubricant at the site at all times when pipe jointing operations are in progress.

3. Proprietary Joints:

a. Pipe which utilizes proprietary joints such as Fastite, by American Cast Iron Pipe Company, Tyton by U.S. Pipe Incorporated, restrained joints described under Paragraph 3.2.D., or other such joints shall be installed in strict accordance with the manufacturer's instructions.

4. Flanged Joints:

a. Assemble flanged joints using 1/8-inch ring-type gaskets for raised face flanges. Use full face gaskets for flat face flanges, unless otherwise approved by OCWS. Gaskets shall be suitable for the service intended in accordance with the manufacturer's ratings and instructions. Gaskets shall be properly centered.

b. Bolts shall be tightened in a sequence, which will insure equal distribution of bolt loads.

c. The length of bolts shall be uniform, and they shall not project beyond the nut more than 1/4-inch or fall short of the nut when fully taken up. The ends of bolts shall be machine cut so as to be neatly rounded. No washers shall be used.

d. Bolt threads and gasket faces for flanged joints shall be lubricated prior to assembly.

e. After assembly, coat all bolts and nuts with two 8-mil coats of a high- build epoxy or bituminous coating as manufactured by Tnemec, or equal.

5. Thermoplastic Pipe Joints:

a. Solvent Cement Joints:

1) Bevel pipe ends and remove all burrs before making joints. Clean both pipe and fittings thoroughly. Do not attempt to make solvent cement joints if temperature is below 40 F nor in wet conditions.

2) Use solvent cement supplied or recommended by the pipe manufacturer.
3) Apply joint primer and solvent cement and assemble joints in strict accordance with the recommendations and instructions of the manufacturer of the joint materials and the pipe manufacturer.
4) Observe safety precautions with the use of joint primers and solvent cements. Allow air to circulate freely through pipelines to permit solvent vapors to escape. Slowly admit water when flushing or filling pipelines to prevent compression of gases within pipes.

b. Push-On Joints:
1) Bevel all field-cut pipe, remove all burrs and provide a reference mark the correct distance from the pipe end.

J. Clean the pipe end and the bell thoroughly before making the joint. Insert the O-ring gasket, making certain it is properly oriented. Lubricate the spigot well with an approved lubricant; do not lubricate the bell or O-ring. Insert the spigot end of the pipe carefully into the bell until the reference mark on the spigot is flush with the bell.Backfilling:

1. Conform to the applicable requirements of Section 02220 or 02223.
2. Place backfill as construction progresses. Backfill by hand and use power tampers until pipe is covered by at least one foot of fill.

K. Connections to Valves and Hydrants:
1. Install valves and hydrants as shown.
2. Provide suitable adapters when valves or hydrants and piping have different joint types.
3. Provide thrust restraint at all hydrants and at valves at pipeline terminations.

L. Transitions from One Type of Pipe to Another:
1. Provide all necessary adapters, specials and connection pieces required when connecting different types and sizes of pipe or connecting pipe made by different manufacturers.

M. Closures:
1. Provide all closure pieces shown or required to complete the Work.

3.2 THRUST RESTRAINT

A. Provide thrust restraint on all pressure piping systems and where otherwise shown and specified.

B. Thrust restraint may be accomplished by means of restrained pipe joints, or by concrete thrust blocks. Thrust restraints shall be designed for the axial thrust exerted by the test pressure specified in the "Buried Piping Schedule".

C. Place concrete thrust blocks against undisturbed soil. Where undisturbed soil does not exist, or for projects where the site consists of fill material, thrust restraint shall be provided by restrained pipe joints.

D. Restrained Pipe Joints:
1. Pipe joints shall be restrained by means suitable for the type of pipe being installed.
a. Restrain ductile iron push-on joints and mechanical joints utilizing a proprietary restrained joint system such as American Lok-Ring, Lok-Fast, Lok-Set; U.S. Pipe Field Lok Gasket, U.S. Pipe TR Flex System; lugs and tie rods, or other systems approved by OCWS.

b. Where push-on type or other non-restrained joints are utilized for thermoplastic piping, CONTRACTOR shall provide tie rods or other suitable joint restraint system, subject to the approval of OCWS.

E. Concrete Thrust Blocks:

1. Provide concrete thrust blocks on pressure piping at all changes in alignment of 15 degrees or more, at all tees, plugs and caps and where shown. Construct thrust blocks of Class B concrete.
2. Install thrust blocks against undisturbed soil. Place concrete so that pipe and fitting joints will be accessible for repair.
3. Size concrete thrust blocks as shown or as approved by OCWS.

3.3 WORK AFFECTING EXISTING PIPING

A. Location of Existing Piping:

1. Locations of existing piping shown should be considered approximate.
2. CONTRACTOR shall determine the true location of existing piping to which connections are to be made, and location of other facilities which could be disturbed during earthwork operations, or which may be affected by CONTRACTOR'S Work in anyway.
3. Conform to applicable requirements of Division 1 pertaining to cutting and patching, and connections to existing facilities.

B. Taking Existing Pipelines Out of Service:

1. Do not take pipelines out of service unless approved by OCWS.
2. Notify OCWS at least 48 hours prior to taking pipeline out of service.

C. Work on Existing Pipelines:

1. Cut or tap pipes as shown or required with machines specifically designed for this work.
2. Install temporary plugs to prevent entry of mud, dirt, water and debris.
3. Provide all necessary adapters, fittings, pipe and appurtenances required to complete the Work.

3.4 TESTING OF PIPING

A. General:

1. Test all piping except as may be exempted in the Schedule.
2. Notify OCWS and local authorities having jurisdiction at least 48 hours in advance of testing if their presence is required.
3. Conduct all tests in the presence of OCWS.
4. Remove or protect any pipeline-mounted devices which may be damaged by the test pressure.
5. Provide all apparatus and services required for testing, including but not limited to, the following:
   a. Test pumps, bypass pumps, hoses, calibrated gauges, meters, test containers, valves and fittings.
   b. Temporary bulkheads, bracing, blocking and thrust restraints.
6. Provide air if an air test is required and power if pumping is required.
7. Unless otherwise approved by OCWS, CONTRACTOR will provide fluid

required for testing.

8. Repair observed leaks and any pipeline failing to meet acceptance criteria. Retest after repair.

B. Test Schedule:

1. Refer to the Piping Schedule for the type of test required and the required hydrostatic test pressure.
2. Unless otherwise specified, the required hydrostatic test pressures are at the lowest elevation of the pipeline.
3. For piping not listed in the Schedule:
   a. Hydrostatically test pipe that will be operating at a pressure greater than 5 psig.
   b. Use exfiltration testing or low-pressure air testing for all other piping.
4. Hydrostatic Test Pressure:
   a. Use test pressures listed in the Schedule.
   b. If a test pressure is not listed in the Schedule, or if a hydrostatic test is required for piping not listed in the Schedule, the test pressure will be determined by the OCWS based on the maximum anticipated sustained operating pressure and the methods described in the AWWA Manual or Standard which applies to the piping system.

C. Hydrostatic Testing:

1. Preparation for Testing:
   a. For plastic pipe, follow procedures described in Section 7 of AWWA Standard C605.
   b. Ensure that adequate thrust protection is in place and that all joints are properly installed.
   c. Special requirements:
2. Test Procedure:
   a. Fill pipeline slowly to minimize air entrapment and surge pressures. Fill rate should not exceed one foot per second in the pipe being tested.
   b. Examine exposed joints and valves, and correct visible leakage.
   c. After the wetting period prescribed above, add fluid to pressurize line to the required test pressure. Maintain test pressure for a stabilization period of 10 minutes before beginning test.
   d. After the stabilization period, maintain test pressure for a two-hour period. Add fluid to restore test pressure if pressure drops 5 psi below test pressure at any time during the test period.
   e. Pump from a test container to maintain test pressure. Measure the volume of fluid pumped from the container and record on the test report. Record pressure at the test pump at 15 minute intervals for the duration of the test.
3. Allowable Leakage Rates: Leakage is defined as the quantity of fluid that must be supplied to the pipeline or any section thereof to maintain pressure within 5 psi of the test pressure during a two-hour period. The two-hour test period shall not begin until after the pipe has been filled, exposed to the required wetting period, air has been expelled and pressure has been stabilized. Allowable leakage rates for piping system are listed below:
   a. No Leakage: Pipe with flanged or fused joints.
   b. Rates based on the formula or table in AWWA Manual M41:

1) Metal pipe joined with rubber gaskets as sealing members. This includes the following joint types:
   - Push-on joints.
   - Mechanical joints.
   - Bolted sleeve type couplings.
   - Grooved and shouldered couplings.

c. Rates based on the formula or table in AWWA Standard 605:
   1) Plastic pipe joined with O-ring gasket sealing members.

D. Exfiltration Testing:
1. Plug and bulkhead the section of pipe to be tested at both ends and admit fluid until the pipe is full.
2. Provide a minimum head of 2 feet above the crown of the pipe at the upstream end.
3. Add fluid from a test container or from a metered supply as required to maintain the level within 3 inches of the minimum head throughout the test duration.
4. Test duration shall not be less than 2 hours.
5. Allowable Leakage Rates:
   a. Leakage is defined as the quantity of fluid that must be supplied to the pipeline or any section thereof to maintain the head within 3 inches of the test elevation during the test duration after the pipe has been filled and exposed to the required wetting period plus the quantity required to refill to the original head.
   b. Leakage shall not be greater than that allowed by the regulatory agency having jurisdiction.

E. Low Pressure Air Testing:
1. Test in accordance with requirements of the regulatory agency.
2. If there are no regulatory requirements use test procedures described in ASTM Standards:
   a. ASTM F1417 – For thermoplastic pipe.

3.5 CLEANING AND DISINFECTION

A. Cleaning:
1. Thoroughly clean all piping and flush in a manner approved by OCWS, prior to placing in service.
2. If piping which requires disinfection has not been kept clean during storage or installation, CONTRACTOR shall swab each section individually before installation with a five percent hypochlorite solution, to ensure clean piping.

B. Disinfection:
1. Disinfect all potable and finished water piping.
2. A suggested procedure for accomplishing complete and satisfactory disinfection is specified below. Other procedures will be considered for approval by OCWS.
   a. Thoroughly flush piping prior to disinfection with water.
   b. Conform to procedures described in AWWA C651. Continuous feed method of disinfecting shall be used unless alternative method is acceptable to OCWS.
3. Water for initial flushing, testing and chlorination will be furnished by the CONTRACTOR. CONTRACTOR shall provide all temporary piping, hose,

valves, appurtenances and services required. Cost of water required for redisinfection will be paid by CONTRACTOR to OWNER at OWNER'S standard rates.

4. Chlorine will be supplied by CONTRACTOR.
5. Bacteriologic tests will be performed by OWNER. A certified test laboratory report will be made available to CONTRACTOR, if requested.
6. Chlorine concentration in the water entering the piping shall be between 50 and 100 parts per million, such that a minimum residual concentration of 25 mg/l will be left after a 24-hour retention period. Care shall be taken to ensure disinfection of the piping in all its parts. The operation shall be repeated as necessary to provide complete disinfection.
7. After the required retention period, the heavily chlorinated water shall be flushed to drain, unless otherwise directed.

3.6 PIPING SCHEDULE

Service	Size	Material	Interior Lining	Exterior Coating	Pressure Class	Joint	Test	Remarks
PW	4"-12"	D.I.	CL	BC	350	B.S.	HY	
PW	4"-12"	PVC	--	--	C900	B.S.	HY	
FM	4"-12"	D.I.	EC CL	BC	350	B.S.	HY	
FM	4"-12"	HDPE	--	--	As Required	B.W.	HY	
SS	8"-12"	D.I.	EC	BC	350	B.S.	AIR	
SS	8"-12"	PVC	--	--	ASTM 3034	B.S.	AIR	

A. Polyvinyl chloride (PVC) pressure pipe, 4 - 12 inches in diameter, shall be Class 235, DR 18, meeting the requirements of AWWA C900 and shall have cast-iron-pipe-equivalent outside diameters (also known as ductile iron pipe size (DIPS)). Each length of pipe shall be hydrostatically tested to four times its pressure class of the pipe by the manufacturer in accordance with AWWA C900..

B. Polyethylene tubing 2 inches in diameter and smaller for potable water and reclaimed water shall be high-density PE 3408 polyethylene resin per ASTM D2737, Pressure Class 200, Copper Tube Size (CTS), SDR 9, Performance Pipe DriscoPlex 5100, Endot EndoPure, Charter Plastics or an approved equal, meeting the requirements of AWWA C901. Butt fusion or CTS brass connections shall be used. All pipe materials used in potable water systems shall comply with NSF Standard 61.

C. Ductile iron pipe shall conform to AWWA C150 and AWWA C151. Pipe shall be Pressure Class 350. All pipe materials used in potable water systems shall comply with NSF Standard 61.

D. Polyvinyl chloride (PVC) gravity sewer pipe and fittings, 4-15 inches in diameter, shall be SDR 26, meeting the requirements of ASTM D 3034. Joining of pipe sections and fittings shall be by water-tight push-on joints using elastomeric gaskets in accordance with ASTM D 3212.

The following abbreviations are used in the piping schedule:

A.	Service Abbreviations			
	Potable Water	PW	Secondary Sludge	SS
	Force Main	FM		
B.	Material Abbreviations			
	Polyvinyl Chloride	PVC	Ductile Iron	DI
	High Density Polyethylene	HDPE		
C.	Lining/Coating Abbreviations			
	Cement Lined	CL		
	Bituminous Coated	BC		
	Epoxy Coated	EC		
D.	Joint Abbreviations

	Low pressure air	AIR		
	No test required	NR		

END OF SECTION 15051

SECTION 321408

VALVES, 4-INCH AND LARGER

PART 1 - GENERAL

1.1 DESCRIPTION

A. Scope:
   1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install 4-inch and larger valves and appurtenances, complete and operational.

B. Related Sections:
   1. Section 09900, Painting.
   2. Section 15051, Buried Piping Installation.
   3. Section 15052, Exposed Piping Installation.

1.2 REFERENCES

A. Comply with the applicable provisions and recommendations of the following standards, except as otherwise shown or specified.

B. ANSI Standards:
   1. B16.1, Cast-Iron Pipe Flanges and Flanged Fittings.
   2. B16.34, Valves-Flanged, Threaded, and Welding End.

C. API Standards:
   1. 594, Wafer Check Valves.
   2. 598, Valve Inspection and Test.
   3. 609, Butterfly Valves, Lug-Type and Wafer-Type.

D. ASTM Standards:
   1. A126, Gray Iron Castings for Valves, Flanges and Pipe Fittings.
   2. A193, Alloy Steel and Stainless Steel Bolting Materials for High Temperature Service.
   3. A194, Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure and High Temperature Service.
   4. A307, Carbon Steel Externally Threaded Standard Fasteners.
   5. A380, Practice for Cleaning and Descaling Stainless Steel Parts, Equipment and Systems.
   6. A536, Ductile Iron Castings.
   7. A743, Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.
   8. B21, Naval Brass, Rod, Bar, and Shapes.
   9. B61, Steam or Valve Bronze Castings.
   10. B62, Composition Bronze or Ounce Metal Castings.

11. B98, Copper-Silicon Alloy Rod, Bar, and Shapes.
12. B124, Copper and Copper Alloy Forging Rod, Bar and Shapes.
13. B138, Manganese Bronze Rod, Bar and Shapes.
14. D429, Test Methods for Rubber Property - Adhesion to Rigid Substrates.
15. B584, Copper Alloy Sand Castings for General Applications.

E. AWWA Standards:
1. C502, Dry-Barrel Fire Hydrants.
2. C504, Rubber-Seated Butterfly Valves.
3. C507, Ball Valves, 6 Inch Through 48 Inch.
4. C508, Swing-Check Valves for Waterworks Service, 2 Inch Through 24 Inch.
5. C509, Resilient-Seated Gate Valves for Water Supply Service.
6. C550, Protective Epoxy Interior Coatings for Valves and Hydrants.

1.3 QUALITY ASSURANCE

A. Qualifications:
1. Manufacturer:
a. Minimum of five years of experience producing substantially similar equipment and able to show evidence of at least five installations in satisfactory operation for at least five years in the continental United States.
b. Equipment shall be manufactured in the United States.

B. Component Supply and Compatibility:
1. Obtain all equipment included in this Section, regardless of the component manufacturer, from the valve manufacturer to ensure compatibility and proper operation.

1.4 SUBMITTALS

A. Shop Drawings:
1. Product data sheets.
2. Complete catalog information, including dimensions, weight, specifications, and identification of materials of construction of all parts.
3. C_v values and headloss curves.
4. Certificates of compliance with AWWA Standards where applicable.
5. Corrosion resistance information to confirm suitability of the valve materials for the application. Information on chemical resistance of elastomers shall be furnished from the elastomer manufacturers.

B. Certified copies of shop test results and inspection data.
C. Operation and Maintenance Data: Submit complete manuals including:
1. Copies of all approved Shop Drawings, test reports, maintenance

data and schedules, description of operation, and spare parts information.

PART 2 - PRODUCTS

2.1 GENERAL PROVISIONS

A. Manually operated valves, with or without extension stems, shall require not more than a 40-pound pull on the manual operator to open or close a valve against the specified criteria. The gear actuator and the valve components shall be able to withstand a minimum pull of 200 pounds on the manual operator and an input torque of 300 foot pounds to an actuator nut. Manual operators include handwheel, and a T-handle wrench.

B. Provide all valves to turn clockwise to close, unless otherwise specified.

C. Provide all valves with permanent markings for direction to open.

D. Provide exposed valves with flanged ends conforming to ANSI B16.1. The pressure class of the flanges shall be equal to or greater than the specified pressure rating of the valves.

E. Provide buried valves with mechanical or push-on joints, restrained or unrestrained, as required by the piping with which they are installed.

F. All materials of construction of the valves shall be suitable for the application as shown on the Drawings.

G. Protect wetted parts from galvanic corrosion due to contact of two different metals.

H. Provide all valves with manufacturer's name and rated pressure cast in raised letters on the valve body.

I. Provide valves with brass or Type 316 stainless steel nameplates attached with Type 316 stainless steel screws. Nameplates shall have engraved letters and shall include the following information as a minimum:
   1. Valve size.
   2. Pressure and temperature ratings.
   3. Application (other than water and wastewater).
   4. Date of manufacture.
   5. Manufacturer's name.

J. Clean and descale fabricated stainless steel items in accordance with ASTM A380, and as follows:
   1. Passivate all stainless steel welded fabricated items after manufacture by immersion in a pickling solution of 6 percent nitric acid and 3 percent hydrofluoric acid. Temperature and detention time shall be sufficient for removal of oxidation and ferrous contamination without etching the surface. Perform a complete neutralizing operation by immersion in a trisodium phosphate rinse followed by a clean water wash.
   2. Scrub welds with the same pickling solution or pickling paste and clean with stainless steel wire brushes or by grinding with non-metallic abrasive tools to remove weld discoloration, and then

neutralize and wash clean.

K. For stainless steel bolting, except where Nitronic-60 nuts are required, use anti- seize compound, graphite free, to prevent galling. Strength of the joint shall not be affected by the use of anti-seize compound.

2.2 APPURTENANCES FOR EXPOSED METALLIC VALVES

A. Handwheels:
   1. Conform to the applicable AWWA Standards.
   2. Material of Construction: Ductile iron or cast aluminum.
   3. Arrow indicating direction of opening and word "OPEN" shall be cast on the trim of the handwheel.
   4. Maximum Handwheel Diameter: 30 inches.

2.3 APPURTENANCES FOR BURIED METALLIC VALVES

A. Wrench Nuts:
   1. Provide wrench nuts on all buried valves of nominal 2-inch size conforming to AWWA C500.
   2. Arrow indicating direction of opening the valve shall be cast on the nut along with the word "OPEN".
   3. Material: Ductile iron.
   4. The nut shall be secured to the stem by mechanical means.

B. Extension Stems for Non-Rising Stem Gate Valves and Quarter Turn Buried Valves:
   1. Provide extension stems to bring the operating nut to 6 inches below the valve box cover.
   2. Minimum Size and Material: Same as valve stem.
   3. Maximum Unsupported Length: 3 feet.
   4. Provide top nut and bottom coupling of ductile iron with pins and set screws of Type 316 stainless steel.

C. Valve Boxes:
   1. Valve boxes shall be as indicated and as required.
   2. Type: Heavy duty, suitable for highway loading, 2-piece telescopic, and adjustable. Lower section shall enclose operating nut and stuffing box and rest on bonnet.
   3. Material: Cast or ductile iron.
   4. Coating: Two coats of asphalt varnish conforming to Federal Specification TT-C-494.
   5. Marking: As required for service.

2.4 ANCHOR AND MISCELLANEOUS MOUNTING BOLTS

A. All bolts, nuts and washers for connection of the valve appurtenances to concrete structure or other structural members shall be obtained from the valve manufacturer, and shall be of ample size and strength for the purpose

intended. Anchor bolts shall be hooked or adhesive type.

B. Provide anchor bolts for stem guides of required strength to prevent twisting or sagging of the guides under load.

C. Provide bolts and washers of Type 316 stainless steel and nuts of Nitronic 60. The bolts shall have rolled threads and both bolts and nuts shall be electropolished to remove burrs.

D. Minimum Size of Anchor Bolts: 5/8 inch.

2.5 PAINTING OF EXPOSED VALVES, HYDRANTS AND APPURTENANCES

A. Exterior steel, cast-iron, and ductile iron surfaces except machined surfaces of all exposed valves and appurtenances shall be finish painted in the shop. The surface preparation, priming, finish painting, and field touch-up painting shall conform to Section 09900.

2.6 PAINTING OF BURIED VALVES

A. Exterior steel, cast-iron, and ductile iron surfaces except machined or bearing surfaces of all buried valves shall be shop-painted with two coats of asphalt varnish conforming to Federal Specification TT-C 494.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install all valves and appurtenances in accordance with the manufacturer's instructions.

B. Conform to appendices of AWWA Standards, where applicable.

C. Install all valves so that operating handwheels or levers can be conveniently turned from operating floor without interfering with access to other valves and equipment, and as approved by the ENGINEER. Orient chain operators out of the way of the walking areas. Mount valves so that indicator arrows are visible from floor level.

D. For motor-operated valves located lower than five feet above the operating floor, orient the motor actuator to permit easy access to the push buttons and the handwheel.

E. Install all valves plumb and level. Install all valves to be free from distortion and strain caused by misaligned piping, equipment or other causes.

F. For buried valve installations, set valve boxes plumb and centered, with soil carefully tamped to a lateral distance of 4 feet on all sides of the box, or to the undisturbed trench face if less than 4 feet. Provide a flexible coupling next to a buried valve for ease of valve removal.

G. Install plug valves in horizontal liquid lines with the stem horizontal and the plugs on top when the valves are open and the plugs on upstream end when

the valves are closed. Install valves in vertical liquid lines with the plug at the top when closed.

3.2 FIELD TESTS AND ADJUSTMENTS

A. Adjust all parts and components as required to provide correct operation of the valves.

B. Conduct a functional field test on each valve in the presence of the ENGINEER to demonstrate that each valve operates correctly.

C. Verify satisfactory operation and controls of motor operated valves.

D. Demonstrate satisfactory opening and closing of valves at the specified criteria requiring not more than 40 pounds effort on the manual actuators.

E. Test 10 percent valves of each type by applying 200 pounds effort on the manual operators. There shall be no damage to the gear actuator or the valve.

END OF SECTION 321408

SECTION 329113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 DESCRIPTION

A. This section describes preparation of soil including application of herbicide and soil amendments.

1.2 RELATED WORK SPECIFIED ELSEWHERE

A. Section 328400, Planting Irrigation

B. 329200, Turf and Grasses

C. Section 329300, Trees, Shrubs, and Ground Covers

1.3 SUBMITTALS

A. Submit certification of quantities of fertilizer and compost delivered to the site to the architect.

B. Submit to the architect for approval a sample of garden care compost and yard debris compost.

1.4 PRODUCT DELIVERY

A. Deliver fertilizer to the site in original unopened containers, each bearing the manufacturer’s guaranteed analysis.

1.5 PROTECTION

A. Protect utility lines, storm drainage lines, site improvements, and underground irrigation system during execution of work. See Section 015000, Temporary Facilities and Controls.

PART 2 - PRODUCTS

2.1 SOIL AMENDMENTS

A. Lime: Dolomite lime, No. 10.

2.2 CONTACT HERBICIDE

A. Roundup Pro, or equal.

2.3 TOPSOIL

A. Clean, fertile, friable, natural soil material free of debris, roots, stones, weeds, and grass.

PART 3 - EXECUTION

3.1 HERBICIDE APPLICATION

A. Apply contact herbicide over all areas of weed or grass growth within landscaped area.

B. Apply in two applications as follows:
   1. First application, apply seven days prior to performing earthwork.
   2. Second application (to kill new vegetation), apply after grading has been completed and 48 hours prior to planting.

C. Observe manufacturer's recommended period prior to working in treated areas.

D. Apply at manufacturer's maximum recommended application rate.

E. Do not apply herbicide to impervious areas unless specifically directed to do so by the contract documents.

3.2 SOIL PREPARATION

A. Remove stones, mortar, concrete, asphalt, rubbish, debris, and other materials larger than 1 1/2 inches from planting areas. See Section 329119, Landscape Grading.
   1. If existing soil base is not suitable for use, remove top 2 inches and replace with suitable topsoil.

B. Level soil surface to ___ inch(es) below finish elevation. Use excess suitable material as fill elsewhere in the work area, if required.

C. Lawn area finished surface shall match top of curb or sidewalk elevation. Planting area finished surface shall be ___ inch(es) below curb top prior to mulch application.

D. See Section 329119, Landscape Grading, if existing soil is not sandy or silty, thus requiring over-excavation and placement of fill material.

E. Amend existing clean base with 4 inches of soil and till to a depth of 5 inches to eliminate layering of the soil and sand base.
   1. Add 2 inches of yard debris compost and fertilizer, as specified, and lime (if lawn area) and till to a depth of 3 inches to 5 inches to incorporate.

F. Amend soil with compost at the rates described below to achieve a total 6-inch layer of amended soil material. Apply in the following order.
   1. Add 2 inches (6 cubic yards per 1,000 square feet) of yard debris compost.
   2. For each 1,000 square feet, apply 10 pounds of 34-0-0 and 4 pounds of 16-16-16. Do not apply fertilizer to impervious areas. Use deflectors to prevent improper application.
   3. Rototill, in two directions, to a depth of 6 inches, to create a uniform mix of soil and Yard Debris Compost.

G. Within the lawn areas, apply lime at a rate of 50 pounds per 1000 square feet.

H. Rake and smooth planting area to a tolerance of 1 inch, plus or minus, in 10 feet.

I. See Section 329300, Plants, for application of prepared soil mix in planting pits.

END OF SECTION 329113

SECTION 329200 - TURF AND GRASSES (BAHIA)

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Requirements relating to sodding of lawns and turfgrass areas including site preparation, material installation and removal policies.

1.2 DEFINITIONS

A. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

B. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 1.8

1.3 COORDINATION:

A. Coordinate installation of turfgrass with other work to stabilize affected areas.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's installation instructions.

B. Samples:

1. Submit
2. Reviewed and accepted samples may be returned to the contractor.

1.5 INFORMATIONAL SUBMITTALS

A. Product Data: Manufacturer's product data and installation instructions.

B. Material Certificates: For soil preparation materials.

C. Certification of Bahia Turfgrass.

1. Certification of turfgrass sod from supplier.

D. Product certificates: For Fertilizer material

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful turf establishment projects of comparable size.

1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.

2. Pesticide Applicator: State licensed, commercial.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws, as applicable.

B. Sod: Harvest, deliver, store, and handle sod according to requirements in "Specifications for Turfgrass Sod Materials" and "Specifications for Turfgrass Sod Transplanting and Installation" sections in TPI's "Guideline Specifications to Turfgrass Sodding." Deliver sod within 24 hours of harvesting and in time for planting promptly. Protect sod from breakage and drying.

1.8 SOIL PREPARATION

A. Remove stones, mortar, concrete, asphalt, rubbish, debris and any other material larger than 1 ½” from planting areas.

1. If existing soil base is not suitable for use, remove top 2” and replace with suitable topsoil.

B. Level soil surface to ½ inch(es) below finish elevation. Use excess suitable material as fill elsewhere in the work area, if required.

C. Lawn area finished surface shall match top of curb or sidewalk elevation.

D. Add 2 inches of yard debris compost and fertilizer, as specified, and lime and till to a depth of 3 inches to 5 inches to incorporate.

E. Rototill, in two directions, to a depth of 6 inches, to create a uniform mix of soil and Yard Debris Compost.

F. Within the lawn areas, apply lime at a rate of 50 pounds per 1,000 square feet.

G. Rake and smooth area to a tolerance of 1 inch, plus or minus.

PART 2 - PRODUCTS

2.1 BAHIA TURFGRASS SOD

A. Turfgrass Sod: Furnish viable sod of uniform density, color, and texture that is strongly rooted and capable of vigorous growth and development when planted.

1. Use a 1/4inch shallow cut rolled sod from a reputable local grower.
2. Species should be wear-resistant, free from disease, and in excellent condition.
3. Sod shall be grown in sand or sandy loam soils only. Sod grown in soils of clay, silt, or high organic materials such as peat, will not be accepted.

2.2 FERTILIZERS

A. Commercial "Starter" Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: 10-10-10 Nitrogen, Phosphorous, and Potassium, by weight. In a ratio that will provide 40lbs/acre

2. Liming is only needed when soil pH is below 5.5. Lime as needed 3-6 months prior to fertilization to allow for the lime to react with the soil.

2.3 SODDING

A. Lay sod within 24 hours of harvesting. Do not lay sod if dormant or if ground is frozen or muddy.

B. Lay sod to form a solid mass with tightly fitted joints, moistened and rolled to create good contact for growth. Butt ends and sides of sod; do not stretch or overlap. Stagger sod strips or pads to offset joints in adjacent courses. Avoid damage to soil or sod during installation. Tamp and roll lightly to ensure contact with soil, eliminate air pockets, and form a smooth surface. Work sifted soil or fine sand into minor cracks between pieces of sod; remove excess to avoid smothering sod and adjacent grass.

1. Lay sod across slopes exceeding 1:3.
2. Anchor sod on slopes exceeding 1:6 with wood pegs or steel staples spaced as recommended by sod manufacturer but not less than two anchors per sod strip to prevent slippage.

C. Saturate sod with fine water spray within two hours of planting. During first week after planting, water daily or more frequently as necessary to maintain moist soil.

D. Sodded areas must be fertilized and kept moist during root establishment (minimum of 3 weeks).

2.4 TURF MAINTENANCE

A. General: Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and remulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation.

B. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than one-third of grass height. Remove no more than one-third of grass-leaf growth in initial or subsequent mowings.

2.5 SATISFACTORY TURF

A. Turf installations shall meet the following criteria as determined by Architect:

1. Satisfactory Sodded Turf: At end of maintenance period, a healthy, well-rooted, even-colored, viable turf has been established, free of weeds, open joints, bare areas, and surface irregularities.

B. Use specified materials to reestablish turf that does not comply with requirements, and continue maintenance until turf is satisfactory.

2.6 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material, including excess subsoil, unsuitable soil, trash, and debris, and legally dispose of them off Owner's property.

C. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout initial maintenance period and remove after plantings are established. Any barricades constructed must still be accessible by emergency and fire equipment during and after construction.

1. Sodded areas must be protected from any traffic, other than emergency vehicles, for a period of 3 to 4 weeks, or until root system has penetrated.

D. Remove nondegradable erosion-control measures after grass establishment period.

E. Repair any damage to adjacent materials and surfaces resulting from installation of this work.

END OF SECTION 329200

SECTION 329300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cast iron tree grates.
2. Tree grate frames.
3. Fabricated steel tree guards.
4. Cast iron tree fences.
5. Plants.
6. Tree stabilization.
7. Tree-watering devices.
8. Landscape edgings.

B. Related Requirements:

1. Section 015639 "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.
2. Section 129200 "Interior Planters and Artificial Plants" for planters for live and artificial interior plants.
3. Section 329200 "Turf and Grasses" for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.
4. Section 329600 "Transplanting" for transplanting non-nursery-grown trees.

1.3 ALLOWANCES

A. Allowances for plants are specified in Section 012100 "Allowances."

1. Perform planting work under quantity allowances and only as authorized. Authorized work includes [**work required by Drawings and the Specifications and**] [**only**] work authorized in writing by Architect.
2. Notify Architect [**weekly**] <**Insert time interval**> of extent of work performed that is attributable to quantity allowances.
3. Perform work that exceeds quantity allowances only as authorized by Change Orders.

B. Furnish trees as part of tree allowance.

C. Furnish <**Insert plant variety**> as part of <**Insert name of allowance**>.

1.4 UNIT PRICES

A. Work of this Section is affected by unit prices specified in Section 012200 "Unit Prices."

B. Unit prices apply to authorized work covered by quantity allowances.

C. Unit prices apply to additions to and deletions from the Work as authorized by Change Orders.

1.5 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than [**sizes indicated**] [**diameter and depth recommended by ANSI Z60.1 for type and size of plant required**]; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.

C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than [**sizes indicated**] [**diameter and depth recommended by ANSI Z60.1 for type and size of plant required**].

D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.

E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.

F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.

G. Finish Grade: Elevation of finished surface of planting soil.

H. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.

I. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

J. Planting Area: Areas to be planted.

K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See [**Section 329113 "Soil Preparation"**] [**Section 329115 "Soil Preparation (Performance Specification)"**] for drawing designations for planting soils.

L. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

M. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.6 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.7 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**] <**Insert location**>.

1.8 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
2. Plant Photographs: Include color photographs in [**digital**] [**3- by 5-inch (76- by 127-mm) print**] format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than [**20**] <**Insert number**> plants are required, include a minimum of [**three**] <**Insert number**> photographs showing the average plant, the best

quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. Samples for Verification: For each of the following:

1. Trees and Shrubs: [**Three**] <**Insert number**> Samples of each variety and size[**delivered to site for review**]. Maintain approved Samples on-site as a standard for comparison.
2. [**Organic**] [**Compost**] Mulch: [**1-pint (0.5-L)**] [**1-quart (1-L)**] <**Insert value**> volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
3. Mineral Mulch: [**2 lb (1.0 kg)**] [**5 lb (2.5 kg)**] <**Insert value**> of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on-site; provide an accurate indication of color, texture, and makeup of the material.
4. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).
5. Proprietary Root-Ball-Stabilization Device: One unit.
6. Slow-Release, Tree-Watering Device: One unit of each size required.
7. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
8. Tree Grates[**, Frames,**] and Accessories: Manufacturer's standard size[**delivered to site for review**], to verify design[**and color**] selected.
9. Root Barrier: Width of panel by 12 inches (300 mm).

1.9 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

D. Sample Warranty: For special warranty.

1.10 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.11 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: [**Three**] [**Five**] <**Insert number**> years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certifications: Installer's [**field supervisor**] [**personnel assigned to the Work**] shall have certification in [**one**] [**all**] of the following categories from the Professional Landcare Network:

    a. Landscape Industry Certified Technician - Exterior.
    b. Landscape Industry Certified Interior.
    c. Landscape Industry Certified Horticultural Technician.

5. Pesticide Applicator: State licensed, commercial.

B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

1. Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.

C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches (150 mm) above the root flare for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

D. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials [**seven**] <**Insert number**> days in advance of delivery to site.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Deliver bare-root stock plants within [**24 hours**] [**36 hours**] <**Insert time**> of digging. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting. Transport in covered, temperature-controlled vehicles, and keep plants cool and protected from sun and wind at all times.

D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

E. Handle planting stock by root ball.

F. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F (16 to 18 deg C) until planting.

G. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

H. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

I. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.

3. Do not remove container-grown stock from containers before time of planting.
4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.13 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: <**Insert dates**>.
2. Fall Planting: <**Insert dates**>.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.14 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
b. Structural failures including plantings falling or blowing over.
c. Faulty performance of [**tree stabilization**] [**edgings**] [**and**] [**tree grates**] <**Insert item**>.
d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Periods: From date of [**planting completion**] [**Substantial Completion**] <**Insert starting time**>.

3. Warranty periods in "Trees, Shrubs, Vines, and Ornamental Grasses," "Ground Covers, Biennials, Perennials, and Other Plants," and "Annuals" subparagraphs below are examples only for some categories of plants; revise or insert other plant categories to suit Project.

a. Trees, Shrubs, Vines, and Ornamental Grasses: [**12**] <**Insert number**> months.

b. Ground Covers, Biennials, Perennials, and Other Plants: [**12**] [**Nine**] [**Six**] [**Three**] <**Insert number**> months.
c. Annuals: [**Three**] [**Two**] <**Insert number**> months.

4. Include the following remedial actions as a minimum:

a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch (19 mm) in diameter; or with stem girdling roots are unacceptable.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

D. Labeling: Label [**each**] [**at least one**] plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.

E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

F. [**Annuals**] [**and**] [**Biennials**]: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery[**and that are in bud but not yet in bloom**].

2.2 FERTILIZERS

A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: [**5-gram**] [**10-gram**] [**21-gram**] <**Insert size**> tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: [**Shredded hardwood**] [**Ground or shredded bark**] [**Wood and bark chips**] [**Pine straw**] [**Salt hay or threshed straw**] [**Pine needles**] [**Peanut, pecan, and cocoa-bean shells**] <**Insert mulch type**>.
2. Size Range: [**3 inches (76 mm) maximum, 1/2 inch (13 mm) minimum**] <**Insert dimensions**>.
3. Color: Natural.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through a 1-inch (25-mm) sieve; soluble-salt content of [**2 to 5**] <**Insert range or value**> dS/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: [**50 to 60**] <**Insert number range**> percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

C. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:

1. Type: [**Rounded riverbed gravel or smooth-faced stone**] [**Crushed stone or gravel**] [**Marble chips**] [**Granite chips**] <**Insert stone type**>.
2. Size Range: [**1-1/2 inches (38 mm) maximum, 3/4 inch (19 mm) minimum**] [**3/4 inch (19 mm) maximum, 1/4 inch (6.4 mm) minimum**] <**Insert dimensions**>.
3. Color: [**Uniform tan-beige color range acceptable to Architect**] [**Readily available natural gravel color range**] <**Insert color**>.

2.4 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. (101g/sq. m) minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

B. Composite Fabric: Woven, needle-punched polypropylene substrate bonded to a nonwoven polypropylene fabric, 4.8 oz./sq. yd. (162 g/sq. m).

2.5 PESTICIDES

A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new [**hardwood**] [**softwood with specified wood pressure-preservative treatment**], free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal (38-by-38-mm actual) by length indicated, pointed at one end.
2. Wood Deadmen: Timbers measuring 8 inches (200 mm) in diameter and 48 inches (1200 mm) long, treated with specified wood pressure-preservative treatment.
3. Flexible Ties: Wide rubber or elastic bands or straps of length required to reach stakes or [**turnbuckles**] [**compression springs**].
4. Guys and Tie Wires: ASTM A 641/A 641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch (2.7 mm) in diameter.
5. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
6. Guy Cables: Five-strand, 3/16-inch- (4.8-mm-) diameter, galvanized-steel cable, with zinc-coated [**turnbuckles**] [**compression springs**], a minimum of 3 inches (75 mm) long, with two 3/8-inch (10-mm) galvanized eyebolts.
7. Flags: Standard surveyor's plastic flagging tape, white, 6 inches (150 mm) long.
8. Proprietary Staking-and-Guying Devices: Proprietary stake or anchor and adjustable tie systems to secure each new planting by plant stem; sized as indicated and according to manufacturer's written recommendations.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Arborbrace.
2) Better Bilt Products, Inc.
3) DeepRoot Green Infrastructure, LLC.
4) Foresight Products, LLC.
5) J. R. Partners.
6) Villa Root Barrier.
7) <**Insert manufacturer’s name**>.

B. Root-Ball Stabilization Materials:

1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal (38-by-38-mm actual) by length indicated; stakes pointed at one end.
2. Wood Screws: ASME B18.6.1.
3. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized according to manufacturer's written recommendations unless otherwise indicated.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Border Concepts, Inc.
2) Foresight Products, LLC.
3) Tree Staple, Inc.
4) <**Insert manufacturer’s name**>.

C. Palm Bracing: Battens or blocks, struts, straps, and protective padding.

1. Battens or Blocks and Struts: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-4-inch nominal (38-by-89-mm actual) by lengths indicated.
2. Straps: Adjustable steel or plastic package banding.
3. Padding: Burlap.
4. Proprietary Palm-Bracing Devices: Proprietary systems to secure each new planting by trunk; sized according to manufacturer's written recommendations unless otherwise indicated.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Arborbrace.
2) Better Bilt Products, Inc.
3) Horticultural Consultants, Inc.
4) Villa Root Barrier.
5) <**Insert manufacturer’s name**>.

2.7 LANDSCAPE EDGINGS

A. Wood Edging: Of sizes indicated on Drawings, and wood stakes as follows:

1. Species: [**Western red cedar, all heart**] [**Southern pine with specified wood pressure-preservative treatment**].
2. Stakes: Same species as edging, 1-by-2-inch nominal (19-by-38-mm actual) by 18 inches (450 mm) long, with galvanized nails for anchoring edging.

B. Steel Edging: Standard commercial-steel edging, fabricated in sections of standard lengths, with loops stamped from or welded to face of sections to receive stakes.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Border Concepts, Inc.
b. Collier Metal Specialties, Inc.
c. J. D. Russell Company (The).
d. Sure-loc Edging Corporation.
e. <**Insert manufacturer’s name**>.

2. Edging Size: [**3/16 inch (4.8 mm) thick by 4 inches (100 mm) deep**] [**1/4 inch (6.4 mm) thick by 5 inches (125 mm) deep**] [**1/4 inch (6.4 mm) thick by 4 inches (100 mm) deep**] [**1/8 inch (3.2 mm) thick by 4 inches (100 mm) deep**] [**1/8 inch (3.2 mm) thick by 6 inches (150 mm) deep**] [**0.1 inch (2.5 mm) thick by 4 inches (100 mm) deep**] <**Insert dimensions**>.
3. Stakes: Tapered steel, a minimum of [**12 inches (300 mm)**] [**15 inches (380 mm)**] <**Insert dimension**> long.
4. Accessories: Standard tapered ends, corners, and splicers.
5. Finish: [**Manufacturer's standard paint**] [**Zinc coated**] [**Unfinished**].

a. Paint Color: [**Black**] [**Green**] [**Brown**].

C. Aluminum Edging: Standard-profile extruded-aluminum edging, ASTM B 221 (ASTM B 221M), Alloy 6063-T6, fabricated in standard lengths with interlocking sections with loops stamped from face of sections to receive stakes.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Curv-Rite, Inc.
b. J. D. Russell Company (The).
c. Permaloc Corporation.
d. Sure-loc Edging Corporation.
e. <**Insert manufacturer’s name**>.

2. Edging Size: [**3/16 inch (4.8 mm) thick by 5-1/2 inches (140 mm) deep**] [**3/16 inch (4.8 mm) thick by 4 inches (100 mm) deep**] [**1/8 inch (3.2 mm) thick by 5-1/2 inches (140**

mm) deep] [**1/8 inch (3.2 mm) thick by 4 inches (100 mm) deep**] <**Insert dimensions**>.

3. Stakes: Aluminum, ASTM B 221 (ASTM B 221M), Alloy 6061-T6, approximately 1-1/2 inches (38 mm) wide by 12 inches (300 mm) long.
4. Finish: [**Manufacturer's standard paint**] [**Powder-coat paint**] [**Mill (natural aluminum)**] [**Black anodized**].

    a. Paint Color: [**Black**] [**Green**] [**Brown**].

D. Plastic Edging: Standard black polyethylene or vinyl edging, [**V-lipped bottom**] [**horizontally grooved**] <**Insert configuration**>, extruded in standard lengths, with 9-inch (225-mm) [**steel angle**] [**plastic**] stakes.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Oly-Ola Edgings, Inc.
    b. Permaloc Corporation.
    c. Sure-loc Edging Corporation.
    d. Valley View Industries.
    e. Villa Root Barrier.
    f. <**Insert manufacturer’s name**>.

2. Edging Size: [**0.1 inch (2.5 mm) thick by 5 inches (125 mm) deep**] [**0.07 inch (1.8 mm) thick by 5 inches (125 mm) deep**] <**Insert dimensions**>.
3. Top Profile: Straight, with top 2 inches (50 mm) being 1/4 inch (6.4 mm) thick.
4. Top Profile: Round top, [**1/2 inch (13 mm)**] [**1 inch (25 mm)**] in diameter.
5. Accessories: Manufacturer's standard alignment clips or plugs.

2.8 TREE-WATERING DEVICES

A. Watering Pipe: PVC pipe 4 inches (100 mm) in diameter, site-cut to length as required, and with snug-fitting removable cap.

B. Slow-Release Watering Device: Standard product manufactured for drip irrigation of plants and emptying its water contents over [**an extended time period**] [**two to nine hours**] [**two to three weeks**] <**Insert number or range**>; manufactured from UV-light-stabilized nylon-reinforced polyethylene sheet, PVC, or HDPE plastic.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. BIO-PLEX.
    b. Engineered Watering Solutions; PQ Partners, LLC.
    c. Spectrum Products, Inc.
    d. <**Insert manufacturer’s name**>.

2. Color: [**As selected by Architect from manufacturer's full range**] [**black**] [**dark chocolate**] [**green**] [**or**] [**tan**] <**Insert color**>.

2.9 MISCELLANEOUS PRODUCTS

A. Tree Guards: Manufacturer's standard tree guards.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Neenah Foundry Company; Tree Guards or comparable product by one of the following:

a. Barry Pattern & Foundry Co., Inc.
b. Ironsmith Inc.
c. <**Insert manufacturer’s name**>.

2. Steel Fabricated Tree Guards: As indicated on the drawings; hot rolled steel of 0.5 inch (13 mm) and 0.625 inch (16 mm) square steel stock.

B. Tree Fences: Manufacturer's standard tree fences.

1. Basis if Design: Product: Subject to compliance with requirements, provide Neenah Foundry Company; Tree Fences or comparable product by one of the following Subject to compliance with requirements, provide products by one of the following:

a. Barry Pattern & Foundry Co., Inc.
b. Ironsmith Inc.
c. <**Insert manufacturer’s name**>.

2. Cast Iron Tree Fences: ASTM A 48/A 48M, Class 35 (Class 250) or better, gray-iron castings with stainless steel hardware and stainless steel installation spikes.

C. Pressure-Preservative Treatment: AWPA U1, Use Category UC4a; acceptable to authorities having jurisdiction, and containing no arsenic or chromium.

D. Root Barrier: Black, molded, modular panels [**18 inches (457 mm)**] [**24 inches (610 mm)**] <**Insert dimension**> high (deep), 85 mils (2.2 mm) thick, and with vertical root deflecting ribs protruding 3/4 inch (19 mm) out from panel surface; manufactured with minimum 50 percent recycled polyethylene plastic with UV inhibitors.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. DeepRoot Green Infrastructure, LLC.
b. NDS Inc.
c. Villa Root Barrier.
d. <**Insert manufacturer’s name**>.

E. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

F. Burlap: Non-synthetic, biodegradable.

G. Planter Drainage Gravel: Washed, sound crushed stone or gravel complying with [**ASTM D 448 for Size No. 8**] <**Insert requirements**>.

H. Planter Filter Fabric: [**Woven**] [**Nonwoven**] geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

I. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb (0.45 kg) of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb (0.45 kg) of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable or which is dusty.

B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

A. General: Prepare planting area for soil placement and mix planting soil according to [**Section 329113 "Soil Preparation."**] [**Section 329115 "Soil Preparation (Performance Specification)."**]

B. Placing Planting Soil: [**Place and mix planting soil in-place over exposed subgrade**] [**Place manufactured planting soil over exposed subgrade**] [**Blend planting soil in place**] <**Insert requirement**>.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at application rate [**indicated on Drawings**] [**according to manufacturer's written recommendations**] <**Insert application rate**>.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits.

1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
2. Excavate approximately three times as wide as ball diameter for [**balled and burlapped**] [**balled and potted**] [**container-grown**] [**fabric bag-grown**] stock.
3. Excavate at least 12 inches (300 mm) wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
4. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
5. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
6. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
7. Maintain supervision of excavations during working hours.
8. Keep excavations covered or otherwise protected [**overnight**] [**after working hours**] [**when unattended by Installer's personnel**].

9. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Backfill Soil: Subsoil and topsoil removed from excavations [**may**] [**may not**] be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- (150-mm-) diameter holes, 24 inches (600 mm) apart, into free-draining strata or to a depth of 10 feet (3 m), whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**] [**2 inches (50 mm) above**] <**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil <**Insert drawing designation**>.[**For trees, use excavated soil for backfill.**]
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.

a. Quantity: [**As indicated on Drawings**] [**Two per plant**] [**Three for each caliper inch of plant**] <**Insert requirement**>.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

D. [**Balled and Potted**] [**and**] [**Container-Grown**] Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**] [**2 inches (50 mm) above**] <**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil <**Insert drawing designation**>.[**For trees, use excavated soil for backfill.**]
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.

    a. Quantity: [**As indicated on Drawings**] [**Two per plant**] [**Three for each caliper inch of plant**] <**Insert requirement**>.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

E. Fabric Bag-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**] [**2 inches (50 mm) above**] <**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil <**Insert drawing designation**>.[**For trees, use excavated soil for backfill.**]
2. Carefully remove root ball from fabric bag without damaging root ball or plant. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.

    a. Quantity: [**As indicated on Drawings**] [**Two per plant**] [**Three for each caliper inch of plant**] <**Insert requirement**>.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

F. Bare-Root Stock: Set and support each plant in center of planting pit or trench with root flare [**1 inch (25 mm) above**] [**2 inches (50 mm) above**] <**Insert requirement**> adjacent finish grade.

1. Backfill: Planting soil <**Insert drawing designation**>.[**For trees, use excavated soil for backfill.**]
2. Spread roots without tangling or turning toward surface. Plumb before backfilling, and maintain plumb while working.

3. Carefully work backfill in layers around roots by hand. Bring roots into close contact with the soil.
4. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
5. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside soil-covered roots about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole or touching the roots.

    a. Quantity: [**As indicated on Drawings**] [**Two per plant**] [**Three for each caliper inch of plant**] <**Insert requirement**>.

6. Continue backfilling process. Water again after placing and tamping final layer of soil.

G. Watering Pipe: During backfilling, install watering pipe 4 feet (1.25 m) deep into the planting pit outside the root ball [**as indicated on Drawings**] [**and**] [**with top of pipe 1 inch (25 mm) above the mulched surface**].

H. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.

C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

3.7 TREE STABILIZATION

A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:

1. Upright Staking and Tying: Stake trees of 2- through 5-inch (50- through 125-mm) caliper. Stake trees of less than 2-inch (50-mm) caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least 18 inches (450 mm) below bottom of backfilled excavation and to extend [**to the dimension indicated on Drawings**] [**at least 72 inches (1830 mm)**] [**one-third of trunk height**] <**Insert dimension or requirement**> above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.

2. Upright Staking and Tying: Stake trees with two stakes for trees up to 12 feet (3.6 m) high and 2-1/2 inches (63 mm) or less in caliper; three stakes for trees less than 14 feet (4.2 m) high and up to 4 inches (100 mm) in caliper. Space stakes equally around trees.
3. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
4. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

B. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings. Stake and guy trees more than 14 feet (4.2 m) in height and more than 3 inches (75 mm) in caliper unless otherwise indicated.

1. Site-Fabricated, Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.

    a. Securely attach guys to stakes 30 inches (760 mm) long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide [**turnbuckle**] [**compression spring**] for each guy wire and tighten securely.
    b. For trees more than [**6 inches (150 mm) in caliper**] <**Insert size**>, anchor guys to wood deadmen buried at least 36 inches (900 mm) below grade. Provide [**turnbuckle**] [**compression spring**] for each guy wire and tighten securely.
    c. Support trees with bands of flexible ties at contact points with tree trunk and reaching to [**turnbuckle**] [**compression spring**]. Allow enough slack to avoid rigid restraint of tree.
    d. Support trees with [**guy cable**] [**or**] [**multiple strands of tie wire**], connected to the brass grommets of tree-tie webbing at contact points with tree trunk and reaching to [**turnbuckle**] [**compression spring**]. Allow enough slack to avoid rigid restraint of tree.
    e. Attach flags to each guy wire, 30 inches (760 mm) above finish grade.
    f. Paint [**turnbuckles**] [**compression springs**] with luminescent white paint.

2. Proprietary Staking and Guying Device: Install staking and guying system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

C. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.

1. Wood Hold-Down Method: Place vertical stakes against side of root ball and drive them into subsoil; place horizontal wood hold-down stake across top of root ball and screw at each end to one of the vertical stakes.

    a. Install stakes of length required to penetrate at least [**to the dimension indicated on Drawings**] [**18 inches (450 mm)**] <**Insert dimension**> below bottom of backfilled excavation. Saw stakes off at horizontal stake.
    b. Install screws through horizontal hold-down and penetrating at least 1 inch (25 mm) into stakes. Predrill holes if necessary to prevent splitting wood.
    c. Install second set of stakes on other side of root trunk for larger trees.

2. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

D. Palm Bracing: Install bracing system at three or more places equally spaced around perimeter of trunk to secure each palm until established unless otherwise indicated.

1. Site-Fabricated Palm-Bracing Method:

a. Place battens over padding and secure battens in place around trunk perimeter with at least two straps, tightened to prevent displacement. Ensure that straps do not contact trunk.
b. Place diagonal braces and cut to length. Secure upper ends of diagonal braces with galvanized nails into battens or into nail-attached blocks on battens. Do not drive nails, screws, or other securing devices into palm trunk; do not penetrate palm trunk in any fashion. Secure lower ends of diagonal braces with stakes driven into ground to prevent outward slippage of braces.

2. Proprietary Palm-Bracing Device: Install palm-bracing system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

3.8 ROOT-BARRIER INSTALLATION

A. Install root barrier where trees are planted within [**60 inches (1500 mm)**] [**48 inches (1200 mm)**] <**Insert dimension**> of paving or other hardscape elements, such as walls, curbs, and walkways, unless otherwise indicated on Drawings.

B. Align root barrier [**vertically**] [**with bottom edge angled at 20 degrees away from the paving or other hardscape element**], and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.

C. Install root barrier continuously for a distance of [**60 inches (1500 mm)**] <**Insert dimension**> in each direction from the tree trunk, for a total distance of [**10 feet (3 m)**] <**Insert dimension**> per tree. If trees are spaced closer, use a single continuous piece of root barrier.

1. Position top of root barrier [**flush with finish grade**] [**1/2 inch (13 mm) above finish grade**] [**according to manufacturer's written recommendations**].
2. Overlap root barrier a minimum of 12 inches (300 mm) at joints.
3. Do not distort or bend root barrier during construction activities.
4. Do not install root barrier surrounding the root ball of tree.

3.9 PLACING SOIL IN PLANTERS

A. Place a layer of drainage gravel at least 4 inches (100 mm) thick in bottom of planter. Cover bottom with filter fabric and wrap filter fabric [**4 inches (100 mm)**] [**6 inches (150 mm)**]

<**Insert dimension**> up on all sides. Duct tape along the entire top edge of the filter fabric, to secure the filter fabric against the sides during the soil-filling process.

B. Fill planter with planting soil <**Insert drawing designation**>. Place soil in lightly compacted layers to an elevation of 1-1/2 inches (38 mm) below top of planter, allowing natural settlement.

3.10 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines [**9 inches (225 mm) apart**] [**12 inches (300 mm) apart**] [**18 inches (450 mm) apart**] [**24 inches (600 mm) apart**] [**as indicated on Drawings**] in even rows with triangular spacing.

B. Use planting soil <**Insert drawing designation**> for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.11 PLANTING AREA MULCHING

A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of [**6 inches (150 mm)**] [**12 inches (300mm)**] and secure seams with galvanized pins.

B. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees[**and Treelike Shrubs**] in Turf Areas: Apply [**organic**] [**mineral**] mulch ring of [**2-inch (50-mm)**] [**3-inch (75-mm)**] <**Insert dimension**> average thickness, with [**12-inch (300-mm)**] [**24-inch (600-mm)**] [**36-inch (900-mm)**] <**Insert dimension**> radius around trunks or stems. Do not place mulch within [**3 inches (75 mm)**] [**6 inches (150 mm)**] <**Insert distance**> of trunks or stems.
2. Organic Mulch in Planting Areas: Apply [**2-inch (50-mm)**] [**3-inch (75-mm)**] <**Insert dimension**> average thickness of organic mulch [**extending 12 inches (300 mm) beyond edge of individual planting pit or trench**] [**and**] [**over whole surface of planting area**], and finish level with adjacent finish grades. Do not place mulch within [**3 inches (75 mm)**] [**6 inches (150 mm)**] <**Insert distance**> of trunks or stems.
3. Mineral Mulch in Planting Areas: Apply [**2-inch (50-mm)**] [**3-inch (75-mm)**] <**Insert dimension**> average thickness of mineral mulch [**extending 12 inches (300 mm)**

beyond edge of individual planting pit or trench] [**and**] [**over whole surface of planting area**], and finish level with adjacent finish grades. Do not place mulch within [**3 inches (75 mm)**] [**6 inches (150 mm)**] <**Insert distance**> of trunks or stems.

3.12 EDGING INSTALLATION

A. Wood Edging: Install edging where indicated.[**Mitre cut joints and connections at a 45-degree angle.**] Fasten each cut joint or connection with two galvanized nails. Anchor with wood stakes spaced up to 36 inches (900 mm) apart, driven at least 1 inch (25 mm) below top elevation of edging. Use two galvanized nails per stake to fasten edging, of length as needed to penetrate both edging and stake and provide 1/2-inch (13-mm) clinch at point. Predrill stakes if needed to avoid splitting. Replace stakes that crack or split during installation process.

B. Steel Edging: Install steel edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately 30 inches (760 mm) apart, driven below top elevation of edging.

C. Aluminum Edging: Install aluminum edging where indicated according to manufacturer's written instructions. Anchor with aluminum stakes spaced approximately [**36 inches (900 mm)**] [**48 inches (1200 mm)**] apart, driven below top elevation of edging.

D. Plastic Edging: Install plastic edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately [**36 inches (900 mm)**] [**48 inches (1200 mm)**] apart, driven through upper base grooves or V-lip of edging.

E. Shovel-Cut Edging: Separate mulched areas from turf areas[**, curbs, and paving**] with a 45-degree, 4- to 6-inch- (100- to 150-mm-) deep, shovel-cut edge[**as indicated on Drawings**].

F. Mow-Strip Installation:

1. Excavate for mow strip[**as indicated on Drawings**].
2. Compact subgrade uniformly beneath mow strip.
3. Apply nonselective, pre-emergent herbicide that inhibits growth of grass and weeds.
4. Install [**wood**] [**steel**] [**aluminum**] [**plastic**] edging, delineating the edge of mow strip.
5. Install weed-control barrier before mulching, covering area of mow strip, and overlapping and pinning edges of barrier at least 6 inches (150 mm) and according to manufacturer's written instructions.
6. Place indicated thickness of [**organic**] [**mineral**] mulch, fully covering weed barrier.
7. Rake mulch to a uniform surface level with adjacent finish grades.

3.13 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.

B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.14 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents according to authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas according to manufacturer's written recommendations. Do not apply to seeded areas.

C. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.15 REPAIR AND REPLACEMENT

A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Remove and replace trees that are more than [**25**] <**Insert number**> percent dead or in an unhealthy condition[**before the end of the corrections period**] or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of [**6 inches (150 mm)**] [**4 inches (100 mm)**] <**Insert dimension**> or smaller in caliper size.
2. Provide [**one**] [**two**] <**Insert number**> new tree(s) of [**6-inch (150-mm)**] [**4-inch (100-mm)**] <**Insert dimension**> caliper size for each tree being replaced that measures more than [**6 inches (150 mm)**] [**4 inches (100 mm)**] in caliper size.
3. Species of Replacement Trees: [**Same species being replaced**] [**Species selected by Architect**] <**Insert species**>.

3.16 CLEANING AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

D. After installation and before [**Substantial Completion**] <**Insert time**>, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

3.17 MAINTENANCE SERVICE

A. Maintenance Service for Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:

1. Maintenance Period: [**12**] [**Six**] [**Three**] months from date of [**planting completion**] [**Substantial Completion**] <**Insert starting time**>.

B. Maintenance Service for Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:

1. Maintenance Period: [**Six**] [**Three**] months from date of [**planting completion**] [**Substantial Completion**] <**Insert starting time**>.

DETAIL NUMBERING LEGEND

EACH SHEET IS DIVIDED INTO AN ALPHA-NUMERIC GRID COORDINATE SYSTEM WHICH IS USED TO ORGANIZE THE DRAWING DETAILS

DRAWING TITLES ARE NUMBERED ACCORDING TO ITS LOCATION ON THE GRID, THE LOWER LEFT HAND CORNER IS USED TO IDENTIFY THE GRID SPACE AND CORRESPONDING DETAIL (SEE DIAGRAM)

MASTER KEYNOTE LIST

NO.	
01 21 00.E217	TYP. ALLOWANCE FOR FIXED MULTIPLE SEATING WORK.
01 23 00.0000	LIMITS OF ALTERNATE WORK, SEE SPECIFICATIONS FOR MORE INFORMATION.
01 23 04.B123	TYP. ALTERNATE 4 CANOPY CONTRUCTION WORK.
01 23 05.G237	TYP. ALTERNATE 5 EXTERIOR CONCESSIONS PLAZA WORK.
03 05 31.0031	TYP. CAST SLEEVE FOR PENETRENTS.
03 05 31.0070	TYP. BUTYL TAPE AROUND SLEEVE.
03 05 31.0080	TYP. SAW CUT CONTROL JOINT.
03 21 00.0000	TYP. CONCRETE REINFORCING STEEL BAR(S), SEE STRUCTURAL.
03 21 00.500C	TYP. NO. 5 CONCRETE REINFORCEMENT BARS @ 12" OC, SEE STRUCTURAL.
03 21 00.600O	TYP. NO. 6 CONCRETE REINFORCEMENT BARS @ 24" OC, SEE STRUCTURAL.
03 21 00.5310	TYP. (3) NO. 5 CONCRETE REINFORCEMENT BARS CONT., SEE STRUCTURAL.
03 31 00.A000	TYP. CONCRETE SLABS-ON-GRADE, SEE STRUCTURAL
03 31 00.A130	
03 31 00.B000	TYP. STRUCTURAL CONCRETE FLOOR SLAB, SEE STRUCTURAL.
03 31 00.B104	TYP. 4" STRUCTURAL SLAB-ON-GRADE, SEE STRUCTURAL.
03 31 00.B105	TYP. 5" CONCRETE FLOOR SLAB, SEE STRUCTURAL
03 31 00.B400	TYP. ELEVATED STRUCTURAL CONCRETE MEZZANINE FLOOR SLAB, SEE STRUCTURAL
03 31 00.C104	TYP. 4" STRUCTURAL CAST-IN-PLACE CONCRETE WALL, SEE STRUCTURAL
03 31 00.D000	TYP. CONCRETE CAST-IN-PLACE BEAM, SEE STRUCTURAL
03 31 00.D130	TYP. 12" X 16" CAST-IN-PLACE BEAM, SEE STRUCTURAL
03 31 00.F100	TYP. CONTINOUS WALL FOUNDATION, SEE STRUCTURAL.
03 45 13.DZ60	TYP. 8" X 24" FACED ARCHITECTURAL PRECAST CONCRETE, SAND FINISH.
03 60 00.A200	TYPICAL FILL SOLID W/ GROUT
04 01 20.1926	TYP. MASONRY REINFORCING INSPECTION OPENING @ EACH FILLED CELL, SEE STRUCTURAL
04 05 16.363K	TYP. FILL CELL MASONRY W/ 3000 PSI GROUT.
04 05 19.2600	TYP. MASONRY REINFORCING BARS, SEE STRUCTURAL
04 05 19.HC16	TYP. MASONRY HORIZONTAL GALVANIZED WIRE REINFORCING @ 16" O.C. MAX
04 05 22.0023	TYP. MASONRY WALL TIES @ 16" OC, VERT. & HORZ.
04 05 22.0048	TYP. CMU SASH EXPANSION MATERIAL, SEE SPECIFICATIONS.
04 05 23.1953	TYP. 1/4" 'V' GROVE CUT CONT. AROUND CAP STONE.
04 07 22.0000	TYP. FILL ALL NON-GROUTED CELLS WITH INSULATION, SEE SPECIFICATIONS.
04 22 00.000C	TYP. 12" NOMINAL CONCRETE MASONRY UNIT
04 22 00.00KC	TYP. 12" NOMINAL GROUT FILLED CONCRETE MASONRY KNOCK-OUT UNIT.
04 22 00.00L8	TYP. 8" NOM. LINTEL CONCRETE MASONRY UNIT.
04 22 00.00LC	TYP. 12" NOM. LINTEL CONCRETE MASONRY UNIT.
04 22 00.0008	TYP. 8" NOMINAL CONCRETE MASONRY UNIT.
04 22 23.530C	TYP. BURNISHED CORNER CONCRETE MASONRY UNIT
04 22 23.530D	TYP. BURNISHED 2 FACE CONCRETE MASONRY UNIT
04 22 23.5304	TYP. 4" BURNISHED CONCRETE MASONRY UNIT
04 22 23.5308	TYP. 8" BURNISHED CONCRETE MASONRY UNIT
04 22 23.5312	TYP. 12" BURNISHED CONCRETE MASONRY UNIT
04 72 00.0004	TYP. CAST STONE CAP TO MATCH EXISTING, 4" TALL.
05 05 21.1923	TYP. JOIST BEARING ANGLE, REF. STRUC.
05 05 23.2000	TYP. STAINLESS STEEL FASTENER(S).
05 05 31.2323	TYP. ROOF DECK CLOSURE, REF. STRUC.
05 05 51.3300	TYP. STEEL ANGLE SUPPORT WELD CONT. @ STRINGER AND FLOOR ANCHOR
05 05 51.3301	2-1/2" X 3/8" VERTICAL MTL. STRINGER
05 05 51.3302	TYP. 1" DIA MTL. RUNGS @ 12" O.C. CONT. WELD TO EACH STRINGER
05 05 51.3303	TYP. 12"MIN. X 2" WIDE BENT STEEL 3/8" PLATE SUPPORT CONT. WELD TO STRINGER SO THAT MIN. CLEARANCE FROM CENTERLINE OF RUNG AND NEAREST OBSTRUCTION IS 7" U.O.N.
05 12 00.H000	TYP. HSS SHAPE STRUCTURAL STEEL FRAMING, SEE STRUCTURAL.
05 12 00.H668	TYP. HSS 6X6X1/2 STRUCTURAL STEEL FRAMING, SEE STRUCTURAL.
05 12 00.L000	TYP. STEEL ANGLE 'L' SHAPE MEMBER, SEE STRUCTURAL.
05 12 00.W000	TYP. STEEL WIDE FLANGE 'W' SHAPE MEMBER, SEE STRUCTURAL.
05 12 11.P02	TYPICAL 2" DIA. GALV. STEEL PIPE
05 21 19.00K0	TYP. K SERIES OPEN WEB STEEL JOIST, SEE STRUCTURAL.
05 31 23.W639	TYP. 1-1/2" WR 20 GA. G90 STEEL ROOF DECK, SEE STRUCTURAL.
05 31 53.V049	TYP. 4" DOVETAIL G-90 GALV. STEEL ARCHITECTURALLY EXPOSED DECK. BASIS OF DESIGN: EPIC TORIS 4 - CANOPY.
05 42 00.A6	10" "C" JOIST
05 50 00	METAL FABRICATIONS
05 51 33.A000	STEEL ROOF ACCESS LADDER
05 52 13.2000	TYP. STAINLESS STEEL PIPE AND TUBE RAILING.
05 52 13.2012	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, INFILL HORIZONTAL 1-1/4" NOM. HSS 1.660 X 0.140 PIPE.
05 52 13.2013	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, HAND RAIL.
05 52 13.2017	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, GUARD RAIL.
05 52 13.2031	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, POST 1-1/2" NOM. HSS 1.900 X 0.188 PIPE @ 3'-0" OC MAX..
05 52 13.2053	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, HANDRAIL RAIL SUPPORTS AS REQ'D.
05 52 13.2056	TYP. STAINLESS STEEL PIPE AND TUBE RAILING, EMBED POST MIN. OF 5".
06 11 00.G1	
06 11 14.F000	TYP. NOMINAL FIRE RETARDINT WOOD BLOCKING, CONT.
06 11 14.F260	TYP. 2X6 NOMINAL FIRE RETARDINT WOOD BLOCKING, CONT.
06 11 24.F200	TYP. FIRE RETARDINT WOOD BLOCKING NAILER, CONT. CUT FROM (2) 2X NOMINAL.
06 16 33.F800	TYP. 1/2" FR PLYWOOD.
06 16 33.FC00	TYP. 3/4" FR PLYWOOD.
06 41 16.1450	TYP. PLASTIC LAMINATE CLAD ACCESS PANEL CASEWORK.
06 41 93.1100	TYP. FULL LENGTH PIANO HINGE.
06 41 93.1320	TYP. HEAVY DUTY FULL EXTENSION STAINLESS STEEL SLIDE CASEWORK HARDWARE.
06 41 93.2120	TYP. STAINLESS STEEL CASEWORK LOCK HADRWARE.
07 05 22.1623	TYP. ROOF BOARD INSULATION FASTENERS, SEE MNFR. INSTRUCTIONS.
07 05 26.1623	TYP. BELOW GRADE VAPOR BARRIER TERMINATION BAR, FASTEN PER MNFR. INSTRUCTION.
07 05 26.1627	TYP. MASTIC SEALER FOR BELOW GRADE VAPOR BARRIER. USE MNFR. APPROVED MASTIC AND INSTALL AS INSTRUCTED.
07 05 26.1651	TYP. ADHESIVE JOINT TAPE FOR BELOW GRADE VAPOR BARRIER, USE MNFR. APPROVED TAPE AND INSTALL AS INSTRUCTED.
07 05 27.2951	TYP. LAP 40 MILL THICK FLUID-APPLIED MEMBRANE VAPOR RETARDING AIR BARRIER JOINT ADHESIVE TAPE OVER STUCCO ACCESSORY AND BARRIER.
07 05 54.1921	TYP. PVC ROOFING MEMBRANE ADHESIVE COAT.
07 05 54.1922	TYP. PVC ROOFING MEMBRANE CAP/FLASHING PLY WELD.
07 05 54.1925	TYP. PVC ROOF MEMBRANE SYSTEM TERMINATION HARDWARE, FASTEN AND SEAL PER NOA/FLORIDA PRODUCT APPROVAL OR 8" OC MIN. WHICHEVER IS MORE RESTRICTIVE.
07 05 54.1927	TYP. PVC ROOF MEMBRANE SYSTEM FASTENERS AND STRESS PLATE HARDWARE @ 12" OC AROUND SUMP.
07 05 54.1928	TYP. PVC ROOF MEMBRANE SYSTEM FASTENERS AND STRESS PLATE HARDWARE MIN. (4).
07 05 54.1929	TYP. PVC ROOF MEMBRANE SYSTEM SEALANT.
07 05 54.1951	TYP. PVC ROOF MEMBRANE SYSTEM PREFORMED BUTYL TAPE SEALANT.
07 05 71.1321	TYP. MANUFACTURED COPING CLEAT, INSTALL PER MNFR. INSTRUCTIONS.
07 05 71.1323	TYP. 1/2" DIA. SS EXPANSION BOLTS W/4" EMBEDMENT MIN. @ 16" CENTERS STAGGERED. PROVIDED (2) SIDE BY SIDE BOLTS ON EACH END OF BLOCKING SPLICES. HEADS SHALL BE COUNTERSUNK.
07 21 13.13I6	TYP. 3" THICK, POLYISOCYANURATE RIGID FOAM BOARD INSULATION.
07 21 16.G006	TYP. 3" ACOUSTICAL BATT INSULATION.
07 21 23.0422	TYP. FILL ALL UN-GROUTED CELLS WITH INJECTED FOAM FILL INSULATION.
07 22 16.1618	TYP. 4" MIN. POLYISOCYANURATE RIGID FOAM ROOF BOARD INSULATION.
07 22 16.23PA	TYP. 5/8" PRIMED DENS DECK ROOF INSULATION COVER BOARD.
07 22 16.230A	TYP. 5/8" DENS DECK ROOF INSULATION COVER BOARD.
07 22 16.5301	TYP. PROVIDE TAPERED RIGID INSULATION BYOND MIN. THICKNESS REQUIREMENT TO ENSURE POSITIVE DRAINAGE TO ROOF DRAINS.
07 26 16.0315	TYP. 15 MIL BELOW GRADE VAPOR BARRIER.
07 27 00.A01	TYPICAL PERMA-BARRIER
07 27 26.0040	TYP. 40 MILL THICK FLUID-APPLIED MEMBRANE VAPOR RETARDING AIR BARRIER.
07 27 26.7000	FLUID APPLIED MEMBRANE VAPOR RETARDING AIR PARRIER COMPATABLE SEALANT.
07 27 26.9040	TYP. 40 MILL THICK FLUID-APPLIED MEMBRANE VAPOR RETARDING AIR BARRIER JOINT REINFORCEMENT SELF ADHEARING SHEET.
07 42 13.1900	
07 54 19.00C0	TYP. ROOF CRICKET.
07 54 19.0060	TYP. PVC MEMBRAINE ROOFING PRE-FORMED/MOLDED FLASHING.
07 54 19.0096	TYP. 60 MIL PVC MEMBRAINE ROOFING FLASHING SHEET.
07 54 19.1106	TYP. COLD ADHESIVE APPLIED, 60 MIL PVC MEMBRAINE ROOFING.
07 61 13	
07 62 00.C000	TYP. STAINLESS STEEL COUNTER-FLASHING.
07 62 00.H000	TYP. 8" X 6" BEVELED ALUMINUM GUTTER.
07 71 13.5000	TYP. ALUMNINUM MANUFACTURED COPING SYSTEM, INSTALLED PER MNFR. INSTRUCTIONS.
07 72 33.0000	TYP. SINGLE-LEAF ROOF ACCESS HATCH W/ CURB AND SAFETY RAIL.
07 91 23.1010	TYP. BACKER ROD WITH JOINT SEALANT, CONT.
07 91 23.1014	TYP. 1/4" BACKER ROD WITH JOINT SEALANT, CONT.
07 91 23.1018	TYP. 1/2" BACKER ROD WITH JOINT SEALANT, CONT.
07 91 26.F018	TYP. 1/2" MINIERAL FIBER JOINT FILLER CONT.
07 92 00.00A0	TYP. JOINT SEALANT, FULL PERIMETER.
07 92 00.0010	TYP. JOINT SEALANT, CONT.
07 92 00.0014	TYP. 1/4" JOINT SEALANT, CONT.
07 92 00.0018	TYP. 1/2" JOINT SEALANT, CONT.
08 05 00.0083	TYP. PT/FR SHIM AS REQUIRED.
08 05 12.0390	TYP. FILL FRAME SOLID WITH GROUT.
08 05 12.5150	TYP. (5) MASONRY TIE ANCHORS PER JAMB.
08 05 80.0027	TYP. GLAZING BUTYL TAPE, PER MNFR.
08 05 80.0048	TYP. GLAZING RUBBERIZED GASKETING, PER MNFR.
08 31 13.C	
08 42 29.130E	TYP. ALUMINUM FRAMED AUTOMATIC ENTRANCE PANIC EGRESS HARDWARE.
08 42 29.1300	TYP. ALUMINUM FRAMED AUTOMATIC ENTRANCE DOOR.
08 42 29.1301	TYP. ALUMINUM FRAMED AUTOMATIC ENTRANCE JAMB.
08 42 29.1303	TYP. ALUMINUM FRAMED AUTOMATIC ENTRANCE HEADER.
08 42 29.1305	TYP. ALUMINUM FRAMED AUTOMATIC ENTRANCE SILL.
08 44 13.0000	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY.
08 44 13.0001	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY - JAMB EXTRUSION.
08 44 13.0005	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY - SILL EXTRUSION WITH MNFR. FLASHING CLIP.
08 44 13.0007	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY - VERT. MULLION EXTRUSION WITH INTERNAL STEEL SUPPORT UN-INTURRUPTED SILL TO HEADER.
08 44 13.0009	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY - HORIZONTAL MULLION EXTRUSION WITH CLIPS @VERT.
08 71 00.1799	TYP. DOOR DRIP HARDWARE AS SCHEDULED.
08 71 00.A3	4" SADDLE THRESHOLD
08 81 00	GLASS GLAZING
08 81 19.0003	TYP. 3/8" CLEAR TEMPERED GLAZING; SEE GLAZING TYPES FOR APPLIED FILM.
08 81 19.0004	TYP. 1/4" CLEAR TEMPERED GLAZING.
08 83 13.0004	TYP. 1/4" TEMPERED MIRROR GLAZING, WALL MOUNTED.
08 83 13.W10	TYP. FULL HEIGHT WALL MOUNTED MIRROR
08 88 19.1015	TYP. 1-5/16" HURRICANE-RESISTANT INSULATED GLAZING UNIT.
09 05 24.2329	TYP. PAPER BACKED SELF FURRING GALV. LATH.
09 05 29.00A5	TYP. ALUMINUM GYPSUM BOARD REVEAL BASE ACCESSORY.
09 05 29.00A7	TYP. ALUMINUM GYPSUM BOARD 3 PIECE COMPRESSION EXPANSION REVEAL ACCESSORY.
09 05 29.00AF	TYP. ALUMINUM GYPSUM BOARD 'F' REVEAL ACCESSORY.
09 05 30.150T	TYP. ALUM. TRIM EXTRUSION FOR PROCELIAN STONE TILE TRANSITION.
09 05 30.150X	TYP. ALUM. EXPANSION TRIM EXTRUSION FOR PROCELIAN STONE TILE.
09 05 30.1513	TYP. PROCELIAN STONE TILE THIN-SET MATERIAL, SEE SPECIFICATIONS.
09 05 65.1961	TYP. PREP SLAB TO RECIVE RESILIENT FLOOR TILE AND TRIM.
09 06 60.0000	TYP. FINISH FLOOR SEE ROOM FINISH SCHEDULE.
09 22 16.B000	TYPICAL 2 1/2" GALV. METAL STUD FRAMING @ 24" OC UNO.
09 22 16.D000	TYPICAL 3 5/8" GALV. METAL STUD FRAMING @ 24" OC UNO.
09 22 16.D024	
09 22 16.E000	TYP. 4" GALV. METAL STUD FRAMING @ 24" OC UNO.
09 22 16.G000	TYPICAL 6" GALV. METAL STUD FRAMING @16" OC UNO.
09 22 16.G024	
09 22 16.G040	TYP. 16 GA. 6" GALV. METAL STUD BLOCKING.
09 22 16.T000	TYPICAL GALV. METAL TRACK RUNNER CONT.
09 22 26.0000	TYP. GYPSUM ASSEMBLY SUSPENSION SYSTEM, INSTALL PER MNFR. INSTRUCTIONS.
09 22 36.E3	5/8" "L" CASING BEAD
09 24 23.350E	TYP. 7/8", (3) LAYER SMOOTH CEMENT STUCCO PLASTERING.
09 24 23.L378	TYP. SMOOTH 7/8" STUCCO, 3 COAT SYSTEM
09 24 99.000J	TYP. CEMENT PLASTERING 'J' TRIM ACESSORY.
09 24 99.000L	TYP. CEMENT PLASTERING 'L' TRIM ACESSORY.
09 24 99.000M	TYP. CEMENT PLASTERING 'M' REVEAL SCREED ACESSORY.
09 24 99.000W	TYP. CEMENT PLASTERING WEEP SCREED ACESSORY.
09 24 99.000X	TYP. CEMENT PLASTERING EXPANSIN CHANNEL W/ 1/2" REVEAL SCREED ACESSORY.
09 29 00.X00A	TYPICAL 5/8" TYPE 'X' GYPSUM WALL BOARD
09 29 99.560C	TYP. GALV. GWB ASSEMBLY CORNER BEAD TRIM ACCESSORY.
09 29 99.560J	TYP. GALV. GWB ASSEMBLY 'J' CASING BEAD TRIM ACCESSORY.
09 30 15.3324	TYP. 12" X 24" RECTIFIED, PROCELIAN STONE WALL TILING.
09 30 15.5324	TYP. 12" X 24" RECTIFIED, PROCELIAN STONE FLOOR TILING.
09 51 23.0000	TYP. ACOUSITCAL TILE CEILING SYSTEM, REF. FINISH SCHEDULES.
09 51 23.0667	TYP. STANDARD, 24" X 24" TEGULAR ACOUSITCAL TILE CEILING SYSTEM.
09 53 53.A904	TYPICAL 9 GAUGE GALV. METAL HANGER WIRE @ 48" O.C. EACH WAY
09 53 53.H000	TYPICAL SUPPORT CLIP FOR MECHANICAL DIFFUSERS/GRILLS.
09 65 13.330T	TYP. VINYL - RESILIENT TRANSITION ACCESSORY.
09 65 13.1300	TYP. 4" VINYL COVE BASE; SEE SCHEDULE/
09 65 19.0000	TYP. LUXARY VINYL COMPOSITION TILE, SEE SCHEDULE.
09 65 19.T000	TYP. VINYL COMPOSITION TILE; SEE SCHEDULE.
09 65 99.550T	TYP. ALUM. TRIM EXTRUSION FOR RESILIENT TILE TRANSITION.
09 65 99.550X	TYP. ALUM. EXPANSION TRIM EXTRUSION FOR RESILIENT TILE TRANSITION.
09 96 56.2115	TYP. TEXTURED EPOXY FLOOR HIGH PERFORMANCE COATING.
10 05 73.1621	TYP. CANOPY SUPPORT TENSION ROD.
10 05 73.1623	TYP. THREADED ROD THROUGH BOLT W/ COMPRESSIVE SLEAVE & BACKPLATE FOR LOWER CONNECTION OF CANOPY.
10 05 73.1625	TYP. THREADED ROD THROUGH BOLT W/ COMPRESSIVE SLEAVE & BACKPLATE FOR UPPER CONNECTION OF CANOPY SYSTEM EYE BOLT. ATTACHMENT POINT MUST REMAIN IN VERTICLE POSITION.
10 21 13.1900	TYP. PLASTIC TOILET COMPARTMENT.
10 22 00.0000	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY.
10 22 00.000C	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - 45 DEGREE CORNER EXTRUSION.
10 22 00.000L	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - 90 DEGREE CORNER EXTRUSION.
10 22 00.0001	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - END CAP EXTRUSION.
10 22 00.0002	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - "T" 3 WAY CONNECTION EXTRUSION.
10 22 00.0003	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - HEADER EXTRUSION.
10 22 00.0004	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - HEAD - RECESSED CEILING CHANNEL
10 22 00.0005	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - SILL EXTRUSION.
10 22 00.0006	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - SILL - ADJUSTABLE RECESS BASE.
10 22 00.0007	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - VERT. IN-LINE MULLION EXTRUSION UN-INTERRUPTED SILL TO HEADER.
10 22 00.0008	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - HEAD - RECESSED CEILING GASKET.
10 22 00.0009	TYP. GLAZED ALUMINUM DEMOUNTABLE WALL ASSEMBLY - HORIZONTAL IN-LINE MULLION EXTRUSION.
10 26 13.5250	TYP. 2" BRUSHED ALUMINUM WALL CORNER GUARD.
10 28 13.C000	TYPICAL GRAB BAR
10 43 13.0007	TYP. WALL CABINENT MOUNTED AUTOMATIC ELECTRONIC DEFIBRILLATOR (AED).
10 44 16.1005	TYP. RECESSED WALL CABINENT MOUNTED MULTI-PURPOSE (ABC CLASS) FIRE EXTINGUISHER.
10 73 16.5000	TYP. PREMANUFACTURED ALUMINUM CANOPY SYSTEM. PROVIDE SIGNED & SEALED CALCULATIONS/SHOPDRAWINGS COMPLYING W/ STRUCTURAL DESIGN LOADS.
11 14 03.0093	RETRACTABLE BELT STANCHION, NIC.
12 36 61.1600	TYP. SOLID SURFACING COUNTERTOPS.
12 48 16.220A	TYP. 5/8" SS 304 WALKOFF ENTRY MAT.
12 61 00.0093	FIXED RAIL MULTIPLE SEATING FURNITURE SYSTEM - POWERED, NIC.
13 31 23.0000	TYP. TENSIONED FABRIC CANOPY SYSTEM, SEE MNFR. INSTRUCTIONS.
22 07 19.1300	TYP. WRAP SINK P-TRAP AND EXPOSED SANITARY DRAIN LINES WITH PIPE INSULATION.
22 14 16.0006	TYP. 6" STORM WATER LEADER, SEE PLUMBING. SUPPORT AS REQUIRED TO 12" CMU ONLY.
22 14 26.1300	TYP. FACILITY STORM ROOF DRAIN W/ INTRIGAL OVERFLOW, SEE PLUMBING.
22 14 26.1900	TYP. FACILITY STORM TRENCH DRAIN, SEE PLUMBING.
22 42 13.1330	TYP. FLUSH VALVE WALL MOUNTED WATER CLOSET, SEE PLUMBING.
22 42 13.1630	TYP. FLUSH VALVE URINAL, SEE PLUMBING.
22 42 16.133A	TYP. ADA, WALL MOUNTED LAVATORY, SEE PLUMBING.
23 05 13.C000	TYPICAL PRE-ENGINEERED MECHANICAL CURB FOR HVAC & FAN EQUIPMENT, SEE MECHANICAL
23 07 16.8113	TYP. RIGID INSULATION INSERTS FOR PRE-MANUFACTURED ROOF TOP MECHAINICAL EQUIPMENT CURB.
23 08 81.1357	TYP. SERVICE CLEARANCES OF PACKAGED ROOFTOP UNIT MAINTAIN UNOBSTRUCTED ACCESS, SEE MECH.
23 22 13.0050	TYP. CONDENSATE PIPING, SEE MECH.
23 34 16.3070	TYP. ROOF TOP CENTRIFUGAL HVAC/EXHAUST FAN ON CURB, SEE MECHANICAL.
23 34 16.3080	TYP. COORDINATE FINAL PLACEMENT OF ROOF TOP CENTRIFUGAL HVAC/EXHAUST FAN AND CURB WITH TENANT REQUIREMENTS AND BAR JOIST BELOW ROOF DECK, SEE MECH.
23 37 13.1122	TYP. 1' X 1' HVAC SUPPLY DIFFUSER, SEE MECH.
23 37 13.1322	TYP. 1' X 1' HVAC EXHAUST REGISTER, SEE MECH.
23 37 13.1344	TYP. 2'X2' HVAC EXHAUST REGISTER, SEE MECH.
23 81 13.R000	TYP. PACKAGED ROOFTOP UNIT, SEE MECH.
26 05 33.1600	TYP. ELECTRICAL BOX WITH FACEPLATE, COORDINATE FACEPLATE WITH DIV. 26, 27 AND 28.
26 05 36.0000	TYP. CONCEALED S.S. WIRE TRAY SUSPEND FROM COUNTER.
26 12 00.0000	TYP. AREA RESERVED FOR UTILITY TRANSFORMER, REF CIVIL AND ELEC.
26 41 13.1300	TYP. LIGHTNING PROTECTION TERMINAL, SEE ELECTRICAL.
26 41 13.8300	TYP. LIGHTNING PROTECTION CONDUCTOR, SEE ELECTRICAL.
26 51 00.1900	TYP. RECESSED CEILING MOUNTED LED "CAN", SEE ELECTRICAL FOR FIXTURE TYPE. PROVIDE MUD FLANGE FOR GWB INSTALL.
28 13 53.0093	SECURITY ACCESS, METAL DETECTORS, X-RAY, EXPLOSIVE DETECTION, BAGGAGE AND PASSANGER SCREENING EQUIPMENT, NIC CONTRCTOR TO COORDINATE POWER AND DATA REQUIREMENTS.
31 23 23.2385	TYP. COMPACTED FILL TO A MIN. OF 85% COMPACTION AS PER ASTM D1557.
31 31 16.1300	TYP. SPRAY TERMITE TOXICANT BARRIER.
32 16 23.0405	TYP. 4" BROOM FINISHED CONCRETE SIDEWALK.
32 16 23.0505	TYP. 5" BROOM FINISHED CONCRETE SIDEWALK.
32 92 23.0000	TYP. SODDING AND PLANTING SEE LANDSCAPE.
34 01 73.0092	TYP. PRESERVE EDGE OF AIRFIELD CONSTRUCTION. COORDINATE PROTECTION OF BUILT ELEMENTS WITH ADJACENT PROJECT.

PROTECTION OF OPENINGS

PROTECTION OF OPENINGS IN FIRE BARRIER HORIZONTAL ASSEMBLIES

OPENINGS THROUGH A FLOOR/CEILING ASSEMBLIES SHALL BE PROTECTED IN ACCORDANCE WITH FBC SECTION 707 AND FFPC SECTION 8.6.

FIRE RESISTANCE RATINGS AND OPENING PROTECTION REQUIREMENTS
(FBC 707.6 AND TABLE 716.5)

EXIT SHAFTS:	2 HR WITH 90 MIN OPENINGS
ALL OTHER SHAFTS:	2 HR WITH 90 MIN OPENINGS
FIRE BARRIERS/PARTITIONS:	1 HR WITH 45 MIN OPENINGS
EXTERIOR BEARING WALLS:	1 HR WITH 45 MIN OPENINGS

DUCT PENETRATIONS (FBC 716.6)

PENETRATIONS BY DUCTS AND AIR TRANSFER OPENINGS OF A FLOOR, FLOOR/CEILING ASSEMBLY OR THE CEILING MEMBRANE OF A ROOF/CEILING ASSEMBLY SHALL BE PROTECTED BY A SHAFT ENCLOSURE THAT COMPLIES WITH FBC SECTION 707 OR SHALL COMPLY WITH FBC SECTION 716.6.

A DUCT AND AIR TRANSFER OPENING SYSTEM CONSTRUCTED OF APPROVED MATERIALS IN ACCORDANCE WITH THE FBC: MECHANICAL THAT PENETRATES A FIRE-RESISTANCE-RATED FLOOR/CEILING ASSEMBLY THAT CONNECTS NOT MORE THAN TWO STORIES IS PERMITTED WITHOUT SHAFT ENCLOSURE PROTECTION PROVIDED A FIRE DAMPER IS INSTALLED AT THE FLOOR LINE.

PROTECTION OF PENETRATIONS (FBC 714)

PENETRATIONS OF A FLOOR, FLOOR/CEILING ASSEMBLY, OR THE CEILING MEMBRANE OF A ROOF/CEILING ASSEMBLY SHALL BE PROTECTED BY A SHAFT ENCLOSURE IN ACCORDANCE WITH FBC SECTIONS 707 AND 713.4.
PENETRATIONS INTO OR THROUGH FIRE WALLS, FIRE BARRIERS, SMOKE BARRIER WALLS, AND FIRE PARTITIONS SHALL COMPLY WITH FBC SECTIONS 708 & 709 SUCH PENETRATIONS SHALL BE INSTALLED AS TESTED IN AN APPROVED FIRE-RESISTANCE RATED ASSEMBLY AND SHALL BE PROTECTED BY AN APPROVED PENETRATION FIRE-STOP SYSTEM.

WHERE POTENTIAL FUEL SPILL POINTS ARE LOCATED LESS THAN 100 FT HORIZONTALLY FROM GLAZING MATERIAL COVERED OPENINGS IN THE TERMINAL BUILDING WALLS FACING THE AIRPORT RAMP, THEY SHALL BE PROTECTED. (4.1.5.3, NFPA 415, 2008)

HANDRAILS AND GUARDRAILS

HANDRAILS AND GUARDRAILS SHALL BE PROVIDED ON BOTH SIDES OF ALL STAIRS AND RAMPS, IN ACCORDANCE WITH THE FOLLOWING:

A. STAIRS SHALL BE CLEAR OF ALL OBSTRUCTIONS EXCEPT PROJECTIONS NOT EXCEEDING 2 ½ INCHES AT OR BELOW HANDRAIL HEIGHT ON EACH SIDE.
B. NEW HANDRAILS SHALL BE INSTALLED TO PROVIDE A CLEARANCE OF NOT LESS THAN 2 ¼ INCHES BETWEEN THE HANDRAIL AND THE WALL TO WHICH IT IS FASTENED. (FFPC SIXTH ED 7.2.2.4.4.5)
C. HANDRAILS SHALL BE PROVIDED WITHIN 30 INCHES OF ALL PORTIONS OF THE STAIR WIDTH REQUIRED FOR EGRESS CAPACITY. (FFPC SIXTH ED 7.2.2.4.1.2)
D. HANDRAIL HEIGHT SHALL BE ≥ 34 IN. TO ≤ 38 IN. ABOVE THE SURFACE OF THE TREAD, MEASURED VERTICALLY FROM THE TOP OF THE RAIL FROM THE LEADING EDGE OF THE TREAD. (FFPC SIXTH ED 7.2.2.4.4.1)
E. HANDRAIL SHAPE, CIRCULAR CROSS SECTION WITH OUTSIDE DIAMETER ≥ 1-1/4 IN. TO ≤ 2 IN. OR, NON-CIRCULAR CROSS SECTION WITH PERIMETER ≥ 4 IN. TO ≤ 6-1/4 IN. AND LARGEST CROSS SECTION ≤ 2-1/4 IN. WITH ROUNDED EDGE (RADIUS ≥ 1/8 IN.). (FFPC SIXTH ED 7.2.2.4.4.6)
F. HANDRAILS AND GUARDS SHALL CONTINUE FOR THE FULL LENGTH OF EACH FLIGHT OF STAIRS. AT TURNS OF NEW STAIRS, INSIDE HANDRAILS SHALL BE CONTINUOUS BETWEEN FLIGHTS AT LANDINGS. (FFPC SIXTH ED 7.2.2.4.2)
G. HANDRAILS THAT ARE NOT CONTINUOUS BETWEEN FLIGHTS SHALL EXTEND HORIZONTALLY, AT THE REQUIRED HEIGHT, NOT LESS THAN 12 IN. BEYOND THE TOP RISER AND CONTINUE TO SLOPE FOR A DEPTH OF ONE TREAD BEYOND THE BOTTOM RISER. (FFPC SIXTH ED 7.2.2.4.4.10)
H. HANDRAIL ENDS SHALL BE RETURNED TO THE WALL OR FLOOR OR SHALL TERMINATE AT NEWEL POSTS. (FFPC SIXTH ED 7.2.2.4.9)
I. GUARDS ARE REQUIRED TO PREVENT FALLS OVER THE OPEN SIDE WHEN MEANS OF EGRESS IS MORE THAN 30 IN. ABOVE FLOOR OR GRADE BELOW. (FBC 1012)
J. GUARDRAIL HEIGHT MINIMUM: 42 IN. (FFPC 6TH ED 7.2.2.4.5.2)
K. OPEN GUARDS SHALL HAVE INTERMEDIATE RAILS OR ORNAMENTAL PATTERN TO PREVENT 4 IN. DIAMETER SPHERE FROM PASSING THROUGH ANY OPENING UP TO A HEIGHT OF 34 INCHES.
L. FOR OPEN GUARDS, FROM A HEIGHT OF 34 INCHES TO 42 INCHES ABOVE THE ADJACENT WALKING SURFACES, A SPHERE 8 INCHES IN DIAMETER SHALL NOT PASS. (FBC 1012.3)

PANIC HARDWARE

1. ALL DOORS SERVING REQUIRED EXIT ENCLOSURES SHALL BE PROVIDED WITH PANIC HARDWARE OR FIRE EXIT HARDWARE COMPLYING WITH FFPC SIXTH ED 7.2.1.7, AS FOLLOWS: (FFPC 12.2.2.2.3)
   A. IT SHALL CONSIST OF A CROSS BAR OR PUSH PAD, THE ACTUATING PORTION OF WHICH EXTENDS ACROSS NOT LESS THAN ONE-HALF OF THE WIDTH OF THE DOOR LEAF.
   B. IT SHALL BE CONSTRUCTED SO THAT A HORIZONTAL FORCE NOT TO EXCEED 15 LBF ACTUATES THE CROSS BAR OR PUSH PAD AND LATCHES.
   C. IT SHALL BE MOUNTED BETWEEN 34 INCHES AND 48 INCHES ABOVE THE FLOOR.
   D. IT SHALL NOT BE EQUIPPED WITH ANY LOCKING DEVICE, SET SCREW, OR OTHER ARRANGEMENT THAT PREVENTS THE RELEASE OF THE LATCH WHEN PRESSURE IS APPLIED TO THE RELEASING DEVICE.
   E. DEVICES THAT HOLD THE LATCH IN THE RETRACTED POSITION SHALL BE PROHIBITED ON FIRE EXIT HARDWARE UNLESS LISTED AND APPROVED FOR THAT PURPOSE.
2. ASSEMBLY OCCUPANCUY: ANY DOOR IN A REQUIRED MEANS OF EGRESS FROM AN AREA HAVING AN OCCUPANT LOAD OF 50 OR MORE PERSONS SHALL BE PERMITTED TO BE PROVIDED WITH A LATCH OR LOCK ONLY IF THE LATCH OR LOCK IS PANIC HARDWARE OR FIRE EXIT HARDWARE COMPLYING WITH FFPC SIXTH ED 7.2.1.7, UNLESS PERMITTED BY ONE OF THE FOLLOWING: (1) THIS REQUIREMENT SHALL NOT APPLY TO DELAYED EGRESS LOCKS AS PERMITTED 12.2.2.2.5, (2) THIS REQUIREMENT SHALL NOT APPLY TO ACCESS CONTROLLED EGRESS DOORS AS PERMITTED IN 12.2.2.2.6.
3. ELECTRICAL ROOMS WITH EQUIPMENT RATED 1,200 AMPERES OR MORE AND OVER (6) SIX FEET WIDE THAT CONTAIN OVERCURRENT DEVICES, SWITCHING DEVICES OR CONTROL DEVICES WITH EXIT OR EXIT ACCESS DOORS SHALL BE EQUIPPED WITH PANIC HARDWARE OF FIRE EXIT HARDWARE. THE DOORS SHALL SWING IN THE DIRECTION OF EGRESS TRAVEL. (FBC 1010.110)

PANIC HARDWARE

DELAYED EGRESS LOCKS COMPLYING WITH FFPC 7.2.1.6.1 SHALL BE PERMITTED ON DOORS OTHER THAN MAIN ENTRANCE/EXIT DOORS. THE A/E WILL FILE A DETERMINATION WITH OKALOOSA COUNTY BUILDING AND FIRE PLANS EXAMINER REQUESTING THE USE OF DELAYED EGRESS DEVICES AS A MEANS OF MAINTAINING LIFE SAFETY AND SECURITY OF THE AIRPORT/AIRCRAFT OPERATIONS AREA.
FBC 1010.1.9.7: **Delayed egress locking systems shall be permitted to be installed on doors serving any occupancy except Group A**, E and H in buildings that are equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or an approved automatic smoke or heat detection system installed in accordance with Section 907. The locking system shall be installed and operated in accordance with all of the following:
1. The delay electronics of the delayed egress locking system shall deactivate upon actuation of the automatic sprinkler system or automatic fire detection system, allowing immediate, free egress.
2. The delay electronics of the delayed egress locking system shall deactivate upon loss of power controlling the lock or lock mechanism, allowing immediate free egress.
3. The delayed egress locking system shall have the capability of being deactivated at the fire command center and other approved locations.
4. An attempt to egress shall initiate an irreversible process that shall allow such egress in not more than 15 seconds when a physical effort to exit is applied to the egress side door hardware for not more than 3 seconds. Initiation of the irreversible process shall activate an audible signal in the vicinity of the door. Once the delay electronics have been deactivated, rearming the delay electronics shall be by manual means only.
   Exception: Where approved, a delay of not more than 30 seconds is permitted on a delayed egress door.
5. The egress path from any point shall not pass through more than one delayed egress locking system.
   Exception: In Group I-2 or I-3 occupancies, the egress path from any point in the building shall pass through not more than two delayed egress locking systems provided the combined delay does not exceed 30 seconds.
6. A sign shall be provided on the door and shall be located above and within 12 inches (305 mm) of the door exit hardware:
   6.1.For doors that swing in the direction of egress, the sign shall read: PUSH UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS.
   6.2.For doors that swing in the opposite direction of egress, the sign shall read: PULL UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS.
   6.3.The sign shall comply with the visual character requirements in ICC A117.1.
   Exception: Where approved, in Group I occupancies, the installation of a sign is not required where care recipients who because of clinical needs require restraint or containment as part of the function of the treatment area.
7. Emergency lighting shall be provided on the egress side of the door.
8. The delayed egress locking system units shall be listed in accordance with UL 294

HORIZONTAL SLIDING DOORS

FBC 1010.1.4.3:
In other than Group H occupancies, special purpose horizontal sliding, accordion or folding door assemblies permitted to be a component of a means of egress in accordance with Exception 6 to Section 1010.1.2 shall comply with all of the following criteria:

1. The doors shall be power operated and shall be capable of being operated manually in the event of power failure.
2. The doors shall be openable by a simple method from both sides without special knowledge or effort.
3. The force required to operate the door shall not exceed 30 pounds (133 N) to set the door in motion and 15 pounds (67 N) to close the door or open it to the minimum required width.
4. The door shall be openable with a force not to exceed 15 pounds (67 N) when a force of 250 pounds (1100 N) is applied perpendicular to the door adjacent to the operating device.
5. The door assembly shall comply with the applicable fire protection rating and, where rated, shall be self-closing or automatic closing by smoke detection in accordance with Section 716.5.9.3, shall be installed in accordance with NFPA 80 and shall comply with Section 716.
6. The door assembly shall have an integrated standby power supply.
7. The door assembly power supply shall be electrically supervised.
8. The door shall open to the minimum required width within 10 seconds after activation of the operating device.

Guide for Airport Terminal Restroom Planning & Design (2015)
Pages 13 & 14

Design Passenger = EQA x 158 x 0.80
5 x 158 x 0.80 = 632

Peak 20 Min Passanger Demand = 632 x 0.50 = 316

Design Factor = 316 x 0.50 = 158.25 ≈ 158
316 x 0.60 = 189.60 ≈190
(Generic utilization rate for passangers)

MAX men fixture = DF x Male %
190 x 0.50 / 13
7.3 ≈ 7

Womens Fixtures = 7.30 x 1.25 - Table 2.2 Assumes Female increase Factor of 1.25
9.125 ≈ 9

Anticipated MAX # of Passengers per aircraft
158 - 80% Load Factor
50% = Peak 20% for Origin and Destination Airports

Tables 2.1 Equivalent Aircraft Index
Group III = 1.0 EQA
1.0 EQA x 5 Gates = 5 EQA

Table 2.3 O&D Airports @ 60% utilization Table
Men 6 -7
Women 7.5 ≈ 8 to 8.75 ≈ 9

Restrooms are group for single sided gate concourse
Layout ± 200' from gate MAX.

ACCESS CONTROLLED EGRESS DOORS

ACCESS-CONTROLLED EGRES DOORS (FBC 1010.1.9.8). THE ELECTRIC LOCKS ON SENSOR RELEASED DOORS LOCATED IN A MEANS OF EGRESS IN BUILDINGS WITH OCCUPANCY IN GROUP A, B, & M; AND ENTRACNCE DOORS TO TENANT SPACES IN OCCUPANCY IN GROUP A, B, & M ARE PERMITTED WHERE INSTALLED AND OPERATED IN ACCORDANCE WITH THE FOLLOWING CRITERIA:
1. The sensor shall be installed on the egress side, arranged to detect an occupant approaching the doors. The doors shall be arranged to unlock by a signal from or loss of power to the sensor.
2. Loss of power to the lock or locking system shall automatically unlock the doors.
3. The doors shall be arranged to unlock from a manual unlocking device located 40 inches to 48 inches (1016 mm to 1219 mm) vertically above the floor and within 5 feet (1524 mm) of the secured doors. Ready access shall be provided to the manual unlocking device and the device shall be clearly identified by a sign that reads "PUSH TO EXIT." When operated, the manual unlocking device shall result in direct interruption of power to the lock—independent of other electronics—and the doors shall remain unlocked for not less than 30 seconds.
4. Activation of the building fire alarm system, where provided, shall automatically unlock the doors, and the doors shall remain unlocked until the fire alarm system has been reset.
5. Activation of the building automatic sprinkler system or fire detection system, where provided, shall automatically unlock the doors. The doors shall remain unlocked until the fire alarm system has been reset.
6. The door locking system units shall be listed in accordance with UL 294.

PROJECT DESCRIPTION

PROJECT ADDRESS:
1701 State Road 85N,
Eglin AFB, FL 32542-1498

Single story concrete masonry bearing wall construction with open webbed steel joist single ply membrane roofing structure. The project consists of a Satellite "Airside" Concourse Building with 2 holdrooms in base bid with alternates totaling a maximum ultimate build of 5 holdrooms, concessions, restrooms and TSA Passenger Security Screening Check Point.

Corridors	B
Rooms and Enclosed spaces	C

MEANS OF EGRESS SIZING

REQUIRED CAPACITY BASED ON OCCUPANT LOADS FBC Section 1005.3
BUILDING OCCUPANT LOAD 1476
§1005.3.1 STAIRWAYS @ 0.3" PER OCCUPANT | 18' - 6"
§1005.3.2 OTHER EGRESS COMPONENTS @ 0.2" PER OCCUPANT | 12' - 3"
**ASSUMPTION IS MADE OF BUILDING OCCUPANT LOAD DIVIDED BY 2. INDIVIDUAL COMPONENTS SHALL COMPLY WITH WIDTHS BASED ON THEIR LOAD BUT NO LESS THAN 34" PROVIDED.*

SEE AL211 FOR FOR ADDITONAL REQUIREMENTS

NOTE for NFPA 419 Review: This is a ground load facility. Meaning; there are no jet bridges nor are they anticipated to be installed. assumption made in event of emergency passengers onboard aircraft will egress directly to hard stand apron and not into building.

HEADROOM

1. MEANS OF EGRESS SHALL BE DESIGNED AND MAINTAINED TO PROVIDE HEADROOM IN ACCORDANCE WITH OTHER SECTIONS OF THIS CODE, AND SUCH HEADROOM SHALL BE NOT LESS THAN 7 FT 6 IN. (2285 MM), WITH PROJECTIONS FROM THE CEILING NOT LESS THAN 6 FT 8 IN. (2030 MM) WITH A TOLERANCE OF-3/4 IN. (-19 MM), ABOVE THE FINISHED FLOOR, UNLESS OTHERWISE SPECIFIED BY THE FOLLOWING: FFPC SIXTH EDITION.

2. HEADROOM IN INDUSTRIAL EQUIPMENT ACCESS AREAS AS PROVIDED IN FFPC SIXTH EDITION 40.2.5.2 SHALL BE PERMITTED.

WALL DEMARCATION

FFPC SITH EDITION, NFPA1, 12.3
ALL FIRE-RESISTIVE CONSTRUCTION INCLUDING FIRE BARRIERS, FIRE WALLS, AND SMOKE BARRIERS SHALL BE PERMANENTLY STENCEILED WITH LETTERS NO LESS THAN SIX (6) INCHES IN HEIGHT ON THE PARTITION READING SUBSTANTIALLY AS FOLLOWS:

"FIRE AND SMOKE BARRIER -- PROTECT ALL OPENINGS"

TENANT SEPARATIONS

FLORIDA BUILDING CODE SECTION 709.1,
EXCEPTION 4:
OTHER THAN DWELLING UNITS OR SLEEPING UNITS, WALLS USED TO SEPARATE INDIVIDUAL TENANT SPACES SHALL NOT BE REQUIRED TO HAVE A FIRE-RESISTANCE RATING WHEN THE BUILDING IS PROTECTED BY A COMPLETE AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH FBC SECTION 903.3.1.1.

MIXED OCCUPANCY

FLORIDA BUILDING CODE SECTION 508.3
A. THE BUILDING IS CLASSIFIED AS A NON-SEPARATED MIXED OCCUPANCY.
B. NO SEPARATION IS REQUIRED. (FBC 508.3.3)
C. NON-SEPARATED OCCUPANCIES SHALL BE INDIVIDUALLY CLASSIFIED IN ACCORDANCE WITH SECTION 302.1. THE REQUIREMENTS OF THIS CODE SHALL APPLY TO EACH PORTION OF THE BUILDING BASED ON THE OCCUPANCY CLASSIFICATION OF THAT SPACE EXCEPT THAT THE MOST RESTRICTIVE APPLICABLE PROVISIONS OF SECTION 403 AND CHAPTER 9 SHALL APPLY TO THE BUILDING OR PORTION THEREOF IN WHICH THE NON-SEPARATED OCCUPANCIES OCCURRED. (FBC 508.3.1)
D. THE ALLOWABLE BUILDING AREA AND HEIGHT OF THE BUILDING OR PORTION THEREOF SHALL BE BASED ON THE MOST RESTRICTIVE ALLOWANCES FOR THE OCCUPANCY GROUPS UNDER CONSIDERATION FOR THE TYPE OF CONSTRUCTION OF THE BUILDING IN ACCORDANCE WITH SECTION 503.1.

EXIT SIGNAGE

ACCESS TO ALL EXITS SHALL BE PROVIDED THROUGHOUT THE MEANS OF EGRESS BY APPROVED, READILY VISIBLE SIGNS, IN ACCORDANCE WITH FFPC SITH EDITION 7.10. SIGNAGE SHALL COMPLY WITH ICC/ANSI A117.1, AMERICAN NATIONAL STANDARD FOR ACCESSIBLE AND USABLE BUILDINGS AND FACILITIES. SIGN PLACEMENT SHALL BE SUCH THAT NO POINT IN THE EXIT ACCESS CORRIDOR IS IN EXCESS OF THE RATED VIEWING DISTANCE OR 100 FT, WHICHEVER IS LESS, FROM THE NEAREST SIGN. **SEE AL211 FOR LOCATIONS**

EMERGENCY LIGHTING

EMERGENCY LIGHTING SHALL BE PROVIDED IN ACCORDANCE WITH FFPC 7.9. **SEE ELECTRICAL DRAWINGS FOR PLACEMENT**

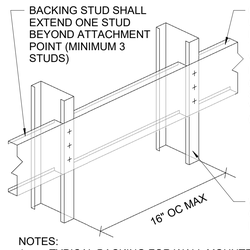
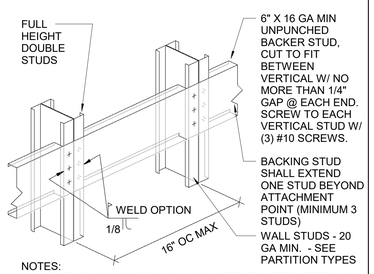
NOTES:
1. TYPICAL BACKING FOR DOOR WALL STOPS, COAT HOOKS, MOP RACKS, & LIGHT WEIGHT ACCESSORIES
2. THIS DETAIL MAY BE USED WHEN THE LENGTH OF THE CABINET OR EQUIPMENT DISTRIBUTES UP TO 30 LBS PER STUD SPACING.
3. 2x6 MIN. FR WOOD BLOCKING MAY BE USED IN PLACE OF METAL BACKING.

WALL BLOCKING - LIGHT (UNDER 30 LBS)



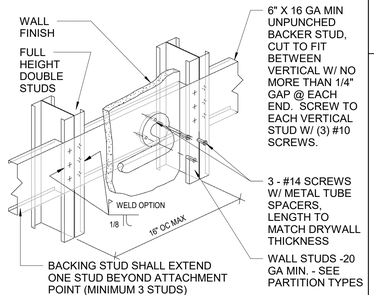
NOTES:
1. TYPICAL BACKING FOR WALL MOUNTED HANDRAILS, LIGHT FIXTURES, AND PATIENT SERVICE MODULES
2. THIS DETAIL MAY BE USED WHEN THE LENGTH OF THE CABINET OR EQUIPMENT DISTRIBUTES UP TO 50 LBS PER STUD SPACING.
3. 2x6 MIN. FR WOOD BLOCKING MAY BE USED IN PLACE OF METAL BACKING.

WALL BLOCKING - MEDIUM (31 LBS - 50 LBS)



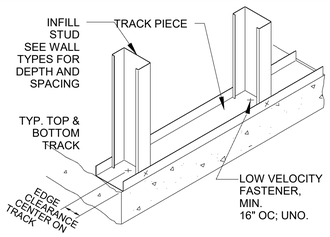
NOTES:
1. TYP. BACKING FOR WALL MOUNTED TOILET PARTITIONS, WALL MOUNTED COUNTERS AND LAVATORIES, AND WALL/FLOOR MOUNTED CASEWORK
2. THIS DETAIL MAY BE USED WHEN THE LENGTH OF THE CABINET OR EQUIPMENT DISTRIBUTES UP TO 150 LBS PER STUD SPACING.
3. DOUBLE STUDS NOT REQUIRED IF WALL IS BRACED AT 9'-0" MAX. A.F.F.
4. 2x6 MIN. FR WOOD BLOCKING MAY BE USED IN PLACE OF METAL BACKING.

WALL BLOCKING - HEAVY (51 LBS - 150 LBS)



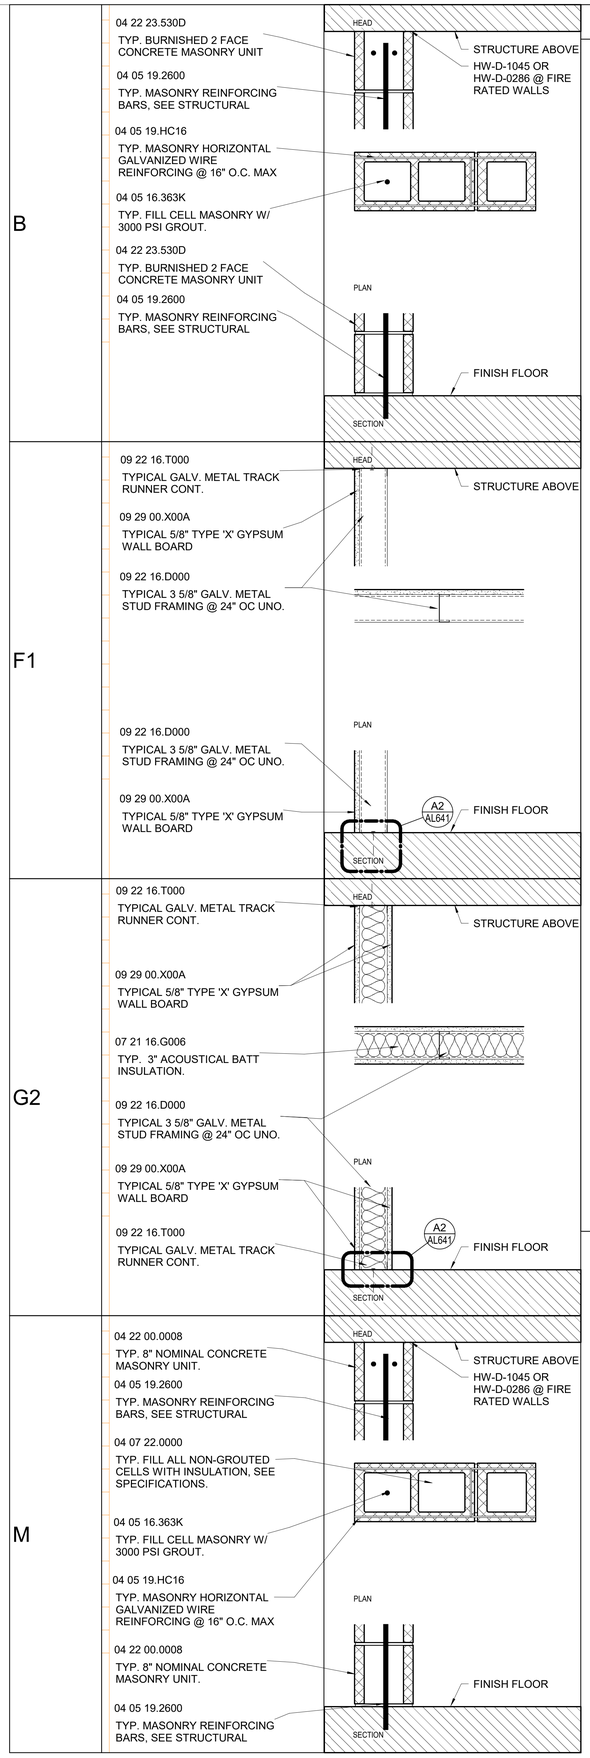
NOTES:
1. TYPICAL BACKING FOR GRAB BARS
2. DOUBLE STUDS NOT REQ'D IF WALL IS BRACED @ 9'-0" MAX. A.F.F.
3. 2x6 MIN. FR WOOD BLOCKING MAY BE USED IN PLACE OF METAL BACKING.

WALL BLOCKING - VERY HEAVY (151 LBS - 250 LBS)



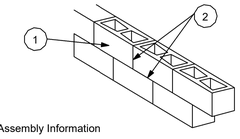
A2 TYP. FASTENER DETAIL

N.T.S.



BLOCK CALCULATIONS

WALL RATING - 1 HR.



Assembly Information
1. Preferred product 910635 c.m.u. 8" x 8" x 16" nominal
2. ASTM C-270 Masonry Mortar, Type M or S. Face Shell or full mortar bedding as required.
3. Masonry grout, reinforcing steel, joint reinforcement, anchors, ties and accessories (Not depicted above - optional). Use where specified.

Preferred Materials Inc. accepts no responsibility for proper application of the rated wall assembly above, or responsibility for the construction of such assemblies.

Concrete Masonry Unit
§721.3.2 of the Florida Building Code

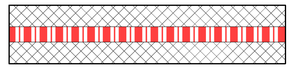
Unit Description:	**910635**
Size W x H x L Nominal:	**8 x 8 x 16**
Equivalent Thickness Inches:	**3.6**
Fire Rating Minutes:	**95.5***

* *Linear interpolation from table 721.3.2 of the Florida Building Code for Exposed Finish Block Mix -- 55% Limestone & 45% Siliceous Aggregates.*

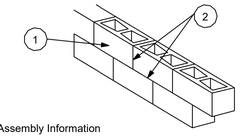
Acoustical Properties

Unit Description:	**910635**
Unit Weight in Pounds (lbs.):	**32**
lbs./SF:	**36.08**
STC Rating:	**47.8****

** *STC Rating based on minimum lbs./SF required to archive Sound Transmission Class as Defined by the National Concrete Masonry Association. Rating Value interpolated from nown weights of STC Ratings.*



WALL RATING - 2 HR.



Assembly Information
1. Preferred product 910505 c.m.u. 8" x 8" x 16" nominal
2. ASTM C-270 Masonry Mortar, Type M or S. Face Shell or full mortar bedding as required.
3. Masonry grout, reinforcing steel, joint reinforcement, anchors, ties and accessories (Not depicted above - optional). Use where specified.

Preferred Materials Inc. accepts no responsibility for proper application of the rated wall assembly above, or responsibility for the construction of such assemblies.

Concrete Masonry Unit
§721.3.2 of the Florida Building Code

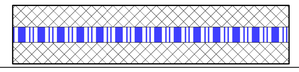
Unit Description:	**910505**
Size W x H x L Nominal:	**8 x 8 x 16**
Equivalent Thickness Inches:	**4.1**
Fire Rating Minutes:	**120.5***

* *Linear interpolation from table 721.3.2 of the Florida Building Code for Exposed Finish Block Mix -- 55% Limestone & 45% Siliceous Aggregates.*

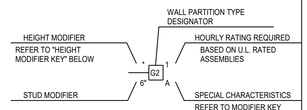
Acoustical Properties

Unit Description:	**910505**
Unit Weight in Pounds (lbs.):	**38**
lbs./SF:	**42.84**
STC Rating:	**49.8****

** *STC Rating based on minimum lbs./SF required to archive Sound Transmission Class as Defined by the National Concrete Masonry Association. Rating Value interpolated from nown weights of STC Ratings.*



PARTITION MARK



WALL PARTITION TYPES

B = BURNISHED (NCA TYPE GRF) ARCHITECTURAL MASONRY UNIT

F# = GYP BD ON FURRING (# DESIGNATES TOTAL LAYERS OF GYP BD)

G# = GYP BD ON METAL STUDS (# DESIGNATES TOTAL LAYERS OF GYP BD)

M = CONCRETE MASONRY UNIT

P = PROJECTILE RESISTANT PARTITIONS

S = GYPSUM BOARD SHAFT WALL

V = "BURNISHED" GROUND FACE ARCHITECTRUAL CMU - "GRF" CMA DESIGNATION

Z = GYPSUM BOARD ON METAL ZEE FURRING

HEIGHT MODIFIER KEY

(NO MODIFIER) = EXTEND ENTIRE WALL ASSEMBLY FROM FLOOR SLAB TO STRUCTURAL DECK ABOVE

P = EXTEND ENTIRE WALL ASSEMBLY FROM FINISH FLOOR TO 5'-8" ABOVE FINISH FLOOR ELEVATION ("HOLDROOM")

V = EXTEND ENTIRE WALL ASSEMBLY FROM **12'-0"** ABOVE FINISH FLOOR TO STRUCTURAL DECK ABOVE (BRACE AS REQUIRED)

W = EXTEND ENTIRE WALL ASSEMBLY FROM FLOOR SLAB TO **12'-0"** ABOVE FINISH FLOOR (BRACE AS REQUIRED)

X = EXTEND ENTIRE WALL ASSEMBLY FROM FLOOR SLAB TO **8"** ABOVE FINISH CEILING (BRACE AS REQUIRED)

Y = EXTEND STRUCTURE TO DECK ABOVE HOLD STUD AND GWB TO **3'-0"** ABOVE FINISH CEILING (BRACE AS REQUIRED)

Z = EXTEND ENTIRE WALL ASSEMBLY FROM FLOOR SLAB TO **1' - 4"** ABOVE FINISH CEILING (BRACE AS REQUIRED)

FIRE RATING MODIFIER KEY

(NO MODIFIER) = NO FIRE RATING

1, 2, 3, ETC. = PARTITION FIRE RATING (IN HOURS)

WALL DEPTH MODIFIER KEY

CAST IN PLACE CONCRETE:
CONCRETE MASONRY UNIT:
NO MODIFIER = 8" CMU
4, 6, 8,12 = CMU DEPTH (NOMINAL DIMENSION IN INCHES)

METAL STUDS:
NO MODIFIER = 3 5/8"
1.6 = 1- 5/8", 2.5 = 2-1/2", 4 = 4", 6 = 6", 8 = 8"

SHAFT WALL STUDS:
NO MODIFIER = 4"
2.5 = 2-1/2"

SPECIAL CHARACTERISTIC MODIFIER KEY

(NO MODIFIER) = NO SPECIAL CHARACTERISTIC

A = ACOUSTICAL

L = LEAD-SHIELDED

M = ABUSE-RESISTANT GYPSUM BOARD ONE-SIDE TO 8' - 0" AFF UNO

N = ABUSE-RESISTANT GYPSUM BOARD EACH SIDE TO 8' - 0" AFF UNO

P = PROJECTILE RESISTANT

R = SECURITY FENCING EXTENDING FROM ACCESS FLOOR TO FLOOR SLAB BELOW & FROM ABOVE CEILING TO STRUCTURAL DECK ABOVE

S = SECURITY FENCING ABOVE PARTITION TO STRUCTURAL DECK ABOVE

T = THERMALLY INSULATED

U = SPILL CONTAINMENT CURB

V = SECURITY FENCING EXTENDING FROM ACCESS FLOOR TO FLOOR SLAB BELOW

PARTITION TYPE NOTES

1. ALL INTERIOR STUDS SHALL WITHSTAND A LATERAL LOAD OF NOT LESS THAN 5 LBS/FT ². DEPTH OF STUDS OR WIDTH OF MASONRY SHALL NOT BE INCREASED OR DECREASED FROM THAT SHOWN ON THE DRAWINGS. IN ORDER TO ACCOMMODATE THE REQUIRED LATERAL LOAD FOR LONG SPAN PARTITIONS THAT DO NOT EXTEND TO STRUCTURE ABOVE, THE CONTRACTOR MAY MODIFY THE PARTITION USING ANY, OR ANY COMBINATION, OF THE FOLLOWING METHODS:

A. BRACE STUDS DIAGONALLY TO STRUCTURAL DECK ABOVE SUSPENDED CEILING;
B. INCREASE THICKNESS (GAGE) OF METAL STUDS;
C. PROVIDE ADDITIONAL REINFORCEMENT; AND/ OR
D. DECREASE SPACING OF METAL STUDS.

2. REFER TO FINISH SCHEDULE FOR WALL BASE, CERAMIC TILE, FRP OR ANY OTHER FINISH TO BE APPLIED TO WALL SURFACE.

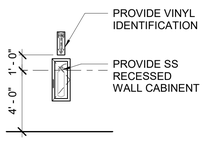
EXTINGUISHER NOTES

FIRE EXTINGUISHERS SHALL BE PROVIDED THROUGHOUT IN ACCORDANCE WITH NFPA 10, NFPA 1, FFPC SIXTH EDITION, AS FOLLOWS:

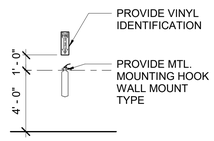
A. FIRE EXTINGUISHERS SHALL NOT BE OBSTRUCTED OR OBSCURED FROM VIEW.
B. FIRE EXTINGUISHERS (40 LB. OR LESS) SHALL BE INSTALLED SO THAT THE TOP OF THE FIRE EXTINGUISHER IS NOT MORE THAN 5 FT. ABOVE THE FLOOR.
C. EXTINGUISHER'S OPERATING INSTRUCTIONS SHALL BE LOCATED ON THE FRONT OF THE EXTINGUISHER AND SHALL BE CLEARLY VISIBLE.
D. FIRE EXTINGUISHERS LOCATED IN CABINETS OR WALL RECESSES MUST BE PLACED WITH THE EXTINGUISHER OPERATING INSTRUCTIONS FACING OUTWARD.
E. MAXIMUM TRAVEL DISTANCE TO ANY EXTINGUISHER SHALL BE 75 FEET, FOR CLASS A HAZARD AREAS.

EXTINGUISHER TYPE



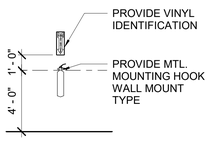
TYPE 1 ■1

MULTIPURPOSE DRY-CHEMICAL TYPE: UL RATED 4-A 80-B:C, 10 LB NOMINAL CAPACITY, IN ENAMILED STEEL CONTAINER. RECESSED CAB.



TYPE 2 ■2

MULTIPURPOSE DRY-CHEMICAL TYPE: UL RATED 4-A 80-B:C, 10 LB NOMINAL CAPACITY, IN ENAMILED STEEL CONTAINER.



TYPE 3 ■3

REGULAR DRY-CHEMICAL TYPE: UL RATED 60-B:C, 10LB NOMINAL CAPACITY, IN ENAMELED-STEEL CONTAINER.

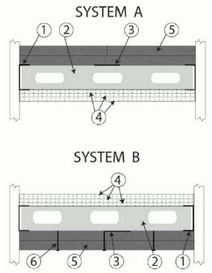
Design No. I502

September 19, 2017

Unrestrained Assembly Rating - 2 Hr

Load Restriction - Limited to the Dead Weight of the Assembly.

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**



1. **Perimeter Channels —** Used to support steel studs at both ends of wall structure. Min. 6 in. deep with min. 2 in. legs and formed from min. No. 20 MSG galv. steel (0.0329 in. thick bare metal thickness). Perimeter channels attached to wall structure with fasteners spaced not greater than 24 in. O.C. at both the top and bottom of the vertical leg. Maximum clear span from vertical leg to vertical leg of the perimeter channels is 8 ft., 2-1/4 in.

2. **Steel Studs —** Min. 6 in. wide with min. 1-5/8 in. legs containing folded back flanges and formed from min. No. 20 MSG galv. steel (0.0329 in. thick bare metal thickness) . Studs to be cut 1/2 in. to 3/4 in. less than the clear span between the vertical legs of the perimeter channels. Studs spaced a max. 16 in. O.C. At each end of the stud, the un-faced side shall be secured to the perimeter channel with one 1/2 in. long pan-head steel screw. Studs are used at each end of the horizontal barrier to terminate the assembly at the adjoining wall. These end studs shall be secured to the adjoining wall in the same manner as the perimeter channels (Item1).

3. **Steel Strap —** Min 4 in. wide formed from min. No. 20 MSG galv. steel (0.0329 in. thick bare metal thickness). Secured perpendicular to the studs at the centerline of the span using two 1/2 in. long pan-head steel screws. Strips to overlap one full stud bay at splice locations.

4. **Gypsum Board* —** Three layers of nom. 5/8 in. thick, 46 to 54 in. wide, gypsum board installed with long dimension perpendicular to the steel studs. Base layer installed with end joints in adjacent rows staggered min. 32 in. Boards secured to studs and perimeter channels with 1-1/4 in. long Type S steel screws spaced max. 16 in. O.C. Middle layer installed with end joints in adjacent rows staggered min. 32 in. Boards secured to the studs and perimeter channels with 1-5/8 in. long Type S steel screws spaced max. 16 in. O.C. Middle layer joints staggered a min. 16 in. from base layer joints Face layer installed with end joints in adjacent rows staggered min. 32 in. Boards secured to the studs and perimeter channels with 2-1/4 in. long Type S steel screws spaced max. 12 in. O.C. Face layer joints staggered a min. 16 in. from middle layer joints.
AMERICAN GYPSUM CO — Types AGX-1, AG-C, LightRoc.

5. **Batts and Blankets* —** Two layers of nom. 1-1/2 in. thick mineral wool batts.

SYSTEM A

Mineral wool batts are loosely laid perpendicular to the top side of the steel stud flanges. Base layer laid with narrow (2ft.) end joints centered over studs. Short end joints in adjacent rows are not staggered. Face layer laid with narrow (2ft.) end joints centered over studs with end joints in adjacent rows not being staggered. Narrow end joints between layers are staggered 16 in., with long end joints staggered 8 in. between layers.

SYSTEM B

Mineral wool batts are attached mechanically perpendicular to the steel stud flanges. Base layer attached with narrow (2ft.) end joints centered over studs. Short end joints in adjacent rows are not staggered. Face layer attached with narrow (2ft.) end joints centered over studs with end joints in adjacent rows not being staggered. Narrow end joints between layers are staggered 16 in., with long end joints staggered 8 in. between layers.

UNITED STATES MINERAL PRODUCTS CO, DBA ISOLATEK INTERNATIONAL — Type CB

6. **Pins and Clinch Shields —** Steel pins, 1/8 in. diameter steel wire studs, 4 in. long. Clinch Shields, 2-1/2 in. square, fabricated from min. 30 ga. galvanized steel.

SYSTEM A

Pins and clinch shields are not required.

SYSTEM B

Steel pins welded to the flanges of the steel studs, spaced 8 in. OC which results in a pin to be located at each intersection of narrow (2 ft.) end and long end joints of the face layer batt and blanket material. While impaling the base layer of batts on the pins, standard office rubber bands (or any other method) can be used to hold the batts in place until the face layer along with clinch shields are installed. One clinch shield installed on each steel pin.

7. **Adhesive* —** (Optional- Not Required, Not Shown) — May be applied to the joints prior to installation of the batts.
ISOLATEK INTERNATIONAL — Type CBA

8. **Joint Tape and Compound —** (Optional- Not Required, Not Shown) - Vinyl, dry or premixed joint compound, applied in two coats to joints and screw heads; paper tape, nom. 2 in. wide, embedded in first layer of compound over all joints.

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

Design/System/Construction/Assembly Usage Disclaimer

- Authorities Having Jurisdiction should be consulted in all cases as to the particular requirements covering the installation and use of UL Certified products, equipment, system, devices, and materials.
- Authorities Having Jurisdiction should be consulted before construction.
- Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.
- When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.
- Only products which bear UL's Mark are considered Certified.

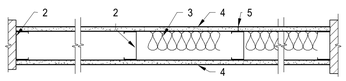
Nonbearing Wall Ratings — 1, 2, 3 or 4 Hr

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**



1. **Floor, Side and Ceiling Runners** — "J" - shaped runner, min 2-1/2 in. deep (min 4 in. deep when System C is used), with unequal legs of 1 in. and 2 in., fabricated from min 24 MSG (min 20 MSG when Item 4A, 4B or 7 are used) galv steel. Runners positioned with short leg toward finished side of wall. Runners attached to structural supports with steel fasteners located not greater than 2 in. from ends and not greater than 24 in. OC. "E" - shaped studs (Item 2A) may be used as side runners in place of "J" - shaped runners.

2. **Steel Studs** — "C-H" - shaped studs, min 2-1/2 in. deep (min 4 in. deep when System C is used), fabricated from min 25 MSG (min 20 MSG when Items 2D, 4A, 4B or 7 is used) galv steel. Cut to lengths 3/8 to 1/2 in. less than floor-to-ceiling height and spaced 24 in. or 600 mm OC.

2A. **Steel Studs** — (Not Shown) — "E" - shaped studs installed back to back in place of "C-H" - shaped studs (Item 2) "E" - shaped studs secured together with steel screws spaced a maximum 12 in. OC. Fabricated from min 25 MSG (min 20 MSG when Item 2D, 4A, 4B or 7 is used) galv steel, min 2-1/2 in. deep (min 4 in. deep when System C is used), with one leg 1 in. long and two legs 3/4 in. long. Shorter legs 1 in. apart to engage gypsum liner panels. Cut to lengths 3/8 to 1/2 in. less than floor to ceiling heights.

2B. **Furring Channels** — (Optional, not shown) — For use with single or double layer systems. Resilient furring channels fabricated from min 25MSG corrosion protected steel, installed horizontally, and spaced vertically a max 24 in. OC. Flange portion of channel attached to each intersecting "C-H" or "E" stud on side of stud opposite the 1 in. liner panels with 1/2 in. long Type S or S-12 pan-head steel screws. When furring channels are used, wallboard to be installed vertically only. Not to be used with Type FRX-G gypsum wallboard, Type RB-LBG (Item 4A), Type Nelco (Item 4B) or cementitious backer units (Item 7).

2C. **Furring Channels** — For use with System I - "Hat" - shaped, 25 MSG galv steel furring channels attached directly over the inner layers of wallboard to each stud with 2 in. long Type S pan head steel screws. Screws alternate from top flange to bottom flange at each stud intersection. Furring channels spaced vertically max 24 in. OC.

2D. **Steel Framing Members*** — (Optional, not shown) — For use with single or double layer systems. Furring channels and Steel Framing Members as described below. Not to be used with Type FRX-G gypsum wallboard, Type RB-LBG (Item 4A), Type Nelco (Item 4B) or cementitious backer units (Item 7):

a. **Furring Channels** — Formed of No. 25 MSG galv steel. 2-9/16 in. or 2-23/32 in. wide by 7/8 in. deep, spaced max. 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Gypsum board installed vertically only and attached to furring channels as described in Item 3.

b. **Steel Framing Members*** — Used to attach furring channels (Item 2Da) to studs (Item 2 or 2A). Clips spaced max. 24 in. OC,, and secured to studs with No. 8 x 1-1/2 in. minimum self-drilling, S-12 steel screw through the center grommet. Furring channels are friction fitted into clips. RSIC-1 clip for use with 2-9/16 in. wide furring channels. RSIC-1 (2.75) clip for use with 2- 23/32 in. wide furring channels.

PAC INTERNATIONAL INC — Types RSIC-1, RSIC-1 (2.75)

2E. **Steel Framing Members** — (Optional, Not Shown)* - Furring channels and resilient sound isolation clip as described below:

a. **Furring Channels** — Formed of No. 25 MSG galv steel. Spaced 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Ends of adjoining channels overlapped 6 in. and secured together with four self-tapping No. 8x1/2 Self Drilling screws (2 per side 1 in. and 4 in. from overlap edge). Gypsum board attached to furring channels as described in Item 3. Side joint furring channels shall be attached to studs with RESILMOUNT Sound Isolation Clips - Type A237R located approximately 2 in. from each end of length of channel. Both Gypsum Boards at side joints fastened into channel with screws spaced 8 in. OC, approximately 1/2 in. from joint edge.

b. **Steel Framing Members*** — Resilient sound isolation clip used to attach furring channels (Item 2Ea) to studs. Clips spaced 24 in. OC., and secured to studs with No. 10 x 2-1/2 in. coarse drywall screw through the center hole. Furring channels are friction fitted into clips.

STUDCO BUILDING SYSTEMS — RESILMOUNT Sound Isolation Clips - Type A237R

2F. **Steel Framing Members*** — (Optional, not shown) — For use with single or double layer systems. Furring channels and Steel Framing Members as described below. Not to be used with Type FRX-G gypsum wallboard, Type RB-LBG (Item 4A), Type Nelco (Item 4B) or cementitious backer units (Item 7):

a. **Furring Channels** — Formed of No. 25 MSG galv steel. 2-3/8 in. wide by 7/8 in. deep, spaced max. 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Gypsum board installed vertically only and attached to furring channels as described in Item 3.

b. **Steel Framing Members*** — Used to attach furring channels (Item 2Da) to studs (Item 2 or 2A). Clips spaced max. 24 in. OC. GENIECLIPS secured to studs with No. 8 x 1-1/2 in. minimum self-drilling, S-12 steel screw through the center grommet. Furring channels are friction fitted into clips.

PLITEQ INC — Type GENIECLIP

3. **Gypsum Board*** — Gypsum liner panels, nom 1 in. thick, 24 in. or 600 mm (for metric spacing) wide. Panels cut 1 in. less in length than floor to ceiling height. Vertical edges inserted in "H" portion of "C-H" studs or the gap between the two 3/4 in. legs of the "E" studs. Free edge of end panels attached to long leg of vertical "J" - runners with 1-5/8 in. long Type S steel screws spaced not greater than 12 in. OC. When wall height exceeds liner panel length, liner panel may be butted to extend to the full height of the wall. Horizontal joints need not be backed by steel framing. In System I, butt joints in liner panels are staggered min 36 in. Butt joints backed with 6 in. by 22 in. strips of 3/4 in. thick gypsum wallboard (Item 4). Wallboard strips centered over butt joints and secured to liner panels with six 1-1/2 in. long Type G steel screws, three screws along the 22 in. dimension at the top and bottom of the strips.

System A — 1 Hr

CGC INC — Type SI X

Gypsum panels with beveled, square or tapered edges, nom 5/8 in. thick, 48 in. or 1200 mm wide, applied vertically or horizontally. If applied vertically, 1/2- and Type S steel screws spaced 12 in. when installed vertically or 8 in OC when installed horizontally. Horizontal joints need not be backed by steel framing.

UNITED STATES GYPSUM CO — Types SLX

USG MEXICO S A DE C V — Types SLX

CGC INC — Types AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, ULX, WRC, WRX

UNITED STATES GYPSUM CO — Types AR, C, FRX-G, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SGX, SHX, ULX, WRC, WRX, USGX

USG MEXICO S A DE C V — Types AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, ULX, WRC, WRX

System B — 2 Hr

Gypsum panels, with beveled, square or tapered edges, nom 1/2 in. or 5/8 in. thick, 48 in. or 1200 mm wide, applied vertically or horizontally in two layers. Inner or base layer attached to studs with 1 in. long Type S steel screws spaced 24 in. OC when installed vertically or 16 in. OC when installed horizontally. Outer or face layer attached to studs with 1-5/8 in. long Type S steel screws spaced 12 in. OC when installed vertically and staggered 12 in. from base layer screws or 8 in. OC when installed horizontally and staggered 8 in. from base layer screws. Horizontal joints between inner and outer layers staggered a min of 12 in. Horizontal joints need not be backed by steel framing. Vertical joints centered over studs and staggered 24 in.

CGC INC — 1/2 in. Type C, IP-X2, IPC-AR or WRC; 5/8 in. Types AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, ULX, WRC, WRX

UNITED STATES GYPSUM CO — 1/2 in. Types C, IP-X2, IPC-AR, or WRC; 5/8 in. Types AR, C, FRX-G, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SGX, SHX, ULX, USGX, WRC, WRX

USG MEXICO S A DE C V — 1/2 in. Types C, IP-X2, IPC-AR or WRC; 5/8 in. Types AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, ULX, WRC, WRX4A. **Gypsum Board*** — (As an alternate to Item 4 Systems A, B, C, D, E, G, H, and I when used as the base layer, For direct attachment only) - Nom 5/8 in. or ¾ in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over 20 MSG steel studs and staggered min 1 stud cavity on opposite sides of studs. See Items 1, 2, 2A, 2B and 2D. Wallboard secured to studs with 1-1/4 in. long Type S-12 steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. For Joint Compound see Item 5. To be used with Lead Batten Strips (see Item 9) or Lead Discs or Tabs (see Item 10).

RAY-BAR ENGINEERING CORP — Type RB-LBG

4B. **Gypsum Board*** — (As an alternate to Item 4 Systems A, B, C, D, E, G, H, and I when used as the base layer, For direct attachment only) - Nominal 5/8 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over studs and staggered min 1 stud cavity on opposite sides of studs. Wallboard secured to studs with 1-1/4 in. long Type S-12 (or #6 by 1-1/4 in. long bugle head fine driller) steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field.

NEW ENGLAND LEAD BURNING CO INC, DBA NELCO — Type Nelco

4C. **Gypsum Board*** — (As an alternate to Item 4 Systems A, B, C, D, E, G, H, and I when used as the base layer, For direct attachment only) - Nom 5/8 or 3/4 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over 20 MSG steel studs and staggered min 1 stud cavity on opposite sides of studs. See Items 1, 2, 2A, 2B and 2D. Wallboard secured to studs with 1-1/4 in. long Type S-12 steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. For Joint Compound see Item 5. To be used with Lead Batten Strips (see Item 9A) or Lead Discs (see Item 10A). Lead batten strips required behind vertical joints of lead backed gypsum wallboard and optional at remaining stud locations. Lead batten strips, min 2 in. wide, max 10 ft long with a max thickness of 0.140 in. placed on the face of studs and attached to the stud with two 1 in. long Type S-8 pan head steel screws, one at the top of the strip and one at the bottom of the strip.

MAYCO INDUSTRIES INC — Type X-Ray Shielded Gypsum

4D. **Gypsum Board*** — (As an alternate to Item 4 Systems A, B, C, D, E, G, H, and I when used as the base layer, For direct attachment only). Nom 5/8 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over studs and staggered min 1 stud cavity on opposite sides of studs. Wallboard secured to studs with 1-1/4 in. long Type S-12 steel screws gypsum panel steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. Lead batten strips required behind vertical joints of lead backed gypsum wallboard and optional at remaining stud locations. Lead batten strips, min 2 in. wide, max 8 ft long with a max thickness of 0.14 in. placed on the face of studs and attached to the stud with construction adhesive and two 1 in. long Type S-12 pan head steel screws, one at the top of the strip and one at the bottom of the strip. Lead discs, nominal 3/8 in. diam by max 0.085 in. thick. Compression fitted or adhered over the screw heads. Lead batten strips and discs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C".

RADIATION PROTECTION PRODUCTS INC — Type RPP - Lead Lined Drywall

5. **Joint Tape and Compound** — (Not Shown)

Systems A, B, C, E, F, G, H, I

Joints on outer layers of gypsum boards (Item 4 and 4A) covered with paper tape and joint compound. Paper tape and joint compound may be omitted when gypsum boards are supplied with square edges. Exposed screw heads covered with joint compound.

6. **Batts and Blankets*** —

Systems A, B, E, F, G, H, I

(Optional) — Mineral wool or glass fiber batts partially or completely filling stud cavity. Any mineral wool or glass fiber batt mineral bearing the UL Classification Marking as to Fire Resistance.

7. **Cementitious Backer Units*** — (System D) — Nom 1/2 or 5/8 in. thick panels, square edge, attached to studs over gypsum wallboard with 1-5/8 in. long, Type S-12, corrosion resistant steel screws spaced 8 in. OC and staggered 8 in. from gypsum wall board screws. Joints covered with glass fiber mesh tape. Vertical joints staggered one stud cavity from gypsum wallboard joints. Horizontal joints staggered a min of 12 in. from the gypsum wallboard joints.

UNITED STATES GYPSUM CO — Type DCB

8. **Laminating Adhesive*** — (Optional, Not Shown) — Used to bond outer layer of Cementitious Backer Units (Item 7) to inner layers of Gypsum Board (Item 4) in System D. ANSI A136.1 Type 1 organic adhesive applied with 1/4 in. square notched trowel. See Adhesives (BYWR) in the Fire Resistance Directory or Adhesives (BJLZ) in the Building Materials Directory for names of Classified companies.

9. **Lead Batten Strips** — (Not Shown, For Use With Item 4A) - Lead batten strips, min 1-1/2 in. wide, max 10 ft long with a max thickness of 0.125 in. Strips placed on the interior face of studs and attached from the exterior face of the stud with two 1 in. long Type S-12 pan head steel screws, one at the top of the strip and one at the bottom of the strip. Lead batten strips to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead batten strips required behind vertical joints of lead backed gypsum wallboard (Item 4A) and optional at remaining stud locations. Required behind vertical joints.

9A. **Lead Batten Strips** — (Not Shown, for use with Item 4C) Lead batten strips, 2 in. wide, max 10 ft long with a max thickness of 0.140 in. Strips placed on the face of studs and attached to the stud with two min. 1 in. long min. Type S-8 pan head steel screws, one at the top of the strip and one at the bottom of the strip or with one min. 1 in. long min. Type S-8 pan head steel screw at the top of the strip. Lead batten strips to have a purity of 99.5% meeting the Federal specification QQ-L-201f, Grades "B, C or D". Lead batten strips required behind vertical joints of lead backed gypsum wallboard (Item 6) and optional at remaining stud locations.

10. **Lead Discs or Tabs** — (Not Shown, For Use With Item 4A) - Used in lieu of or in addition to the lead batten strips (Item 9) or optional at other locations - Max 3/4 in. diam by max 0.125 in. thick lead discs compression fitted or adhered over steel screw heads or max 1/2 in. by 1-1/4 in. by max 0.125 in. thick lead tabs placed on gypsum boards (Item 4A) underneath screw locations prior to the installation of the screws. Lead discs or tabs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C".

10A. **Lead Discs** — (Not Shown, for use with Item 4C) Max 5/16 in. diam by max 0.140 in. thick lead discs compression fitted or adhered over steel screw heads. Lead discs to have a purity of 99.5% meeting the Federal Specification QQ-L-201f, Grades "B, C or D".

11. **Lead Batten Strips** — (Not Shown, For Use With Item 4B) Lead batten strips, 2 in. wide, max 10 ft long with a max thickness of 0.142 in. Strips placed on the face of studs and attached to the stud with two min. 1 in. long min. Type S-8 pan head steel screws, one at the top of the strip and one at the bottom of the strip or with one min. 1 in. long min. Type S-8 pan head steel screw at the top of the strip. Lead batten strips to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead batten strips required behind vertical joints of lead backed gypsum wallboard (Item 4B) and optional at remaining stud locations.

12. **Lead Tabs** — (Not Shown, For Use With Item 4B) 2 in. wide, 5 in. long with a max thickness of 0.142 in. Tabs friction-fit around front face of stud, the stud folded back flange, and the back face of the stud. Tabs required at each location where a screw (that secures the gypsum boards, Item 4B) will penetrate the steel stud. Lead tabs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead tabs may be held in place with standard adhesive tape if necessary.

Fire Resistance Ratings - ANSI/UL 263

Design/System/Construction/Assembly Usage Disclaimer

- Authorities Having Jurisdiction should be consulted in all cases as to the particular requirements covering the installation and use of UL Certified products, equipment, system, devices, and materials.
- Authorities Having Jurisdiction should be consulted before construction.
- Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.
- When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.
- Only products which bear UL's Mark are considered Certified.

BXUV - Fire Resistance Ratings - ANSI/UL 263

BXUV7 - Fire Resistance Ratings - CAN/ULC-S101 Certified for Canada

See General Information for Fire-resistance Ratings - ANSI/UL 263

See General Information for Fire Resistance Ratings - CAN/ULC-S101 Certified for Canada

Design No. U905

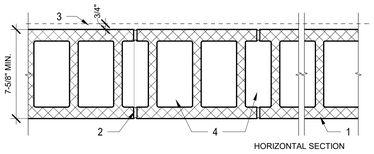
March 11, 2016

Bearing Wall Rating — 2 HR.

Nonbearing Wall Rating — 2 HR.

This design was evaluated using a load design method other than the Limit States Design Method (e.g., Working Stress Design Method). For jurisdictions employing the Limit States Design Method, such as Canada, a load restriction factor shall be used — See Guide BXUV or BXUV7

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**



HORIZONTAL SECTION

1. **Concrete Blocks*** — Various designs. Classification D-2 (2 hr).

See **Concrete Blocks** category for list of eligible manufacturers.

2. **Mortar** — Blocks laid in full bed of mortar, nom. 3/8 in. thick, of not less than 2-1/4 and not more than 3-1/2 parts of clean sharp sand to 1 part Portland cement (proportioned by volume) and not more than 50 percent hydrated lime (by cement volume). Vertical joints staggered.

3. **Portland Cement Stucco or Gypsum Plaster** — Add 1/2 hr to classification if used. Where combustible members are framed in wall, plaster or stucco must be applied on the face opposite framing to achieve a max. Classification of 1-1/2 hr. Attached to concrete blocks (Item 1).

4. **Loose Masonry Fill** — If all core spaces are filled with loose dry expanded slag, expanded clay or shale (Rotary Kiln Process), water repellant vermiculite masonry fill insulation, or silicone treated perlite loose fill insulation add 2 hr to classification.

5. **Foamed Plastic*** — (Optional-Not Shown) — 1-1/2 in. thick max, 4 ft wide sheathing attached to concrete blocks (Item 1).

ATLAS ROOFING CORP — "EnergyShield Pro Wall Insulation" and "EnergyShield Pro 2 Wall Insulation"

CARLISLE COATINGS & WATERPROOFING INC — Type R2+ Sheath

FIRESTONE BUILDING PRODUCTS CO L L C — "Enverge™ CI Foil Exterior Wall Insulation" and "Enverge™ CI Glass Exterior Wall Insulation"

HUNTER PANELS — Types Xci-Class A, Xci 286

RMAX OPERATING L L C — "TSX-8500", "TSX-8510", "Thermasheath-XP", "ECOMAXci", "Thermasheath-3", "Durasheath-3"

THE DOW CHEMICAL CO — Types Thermax Sheathing, Thermax Light Duty Insulation, Thermax Heavy Duty Insulation, Thermax Metal Building Board, Thermax White Finish Insulation, Thermax ci Exterior Insulation, Thermax XARMOR ci Exterior Insulation, Thermax IH Insulation, Thermax Plus Liner Panel, Thermax Heavy Duty Plus (HDP) and TUFF-R™ ci Insulation

5A. **Building Units** — As an alternate to Items 5, min. 1-in thick polyisocyanurate composite foamed plastic insulation boards, nom. 48 by 48 or 96 in.

RMAX OPERATING L L C — "Thermasheath-SI", "ECOBASEci", "ThermaBase-CI"

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

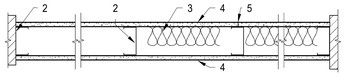
*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**



1. **Floor and Ceiling Runners** — (Not shown) — For use with Item 2 - Channel shaped, fabricated from min 25 MSG corrosion-protected steel, min depth to accommodate stud size, with min 1-1/4 in. long legs, attached to floor and ceiling with fasteners 24 in. OC max.

1A. **Framing Members*** - Floor and Ceiling Runner — Not shown - In lieu of Item 1 — For use with Item 2B, proprietary channel shaped runners, 3-5/8 in. deep attached to floor and ceiling with fasteners 24 in. OC max.

CALIFORNIA EXPANDED METAL PRODUCTS CO — Viper25™ Track

CRACO MFG INC — SmartTrack25™

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Viper25™ Track

PHILLIPS MFG CO L L C — Viper25™ Track

1B. **Framing Members*** - Floor and Ceiling Runner — Not shown - In lieu of Item 1 — For use with Item 2C, proprietary channel shaped runners, 1-1/4 in. wide by 3-5/8 in. deep fabricated from min 0.020 in. thick galv steel, attached to floor and ceiling with fasteners spaced 24 in. OC max.

CALIFORNIA EXPANDED METAL PRODUCTS CO — Viper20™ Track

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Viper20™ Track

PHILLIPS MFG CO L L C — Viper20™ Track

1C. **Framing Members*** — Floor and Ceiling Runners — (Not shown) — In lieu of Item 1 - Channel shaped, attached to floor and ceiling with fasteners 24 in. OC. max.

ALLSTEEL & GYPSUM PRODUCTS INC — Type SUPREME Framing System

CONSOLIDATED FABRICATORS CORP, BUILDING PRODUCTS DIV — Type SUPREME Framing System

QUAIL RUN BUILDING MATERIALS INC — Type SUPREME Framing System

SCAFCO STEEL STUD MANUFACTURING CO — Type SUPREME Framing System

STEEL CONSTRUCTION SYSTEMS INC — Type SUPREME Framing System

UNITED METAL PRODUCTS INC — Type SUPREME Framing System

1D. **Floor and Ceiling Runners** — (Not shown)—For use with Item 2A- Channel shaped, fabricated from min 20 MSG corrosion-protected or galv steel, min depth to accommodate stud size, with min 1 in. long legs, attached to floor and ceiling with fasteners spaced max 24 in. OC.

1E. **Framing Members*** — Floor and Ceiling Runners — (Not shown, As an alternate to Item 1) — For use with Items 2E, 5F or 5G or 5I only, channel shaped, fabricated from min. 0.015 in. (min bare metal thickness) galvanized steel, attached to floor and ceiling with fasteners 24 in. OC. max.

CLARKDIETRICH BUILDING SYSTEMS — CD ProTRAK

DMFCWBS L L C — ProTRAK

MBA METAL FRAMING — ProTRAK

RAM SALES L L C — Ram ProTRAK

STEEL STRUCTURAL SYSTEMS L L C — Tri-S ProTRAK

1F. **Framing Members*** - Floor and Ceiling Runner — Not shown - In lieu of Item 1 — For use with Item 2F, proprietary channel shaped runners, minimum width to accommodate stud size, with 1- 1/8 in. long legs fabricated from min 0.015 in. (min bare metal thickness) galv steel, attached to floor and ceiling with fasteners spaced 24 in. OC max.

SUPER STUD BUILDING PRODUCTS — The Edge

1G. **Framing Members*** - Floor and Ceiling Runner — For use with Item 2G, proprietary channel shaped runners, minimum width to accommodate stud size attached to floor and ceiling with fasteners 24 in. OC max.

STUDCO BUILDING SYSTEMS — CROCSTUD Track

1H. **Floor and Ceiling Runners** — (Not shown) — Channel shaped, fabricated from min 0.02 in. galv steel, min width to accommodate stud size, with min 1 in. long legs, for use with studs specified below and fabricated from min 0.02 in. galv steel or thicker, attached to floor and ceiling with fasteners spaced max 24 in. OC.

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Viper20™ Track VT100.

1I. **Framing Members*** — Floor and Ceiling Runners — (Not shown, As an alternate to Item 1) — For use with Items 2H, channel shaped, fabricated from min. 0.015 in. (min bare metal thickness) galvanized steel, attached to floor and ceiling with fasteners 24 in. OC. max.

TELLING INDUSTRIES L L C — TRUE-TRACK™

1J. **Framing Members*** - Floor and Ceiling Runner — Not shown - In lieu of Item 1 — For use with Item 2I, proprietary channel shaped runners, 3-5/8 in. deep attached to floor and ceiling with fasteners 24 in. OC max.

TELLING INDUSTRIES L L C — Viper25™ Track

1K. **Framing Members*** - Floor and Ceiling Runner — Not shown - In lieu of Item 1 — For use with Item 2J, proprietary channel shaped runners, 1-1/4 in. wide by 3-5/8 in. deep fabricated from min 0.020 in. thick galv steel, attached to floor and ceiling with fasteners spaced 24 in. OC max.

TELLING INDUSTRIES L L C — Viper20™ Track

2. **Steel Studs** — Channel shaped, fabricated from min 25 MSG corrosion-protected steel, min depth as indicated under Item 5, spaced a max of 24 in. OC. Studs to be cut 3/8 to 3/4 in. less than assembly height.

2A. **Steel Studs** — (As an alternate to Item 2, For use with Items 5B, 5E, 5H and 5J) Channel shaped, fabricated from min 20 MSG corrosion-protected or galv steel, 3-1/2 in. min depth, spaced a max of 16 in. OC. Studs friction-fit into floor and ceiling runners. Studs to be cut 5/8 to 3/4 in. less than assembly height.

2B. **Framing Members*** - Steel Studs — (As an alternate to Item 2, For use with Items 5C, 5I or 5K) - Proprietary channel shaped studs, 3-5/8 in. deep spaced a max of 24 in. OC. Studs to be cut 3/4 in less than the assembly height and installed with a 1/2 in. gap between the end of the stud and track at the bottom of the wall. For direct attachment of gypsum board only.

CALIFORNIA EXPANDED METAL PRODUCTS CO — Viper25™

CRACO MFG INC — SmartStud25™

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Viper25™

PHILLIPS MFG CO L L C — Viper25™

2C. **Framing Members*** - Steel Studs — Not shown - In lieu of Item 2 — proprietary channel shaped steel studs, min depth as indicated under Item 5, spaced a max if 24 in. OC, fabricated from min 0.020 in. thick galv steel. Studs cut 3/8 in. to 3/4 in. less in lengths than assembly heights.

CALIFORNIA EXPANDED METAL PRODUCTS CO — Viper20™

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Viper20™

PHILLIPS MFG CO L L C — Viper20™

2D. **Framing Members*** — Steel Studs — In lieu of Item 2 - Channel shaped studs, min depth as indicated under Item 5, spaced a max of 24 in. OC. Studs to be cut 3/4 in. less than assembly height.

ALLSTEEL & GYPSUM PRODUCTS INC — Type SUPREME Framing System

2E. **Framing Members*** — Steel Studs — (Not shown, As an alternate to Item 2) —For use with Items 5F or 5G or 5I only, channel shaped studs, min depth as indicated under Item 5F, 5G or 5I, fabricated from min. 0.015 in. (min bare metal thickness) galvanized steel, spaced a max of 24 in. OC. Studs to be cut 3/4 in. less than assembly height.

CLARKDIETRICH BUILDING SYSTEMS — CD ProSTUD

DMFCWBS L L C — ProSTUD

MBA METAL FRAMING — ProSTUD

RAM SALES L L C — Ram ProSTUD

STEEL STRUCTURAL SYSTEMS L L C — Tri-S ProSTUD

2F. **Framing Members*** - Steel Studs — Not shown - In lieu of Item 2 — proprietary channel shaped steel studs, minimum width indicated under Item 5, 1-1/4 in. deep fabricated from min 0.015 in. (min bare metal thickness) galvanized steel. Studs 3/8 in. to 3/4 in. less in lengths than assembly heights.

SUPER STUD BUILDING PRODUCTS — The Edge

2G. **Framing Members*** - Steel Studs — Not shown - In lieu of Item 2 - proprietary channel shaped studs, minimum width indicated under Item 5, Studs to be cut 3/8 to 3/4 in less than the assembly height.

STUDCO BUILDING SYSTEMS — CROCSTUD

2H. **Framing Members*** — Steel Studs — (Not shown, As an alternate to Item 2) — Fabricated from min. 0.015 in. (min bare metal thickness) galvanized steel, spaced a max of 24 in. OC. Studs to be cut 3/4 in. less than assembly height.

TELLING INDUSTRIES L L C — TRUE-STUD™

2I. **Framing Members*** - Steel Studs — (As an alternate to Item 2, For use with Items 5C or 5L) - Proprietary channel shaped studs, 3-5/8 in. deep spaced a max of 24 in. OC. Studs to be cut 3/4 in less than the assembly height and installed with a ½ in. gap between the end of the stud and track at the bottom of the wall. For direct attachment of gypsum board only.

TELLING INDUSTRIES L L C — Viper25™

2J. **Framing Members*** - Metal Studs — Not shown - In lieu of Item 2 — proprietary channel shaped steel studs, min depth as indicated under Item 5, spaced a max if 24 in. OC, fabricated from min 0.020 in. thick galv steel. Studs cut 3/8 in. to 3/4 in. less in lengths than assembly heights

TELLING INDUSTRIES L L C — Viper20™

2K. **Framing Members*** — Steel Studs — As an alternate to Item 2 - For use with Item 1, channel shaped studs, fabricated from min 25 MSG corrosion-protected steel, min depth as indicated under Item 5, spaced a max of 24 in. OC. Studs to be cut 3/8 to 3/4 in. less than assembly height.

EB MéTAL INC — EB Stud

2L. **Framing Members*** — Steel Studs — As an alternate to Item 2 - For use with Item 1, channel shaped studs, fabricated from min 25 MSG corrosion-protected steel, min depth as indicated under Item 5, spaced a max of 24 in. OC. Studs to be cut 3/8 to 3/4 in. less than assembly height.

OLMAR SUPPLY INC — PRIMESTUD

3. **Wood Structural Panel Sheathing** — (Optional, For use with Item 5 Only.)- (Not Shown) - 4 ft wide, 7/16 in. thick oriented strand board (OSB) or 15/32 in. thick structural 1 sheathing (plywood) complying with DOC PS1 or PS2, or APA Standard PRP-108, manufactured with exterior glue, applied horizontally or vertically to the steel studs. Vertical joints centered on studs, and staggered min stud space from wallboard joints. Attached to studs with flat-head self-drilling tapping screws with a min. head diam. of 0.292 in. at maximum 6 in. OC. in the perimeter and 12 in. OC. in the field. When used, fastener lengths for gypsum panels increased by min. 1/2 in.

4. **Batts and Blankets*** — (Required as indicated under Item 5) — Mineral wool batts, friction fitted between studs and runners. Min nom thickness as indicated under Item 5. See Batts and Blankets (BKNV or BZJZ) Categories for names of Classified companies.

4A. **Batts and Blankets*** — (Optional) — Placed in stud cavities, any glass fiber or mineral wool insulation bearing the UL Classification Marking as to Surface Burning Characteristics and/or Fire Resistance. See Batts and Blankets (BKNV or BZJZ) Categories for names of Classified companies.

4B. **Batts and Blankets*** — Placed in stud cavities, any 3-1/2 in. thick glass fiber insulation bearing the UL Classification Marking as to Surface Burning Characteristics and/or Fire Resistance. See Batts and Blankets (BKNV or BZJZ) Categories for names of Classified companies.

5. **Gypsum Board*** — Gypsum panels with beveled, square or tapered edges, applied vertically or horizontally. Vertical joints centered over studs and staggered one stud cavity on opposite sides of studs. Vertical joints in adjacent layers (multilayer systems) staggered one stud cavity. Horizontal joints need not be backed by steel framing. Horizontal edge joints and horizontal butt joints on opposite sides of studs need not be staggered. Horizontal edge joints and horizontal butt joints in adjacent layers (multilayer systems) staggered a min of 12 in. The thickness and number of layers for the 1 hr, 2 hr, 3 hr and 4 hr ratings are as follows:

Gypsum Board Protection on Each Side of Wall

Rating, Hr	Min Stud Depth, in.	No. of Layers & Thkns of Panel
Insulation (Item 4)	Items 2, 2C, 2D, 2F and 2G	
1	1 layer, 5/8 in. thick	3-1/2
Optional		
1	1 layer, 1/2 in. thick	2-1/2
Optional		
1	1 layer, 3/4 in. thick	1-1/2 in.
Optional		
2	2 layers, 1/2 in. thick	1-5/8
Optional		
2	2 layers, 5/8 in. thick	1-5/8
Optional		
2	1 layer, 3/4 in. thick	3-1/2
3	3 layers, 1/2 in. thick	3 in.
Optional		
3	2 layers, 3/4 in. thick	1-5/8
Optional		
4	4 layers, 1/2 in. thick	1-5/8
Optional		
4	2 layers, 3/4 in. thick	1-5/8
Optional		

CGC INC — 1/2 in. thick Type C, IP-X2 or IPC-AR; WRC, 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX or WRC; 3/4 in. thick Types IP-X3 or ULTRACODE

UNITED STATES GYSUM CO — 1/2 in. thick Type C, IP-X2, IPC-AR or WRC; 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX, IP-X1, AR, C, FRX-G, IP-AR, IP-X2, IPC-AR ; 3/4 in. thick Types IP-X3 or ULTRACODE

USG MEXICO S A DE C V — 1/2 in. thick Type C, IP-X2, IPC-AR or WRC; 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX, WRC or; 3/4 in. thick Types IP-X3 or ULTRACODE

When Item 7B, Steel Framing Members*, is used, Nonbearing Wall Rating is limited to 1 Hr. Min. stud depth is 3-1/2 in., min. thickness of insulation (Item 4) is 3 in., and two layers of gypsum board panels (1/2 in. or 5/8 in. thick) shall be attached to furring channels as described in Item 6. One layer of gypsum board panels (1/2 in. or 5/8 in. thick) attached to opposite side of stud without furring channels as described in Item 6.

5A. **Gypsum Board*** — (As an alternate to Item 5) — 5/8 in. thick, 24 to 54 in. wide, applied horizontally as the outer layer to one side of the assembly. Secured as described in Item 6.

CGC INC — Type SHX.

UNITED STATES GYPSUM CO — Type FRX-G, SHX.

USG MEXICO S A DE C V — Type SHX.

5B. **Gypsum Board*** — (Not Shown) - As an alternate to Item 5 when used as the base layer on one or both sides of wall when 5/8 in or ⅝ in. thick products are specified. For direct attachment only to steel studs Item 2A, (not to be used with Item 3) - Nom 5/8 in. or ⅝ in. may be used as alternate to all 5/8 in. or ⅝ in. shown in Item 5, Wallboard Protection on Each Side of Wall table. Nom 5/8 in. or ⅝ in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over studs and staggered min 1 stud cavity on opposite sides of studs. Gypsum board secured to 20 MSG steel studs Item 2A with 1-1/4 in. long Type S-12 steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. To be used with Lead Batten Strips (see Item 11) or Lead Discs or Tabs (see Item 12).

RAY-BAR ENGINEERING CORP — Type RB-LBG

5C. **Gypsum Board*** — (For Use With Item 2B) Rating Limited to 1 Hour. 5/8 in. thick, 48 in. wide, Gypsum panels with beveled, square or tapered edges, applied vertically or horizontally. (Vertical Application) - The gypsum board is to be installed on each side of the studs with 1 in. long Type S coated steel screws spaced 8 in. OC starting 4 in. from the edge of the board at the vertical edges and 12 in. OC starting 6 in. from the edge of the board at the center of each board. Gypsum boards are to be secured to the top and bottom track with screws spaced 8 in. OC starting 4 in. from the board edge. Fasteners shall not penetrate through both the stud and the track at the same time. Vertical joints are to be centered over studs and staggered one stud cavity on opposite sides of studs. (Horizontal Application) - The gypsum board is to be installed on each side of the studs with 1 in. long Type S coated steel screws spaced 8 in. OC starting 4 in. from the edge of the board at the vertical edges and 12 in. OC starting 6 in. from the edge of the board at the center of each board. Gypsum boards are to be secured to the top and bottom track with screws spaced 8 in. OC starting 4 in. from the board edge. Fasteners shall not penetrate through both the stud and the track at the same time. All horizontal joints are to be backed as outlined under section VI of Volume 1 in the Fire Resistive Directory.

CGC INC — Type SCX.

UNITED STATES GYPSUM CO — Type SCX, SGX.

USG MEXICO S A DE C V — Type SCX.

5D. **Gypsum Board*** — (As an alternate to Item 5) — 5/8 in. thick, 48 in. wide, applied vertically or horizontally. Secured as described in Item 6. For use with Items 1 and 2 only.

UNITED STATES GYPSUM CO — Type USGX.

5E. **Gypsum Board*** — (Not Shown) - (As an alternate to Item 5 when used as the base layer on one or both sides of wall when 1/2 in. or 5/8 in thick products are specified, For direct attachment only to steel studs Item 2A, not to be used with Item 3). Nominal 5/8 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over studs and staggered min 1 stud cavity on opposite sides of studs. Wallboard secured to studs with 1-1/4 in. long Type S-12 (or No. 6 by 1-1/4 in. long bugle head fine driller) steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field.

NEW ENGLAND LEAD BURNING CO INC, DBA NELCO — Nelco

5F. **Gypsum Board*** — (As an alternate to Item 5) — For use with Items 1E and 2E and limited to 1 Hour Rating only, Gypsum panels with beveled, square or tapered edges, applied vertically, and fastened to the steel studs with 1 in. long Type S screws spaced 8 in. OC along vertical and bottom edges and 12 in. OC in the field. Vertical joints centered over studs and staggered one stud cavity on opposite sides of studs. Steel stud depth shall be a minimum 3-5/8 in.

UNITED STATES GYPSUM CO — 5/8 in. thick Type SCX, SGX.

5G. **Gypsum Board*** — (As an alternate to Item 5) — For use with Items 1E and 2E only, Gypsum panels with beveled, square or tapered edges, applied vertically or horizontally, as specified in the table below and fastened to the steel studs as described in Item 6. Vertical joints centered over studs and staggered one stud cavity on opposite sides of studs. Vertical joints in adjacent layers (multilayer systems) staggered one stud cavity. Horizontal joints need not be backed by steel framing. Horizontal edge joints and horizontal butt joints on opposite sides of studs need not be staggered. Horizontal edge joints and horizontal butt joints in adjacent layers (multilayer systems) staggered a min of 12 in. The thickness and number of layers for the 2 hr, 3 hr and 4 hr ratings are as follows:

Gypsum Board Protection on Each Side of Wall

Rating, Hr	Min Stud Depth, in.	No. of Layers & Thkns of Panel
Insulation (Item 4)	Item 2E	
2	1-5/8	2 layers, 1/2 in. thick
Optional		
2	1-5/8	2 layers, 5/8 in. thick
Optional		
3	1-5/8	3 layers, 1/2 in. thick
Optional		
3	1-5/8	3 layers, 5/8 in. thick
Optional		
4	1-5/8	4 layers, 1/2 in. thick
Optional		
4	1-5/8	2 layers, 5/8 in. thick

CGC INC — 1/2 in. thick Type C, IP-X2 or IPC-AR; 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX or WRC; 3/4 in. thick Types IP-X3 or ULTRACODE

UNITED STATES GYPSUM CO — 1/2 in. thick Type C, IP-X2, IPC-AR or WRC; 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX, IP-X1, AR, C, FRX-G, IP-AR, IP-X2, IPC-AR ; 3/4 in. thick Types IP-X3 or ULTRACODE

USG MEXICO S A DE C V — 1/2 in. thick Type C, IP-X2, IPC-AR or WRC; 5/8 in. thick Type AR, C, IP-AR, IP-X1, IP-X2, IPC-AR, SCX, SHX, WRX, WRC or; 3/4 in. thick Types IP-X3 or ULTRACODE

5H. **Gypsum Board*** — (Not Shown) - (As an alternate to Item 5 when used as the base layer on one or both sides of wall when 5/8 or 3/4 in thick products are specified. For direct attachment only to steel studs Item 2A, (not to be used with Item 3) - Nom 5/8 or 3/4 in. may be used as alternate to all 5/8 or 3/4 in. shown in Item 5, Wallboard Protection on Each Side of Wall table. Nom 5/8 or 3/4 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over 20 MSG steel studs and staggered min 1 stud cavity on opposite sides of studs. Wallboard secured to studs with 1-1/4 in. long Type S-12 steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. Gypsum board secured to 20 MSG steel studs Item 2B with 1-1/4 in. long Type S-12 steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. For Joint Compound see Item 5. To be used with Lead Batten Strips (see Item 11A) or Lead Discs (see Item 12A).

MAYCO INDUSTRIES INC — Type X-Ray Shielded Gypsum

5I. **Gypsum Board*** — (As an alternate to Item 5) - Nom. 5/8 in. thick gypsum panels with beveled, square or tapered edges installed as described in Item 5. Steel stud minimum depth shall be as indicated in Item 5.

CGC INC — Type ULX

UNITED STATES GYPSUM CO — Type ULX

USG MEXICO S A DE C V — Type ULX

5J. **Gypsum Board*** — (Not Shown) - (As an alternate to Item 5 when used as the base layer on one or both sides of wall when 1/2 in. or 5/8 in thick products are specified, For direct attachment only to steel studs Item 2A, not to be used with Item 3). Nom 5/8 in. thick lead backed gypsum panels with beveled, square or tapered edges, applied vertically. Vertical joints centered over studs and staggered min 1 stud cavity on opposite sides of studs. Wallboard secured to studs with 1-1/4 in. long Type S-12 steel screws gypsum panel steel screws spaced 8 in. OC at perimeter and 12 in. OC in the field. Lead batten strips required behind vertical joints of lead backed gypsum wallboard and optional at remaining stud locations. Lead batten strips, min 2 in. wide, max 8 ft long with a max thickness of 0.14 in. placed on the face of studs and attached to the stud with construction adhesive and two 1 in. long Type S-12 pan head steel screws, one at the top of the strip and one at the bottom of the strip. Lead discs, nominal 3/8 in. diam by max 0.085 in. thick, Compression fitted or adhered over the screw heads. Lead batten strips and discs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C".

RADIATION PROTECTION PRODUCTS INC — Type RPP - Lead Lined Drywall

5K. **Gypsum Board*** — Nom. 5/8 in. thick gypsum panels with beveled, square or tapered edges installed as described in Item 5. Insulation (Item 4B) required. The steel stud size and type and number of layers are as follows:

Gypsum Board Protection on Each Side of Wall

Rating, Hr	Min Stud Depth, in.	No. of Layers & Thickness of Panel
	Items 2, 2B	
1	1 layer, 5/8 in. thick	3-5/8

UNITED STATES GYPSUM CO — 5/8 in. thick Type ULIX

6. **Fasteners** — (Not shown) — For use with Items 2 and 2F - Type S or S-12 steel screws used to attach panels to studs (Item 2) or furring channels (Item 7). **Single layer systems**: 1 in. long for 1/2 and 5/8 in. thick panels or 1-1/4 in. long for 3/4 in. thick panels, spaced 8 in. OC when panels are applied horizontally, or 8 in. OC along vertical and bottom edges and 12 in. OC in the field when panels are applied vertically. **Two layer systems**: First layer- 1 in. long for 1/2 and 5/8 in. thick panels or 1-1/4 in. long for 3/4 in. thick panels, spaced 16 in. OC. Second layer- 1-5/8 in. long for 1/2 in., 5/8 in. thick panels or 2-1/4 in. long for 3/4 in. thick panels, spaced 16 in. OC with screws offset 8 in. from first layer.**Three-layer systems**: First layer- 1 in. long for 1/2 in., 5/8 in. thick panels, spaced 24 in. OC. Second layer- 1-5/8 in. long for 1/2 in., 5/8 in. thick panels, spaced 24 in. OC. Third layer- 2-1/4 in. long for 1/2 in., 5/8 in. thick panels or 2-5/8 in. long for 5/8 in. thick panels, spaced 12 in. OC. Screws offset min 6 in. from layer below. **Four-layer systems**. First layer- 1 in. long for 1/2 in., 5/8 in. thick panels, spaced 24 in. OC. Second layer- 1-5/8 in. long for 1/2 in., 5/8 in. thick panels, spaced 24 in. OC. Third layer- 2-1/4 in. long for 1/2 in. thick panels or 2-5/8 in. long for 5/8 in. thick panels, spaced 24 in. OC. Fourth layer- 2-5/8 in. long for 1/2 in. thick panels or 3 in. long for 5/8 in. thick panels, spaced 12 in. OC. Screws offset min 6 in. from layer below.

7. **Furring Channels** — (Optional, not shown, for single or double layer systems) — Resilient furring channels fabricated from min 25 MSG corrosion-protected steel, spaced vertically a max of 24 in. OC. Flange portion attached to each intersecting stud with 1/2 in. long Type S-12 steel screws. Not for use with Item 5A and 5E.

7A. **Framing Members*** — (Optional on one or both sides, not shown, for single or double layer systems) — As an alternate to Item 7, furring channels and Steel Framing Members as described below:

a. **Furring Channels** — Formed of No. 25 MSG galv steel. 2-9/16 in. or 2-23/32 in. wide by 7/8 in. deep, spaced max. 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Gypsum board attached to furring channels as described in Item 6. Not for use with Item 5A and 5E.

b. **Steel Framing Members*** — Used to attach furring channels (Item 7Aa) to studs (Item 2). Clips spaced max. 48 in. OC. RSIC-1 and RSIC-1 (2.75) clips secured to studs with No. 8 x 1-1/2 in. minimum self-drilling, S-12 steel screw through center grommet. RSIC-V and RSIC-V (2.75) clips secured to studs with No. 8 x 9/16 in. minimum self-drilling, S-12 steel screw through the center hole. Furring channels are friction fitted into clips. RSIC-1 and RSIC-V clips for use with 2-9/16 in. wide furring channels. RSIC-1 (2.75) and RSIC-V (2.75) clips for use with 2-23/32 in. wide furring channels.

PAC INTERNATIONAL INC — Types RSIC-1, RSIC-V, RSIC-1 (2.75), RSIC-V (2.75).

7B. **Framing Members*** — (Optional, Not Shown) — As an alternate to Item 7, for single or double layer systems, furring channels and Steel Framing Members on only one side of studs as described below:

a. **Furring Channels** — Formed of No. 25 MSG galv steel, spaced 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Batts and Blankets placed in stud cavity as described in Item 5. Two layers of gypsum board attached to furring channels as described in Item 5. Not for use with Item 5A and 5E.

b. **Steel Framing Members*** — Used to attach furring channels (Item 7Ba) to one side of studs (Item 2) only. Clips spaced 48 in. OC., and secured to studs with two No. 8 x 2-1/2 in. coarse drywall screws, one through the hole at each end of the clip. Furring channels are friction fitted into clips.

KINETICS NOISE CONTROL INC — Type Isomax

7C. **Framing Members*** — (Not Shown) — (Optional on one or both sides, not shown, for single or double layer systems) — As an alternate to Item 7, furring channels and Steel Framing Members as described below:

a. **Furring Channels** — Formed of No. 25 MSG galv steel. 2-3/8 in. wide by 7/8 in. deep, spaced max. 24 in. OC perpendicular to studs. Channels secured to studs as described in Item b. Gypsum board attached to furring channels as described in Item 6. Not for use with Item 5A and 5E.

b. **Steel Framing Members*** — Used to attach furring channels (Item 7Aa) to studs (Item 2). Clips spaced max. 48 in. OC. GENIECLIPS secured to studs with No. 8 x 1-1/2 in. minimum self-drilling, S-12 steel screw through the center grommet. Furring channels are friction fitted into clips.

PLITEQ INC — Type GENIECLIP

8. **Joint Tape and Compound** — Vinyl or casein, dry or premixed joint compound applied in two coats to joints and screw heads of outer layers. Paper tape, nom 2 in. wide, embedded in first layer of compound over all joints of outer layer panels. Paper tape and joint compound may be omitted when gypsum panels are supplied with a square edge.

9. **Siding, Brick or Stucco** — (Optional, not shown) — Aluminum, vinyl or steel siding, brick veneer or stucco, meeting the requirements of local code agencies, installed over gypsum panels. Brick veneer attached to studs with corrugated metal wall ties attached to each stud with steel screws, not more than each sixth course of brick.

10. **Caulking and Sealants*** — (Optional, not shown) — A bead of acoustical sealant applied around the partition perimeter for sound control.

UNITED STATES GYPSUM CO — Type AS

11. **Lead Batten Strips** — (Not Shown, For Use With Item 5B) - Lead batten strips, min 1-1/2 in. wide, max 10 ft long with a max thickness of 0.125 in. Strips placed on the interior face of studs and attached from the exterior face of the stud with two 1 in. long Type S-12 pan head steel screws, one at the top of the strip and one at the bottom of the strip. Lead batten strips to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead batten strips required behind vertical joints of lead backed gypsum wallboard (Item 5B) and optional at remaining stud locations. Required behind vertical joints.

11A. **Lead Batten Strips** — (Not Shown, For Use With Item 5H) Lead batten strips, 2 in. wide, max 10 ft long with a max thickness of 0.140 in. Strips placed on the face of studs and attached to the stud with two min. 1 in. long min. Type S-8 pan head steel screws, one at the top of the strip and one at the bottom of the strip or with one min. 1 in. long min. Type S-8 pan head steel screw at the top of the strip. Lead batten strips to have a purity of 99.5% meeting the Federal specification QQ-L-201f, Grades "B, C or D". Lead batten strips required behind vertical joints of lead backed gypsum wallboard and optional at remaining stud locations.

12. **Lead Discs or Tabs** — (Not Shown, For Use With Item 5B) - Used in lieu of or in addition to the lead batten strips (Item 11) or optional at other locations - Max 3/4 in. diam by max 0.125 in. thick lead discs compression fitted or adhered over steel screw heads or max 1/2 in. by 1-1/4 in. by max 0.125 in. thick lead tabs placed on gypsum boards (Item 5B) underneath screw locations prior to the installation of the screws. Lead discs or tabs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C".

12A. **Lead Discs** — (Not Shown, for use with Item 5H) Max 5/16 in. diam by max 0.140 in. thick lead discs compression fitted or adhered over steel screw heads. Lead discs to have a purity of 99.5% meeting the Federal Specification QQ-L-201f, Grades "B, C or D".

13. **Lead Batten Strips** — (Not Shown, For Use With Item 5E) Lead batten strips, 2 in. wide, max 10 ft long with a max thickness of 0.142 in. Strips placed on the face of studs and attached to the stud with two min. 1 in. long min. Type S-8 pan head steel screws, one at the top of the strip and one at the bottom of the strip or with one min. 1 in. long min. Type S-8 pan head steel screw at the top of the strip. Lead batten strips to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead batten strips required behind vertical joints of lead backed gypsum wallboard (Item 5E) and optional at remaining stud locations.

14. **Lead Tabs** — (Not Shown, For Use With Item 5E) 2 in. wide, 5 in. long with a max thickness of 0.142 in. Tabs friction-fit around front face of stud, the stud folded back flange, and the back face of the stud. Tabs required at each location where a screw (that secures the gypsum boards, Item 5E) will penetrate the steel stud. Lead tabs to have a purity of 99.9% meeting the Federal specification QQ-L-201f, Grade "C". Lead tabs may be held in place with standard adhesive tape if necessary.

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

XHBN - Joint Systems

System No. HW-D-0286

June 04, 2010

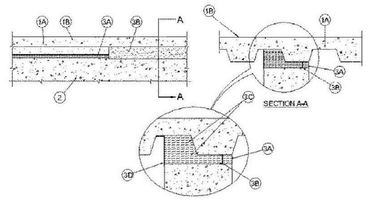
Assembly Rating — 2 Hr

Nominal Joint Width — 2 In.

L Rating At Ambient — Less Than 1 CFM/Lin Ft

L Rating At 400°F — Less Than 1 CFM/Lin Ft

Class II Movement Capabilities — 12.5% Compression



1. **Floor Assembly —** The 2 hr fire-rated fluted steel deck/concrete floor assembly shall be constructed of the materials and in the manner described in the individual D900 Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Form Units* —** Max 3 in. (76 mm) deep galv steel fluted floor units.

B. **Concrete —** Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

2. **Wall Assembly —** Min 8 in. (203 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m^3) structural concrete. Wall shall be installed parallel with the flutes of the steel floor and form units (Item 1A). Wall may also be constructed of any UL Classified 2 hr fire rated **Concrete Blocks***. When wall is constructed of concrete blocks, the top course of block shall be filled with concrete, grout or mortar.

See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Joint System — Max separation between bottom of spray-applied fire resistive and top of the wall at time of installation of joint system is 2 in. (51 mm). The joint system is designed to accommodate a max 12.5 percent compression or extension from its installed width.** The joint system consists of the following:

A. **Forming Material* —** Min 4 pcf (64 kg/m^3) mineral wool batt insulation cut into strips min 2 in. (51 mm) wide compressed 33 percent in thickness and inserted into the gap between the top of the wall and the bottom of the floor units flush with one surface of the wall.

ROCK WOOL MANUFACTURING CO — Delta Board

B. **Fill, Void or Cavity Material* —** Min 1/8 in. (3.2 mm) wet thickness (min 1/16 in. or 1.6 mm dry thickness) of fill material sprayed or troweled into joint to completely cover mineral wool forming material and to overlap a min of 1/2 in. (13 mm) onto wall and steel deck within joint cavity.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP672 Firestop Spray

C. **Forming Material* —** Min 4 pcf (64 kg/m^3) mineral wool batt insulation cut into strips min 6 in. (152 mm) wide, compressed 33 percent in thickness and inserted into the gap between the top of the wall and the bottom of the floor units flush with the installed forming material Item 3A. When the void beneath the steel deck is located entirely above the wall, the void shall be completely filled with mineral wool insulation compressed 33 percent in thickness. When void beneath the steel deck is located in part above the wall, that portion of the void above the wall shall be packed with additional strips of mineral wool batt insulation compressed 33 percent in thickness flush with the surface of the wall.

ROCK WOOL MANUFACTURING CO — Delta Board

D. **Fill, Void or Cavity Material* —** Min 1/8 in. (3.2 mm) wet thickness (min 1/16 in. or 1.6 mm dry thickness) of fill material sprayed or troweled to completely cover mineral wool forming material and to overlap a min of 1/2 in. (13 mm) onto wall and steel deck on accessible side of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP672 Firestop Spray or CFS-SP WB Firestop Joint Spray

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

Last Updated on 2010-06-04

XHBN - Joint Systems

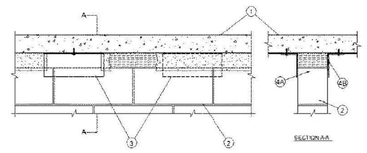
System No. HW-D-1045

June 07, 2010

Assembly Rating — 2 Hr

Nominal Joint Width — 3-1/2 In.

Class II Movement Capabilities — 14% Compression and Extension



1. **Floor Assembly —** Min 4-1/2 in. thick steel reinforced lightweight or normal weight (100-150 pcf) structural concrete.

2. **Wall Assembly —** Min 8 in. thick steel reinforced lightweight or normal weight (100-150 pcf) structural concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Steel Angles —** Nom 5 in. by 3 in. by 12 MSG (or heavier) steel angles, max 12 in. long, staggered max 24 in. OC on opposite sides of wall with 3 in. leg fastened to concrete floor assembly.

4. **Joint System — Max separation between bottom of floor units and top of concrete wall at time of installation is 3-1/2 in. The joint system is designed to accommodate a max 14 percent compression or extension from its installed width.** The joint system shall consists of the following:

A. **Forming Material* —** Nominal 4 in thick pieces of nominal 4 pcf forming material, min 8 in. wide, shall be compressed 50 percent in thickness and installed edge first into joint opening between bottom of floor assembly and top of concrete wall.

THERMAFIBER INC — Type SAF

B. **Fill, Void or Cavity Material* - Sealant —** A 1/8 in. wet thickness of fill material sprayed of troweled on each side of wall to completely cover mineral wool forming material and to overlap a min 1/2 in. onto steel angles, concrete floor assembly and concrete wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP672 Firestop Spray or CFS-SP WB Firestop Joint Spray

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

XHBN - Joint Systems

System No. HW-D-0538

December 16, 2015

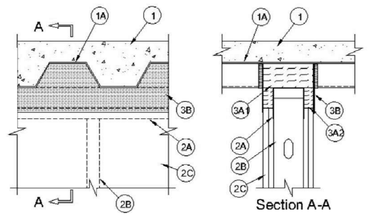
Assembly Ratings — 1 And 2 Hr (See Item 2)

Nominal Joint Width — 1-1/2 In.

Class II Movement Capabilities — 50% Compression or Extension

L Rating At Ambient — Less Than 1 CFM/Lin Ft

L Rating At 400°F — Less Than 1 CFM/Lin Ft



1. **Floor Assembly —** The fire rated fluted steel deck/concrete floor assembly shall be constructed of the materials and in the manner described in the individual D700 or D900 Series Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Form Units* —** Max 3 in. (76 mm) deep galv steel fluted floor units.

B. **Concrete —** Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

C. **Steel Attachment Clips —** (Optional, Not Shown) - Used to secure ceiling runner when spray-applied fire resistive material (Item 1D) is applied to floor units prior to installation of ceiling runner of wall. Z-shaped clips formed from 1 in. (25 mm) wide strips of min 20 ga galv steel. Clips to be sized to extend through the thickness of the spray-applied fire-resistive material on the steel floor unit with 1-1/2 in. (38 mm) long upper and lower legs. Legs of clips fastened to bottom of floor units (prior to application of spray-applied fire-resistive materials) with steel fasteners or welds. Clips spaced max 16 in. (406 mm) OC and extend to within 1/4 to 3/4 in. (6 to 19 mm) from the surface of the wall.

D. **Spray-Applied Fire Resistive Material* —** (Optional, Not Shown) - After installation of the ceiling runner, or prior to installation of the ceiling runner and after installation of the steel attachment clips (Item 1C), the steel floor units may be sprayed with the min thickness of material specified in the individual D700 Series Design.

ISOLATEK INTERNATIONAL — Type 300

GCP APPLIED TECHNOLOGIES INC — Type MK-6/HY

1A. **Roof Assembly —** (Not Shown) — As an alternate to the floor assembly, a fire rated fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P900 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. (76 mm) deep galv steel fluted roof deck.

B. **Roof Insulation —** Min 2-1/4 in. (57 mm) thick poured insulating concrete, as measured from the top plane of the steel roof deck.

1B. **Roof Assembly —** As an alternate to Items 1 and 1A, a fire rated protected fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P700 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. (76 mm) deep galv steel fluted roof deck.

B. **Steel Attachment Clips —** (Optional, Not Shown) - Used to secure ceiling runner when spray-applied fire resistive material is applied to roof deck prior to installation of ceiling runner of wall. Z-shaped clips formed from 1 in. (25 mm) wide strips of min 20 ga galv steel. Clips to be sized to extend through the thickness of the spray-applied fire-resistive material on the roof deck with 1-1/2 in. (38 mm) long upper and lower legs. Legs of clips fastened to bottom of roof deck (prior to application of spray-applied fire-resistive materials) with steel fasteners or welds. Clips spaced max 16 in. (406 mm) OC and extend to within 1/4 to 3/4 in. (6 to 19 mm) from the surface of the wall.

C. **Spray--Applied Fire Resistive Materials* —** (Not Shown)--Prior to or after the installation of the steel ceiling runners, the roof assembly shall be sprayed with the type and thickness of fire resistive material indicated in the individual P700 Series design.

ISOLATEK INTERNATIONAL — Type 300

GCP APPLIED TECHNOLOGIES INC — Type MK-6/HY

2. **Wall Assembly —** The 1 hr or 2 hr fire rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Ceiling Runners —** Floor and ceiling runners of wall assembly shall consist of galv steel channels sized to accommodate steel studs (Item 2B). Flange height of ceiling runner shall be min 1/4 in. (6 mm) greater than max extended joint width. Ceiling runner installed perpendicular to the deck direction and secured to valleys of deck with masonry anchors, steel fasteners or welds spaced max 24 in. (610 mm) OC. *For floor or roof decks with* spray-applied fire resistive material, ceiling runner attached to steel attachment clips (Item 1C) with masonry anchors, steel fasteners or welds spaced max 16 in. (406 mm) OC.

A1. **Light Gauge Framing*-Slotted Ceiling Runner —** As an alternate to the ceiling runner in Item 2A, slotted ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Item 2B). Slotted ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys befors or after optional spray-applied fire resistive material is used with steel masonry anchors, steel fasteners or welds spaced max 24 in. (610 mm) OC. The use of welds to secure the ceiling runner may only be used prior to the installation of the optional spray-applied material.

BRADY CONSTRUCTION INNOVATIONS INC, DBA SLIPTRACK SYSTEMS — SLP-TRK, SLPTRK32S

SCAFCO STEEL STUD MANUFACTURING CO

THE STEEL NETWORK INC — VertiTrack VT series, 250VT, 362VT, 400VT, 600VT and 800VT

A2. **Light Gauge Framing* — Slotted Ceiling Runner —** As an alternate to the ceiling runner in Item 2A through 2A1, ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Item 2B). Flange height of slotted ceiling runner shall be 3-1/4 in. (83 mm) with 2 in. (51 mm) deep slots. Slotted ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys as described in Item A1.

SCAFCO STEEL STUD MANUFACTURING CO — Slotted Track-Type SDLT

B. **Studs** — Steel studs to be min 3-1/2 in. (89 mm) wide. Studs cut 1-1/4 in. to 1-1/2 in. (32 to 38 mm) less in length than assembly height with bottom nesting in and resting on floor runner and with top nesting in ceiling runner without attachment. Stud spacing not to exceed 24 in. (610 mm) OC. When slotted ceiling runner (Item 2A2) is used, steel studs cut in lengths 3/4 to 1-3/4 in. (19 to 44 mm) less than floor to ceiling height and secured to slotted ceiling runner with No. 8 by 1/2 (13 mm) long wafer head steel screws at +/- 3/16 in. (5 mm) of the mid-height of slot on each side of wall.

C. **Gypsum Board* —** Gypsum board installed to a min total thickness of 5/8 in. (16 mm) or 1-1/4 in. (32 mm) on each side of wall for 1 hr and 2 hr rated assemblies, respectively. Wall to be constructed as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory, except that a nom 1-1/2 in. (38 mm) gap shall be maintained between the top of the gypsum board and the bottom of the steel deck and the top row of screws shall be installed 1 to 1-1/2 in. (25 to 38 mm) below the bottom of the ceiling runner.

The hourly rating of the joint system is dependent on the hourly rating of the wall.

3. **Joint System —** Max separation between bottom plane of floor or roof and top of gypsum board at time of installation of joint system is 1-1/2 in. (38 mm). The joint system is designed to accommodate a max 50 compression or extension from its installed width. The joint system consists of forming material and a fill material as follows:

A. **Forming Material* —** Min 4 pcf (64 kg/m^3) forming material sized to attain a min compression rate of 25 percent in the thickness direction and firmly packed to completely fill the flutes. Alternately, nom 4 pcf (64 kg/m^3) forming material cut to shape of flute and nom 1 in. (25 mm) longer than thickness of wall; mineral wool compressed from ends and firmly packed into each flute to attain a min compression rate of 14.3 percent in the length (wall thickness) direction to be flush with both wall surfaces. Additional pieces of batt insulation, 5/8 or 1-1/4 in. (16 or 32 mm) wide, shall be compressed 50 percent in thickness and installed cut edge first into gap between bottom of fluted floor or roof units and forming material within flutes. and top of gypsum board.

INDUSTRIAL INSULATION GROUP L L C — MinWool-1200 Safing

JOHNS MANVILLE — Safing

ROCK WOOL MANUFACTURING CO — Delta Board

ROCKWOOL — SAFE

THERMAFIBER INC — Type SAF

A1. **Forming Material*--Plugs —** As an alternate to Item 3A, preformed mineral wool plugs, formed to the shape of the fluted floor units, friction fit to completely fill the flutes above the ceiling runner. The plugs shall project beyond each side of the ceiling runner, flush with wall surfaces. Additional forming material, described in Item 3A2, to be used in conjunction with the plugs to fill the gap between the top of gypsum board and the bottom of plug.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP777 Speed Plugs

A2. **Forming Material* - Strips —** Nom 5/8 in. (16 mm) and 1-1/4 in. (32 mm) wide precut mineral wool strips for 1 and 2 hr rated assemblies, respectively. The strips are compressed 50 percent in thickness and firmly packed into the gap between the top of the gypsum board and bottom of the steel floor or roof deck on both sides of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP 767 Speed Strips

B. **Fill, Void or Cavity Material* —** Min 1/16 in. (1.6 mm) dry thickness (min 1/8 in. or 3.2 mm wet thickness) of fill material sprayed on each side of the wall to completely cover mineral wool forming material and to overlap a min of 1/2 in. (13 mm) onto gypsum board and min of 1/2 in. (13 mm) onto the steel deck or 2 in. (51 mm) onto the spray-applied fire resistive material on steel deck, on both sides of wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CFS-SP WB Firestop Joint Spray

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

System No. HW-D-0539

December 16, 2015

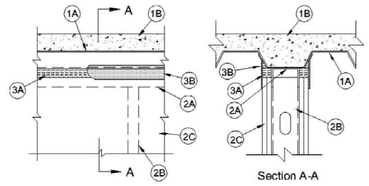
Assembly Ratings — 1 and 2 Hr (See Item 2)

Nominal Joint Width — 1-1/2 In.

Class II Movement Capabilities — 50% Compression or Extension

L Rating At Ambient — Less Than 1 CFM/Lin Ft

L Rating At 400°F — Less Than 1 CFM/Lin Ft



1. **Floor Assembly —** The fire-rated fluted steel deck/concrete floor assembly shall be constructed of the materials and in the manner described in the individual D700 or D900 Series Floor-Ceiling Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Form Units* —** Max 3 in. (76 mm) deep galv steel fluted floor units.

B. **Concrete —** Min 2-1/2 in. (64 mm) thick reinforced concrete, as measured from the top plane of the floor units.

C. **Steel Attachment Clips —** — (Optional. Not Shown) - Used to secure ceiling runner when spray-applied fire resistive material (Item 13) is applied to floor units prior to installation of ceiling runner of wall. Z-shaped clips formed from 1 in. (25 mm) wide strips of min 20 ga galv steel. Clips to be sized to extend through the thickness of the spray-applied fire-resistive material on the steel floor unit with 1-1/2 in. (38 mm) long upper and lower legs. Legs of clips fastened to bottom of floor units (prior to application of spray-applied fire-resistive materials) with steel fasteners or welds. Clips spaced max 16 in. (406 mm) OC and extend to within 1/4 to 3/4 in. (6 to 19 mm) from the surface of the wall.

D. **Spray-Applied Fire Resistive Materia* —** — (Optional. Not Shown) - After installation of the ceiling runner, or prior to installation of the ceiling runner and after installation of the steel attachment clips (Item 1C), the steel floor units may be sprayed with the min thickness of material specified in the individual D700 Series Design.

ISOLATEK INTERNATIONAL — Type 300

GCP APPLIED TECHNOLOGIES INC — Type MK-6/HY

1A. **Roof Assembly —** (Not Shown) — As an alternate to the floor assembly, a fire rated fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P900 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. (76 mm) deep galv steel fluted roof deck.

B. **Roof Insulation —** Min 2-1/4 in. (57 mm) thick poured insulating concrete, as measured from the top plane of the steel roof deck.

1B. **Roof Assembly —** As an alternate to Items 1 and 1A, a fire rated protected fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P700 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. (76 mm) deep galv steel fluted roof deck.

B. **Steel Attachment Clips —** (Optional. Not Shown) - Used to secure ceiling runner when spray-applied fire resistive material is applied to roof deck prior to installation of ceiling runner of wall. Z-shaped clips formed from 1 in. (25 mm) wide strips of min 20 ga galv steel. Clips to be sized to extend through the thickness of the spray-applied fire-resistive material on the roof deck with 1-1/2 in. (38 mm) long upper and lower legs. Legs of clips fastened to bottom of roof deck (prior to application of spray-applied fire-resistive materials) with steel fasteners or welds. Clips spaced max 16 in. (406 mm) OC and extend to within 1/4 to 3/4 in. (6 to 19 mm) from the surface of the wall.

C. **Spray--Applied Fire Resistive Materials* —** (Not Shown)--Prior to or after the installation of the steel ceiling runners, the roof assembly shall be sprayed with the type and thickness of fire resistive material indicated in the individual P700 Series design.

ISOLATEK INTERNATIONAL — Type 300

GCP APPLIED TECHNOLOGIES INC — Type MK-6/HY

2. **Wall Assembly —** The 1 hr or 2 hr fire rated gypsum board /steel stud wall assembly shall be constructed of the materials and in the manner described in the individual U400 or V400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Ceiling Runners —** Floor and ceiling runners of wall assembly shall consist of galv steel channels sized to accommodate steel studs (Item 2B). Flange height of ceiling runner shall be min 1/4 in. (6 mm) greater than max extended joint width.. Ceiling runner centered beneath and parallel with the valley of the deck and secured to valley with steel fasteners, steel masonry anchors or welds spaced max 24 in. (610 mm) OC. *For floor or roof* decks with spray-applied fire resistive material, ceiling runner attached to steel attachment clips (Item 1C) with steel fasteners spaced max 16 in. (406 mm) OC.

A1. **Light Gauge Framing*-Slotted Ceiling Runner —** As an alternate to the ceiling runner in Item 2A, slotted ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Item 2B). Slotted ceiling runner installed perpendicular to direction of fluted steel deck and secured to valleys before or after optional spray-applied fire resistive material is used with steel masonry anchors, steel fasteners or welds spaced max 24 in. (610 mm) OC. The use of welds to secure the ceiling runner may only be used prior to the installation of the optional spray-applied material.

BRADY CONSTRUCTION INNOVATIONS INC, DBA SLIPTRACK SYSTEMS — SLP-TRK, SLPTRK32S

SCAFCO STEEL STUD MANUFACTURING CO

THE STEEL NETWORK INC — VertiTrack VT series, 250VT, 362VT, 400VT, 600VT and 800VT

A2. **Light Gauge Framing* — Slotted Ceiling Runner —** As an alternate to the ceiling runner in Item 2A through 2A1, ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Item 2B). Flange height of slotted ceiling runner shall be 3-1/4 in. (83 mm) with 2 in. (51 mm) deep slots. Slotted ceiling runner centered beneath and parallel with the valley of the deck and secured to valley as described in Item A1.

SCAFCO STEEL STUD MANUFACTURING CO — Slotted Track-Type SDLT

B. **Studs —** Steel studs to be min 3-1/2 in. (89 mm) wide. Studs cut 1-1/4 in. to 1-1/2 in. (32 to 38 mm) less in length than assembly height with bottom nesting in and resting on floor runner and with top nesting in ceiling runner without attachment. Stud spacing not to exceed 24 in. (610 mm) OC. When slotted ceiling runner (Item 2A2) is used, steel studs cut in lengths 3/4 to 1-3/4 in. (19 to 44 mm) less than floor to ceiling height and secured to slotted ceiling runner with No. 8 by 1/2 (13 mm) long wafer head steel screws at +/- 3/16 in. (5 mm) of the mid-height of slot on each side of wall.

C. **Gypsum Board* —** Gypsum board installed to a min total thickness of 5/8 in. (16 mm) or 1-1/4 in. (32 mm) on each side of wall for 1 hr and 2 hr rated assemblies, respectively. Wall to be constructed as specified in the individual Wall and Partition Design in the UL Fire Resistance Directory, except that a min 1/2 in (38 mm) gap shall be maintained between the top of the gypsum board and the bottom of the steel deck and the top row of screws shall be installed into the studs 1 to 1-1/2 in. (25 to 38 mm) below the bottom of the ceiling runner.

The hourly rating of the joint system is dependent on the hourly rating of the wall.

3. **Joint System —** Max separation between bottom of floor or *roof* and top of gypsum board at time of installation of joint system is 1-1/2 in. (38 mm). The joint system is designed to accommodate a max 50 percent compression or extension from its installed width. The joint system consists of forming material and a fill material, as follows:

A. **Forming Material* —** Nom 5/8 in. or 1-1/4 in. (16 or 32 mm) wide strips of min 4 pcf (64 kg/m^3) mineral wool batt insulation. for 1 and 2 hr rated assemblies, respectively. Strips compressed 50 percent in thickness and inserted cut-edge first into gap between top of gypsum board and bottom of the floor or *roof* deck, flush with both surfaces of the wall.

INDUSTRIAL INSULATION GROUP L L C — MinWool-1200 Safing

JOHNS MANVILLE — Safing

ROCK WOOL MANUFACTURING CO — Delta Board

ROCKWOOL — SAFE

THERMAFIBER INC — Type SAF

A1. **Forming Material*--Strips —** As an alternate to Item 3A, nom 5/8 in.(16 mm) and 1-1/4 in. (32 mm) wide precut mineral wool strips for 1 and 2 hr rated assemblies, respectively. The strips are compressed 50 percent in thickness and inserted cut-edge first into the gap between the top of the gypsum board and the bottom of the *floor or roof* deck, flush with both surfaces of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP 767 Speed Strips

B. **Fill, Void or Cavity Material* —** Min 1/16 in. (1.6 mm) dry thickness (min 1/8 in. or 3.2 mm wet thickness) of fill material sprayed on each side of the wall to completely cover mineral wool forming material and to overlap a min of 1/2 in. (13 mm) onto gypsum board and steel deck, and 2 in. (51 mm) onto the spray-applied fire resistive material (Item 1D), on both sides of wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CFS-SP WB Firestop Joint Spray

1. **Floor Assembly —** Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m^3) structural concrete. Floor may also be constructed of any 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***.

See **Precast Concrete Units** category in the Fire Resistance Directory for names of manufactures.

2. **Wall Assembly —** The 1 or 2 h fire-rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall or Partition Design in the UL Fire Resistance Directory. In addition, the wall may incorporate a head-of-wall joint system as specified in the HW Series Joint Systems in the UL Fire Resistance Directory. The wall shall include the following construction features:

A. **Steel Floor Runners —** Floor runners of wall assembly shall consist of min No. 25 gauge galv steel channels sized to accommodate steel studs (Item 2B). Floor runners to be provided with 1-1/4 in. (32 mm) flanges. Runners secured with steel fasteners spaced 12 in. (305 mm) OC.

B. **Studs —** Steel studs to be min 3-1/2 in. (89 mm) wide. Studs cut 1/2 to 3/4 in. (13 to 19 mm) less in length than assembly height with bottom nesting in, resting on and fastened to floor runner with sheet metal screws. Stud spacing not to exceed 24 in. (610 mm) OC.

C. **Gypsum Board* —** Gypsum board installed to a min total thickness of 5/8 or 1-1/4 in. (16 or 32 mm) on each side of wall for a 1 or 2 hr rated wall, respectively. Wall to be constructed as specified in the individual U400, V400 or W400 Series Design in the UL Fire Resistance Directory, except that a max 3/4 in. (19 mm) gap shall be maintained between the bottom of gypsum board and top of concrete floor. **The hourly fire rating of the joint system is equal to the hourly fire rating of the wall.**

3. **Fill, Void or Cavity Material* Sealant — Max separation between top of floor and bottom of gypsum board wall sheathing is 3/4 in. (19 mm).** Min 5/8 in. (16 mm) thickness of fill material installed on each side of the wall between the bottom of the gypsum board and the top of the concrete floor, flush with each surface of the wall.
HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP 605 Bottom of Wall Firestop Sealant, CP601S Elastomeric Firestop Sealant, CP606 Flexible Firestop Sealant, CFS-S SIL GG, FS-ONE Sealant or FS-ONE MAX Intumescent Sealant

Design/System/Construction/Assembly Usage Disclaimer

- Authorities Having Jurisdiction should be consulted in all cases as to the particular requirements covering the installation and use of UL Certified products, equipment, system, devices, and materials.
- Authorities Having Jurisdiction should be consulted before construction.
- Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.
- When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.
- Only products which bear UL's Mark are considered Certified.

XHBN - Joint Systems

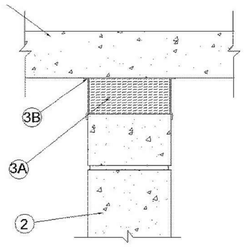
System No. HW-D-0097

June 04, 2010

Assembly Rating — 2 Hr

Nominal Joint Width — 2 In.

Class II Movement Capabilities — 14% Compression or Extension



1. **Floor Assembly —** Min 4-1/2 in. thick steel-reinforced lightweight or normal weight (100-150 pcf) structural concrete.

2. **Wall Assembly —** Min 8 in. thick steel-reinforced lightweight or normal weight (100-150 pcf) structural concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Joint System — Max width of joint (at time of installation of joint system) is 2 in. The joint system is designed to accommodate a max 14 percent compression or extension from its installed width.** The joint system shall consist of the following:

A. **Forming Material —** Min 4.0 pcf mineral wool batt insulation installed in joint opening as a permanent form. Batt cut to min width of 8 in. and installed cut edge-first into joint opening, parallel with joint direction, such that batt sections are compressed min 50 percent in thickness and such that the compressed batt sections are flush with both surfaces of wall. Adjoining lengths of batt to be tightly butted with butted seams spaced min 48 in. apart along the lengths of the joint.

ROCK WOOL MANUFACTURING CO — Delta Board

B. **Fill, Void or Cavity Material* —** Min 1/8 in. wet thickness of fill material sprayed or trowelled on each side of wall to completely cover mineral wool forming material and to overlap a min 1/2 in. onto concrete floor and concrete wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP672 Firestop Spray or CFS-SP WB Firestop Joint Spray

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

Last Updated on 2010-06-04

XHBN - Joint Systems

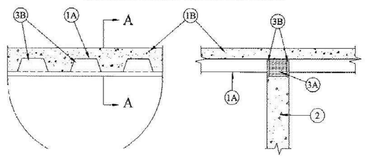
System No. HW-D-0225

March 08, 2002

Assembly Rating - 2 Hr

Nominal Joint Width - 2-1/4 in.

Class II Movement Capabilities - 11% Compression or Extension



SECTION A-A

1. **Floor Assembly —** The fire-rated fluted steel floor unit/concrete floor assembly shall be constructed of the materials and in the manner described in the individual D900 Series Floor-Ceiling Design in the Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Form Units* —** Max 3 in. deep galv steel fluted floor units.

B. **Concrete —** Min 2-1/2 in. thick reinforced concrete, as measured from the top plane of the floor units.

2. **Wall Assembly —** Min 5 in. thick steel reinforced lightweight or normal weight (100-150 pcf) concrete. Wall may also be constructed of an UL Classified Concrete Blocks*.

See **Concrete Block** (CAZT) category in the Fire Resistance Directory for names of manufactures.

3. **Joint System —** Max separation between valleys of fluted steel floor unit and top of wall is 2-1/4 in., providing separation at crests of floor unit does not exceed 3-3/4 in. The joint system is designed to accommodate a max 11 percent compression or extension from the nom installed joint width. The joint system consists of a packing material and a fill material between the top of the gypsum board and the bottom of the floor, as follows:

A. **Forming Material —** Sections of min 4 pcf density mineral wool batt insulation inserted between top of wall and bottom of floor, compressed approx 20 percent in thickness beneath each valley. Additional pieces of mineral wool cut to the shape of the flute, stacked to a thickness approx 20 percent greater than the overall thickness of the opening and installed in the flutes above the wall. The forming material shall be recessed 1/2 in. from each side of the wall.

A1. **Forming Material* —** Plugs (Optional-Not Shown) Performed mineral wool plugs, formed to the shape of the fluted deck, friction fit to completely fill the flutes. The plugs shall be recessed 1/2 in. from both wall surfaces. Additional forming material, described in Item 3A, to be used in conjunction with the plugs to fill the gap between the top of the wall and bottom of steel deck.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP777 Speed Plugs

B. **Fill, Void or Cavity Material* —** Sealant Min 1/2 in. thickness of fill material installed on each side of the wall in the flutes of the steel floor units and between the top of the wall and the bottom of the steel floor units, flush with each surface of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP606 Flexible Firestop Sealant

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

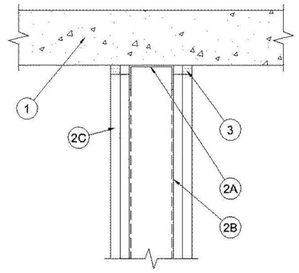
Nominal Joint Width - 1 In.	FT Ratings — 1 and 2 Hr (See Item 2)
Class II Movement Capabilities — 19% Compression or Extension	FH Ratings — 1 and 2 Hr (See Item 2)
L Rating At Ambient — Less Than 1 CFM/lin ft (See Item 3)	FTH Ratings — 1 and 2 Hr (See Item 2)
L Rating At 400 F — Less Than 1 CFM/lin ft (See Item 3)	Nominal Joint Width - 1 In.
	Class II Movement Capabilities — 19% Compression or Extension
	L Rating At Ambient — Less Than 1 CFM/lin ft (See Item 3)
	L Rating At 400 F — Less Than 1 CFM/lin ft (See Item 3)



1. **Floor Assembly —** Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m^3) structural concrete. Floor may also be constructed of any 6 in. (152 mm) thick UL Classified hollow-core **Precast Concrete Units***.

See **Precast Concrete Units** category in the Fire Resistance Directory for names of manufactures.

2. **Wall Assembly —** The 1 or 2 h fire rated gypsum board/steel stud wall assembly shall be constructed of the materials and in the manner specified in the individual U400, V400 or W400 Series Wall and Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Ceiling Runners —** Floor and ceiling runners of wall assembly shall consist of min No. 25 gauge galv steel channels sized to accommodate steel studs (Item 2B). Flange height of ceiling runner shall be min 1/4 in. (6 mm) greater than max extended joint width. Ceiling runner secured with masonry anchors or steel fasteners spaced 24 in. (610 mm) OC.

A1. **Light Gauge Framing* —** Slotted Ceiling Runner - As an alternate to the ceiling runner in Item 2A, slotted ceiling runner to consist of galv steel channel with slotted flanges sized to accommodate steel studs (Item 2B). Slotted ceiling runner secured to valleys lower surface of floor with steel fasteners spaced max 24 in. (610 mm) OC.

BRADY CONSTRUCTION INNOVATIONS INC, DBA SLIPTRACK SYSTEMS — SLP-TRK

CALIFORNIA EXPANDED METAL PRODUCTS CO — CST

MARINO/WARE, DIV OF WARE INDUSTRIES INC — Type SLT

A2. **Light Gauge Framing* —** Vertical Deflection Ceiling Runner - As an alternate to the ceiling runners in Items 2A and 2A1, vertical deflection ceiling runner to consist of galv steel channel with slotted vertical deflection clips mechanically fastened to web of runner. Slotted clips provided with step bushings for permanent fastening of steel studs. Flanges sized to accommodate steel studs (Item 2B). Vertical deflection ceiling runner secured to lower surface of floor with steel fasteners spaced max 24 in. (610 mm) OC.

THE STEEL NETWORK INC — VertiTrack VTD250, VTD362, VTD400, VTD600 and VTD800

B. Studs — Steel studs to be min 3-1/2 in. (89 mm) wide. Studs cut 1/2 to 3/4 in. (13 to 19 mm) less in length than assembly height with bottom nesting in and resting on floor runner and with top nesting in ceiling runner without attachment. When slotted ceiling runner (Item 2A1) is used, steel studs secured to slotted ceiling runner with No. 8 by 1/2 in. (13 mm) long wafer head steel screws at midheight of slot on each side of wall. Stud spacing not to exceed 24 in. (610 mm) OC. When vertical deflection ceiling runner (Item 2A2) is used, steel studs secured to slotted vertical deflection clips, through the bushings, with steel screws at midheight of each slot. Stud spacing not to exceed 24 in. (610 mm) OC.

C. **Gypsum Board* —** For 1 hr assembly, one layer of 5/8 in. (16 mm) thick gypsum board is required in the individual Wall and Partition Design. For 2 hr assembly, two layers of 5/8 in. (16 mm) thick gypsum board is required in the individual Wall and Partition Design. Wall to be constructed as specified in the individual U400 or V400 Series Design in the UL Fire Resistance Directory, except that a max 1 in. (25 mm) gap shall be maintained between the top of gypsum board and bottom of concrete floor. The screws attaching the gypsum board to the studs at the top of the first layer shall be located 4 in. (102 mm) below the floor. The screws attaching the second layer to the steel studs shall be installed into the studs 3-1/2 in. (89 mm) below the floor.

The hourly fire rating of the joint system is equal to the hourly ratings of the walls.

3. **Fill, Void or Cavity Material* - Sealant — Max separation between bottom of floor and top of wall is 1 in. (25 mm). The joint system is designed to accommodate a max 19 percent compression or extension from its installed width.** Min 5/8 in. (16 mm) thickness of fill material installed on each side of the wall between the top of the gypsum board and the bottom of the concrete floor, flush with each surface of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP601S Elastomeric Firestop Sealant or CP606 Flexible Firestop Sealant or CFS-S SIL GG Sealant. L Ratings apply only when CP606 or CFS-S SIL GG Sealant is used.

4. **Forming Material —** (Optional, Not Shown) - Mineral wool insulation, fiberglass batt insulation or polyurethane/polyethylene foam backer rod. Forming material to be recessed from both surfaces of the 2 hr fire rated wall to accommodate the required thickness of fill material.

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

Last Updated on 2015-02-23

XHBN - Joint Systems

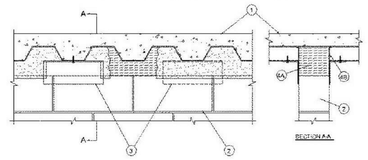
System No. HW-D-1044

June 07, 2010

Assembly Rating — 2 Hr

Nominal Joint Width — 3-1/2 In.

Class II Movement Capabilities — 14% Compression and Extension



1. **Floor Assembly —** The fire-rated fluted steel floor unit/concrete floor assembly shall be constructed of the materials and in the manner described in the individual Floor-Ceiling Design in the Fire Resistance Directory and shall include the following construction features:

A. **Steel Floor and Form Units* —** Max 3 in. deep galv steel fluted floor units.

B. **Concrete —** Min 2-1/2 in. thick reinforced concrete, as measured from the top plane of the floor units.

C. **Spray-Applied Fire Resistive Materials* —** (Optional)- (Not Shown)-Prior to the installation of the forming material and fill, void or cavity material (Items 3A, 3B) the steel floor units may be sprayed with a min 5/16 in. to max 1-3/4 in. thickness of fire resistive material.

GCP APPLIED TECHNOLOGIES INC — Type MK-6-HY

1A. **Roof Assembly —** (Not Shown) As an alternate to the floor assembly, a fire rated fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P900 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. deep galv steel fluted roof deck.

B. **Roof Insulation —** Min 2-1/4 in. thick poured insulating concrete, as measured from the top plane of the floor units.

1B. **Roof Assembly —** As an alternate to Items 1 and 1A, a fire rated protected fluted steel deck roof assembly may be used. The roof assembly shall be constructed of the materials and in the manner described in the individual P700 Series Roof-Ceiling Design in the UL Fire Resistance Directory. The hourly rating of the roof assembly shall be equal to or greater than the hourly rating of the wall assembly. The roof assembly shall include the following construction features:

A. **Steel Roof Deck —** Max 3 in. deep galv steel fluted roof deck.

B. **Spray-Applied Fire Resistive Materials* —** (Not Shown) - Prior to the installation of the steel ceiling runners, Forming Material and Fill, Void or Cavity Material (Items 2A, 3A, 3B), the roof assembly shall be sprayed with the type and thickness of fire resistive material indicated in the individual P700 Series design.

GCP APPLIED TECHNOLOGIES INC — Type MK-6-HY

2. **Wall Assembly —** Min 8 in. thick steel reinforced lightweight or normal weight (100-150 pcf) structural concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

3. **Steel Angles —** Nom 5 in. by 3 in. by 12 MSG (or heavier) steel angles, max 12 in. long, staggered max 24 in. OC on opposite sides of wall with 3 in. leg fastened to fluted steel floor units or roof deck.

4. **Joint System — Max separation between bottom of floor units and top of concrete wall at time of installation is 3-1/2 in. The joint system is designed to accommodate a max 14 percent compression or extension from its installed width.** The joint system shall consists of the following:

A. **Forming Material* —** Nominal 4 in thick pieces of nominal 4 pcf forming material sized to attain a min compression rate of 50 percent in the thickness direction firmly packed to completely fill the flutes. Additional pieces of batt insulation, min 8 in. wide, shall be compressed 50 percent in thickness and installed edge first into joint opening between bottom of fluted floor or roof units and top of concrete wall.

THERMAFIBER INC — Type SAF

A1. **Forming Material*-Plugs —** (Optional-Not Shown) Performed mineral wool plugs, formed to the shape of the fluted floor units, friction fit to completely fill the flutes above the ceiling runner. The plugs shall be flush with both wall surfaces. Additional forming material, described in Item 3A, to be used in conjunction with the plugs to fill the gap between the top of the wall and the bottom of the steel floor units.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP777 Speed Plugs

B. **Fill, Void or Cavity Material* - Sealant —** A 1/8 in. wet thickness of fill material sprayed of trowled on each side of wall to completely cover mineral wool forming material and to overlap a min 1/2 in. onto steel angles, steel floor units and concrete wall. When spray-applied fire resistive material* is applied to the steel deck, the fill material is to overlap the steel angles and wall a min 1/2 in. and the spray-applied fire resistive material a min of 2 in. on both sides of the wall.

HILTI CONSTRUCTION CHEMICALS, DIV OF HILTI INC — CP672 Firestop Spray or CFS-SP WB Firestop Joint Spray

*** Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.**

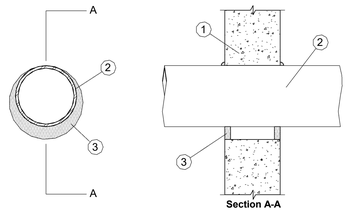
T RATING — 0 HR
L RATING AT AMBIENT - LESS THAN 1 CFM/SQ FT
L RATING AT 400 F - LESS THAN 1 CFM/SQ FT



Section A-A

1. **Wall Assembly -** Min 6 in. (152 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m3) concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***. Max diam of opening is 26 in. (660 mm).
   See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.
2. **Through Penetrant -** One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Pipe, conduit or tubing may be installed at an angle not greater than 45 degrees from perpendicular. The annular space between pipe, conduit or tubing and periphery of opening shall be min 0 in. (0 mm, point contact) to max 2 in. (51 mm). Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduit or tubing may be used:
   A. **Steel Pipe -** Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.
   B. **Iron Pipe -** Nom 24 in. (610 mm) diam (or smaller) cast or ductile iron pipe.
   C. **Conduit -** Nom 4 in. (102 mm) diam (or smaller) steel electrical metallic tubing, nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 1 in. (25 mm) diam (or smaller) flexible steel conduit.
   D. **Copper Tubing -** Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.
   E. **Copper Pipe -** Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.
3. **Fill, Void or Cavity Material* - Sealant -** Min 5/8 in. (16 mm) thickness of fill material applied within annulus, flush with both surfaces of wall. At the point contact location between through penetrant and concrete, a min 3/8 in. (10 mm) diam bead of fill material shall be applied at the concrete/through penetrant interface on both surfaces of wall.
   SPECIFIED TECHNOLOGIES INC - SpecSeal Series SSS Sealant or SpecSeal LCI Sealant
   * Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

NOTES:

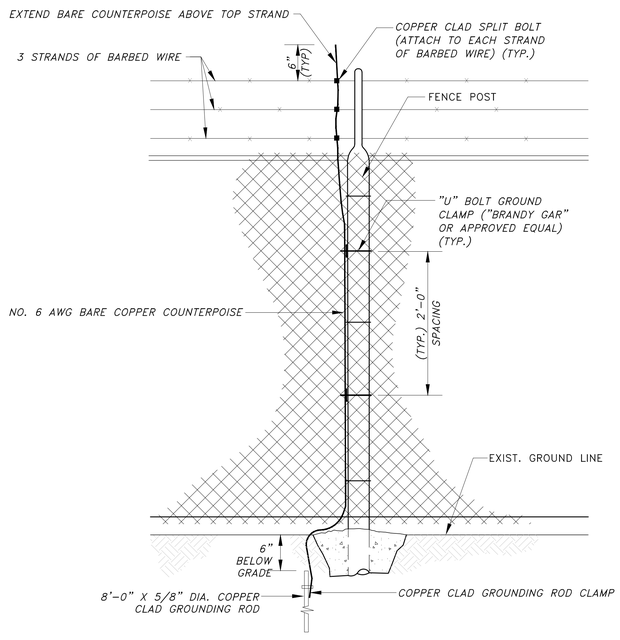
1. ALL BACKFILL/EMBANKMENT MATERIAL, PLACEMENT AND COMPACTION REQUIRED TO MAINTAIN THE 1" MAXIMUM GAP BETWEEN FENCE AND GROUND AND TO BACKFILL AROUND CONCRETE POST BASES SHALL BE INCIDENTAL TO THE PAY ITEM FOR FENCING. NO ADDITIONAL PAYMENT SHALL BE MADE FOR EMBANKMENT.
2. AT LOCATIONS SHOWN IN THE PLANS OR WHERE DIRECTED BY THE ENGINEER, HIGH DENSITY POLYETHYLENE SLATS WOVEN THROUGH THE CHAIN LINK FABRIC SHALL BE INCLUDED. SLATS SHALL BE INDUSTRIAL QUALITY WITH ULTRAVIOLET INHIBITORS. SLATS SHALL BE INSTALLED VERTICALLY WITH EACH SLAT EXTENDING THE ENTIRE HEIGHT OF THE FABRIC AND SECURED FROM SLIDING DOWN. OWNER TO SELECT COLOR.
3. FOR TEMPORARY FENCE THE CONCRETE POST FOUNDATION AND TOP RAIL ARE NOT ROQUIRED.



TYPICAL FENCE GROUNDING DETAIL
N.T.S.

FENCE ELECTRICAL GROUNDING NOTE:

1. ELECTRICAL GROUNDS SHALL BE CONSTRUCTED AT THE FOLLOWING LOCATIONS:

A) WHERE A POWER LINE PASSES OVER OR UNDER THE FENCE, THE GROUND SHALL BE INSTALLED DIRECTLY BELOW THE POINT OF CROSSING.

B) AT MAXIMUM 500-FOOT INTERVALS ALONG THE FENCE,

C) AT EACH GATE LEAF AND EACH GATE POST ON BOTH SIDES OF EACH GATE.

2. THE GROUND SHALL BE ACCOMPLISHED WITH A COPPER-CLAD ROD 8 FEET LONG AND A MINIMUM OF 5/8 INCH IN DIAMETER DRIVEN VERTICALLY UNTIL THE TOP IS 6 INCHES BELOW THE GROUND SURFACE. A NO. 6 SOLID COPPER CONDUCTOR SHALL BE CLAMPED TO THE ROD AND TO THE FENCE IN SUCH A MANNER THAT EACH ELEMENT OF THE FENCE IS GROUNDED.

3. INSTALLATION OF GROUND RODS SHALL NOT CONSTITUTE A PAY ITEM AND SHALL BE CONSIDERED INCIDENTAL TO THE LINE ITEM FOR FENCING.

08 44 13.0000	TYP. GLAZED ALUMINUM CUTAIN WALL ASSEMBLY.
09 22 26.0000	TYP. GYPSUM ASSEMBLY SUSPENSION SYSTEM, INSTALL PER MNFR. INSTRUCTIONS.
09 51 23.0667	TYP. STANDARD, 24" X 24" TEGULAR ACOUSITCAL TILE CEILING SYSTEM.
10 73 16.5000	TYP. PREMANUFACTURED ALUMINUM CANOPY SYSTEM. PROVIDE SIGNED & SEALED CALCULATIONS/SHOPDRAWINGS COMPLYING W/ STRUCTURAL DESIGN LOADS.

NOTES

1. REFER TO **AL641** FOR PARTITION TYPES
2. ALL PARTITIONS ARE DIMENSIONED FROM FACE OF FINISH TO FACE OF FINISH U.O.N.
3. ALL WALL PARTITIONS TO BE FULL HEIGHT U.O.N.
4. REFER TO **AG** SERIES SHEETS FOR WAYFINDING AND SIGNAGE.
5. FOR DOOR TYPES AND SCHEDULES REFER TO SHEET SERIES **A711**
6. REFER TO ELECTRICAL, TELECOM, AV, AND SIGNAGE DRAWINGS FOR OUTLET INFORMATION.
7. REFER TO **AF** SERIES SHEETS FOR FINISH INFORMATION.
8. AREA DESIGNATED FOR FUTURE WORK.(NIC). CONTRACTOR SHALL KEEP THIS AREA CLEAR OF ANY BUILT ELEMENTS ABOVE AND/OR BELOW GROUND UNLESS OTHERWISE NOTED WITHIN THE SCOPE OF THIS PROJECT.
9. CONCESSION AREAS SHALL BE FIT OUT AS SHELL SPACES WITH CODE MINIMUM SYSTEMS SUPPORT AS INDICATED.

CEILING LEGEND

- 24" X 24" ACOUSTICAL TILE CEILING SYSTEM
- ALUMINUM COMPOSITE PANEL EXTERIOR SOFFIT
- SUSPENDED GYPSUM WALL BOARD ASSEMBLY
- DIFFUSER / LINEAR, SEE MECH
- SUPPLY / RETURN DIFFUSER, SEE MECH
- LIGHT FIXTURES, SEE ELEC
- ELEVATIONS PROVIDED FROM CONCOURSE LEVEL

KEYNOTES

NO.	
03 21 00.0000	TYP. CONCRETE REINFORCING STEEL BAR(S), SEE STRUCTURAL.
03 31 00.B104	TYP. 4" STRUCTURAL SLAB-ON-GRADE, SEE STRUCTURAL.
03 31 00.D000	TYP. CONCRETE CAST-IN-PLACE BEAM, SEE STRUCTURAL
03 31 00.D130	TYP. 12" X 16" CAST-IN-PLACE BEAM, SEE STRUCTURAL
03 31 00.F100	TYP. CONTINOUS WALL FOUNDATION, SEE STRUCTURAL.
03 45 13.DZ60	TYP. 8" X 24" FACED ARCHITECTURAL PRECAST CONCRETE, SAND FINISH.
04 05 19.HC16	TYP. MASONRY HORIZONTAL GALVANIZED WIRE REINFORCING @ 16" O.C. MAX
04 22 00.000C	TYP. 12" NOMINAL CONCRETE MASONRY UNIT
04 22 00.00KC	TYP. 12" NOMINAL GROUT FILLED CONCRETE MASONRY KNOCK-OUT UNIT.
04 22 23.530D	TYP. BURNISHED 2 FACE CONCRETE MASONRY UNIT
05 21 19.00K0	TYP. K SERIES OPEN WEB STEEL JOIST, SEE STRUCTURAL.
05 31 23.W639	TYP. 1-1/2" WR 20 GA. G90 STEEL ROOF DECK, SEE STRUCTURAL.
07 21 13.13I6	TYP. 3" THICK, POLYISOCYANURATE RIGID FOAM BOARD INSULATION.
07 22 16.16I8	TYP. 4" MIN. POLYISOCYANURATE RIGID FOAM ROOF BOARD INSULATION.
07 22 16.23PA	TYP. 5/8" PRIMED DENS DECK ROOF INSULATION COVER BOARD.
07 22 16.230A	TYP. 5/8" DENS DECK ROOF INSULATION COVER BOARD.
07 26 16.0315	TYP. 15 MIL BELOW GRADE VAPOR BARRIER.
07 27 26.0040	TYP. 40 MILL THICK FLUID-APPLIED MEMBRANE VAPOR RETARDING AIR BARRIER.
07 54 19.1106	TYP. COLD ADHESIVE APPLIED, 60 MIL PVC MEMBRAINE ROOFING.
07 71 13.5000	TYP. ALUMNINUM MANUFACTURED COPING SYSTEM, INSTALLED PER MNFR. INSTRUCTIONS.
09 05 24.2329	TYP. PAPER BACKED SELF FURRING GALV. LATH.
09 05 29.00A5	TYP. ALUMINUM GYPSUM BOARD REVEAL BASE ACCESSORY.
09 05 29.00AF	TYP. ALUMINUM GYPSUM BOARD 'F' REVEAL ACCESSORY.
09 22 16.D000	TYPICAL 3 5/8" GALV. METAL STUD FRAMING @ 24" OC UNO.
09 22 26.0000	TYP. GYPSUM ASSEMBLY SUSPENSION SYSTEM, INSTALL PER MNFR. INSTRUCTIONS.
09 24 23.350E	TYP. 7/8", (3) LAYER SMOOTH CEMENT STUCCO PLASTERING.
09 24 99.000W	TYP. CEMENT PLASTERING WEEP SCREED ACESSORY.
09 29 00.X00A	TYPICAL 5/8" TYPE 'X' GYPSUM WALL BOARD
09 53 53.A904	TYPICAL 9 GAUGE GALV. METAL HANGER WIRE @ 48" O.C. EACH WAY
31 23 23.2385	TYP. COMPACTED FILL TO A MIN. OF 85% COMPACTION AS PER ASTM D1557.
31 31 16.1300	TYP. SPRAY TERMITE TOXICANT BARRIER.
32 16 23.0405	TYP. 4" BROOM FINISHED CONCRETE SIDEWALK.

GENERAL NOTES

1. SEE SPECIFICATION SECTION 08 71 00 FOR HARDWARE GROUPS, SECTION 08 8000 FOR GLASS TYPE OF DOORS & WINDOWS.
2. REFERENCE FINISH SCHEDULE FOR ADDITIONAL DOOR & FRAME FINISH INFORMATION.
3. SEE PARTITION SCHEDULE FOR DEPTH OF ALL DOORS & WINDOWS IN GYP. BOARD WALLS.
4. RIGHT HAND DOOR SHALL BE ACTIVE LEAF FOR DOUBLE DOORS.
5. EXTERIOR DOORS - MAXIMUM EFFORT TO OPERATE DOORS SHALL NOT EXCEED 5 LBS.
6. INTERIOR DOORS - MAXIMUM EFFORT TO OPERATE DOORS SHALL NOT EXCEED 5 LBS.
7. MAXIMUM EFFORT TO OPERATE DOOR SHALL NOT EXCEED 15 LBS. FOR INTERIOR AND EXTERIOR FIRE DOORS.
8. TYPICAL JAMB DIMENSIONS TO ADJACENT PARTITIONS ON HINGE SIDE OF DOOR OPENINGS: 8" AT CMU & 4" AT STUD PARTITIONS U.O.N.
9. ALL WOOD DOORS ARE TO BE UNDERCUT AS REQUIRED FOR FLOOR FINISHES & SPECIFICATIONS.
10. WIDTH / HEIGHT DIMENSIONS ARE LEAF OPENING SIZE
11. FOR DOORS IN MASONRY CONDITIONS, PROVIDE DOOR FRAME WITH 4" HEAD WIDTH FOR TOP OF FRAME.
12. FINISH AT MASONRY COURSING, WHERE OCCURS. CONTRACTOR TO VERIFY IN FIELD AND COORDINATE ALL LOCATIONS.

KEYNOTES

NO.

SUBMITTAL

EXTERIOR DOORS--(FOR EACH TYPE AND SIZE INSTALLED)--PROVIDE ONE OF THE FOLLOWING (TO INCLUDE COVER PAGE AND INSTALLATION DETAILS): FLORIDA PRODUCT APPROVAL, MIAMI DADE NOA, OR (ICC-ES) NER. DOCUMENTS ARE TO BE PROVIDED BY THE SAME ROUTING METHOD AS DRAWINGS WERE SUBMITTED TO GROWTH MANAGEMENT. THIS IS TO BE SUBMITTED BEFORE A FRAMING INSPECTION. BUILDER WILL NOT BE ABLE TO SCHEDULE A FRAMING INSPECTION UNTIL A RESPONSE IS APPROVED. 2017 FBC 104.9, 107.2.1; FLORIDA ADMINISTRATIVE CODE 9B-72.005

ADDITIONAL REMARKS

P2** BURNISHED (GRF) MASONRY EXISTS AS COMPONENT OF WALL. DO NOT PAINT BURNISHED (GRF) BLOCK.

ACT1* SUSPENDED GWB CEILING ASSEMBLIES EXIST AS COMPONENT OF CEILING. DO NOT PAINT ACT1 HOWEVER PROVIDE P3 FINISH TO SUSPENDED GWB CEILING ASSEMBLY.

GL# GLAZING APPLICATIONS VARY, SEE ELEVATIONS FOR GL TYPES.

FINISH

BR BRUSHED ALUMINUM

FF FACTORY FINISH

PNT PAINT FINISH, SEE FINISH CODE FOR MORE INFO.

SP SAND (ABRASIVE) BRODCAST ON ROLLED EPOXY RESIN.

UP UNPOLISHED FINISH.

SUBSTRATE MATERIAL

CMU CONCRETE UNIT MASONRY

CONC CAST CONCRETE

GWB TYPE 'X' GYPSUM WALL BOARD

MWB MOISTURE RESISTANT/ TILE BACKER WALL BOARD.

STL EXPOSED STRUCTURAL STEEL/DECK.

NOTES

1. ALL HOLLOW METAL DOORS AND FRAMES SHALL BE PAINTED **P4** UON.
2. WITHIN ELECTRICAL ROOMS; ALL OUSEKEEPING PADS SHALL BE PAINTED "SAFETY RED" **HPC3.**
3. SEE **AF712** FOR FINISH CODE DEFINITIONS.

B1 CONCORSE WAYFINDING PLAN

3/16" = 1'-0"

NOTES

1. REFER TO **AL611** FOR PARTITION TYPES
2. FOR DOOR TYPES AND SCHEDULES REFER TO SHEET SERIES **A711**
3. REFER TO ELECTRICAL, TELECOM, AV, AND SIGNAGE DRAWINGS FOR OUTLET INFORMATION.
4. REFER TO **A** SERIES SHEETS FOR DIMENSIONS.
5. AREA DESIGNATED FOR FUTURE WORK (NIC). CONTRACTOR SHALL KEEP THIS AREA CLEAR OF ANY BUILT ELEMENTS ABOVE AND/OR BELOW GROUND UNLESS OTHERWISE NOTED WITHIN THE SCOPE OF THIS PROJECT.
6. ALL GRADE II BRAILLE IS PRESENTED FOR GRAPHIC REPRESENTATION. CONTRACTOR TO COORDINATE WITH FABRICATOR THAT ACTUAL BRAILLE PRODUCED TRANSLATES THE COPY PROVIDED.
7. MESSAGES ILLUSTRATED IN DRAWINGS ARE NOT ACTUAL MESSAGES BUT FOR LAYOUT PURPOSES ONLY. SEE MESSAGE SCHEDULE FOR SPECIFIC MESSAGES. NOTE THAT BID ISSUE OF THE MESSAGE SCHEDULE IS "DRAFT" LEVEL AND IS TO BE UPDATED BY FABRICATOR THROUGHOUT PROJECT CONSTRUCTION SUBMITTAL PROCESS.
8. SIGN LOCATION PLAN SYMBOLS INDICATE GENERAL SIGN LOCATIONS. THEY ARE NOT REPRESENTATIVE OF ACTUAL SIGN SIZES OR OR LOCATIONS. SEE MOUNTING DETAILS FOR MOUNTING LOCATION INFORMATION. CONDUCT PRE-CONSTRUCTION MEETING IN FIELD WITH AIRPORT, AND ARCHITECT TO ESTABLISH PROTOYPICAL LOCATIONS AND HEIGHTS FOR EACH SIGN TYPE.
9. FABRICATOR TO FIELD VERIFY ALL EXISTING CONDITIONS AND THEIR IMPACT ON FINAL SIGN DIMENSIONS PRIOR TO FABRICATION.
10. SUBSTITUTE TYPEFACES, ARROWS OR SYMBOLS WILL NOT BE ACCEPTED. ALL SYMBOLS TO BE STANDARD F.A.A., AIGA, DOT, ANSI, ADA SYMBOLS. IF NECESSARY, CONTACT ARCHITECT FOR INFORMATION ON AVAILABILITY.
11. ALL FASTENERS TO BE CONCEALED AND VANDAL RESISTANT UNLESS OTHERWISE NOTED.
12. FABRICATOR TO BE RESPONSIBLE FOR PULLING ALL PERMITS AND COORDINATING ALL INSPECTIONS REQUIRED IN CONNECTION WITH THE WORK.
13. SIGN LOCATION SYMBOLS IN PLAN ASSIGNED SHOULD BE CROSS REFRENCED TO ELEVATION FOR INDICATION THAT SIGN IS DOUBLE FACED. PROJECTIONS SIGNS ARE ALSO DOUBLE FACED.
14. FABRICATOR SHALL BE RESPONSIBLE FOR PREPARATION OF ITS SUBMITTALS AND PULLING OF ALL NECESSARY PERMITS AND VARIANCES, (IF APPLICABLE), INCLUDING SUBMITTALS FOR OTHER RELATED REVIEW COMMITTEES FOR THIS PROJECT'S JURISDICTION. TASKS ALSO INCLUDE COORDINATION OF ALL INSPECTIONS REQUIRED IN CONNECTION WITH THE WORK.
15. FABRICATOR SHALL BE RESPONSIBLE FOR LAYOUT AND PRODUCTION OF FULL SIZE TEMPLATES FOR ALL DIMENSIONAL LETTERS AND OTHER SPECIALIZED FORMATS. THESE ALSO REQUIRE THE FIELD REVIEW BY OWNER, ARCHITECT AND OTHER DESIGN PROFESSIONALS.
16. FOR SIGNS IN WHICH THE MOUNTING LOCATION IS REQUIRED TO BE ON GLASS, FABRICATOR SHALL PROVIDE VINYL SHEET PRECISION MEASURED TO SIZE OF SIGN AND APPLIED TO REVERSE SIDE OF GLASS. THE VINYL COLOR SHALL MATCH THE COLOR OF THE SIGN. THE SIGN AND ITS DOUBLE FACED TAPE ARE TO BE APPLIED TO THE VIEWING SIDE OF GLASS. THE "BACKER" VINYL SHALL BE OPTICALLY POSITIONED, SO NO "BACKER" VINYL IS SEEN.

4. REFER TO A SERIES SHEETS FOR DIMENSIONS.
5. AREA DESIGNATED FOR FUTURE WORK (NIC). CONTRACTOR SHALL KEEP THIS AREA CLEAR OF ANY BUILT ELEMENTS ABOVE AND/OR BELOW GROUND UNLESS OTHERWISE NOTED WITHIN THE SCOPE OF THIS PROJECT.
6. ALL GRADE II BRAILLE IS PRESENTED FOR GRAPHIC REPRESENTATION. CONTRACTOR TO COORDINATE WITH FABRICATOR THAT ACTUAL BRAILLE PRODUCED TRANSLATES THE COPY PROVIDED.
7. MESSAGES ILLUSTRATED IN DRAWINGS ARE NOT ACTUAL MESSAGES BUT FOR LAYOUT PURPOSES ONLY. SEE MESSAGE SCHEDULE FOR SPECIFIC MESSAGES. NOTE THAT BID ISSUE OF THE MESSAGE SCHEDULE IS 'DRAFT' LEVEL AND IS TO BE UPDATED BY FABRICATOR THROUGHOUT PROJECT CONSTRUCTION SUBMITTAL PROCESS.
8. SIGN LOCATION PLAN SYMBOLS INDICATE GENERAL SIGN LOCATIONS. THEY ARE NOT REPRESENTATIVE OF ACTUAL SIGN SIZES OR OR LOCATIONS. SEE MOUNTING DETAILS FOR MOUNTING LOCATION INFORMATION. CONDUCT PRE-CONSTRUCTION MEETING IN FIELD WITH AIRPORT, AND ARCHITECT TO ESTABLISH PROTOTYPICAL LOCATIONS AND HEIGHTS FOR EACH SIGN TYPE.
9. FABRICATOR TO FIELD VERIFY ALL EXISTING CONDITIONS AND THEIR IMPACT ON FINAL SIGN DIMENSIONS PRIOR TO FABRICATION.
10. SUBSTITUTE TYPEFACES, ARROWS OR SYMBOLS WILL NOT BE ACCEPTED. ALL SYMBOLS TO BE STANDARD F.A.A., AIGA, DOT, ANSI, ADA SYMBOLS. IF NECESSARY, CONTACT ARCHITECT FOR INFORMATION ON AVAILABILITY.
11. ALL FASTENERS TO BE CONCEALED AND VANDAL RESISTANT UNLESS OTHERWISE NOTED.
12. FABRICATOR TO BE RESPONSIBLE FOR PULLING ALL PERMITS AND COORDINATING ALL INSPECTIONS REQUIRED IN CONNECTION WITH THE WORK.
13. SIGN LOCATION SYMBOLS IN PLAN ASSIGNED SHOULD BE CROSS REFRENCED TO ELEVATION FOR INDICATION THAT SIGN IS DOUBLE FACED. PROJECTIONS SIGNS ARE ALSO DOUBLE FACED.
14. FABRICATOR SHALL BE RESPONSIBLE FOR PREPARATION OF ITS SUBMITTALS AND PULLING OF ALL NECESSARY PERMITS AND VARIANCES, (IF APPLICABLE), INCLUDING SUBMITTALS FOR OTHER RELATED REVIEW COMMITTEES FOR THIS PROJECT'S JURISDICTION. TASKS ALSO INCLUDE COORDINATION OF ALL INSPECTIONS REQUIRED IN CONNECTION WITH THE WORK.
15. FABRICATOR SHALL BE RESPONSIBLE FOR LAYOUT AND PRODUCTION OF FULL SIZE TEMPLATES FOR ALL DIMENSIONAL LETTERS AND OTHER SPECIALIZED FORMATS. THESE ALSO REQUIRE THE FIELD REVIEW BY OWNER, ARCHITECT AND OTHER DESIGN PROFESSIONALS.
16. FOR SIGNS IN WHICH THE MOUNTING LOCATION IS REQUIRED TO BE ON GLASS, FABRICATOR SHALL PROVIDE VINYL SHEET PRECISION MEASURED TO SIZE OF SIGN AND APPLIED TO REVERSE SIDE OF GLASS. THE VINYL COLOR SHALL MATCH THE COLOR OF THE SIGN, THE SIGN AND ITS DOUBLE FACED TAPE ARE TO BE APPLIED TO THE VIEWING SIDE OF GLASS. THE "BACKER" VINYL SHALL BE OPTICALLY POSITIONED, SO NO "BACKER" VINYL IS SEEN.

1/22/2020 2:07:30 PM

1000 GENERAL NOTES:

1. STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH PROJECT SPECIFICATIONS AND ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING, AND SITE DRAWINGS. CONSULT THESE DRAWINGS FOR OPENINGS, DEPRESSIONS, EQUIPMENT WEIGHTS AND LOCATIONS, EMBEDDED ITEMS AND OTHER DETAILS NOT SHOWN ON STRUCTURAL DRAWINGS.
2. DIMENSIONS AND CONDITIONS MUST BE VERIFIED IN THE FIELD. ANY DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER OF RECORD BEFORE PROCEEDING WITH THE AFFECTED PART OF THE WORK.
3. NO STRUCTURAL MEMBER OR COMPONENT SHALL BE CUT, NOTCHED, OR OTHERWISE ALTERED UNLESS APPROVED IN WRITING BY THE ENGINEER OF RECORD. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY AND ALL COSTS INCURRED BY THE ENGINEER OF RECORD FOR REVIEW OF ANY SUCH DEVIATIONS.
4. DO NOT SCALE DRAWINGS.
5. THE STRUCTURE IS DESIGNED TO BE SELF-SUPPORTING AND STABLE AFTER THE BUILDING IS COMPLETE. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE ERECTION PROCEDURES AND SEQUENCE TO ENSURE SAFETY OF THE BUILDING AND ITS COMPONENTS DURING ERECTION. THIS INCLUDES THE ADDITION OF NECESSARY SHORING, SHEETING, TEMPORARY BRACING, GUYS OR TIEDOWNS.
6. DETAILS LABELED "TYPICAL DETAILS" ON THE DRAWINGS SHALL APPLY TO ALL SITUATIONS OCCURRING ON THE PROJECT THAT ARE THE SAME OR SIMILAR TO THOSE SPECIFICALLY DETAILED. THE APPLICABILITY OF THE DETAIL TO ITS LOCATION ON THE DRAWINGS CAN BE DETERMINED BY THE TITLE OF DETAIL. SUCH DETAILS SHALL APPLY WHETHER OR NOT THEY ARE REFERENCED AT EACH LOCATION. QUESTIONS REGARDING APPLICABILITY OF TYPICAL DETAILS SHALL BE DETERMINED BY THE ENGINEER OF RECORD.
7. THE GENERAL CONTRACTOR SHALL COMPARE THE ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING, CIVIL AND STRUCTURAL DRAWINGS AND REPORT ANY DISCREPANCIES BETWEEN EACH SET OF DRAWINGS AND WITHIN EACH SET OF DRAWINGS TO THE ARCHITECT AND ENGINEER OF RECORD PRIOR TO THE FABRICATION AND INSTALLATION OF ANY STRUCTURAL MEMBERS.
8. THE CONTRACT STRUCTURAL DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE, AND DO NOT INDICATE THE METHOD OR MEANS OF CONSTRUCTION. THE CONTRACTOR SHALL SUPERVISE AND DIRECT THE WORK AND SHALL BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, PROCEDURES, TECHNIQUES, SEQUENCE AND SAFETY. THE ENGINEER DOES NOT HAVE CONTROL OR CHARGE OF, AND SHALL NOT BE RESPONSIBLE FOR, CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, OR PROCEDURES, FOR SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK, FOR THE ACTS OR OMISSION OF THE CONTRACTOR, SUBCONTRACTOR OR ANY OTHER PERSONS PERFORMING ANY OF THE WORK, OR FOR THE FAILURE OF ANY OF THEM TO CARRY OUT THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.
9. THE STRUCTURAL ENGINEER'S OBLIGATIONS TO REVIEW SHOP DRAWINGS AND OTHER SUBMITTALS AND TO RETURN THEM IN A TIMELY MANNER ARE CONDITIONED UPON THE PRIOR REVIEW AND APPROVAL OF THE SHOP DRAWINGS OR SUBMITTALS BY THE CONTRACTOR AS REQUIRED IN THE CONSTRUCTION CONTRACT AND THE CONTRACTOR'S SUBMITTAL OF THE SHOP DRAWINGS AND OTHER SUBMITTALS IN ACCORDANCE WITH A WRITTEN SCHEDULE DISTRIBUTED IN ADVANCE TO THE ENGINEER IDENTIFYING THE DATES FOR THE SUBMITTAL OF THE VARIOUS SHOP DRAWINGS AND SUBMITTALS.
10. PERIODIC SITE OBSERVATION BY FIELD REPRESENTATIVES OF TLC ENGINEERING FOR ARCHITECTURE IS SOLELY FOR THE PURPOSE OF DETERMINING IF THE WORK OF THE CONTRACTOR IS PROCEEDING IN GENERAL ACCORDANCE WITH THE STRUCTURAL CONTRACT DOCUMENTS. THIS LIMITED SITE OBSERVATION SHALL NOT BE CONSTRUED AS EXHAUSTIVE OR CONTINUOUS TO CHECK THE QUALITY OR QUANTITY OF THE WORK.
11. ALL STRUCTURES REQUIRE PERIODIC MAINTENANCE TO EXCEED LIFE SPAN AND TO ENSURE STRUCTURAL INTEGRITY FROM EXPOSURE TO THE ENVIRONMENT. A PLANNED PROGRAM OF MAINTENANCE SHALL BE ESTABLISHED BY THE OWNER. THIS PROGRAM SHALL INCLUDE ITEMS SUCH AS, BUT NOT LIMITED TO, PAINTING OF STRUCTURAL STEEL, PROTECTIVE COATINGS FOR CONCRETE, SEALANTS, CAULKED JOINTS, EXPANSION JOINTS, CONTROL JOINTS, SPALLS AND CRACKS IN CONCRETE, AND PRESSURE WASHING OF EXPOSED STRUCTURAL ELEMENTS EXPOSED TO SALT ENVIRONMENT OR OTHER HARSH CHEMICALS.
12. STRUCTURAL ENGINEER OF RECORD IS NOT RESPONSIBLE FOR THE DESIGN OF STEEL STAIRS, HANDRAILS, CURTAIN WALL/WINDOW WALL SYSTEMS, COLD-FORMED STEEL FRAMING, OR OTHER SYSTEMS NOT SHOWN IN THE STRUCTURAL DOCUMENTS. SUCH SYSTEMS SHALL BE DESIGNED, FURNISHED, AND INSTALLED AS REQUIRED BY OTHER PORTIONS OF THE CONTRACT DOCUMENTS.
13. IN THE PROFESSIONAL OPINION OF TLC ENGINEERING FOR ARCHITECTURE, INC. THE STRUCTURAL CONTRACT DOCUMENTS FOR THIS PROJECT HAVE BEEN PREPARED IN ACCORDANCE WITH THE DESIGN CRITERIA AS SET FORTH IN THE **FLORIDA BUILDING CODE (FBC) 6th EDITION (2017), 2014 EDITION 2015 INTERNATIONAL BUILDING CODE (IBC).** ENGINEER TO SELECT APPLICABLE BUILDING CODE**
14. NO PROVISIONS HAVE BEEN MADE FOR VERTICAL OR HORIZONTAL EXPANSION EXCEPT AS SHOWN ON CONTRACT DOCUMENTS.
15. FINISH FLOOR ELEVATION (FIRST FLOOR) OF 0'-0" IS USED AS A REFERENCE ELEVATION. ACTUAL FLOOR ELEVATION IS + 86.25'. SEE CIVIL DRAWINGS FOR ACTUAL ELEVATION.
16. THE USE OF REPRODUCTIONS OF THESE CONTRACT DOCUMENTS AND USE OF CAD/REVIT FILES BY ANY CONTRACTOR, SUBCONTRACTOR, ERECTOR, FABRICATOR OR MATERIAL SUPPLIER IN LIEU OF PREPARATION OF SHOP DRAWINGS IS PROHIBITED UNLESS PRIOR WRITTEN APPROVAL IS OBTAINED FROM ENGINEER OF RECORD.
17. IN THE EVENT THAT THE STRUCTURAL CONTRACTS DRAWINGS AND SPECIFICATIONS CONFLICT ON INFORMATION, THE STRUCTURAL CONTRACT DRAWINGS SHALL SUPERSEDE THE SPECIFICATIONS.

1060 DESIGN LOADS:

1. THE STRUCTURAL SYSTEM FOR THIS BUILDING HAS BEEN DESIGNED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE, 6TH EDITION (2017) AND AS SUPPLEMENTED BY LOCAL AMENDMENTS.
2. THE FOLLOWING SUPERIMPOSED LOADINGS HAVE BEEN UTILIZED:
   A. DEAD LOADS:

ROOF	20 PSF

   B. LIVE LOADS:

ROOF	20 PSF
FLOOR	100 PSF
TSA EQUIPMENT	100 PSF
SCISSOR LIFT	3.2 K MAX TOTAL WEIGHT
VEHICLES DISPLAYED IN HOLD ROOMS	6 K MAX TOTAL WEIGHT (ONE ONLY)

   C. WIND LOADS: PER FLORIDA BUILDING CODE, SECTION 1609

   SEE SHEET S003 FOR COMPONENTS AND CLADDING PRESSURES

ULTIMATE DESIGN WIND SPEED, Vult	154 MPH (3 SEC. GUST)
NOMINAL DESIGN WIND SPEED, Vasd	119 MPH (3 SEC. GUST)
RISK CATEGORY	III
EXPOSURE	C

1330 SHOP DRAWING REVIEW:

1. SHOP DRAWINGS SHALL ADEQUATELY DEPICT THE STRUCTURAL ELEMENTS AND CONNECTIONS SHOWN ON THE CONTRACT DOCUMENTS. SHOP DRAWINGS WILL BE REVIEWED FOR GENERAL COMPLIANCE WITH THE DESIGN INTENT OF THE CONTRACT DOCUMENTS ONLY. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY COMPLIANCE WITH THE CONTRACT DOCUMENTS AS TO QUANTITY, LENGTH, ELEVATIONS, DIMENSIONS, ETC. REVIEW OF SUBMITTALS AND SHOP DRAWINGS DOES NOT RELIEVE THE CONTRACTOR OF FULL RESPONSIBILITY FOR ERRORS AND OMISSIONS ASSOCIATED WITH THE PREPARATION OF THE SHOP DRAWINGS.
2. SHOP DRAWINGS SHALL BE REVIEWED BY THE CONTRACTOR AND MARKED "APPROVED" PRIOR TO SUBMITTAL TO THE ARCHITECT/ENGINEER. NON-CONFORMING DRAWING SUBMITTALS WILL BE RETURNED WITHOUT REVIEW.
3. SHOP DRAWING SUBMITTALS SHALL EITHER BE SUBMITTED ELECTRONICALLY OR SHALL INCLUDE, AT A MINIMUM, FOUR HARD COPIES. ONE SET OF PRINTS WILL BE RETAINED BY THE ENGINEER OF RECORD, ONE BY THE ARCHITECT, ONE BY THE LOCAL BUILDING DEPARTMENT (WHERE REQUIRED) AND THE CONTRACTOR SHALL MAKE PRINTS AS REQUIRED FOR DISTRIBUTION.
4. THE CONTRACT DOCUMENTS WILL GOVERN OVER THE SHOP DRAWINGS UNLESS OTHERWISE SPECIFIED IN WRITING BY THE ENGINEER OF RECORD.
5. CHANGES AND ADDITIONS MADE ON RE-SUBMITTALS SHALL BE CLEARLY FLAGGED AND NOTED. THE PURPOSE OF THE RE-SUBMITTALS SHALL BE CLEARLY NOTED ON THE LETTER OF TRANSMITTAL. ARCHITECT/ENGINEER OF RECORD REVIEW WILL BE LIMITED TO THOSE ITEMS CAUSING THE RE-SUBMITTAL. CONTRACTOR IS RESPONSIBLE FOR COSTS CAUSED BY MULTIPLE RE-SUBMITTALS (MORE THAN ONE) AT ARCHITECT/ENGINEERS' CURRENT HOURLY RATES.

1070 SPECIAL INSPECTIONS

1. THIS BUILDING IS CLASSIFIED AS A "THRESHOLD BUILDING".
2. SPECIAL INSPECTION OF THE CONSTRUCTION IS REQUIRED BY THE STATE OF FLORIDA IN ACCORDANCE WITH CHAPTER 553 OF THE FLORIDA STATUTES. CONSTRUCTION SHALL BE INSPECTED IN ACCORDANCE WITH THE SPECIAL INSPECTION PLAN SUBMITTED TO THE LOCAL AUTHORITY HAVING JURISDICTION. THE SPECIAL INSPECTION PLAN IS PART OF THE PERMIT DOCUMENTS.
3. SPECIAL INSPECTIONS REQUIRED FOR THE FOLLOWING MATERIALS, SYSTEMS, COMPONENTS, AND WORK IN ACCORDANCE WITH THE THRESHOLD INSPECTION PLAN:
   A. STRUCTURAL STEEL
   B. WELDING/BOLTING
   C. METAL DECK
   D. COLD-FORMED STEEL
   E. CAST-IN-PLACE CONCRETE
   F. MASONRY
   G. POST INSTALLED ANCHORS
   H. FOUNDATIONS - SOIL
4. FREQUENCY AND SCOPE OF THRESHOLD INSPECTIONS SHALL BE IN ACCORDANCE WITH THE THRESHOLD INSPECTION PLAN.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING AND SCHEDULING ALL SPECIAL INSPECTIONS.
6. THRESHOLD INSPECTION REPORTS SHALL BE SUBMITTED TO THE BUILDING OFFICIAL, EOR, AND OWNER SIGNED AND SEALED BY THE SPECIAL INSPECTOR.
7. THE CONTRACTOR SHALL BEAR THE COST OF CORRECTING AND/OR REPLACING ALL MATERIALS, SYSTEMS, COMPONENTS, AND/OR WORK THAT DOES NOT MEET THE REQUIREMENTS OF THE SPECIAL INSPECTOR.

1331 SHOP DRAWINGS FOR SPECIALTY ENGINEERED PRODUCTS:

1. THE FOLLOWING SYSTEMS AND COMPONENTS AS A MINIMUM REQUIRE FABRICATION AND ERECTION DRAWINGS PREPARED BY A DELEGATED ENGINEER:
   A. COLD FORMED STEEL EXTERIOR OR LOAD BEARING WALL SYSTEMS
   B. CURTAIN WALL SYSTEMS
   C. PREFABRICATED STEEL STAIRS & RAILINGS
   D. OPEN WEB STEEL JOISTS
   E. STRUCTURAL STEEL CONNECTIONS REQUIRING ENGINEERING
   F. METAL ROOF DECK ASSEMBLIES
2. SUBMITTALS SHALL CLEARLY IDENTIFY THE SPECIFIC PROJECT AND APPLICABLE CODES, LIST THE DESIGN CRITERIA, AND SHOW ALL DETAILS AND DRAWINGS NECESSARY FOR PROPER FABRICATION AND INSTALLATION. SHOP DRAWINGS AND CALCULATIONS SHALL IDENTIFY SPECIFIC PRODUCT UTILIZED. GENERIC PRODUCTS WILL NOT BE ACCEPTED.
3. SHOP DRAWINGS AND CALCULATIONS SHALL BE PREPARED UNDER THE DIRECT SUPERVISION AND CONTROL OF THE DELEGATED ENGINEER.
4. SHOP DRAWINGS AND CALCULATIONS SHALL BE SIGNED AND SEALED BY AN ENGINEER REGISTERED IN THE STATE OF FLORIDA (IN WHICH THE PROJECT RESIDES). COMPUTER PRINTOUTS ARE AN ACCEPTABLE SUBSTITUTE FOR MANUAL COMPUTATIONS PROVIDED THEY ARE ACCOMPANIED BY SUFFICIENT DESCRIPTIVE INFORMATION TO PERMIT THEIR PROPER EVALUATION. SUCH DESCRIPTIVE INFORMATION SHALL BE SIGNED AND SEALED BY AN ENGINEER REGISTERED IN THE STATE OF FLORIDA (IN WHICH THE PROJECT RESIDES) AS AN INDICATION THAT HE/SHE HAS ACCEPTED RESPONSIBILITY FOR THE RESULTS. THE STRUCTURAL ENGINEER WILL RETAIN ONE SIGNED AND SEALED SET FOR THEIR RECORDS.
5. DRAWINGS PREPARED SOLELY TO SERVE AS A GUIDE FOR FABRICATION AND INSTALLATION (SUCH AS REINFORCING STEEL SHOP DRAWINGS OR STRUCTURAL STEEL ERECTION DRAWINGS) AND REQUIRING NO ENGINEERING, DO NOT REQUIRE THE SEAL OF A DELEGATED ENGINEER.
6. CATALOG INFORMATION ON STANDARD PRODUCTS DOES NOT REQUIRE THE SEAL OF A DELEGATED ENGINEER.
7. REVIEW BY THE STRUCTURAL ENGINEER OF RECORD OF SUBMITTALS IS LIMITED TO VERIFYING THE FOLLOWING:
   A. THAT THE SPECIFIED STRUCTURAL SUBMITTALS HAVE BEEN FURNISHED.
   B. THAT THE STRUCTURAL SUBMITTALS HAVE BEEN SIGNED AND SEALED BY THE DELEGATED ENGINEER.
   C. THAT THE DELEGATED ENGINEER HAS UNDERSTOOD THE DESIGN INTENT AND HAS USED THE SPECIFIED STRUCTURAL CRITERIA. NO DETAILED CHECK OF CALCULATIONS WILL BE MADE.
   D. THAT THE CONFIGURATION SET FORTH IN THE STRUCTURAL SUBMITTALS IS CONSISTENT WITH THE CONTRACT DOCUMENTS. NO DETAILED CHECK OF DIMENSIONS OR QUANTITIES WILL BE MADE.
8. SUBMITTALS NOT MEETING THE ABOVE CRITERIA WILL NOT BE REVIEWED AND WILL BE RETURNED.

1333 SUBMITTALS:

1. ALL SHOP DRAWINGS MUST BE REVIEWED AND STAMPED APPROVED BY THE GENERAL CONTRACTOR PRIOR TO SUBMITTAL.
2. THE GENERAL CONTRACTOR SHALL SUBMIT FOR ENGINEER REVIEW SHOP DRAWINGS FOR THE FOLLOWING ITEMS:
   - ITEMS MARKED (D) SHALL HAVE SHOP DRAWINGS SEALED BY A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF FLORIDA.
   - ITEMS MARKED (#) SHALL BE SUBMITTED FOR ENGINEER'S RECORD ONLY.

   A. STRUCTURAL STEEL (D)
   B. REINFORCING STEEL
   C. STEEL AND PRECAST CONCRETE STAIRS (D)
   D. METAL ROOF OR FORM DECK
   E. COMPOSITE METAL DECK
   F. COLD-FORMED STEEL FRAMING (D)
   G. CONCRETE MIX DESIGNS
   H. CONSTRUCTION JOINT LOCATIONS IN STRUCTURAL FLOORS
   I. CURTAIN WALL SYSTEMS (D)
   J. MECHANICAL ANCHORS (#)
   K. CHEMICAL (ADHESIVE) ANCHORS (#)
   L. OPEN WEB STEEL JOISTS (D)
   M. POST-INSTALLED ADHESIVE ANCHORS (#)
   N. POST-INSTALLED MECHANICAL ANCHORS (#)
3. MANUFACTURER'S LITERATURE. SUBMIT TWO COPIES OF MANUFACTURER'S LITERATURE FOR ALL MATERIALS AND PRODUCTS USED IN CONSTRUCTION ON THE PROJECT.

1334 REQUEST FOR INTERPRETATION:

1. RFI SHALL ORIGINATE WITH CONTRACTOR AND SHALL BE SUBMITTED IN THE FORM SPECIFIED WITHIN CONTRACT DOCUMENTS. RFI SHALL BE SUBMITTED IN A PROMPT MANNER AS TO AVOID DELAYS IN CONTRACTORS WORK.
2. RFI SHALL BE SUBMITTED AS SPECIFIED WITHIN THE CONTRACT DOCUMENTS AND SHALL BE FORWARDED TO THE ENGINEER VIA THE ARCHITECT OR DIRECTLY TO THE ENGINEER BY THE CONTRACTOR WHEN APPROVED BY THE ARCHITECT.
3. ENGINEER SHALL TAKE UP TO 5 BUSINESS DAYS TO REVIEW AND RETURN RFI'S. HOWEVER, THE ENGINEER WILL ATTEMPT TO EXPEDITE THE REVIEW OF ALL RFI'S WITHIN A REASONABLE TIME FRAME.
4. RFI RESPONSES ARE NOT INTENDED TO AUTHORIZE ANY INCREASE IN CONSTRUCTION COST, SCHEDULE OR TIME EXTENSIONS, OR CONSTRUCTION IN CONFLICT WITH ANY APPLICABLE CODES OR SPECIFIED DESIGN STANDARDS. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY THE DESIGN TEAM IMMEDIATELY OF ANY PERCEIVED SCOPE, SCHEDULE, OR COST IMPACTS OR ADJUSTMENTS. IF CONTRACTOR REQUESTS ANY ADDITIONAL COST, INCREASE IN SCHEDULE OR ADJUSTMENT IN SCOPE, THE CONTRACTOR SHALL NOT PROCEED WITH ADDITIONAL WORK UNTIL APPROVED IN WRITING BY THE CONSTRUCTION ADMINISTRATOR.

2310 FOUNDATIONS:

1. SEE THE FOLLOWING GEOTECHNICAL REPORT FOR COMPLETE GEOTECHNICAL RECOMMENDATIONS AND INSTALLATION PROCEDURES. SITE PREPARATION AND FOUNDATION INSTALLATION SHALL COMPLY WITH:

REPORT No.	07832840
PREPARED BY:	PROFESSIONAL SERVICE INDUSTRIES. INC
TITLED:	REPORT OF GEOTECHNICAL ENGINEERING SERVICES, NEW VPS CONCOURSE
DATED:	AUGUST 8, 2019

2. FOLLOW THE RECOMMENDATIONS LISTED IN THE GEOTECHNICAL REPORT FOR SITE PREPARATION WORK. AT A MINIMUM, SITE PREPARATION WORK SHALL INCLUDE:
3. SLABS ON GRADE SHALL BE PLACED OVER A 15 MIL, CLASS "A" VAPOR RETARDER. VAPOR RETARDER SHALL BE LAPPED A MINIMUM OF 6", OR AS RECOMMENDED BY THE MANUFACTURER (WHICHEVER IS GREATER) AND TAPED AT ALL JOINTS. ALL PUNCTURES IN THE VAPOR RETARDER SHALL BE REPAIRED PER MANUFACTURER'S WRITTEN INSTRUCTIONS. ALL PENETRATIONS THROUGH THE VAPOR RETARDER (COLUMNS, PLUMBING, CONDUITS, ETC) SHALL BE SEALED PER MANUFACTURER'S WRITTEN INSTRUCTIONS. VAPOR RETARDER SHALL BE CONTINUOUS UNDER WALL FOUNDATIONS OR SEALED TO EXTERIOR WALLS PER MANUFACTURER'S WRITTEN INSTRUCTIONS.
4. FOUNDATION DESIGN IS BASED ON AN ALLOWABLE BEARING PRESSURE OF 2,000 PSF.

3302 CONCRETE:

1. SHALL BE PER AN APPROVED MIX DESIGN PROPORTIONED TO ACHIEVE A STRENGTH AT 28 DAYS AS LISTED BELOW WITH A PLASTIC AND WORKABLE MIX:

****ENGINEER TO EDIT CONC STRENGTH AND W/C RATION BASED ON EXPOSURE AND USE****

CONCRETE STRUCTURE TYPE	COMPRESSIVE STRENGTH	SLUMP	COARSE AGGREGATE	MAXIMUM W/C RATIO
FOUNDATIONS	3000 PSI	4-6"	1"	0.50
SLABS-ON-GRADE	3000 PSI	4-6"	3/4"	0.50
BEAMS	4000 PSI	4-6"	3/8"	0.48

2. CONCRETE SHALL BE PLACED AND CURED ACCORDING TO ACI STANDARDS AND SPECIFICATIONS.
3. SUBMIT PROPOSED MIX DESIGN WITH RECENT FIELD CYLINDER OR LAB TESTS FOR REVIEW PRIOR TO USE. MIX SHALL BE UNIQUELY IDENTIFIED BY MIX NUMBER OR OTHER POSITIVE IDENTIFICATION. MIX SHALL MEET THE REQUIREMENTS OF ASTM C33 FOR COARSE AGGREGATE.
4. CONCRETE SHALL COMPLY WITH THE REQUIREMENTS OF ASTM STANDARD C94 FOR MEASURING, MIXING, TRANSPORTING, ETC. CONCRETE TICKETS SHALL BE TIME STAMPED WHEN CONCRETE IS BATCHED.
5. THE MAXIMUM TIME ALLOWED FROM THE TIME THE MIXING WATER IS ADDED UNTIL IT IS DEPOSITED IN ITS FINAL POSITION SHALL NOT EXCEED ONE AND ONE HALF (1-1/2) HOURS. IF FOR ANY REASON THERE IS A LONGER DELAY THAN THAT STATED ABOVE, THE CONCRETE SHALL BE DISCARDED. IT SHALL BE THE RESPONSIBILITY OF THE TESTING LAB TO NOTIFY THE OWNER'S REPRESENTATIVE AND THE CONTRACTOR OF ANY NONCOMPLIANCE WITH THE ABOVE.
6. SLABS SHALL BE CURED USING A DISSIPATING CURING COMPOUND MEETING ASTM STANDARD C309 TYPE 1-CLASS D AND SHALL HAVE A FUGITIVE DYE. THE COMPOUND SHALL BE PLACED AS SOON AS THE FINISHING IS COMPLETED OR AS SOON AS THE WATER HAS LEFT THE UNFINISHED CONCRETE. SCUFFED OR BROKEN AREAS IN THE CURING MEMBRANE SHALL BE RECOATED DAILY.
7. CALCIUM CHLORIDES SHALL NOT BE UTILIZED; OTHER ADMIXTURES MAY BE USED ONLY WITH THE APPROVAL OF THE ENGINEER.
8. CONCRETE MIX DESIGNS SHALL INCLUDE A WRITTEN DESCRIPTION INDICATING WHERE EACH PARTICULAR MIX IS TO BE PLACED WITHIN THE STRUCTURE.
9. CONDUITS, PIPES AND SLEEVES SHALL BE PLACED AND SPACED IN ACCORDANCE WITH ACI 318, 6.3.
10. CONCRETE DESIGN MIX SUBMITTALS SHALL INCLUDE TESTED, STATISTICAL BACK-UP DATA AS PER CHAPTER 5 OF ACI 318.

3310 REINFORCING STEEL:

1. SHALL BE ASTM A615 GRADE 60 DEFORMED BARS, FREE FROM OIL, SCALE AND RUST, AND PLACED IN ACCORDANCE WITH THE TYPICAL BENDING DIAGRAM AND PLACING DETAILS OF ACI STANDARDS AND SPECIFICATIONS.
2. PROVIDE CONCRETE COVER OVER PRIMARY REINFORCEMENT, TIES, AND STIRRUPS, AS FOLLOWS, UNLESS OTHERWISE NOTED:

LOCATION AND CONDITION	MINIMUM COVER
A. CONCRETE CAST AGAINST AND PERMANENTLY EXPOSED TO EARTH	ALL BARS 3"
B. CONCRETE EXPOSED TO EARTH OR WEATHER	#6 OR GREATER 2" #5 OR SMALLER 1.5"
C. CONCRETE NOT EXPOSED TO WEATHER OR IN CONTACT WITH GROUND	
1. SLABS	#11 OR SMALLER 3/4"
2. BEAMS	ALL BARS 1.5"

3. SECURE APPROVAL OF SHOP DRAWINGS PRIOR TO COMMENCING FABRICATION.
4. PROVIDE STANDARD HOOKS AT DISCONTINUOUS ENDS OF ALL TOP BARS.
5. WHERE REINFORCING IS SHOWN CONTINUOUS, SPLICE BOTTOM BARS OVER SUPPORTS AND TOP BARS AT CENTER OF SPAN. ALL OTHER LAP SPLICES SHALL BE IN ACCORDANCE WITH SPLICE TABLES AND DETAILS SHOWN ON DRAWINGS.
6. LENGTH OF LAP SPLICES AND BAR EMBEDMENT SHALL BE AS SHOWN IN TABLE, UNLESS OTHERWISE NOTED:

	BAR SIZE	3000 PSI	4000 PSI
T<12"	#6 OR LESS	57 Db	49 Db
T>12"	#6 OR LESS	74 Db	65 Db

WHERE "T" IS DEPTH OF CONCRETE UNDER BARS AND "Db" IS BAR DIAMETER.
UTILIZE CLASS "B" SPLICE FOR ALL SPLICES, U.N.O. ON PLANS OR DETAILS.

7. WHERE HOOKS ARE SHOWN ON THE PLANS OR DETAILS, HOOKS SHALL BE DETAILED TO EXTEND DEEP ENOUGH INTO SUPPORTING STRUCTURE TO DEVELOP THE FULL STRENGTH OF THE HOOKED BAR. PROVIDE ADDITIONAL TIES OR STIRRUPS IN SUPPORTING STRUCTURE AS REQUIRED TO SATISFY ACI 318 HOOK DEVELOPMENT, CONFINEMENT, AND ANCHORAGE CRITERIA.

3314 WELDED WIRE FABRIC:

1. SHALL CONFORM TO ASTM A-185, FREE FROM OIL, SCALE AND RUST AND PLACED IN ACCORDANCE WITH THE TYPICAL PLACING DETAILS OF ACI STANDARDS AND SPECIFICATIONS.
2. MINIMUM LAP SHALL BE ONE SPACE PLUS TWO INCHES.
3. USE OF FLAT MANUFACTURED SHEETS IS REQUIRED (NO ROLLS).
4. INSTALL WWF ON BRICKS OR BOLSTERS AT MID DEPTH OF SLAB U.N.O.; SPACING OF SUPPORTS SHALL BE ADEQUATE TO PREVENT SHIFTING OF WWF DURING CONSTRUCTION, BUT SHALL NOT EXCEED 24" O.C.

4810 MASONRY WALLS:

1. ALL MASONRY CONSTRUCTION SHALL CONFORM TO TMS 402 "BUILDING CODE REQUIREMENTS FOR MASONRY STRUCTURES" AND TMS 602 "SPECIFICATION FOR MASONRY STRUCTURES", LATEST EDITION.
2. MASONRY UNITS SHALL MEET ASTM C-90 FOR HOLLOW LOAD BEARING TYPE MASONRY WITH UNIT STRENGTH OF 2000 PSI ON THE NET AREA (f'm = 2000 PSI). MORTAR SHALL BE TYPE "M" OR "S" AND MEET ASTM C-270.
3. GROUT SHALL BE 3000 PSI MINIMUM COMPRESSIVE STRENGTH AND MEET ASTM C-476 AND HAVE A SLUMP BETWEEN 8" AND 11" WITH WATER CM RATIO OF 0.55 MAXIMUM AND WITH 3/8" MAXIMUM AGGREGATE.
4. PROVIDE HOOKED DOWELS IN FOUNDATIONS FOR VERTICAL REINFORCING ABOVE. LAP SPLICES SHALL BE PER LAP SPLICE SCHEDULE SHOWN IN TYPICAL DETAIL.
5. BLOCK CELLS SHALL BE GROUT FILLED WITH VERTICAL REINFORCING BARS AT CORNERS, INTERSECTIONS, EACH SIDE OF OPENINGS AND AS SHOWN ON THE DRAWINGS.
6. DOWELS SHALL BE USED TO PROVIDE CONTINUITY INTO THE STRUCTURE ABOVE AND/OR BELOW, UNLESS NOTED OTHERWISE.
7. USE METAL LATH, MORTAR OR SPECIAL UNITS TO CONFINE CONCRETE AND GROUT TO AREA AS REQUIRED.
8. MASONRY SHALL BE LAID IN RUNNING BOND PATTERN UNLESS NOTED OTHERWISE. AT FILLED CELLS LAY UNITS WITH FULL BED JOINTS AROUND CELLS.
9. PROVIDE 3/16" WITH 12" CMU GALVANIZED HORIZONTAL JOINT REINFORCING (DUR-O-WALL OR ENGINEER APPROVED SUBSTITUTION) AT ALTERNATE BLOCK COURSES. LADDER TYPE IS RECOMMENDED WITH REINFORCED FILLED CELLS. PROVIDE PREFABRICATED "TEE" OR CORNER SECTIONS AT WALL INTERSECTIONS.
10. CONTROL JOINTS SHALL BE CONSTRUCTED IN CONCRETE MASONRY CONSTRUCTION AT A MAXIMUM HORIZONTAL SPACING BETWEEN JOINTS OF 25'-0" AND NOT MORE THAN 12'-6" FROM CORNERS. SEE ARCHITECTURAL DRAWINGS FOR EXACT LOCATIONS. CONSTRUCT INTERIOR CONTROL JOINTS AT A MAXIMUM HORIZONTAL SPACING OF 32'-0" OR 16'-0" FROM CORNERS. NO JOINTS SHALL BE LOCATED WITHIN 2'-0" OF STEEL BEAM BEARINGS. HORIZONTAL WALL REINFORCING SHALL BE STOPPED EACH SIDE OF CONTROL JOINTS. SEE ARCHITECTURAL DRAWINGS FOR SEALANT REQUIREMENTS AT CONTROL JOINTS.
11. SUBMIT PROPOSED GROUT MIX DESIGNS FOR REVIEW PRIOR TO USE. MIX NUMBER OR OTHER POSITIVE IDENTIFICATION SHALL UNIQUELY IDENTIFY MIX.
12. USE OF SUPERPLASTICIZER IS PROHIBITED.
13. CELLS TO BE GROUT FILLED SHALL HAVE VERTICAL ALIGNMENT SUFFICIENT TO MAINTAIN A CLEAR, UNOBSTRUCTED, CONTINUOUS VERTICAL GROUT SPACE.
14. CLEANOUT OPENINGS SHALL BE PROVIDED AT THE BOTTOM OF CELLS TO BE GROUT FILLED IN EACH POUR IN EXCESS OF 5 FEET IN HEIGHT. AFTER INSPECTION AND BEFORE GROUTING, THE REBAR SHALL BE TIED AT THE CLEANOUTS AND THE CLEANOUTS SHALL BE SEALED.
15. ANY OVERHANGING MORTAR OR OTHER OBSTRUCTION OR DEBRIS SHALL BE REMOVED FROM THE INSIDES OF SUCH CELL WALLS.
16. VERTICAL REINFORCEMENT SHALL BE HELD IN POSITION AT TOP AND BOTTOM AND AT INTERVALS NOT EXCEEDING 192 BAR DIAMETERS.
17. CELLS CONTAINING REINFORCEMENT SHALL BE FILLED SOLIDLY WITH GROUT. SAMPLE AND TEST GROUT PER ASTM C1019.
18. GROUT SHALL BE POURED IN LIFTS OF 4 FEET MAXIMUM HEIGHT. GROUT SHALL BE CONSOLIDATED AT TIME OF PLACING BY VIBRATING AND RECONSOLIDATED LATER BY VIBRATING BEFORE PLASTICITY IS LOST.
19. WHEN TOTAL GROUT POUR EXCEEDS 5'-4" FEET IN HEIGHT, (HIGH LIFT GROUTING), THE GROUT SHALL BE PLACED IN 4-FOOT LIFTS WITH A MINIMUM OF A 30 MINUTE DELAY BETWEEN LIFTS. MINIMUM CELL DIMENSION SHALL BE IN ACCORDANCE WITH TABLE 5 OF TMS 402 (3" X 3" FOR COARSE GROUT, 12 FT. MAXIMUM POUR HEIGHT).
20. WHEN THE GROUTING IS STOPPED FOR ONE HOUR OR LONGER, HORIZONTAL CONSTRUCTION JOINTS SHALL BE MADE BY STOPPING THE POUR OF GROUT NOT LESS THAN 1-1/2 INCH BELOW THE TOP OF THE UPPERMOST UNIT GROUTED.
21. WHERE CONCRETE BEAMS ARE INSTALLED IN CONCRETE MASONRY WALL, SUPPORT CONCRETE WITH 6" SIDE CONTINUOUS STRIPS OF 1/8 SQUARE MESH SOFFIT SCREENING OR PUR-O-STOP OF EQUAL CENTERED OVER BLOCK WORK. USE OF ROOFING FELT STRIPS WILL NOT BE PERMITTED.
22. MASONRY WALLS MARKED AS "LOAD BEARING" ARE DESIGNED TO CARRY FLOOR GRAVITY LOADS AND MUST BE CONSTRUCTED TO SUPPORT THE CONCRETE FLOOR SLAB CONCURRENTLY WITH CONCRETE COLUMN CONSTRUCTION.
23. MASONRY WALLS INDICATED AS "INFILL" ARE DESIGNED TO RESIST LATERAL LOADS AND MUST BE CONSTRUCTED AFTER THE CONCRETE SLAB IS CAST AND POST TENSIONING OPERATION IS COMPLETED. INFILL WALLS SHALL BE CONSTRUCTED STARTING AT THE FOUNDATION LEVEL AND WORKING UPWARD ONE LEVEL AT A TIME. DO NOT START NEXT HIGHER LEVEL OF WALL PRIOR TO COMPLETION OF WALL BELOW. ALLOW A MINIMUM OF 3 DAYS CURING FOR GROUT OF WALL BELOW PRIOR TO STARTING WALL ABOVE.
24. SINGLE STORY MASONRY WALLS INDICATED AS "PARTITION WALLS" SHALL BE CAST ON THICKENED SLAB FOUNDATIONS AND ARE NOT DESIGNED TO CARRY ANY LOADS FROM THE MAIN BUILDING STRUCTURES. ISOLATE TOP OF PARTITION WALLS FROM UNDERSIDE OF CONCRETE SLAB WITH A MINIMUM 1/2" THICK COMPRESSIBLE MATERIAL.
25. PROVIDE DOVETAIL ANCHORS AT 16" C/C, UNLESS NOTED OTHERWISE, WHERE MASONRY WALLS ABUT CONCRETE SURFACES.
26. SUBMIT WRITTEN CONSTRUCTION SEQUENCES AND PROCEDURES PRIOR TO THE START OF MASONRY CONSTRUCTION.
27. REINFORCING SHALL BE ASTM A615 GRADE 60 DEFORMED BARS, FREE FROM OIL, SCALE AND RUST AND PLACED IN ACCORDANCE WITH THE TYPICAL BENDING DIAGRAM AND PLACING DETAILS OF ACI STANDARDS AND SPECIFICATIONS.
28. SECURE APPROVAL OF REINFORCING SHOP DRAWINGS PRIOR TO COMMENCING FABRICATION.
29. PROVIDE STANDARD HOOKS AT ENDS OF ALL BARS WHICH TERMINATE IN TIE BEAMS OR BOND BEAMS.
30. WHERE REINFORCING IS SHOWN CONTINUOUS, LAP SPLICE BARS IN ACCORDANCE WITH SPLICE TABLE IN TYPICAL DETAIL.
31. PROVIDE DOWELS INTO FOOTINGS, PILE CAPS, SUPPORT BEAMS, ETC. TO MATCH VERTICAL BARS WITH LAP SPLICES PER SPLICE TABLE IN TYPICAL DETAIL, UNO.
32. MECHANICAL BAR COUPLERS MAY BE USED TO SPLICE CONTINUOUS BARS, IN LIEU OF LAP SPLICES. BAR COUPLERS MUST ACHIEVE 125% OF BAR STRENGTH MINIMUM. COUPLERS MAY BE BOLTED TYPE (DAYTON D-250 BAR-LOCK S-SERIES COUPLER OR EQUAL) OR THREADED TYPE (DAYTON D310 TAPER-LOCK COUPLER OR EQUAL). COUPLERS SHALL BE INSTALLED PER MANUFACTURER'S WRITTEN INSTALLATION RECOMMENDATIONS.
33. AT CHANGES IN DIRECTION OF BOND BEAMS, PROVIDE CORNER BARS OF SAME SIZE AND SPACING AS HORIZONTAL STEEL.

4814 TIE BEAMS:

1. BEAMS WITH THE PREFIX "TB" SHALL BE OF CONCRETE, POURED AFTER THE MASONRY WALLS BELOW ARE IN PLACE.
2. REINFORCING SHALL BE CONTINUOUS THROUGH TIE BEAMS WITH MINIMUM LAP SPLICES OF 48 BAR DIAMETERS AND BENT BARS AT CORNERS.
3. USE METAL LATH, MORTAR, OR SPECIAL UNITS TO CONFINE CONCRETE TO AREA REQUIRED, IN ACCORDANCE WITH TMS 602 (SOLID METAL OR FELT CAVITY CAPS ARE PROHIBITED).
4. AT TIE BEAMS DIRECTLY OVER OPENINGS, REDUCE SPACING OF STIRRUPS OVER THE OPENING TO EITHER HALF OF TYPICAL SPACING, OR D/2, WHICHEVER IS LESS. THIS REQUIREMENT SHALL ALSO APPLY WHERE HEIGHT OF MASONRY BETWEEN BOTTOM OF TIE BEAM AND TOP OF OPENING IS LESS THAN THE WIDTH OF THE OPENING DIVIDED BY TWO.
5. WHERE TIE BEAMS CANTILEVER OUT FROM SUPPORTING WALL, TOP AND BOTTOM BARS SHALL BE FULLY DEVELOPED INTO TIE BEAM BEYOND SUPPORT, EITHER BY PROVIDING FULL CLASS B LAP SPLICE OR STANDARD ACI HOOKS EMBEDDED DEEP ENOUGH BEYOND SUPPORT TO DEVELOP STRENGTH OF BAR. ALSO, REDUCE STIRRUP SPACING PER NOTE ABOVE.

4816 LINTELS:

1. MASONRY OPENINGS LESS THAN ** FEET SHALL BE SPANNED WITH 8"x16" CONCRETE LINTELS WITH 2#5 REINFORCING BARS TOP AND BOTTOM.
2. MASONRY OPENINGS LESS THAN ** FEET SHALL BE SPANNED WITH 8"x12" CONCRETE LINTELS WITH 2#5 REINFORCING BARS TOP AND BOTTOM.
3. MASONRY OPENINGS LESS THAN *** FEET SHALL BE SPANNED WITH 8"x8" CONCRETE LINTELS WITH 2#5 REINFORCING BARS BOTTOM.
4. LINTELS SHALL BEAR A MINIMUM OF 8" AT EACH END.

4860 BRICK/STONE VENEER:

1. SEE ARCHITECTURAL DRAWINGS FOR BRICK VENEER SPECIFICATIONS.
2. ALL BRICK SUPPORT ANGLES SHALL BE GALVANIZED AND SHALL BE LOCATED AT EACH SLAB LEVEL. BRICK ANGLES ARE TO ATTACHED WITH HEADED STUDS AS SHOWN IN DETAILS.
3. ATTACH BRICK VENEER TO WALL WITH GALVANIZED TIES.

5120 STRUCTURAL STEEL:

1. STEEL WORK SHALL BE NEW AND CONFORM TO THE ANSI/AISC 360-10 SPECIFICATION FOR STRUCTURAL STEEL BUILDINGS.
2. MATERIAL SHALL CONFORM TO THE FOLLOWING, EXCEPT AS NOTED:

WIDE FLANGE SHAPES	ASTM A992 (Fy=50 KSI)
RECTANGULAR HSS	ASTM A500, GRADE B (Fy=46 KSI)
HIGH STRENGTH BOLTS	ASTM A325 OR A490
ANCHOR RODS	ASTM F1554 GR. 36 (Fy=36 KSI)
SHEAR STUD CONNECTORS	ASTM A108 (Fu=65 KSI)

3. CONNECTIONS:
   A. BOLTS SHALL BE HIGH-STRENGTH, BEARING TYPE IN SNUG TIGHT CONDITION, U.N.O. TIGHTEN BY AN AISC APPROVED METHOD.
   B. WELDING ELECTRODES SHALL BE PER AWS D1.1. RETURN FILLET WELDS FOR FRAMED CONNECTIONS 1/2" AT EACH END.
   C. FIELD CONNECTIONS SHALL BE BOLTED, EXCEPT AS NOTED OTHERWISE.
   D. DESIGN BEAM CONNECTIONS TO DEVELOP THE REACTIONS SHOWN. IF NOT SHOWN, DESIGN CONNECTIONS TO DEVELOP THE REACTIONS DUE TO THE MAXIMUM ALLOWABLE UNIFORM LOAD FOR THE BEAM SIZE AND SPAN SHOWN, ASSUMING FULL LATERAL SUPPORT PER AISC BEAM (ALLOWABLE UNIFORM LOAD) TABLE VALUE FOR THE CORRESPONDING SPAN, U.N.O.
   E. DESIGN DIAGONAL BRACING CONNECTIONS TO DEVELOP THE REACTIONS SHOWN. IF REACTIONS ARE NOT SHOWN, DESIGN CONNECTIONS TO DEVELOP FULL TENSION CAPACITY OF THE DIAGONAL BRACING MEMBER.
   F. CALCULATIONS AND SHOP DRAWINGS FOR STRUCTURAL STEEL CONNECTIONS SHALL BE SUBMITTED FOR APPROVAL PRIOR TO FABRICATION AND SHALL BE SIGNED AND SEALED BY AN ENGINEER REGISTERED IN THE STATE OF FLORIDA (IN WHICH THE PROJECT RESIDES).
4. HIGH STRENGTH BOLTS IN BEARING CONDITION SUPPORTING SIMPLE SPAN BEAMS NOT SUBJECT TO AXIAL LOADS MAY BE INSTALLED TO "SNUG TIGHT" CONDITION IF NORMAL, OR SHORT SLOTTED HOLES ARE USED. THE ENGINEER OF RECORD WILL BE THE ULTIMATE AUTHORITY IN THE USE OF "SNUG TIGHT" BOLTS. IF LONG SLOTTED OR OVERSIZED HOLES ARE USED, BOLTS MUST BE FULLY PRETENSIONED AND SLIP CRITICAL. PROPER SURFACE PREPARATION IS REQUIRED FOR SLIP CRITICAL BOLTS, INCLUDING OMISSION OF PRIMER OR FIRE PROOFING, AS APPROPRIATE.
5. BOLTS SHARING LOAD WITH WELDS IN A CONNECTION SHALL BE FULLY PRETENSIONED AND SLIP CRITICAL.
6. WHERE FULLY PRETENSIONED OR SLIP CRITICAL BOLTS ARE REQUIRED, TIGHTENING SHALL BE ACHIEVED USING EITHER TWIST-OFF TENSION CONTROL BOLTS OR DIRECT TENSION INDICATING WASHERS.
7. ALL STRUCTURAL STEEL EXPOSED TO EXTERIOR CONDITIONS SHALL BE HOT DIPPED GALVANIZED PER ASTM A123 AND ALL FASTENERS AND HARDWARE SHALL BE HOT DIPPED GALVANIZED PER ASTM A153. WHERE GALVANIZING SURFACE IS DAMAGED, INCLUDING AT LOCATIONS OF FIELD WELDING, MEMBERS SHALL BE TOUCHED UP WITH ZINC RICH PRIMER.
8. GROUT UNDER BEARING PLATES SHALL BE NON-METALLIC, NON-SHRINK TYPE WITH A COMPRESSIVE STRENGTH OF AT LEAST 5,000 PSI IN 28 DAYS.
9. IT IS THE INTENTION OF THESE DESIGN DOCUMENTS TO DELEGATE THE DESIGN OF ALL STRUCTURAL STEEL CONNECTIONS TO A QUALIFIED SPECIALTY PROFESSIONAL ENGINEER, REGISTERED IN THE STATE OF FLORIDA. THIS REQUIREMENT EXTENDS TO ALL CONNECTIONS, WITH THE EXCEPTION OF THOSE SPECIFICALLY FULLY DESIGNED IN THE DESIGN DOCUMENTS. IT IS ANTICIPATED THAT PROSPECTIVE STRUCTURAL STEEL FABRICATORS WILL PERFORM NECESSARY INVESTIGATION TO DETERMINE THE FULL IMPACT OF CONNECTION CLEARANCE REQUIREMENTS, AS WELL AS THE POTENTIAL NECESSARY INTRODUCTION OF DOUBLER PLATES, CONTINUITY PLATES, AND/OR WEB FLANGE OR OTHER STIFFENERS PRIOR TO SUBMITTING ANY BID FOR THIS WORK.
10. PROVIDE SIGNED AND SEALED CALCULATIONS FOR ALL STRUCTURAL STEEL CONNECTION DESIGN PREPARED BY A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF FLORIDA (IN WHICH THE PROJECT RESIDES). CALCULATIONS ARE TO BE SUBMITTED SIMULTANEOUSLY WITH CORRESPONDING SUBMITTAL.
11. APPLY FIREPROOFING TO STEEL STRUCTURE CALCULATING THE THICKNESS OF FIREPROOFING BY COMPARING THE ACTUAL MEMBER SIZE TO THE MEMBER SIZE USED IN THE DESIGNATED UL RATING AND ADJUSTING APPROPRIATELY.
12. USE INTUMESCENT PAINT ON STRUCTURAL STEEL EXPOSED TO VIEW WHICH REQUIRES FIRE RATING. SEE ARCHITECTURAL DRAWINGS FOR FIRE RATING AND INTUMESCENT PAINT REQUIREMENTS.
13. STEEL EXPOSED TO VIEW: DRESS ALL WELDS, REMOVE BURS, AND FILL ROLLED TRADE NAMES WITH WELD METAL AND GRIND SMOOTH. TYPICAL AT ALL ARCHITECTURALLY EXPOSED CONDITIONS.

5122 WELDING:

1. WELDING SHALL BE DONE BY WELDERS WITH CURRENT CERTIFICATION IN ACCORDANCE WITH AWS D1.1.
2. WELDS SHOWN ON STRUCTURAL DRAWINGS ARE MINIMUM DESIGN REQUIREMENTS. THE FABRICATOR'S SHOP DRAWINGS SHALL REFLECT WELDS IN ACCORDANCE WITH AWS REQUIREMENTS.
3. FULL PENETRATION GROOVE WELDS SHALL BE INSPECTED BY ULTRASONIC TESTING. TWENTY-FIVE PERCENT OF THE WELDS SHALL BE INSPECTED AT RANDOM UNLESS NOTED OTHERWISE. SEE SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
4. UNLESS NOTED OTHERWISE ON THE DRAWINGS, GROOVE WELDS SHALL BE FULL PENETRATION.
5. PROVIDE FILLET WELDS AT CONTACT POINTS BETWEEN STEEL MEMBERS SUFFICIENT TO DEVELOP THE ALLOWABLE TENSILE STRENGTH OF THE SMALLER MEMBER AT THE JOINT UNLESS DETAILED OTHERWISE ON THE DRAWINGS. THE MINIMUM FILLET WELD SIZE IS 3/16" UNLESS OTHERWISE NOTED.
6. MINIMUM TENSILE STRENGTH OF ELECTRODE MATERIAL F_{EXX} = 70ksi UNLESS NOTED OTHERWISE.

THIS BUILDING IS CLASSIFIED AS A "THRESHOLD BUILDING" SPECIAL INSPECTION OF THE CONSTRUCTION IS REQUIRED BY THE STATE OF FLORIDA IN ACCORDANCE WITH CHAPTER 553 OF THE FLORIDA STATUTES. CONSTRUCTION SHALL BE INSPECTED IN ACCORDANCE WITH THE SPECIAL INSPECTION PLAN.

STRUCTURAL GENERAL NOTES

BID DOCUMENTS

Drawing No.:

S002

BIM 360://Design of Satellite Concourse/VPS-MLM-S.rvt

1/22/2020 2:07:31 PM

5210 STEEL JOISTS:

1. SHALL BE THE SIZE AND SPACING AS SHOWN ON THE STRUCTURAL DRAWINGS AND SHALL BE DESIGNED, FABRICATED, INSTALLED AND BRIDGED IN ACCORDANCE WITH THE STEEL JOIST INSTITUTE SPECIFICATIONS, LATEST EDITION. JOIST SIZES SHOWN ON PLANS ARE MINIMUM SIZES BASED ON SJI STANDARD UNIFORM GRAVITY LOAD TABLES. THE JOIST MANUFACTURER MAY INCREASE THE SIZE OF THE JOISTS, WITHIN THE SAME DEPTH CLASS, AS REQUIRED TO ACCOUNT FOR UPLIFT LOADS OR OTHER NON-STANDARD LOADS.
2. ENDS OF BRIDGING LINES TERMINATING AT WALLS OR BEAMS SHALL BE ANCHORED THERETO AT TOP AND BOTTOM CHORDS. MINIMUM JOIST BRIDGING TERMINATION CONNECTIONS TO MASONRY SHALL BE L3x3x1/4x3" LONG WITH (1) 1/2" DIAMETER ANCHOR BOLT OR L4x4x1/4x0'-3" WITH (1) 1/2"x5" ANCHOR BOLT TO CONCRETE.
3. BRIDGING SHALL BE WELDED OR BOLTED AT POINTS OF CONTACT. WELD SHALL NOT DAMAGE THE JOIST. CROSS BRIDGING SHALL BE WELDED OR BOLTED AT ITS CENTER POINT. BRIDGING SHALL BE STRAIGHT FROM JOIST TO JOIST. CHANGES IN SLOPE OR DIRECTION SHALL BE MADE AT A JOIST, NOT BETWEEN JOISTS.
4. K-SERIES JOISTS SHALL BEAR A MINIMUM OF 2½" ON STEEL BEAMS AND 4" ON CONCRETE BEAMS. ***ENGINEER TO DELETE IF DETAIL PROVIDED*** JOIST BEARING PLATES TO BE MINIMUM 3/8"x4"x7½" WITH (2) 1/2" DIAMETER x 5" SHEAR STUD CONNECTORS. BEARING PLATES FOR BACK TO BACK SINGLE JOISTS SHALL BE MINIMUM 3/8"x7½"x7½" WITH (4) 1/2" DIAMETER x 5" SHEAR STUD CONNECTORS. BEARING PLATES SHALL BE CAST INTEGRALLY WITH THE CONCRETE BEAM. WELD JOISTS TO BEARING PLATES WITH A MINIMUM OF (2) 1/8" FILLET WELDS, UNLESS NOTED OTHERWISE.
5. HANGERS FOR SUPPORT OF EQUIPMENT, OR MEMBERS SUPPORTING SUCH HANGERS, SHALL BE LOCATED AT PANEL POINTS OF JOISTS, AND SHALL BE HUNG FROM THE TOP CHORD OF THE JOIST.
6. ROOF JOISTS SHALL BE DESIGNED FOR NET UPLIFT PRESSURES AS SHOWN ON DRAWINGS.
7. SUBMIT SHOP DRAWINGS FOR REVIEW PRIOR TO FABRICATION. SHOP DRAWING SUBMITTAL SHALL INCLUDE LAYOUT, COMPONENT DESIGNATION, BRIDGING, AND PERTINENT SECTIONS AND DETAILS.
8. SUBMITTALS FOR JOISTS, OTHER THAN STANDARD SJI CATALOG SELECTIONS WHICH HAVE BEEN VERIFIED BY SJI, SHALL BE SIGNED AND SEALED BY AN ENGINEER REGISTERED IN THE STATE OF FLORIDA.
9. JOISTS SHALL BE DESIGNED TO SUPPORT THE LOADS LISTED IN SECTION 1060, THOSE INDICATED ON PLANS, AND AN ADDITIONAL CONCENTRATED DEAD LOAD NOT TO EXCEED 500# TO BE PLACED AT ANY PANEL ALONG THE LENGTH OF THE JOIST. DEAD LOADS SHALL BE IN ACCORDANCE WITH THE MATERIALS SHOWN WITHIN THE CONTRACT DOCUMENTS AND SHALL BE NOTED ON THE SHOP DRAWING SUBMITTAL BY THE JOIST MANUFACTURER.
10. JOIST BOTTOM CHORDS SHALL BE DOUBLE ANGLES.
11. JOISTS ARE TO BE DESIGNED TO ALLOW 1" MAXIMUM DIFFERENCE IN CAMBER BETWEEN ADJACENT PARALLEL JOISTS.
12. JOIST MANUFACTURER SHALL COORDINATE WITH MECHANICAL AND ELECTRICAL DRAWINGS FOR ADDITIONAL LOADS DUE TO EQUIPMENT TO BE SUPPORTED BY ROOF STRUCTURE. ALL ADDITIONAL LOADS SHALL BE CLEARLY INDICATED ON SHOP DRAWINGS SUBMITTALS.
13. WHERE ROOF JOISTS ARE USED TO BRACE STEEL ROOF BEAMS (AS SHOWN ON PLANS AND DETAILS), DESIGN JOISTS TO RESIST A 500 LB AXIAL BRACE LOAD AT EACH BRACE. THIS LOAD SHALL ACT CONCURRENTLY WITH ALL WIND LOAD CASES AND COMBINATIONS.

5212 JOIST BEARING:

1. WHERE STEEL BEAMS SUPPORT JOISTS FRAMING FROM ONE SIDE ONLY, OR WHERE JOISTS FROM ONE SIDE ARE 30% LONGER THAN THE JOISTS ON THE OPPOSITE OF THE BEAM, JOISTS SHALL BEAR FULL WIDTH OF THE STEEL BEAM OR 5-1/2", WHICH EVER IS LESS.
2. CONTRACTOR SHALL COORDINATE JOIST SEAT HEIGHTS AND TOP OF STRUCTURAL STEEL SUPPORTS TO ENSURE PROPER DECK ELEVATIONS.

5312 STEEL ROOF DECK:

1. SHALL BE GALVANIZED (G60), TYPE "B" STEEL ROOF DECK OF GAGE AND DEPTH INDICATED ON DRAWINGS, AND SHALL CONFORM TO THE PROVISIONS OF THE STEEL DECK INSTITUTE (SDI) SPECIFICATIONS FOR STEEL ROOF DECK.
2. DECK SHALL BE VENTED IN AREAS TO RECEIVE LIGHT WEIGHT INSULATING CONCRETE FILL, PER FBC SECTION 1917.4.1; COORDINATE VENTING AREA REQUIREMENT W/ INSULATING FILL MANUFACTURER.
3. DECK CENTERING SHALL BE PLACED IN CONFORMANCE WITH MANUFACTURER'S RECOMMENDATIONS AND SHALL BE CONTINUOUS OVER AT LEAST 3 SPANS.
4. WELD PATTERN AT MAIN DECK SUPPORTS, AND SIDELAP CONNECTIONS, SHALL BE AS INDICATED ON ROOF DECK FASTENING DIAGRAM. PROVIDE 5/8" PUDDLE WELDS AT 12" O.C. ALONG EDGE SUPPORTS, UNLESS NOTED OTHERWISE.
5. DECK SHALL BE TOPPED WITH TYPE II INSULATING FILL CONSISTING OF RIGID INSULATING BOARD COVERED WITH TWO OR MORE INCHES OF LIGHT WEIGHT INSULATING CONCRETE OVER THE TOP (MAX. 30 P.C.F. OVEN DRY DENSITY).
6. METAL DECK MANUFACTURER SHALL BE A MEMBER OF THE STEEL DECK INSTITUTE AND ALL DESIGN SHALL BE IN ACCORDANCE WITH APPLICABLE STANDARDS.
7. DO NOT HANG MEP SYSTEMS (DUCTWORK, ROOF DRAIN OR FIRE PROTECTION PIPING, ETC) FROM ROOF DECK. ALL EQUIPMENT IS TO BE HUNG FROM ROOF JOISTS. SEE SECTION 5210 FOR ROOF JOIST REQUIREMENTS.

THRESHOLD INSPECTION PLAN

GENERAL

1. PER FLORIDA STATUTE §553.79, THE FOLLOWING PLAN PROVIDES SPECIFIC PROCEDURES AND SCHEDULES SO THE BUILDING CAN BE INSPECTED FOR COMPLIANCE WITH THE PERMITTED DOCUMENTS. THIS PLAN SHALL BE AVAILABLE AT THE JOBSITE FOR USE BY THE BUILDING OFFICIAL, SPECIAL INSPECTOR OR THE DESIGNATED REPRESENTATIVE. NOTWITHSTANDING THE PRECEDING, DURING THE COURSE OF CONSTRUCTION THE SPECIAL INSPECTOR MAY OBSERVE ITEMS NOT SPECIFICALLY LISTED BELOW WHICH HE DETERMINES NEED TO BE INSPECTED. FLORIDA STATUTE §553.79 LISTS A NUMBER OF RESPONSIBILITIES THAT ARE IN NO WAY EXEMPTED BY THE FOLLOWING.
2. THIS PLAN SHALL NOT RELIEVE THE GENERAL CONTRACTOR OR HIS SUBCONTRACTORS OF ANY LIABILITY, RESPONSIBILITY OR CONTRACTUAL OBLIGATIONS RELATED TO THE CONSTRUCTION AND INSTALLATION OF THE STRUCTURAL COMPONENTS OF THE BUILDING, NOR DOES IT RELIEVE THE CONTRACTOR OF HIS RESPONSIBILITIES TO CARRY OUT HIS OWN QUALITY CONTROL INSPECTIONS AND TESTING. THIS PLAN INTENDS THAT ALL STRUCTURAL LOAD BEARING ELEMENTS **INCLUDING WIND LOADED ELEMENTS** BE INSPECTED FOR COMPLIANCE WITH THE CONSTRUCTION DOCUMENTS.
3. THE CONTRACTOR SHALL COOPERATE WITH AND ASSIST THE SPECIAL INSPECTOR IN PERFORMING HIS INSPECTION DUTIES AS SPECIFIED BELOW. THE SPECIAL INSPECTOR SHALL HAVE FREE ACCESS TO THE PROJECT AT ALL TIMES. THE CONTRACTOR SHALL REVIEW THIS PLAN, COORDINATE AND SCHEDULE WORK TO ACCOMMODATE THE REQUIRED INSPECTIONS. THE CONTRACTOR SHALL PROVIDE A MINIMUM OF TWENTY-FOUR (24) HOUR NOTICE TO THE SPECIAL INSPECTOR FOR ALL INSPECTIONS.
4. PER SECTION §553.79 5(A), THE PROFESSIONAL ENGINEER RESPONSIBLE FOR THE DESIGN OF THE SHORING AND RE-SHORING SHALL INSPECT IT FOR CONFORMANCE WITH THE PLANS SUBMITTED TO THE ENFORCING AGENCY AND FURNISH A SIGNED AND SEALED LETTER TO THE SPECIAL INSPECTOR STATING THE INSTALLATION IS IN CONFORMANCE WITH THE SUBMITTED PLANS, PRIOR TO CONCRETE PLACEMENT.
5. PER SECTION §553.79 7(C), EACH SHORING AND RE-SHORING INSTALLATION SHALL BE SUPERVISED, INSPECTED AND CERTIFIED BY THE CONTRACTOR TO BE IN COMPLIANCE WITH THE SHORING DOCUMENTS.

PROCEDURES AND SCHEDULE

1. THE THRESHOLD INSPECTOR SHALL PERFORM SITE VISITS AT A FREQUENCY DETERMINED BY HIM TO SATISFY HIM THAT THE INSPECTIONS ARE BEING PERFORMED BY HIS ON-SITE REPRESENTATIVE(S) IN ACCORDANCE WITH THIS PLAN.
2. THE CONTRACTOR SHALL ADVISE THE SPECIAL INSPECTOR IN ADVANCE OF CONSTRUCTION SCHEDULES AND PLANNED OPERATIONS IN ORDER TO ASSURE TIMELY AND APPROPRIATE OBSERVATION INSPECTION.
3. THE SPECIAL INSPECTOR SHALL COOPERATE WITH THE CONTRACTOR AND SHALL REFRAIN FROM DIRECTING WORK, AS THIS IS EXPRESSLY NOT PART OF THE SPECIAL INSPECTION.

SOIL COMPACTION & FOUNDATIONS

1. CONFIRM THAT A SOILS TESTING LABORATORY MONITORS SOIL COMPACTION, AND PERFORMS TESTS TO VERIFY THAT THE INSTALLATIONS MEET THE REQUIREMENTS STATED IN THE PROJECT'S SPECIFICATIONS AND THE SOILS REPORT SUBMITTED BY PROFESSIONAL SERVICE INDUSTRIES, INC.
2. VERIFY THAT FOOTINGS AND FOUNDATIONS ARE IN CONFORMANCE WITH THE CONSTRUCTION DOCUMENTS. SPECIFICALLY VERIFY SIZE, REINFORCING, CONFIGURATION, LAP SPLICES, LOCATION, ADDITIONAL BARS AT CORNERS AND INTERSECTIONS, COVER ON REINFORCING AND ORIENTATION.
3. MONITOR CONSTRUCTION TO ENSURE THAT THERE HAS BEEN NO UNDERMINING OR EXCAVATION UNDER EXISTING FOOTINGS FOR ANY REASON, E.G. TO INSTALL UNDERGROUND UTILITIES AND PIPING, ETC.
4. VERIFY THAT DE-WATERING METHODS ARE MAINTAINED AS RECOMMENDED BY THE GEOTECHNICAL REPORT AND THAT PROCEDURES DO NOT ADVERSELY AFFECT THE STRUCTURAL INTEGRITY OF THE FOUNDATIONS.

CONCRETE AND REINFORCEMENT

1. CONFIRM THAT THE CONTRACTOR HAS OBTAINED APPROVED SHOP DRAWINGS FOR SPECIFIED ITEMS PRIOR TO COMMENCING WORK. THIS INCLUDES, BUT IS NOT LIMITED TO, ANCHOR BOLTS, EMBEDDED ITEMS, STEEL REINFORCING, FORMWORK, SHORING AND CONCRETE MIX DESIGNS.
2. VERIFY THAT REINFORCING STEEL IS INSTALLED PER THE CONSTRUCTION DOCUMENTS AND APPROVED SHOP DRAWINGS. SPECIFICALLY VERIFY SIZE, GRADE, LAP SPLICE LENGTH AND LOCATION, QUANTITY AND/OR SPACING, BENDS OR OFFSETS AND COVERAGE. REPORT ANY DEVIATIONS TO THE GENERAL CONTRACTOR FROM THE CONTRACT DOCUMENTS BEFORE CONCRETE IS CAST AND CONFIRM CORRECTIONS ARE MADE.
3. VERIFY THAT DOWELS, ANCHOR BOLTS AND EMBEDDED ITEMS ARE PROPERLY INSTALLED AND SECURED IN PLACE PRIOR TO CONCRETE PLACEMENT.
4. VERIFY THAT REINFORCING IS NEW BILLET STEEL AND IS CLEAN OF ALL LOOSE, FLAKING RUST OR SCALE AND IS FREE OF GREASE OR OTHER FOREIGN MATERIALS WHICH COULD REDUCE OR PREVENT BOND.
5. VERIFY THAT DEBRIS AND FOREIGN MATERIAL HAS BEEN REMOVED FROM FORMS BEFORE CONCRETE IS PLACED.
6. COLUMNS: INSPECT REINFORCING STEEL, DOVETAIL SLOTS AND OTHER EMBEDDED ITEMS. CHECK TIE SPACING, ESPECIALLY DOUBLE TIES AND TIES AT DEEP BEAM INTERSECTIONS.
7. BEAMS: INSPECT REINFORCING STEEL. CHECK TIE SPACING, INCLUDING LOCATION OF FIRST TIE. CHECK FOR HOOKED BARS. CHECK THAT HOOKED BARS EXTEND TO FAR FACE OF SUPPORT. VERIFY REINFORCING IS PLACED IN ACCORDANCE WITH DIAGRAMS AND DETAILS ON PROJECT DRAWINGS, INCLUDING ADDITIONAL REINFORCING REQUIRED AT CORNERS AND INTERSECTIONS.
8. ONE WAY SLABS: INSPECT REINFORCING STEEL, INCLUDING TEMPERATURE STEEL. CHECK THAT HOOKED BARS EXTEND TO FAR FACE OF SUPPORT.
9. TWO WAY SLABS: INSPECT REINFORCING STEEL. CHECK FOR PROPER LAYERING. CHECK PLACEMENT OF TOP BARS THROUGH COLUMN STRIP FOR UNIFORM SPACING (BARS ARE NOT TO BE TIED TOGETHER). CHECK THAT ADDED TOP BARS ARE PLACED WITHIN THE VICINITY OF THE COLUMN. CHECK THAT ADDED BOTTOM BARS EXTEND TO FACE OF COLUMN, UNLESS OTHERWISE SHOWN ON CONTRACT DOCUMENTS, AND THAT THEY ARE WITHIN THE COLUMN STRIP. CHECK HOOK BAR REQUIREMENTS, BOTH TOP AND BOTTOM. CHECK THAT HOOKS ARE PLACED AT FAR FACE OF SUPPORT. CHECK POSITION OF BARS AT SLAB OFFSETS AND DEPRESSIONS.
10. CHECK THAT EXPANSION JOINT MATERIAL, ANCHORS AND OTHER EMBEDDED ITEMS ARE CORRECT AND HAVE BEEN POSITIONED AND SECURED IN PLACE SO THAT DISPLACEMENT IS NOT POSSIBLE.
    a. CHECK THAT CONDUITS PLACED IN THE SLAB ARE REASONABLY SPACED TO ENSURE INTEGRITY OF THE SLAB AND DO NOT VIOLATE REQUIREMENTS INDICATED IN THE CONTRACT DOCUMENTS.
    b. CONFIRM THAT LOAD CARRYING EMBEDDED ITEMS ARE PLACED IN COMPLIANCE WITH THE CONTRACT DOCUMENTS. RELOCATION OF EMBEDDED ITEMS IN CONFLICT WITH REINFORCING WILL NOT BE PERMITTED WITHOUT PRIOR APPROVAL OF THE ARCHITECT/ENGINEER.
11. OPENINGS: REPORT ALL SLAB OPENINGS LARGER THAN 12" AND NOT SHOWN ON THE CONTRACT DOCUMENTS TO THE ARCHITECT/ENGINEER. CHECK PLACEMENT OF ADDITIONAL REINFORCEMENT AROUND OPENINGS. NO SLEEVES OR OPENINGS WILL BE PERMITTED IN BEAMS WITHOUT PRIOR APPROVAL OF THE ARCHITECT/ENGINEER.
12. AS REQUIRED BY THE CONSTRUCTION DOCUMENTS, VERIFY THAT A TESTING LABORATORY IS PRESENT AT THE JOBSITE TO TAKE SLUMP TESTS AND CYLINDERS BEFORE CONCRETE IS PLACED IN FORMS.
13. CONFIRM THAT THE CONCRETE BEING PLACED AT THE JOBSITE MEETS THE PROJECT REQUIREMENTS REGARDING MIXING AND DELIVERY TIME, SLUMP, CONCRETE STRENGTH AND THAT THE PROPER MIX DESIGN IS USED.
14. VERIFY THAT THE CONTRACTOR DOES NOT ADD WATER TO THE CONCRETE AFTER SLUMP TESTS AND CYLINDERS HAVE BEEN MADE. IF ADDITIONAL WATER IS ADDED TO INCREASE SLUMP, ANOTHER SLUMP TEST IS TO BE TAKEN. IF THE SLUMP TEST DOES NOT MEET THE PROJECT'S REQUIREMENTS, THE CONCRETE IS SUBJECT TO REJECTION.
15. REVIEW THE GENERAL ARRANGEMENT OF FORMS FOR COMPLIANCE WITH FORMWORK SHOP DRAWINGS. CHECK THAT THE FORMWORK INSTALLATION, REMOVAL AND RE-SHORING PROCEDURES ARE ACCORDING TO THE CONSTRUCTION DOCUMENTS AND SUBMITTED SHOP DRAWINGS. INSPECT THE SHORING AND RE-SHORING FOR CONFORMANCE WITH THE SHORING AND RE-SHORING PLANS SUBMITTED TO THE ENFORCING AGENCY.
16. REVIEW THE TIME SEQUENCE OF FORM REMOVAL AND RE-SHORING PROCEDURES AND SCHEDULE FOR COMPLIANCE WITH FORMWORK, SHORING AND RE-SHORING DRAWINGS AND PROJECT SPECIFICATIONS.
17. FOOTING EDGES ARE TO BE FORMED UNLESS UNFORMED FOOTINGS ARE PERMITTED PER THE CONSTRUCTION DOCUMENTS. IF UNFORMED FOOTING EDGES CANNOT RETAIN SHAPE DURING PLACEMENT OF CONCRETE, THEN FOOTING EDGES SHALL BE FORMED. VERIFY THAT SLOUGHED SOIL HAS BEEN CLEANED OUT AND REMOVED FROM EXISTING FOOTING.
18. OBSERVE THE PLACEMENT OF AT LEAST 50% OF CONCRETE BEING PLACED FOR STRUCTURAL ELEMENTS TO ASSURE THAT HANDLING, PLACING, CONSOLIDATION, FINISHING AND CURING IS IN ACCORDANCE WITH THE PROJECT'S SPECIFICATIONS.

OBSERVATION OF PLACEMENT OF CONCRETE FOR SLABS ON GRADE, WHICH DO NOT SUPPORT BEARING WALLS, IS NOT REQUIRED BUT REINFORCEMENT MUST BE INSPECTED

MASONRY

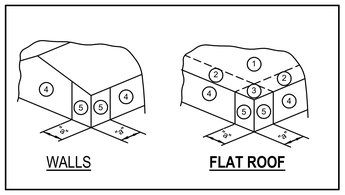
1. VERIFY THAT REQUIRED MASONRY SUBMITTALS, STRUCTURAL IN NATURE, HAVE BEEN ACCEPTED BY THE STRUCTURAL ENGINEER AND THAT COPIES ARE ON SITE.
2. VERIFY THAT MASONRY COMPONENTS USED ON THE JOB MATCH THE SUBMITTED ITEMS.
3. VERIFY THAT MASONRY IS PROPERLY INSTALLED. SPECIFICALLY CHECK FOR HORIZONTAL JOINT REINFORCING AND SIZE AND LOCATION OF FILLED CELL REINFORCING AND DOWELS.
4. VERIFY THAT FULL MORTAR BEDDING IS PLACED AROUND GROUT/CONCRETE FILLED CELLS.
5. VERIFY THAT INSPECTION/CLEAN-OUT HOLES ARE INSTALLED FOR **HIGHLIFT/LOWLIFT** GROUTING. ALSO, VERIFY THAT DEBRIS AND LOOSE MORTAR HAS BEEN REMOVED PRIOR TO CLOSING HOLE.
6. INSPECT AT LEAST 50% OF CONCRETE GROUT PLACEMENT FOR GROUTED MASONRY.

STRUCTURAL STEEL AND STEEL CONNECTIONS

1. CONFIRM THAT PLACEMENT OF STRUCTURAL STEEL, STEEL JOISTS AND METAL DECK IS IN ACCORDANCE WITH THE CONSTRUCTION DOCUMENTS AND APPROVED SHOP DRAWINGS.
2. CONFIRM THAT A TESTING LABORATORY INSPECTS BOLTED AND WELDED CONNECTIONS AND DECK WELDING PER THE REQUIREMENTS OF THE PROJECT DOCUMENTS.
3. VERIFY THAT THE ATTACHMENT OF THE METAL DECK IS PER THE PROJECT'S SPECIFICATIONS.
4. VERIFY THAT BRACING CALLED FOR IN THE CONSTRUCTION DOCUMENTS IS INSTALLED TO SUPPORT ELEMENTS DURING CONSTRUCTION.
5. CONFIRM THAT CONNECTIONS MADE TO EXISTING FRAMING EMBEDS OR MEMBERS ARE MADE PER STRUCTURAL DETAILS.

REPORTING

1. DURING AN INSPECTION, IF A DEFICIENCY IS OBSERVED AND HAS NOT BEEN CORRECTED PRIOR TO LEAVING THE SITE, THE SPECIAL INSPECTOR SHALL INFORM THE CONTRACTOR OF THE DEFICIENCY. IF THE DEFICIENCY IS DISPUTED BY THE CONTRACTOR, IMMEDIATELY INFORM THE STRUCTURAL ENGINEER AS TO THE NATURE OF THE DEFICIENCY AND ITS EXTENT.
2. ADDITIONALLY, FOR THE ITEMS FOUND IN NON-CONFORMANCE WITH THE CONSTRUCTION DOCUMENTS AND NOT CORRECTED DURING THE INSPECTION, THE SPECIAL INSPECTOR SHALL MAINTAIN A LOG OF THE DEFICIENT ITEMS AT THE SITE. THE DEFICIENCIES SHALL BE CONSECUTIVELY NUMBERED AND INCLUDE DATE ITEM OBSERVED AND DATE ITEM CORRECTED. THE LOG SHALL BE SUBMITTED MONTHLY FOR REVIEW BY CONTRACTOR, ENGINEER OF RECORD AND BUILDING OFFICIAL.
3. IT IS NOT THE RESPONSIBILITY OF THE SPECIAL INSPECTOR TO SEEK A SOLUTION TO DEFICIENCIES AND UNDER NO CIRCUMSTANCES IS HE TO REDESIGN A DEFICIENT CONDITION OR ALLOW A DEVIATION WITHOUT PRIOR APPROVAL FROM THE STRUCTURAL ENGINEER. THE CONTRACTOR ALONE IS RESPONSIBLE FOR CONTACTING THE STRUCTURAL ENGINEER FOR SOLUTIONS TO DEVIATIONS AND NON-CONFORMING ITEMS.
4. THE SPECIAL INSPECTOR SHALL SUBMIT AN ORIGINAL SIGNED AND SEALED COPY OF WRITTEN REPORTS FOR EACH INSPECTION TO THE ENGINEER OF RECORD A MAXIMUM OF 3 DAYS AFTER PERFORMING SUCH INSPECTION. SUBMIT INSPECTION REPORTS TO THE BUILDING DEPARTMENT MONTHLY OR AS REQUESTED BY THE BUILDING OFFICIAL.
5. THE PRESENCE OF A SPECIAL INSPECTOR IN NO WAY LESSENS THE RESPONSIBILITY OF THE CONTRACTOR TO BUILD A QUALITY STRUCTURE IN TOTAL COMPLIANCE WITH THE CONSTRUCTION DOCUMENTS. THE SPECIAL INSPECTOR SHALL IMMEDIATELY NOTIFY THE STRUCTURAL ENGINEER OF RECORD IF THERE IS ANY FAILURE BY THE CONTRACTOR TO CONFORM TO CONSTRUCTION DOCUMENTS.



ULTIMATE C&C WIND PRESSURES (ASCE 7-10)

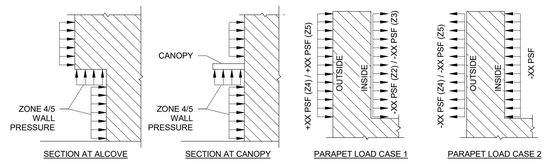
BUILDING	a (FT)	Vult (MPH)	Vasd (MPH)	A (SF)	ZONE 1 (PSF)	ZONE 2 (PSF)	ZONE 3 (PSF)	ZONE 4 (PSF)	ZONE 5 (PSF)	ZONE (2H) (PSF)	ZONE (3H) (PSF)
MAIN	5.5	154	119	<10	+22.2 -54.5	+49.9 -91.5	+49.9 -91.5	+49.9 -54.1	+49.9 -66.5	-78.6	-78.6
				20	+20.8 -53.1	+47.7 -81.8	+47.7 -81.8	+47.7 -51.9	+47.7 -62.1	- -	- -
				50	+19 -51.3	+44.8 -68.9	+44.8 -68.9	+44.8 -48.9	+44.8 -56.3	- -	- -
				100+	+17.6 -49.9	+42.6 -59.1	+42.6 -59.1	+42.6 -46.7	+42.6 -51.9	- -	- -

ULTIMATE C&C WIND PRESSURES (ASCE 7-10)

BUILDING	a (FT)	Vult (MPH)	Vasd (MPH)	A (SF)	ZONE 1 (PSF)	ZONE 2 (PSF)	ZONE 3 (PSF)
CANOPY	3.0	154	119	≤9	+47.1 -42.7	+70.6 -65.7	+94.1 -128.2
				9< A ≤36	+47.1 -42.7	+70.6 -65.7	+70.6 -65.7
				>36	+47.1 -42.7	+47.1 -42.7	+47.1 -42.7

ULTIMATE C&C WIND PRESSURE PLAN NOTES:

1. WIND PRESSURE TABLE IS BASED ON FBC 2014/ASCE 7-10 ULTIMATE WIND SPEED, PRESSURES SHOWN ABOVE ARE ULTIMATE COMPONENTS AND CLADDING PRESSURES.
   A - INDICATES TRIBUTARY AREA IN S.F.
   a - INDICATES END ZONE WIDTH IN FT.
   Vult - INDICATES ULTIMATE DESIGN WIND SPEED IN MPH
   Vasd - INDICATES NOMINAL DESIGN WIND SPEED IN MPH
2. GROSS PRESSURES ARE FOR JOISTS, WINDOWS, DOORS, VENEER, LIGHT GAGE METAL FRAMING, METAL DECK ATTACHMENTS, ROOFING, ROOFING ACCESSORIES AND OTHER BUILDING COMPONENTS AND CLADDING.
3. GROSS PRESSURES SHALL BE LINEARLY INTERPOLATED FOR (A) NOT SHOWN IN TABLE.
4. POSITIVE PRESSURES INDICATE PRESSURES ACTING TOWARD A PROJECTED SURFACE. NEGATIVE PRESSURES INDICATE PRESSURES ACTING AWAY FROM A PROJECTED SURFACE.
5. ROOF AND ZONES (1) THRU (3)
6. WALL ZONES (4) AND (5)
7. OVERHANG ZONES 2H AND 3H APPLY ONLY TO ROOF OVERHANGS WHERE THE COMPONENT OR CLADDING RECEIVES PRESSURE SIMULTANEOUSLY ON BOTH SIDES (UPWARD SUCTION ON TOP AND UPWARD PRESSURE ON BOTTOM, SUCH AS AT OPEN SOFFITS), AND IS CONTINUOUS WITH FIELD OF ROOF.
8. NET DESIGN ROOF PRESSURES SHALL BE CALCULATED USING THE SELFWEIGHT (DEAD LOAD) OF THE MATERIALS. HOWEVER, THE MAXIMUM REDUCTION OF WIND UPLIFT PRESSURES SHALL BE LIMITED TO THE SELF WEIGHT OF THE ROOF SYSTEM PLUS 5 PSF FOR SUPERIMPOSED DEAD LOADS.
9. INTERNAL PRESSURE COEFFICIENT FOR ENCLOSED BUILDING EQUALS +0.18 AND -0.18
   INTERNAL PRESSURE COEFFICIENT FOR OPEN STRUCTURE EQUALS +/- 0.00
   INTERNAL PRESSURE COEFFICIENT FOR PARTIALLY ENCLOSED STRUCTURE EQUALS +/- 0.55
10. ROOF TOP EQUIPMENT SHALL BE DESIGNED FOR A LATERAL PRESSURE OF 90 PSF AND A SIMULTANEOUS UPLIFT PRESSURE OF 70 PSF (ROOF TOP EQUIPMENT PER FBC SECTION 1620.6 WITH Qh = 47 PSF)
11. AT ALCOVES AND CANOPIES, THE TOTAL UPLIFT PRESSURE ON THE ALCOVE SOFFIT OR CANOPY SHALL EQUAL THE WALL PRESSURE IN THAT AREA.
12. PARAPET DESIGN WIND PRESSURE LOAD CASES:
    LOAD CASE 1: OUTSIDE FACE: +49.9 PSF (ZONE 4) AND +49.9 PSF (ZONE 5)
    INSIDE FACE: -91.5 PSF (ZONE 2) AND -91.5 PSF (ZONE 3)
    LOAD CASE 2: OUTSIDE FACE: -54.1 PSF (ZONE 4) AND -66.5 PSF (ZONE 5)
    INSIDE FACE: +49.9 PSF (ZONE 4) AND +49.9 PSF (ZONE 5)
    NOTE THAT CASE 1 & CASE 2 WIND PRESSURES ARE APPLIED INDEPENDENTLY.
13. SCREENWALL DESIGN WIND PRESSURE SHALL BE +/-67 PSF.



SECTION AT ALCOVE | SECTION AT CANOPY | PARAPET LOAD CASE 1 | PARAPET LOAD CASE 2

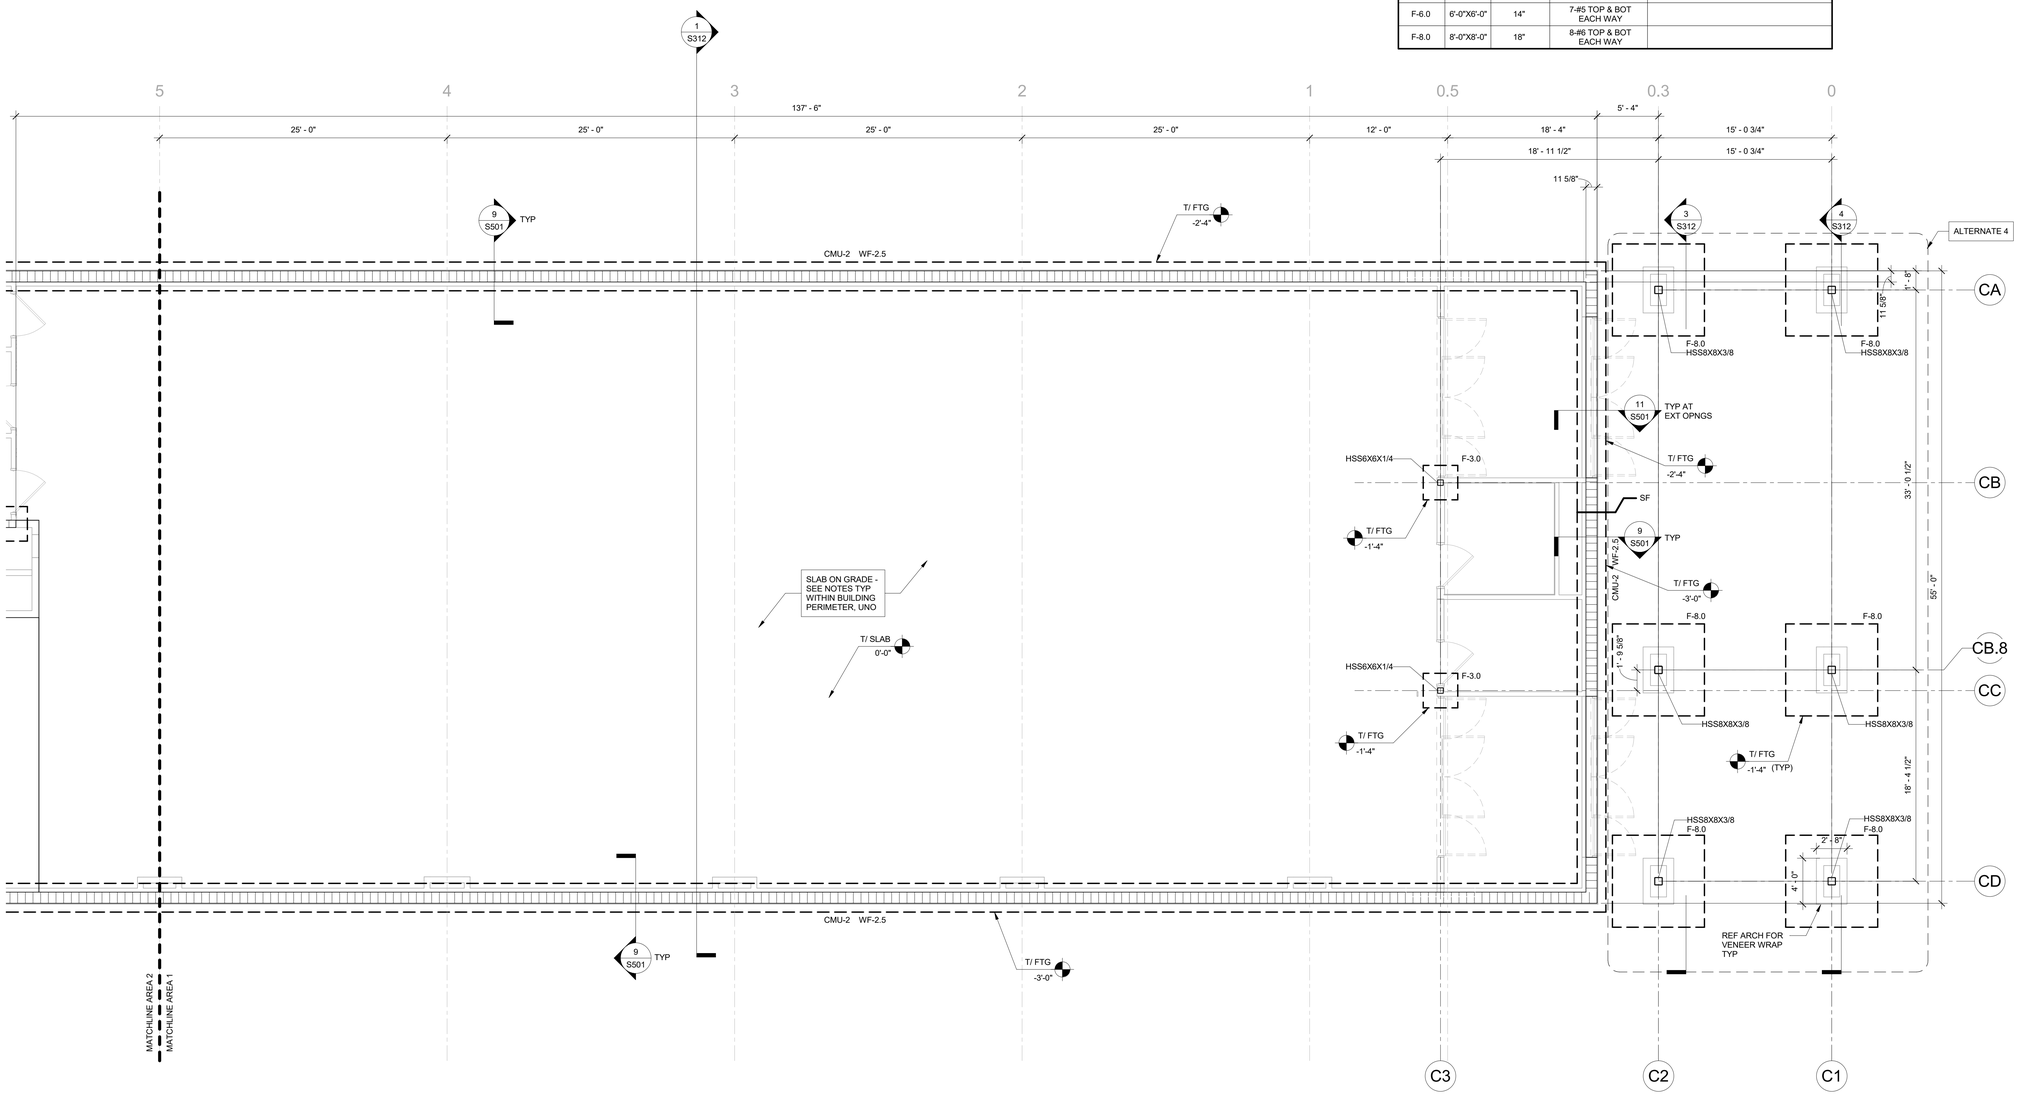
F-3.0	3'-0"X3'-0"	12"	4-#5 TOP & BOT EACH WAY	
F-6.0	6'-0"X6'-0"	14"	7-#5 TOP & BOT EACH WAY	
F-8.0	8'-0"X8'-0"	18"	8-#6 TOP & BOT EACH WAY	

FOUNDATION PLAN NOTES

1. TOP OF SLAB ELEVATION TO VARIES, SEE PLAN.
2. UNO SLAB SHALL BE 4" CONCRETE SLAB ON GRADE REINFORCED w/ 6x6 W4.0XW4.0 WWF OVER 15 MIL VAPOR BARRIER AND COMPACTED FILL.
3. TOP OF FOOTING ELEVATION = SEE PLAN.
4. SEE ARCH DWGS FOR LOCATION AND LIMITS/EXTENTS OF STRUCTURAL CMU WALLS SHOWN ON PLAN, TYPICAL.

FOUNDATION KEY NOTES

1. PROVIDE ADDL TOP BARS TO MATCH BOTTOM REINF. FOR 10'-0" LONG ZONE, CENTERED AT THE SHEAR WALL/FTG INTERSECTION, U.N.O. PROVIDE LONGER ZONE WHERE INDICATED ON PLAN.
2. LOCATION OF BID ALTERNATE EXTENTS. PROVIDE DESIGNS/DETAILS INDICATED SHOULD THIS BE THE TERMINATION POINT FOR THE BUILDING.
3. IF ALTERNATE WALL (AS NOTED IN ITEM 2) IS SELECTED AS TERMINATION OF BUILDING, WALL IDENTIFIED BY THIS NOTE SHALL BE DELETED FROM SCOPE.



1 S211 FOUNDATION PLAN - AREA 1

3/16" = 1'-0"

THIS BUILDING IS CLASSIFIED AS A "THRESHOLD BUILDING" SPECIAL INSPECTION OF THE CONSTRUCTION IS REQUIRED BY THE STATE OF FLORIDA IN ACCORDANCE WITH CHAPTER 553 OF THE FLORIDA STATUTES. CONSTRUCTION SHALL BE INSPECTED IN ACCORDANCE WITH THE SPECIAL INSPECTION PLAN.

LINTEL SCHEDULE

MARK	TYPE	WIDTH	DEPTH	TOP BARS	BOTTOM BARS	REMARKS
L-1	8F24-1B/1T	8"	24"	(1) #5	(1) #5	PRESTRESSED CAST-CRETE
L-2	12F24-2B/2T	12"	24"	(2) #5	(2) #5	PRECAST CAST-CRETE

* REFER TO ARCHITECTURAL DRAWINGS/SPECS FOR AESTHETIC REQUIREMENTS OF LINTELS

TIE BEAM SCHEDULE

MARK	WIDTH	DEPTH	TOP BARS	BOTTOM BARS	TYP STIRRUPS	STIRRUPS OVER ALL MASONRY OPENINGS*
TB-1	8"	20"	(2) #6	(2) #8	#3 @ 16" OC	#3 @ 6" OC
TB-2A	12"	17 1/2"	(2) #8	(3) #8	#3 @ 16" OC	#3 @ 6" OC
TB-2B	12"	20"	(2) #8	(3) #8	#3 @ 16" OC	#3 @ 6" OC
TB-3	12"	20"	(2) #5	(2) #5	#3 @ 16" OC	#3 @ 6" OC
TB-4	8"	20"	(2) #5	(2) #5	#3 @ 16" OC	#3 @ 6" OC

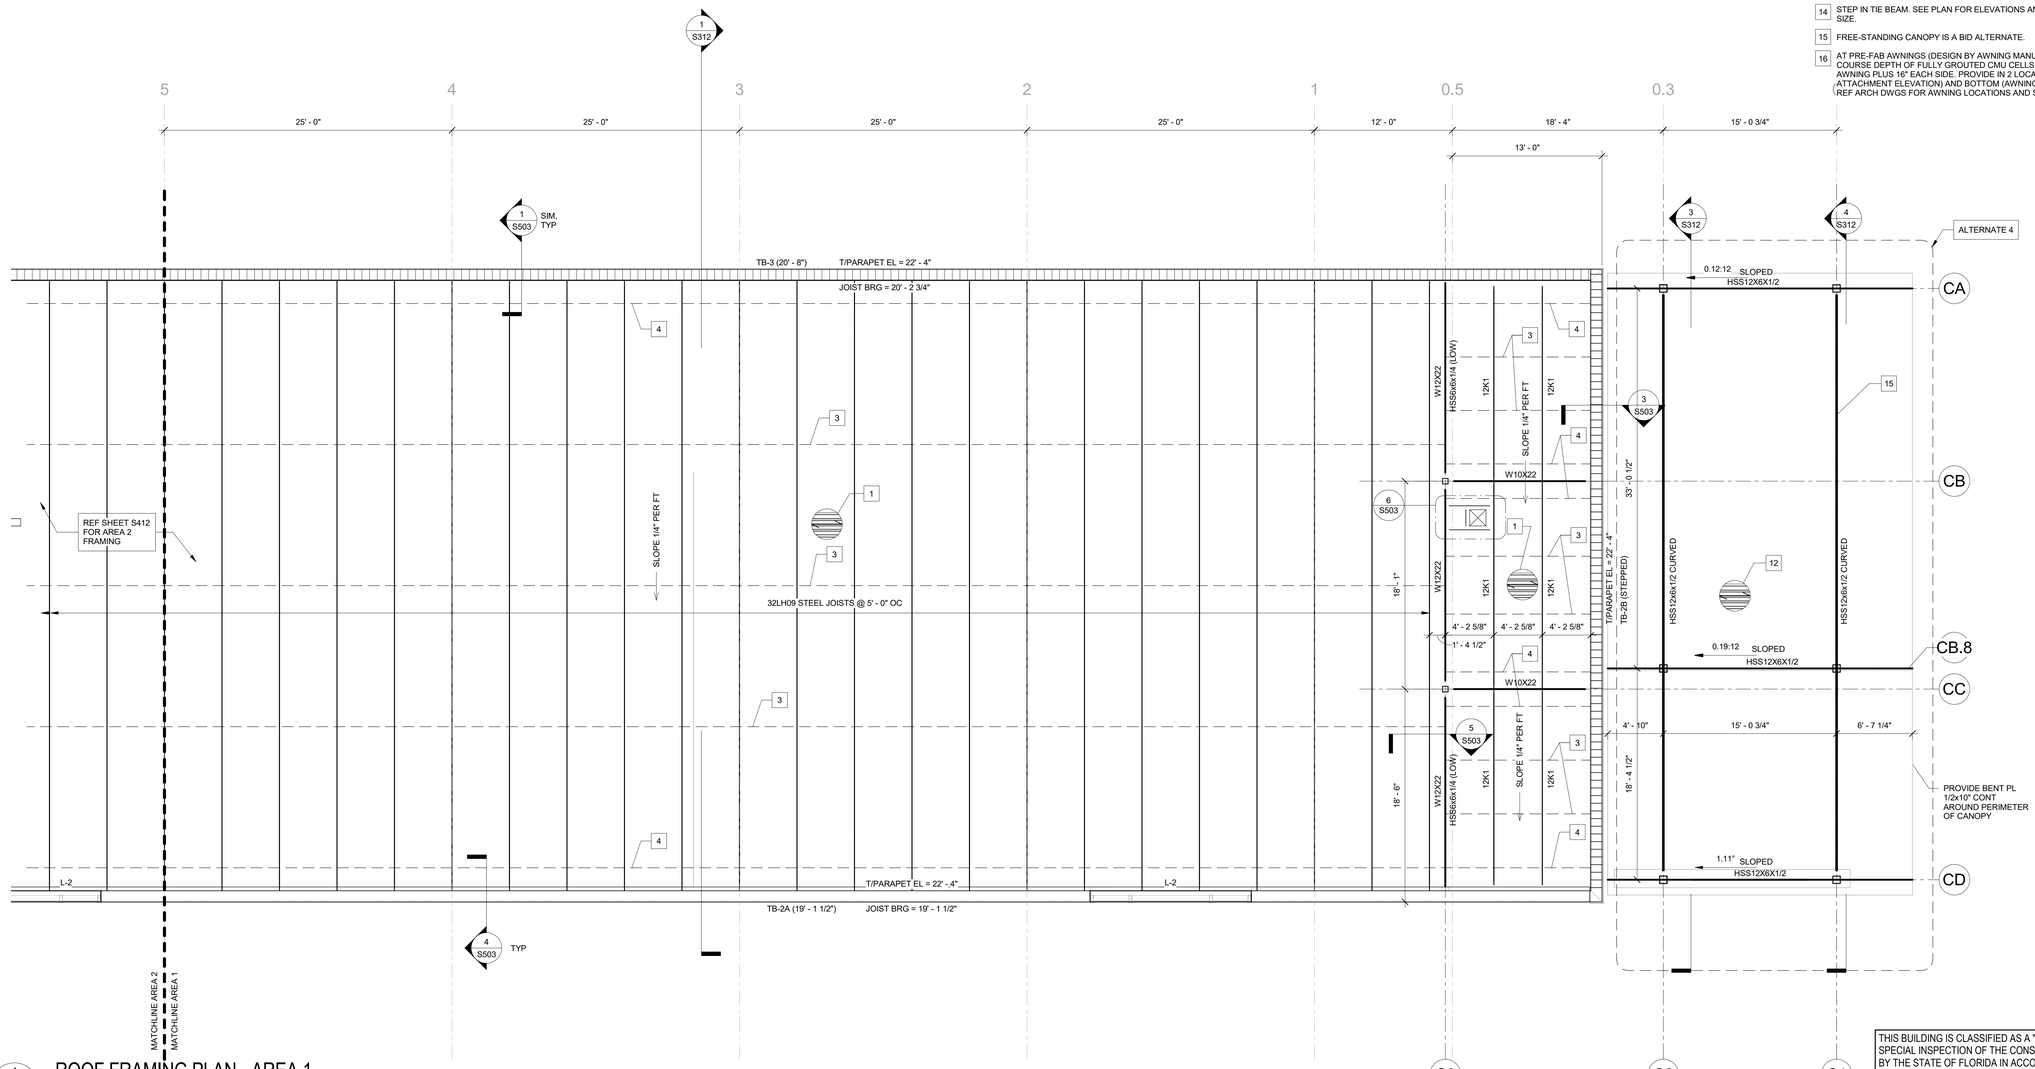
*TIE BEAM STIRRUP SPACING SHALL DECREASE PER THE SCHEDULE ALL ALL MASONRY OPENINGS, INCLUDING WHERE MASONRY LINTEL OCCURS BELOW.

FRAMING PLAN NOTES

1. TOP OF ROOF DECK AND TOP OF STRUCTURAL ELEVATION WILL VARY WITH THE ROOF SLOPE.
2. JOIST SEAT DEPTH SHALL BE SJI STANDARD FOR TYPE OF JOIST, U.N.O. SEAT DEPTH GIVEN IS TAKEN AT CENTERLINE OF GIRDER OR AT INSIDE FACE OF MASONRY.
3. JOIST MANUFACTURER TO DESIGN JOISTS FOR ADDITIONAL NET UPLIFT LOADS PER S003. PROVIDE BOTTOM CHORD JOIST BRACING PER 3/S503 AND 5/S503.
4. SIZE, LOCATION AND WEIGHT OF MECH UNIT SHALL BE CONFIRMED AND COORDINATED WITH MECH DWGS AND MECH CONTRACTOR/MANUFACTURER. WEIGHT OF UNIT (INCLUDING CURBS) SHALL NOT EXCEED THAT SHOWN ON THE PLAN. SEE 11/S503 FOR ADD'L FRAMING REQ'D AT MECH UNITS.
5. PROVIDE PRECAST LINTELS AT MASONRY OPENIGNS PER STRUCTURAL PLANS AND DETAILS. REFER TO ARCH FOR OPENING SIZE, LOCATION AND QUANTITY
6. REFER TO ARCH DWGS FOR EXPOSED STRUCTURE. SEE STRUCTURAL NOTES FOR ADD'L REQUIREMENTS AT THESE LOCATIONS.
7. U.N.O. JOIST SEAT DEPTHS SHALL BE STANDARD SJI SIZES 2 1/2" FOR K-SERIES, 5" FOR LH SERIES.

ROOF FRAMING KEY NOTES

1. 1 1/2" METAL ROOF DECK (GALVANIZED), SEE 7/S503.
2. ▶ INDICATES MOMENT CONNECTION.
3. TYPICAL TOP & BOTTOM CHORD CONTINUOUS BRIDGING BY JOIST MANUFACTURER. BRIDGING SHALL CONTINUE TO BOTH SIDES OF STEEL BEAMS PARALLEL TO STEEL JOISTS PER 5/S503, TYPICAL.
4. TYPICAL CONTINUOUS UPLIFT BRIDGING BY JOIST MANUFACTURER.
5. FUTURE MECHANICAL UNITS (2.0 KIPS EACH MAX), PERMISSIBLE IN HATCHED AREAS ON PLAN. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL LOAD AT APPLICABLE JOISTS.
6. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL +/- 2 KIP ALLOWABLE POINT LOAD AT X +/- 1'-0" ALONG STEEL JOIST.
7. PROVIDE STEEL FRAMING AT MECHANICAL UNITS PER 11/S503.
8. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL 200 PLF ALLOWABLE DEAD LOAD FOR X +/- 1'-0" ALONG STEEL JOIST. WHERE MEP UNIT DOES NOT ALIGN W/ JOIST, REF KEYNOTES 6 AND 7 FOR ALTERNATE DESIGN.
9. LOCATION OF BID ALTERNATE EXTENTS. PROVIDE DESIGNS/DETAILS INDICATED SHOULD THIS BE THE TERMINATION POINT FOR THE BUILDING.
10. IF ALTERNATE WALL (AS INDICATED IN KEYNOTE 9) IS SELECTED AS TERMINATION OF BUILDING, WALL IDENTIFIED BY THIS NOTE SHALL BE DELETED FROM SCOPE.
11. PRE-FABRICATED FABRIC CANOPY, BY CANOPY MANUFACTURER. REF ARCH FOR SPECIFICATIONS.
12. EPIC TORUS 4 ROOF DECK, 18 GA., G90 - CURVED TO MATCH ARCHITECTURAL PROFILE. FASTENING PATTERN:
DECK/DECK (SIDELAP): 1.5" FILLET WELDS AT 24" O.C. PER SPAN, TYP
DECK/SUPPORT: 3/4" PUDDLE WELDS AT 24/3 PATTERN
13. PERMITTED AREA FOR MODEL AIRPLANE SUPPORTS. JOIST MANUFACTURER SHALL DESIGN JOISTS WITH TWO ADDITIONAL 300 LB POINT LOADS AT ANY LOCATION ALONG THE STEEL JOIST WITHIN HATCHED REGION. MODEL AIRPLANES SHALL NOT EXCEED 700 LB TOTAL WITHIN EACH HATCHED REGION.
14. STEP IN TIE BEAM. SEE PLAN FOR ELEVATIONS AND SCHEDULE FOR BEAM SIZE.
15. FREE-STANDING CANOPY IS A BID ALTERNATE.
16. AT PRE-FAB AWNINGS (DESIGN BY AWNING MANUFACTURER) PROVIDE 2 COURSE DEPTH OF FULLY GROUTED CMU CELLS EQUAL TO LENGTH OF AWNING PLUS 16" EACH SIDE. PROVIDE IN 2 LOCATIONS - AT TOP (TIE HANGER ATTACHMENT ELEVATION) AND BOTTOM (AWNING ATTACHMENT ELEVATION). REF ARCH DWGS FOR AWNING LOCATIONS AND SPECIFICATIONS.



1 S411 ROOF FRAMING PLAN - AREA 1

3/16" = 1'-0"

THIS BUILDING IS CLASSIFIED AS A "THRESHOLD BUILDING" SPECIAL INSPECTION OF THE CONSTRUCTION IS REQUIRED BY THE STATE OF FLORIDA IN ACCORDANCE WITH CHAPTER 553 OF THE FLORIDA STATUTES. CONSTRUCTION SHALL BE INSPECTED IN ACCORDANCE WITH THE SPECIAL INSPECTION PLAN.

*TIE BEAM STIRRUP SPACING SHALL DECREASE PER THE SCHEDULE ALL ALL MASONRY OPENINGS, INCLUDING WHERE MASONRY LINTEL OCCURS BELOW.

FRAMING PLAN NOTES

1. TOP OF ROOF DECK AND TOP OF STRUCTURAL ELEVATION WILL VARY WITH THE ROOF SLOPE.
2. JOIST SEAT DEPTH SHALL BE SJI STANDARD FOR TYPE OF JOIST, U.N.O. SEAT DEPTH GIVEN IS TAKEN AT CENTERLINE OF GIRDER OR AT INSIDE FACE OF MASONRY.
3. JOIST MANUFACTURER TO DESIGN JOISTS FOR ADDITIONAL NET UPLIFT LOADS PER S003. PROVIDE BOTTOM CHORD JOIST BRACING PER 3/S503 AND 5/S503.
4. SIZE, LOCATION AND WEIGHT OF MECH UNIT SHALL BE CONFIRMED AND COORDINATED WITH MECH DWGS AND MECH CONTRACTOR/MANUFACTURER. WEIGHT OF UNIT (INCLUDING CURBS) SHALL NOT EXCEED THAT SHOWN ON THE PLAN. SEE 11/S503 FOR ADD'L FRAMING REQ'D AT MECH UNITS.
5. PROVIDE PRECAST LINTELS AT MASONRY OPENIGNS PER STRUCTURAL PLANS AND DETAILS. REFER TO ARCH FOR OPENING SIZE, LOCATION AND QUANTITY
6. REFER TO ARCH DWGS FOR EXPOSED STRUCTURE. SEE STRUCTURAL NOTES FOR ADD'L REQUIREMENTS AT THESE LOCATIONS.
7. U.N.O. JOIST SEAT DEPTHS SHALL BE STANDARD SJI SIZES 2 1/2" FOR K-SERIES, 5" FOR LH SERIES.

ROOF FRAMING KEY NOTES

1. 1 1/2" METAL ROOF DECK (GALVANIZED), SEE 7/S503.
2. ▶ INDICATES MOMENT CONNECTION.
3. TYPICAL TOP & BOTTOM CHORD CONTINUOUS BRIDGING BY JOIST MANUFACTURER. BRIDGING SHALL CONTINUE TO BOTH SIDES OF STEEL BEAMS PARALLEL TO STEEL JOISTS PER S/S503, TYPICAL.
4. TYPICAL CONTINUOUS UPLIFT BRIDGING BY JOIST MANUFACTURER.
5. FUTURE MECHANICAL UNITS (2.0 KIPS EACH MAX), PERMISSIBLE IN HATCHED AREAS ON PLAN. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL LOAD AT APPLICABLE JOISTS.
6. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL +/- 2 KIP ALLOWABLE POINT LOAD AT X +/- 1'-0" ALONG STEEL JOIST.
7. PROVIDE STEEL FRAMING AT MECHANICAL UNITS PER 11/S503.
8. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL 200 PLF ALLOWABLE DEAD LOAD FOR X +/- 1'-0" ALONG STEEL JOIST. WHERE MEP UNIT DOES NOT ALIGN W/ JOIST, REF KEYNOTES 6 AND 7 FOR ALTERNATE DESIGN.
9. LOCATION OF BID ALTERNATE EXTENTS. PROVIDE DESIGNS/DETAILS INDICATED SHOULD THIS BE THE TERMINATION POINT FOR THE BUILDING.
10. IF ALTERNATE WALL (AS INDICATED IN KEYNOTE 9) IS SELECTED AS TERMINATION OF BUILDING, WALL IDENTIFIED BY THIS NOTE SHALL BE DELETED FROM SCOPE.
11. PRE-FABRICATED FABRIC CANOPY, BY CANOPY MANUFACTURER. REF ARCH FOR SPECIFICATIONS.
12. EPIC TORUS 4 ROOF DECK, 18 GA., G90 - CURVED TO MATCH ARCHITECTURAL PROFILE. FASTENING PATTERN: DECK/DECK (SIDELAP): 1.5" FILLET WELDS AT 24" O.C. PER SPAN, TYP DECK/SUPPORT: 3/4" PUDDLE WELDS AT 24/3 PATTERN
13. PERMITTED AREA FOR MODEL AIRPLANE SUPPORTS. JOIST MANUFACTURER SHALL DESIGN JOISTS WITH TWO ADDITIONAL 300 LB POINT LOADS AT ANY LOCATION ALONG THE STEEL JOIST WITHIN HATCHED REGION. MODEL AIRPLANES SHALL NOT EXCEED 700 LB TOTAL WITHIN EACH HATCHED REGION.
14. STEP IN TIE BEAM. SEE PLAN FOR ELEVATIONS AND SCHEDULE FOR BEAM SIZE.
15. FREE-STANDING CANOPY IS A BID ALTERNATE.
16. AT PRE-FAB AWNINGS (DESIGN BY AWNING MANUFACTURER) PROVIDE 2 COURSE DEPTH OF FULLY GROUTED CMU CELLS EQUAL TO LENGTH OF AWNING PLUS 16" EACH SIDE. PROVIDE IN 2 LOCATIONS - AT TOP (TIE HANGER ATTACHMENT ELEVATION) AND BOTTOM (AWNING ATTACHMENT ELEVATION). REF ARCH DWGS FOR AWNING LOCATIONS AND SPECIFICATIONS.

*TIE BEAM STIRRUP SPACING SHALL DECREASE PER THE SCHEDULE ALL ALL MASONRY OPENINGS, INCLUDING WHERE MASONRY LINTEL OCCURS BELOW.

1 S416 ROOF FRAMING PLAN -AREA 6

3/16" = 1'-0"

FRAMING PLAN NOTES

1. TOP OF ROOF DECK AND TOP OF STRUCTURAL ELEVATION WILL VARY WITH THE ROOF SLOPE.
2. JOIST SEAT DEPTH SHALL BE SJI STANDARD FOR TYPE OF JOIST, U.N.O. SEAT DEPTH GIVEN IS TAKEN AT CENTERLINE OF GIRDER OR AT INSIDE FACE OF MASONRY.
3. JOIST MANUFACTURER TO DESIGN JOISTS FOR ADDITIONAL NET UPLIFT LOADS PER S003. PROVIDE BOTTOM CHORD JOIST BRACING PER 3/S503 AND 5/S503.
4. SIZE, LOCATION AND WEIGHT OF MECH UNIT SHALL BE CONFIRMED AND COORDINATED WITH MECH DWGS AND MECH CONTRACTOR/MANUFACTURER. WEIGHT OF UNIT (INCLUDING CURBS) SHALL NOT EXCEED THAT SHOWN ON THE PLAN. SEE 11/S503 FOR ADD'L FRAMING REQ'D AT MECH UNITS.
5. PROVIDE PRECAST LINTELS AT MASONRY OPENIGNS PER STRUCTURAL PLANS AND DETAILS. REFER TO ARCH FOR OPENING SIZE, LOCATION AND QUANTITY.
6. REFER TO ARCH DWGS FOR EXPOSED STRUCTURE. SEE STRUCTURAL NOTES FOR ADD'L REQUIREMENTS AT THESE LOCATIONS.
7. U.N.O. JOIST SEAT DEPTHS SHALL BE STANDARD SJI SIZES 2 1/2" FOR K-SERIES, 5" FOR LH SERIES.

ROOF FRAMING KEY NOTES

1. 1 1/2" METAL ROOF DECK (GALVANIZED), SEE 7/S503.
2. ▶ INDICATES MOMENT CONNECTION.
3. TYPICAL TOP & BOTTOM CHORD CONTINUOUS BRIDGING BY JOIST MANUFACTURER. BRIDGING SHALL CONTINUE TO BOTH SIDES OF STEEL BEAMS PARALLEL TO STEEL JOISTS PER 5/S503, TYPICAL.
4. TYPICAL CONTINUOUS UPLIFT BRIDGING BY JOIST MANUFACTURER.
5. FUTURE MECHANICAL UNITS (2.0 KIPS EACH MAX), PERMISSIBLE IN HATCHED AREAS ON PLAN. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL LOAD AT APPLICABLE JOISTS.
6. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL +/- 2 KIP ALLOWABLE POINT LOAD AT X +/- 1'-0" ALONG STEEL JOIST.
7. PROVIDE STEEL FRAMING AT MECHANICAL UNITS PER 11/S503.
8. JOIST MANUFACTURER TO DESIGN FOR ADDITIONAL 200 PLF ALLOWABLE DEAD LOAD FOR X +/- 1'-0" ALONG STEEL JOIST. WHERE MEP UNIT DOES NOT ALIGN W/ JOIST, REF KEYNOTES 6 AND 7 FOR ALTERNATE DESIGN.
9. LOCATION OF BID ALTERNATE EXTENTS. PROVIDE DESIGNS/DETAILS INDICATED SHOULD THIS BE THE TERMINATION POINT FOR THE BUILDING.
10. IF ALTERNATE WALL (AS INDICATED IN KEYNOTE 9) IS SELECTED AS TERMINATION OF BUILDING, WALL IDENTIFIED BY THIS NOTE SHALL BE DELETED FROM SCOPE.
11. PRE-FABRICATED FABRIC CANOPY, BY CANOPY MANUFACTURER. REF ARCH FOR SPECIFICATIONS.
12. EPIC TORUS 4 ROOF DECK, 18 GA., G90 - CURVED TO MATCH ARCHITECTURAL PROFILE. FASTENING PATTERN: DECK/DECK (SIDELAP): 1.5" FILLET WELDS AT 24" O.C. PER SPAN, TYP DECK/SUPPORT: 3/4" PUDDLE WELDS AT 24/3 PATTERN
13. PERMITTED AREA FOR MODEL AIRPLANE SUPPORTS. JOIST MANUFACTURER SHALL DESIGN JOISTS WITH TWO ADDITIONAL 300 LB POINT LOADS AT ANY LOCATION ALONG THE STEEL JOIST WITHIN HATCHED REGION. MODEL AIRPLANES SHALL NOT EXCEED 700 LB TOTAL WITHIN EACH HATCHED REGION.
14. STEP IN TIE BEAM. SEE PLAN FOR ELEVATIONS AND SCHEDULE FOR BEAM SIZE.
15. FREE-STANDING CANOPY IS A BID ALTERNATE.
16. AT PRE-FAB AWNINGS (DESIGN BY AWNING MANUFACTURER) PROVIDE 2 COURSE DEPTH OF FULLY GROUTED CMU CELLS EQUAL TO LENGTH OF AWNING PLUS 16" EACH SIDE. PROVIDE IN 2 LOCATIONS - AT TOP (TIE HANGER ATTACHMENT ELEVATION) AND BOTTOM (AWNING ATTACHMENT ELEVATION). REF ARCH DWGS FOR AWNING LOCATIONS AND SPECIFICATIONS.

THIS BUILDING IS CLASSIFIED AS A "THRESHOLD BUILDING" SPECIAL INSPECTION OF THE CONSTRUCTION IS REQUIRED BY THE STATE OF FLORIDA IN ACCORDANCE WITH CHAPTER 553 OF THE FLORIDA STATUTES. CONSTRUCTION SHALL BE INSPECTED IN ACCORDANCE WITH THE SPECIAL INSPECTION PLAN.

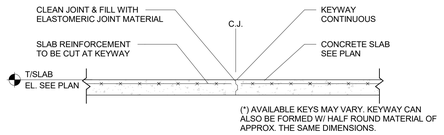
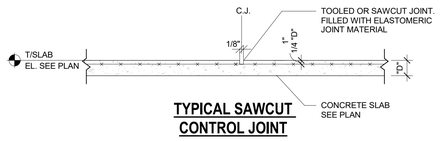
Drawing No.:

S416



TYPICAL CONSTRUCTION JOINT



TYPICAL SAWCUT CONTROL JOINT

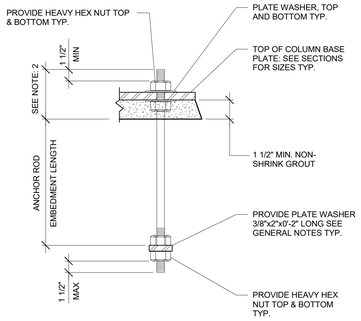
NOTE:

1. C.J. INDICATES CONTROL OR CONSTRUCTION JOINT.
2. CONTROL JOINTS SHALL BE SAWCUT AS SOON AS POSSIBLE WITHOUT RAVELING CONCRETE (4 TO 16 HOURS AFTER PLACEMENT MAX.).
3. JOINT PLACEMENT REQUIREMENTS:
   FOR ENCLOSED/INTERIOR AREAS. 15'-0" O.C. (MAX.) EACH WAY
   FOR OUTSIDE/EXTERIOR AREAS. 12'-0" O.C. (MAX.) EACH WAY

WHERE TOP OF SLAB SURFACES ARE TO BE FINISHED WITH TILE, GENERAL CONTRACTOR IS TO COORDINATE JOINT LOCATIONS WITH THAT OF MORTAR JOINTS.

1 S501 TYPICAL SLAB CONSTRUCTION/CONTROL JOINTS

3/4" = 1'-0"

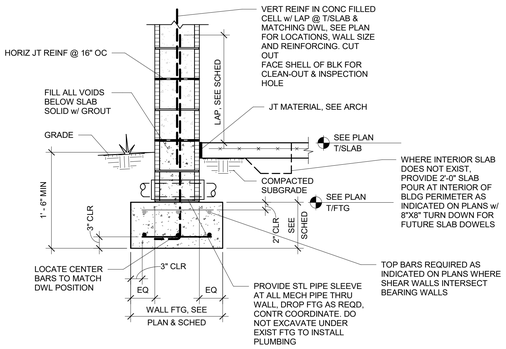


ANCHOR ROD NOTES:

1. THE INFORMATION SHOWN IN THIS DETAIL IS FOR USE WITH ANCHOR RODS-3/4"Ø AND LARGER.
2. ANCHOR ROD PROJECTION: MINIMUM LENGTH AS REQUIRED TO ACCOUNT FOR NON-SHRINK GROUT, COLUMN BASE PLATE THICKNESS, WASHERS/NUT, PLUS 1 1/2" MIN. (THREADED LENGTH ABOVE NUT)
3. HOLES IN THE PLATE WASHERS SHALL BE SIZED 1/16" OVER THAT OF THE ANCHOR ROD DIAMETER.
4. ALL ANCHOR ROD NUTS SHALL BE "SNUG TIGHTENED" AS DEFINED BY "AISC" AFTER THE FOOTING CONCRETE HAS A MINIMUM OF 14 (FOURTEEN) DAYS TO CURE. (TYP. UNLESS NOTED OTHERWISE)

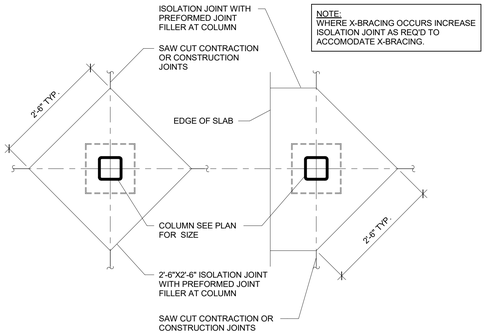
5 S501 TYPICAL ANCHOR ROD DETAIL

3/4" = 1'-0"



9 S501 EXT BLOCK WALL AT FTG

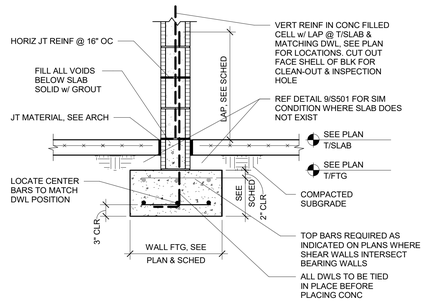
3/4" = 1'-0"



NOTE:
WHERE X-BRACING OCCURS INCREASE ISOLATION JOINT AS REQ'D TO ACCOMODATE X-BRACING.

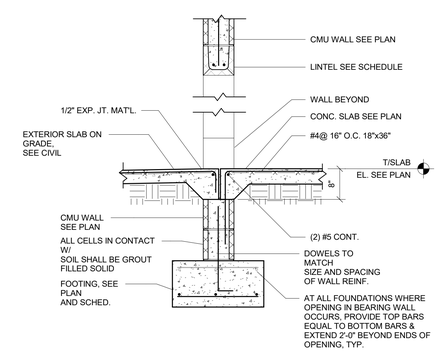
6 S501 TYP. S.O.G. JOINT DETAILS @ COLUMNS

3/4" = 1'-0"



10 S501 INT BLOCK WALL AT FTG

3/4" = 1'-0"



11 S501 TYP. CMU STEM WALL FOOTING @ OPENING

3/4" = 1'-0"

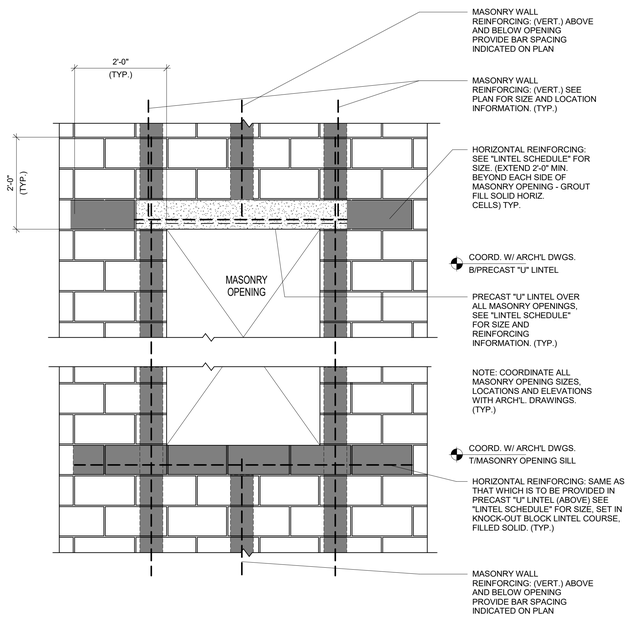
BID DOCUMENTS

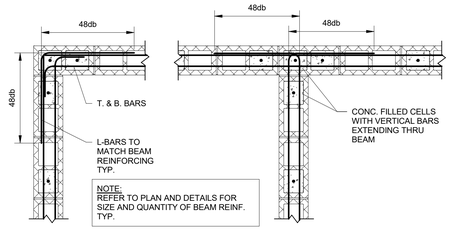
Drawing No.:

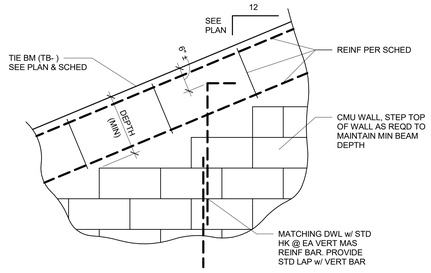
S501



1 S502 TYP. REINFORCING @ LARGE MASONRY OPENINGS

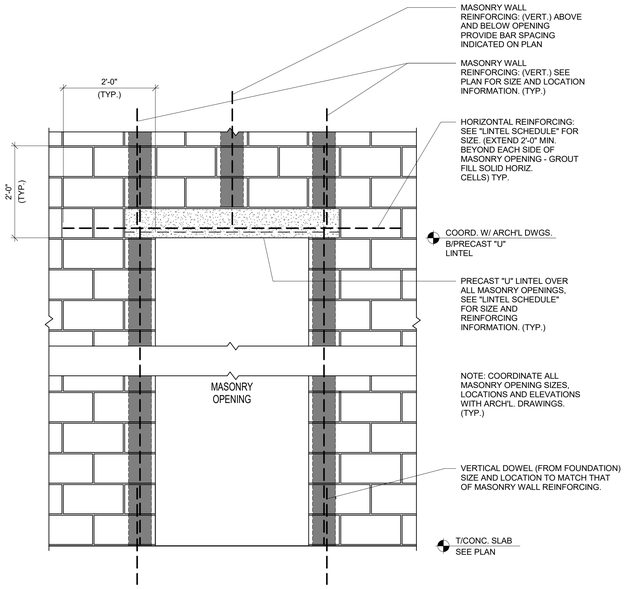
3/4" = 1'-0"

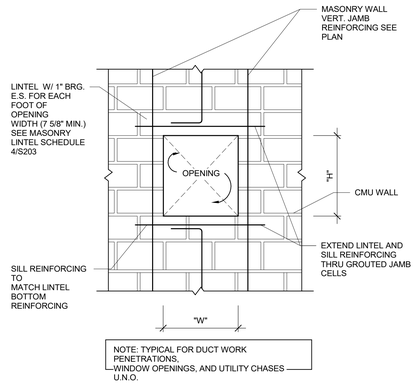




2 S502 TYP. REINFORCING @ MASONRY DOOR OPENINGS

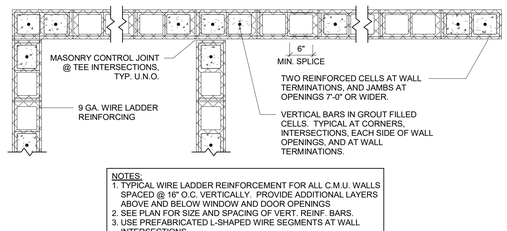
3/4" = 1'-0"



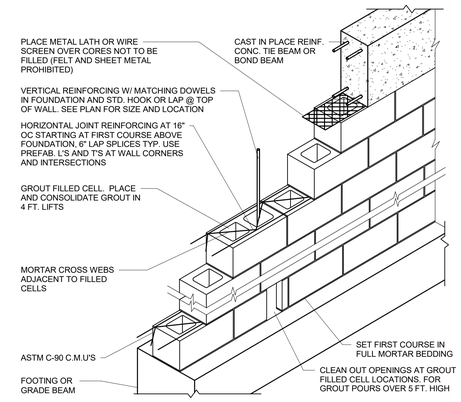


3 S502 TYP. REINFORCING AT SMALL MASONRY OPENINGS

3/4" = 1'-0"

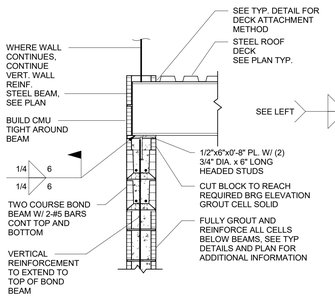


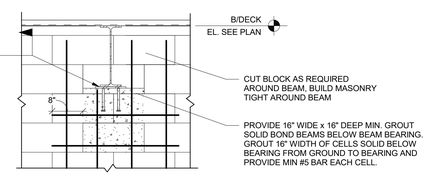
NOTES:
1. TYPICAL WIRE LADDER REINFORCEMENT FOR ALL C.M.U. WALLS SPACED @ 16" O.C. VERTICALLY. PROVIDE ADDITIONAL LAYERS ABOVE AND BELOW WINDOW AND DOOR OPENINGS
2. SEE PLAN FOR SIZE AND SPACING OF VERT. REINF. BARS.
3. USE PREFABRICATED L-SHAPED WIRE SEGMENTS AT WALL INTERSECTIONS.
4. TERMINATE HORZ. WIRE REINFORCING AT CONTROL JOINTS



4 S502 TYPICAL BOND BEAM AND CORNER REINFORCING

3/4" = 1'-0"





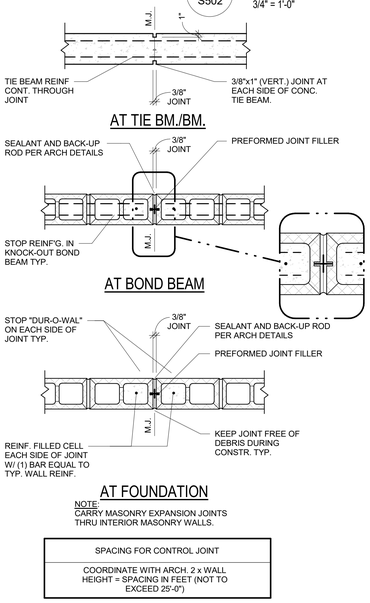
NOTES:
1. BEAMS SHALL BEAR FULL LENGTH OF BEARING PLATES.
2. LONG DIMENSION OF PLATES SHALL BE PARALLEL TO LENGTH OF WALL U.N.O.
3. GALVANIZE ALL BEARING PLATES AT EXTERIOR WALLS

10 S502 TYP SLOPING TIE BEAM DETAIL

3/4" = 1'-0"

5 S502 TYPICAL HORIZ. WALL REINF'G / VERT. CORNER REIN'G

3/4" = 1'-0"

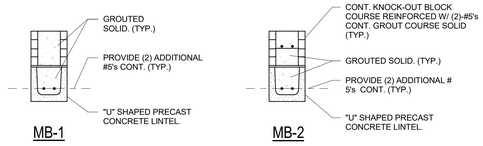


NOTE:
CARRY MASONRY EXPANSION JOINTS THRU INTERIOR MASONRY WALLS.

SPACING FOR CONTROL JOINT
COORDINATE WITH ARCH. 2 x WALL HEIGHT = SPACING IN FEET (NOT TO EXCEED 25'-0")

6 S502 TYP. MASONRY WALL CONSTRUCTION

3/4" = 1'-0"



NOTE:
SHORE PRECAST "U" LINTELS PER MANUFACTURERS RECOMMENDATIONS

MASONRY LINTEL SCHEDULE (CAST-CRETE LINTEL)

MARK	LENGTH (L)	CAST-CRETE MARK	REMARK
MB-1	L ≤ 4-0"	8F8-1B/0T PRECAST	SEE NOTE 4
MB-2	4'-0"< L ≤ 8'-0"	8F16-1B/1T PRECAST	SEE NOTE 4
MB-3	L ≤ 4-0"	12F8-2B/0T PRECAST	SEE NOTE 4
MB-4	4'-0"< L ≤ 8'-0"	12F16-2B/2T PRECAST	SEE NOTE 4

1. PROVIDE MASONRY LINTEL OVER ALL OPENINGS SHOWN ON THE ARCH, MECH, AND ELEC DWGs. IF NO LINTEL IS SPECIFIED, PROVIDE LINTEL PER SCHEDULE ABOVE.
2. PROVIDE MINIMUM END BEARING OF 8". CUT OUT BOTTOM OF LINTEL AT END TO ALLOW CONTINUATION OF FILLED CELL REINFORCING.
3. MASONRY LINTEL SUBSTITUTIONS MUST BE APPROVED BY THE STRUCTURAL ENGINEER OF RECORD PRIOR TO INSTALLATION.
4. SCHEDULED LINTELS ASSUME MASONRY ARCHING ACTION. THE FOLLOWING MUST BE MET:
   a. 5'-8" OR MORE WALL HEIGHT MUST OCCUR ABOVE OPENING.
   b. CONTROL JOINTS MUST NOT OCCUR ADJACENT TO LINTEL.
   c. OPENINGS MUST BE 4'-0" OR MORE FROM THE END OF WALL.
5. THIS SCHEDULE APPLIES FOR MASONRY OPENINGS REQUIRED BY SOFFITS OR RECESSED DOOR/WATER FOUNTAIN OPENINGS SHOWN ON ARCHITECTURAL DRAWINGS UNLESS SHOWN ON THE STRUCTURAL DRAWINGS.

7 S502 TYP. SECTION STEEL BEAM BRG ON CMU WALL

3/4" = 1'-0"

8 S502 TYPICAL MASONRY JOINT DETAILS

3/4" = 1'-0"

9 S502 MASONRY LINTEL SCHEDULE

3/4" = 1'-0"

NOTE: SOME SYMBOLS SHOWN ON THIS LEGEND MAY NOT PERTAIN TO THIS PROJECT

HVAC ABBREVIATIONS

SYMBOL	DESCRIPTION
AFD	-ADJUSTABLE FREQUENCY DRIVE
AFF	-ABOVE FINISHED FLOOR
AFR	-ABOVE FINISHED ROOF
AHU	-AIR HANDLING UNIT
AP	-ACCESS PANEL
BOP	-BOTTOM OF PIPE
BHP	-BRAKE HORSEPOWER
BTU	-BRITISH THERMAL UNIT
CL	-CENTER LINE
CFM	-CFM (CUBIC FEET PER MINUTE)
CD	-CEILING DIFFUSER
CT	-COOLING TOWER
CV	-CONSTANT AIR VOLUME
ΔP	-CHANGE IN PRESSURE
ΔT	-CHANGE IN TEMPERATURE
CFM	-CUBIC FEET PER MINUTE
CU	-CONDENSING UNIT
DDC	-DIRECT DIGITAL CONTROLS
DN	-DOWN
EAT	-ENTERING AIR TEMPERATURE
ESP	-EXTERNAL STATIC PRESSURE
EWT	-ENTERING WATER TEMPERATURE
FCU	-FAN COIL UNIT
FD	-FIRE DAMPER
FF	-FINAL FILTERS
FLA	-FULL LOAD AMPS
FPM	-FEET PER MINUTE
GPM	-GALLONS PER MINUTE
KW	-KILOWATT
LAT	-LEAVING AIR TEMPERATURE
LWT	-LEAVING WATER TEMPERATURE
LD	-LINEAR DIFFUSER
MBH	-THOUSAND BTUs PER HOUR
MCA	-MINIMUM CIRCUIT AMPS
MOCP	-MAXIMUM OVER CURRENT PROTECTION
MOD	-MOTOR OPERATED CONTROL DAMPER (MOD)
NC	-NORMALLY CLOSED
NO	-NORMALLY OPEN
NTS	-NOT TO SCALE
OA	-OUTSIDE AIR
OAL	-OUTSIDE AIR LOUVER
PRV	-PRESSURE REDUCING VALVE
PRS	-PRESSURE REDUCING STATION
PSI	-POUNDS PER SQUARE INCH
PSIG	-PSI GAUGE
PTAC	-PACKAGED TERMINAL AIR CONDITIONER
PVC	-POLYVINYL CHLORIDE PIPE
RA	-RETURN AIR
RHC	-REHEAT COIL
RHP	-ROOFTOP HEAT PUMP
RPM	-REVOLUTIONS PER MINUTE
RS/L	-REFRIGERANT SUCTION & LIQUID LINES
RTU	-ROOFTOP AIR HANDLING UNIT
SA	-SUPPLY AIR
SP	-STATIC PRESSURE
TSP	-TOTAL STATIC PRESSURE
UNO	-UNLESS NOTED OTHERWISE
V/PH	-VOLTS/PHASE
VAV	-VARIABLE AIR VOLUME
VFD	-VARIABLE FREQUENCY DRIVE

HVAC EQUIPMENT TAGS

TAG: A / 200 / CFM — -AIR DISTRIBUTION DEVICE

RTU NUMBER: RTU-1 — -PACKAGED ROOFTOP UNIT

VARIABLE/CONSTANT AIR VOLUME TERMINAL UNITS

TERMINAL UNIT TYPE:
VTU - VARIABLE TERMINAL UNIT
CTU - CONSTANT TERMINAL UNIT
PTU - PARALLEL TERMINAL UNIT
STU - SERIES TERMINAL UNIT

AHU NUMBER / TERMINAL NUMBER: VTU-1-1

HVAC DRAWING INDEX

HVAC GENERAL NOTES

1. CONNECTION TO EQUIPMENT SHALL BE VERIFIED WITH MANUFACTURER'S CERTIFIED DRAWINGS. TRANSITIONS TO ALL EQUIPMENT SHALL BE VERIFIED AND PROVIDED FOR EQUIPMENT FURNISHED.
2. DIMENSIONS SHALL BE FIELD-VERIFIED AND COORDINATED PRIOR TO PROCUREMENT OR FABRICATION. COORDINATE THE WORK WITH OTHER TRADES INVOLVED. FIELD MODIFICATIONS SUCH AS OFFSETS IN PIPING OR DUCTWORK (INCLUDING DIVIDED DUCTWORK) NEEDED DUE TO OBSTRUCTIONS OR INTERFERENCES SHALL BE PROVIDED AT NO ADDITIONAL COST. FOR PROJECTS INVOLVING RENOVATION, COORDINATE NEW WORK WITH EXISTING ELEMENTS SUCH AS THE BUILDING STRUCTURE AND ARCHITECTURAL FEATURES, SPRINKLER PIPING, LIGHTS, PLUMBING, AND ELECTRICAL CONDUIT.
3. DUCT CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE SMACNA HVAC DUCT CONSTRUCTION STANDARD.
4. SEE SPECIFICATIONS FOR GAUGES, THICKNESS, BRACING, REQUIREMENTS, ETC., OF DUCTWORK.
5. PROVIDE AIR TURNING VANES IN ALL 90 DEGREE RECTANGULAR DUCT ELBOWS.
6. DUCT SIZES AND ALL OPENINGS THROUGH BUILDING CONSTRUCTION SHALL SUIT EQUIPMENT FURNISHED.
7. COORDINATE DIFFUSER, GRILLE AND REGISTER LOCATIONS WITH ARCHITECTURAL REFLECTED CEILING PLANS AND EQUIPMENT OF ALL TRADES.
8. LOCATE THERMOSTATS, TEMPERATURE SENSORS, HUMIDISTATS, AND HUMIDITY SENSORS AT 48" ABOVE FINISHED FLOOR UNLESS NOTED OTHERWISE. COORDINATE LOCATIONS WITH OTHER EQUIPMENT, FURNITURE, AND DOOR SWINGS.
9. ALL EQUIPMENT, DUCTWORK, ETC., SHALL BE SUPPORTED AS DETAILED AND/OR SPECIFIED. PROVIDE ADDITIONAL SUPPORTS AS REQUIRED TO PROVIDE A VIBRATION-FREE, RIGID INSTALLATION.
10. ALL DUCT SIZES SHOWN ARE INSIDE CLEAR DIMENSIONS.
11. DAMPERS AND INSIDES OF DUCTS VISIBLE THROUGH GRILLES, REGISTERS AND DIFFUSERS SHALL BE PAINTED FLAT BLACK.
12. REFER TO TYPICAL DETAILS FOR PIPING AND INSTALLATION OF EQUIPMENT.
13. TRAPPED CONDENSATE DRAINS FROM ALL MECHANICAL EQUIPMENT SHALL BE PROVIDED FOR PROPER DRAINAGE TO SUIT EQUIPMENT FURNISHED.
14. ACCESS PANELS IN DUCTWORK AND CEILINGS SHALL BE PROVIDED WHERE REQUIRED FOR OPERATION, BALANCING OR MAINTENANCE OF ALL MECHANICAL EQUIPMENT.
15. ALL DUCTWORK AND PIPING IS SHOWN SCHEMATICALLY. PROVIDE ALL TRANSITIONS, TURNING VANES, ELBOWS, FITTINGS, ETC., TO ALLOW SMOOTH FLOWS. ALL SPLIT DUCT FITTINGS SHALL TRANSITION TO FULL SIZE OF THE SUM OF BOTH BRANCHES, UPSTREAM OF SPLIT.
16. PROVIDE CONCRETE HOUSEKEEPING PAD UNDER ALL FLOOR-MOUNTED EQUIPMENT. REFER TO SPECIFICATIONS FOR DETAILED REQUIREMENTS.
17. VERIFY FINISH WITH ARCHITECT PRIOR TO PURCHASING GRILLES, REGISTERS, DIFFUSERS, LOUVERS AND OTHER AIR DISTRIBUTION DEVICES.
18. PROVIDE FLEXIBLE DUCT CONNECTIONS ON ALL DUCTWORK CONNECTING TO EACH FAN, AIR HANDLING UNITS, AND FAN COIL UNITS.
19. PROVIDE TRANSITIONS AT DIFFUSER NECKS AS REQUIRED TO MATCH SIZES OF FLEX DUCTS TO BE CONNECTED.
20. INTERRUPTIONS TO EXISTING SERVICES SHALL BE SCHEDULED FOR TIMES OTHER THAN NORMAL OPERATING HOURS (SUCH AS NIGHTS AND WEEKENDS). SUCH INTERRUPTIONS TO SERVICES SHALL NOT BE MADE WITHOUT THE PRIOR WRITTEN CONSENT OF THE OWNER'S REPRESENTATIVE AND PROPER COORDINATION WITH OTHER TRADES. PRE-WORK SHALL BE PERFORMED TO MAKE THE SHUTDOWN PERIOD AS BRIEF AS POSSIBLE.
21. ALL EQUIPMENT, DUCTWORK, ETC., TO BE REMOVED SHALL REMAIN PROPERTY OF THE OWNER OR DISPOSED OF LEGALLY, AS DIRECTED BY OWNER.
22. MAINTAIN CLEARANCE OF A MINIMUM OF 6" BETWEEN DUCTWORK, PIPING, EQUIPMENT, ETC., AND ALL FIRE RATED AND FIRE/SMOKE RATED PARTITIONS, TO ALLOW FOR INSPECTIONS OF RATED WALLS.
23. LOCATE ALL OUTSIDE AIR INTAKES A MINIMUM OF 10' CLEAR FROM ALL PLUMBING VENTS AND EXHAUST AIR DISCHARGE LOCATIONS.
24. DUCT RUNOUTS TO DIFFUSERS SHALL MATCH THE SIZE OF THE DIFFUSER NECK.
25. WATER PRESSURE DROPS THROUGH COIL CONTROL VALVES SHALL NOT EXCEED 5 PSI.
26. UNLESS OTHERWISE NOTED, ALL EQUIPMENT AND VALVE DRAINS SHALL BE INDEPENDENTLY PIPED FULL SIZE TO THE NEAREST PLUMBING DRAIN.
27. SLEEVE AND SEAL ALL PIPING PENETRATIONS THROUGH BUILDING PARTITIONS. PROVIDE MANUAL AIR VENTS AT ALL HIGH POINTS IN CHILLED WATER AND HOT WATER PIPING.
28. PIPING, DUCTWORK, LEAK PROTECTION APPARATUS, OR OTHER EQUIPMENT FOREIGN TO ELECTRICAL SWITCHBOARDS, PANELBOARDS, DISTRIBUTION BOARDS, OR MOTOR CONTROL CENTERS SHALL NOT BE INSTALLED WITHIN THE REQUIRED SPACE FOR WORKING CLEARANCES OR DEDICATED SPACES OF THE ELECTRICAL EQUIPMENT, EXTENDING IN FRONT OF AND FROM FLOOR TO STRUCTURAL CEILING WITH A WIDTH AND DEPTH OF THE ELECTRICAL EQUIPMENT IN ACCORDANCE WITH NEC-110.26.

REFERENCED NOTES:

1. RTU MOUNTED ON FACTORY FABRICATED ROOF CURB, REFER TO DETAIL 3 & 5 ON SHEET M411 FOR REQUIREMENTS.
2. FUTURE CONCESSION RTU SHOWN FOR REFERNCE ONLY. APPROXIMATELY 5 TONS AND 1400 LBS TOTAL WEIGHT.
3. FUTURE CONCESSION RTU SHOWN FOR REFERNCE ONLY. APPROXIMATELY 8 TONS AND 2000 LBS TOTAL WEIGHT.
4. ROUTE SCH. 40 PVC CONDENSATE DRAIN PIPES TO NEAREST ROOF DRAIN. PROVIDE ADHESIVE TYPE PIPE ROOF SUPPORTS SPACED AT 4' APART. BASIS OF DESIGN PIPE PROP APS OR EQUIVALENT. (TYPICAL)
5. EXHAUST FAN MOUNTED ON FACTORY FABRICATED ROOF CURB, REFER TO DETAIL 2 ON SHEET M411 FOR REQUIREMENTS. MAINTIAN MINIMUM 10' CLEARANCE FROM ALL RTU OUTDOOR AIR INTAKES.

NOTES:

1. SEE SPECIFICATIONS FOR APPROVED MANUFACTURERS AND ADDITIONAL REQUIREMENTS.
2. CAPACITIES SHOWN ARE MINIMUM.
3. PRESSURE DROPS ARE MAXIMUM.
4. COORDINATE PIPING AND DUCT CONNECTION ORIENTATIONS WITH PLANS.
5. ALL MOTORS SHALL BE MOTOR MANUFACTURER'S HIGHEST "PREMIUM" EFFICIENCY OFFERING AVAILABLE.
6. PROVIDE ONE (1) SET OF CONSTRUCTION AIR FILTERS AND ONE (1) SET OF NEW FILTERS TO BE INSTALLED AT TIME OF C.O.
7. INSTALL PER MANUFACTURERS WRITTEN INSTALLATION INSTRUCTIONS.
8. PROVIDE STAINLESS STEEL DRAIN PAN.
9. PROVIDE ALL MECHANICAL CODE AND ENERGY CODE REQUIRED CLEARANCES.
10. SEE DIVISION 26 FOR DISCONNECT.
11. PROVIDE CONDENSATE TRAP AND PIPING FROM UNIT TO NEAREST ROOF DRAIN.
12. PROVIDE WITH FACROTY FABRICATED INSULATED ROOF CURB.
13. PROVIDE WITH MANUFACTURER'S COIL PROTECTION COATING.
14. PROVIDE WITH EBTRON GOLD AIRFLOW MEASUREMENT STATION FOR OUTDOOR AIRFLOW MONITORING.
15. PROVIDE WITH BACNET COMMUNICATION INTERFACE.
16. PROVIDE INDEPENDENTLY CIRCUITED CONVENIENCE OUTLET AND MARINE LIGHTS.
17. PROVIDE HOT GAS REHEAT.
18. RTU-1 & RTU-2: PROVIDE WITH A MINIMUM OF FOUR (4) COMPRESSORS FOR 25% TURNDOWN.
19. RTU-2, RTU-3, RTU-4, AND RTU-6: AT LEAST ONE COMPRESSOR SHALL BE AN INTERTER SCROLL FOR CAPACITY MODULATION.
20. EACH RTU SHALL BE CAPABLE OF AIRFLOW MODULATION DOWN TO 30% OF MAXIMUM DESIGN AIRFLOW.
21. EACH RTU SHALL HAVE THERMALLY BROKEN DOUBLE WALL CONSTRUCTION WITH MINIMUM R-13 INSULATION.
22. EACH RTU SHALL HAVE FACTORY PAINTED EXTERIORS, 1000 HR SALT SPRAY ASTM B-117.

FAN SCHEDULE

MARK	MANUFACTURER	MODEL	TYPE	CFM	SP (IN. WG.)	MAX FAN RPM	MAX SONES	MOTOR			DRIVE TYPE	FAN SERVICE
								HP	RPM	VOLTS/PHASE

NOTES:

1) ROOF CURB
2) SERVICE DISCONNECT SWITCH
3) PROVIDE DIAL ON MOTOR SPEED CONTROL FOR EC MOTOR
4) PROVIDE MOTOR STARTER WITH BAS INTEGRATION (COMPATIBLE WITH EC MOTOR AS APPLICABLE).
5) PROVIDE BACKDRAFT DAMPER.
6) CERTIFIED HIGH WIND RESISTANT FAN AND CURB ASSEMBLY. CURB AND FAN ASSEMBLY SHALL BE CERTIFIED FOR USE WITHOUT THE USE OF ADDITIONAL CABLE OR GUY-WIRE RESTRAINTS, WHEN CURB IS ANCHORED TO ROOF AND FAN ANCHORED TO CURB IN ACCORDANCE WITH MANUFACTURER'S CERTIFIED INSTALLATION INSTRUCTIONS.
7) PROVIDE FAN WITH EC FAN MOTOR.

NOTES:

1. SEE SPECIFICATIONS FOR OTHER APPROVED MANUFACTURERS AND ADDITIONAL REQUIREMENTS.
2. UNITS SHALL BE PRESSURE INDEPENDENT, NORMALLY OPEN.
3. SOUND DATA SHALL BE OBTAINED FROM TESTS CONDUCTED IN ACCORDANCE WITH ARI STANDARD 880.
4. MAX NC-30 AT 1" W.C. INLET STATIC PRESSURE. PROVIDE FACTORY SOUND ATTENUATOR AS REQUIRED.
5. MANUFACTURER SHALL FACTORY MOUNT AND TEST CONTROLS ON ALL TERMINALS.
6. 1" RIGID INSULATION WITH FOIL FACE TOWARD AIRSTREAM.
7. UNITS WITH HEATERS SHALL BE VAV FOR COOLING AND CONSTANT VOLUME FOR HEATING.
8. AIR PRESSURE DROP INDICATED IS AT FULL-OPEN POSITION AND INCLUDES HEATING COIL DROP WHERE APPLICABLE.
9. MINIMUM COOLING CFM SHALL BE AS SHOWN DURING OCCUPIED MODE, BUT SHALL BE ZERO (0) CFM (FULL-SHUTOFF) DURING UNOCCUPIED COOLING MODE.
10. HEATING COILS LESS THAN 4.5KW SHALL BE 277V/1PH. HEATING COILS 4.5KW AND GREATER SHALL BE 480V/3PH. SINGLE-POINT CONNECTIONS.
11. PROVIDE FACTORY-INSTALLED AND WIRED STEP-DOWN TRANSFORMER FOR CONTROL POWER. TRANSFORMER INPUT VOLTAGE SHALL MATCH HEATER VOLTAGE. (FOR TERMINALS WITHOUT HEATER, PROVIDE 277V PRIMARY TRANSFORMER VOLTAGE.)
12. PROVIDE WITH FACTORY-MOUNTED INTEGRAL FUSED DISCONNECT SWITCH.

SINGLE DUCT VAV TERMINAL UNIT SCHEDULE

PLAN MARK	BASIS OF DESIGN		INLET SIZE	AIRFLOW		
	MFGR	MODEL		COOLING DESIGN (CFM)	COOLING MINIMUM (CFM)	MAX AIR PRESS. DROP
VTU-1-9	PRICE	SDV	8"	600	180 CFM	0.25 in-wg

NOTES:

1. SCHEDULE CREATED FROM SMACNA "HVAC DUCT CONSTRUCTION STANDARDS", SECOND EDITION - 1995. SMACNA REQUIREMENTS GOVERN.
2. TABLE ALLOWS FOR TYPICAL DUCT WEIGHT WITH NORMAL REINFORCEMENT AND JOINTS, 1 LB/SF INSULATION WEIGHT, AND TRAPEZE WEIGHT, BUT NO EXTERNAL LOADS. IF HEAVIER DUCTS ARE TO BE INSTALLED (SUCH AS DOUBLE-WALL OR DENSE INSULATIONS), ADJUST HANGER SIZES TO BE WITHIN THEIR LOAD LIMITS.
3. STRAPS ARE TO BE GALVANIZED STEEL.
4. ALLOWABLE LOADS FOR P/2 ASSUME THAT DUCTS ARE 16 GA MAX., EXCEPT THAT WHEN MAXIMUM DUCT DIMENSION (W) IS OVER 60", THEN P/2 MAX. IS 1.25W.
5. WIRE IS NOT AN APPROVED HANGER.
6. STRAP AND ROD SIZES ARE MINIMUM ALLOWABLE.
7. FOR UPPER ATTACHMENTS, LOWER ATTACHMENTS, TRAPEZE SIZES, AND ROD/STRAP ALLOWABLE LOADS, SEE SMACNA MANUAL.

ROUND DUCT HANGER SCHEDULE

DIAMETER	MAX. SPACING	ROD	STRAP	
10" & DN	12'	1/4"	1" x 22" GA.	
11"-18"	12'	1/4"	1" x 22" GA.	
19"-24"	12'	1/4"	1" x 22" GA.	
25"-36"	12'	3/8"	1" x 20" GA.	
37"-50"	12'	TWO(2) 3/8"	TWO(2) 1" x 20 GA.	
51"-60"	12'	TWO(2) 3/8"	TWO(2) 1" x 18 GA.	
61"-84"	12'	TWO(2) 3/8"	TWO(2) 1" x 16 GA.	

NOTES:

1. SCHEDULE CREATED FROM SMACNA "HVAC DUCT CONSTRUCTION STANDARDS", SECOND EDITION - 1995.
2. TALE ALLOWS FOR CONVENTIONAL WALL THICKNESS, AND JOINT SYSTEMS PLUS 1 LB/SF INSULATION WEIGHT. IF HEAVIER DUCTS ARE TO BE INSTALLED, ADJUST HANGER SIZES TO BE WITHIN THEIR LOAD LIMITS.
3. HANGER SPACING MAY BE ADJUSTED BY SPECIAL ANALYSIS.
4. STRAPS ARE TO BE GALVANIZED STEEL. WIRE IS NOT AN APPROVED HANGER.
5. STRAP AND ROD SIZES ARE MINIMUM ALLOWABLE.
6. FOR UPPER ATTACHMENTS, LOWER ATTACHMENTS, TRAPEZE SIZES, AND ROD/STRAP ALLOWABLE LOADS, SEE SMACNA MANUAL.

WIND RESTRAINT REQUIREMENTS

No Scale

4

WIND RESTRAINT REQUIREMENTS:

1. ALL ROOF- AND GROUND-MOUNTED MECHANICAL EQUIPMENT (GRAVITY AND POWERED VENTILATORS, ROOFTOP A/C UNITS, CONDENSING UNITS, FAN EQUIPMENT, ENERGY RECOVERY VENTILATORS, ETC.) SHALL BE FABRICATED TO RESIST THE EFFECTS OF WIND. WIND LOADS SHALL BE BASED ON WIND SPEEDS AS INDICATED IN THE FLORIDA BUILDING CODE 6TH EDITION (2017) AND PER BORA INTERPRETATION - WIND RESISTANCE OF MECHANICAL EQUIPMENT DATED 12-17-2018. DESIGN ROOF- AND GROUND-MOUNTED MECHANICAL EQUIPMENT, INCLUDING COMPREHENSIVE ENGINEERING ANALYSIS BY A QUALIFIED PROFESSIONAL ENGINEER, USING STRUCTURAL AND WIND PERFORMANCE REQUIREMENTS AND DESIGN CRITERIA INDICATED.

2. ALL ROOF- AND GROUND-MOUNTED MECHANICAL EQUIPMENT (GRAVITY AND POWERED VENTILATORS, ROOFTOP A/C UNITS, CONDENSING UNITS, FAN EQUIPMENT, ENERGY RECOVERY VENTILATORS, ETC.) SHALL BE ANCHORED TO RESIST THE EFFECTS OF WIND. WIND LOADS SHALL BE BASED ON ON WIND SPEEDS AS INDICATED IN THE FLORIDA BUILDING CODE 6TH EDITION (2017) AND PER BORA INTERPRETATION - WIND RESISTANCE OF MECHANICAL EQUIPMENT DATED 12-17-2018. DESIGN ROOF- AND GROUND-MOUNTED MECHANICAL EQUIPMENT ANCHORAGE, INCLUDING COMPREHENSIVE ENGINEERING ANALYSIS BY A QUALIFIED PROFESSIONAL ENGINEER, USING STRUCTURAL AND WIND PERFORMANCE REQUIREMENTS AND DESIGN CRITERIA INDICATED. CONTRACTOR SHALL PREPARE WIND-RESTRAINT DETAILS INDICATED TO COMPLY WITH PERFORMANCE REQUIREMENTS AND DESIGN CRITERIA, INCLUDING ANALYSIS DATA SIGNED AND SEALED BY THE QUALIFIED PROFESSIONAL ENGINEER RESPONSIBLE FOR THEIR PREPARATION.

3. DESIGN ANALYSIS AND CALCULATIONS: PROVIDE TO SUPPORT SELECTION AND ARRANGEMENT OF WIND RESTRAINTS. INCLUDE CALCULATIONS OF COMBINED TENSILE AND SHEAR LOADS. PROVIDE REACTIONS AT CONNECTION POINTS TO THE BUILDING STRUCTURE.

4. FABRICATION AND ARRANGEMENT DETAILS: DETAIL ATTACHMENTS OF RESTRAINTS TO THE RESTRAINED ITEMS AND TO THE STRUCTURE. SHOW ATTACHMENT LOCATIONS, METHODS, AND SPACING. IDENTIFY COMPONENTS, LIST THEIR STRENGTHS, AND INDICATE DIRECTIONS AND VALUES OF FORCES TRANSMITTED TO THE STRUCTURE DURING WIND EVENTS. INCLUDE FABRICATION REQUIREMENTS OF THE EQUIPMENT CURB AND ITS ABILITY TO SUPPORT THE LATERAL LOAD IMPARTED BY THE EQUIPMENT DURING A WIND EVENT.

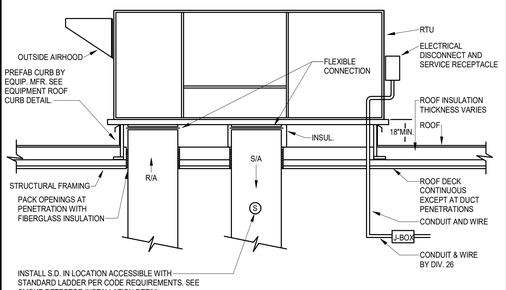
5. PREAPPROVAL AND EVALUATION DOCUMENTATION: PROVIDE, BY AN AGENCY ACCEPTABLE TO AUTHORITIES HAVING JURISDICTION, SHOWING MAXIMUM RATINGS OF RESTRAINT ITEMS AND THE BASIS FOR APPROVAL (TESTS OR CALCULATIONS).

6. WIND RESTRAINT QUALIFICATION CERTIFICATES: PROVIDE, FROM THE MANUFACTURER, FOR ALL ROOF- AND GROUND-MOUNTED MECHANICAL EQUIPMENT. INCLUDE DIMENSIONED OUTLINE DRAWINGS OF EQUIPMENT UNIT, IDENTIFYING CENTER OF GRAVITY AND LOCATION AND DESCRIPTION OF MOUNTING AND ANCHORAGE PROVISIONS. INCLUDE DETAILED DESCRIPTION OF EQUIPMENT ANCHORAGE DEVICES ON WHICH THE CERTIFICATION IS BASED AND THEIR INSTALLATION REQUIREMENTS.

ROOFTOP UNIT INSTALLATION DETAIL

No Scale

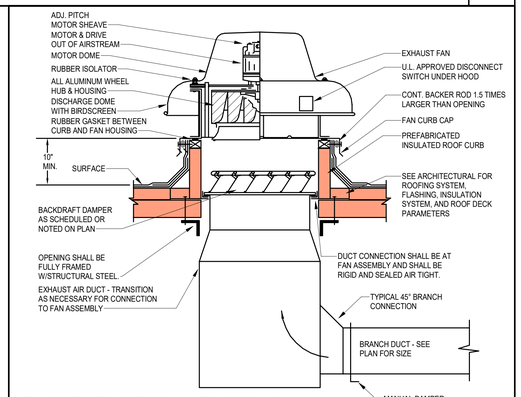
5



ROOFTOP CENTRIFUGAL EXHAUST FAN DETAIL

No Scale

2



1. SEE "WIND RESTRAINT REQUIREMENTS" ON THIS SHEET AND COMPLY WITH ALL.
2. PROVIDE CERTIFIED HIGH WIND RESISTANT FAN AND CURB ASSEMBLY. CURB AND FAN ASSEMBLY SHALL BE CERTIFIED FOR PERFORMANCE WITHOUT THE USE OF ADDITIONAL CABLE OR GUY-WIRE RESTRAINTS, WHEN CURB IS ANCHORED TO ROOF AND FAN ANCHORED TO CURB IN ACCORDANCE WITH MANUFACTURER'S CERTIFIED INSTALLATION INSTRUCTIONS.
3. ANCHOR PER MANUFACTURER'S CERTIFIED INSTALLATION INSTRUCTIONS. AS A MINIMUM, ANCHOR AS FOLLOWS:

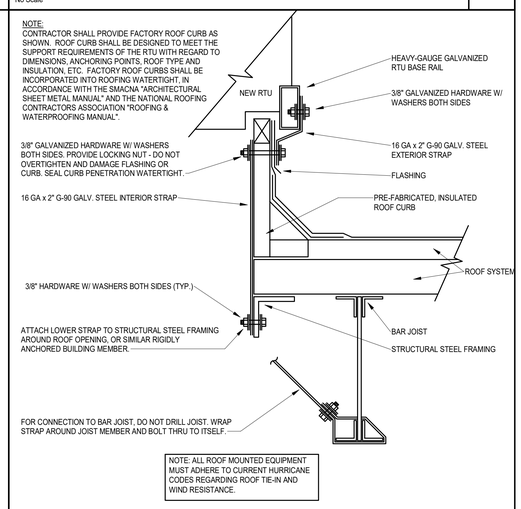
CURB TO STRUCTURAL CONCRETE ROOF DECK - MINIMUM 3/8" BOLTS WITH EXPANSION ANCHORS, AT 12" O.C. (MIN 3 PER SIDE), WITH FENDER WASHERS ON TOP OF SHEETMETAL CURB BASE.
CURB TO METAL DECK - MINIMUM 3/8" BOLTS THRU ROOF ASSEMBLY AND STRUCTURAL STEEL FRAMING ON UNDERSIDE AROUND OPENING, AT 12 O.C. (MIN 3 PER SIDE), WITH FENDER WASHERS ON TOP OF SHEETMETAL CURB BASE.
FAN TO CURB – MINIMUM #12 HEX HEAD SHEETMETAL SCREWS WITH WASHERS, THRU CURB SHEETMETAL ASSEMBLY, SPACED MIN. 9" O.C. (MIN 4 PER SIDE)

RTU TIE-DOWN DETAIL

No Scale

3

NOTE:
CONTRACTOR SHALL PROVIDE FACTORY ROOF CURB AS SHOWN. ROOF CURB SHALL BE DESIGNED TO MEET THE SUPPORT REQUIREMENTS OF THE RTU WITH REGARD TO DIMENSIONS, ANCHORING POINTS, ROOF TYPE AND INSULATION, ETC. FACTORY ROOF CURBS SHALL BE INCORPORATED INTO ROOFING WATERTIGHT, IN ACCORDANCE WITH THE SMACNA "ARCHITECTURAL SHEET METAL MANUAL" AND THE NATIONAL ROOFING CONTRACTORS ASSOCIATION "ROOFING & WATERPROOFING MANUAL".



NOTE: ALL ROOF MOUNTED EQUIPMENT MUST ADHERE TO CURRENT HURRICANE CODES REGARDING ROOF TIE-IN AND WIND RESISTANCE.

MECHANICAL DETAILS

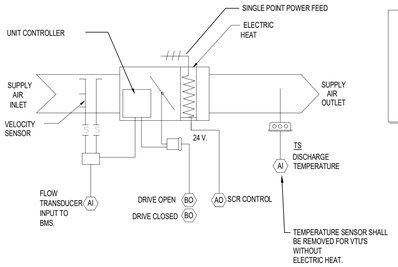
BID DOCUMENTS

Drawing No.:

M411

BIM 360://Design of Satellite Concourse/VPS-MLM_MEP.rvt

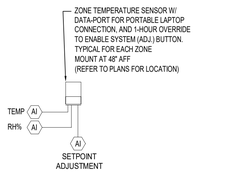
1/21/2020 3:44:54 PM



PROVIDE EMS DISPLAY AND ALARMS FOR:
SPACE TEMPERATURE (°F)
OCCUPIED SPACE COOLING SETPOINT (°F)
OCCUPIED SPACE HEATING SETPOINT (°F)
AIRFLOW (CFM)
MAX AIRFLOW SETTING (CFM)
MIN AIRFLOW SETTING (CFM)
HEATING MIN AIRFLOW SETTING (CFM)
ELECTRIC HEAT OUTPUTS (SCR %)
COMMUNICATION STATUS

24 VOLT CONTROL POWER FOR VAV OPERATOR TO BE OBTAINED FROM A SEPARATE 24 VOLT CONTROLS TRANSFORMER LOCATED IN ELECTRIC HEATER CONTROL CABINET (TO BE FURNISHED WITH TERMINAL UNIT).

WHERE TERMINAL HAS NO ELECTRIC HEATER, PROVIDE SEPARATE CONTROL POWER TRANSFORMER AT CENTRAL LOCATION.



VAV BOX SEQUENCE OF OPERATION

EACH VAV BOX SHALL BE SCHEDULED TO START EACH DAY BASED ON THE RESPECTIVE AHU SCHEDULE. WHEN THE AIR HANDLING UNIT IS "OFF" AND NO AIR FLOW IS SENSED BY THE VAV FLOW TRANSMITTER, THE DAMPER WILL STROKE TO THE FULLY OPEN POSITION. WHEN THE BOX SENSES AIR FLOW AND IS SCHEDULED IN THE UNOCCUPIED STATE, THE DAMPER WILL STROKE CLOSED TO THE MINIMUM SETTING.

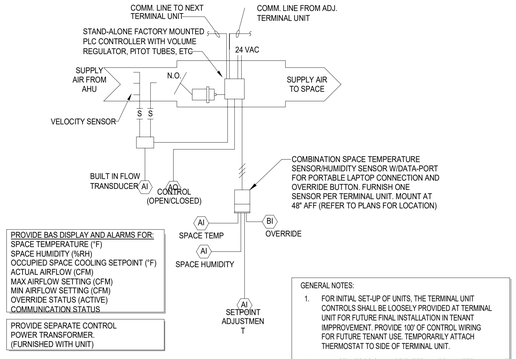
ONCE THE VAV BOX IS SCHEDULED IN THE OCCUPIED STATE THEN ALL SEQUENCES SHALL COMMENCE. DURING COOLING OPERATION THE VAV CONTROLLER WILL STROKE THE DAMPER TO MAINTAIN THE ADJUSTABLE MINIMUM CFM WHILE THE SPACE TEMPERATURE IS 1/2 THE COOLING DEADBAND BELOW THE THERMOSTAT SETPOINT. AS THE SPACE TEMPERATURE RISES FROM 1/2 THE COOLING DEADBAND BELOW THE SETPOINT TO 1/2 THE COOLING DEADBAND ABOVE THE SETPOINT THE CONTROLLER WILL STROKE THE DAMPER AND ADJUST THE AIR FLOW FROM MINIMUM TO MAXIMUM. THE AIR FLOW WILL REMAIN AT MAXIMUM FLOW AS LONG AS THE SPACE TEMPERATURE IS 1/2 THE DEADBAND ABOVE THE ADJUSTED SETPOINT.

THE HEATING SETPOINT SHALL BE DETERMINED BY AN ADJUSTABLE DEADBAND BELOW THE COOLING SETPOINT (INITIALLY AT 4°F). THIS WILL BE ADJUSTABLE BY THE BUILDING OPERATOR AT ONE OF THE MAIN SYSTEM GLOBAL KEYPAD/DISPLAYS OR THE VAV GRAPHIC SCREEN. AS THE SPACE TEMPERATURE DROPS BELOW THE DESIRED HEATING SETPOINT THE VAV CONTROLLER SHALL STROKE THE DAMPER TO MAINTAIN THE REHEAT AIR FLOW CFM (ADJ.) AS SCHEDULED. ON A CONTINUED DROP IN SPACE TEMPERATURE THE CONTROLLER SHALL MODULATE THE ELECTRIC HEAT THROUGH THE SCR CONTROLLER AS REQUIRED TO MAINTAIN SPACE TEMPERATURE.

ALL VAV BOX PARAMETERS SHALL BE AVAILABLE AT THE LOCAL THERMOSTAT AND THE GLOBAL KEYPAD/DISPLAY. THE TEST AND BALANCE CONTRACTOR SHALL BE ABLE TO SET MAX CFM, MIN CFM, REHEAT CFM, AND CALIBRATE TO ACTUAL CFM AT THE LOCAL THERMOSTAT.

GENERAL NOTES:
1. FOR INITIAL SET-UP OF UNITS, THE TERMINAL UNIT CONTROLS SHALL BE LOOSELY PROVIDED AT TERMINAL UNIT FOR FUTURE FINAL INSTALLATION IN TENANT IMPROVEMENT. PROVIDE 100' OF CONTROL WIRING FOR FUTURE TENANT USE. TEMPORARILY ATTACH THERMOSTAT TO SIDE OF TERMINAL UNIT.
2. ALL ACTUATORS SHALL BE EXTERNAL TO VAV TERMINAL UNIT.

CONTROL DIAGRAM FOR VAV TERMINAL UNIT - ELECTRIC HEAT | 4



PROVIDE BAS DISPLAY AND ALARMS FOR:
SPACE TEMPERATURE (°F)
SPACE HUMIDITY (%RH)
OCCUPIED SPACE COOLING SETPOINT (°F)
ACTUAL AIRFLOW (CFM)
MAX AIRFLOW SETTING (CFM)
MIN AIRFLOW SETTING (CFM)
OVERRIDE STATUS (ACTIVE)
COMMUNICATION STATUS

PROVIDE SEPARATE CONTROL POWER TRANSFORMER (FURNISHED WITH UNIT)

GENERAL NOTES:
1. FOR INITIAL SET-UP OF UNITS, THE TERMINAL UNIT CONTROLS SHALL BE LOOSELY PROVIDED AT TERMINAL UNIT FOR FUTURE FINAL INSTALLATION IN TENANT IMPROVEMENT. PROVIDE 100' OF CONTROL WIRING FOR FUTURE TENANT USE. TEMPORARILY ATTACH THERMOSTAT TO SIDE OF TERMINAL UNIT.
2. ALL ACTUATORS SHALL BE EXTERNAL TO VAV TERMINAL UNIT.

CONTROL SEQUENCE: VAV TERMINAL UNITS - NO HEAT

EACH TERMINAL UNIT SHALL BE PRESSURE INDEPENDENT WITH INDEPENDENT COOLING MAXIMUM AND MINIMUM AIRFLOW LIMITS.

EACH TERMINAL UNIT SHALL BE SCHEDULED TO START EACH DAY BASED ON THE RESPECTIVE AHU SCHEDULE. WHEN THE AIR HANDLING UNIT IS "OFF" AND NO AIR FLOW IS SENSED BY THE VAV FLOW TRANSMITTER, THE DAMPER WILL STROKE TO THE FULLY OPEN POSITION. WHEN THE BOX SENSES AIR FLOW AND IS SCHEDULED IN THE UNOCCUPIED STATE, THE DAMPER WILL STROKE TO THE MINIMUM SETTING.

COOLING MODE: THE VAV CONTROLLER WILL STROKE THE DAMPER TO MAINTAIN THE ADJUSTABLE MINIMUM CFM WHILE THE SPACE TEMPERATURE IS 1/2 THE COOLING DEADBAND BELOW THE THERMOSTAT SETPOINT. AS THE SPACE TEMPERATURE RISES FROM 1/2 THE COOLING DEADBAND BELOW THE SETPOINT TO 1/2 THE COOLING DEADBAND ABOVE THE SETPOINT THE CONTROLLER WILL STROKE THE DAMPER AND ADJUST THE AIR FLOW FROM MINIMUM TO MAXIMUM. THE AIR FLOW WILL REMAIN AT MAXIMUM WHEN THE SPACE TEMPERATURE IS 1/2 THE DEADBAND ABOVE THE ADJUSTED SETPOINT.

UNOCCUPIED MODE: THE DDC CONTROLLER SHALL MAINTAIN UNOCCUPIED ADJUSTABLE SETPOINTS OF 80ºF COOLING. UPON ACTIVATION OF SPACE OVERRIDE, THE VAV-BOX, ASSOCIATED AHU & SYSTEM SHALL BE COMMANDED TO OCCUPIED MODE FOR 1HR (ADJ.).

EMERGENCY MODE: UPON ACTIVATION OF THE EMERGENCY AIR DISTRIBUTION SHUT OFF SWITCH, ALL VAV BOXES SHALL MODULATE TO THEIR FULLY CLOSED POSITION.

NOTE: ALL VAV BOX PARAMETERS SHALL BE AVAILABLE AT THE LOCAL THERMOSTAT AND THE GLOBAL KEYPAD/DISPLAY. THE TEST AND BALANCE CONTRACTOR SHALL SET THE MAX CFM, MIN CFM, AND CALIBRATE TO ACTUAL CFM AT THE LOCAL THERMOSTAT.

CONTROL DIAGRAM FOR VAV TERMINAL - NO HEAT | 1

CONTROL DIAGRAM LEGEND

- BI — BINARY/DIGITAL INPUT
- BO — BINARY/DIGITAL OUTPUT
- AI — ANALOG INPUT
- AO — ANALOG OUTPUT

- DX / CC — DIRECT EXPANSION COOLING COIL
- AIRFLOW DIRECTION (BREAK INDICATES SEPARATION FROM AHU.)
- VARIABLE FREQUENCY DRIVE

CONTROL SYSTEM:

A. MANUFACTURERS:
1. SIEMENS
2. TRANE
3. AUTOMATED LOGIC

B. CONTROL SYSTEM SHALL CONSIST OF SENSORS, INDICATORS, ACTUATORS, FINAL CONTROL ELEMENTS, INTERFACE EQUIPMENT, OTHER APPARATUS, AND ACCESSORIES TO CONTROL MECHANICAL SYSTEMS.

C. CONTROL SYSTEM SHALL CONSIST OF SENSORS, INDICATORS, ACTUATORS, FINAL CONTROL ELEMENTS, INTERFACE EQUIPMENT, OTHER APPARATUS, ACCESSORIES, AND SOFTWARE CONNECTED TO DISTRIBUTED CONTROLLERS OPERATING IN MULTIUSER, MULTITASKING ENVIRONMENT ON TOKEN-PASSING NETWORK AND PROGRAMMED TO CONTROL MECHANICAL SYSTEMS. AN OPERATOR WORKSTATION PERMITS INTERFACE WITH THE NETWORK VIA DYNAMIC COLOR GRAPHICS WITH EACH MECHANICAL SYSTEM, BUILDING FLOOR PLAN, AND CONTROL DEVICE DEPICTED BY POINT-AND-CLICK GRAPHICS.

D. THE BAS SHALL BE A WEB-ENABLED SYSTEM WITH A SECURE INTERFACE. A STATIC IP ADDRESS AND CONNECTIVITY WILL BE PROVIDED BY THE OWNER.

BAS EQUIPMENT

CONTROL UNITS: MODULAR, COMPRISING PROCESSOR BOARD WITH PROGRAMMABLE, NONVOLATILE, RANDOM-ACCESS MEMORY; LOCAL OPERATOR ACCESS AND DISPLAY PANEL; INTEGRAL INTERFACE EQUIPMENT; AND BACKUP POWER SOURCE.
1. UNITS MONITOR OR CONTROL EACH I/O POINT; PROCESS INFORMATION; EXECUTE COMMANDS FROM OTHER CONTROL UNITS, DEVICES, AND OPERATOR STATIONS; AND DOWNLOAD FROM OR UPLOAD TO OPERATOR WORKSTATION OR DIAGNOSTIC TERMINAL UNIT.
2. STAND-ALONE MODE CONTROL FUNCTIONS OPERATE REGARDLESS OF NETWORK STATUS. FUNCTIONS INCLUDE THE FOLLOWING:
   A) GLOBAL COMMUNICATIONS.
   B) DISCRETE/DIGITAL, ANALOG, AND PULSE I/O.
   C) MONITORING, CONTROLLING, OR ADDRESSING DATA POINTS.
   D) SOFTWARE APPLICATIONS, SCHEDULING, AND ALARM PROCESSING.
   E) TESTING AND DEVELOPING CONTROL ALGORITHMS WITHOUT DISRUPTING FIELD HARDWARE AND CONTROLLED ENVIRONMENT.
3. STANDARD APPLICATION PROGRAMS:
   A) ELECTRIC CONTROL PROGRAMS: DEMAND LIMITING, DUTY CYCLING, AUTOMATIC TIME SCHEDULING, START/STOP TIME OPTIMIZATION, NIGHT SETBACK/SETUP, ON-OFF CONTROL WITH DIFFERENTIAL SEQUENCING, STAGGERED START, ANTISHORT CYCLING, PID CONTROL, BAS WITH FINE TUNING, AND TREND LOGGING.
   B) HVAC CONTROL PROGRAMS: OPTIMAL RUN TIME, SUPPLY-AIR RESET, AND ENTHALPY SWITCHOVER.
   C) PROGRAMMING APPLICATION FEATURES: INCLUDE TREND POINT; ALARM PROCESSING AND MESSAGING; WEEKLY, MONTHLY, AND ANNUAL SCHEDULING; ENERGY CALCULATIONS; RUN-TIME TOTALIZATION; AND SECURITY ACCESS.
   D) REMOTE COMMUNICATIONS.
   E) MAINTENANCE MANAGEMENT.
   F) UNITS OF MEASURE: INCH-POUND AND SI (METRIC).
4. LOCAL OPERATOR INTERFACE PROVIDES FOR DOWNLOAD FROM OR UPLOAD TO OPERATOR WORKSTATION OR DIAGNOSTIC TERMINAL UNIT.
5. ASHRAE 135 COMPLIANCE: CONTROL UNITS SHALL USE ASHRAE 135 PROTOCOL AND COMMUNICATE USING ISO 8802-3 (ETHERNET) DATALINK/PHYSICAL LAYER PROTOCOL.

C. LOCAL CONTROL UNITS: MODULAR, COMPRISING PROCESSOR BOARD WITH ELECTRONICALLY PROGRAMMABLE, NONVOLATILE, READ-ONLY MEMORY; AND BACKUP POWER SOURCE.
1. UNITS MONITOR OR CONTROL EACH I/O POINT, PROCESS INFORMATION, AND DOWNLOAD FROM OR UPLOAD TO OPERATOR WORKSTATION OR DIAGNOSTIC TERMINAL UNIT.
2. STAND-ALONE MODE CONTROL FUNCTIONS OPERATE REGARDLESS OF NETWORK STATUS. FUNCTIONS INCLUDE THE FOLLOWING:
   A) GLOBAL COMMUNICATIONS.
   B) DISCRETE/DIGITAL, ANALOG, AND PULSE I/O.
   C) MONITORING, CONTROLLING, OR ADDRESSING DATA POINTS.
3. LOCAL OPERATOR INTERFACE PROVIDES FOR DOWNLOAD FROM OR UPLOAD TO OPERATOR WORKSTATION OR DIAGNOSTIC TERMINAL UNIT.
4. ASHRAE 135 COMPLIANCE: CONTROL UNITS SHALL USE ASHRAE 135 PROTOCOL AND COMMUNICATE USING ISO 8802-3 (ETHERNET) DATALINK/PHYSICAL LAYER PROTOCOL.

D. I/O INTERFACE: HARDWIRED INPUTS AND OUTPUTS MAY TIE INTO SYSTEM THROUGH CONTROLLERS. PROTECT POINTS SO THAT SHORTING WILL CAUSE NO DAMAGE TO CONTROLLERS.
1. BINARY INPUTS: ALLOW MONITORING OF ON-OFF SIGNALS WITHOUT EXTERNAL POWER.
2. PULSE ACCUMULATION INPUTS: ACCEPT UP TO 10 PULSES PER SECOND.
3. ANALOG INPUTS: ALLOW MONITORING OF LOW-VOLTAGE (0- TO 10-V DC), CURRENT (4 TO 20 MA), OR RESISTANCE SIGNALS.
4. BINARY OUTPUTS: PROVIDE ON-OFF OR PULSED LOW-VOLTAGE SIGNAL, SELECTABLE FOR NORMALLY OPEN OR NORMALLY CLOSED OPERATION.
5. ANALOG OUTPUTS: PROVIDE MODULATING SIGNAL, EITHER LOW VOLTAGE (0- TO 10-V DC) OR CURRENT (4 TO 20 MA).
6. TRI-STATE OUTPUTS: PROVIDE TWO COORDINATED BINARY OUTPUTS FOR CONTROL OF THREE-POINT, FLOATING-TYPE ELECTRONIC ACTUATORS.
7. UNIVERSAL I/OS: PROVIDE SOFTWARE SELECTABLE BINARY OR ANALOG OUTPUTS.

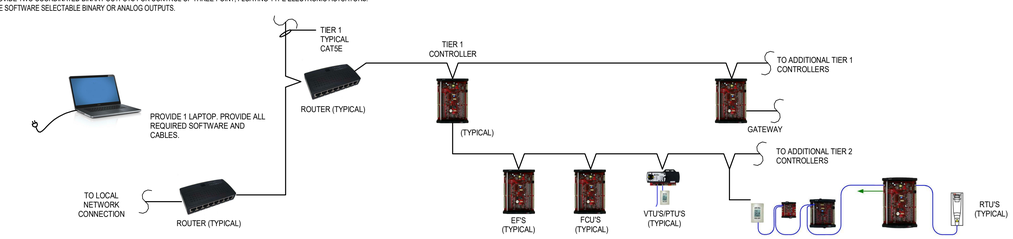
E. POWER SUPPLIES: TRANSFORMERS WITH CLASS 2 CURRENT-LIMITING TYPE OR OVERCURRENT PROTECTION; LIMIT CONNECTED LOADS TO 80 PERCENT OF RATED CAPACITY. DC POWER SUPPLY SHALL MATCH OUTPUT CURRENT AND VOLTAGE REQUIREMENTS AND BE FULL-WAVE RECTIFIER TYPE WITH THE FOLLOWING:
1. OUTPUT RIPPLE OF 5.0 MV MAXIMUM PEAK TO PEAK.
2. COMBINED 1 PERCENT LINE AND LOAD REGULATION WITH 100-MIC.SEC. RESPONSE TIME FOR 50 PERCENT LOAD CHANGES.
3. BUILT-IN OVERVOLTAGE AND OVERCURRENT PROTECTION AND BE ABLE TO WITHSTAND 150 PERCENT OVERLOAD FOR AT LEAST 3 SECONDS WITHOUT FAILURE.

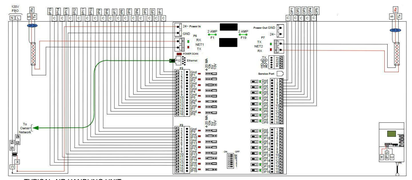
INSTALLATION

A. BUILDING AUTOMATION CONTROLLERS CAN BE ORGANIZED INTO A HIERARCHY STRUCTURE THAT ALLOWS FOR MULTIPLE IP ADDRESSES. THE ONLY DEVICES ALLOWED AT THE IP LEVEL SHALL BE THOSE THAT MEET OR EXCEED THE MINIMUM BIBB REQUIREMENTS OF THE LATEST BTL LISTED B-BC CLASS PICS.
1. ALL OTHER DEVICES MUST RESIDE AT A LOWER TIER.
2. ANY DEVICE THAT IS DEPENDENT ON ANOTHER DEVICE FOR EMERGENCY OPERATION, LIFE SAFETY, ETC. MUST HAVE A MEANS OF A DIRECT I/O FOR THE NEEDED POINTS.
   A) RELIANCE ON THE CNL NETWORK BACKBONE IS NOT ACCEPTABLE FOR THESE CONTROL STRATEGIES.
4. ALL INSTALLATIONS SHALL UTILIZE ONE CONTROLLER FOR EACH PIECE OF EQUIPMENT OR SYSTEM. TWO AHU'S CANNOT SHARE A COMMON CONTROLLER.

B. THE FOLLOWING FRAMEWORK SHALL BE UTILIZED FOR DEVICE ADDRESSING (DEVICE INSTANCE) AND NETWORK NUMBER:
1. NETWORK NUMBER SHALL BE COMPRISED OF 3 DIGIT BUILDING NUMBER (551) FOLLOWED BY 2 DIGIT NETWORK NUMBER. IP LEVEL DEVICES SHALL BE ASSIGNED A NETWORK NUMBER OF 1.
2. THE DEVICE ID SHALL BE COMPRISED OF 2 DIGIT NETWORK NUMBER (IP DEVICES USE 00) FOLLOWED BY 2 DIGIT DEVICE NUMBER.
   A) EXAMPLE:
      1) DEVICES ON THE IP LEVEL: 0001-009
      2) MSTP ASSIGNABLE NETWORK NUMBERS: 01-99
      3) MSTP ASSIGNABLE DEVICES: 0101-0199 FOR NETWORK 01
   A) 0201-0299 FOR NETWORK 02
   B) 0301-0399 FOR NETWORK 03CONTINUING TO
   C) 9901-9999 FOR NETWORK 99
      4) MS/TP PHYSICAL ADDRESS SHALL BE SET TO MATCH THE LAST 2-DIGITS OF THE DEVICE ID.

SEE SPECIFICATION SECTION 23 09 00 FOR ADDITIONAL CONTROLS REQUIREMENTS.





TYPICAL AIR HANDLING UNIT CONTROLLER
WIRING AND POINTS SHALL BE BASED ON CONTROL DRAWINGS PROVIDED. DETAIL IS TO SHOW A GENERAL DIAGRAM. CONTRACTOR SHALL PROVIDE A MINIMUM OF 25% ADDITIONAL INPUTS AND OUTPUTS FOR POTENTIAL FUTURE CONTROLS EXPANSION

GENERAL NOTES:
1. FIRE ALARM SYSTEM IS TO BE STAND ALONE FROM BMS. REFER TO FIRE ALARM DRAWINGS FOR REQUIREMENTS.
2. ROUTERS SHOWN ARE TYPICAL AND DIAGRAMATIC, PROVIDE ADDITIONAL ROUTERS FOR A COMPLETE SYSTEM.
3. TIER 1 CONTROLLERS SHOWN ARE TYPICAL AND DIAGRAMMATIC. PROVIDE ADDITIONAL CONTROLLERS IN ACCORDANCE WITH SPECIFICATIONS FOR A COMPLETE SYSTEM.
4. SYSTEM ARCHITECTURE SHALL OPTIMIZE GRAPHIC REFRESH RATES, TO INSURE SPECIFIED NETWORK SPEED AND REFRESH RATES ARE ACHIEVED.
5. TIER 2 CONTROLLERS SHOWN ARE TYPICAL AND DIAGRAMATIC. PROVIDE ADDITIONAL CONTROLLERS AND REPEATERS FOR A COMPLETE SYSTEM.
6. PROVIDE NORMAL 120 VAC POWER WITHOUT UPS BACKUP UNLESS OTHERWISE NOTED.
7. ROUTERS SHALL BE LABLED, LOCATED BELOW CEILING, AND IN MECHANICAL OR IDF ROOMS ONLY.
8. PROVIDE GATEWAY INTERFACES AS REQUIRED FOR A INTEGRATED SYSTEM.

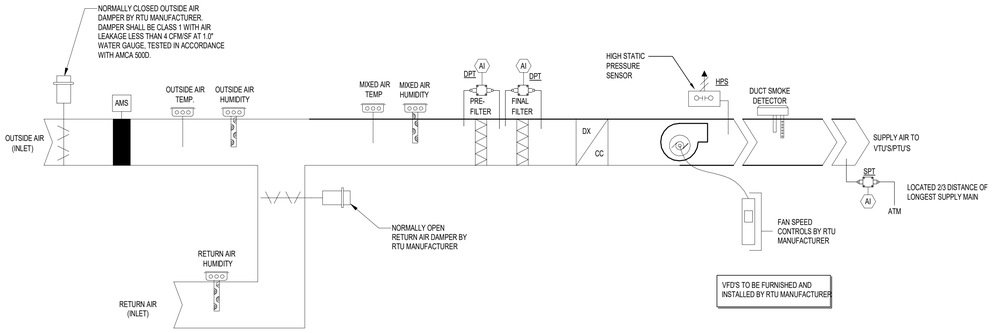
1/21/2020 3:44:59 PM



NOTE:
CONTROLS RACEWAY SHALL BE PROVIDE BY ROOFTOP UNIT MANUFACTURER AT THE FACTORY. CONTROLS CONTRACTOR SHALL PROVIDE WIRING WITHIN RACEWAY ONLY. CONTROLS CONTRACTOR SHALL NOT BE PERMITTED TO PROVIDE PENETRATIONS TO ROOFTOP UNIT CASING. CONTROLS CONTRACTOR SHALL NOT BE PERMITTED TO RUN CONTROL WIRING OUTSIDE OF RACEWAY.

PROVIDE BAS DISPLAY AND ALARMS FOR:

- SUPPLY FAN DISABLED (HIGH STATIC) - ALARM
- SUPPLY AIR TEMP (°F) AND SETPOINT
- COMPRESSOR - STATUS (TYPICAL FOR ALL)
- COMPRESSOR - ALARM (TYPICAL FOR ALL)
- CONDENSER FAN - STATUS (TYPICAL FOR ALL)
- MIXED AIR TEMP (°F)
- MIXED AIR HUMIDITY (RH) - BASED ON ENTHALPY CALCULATION
- RETURN AIR HUMIDITY (RH)
- SPACE AIR CO2 (PPM) - SHOWN FOR EACH SENSOR
- SPACE AIR HUMIDITY (RH) - SHOWN FOR EACH SENSOR
- RETURN AIR TEMPERATURE (°F)
- SUPPLY FAN STATIC PRESSURE (IN. W.G.)
- DIFFERENTIAL PRESSURE ACROSS UNIT PRE FILTER (IN. WG.)
- DIFFERENTIAL PRESSURE ACROSS UNIT FINAL FILTER (IN. WG.)
- HIGH UNIT PRE FILTER DIFFERENTIAL PRESSURE ALARM
- HIGH UNIT FINAL FILTER DIFFERENTIAL PRESSURE ALARM
- HIGH OUTSIDE AIR FILTER DIFFERENTIAL PRESSURE ALARM
- RETURN AIRFLOW BY DIFFERENCE BETWEEN SA AND OA (CFM)
- SUPPLY AIRFLOW BY TOTALIZATION OF SA FROM VTUS (CFM)
- VFD STATUS AHU FAN (ON-OFF)
- VFD SPEED COMMAND AHU FAN (HZ/RPM)
- VFD SPEED FEEDBACK AHU FAN (HZ/RPM)
- VFD STATUS EXHUAST FAN (ON-OFF)
- VFD SPEED COMMAND EXHAUST FAN (HZ/RPM)
- VFD SPEED FEEDBACK EXHAUST FAN (HZ/RPM)
- DISPLAY OF ALL ADJUSTABLE POINTS
- DISPLAY OF ALL CONTROL SETPOINTS
- OUTSIDE AIR INLET FLOW (CFM)
- OUTSIDE AIR INLET HUMIDITY (RH)
- OUTSIDE AIR INLET TEMP (°F)
- OUTSIDE AIR AIRFLOW 10% BELOW SETPOINT (OCCUPIED PERIODS ONLY) - ALARM
- OUTSIDE AIR DAMPER POSITION - % OPEN
- RETURN AIR DAMPER POSITION - % OPEN

DX VAV RTU CONTROL SEQUENCE

GENERAL: THE SYSTEM CONSISTS OF A VARIABLE AIR VOLUME PACKAGED-DX UNIT (RTU), FULLY MODULATING OA DAMPER AND RA DAMPER, AIR FLOW MEASUREMENT STATIONS, POWERED EXHAUST, DUCT SMOKE DETECTOR(S), AND COMPRESSORS. RTU SHALL BE PROVIDED WITH A BAS INTEGRATION CARD FOR FULL BAS INTERFACE VIA BACNET. THE UNIT GRAPHIC SHALL INDICATE ALL POINTS AS INDICATED ON THE CONTROL DIAGRAM AS A MINIMUM. GRAPHICS SHALL ALSO INCLUDE ALL AVAILABLE INPUTS/OUTPUTS AND ALARMS AVAILABLE FROM THE AIR HANDLING UNIT BACNET CARD. THE DX SYSTEM FACTORY CONTROLS SHALL CONTROL COMPRESSOR OPERATION AND STAGING. SUPPLY FAN SPEED TO MAINTAIN DUCT STATIC PRESSURE DIFFERENTIAL. THE RTU SHALL BE CONTROLLED ON A SEVEN-DAY TIME SCHEDULE AUTOMATICALLY THROUGH THE FRONT END BAS. THE UNIT SHALL COOL, DEHUMIDIFY, STAGE COMPRESSORS, MODULATE THE SUPPLY AIR FAN AND OUTSIDE AIR DAMPER, ETC. UTILIZING FACTORY CONTROLS.

MODES OF OPERATION:

OCCUPIED MODE: THE BAS SHALL COMMAND THE UNIT TO OCCUPIED MODE BASED ON SCHEDULE. UPON COMMAND TO OCCUPIED MODE, ACTIVATE RTU AND ENABLE THE FOLLOWING:

- UPON ACTIVATION OF RTU, ACTIVATE ALL INTERLOCKED EXHAUST FANS.

-MAINTAIN SUPPLY AIR DUCT STATIC PRESSURE SETPOINT (AS DETERMINED BY TEST & BALANCE FOR PROPER BALANCE). DUCT STATIC PRESSURE SETPOINT SHALL RESET BASED ON THE STATIC PRESSURE RESET SEQUENCE BELOW.

-MAINTAIN 54 DEG F (ADJ.) DISCHARGE AIR TEMPERATURE SETPOINT UPON INITIAL UNIT ACTIVATION. DISCHARGE AIR TEMPERATURE SETPOINT SHALL RESET BASED ON THE DISCHARGE AIR TEMPERATURE RESET SEQUENCE BELOW.

-MODULATE OA DAMPER TO MAINTAIN OUTSIDE AIR SETPOINT AS DETERMINED BY THE DEMAND CONTROL VENTILATION (DCV) SEQUENCE. IF OUTSIDE AIR DAMPER IS 100% OPEN AND OA FLOW IS LESS THAN SETPOINT, SLOWLY MODULATE RETURN AIR DAMPER FROM THE OPEN POSITION TOWARD THE CLOSED POSITION TO MAINTAIN OUTSIDE AIR SETPOINT (PROVIDE RETURN AIR DAMPER MINIMUM POSITION LIMIT OF 30% (ADJ.) TO ENSURE RETURN AIR DAMPER DOES NOT CLOSE).

- IF ANY ZONE RH% EXCEEDS 60% (ADJ.), ENABLE DEHUMIDIFICATION MODE.

UNOCCUPIED MODE: THE BAS SHALL COMMAND THE UNIT TO UNCCUPIED MODE BASED ON SCHEDULE. UPON COMMAND TO UNOCCUPIED MODE, ENABLE THE FOLLOWING:

- DISABLE ALL INTERLOCKED EXHAUST FANS.

- OUTSIDE AIR DAMPERS SHALL BE COMMANDED 100% CLOSED, RETURN AIR DAMPERS SHALL BE COMMANDED 100% OPEN.

IF A SINGLE ZONE CALLS FOR UNOCCUPIED COOLING, ASSOCIATED RTU SHALL BE ENABLED. IN UNOCCUPIED COOLING MAINTAIN THE FOLLOWING:

-MAINTAIN SUPPLY AIR DUCT STATIC PRESSURE SETPOINT (AS DETERMINED BY TEST & BALANCE FOR PROPER BALANCE).

-MAINTAIN 54 DEG F (ADJ.) DISCHARGE AIR TEMPERATURE SETPOINT.

- IF ANY ZONE RH% EXCEEDS 60% (ADJ.), ENABLE DEHUMIDIFICATION MODE.

DEHUMIDIFICATION MODE:
DISABLE DISCHARGE AIR TEMPERATURE RESET SEQUENCE AND RESET DISCHARGE AIR TEMPERATURE SETPOINT TO 54 DEG F (ADJ.). ONCE ALL SPACE HUMIDITY SENSORS ARE AT LEAST 5% RH BELOW HIGH LIMIT HUMIDITY SETPOINT OF 60% (ADJ.), THEN DISABLE DEHUMIDIFICATION MODE AND ALLOW SUPPLY AIR TEMPERATURE RESET SEQUENCE TO OPERATE STARTING AT 59 °F (ADJ.).

RESET REQUENCES:

DISCHARGE AIR TEMPERATURE RESET SEQUENCE:
PROVIDE A DISCHARGE AIR TEMPERATURE RESET MODE THAT WILL GRADUALLY INCREASE THE DISCHARGE AIR TEMPERATURE (59°F MAXIMUM, AS MEASURED VIA THE FACTORY PROVIDED DISCHARGE AIR TEMPERATURE SENSOR) WHENEVER ALL OF THE FOLLOWING ARE TRUE: A VAV TERMINAL UNIT IS CALLING FOR HEAT; NO OTHER VAV TERMINAL UNIT IS REQUIRING 90% OR GREATER COOLING AIRFLOW; AND THE SPACE AIR RELATIVE HUMIDITY (AS SENSED BY THE SPACE HUMIDITY SENSOR) IS 55% RH OR LESS. IF THE HUMIDITY RISES TO 60% OR GREATER, ENABLE DEHUMIDIFICATION MODE.

STATIC PRESSURE RESET SEQUENCE:
BAS SHALL POLL THE DAMPER POSITION OF ALL VAV TERMINAL UNITS. IF ALL DAMPERS ARE BELOW 70% (ADJ) AS INDICATED BY COMMAND SIGNAL, THE BAS SHALL RESET THE STATIC PRESSURE SET-POINT DOWN AT A RATE OF -0.1 IN W.G. IF ANY VAV BOX DAMPER COMMAND SIGNAL IS ABOVE 98%, THE BAS SHALL RESET STATIC PRESSURE SET-POINT UP AT A RATE OF +0.1 IN W.G. THE BAS SHALL POLL ALL AIR TERMINALS CONTINUOUSLY AND LIMIT RESET FREQUENCY TO EVERY 5 MINUTES.

SAFETIES: ACTIVATION OF THE DUCT SMOKE DETECTOR(S) OR HPS SHALL AUTOMATICALLY SHUT DOWN THE AHU FANS. THESE SAFETIES SHALL BE HARD WIRED INTERLOCKED WITH THE FAN WHEN OPERATING THROUGH THE DDC CONTROLLER OR BYPASS CONTACTOR.

CONTROL DIAGRAM LEGEND

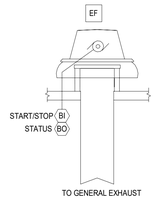
- AIRFLOW DIRECTION (BREAK INDICATES SEPARATION FROM AHU.)
- VARIABLE FREQUENCY DRIVE

CONTROL DIAGRAM FOR PACKAGED ROOFTOP VAV UNIT (RTU-1, RTU-2, RTU-3, RTU-4, RTU-5. RTU-6) | 1



EXHAUST SYSTEM CONTROL SEQUENCE

GENERAL: THE SYSTEM CONSISTS OF A CONSTANT VOLUME EXHAUST FAN.

SEQUENCE: THE BAS SHALL COMMAND THE EXHAUST FAN TO ACTIVATE BASED ON AN INTERLOCK TO THE RESPECTIVE RTU, REFER TO THE EXHAUST FAN INTERLOCK SCHEDULE.

SAFETIES: ACTIVATION OF THE DUCT SMOKE DETECTOR(S) AT THE RESPECTIVE INTERLOCKED RTU SHALL AUTOMATICALLY SHUT DOWN THE EXHAUST FAN. THESE SAFETIES SHALL BE HARD WIRED INTERLOCKED WITH THE FAN WHEN OPERATING THROUGH THE DDC CONTROLLER OR BYPASS CONTACTOR.

PLUMBING FIXTURE SCHEDULE

MARK	FIXTURE TYPE	FIXTURE MANUFACTURER	FIXTURE MODEL	TRIM MANUFACTURER	TRIM MODEL	FLOW RATE / FLUSH RATE / FLOW CYCLE	DESCRIPTION / SPECIFICATIONS
	WATER CLOSET (ACCESSIBLE)	AMERICAN STANDARD	3351.001				
WC-1	WATER CLOSET	AMERICAN STANDARD	3351.101	SLOAN	111-1.6/1.1	1.6/1.1 GPF	WALL MOUNTED FLUSHOMETER VALVE TYPE, 15" HIGH, VITREOUS CHINA, DUAL FLUSH (1.6 / 1.1 GPF), WITH SIPHON JETTED ELONGATED BOWL. REFER TO NOTES BELOW FOR ADDITIONAL REQUIREMENTS.
UR-2	URINAL (ACCESSIBLE)	AMERICAN STANDARD	6501.010	SLOAN	ECOS 8186	1.0 GPF	WALL HUNG VITREOUS CHINA, 1.0 GPF, SIPHON JET URINAL WITH INTEGRAL FLUSHING RIM, INTEGRAL TRAP, AND 2" FEMALE FLANGED OUTLET CONNECTION. REFER TO NOTES BELOW FOR ADDITIONAL REQUIREMENTS.
L-2	LAVATORY (ACCESSIBLE)	AMERICAN STANDARD	0356.015	DELTA COMMERCIAL	590T0151TR-BB	1.5 GPM	WALL HUNG VITREOUS CHINA FOR CONCEALED ARMS SUPPORT, 20" X 18", PROVIDE WITH GOOSENECK SPOUT FAUCET MOUNTED ON 8" CENTERS, WITH WRIST BLADE HANDLES AND LAMINAR FLOW AERATOR. REFER TO NOTES BELOW FOR ADDITIONAL REQUIREMENTS.
L-1	SELF-RIMMING LAVATORY	AMERICAN STANDARD	0476.028	DELTA COMMERCIAL	590T0151TR-BB	0.5 GPM	VITREOUS CHINA, 20" X 17" OVAL, PUNCHED FOR 4" CENTERSET FITTING. PROVIDE WITH SINGLE LEVER CAST BRASS FAUCET WITH VANDAL RESISTANT OUTLET. REFER TO NOTES BELOW FOR ADDITIONAL REQUIREMENTS.
MS-1	MOP SINK	STERN-WILLIAMS	SB-900-BP	T & S BRASS	B-0665-BSTP	2.5 GPM	FLOOR MOUNTED PRECAST TERRAZO WITH STAINLESS STEEL CAP, 24"x24"x12", DRAIN BODY SHALL BE STAINLESS STEEL CAST INTEGRAL, AND SHALL PROVIDE FOR A CAULKED LEAD CONNECTION AND NOT LESS THAN 1" DEEP TO A 3" PIPE. REFER TO NOTES BELOW FOR ADDITIONAL REQUIREMENTS.
EWC-1	ELECTRIC WATER COOLER	ELKAY	LRPBM28K	N/A	N/A	7.5 GPH	TYPE 304 18-8 STAINLESS STEEL TWO-LEVEL WHEELCHAIR ACCESSIBLE WATER COOLER WITH RECESSED REFRIGERATION SYSTEM, WATER SENTRY FILTER SYSTEM AND STAINLESS STEEL WALL GRILL. CONTOURED BASIN RECESSED INTO STAINLESS STEEL TUBULAR SUPPORT ARM. RATED AT 7.5 GPH, 5 FULL LOAD AMPS, 575 WATTS, 115 VOLTS, AND WEIGHTS 140 LBS.
FD-1	FLOOR DRAIN	WATTS	FD-1200-A	N/A	N/A	N/A	EPOXY COATED CAST IRON BODY WITH ANCHOR FLANGE, WEEPHOLES, ADJUSTABLE ROUND STAINLESS STEEL STRAINER, NO-HUB OUTLET, AND TRAP PRIMER CONNECTION.
RD-1	COMBINED LARGE SUMP ROOF DRAIN AND SECONDARY OVERFLOW DRAIN	WATTS	RD-700	N/A	N/A	N/A	EPOXY COATED CAST IRON DUAL OUTLET ROOF DRAIN/OVERFLOW COMBINATION WITH FLASHING CLAMP, INTEGRAL GRAVEL STOP, 4" HIGH INTERNAL OVERFLOW STANDPIPE SECURED DUCTILE IRON DOME, AND NO HUB OUTLETS. SEE PLANS FOR OUTLET SIZES REQUIRED.
TD-1	TRENCH DRAIN (SLAB-ON-GRADE)	ZURN	Z882- HDS	N/A	N/A	N/A	OPTIONS U4 NO HUB BOTTOM OUTLET, HPDE HEEL PROOF DUCTILE SLOTTED GRATE-CLASS E, ADA-USA, VP VALDAL PROOF LOCKDOWN.
WH-1	WALL HYDRANT IN LOCKED BOX	WOODFORD	B65	N/A	N/A	N/A	FREEZE PROOF ENCLOSED WALL ANTI-SIPHON WALL HYDRANT COMPLETE WITH BRONZE CASING, VACUUM BREAKER, ALL BRONZE INTERIOR PARTS AND NON TURNING OPERATING ROD WITH FREE FLOATING COMPRESSION CLOSURE VALVE. WATER BOX DOOR SHALL BE BRASS CASTING WITH CHROME FINISH AND OPERATING KEY.
WH-2	WALL HYDRANT	WOODFORD	24P-3/4	N/A	N/A	N/A	ANTI-SIPHON VACCUMM BREAKER PROTECTED WALL HYDRANT WITH LOOSE KEY HANDLE.

NOTES:

1. WATER CLOSET HARDWARE:

   TOILET SEAT - BEMIS No. 1655SS, EXTRA HEAVY SOLID PLASTIC WITH STAINLESS STEEL SELF SUSTAINING CHECK HINGE. OPEN FRONT WITHOUT COVER.
   FIXTURE CARRIER - WATTS ISCA-102-I,/R, EXTRA-HEAVY DUTY (1,000 lbs) BARIATRIC CARRIER COMPLIANT WITH ASME A112.6.1M, SINGLE VERTICAL THIN WALL WATER CLOSET CARRIER WITH EPOXY COATED CAST IRON FITTING, NO HUB WASTE (3"), AND VENT (2") CONNECTIONS, EPOXY COATED CAST IRON PATENTED COMPRESSION SEAL FACE PLATE ASSEMBLY, EPOXY COATED CAST IRON FOOT SUPPORTS ADJUSTABLE FOR STANDARD AND WHEELCHAIR HEIGHT, ADJUSTABLE ABS NIPPLE WITH INTEGRAL TEST CAP AND NEOPRANE BOWL GASKET, PLATED HARDWARE AND CHROME CAP NUTS.

2. URINAL HARDWARE:

   FIXTURE CARRIER - WATTS No. CA-321, FULLY ADJUSTABLE URINAL CARRIER WITH HEAVY GAUGE STEEL OFFSET UPRIGHTS, ADJUSTED TO ACCESSIBLE HEIGHT.

3. LAVATORY HARDWARE:

   STRAINER/TRAP - McGUIRE No. 155A/8902, CHROME PLATED STRAINER, CAST GRID STRAINER WITH 1-1/4" TAILPIECE, PLATED 17 GAUGE 1-1/4" X 1-1/2" BRASS P-TRAP WITH CLEANOUT. (ADA DEPTH SINKS SHALL HAVE OFFSET TAILPIECES McGUIRE No. 155WC/8902).
   SUPPLIES - McGUIRE No. 2165CC, 1/2" COMPRESSION X 3/8" COMPRESSION CHROME PLATED ANGLE SUPPLY STOPS WITH CHROME PLATED 12" FLEXIBLE RISERS AND ESCUTCHEONS.
   INSULATION KIT - EXPOSED SUPPLIES AND TRAPS ARE TO BE PROTECTED WITH INSULATION KITS EQUAL TO PLUMBEREX No. 4333.
   FIXTURE CARRIER - WATTS No. WCA-411, CONCEALED ARMS FLOOR MOUNTED CARRIER COATED STEEL UPRIGHTS WITH WELDED FEET, CAST IRON ADJUSTABLE HEADERS, STEEL SLEEVES, ALIGNMENT TRUSS AND FASTENERS.

4. SINK HARDWARE:

   TRAP - McGUIRE No. 8912, CHROME PLATED 17 GAUGE 1-1/2" X 1-1/2" BRASS P-TRAP WITH CLEANOUT. (ADA DEPTH SINKS SHALL HAVE OFFSET TAILPIECES McGUIRE No. 155WC/8902).
   SUPPLIES - McGUIRE No. 2165CC, 1/2" COMPRESSION X 3/8" COMPRESSION CHROME PLATED ANGLE SUPPLY STOPS WITH CHROME PLATED 12" FLEXIBLE RISERS AND ESCUTCHEONS.

5. MOP SINK HARDWARE:

   HOSE AND WALL HOOK - STERN WILLIAMS No. T-35, 36" LONG HOSE AND STAINLESS STEEL WALL BRACKET.

6. SHOWER HARDWARE:

   DRAIN - WATTS No. FD-1100-L, EPOXY COATED CAST IRON SHOWER DRAIN WITH ANCHOR FLANGE, REVERSIBLE CLAMPING COLLAR WITH PRIMARY AND SECONDARY WEEPHOLES, ADJUSTABLE HEAVY DUTY SQUARE HEEL PROOF STAINLESS STEEL STRAINER.

7. ELECTRIC WATER COOLER / DRINKING FOUNTAIN HARDWARE:

   FIXTURE CARRIER - WATTS No. CA-431-1, FLOOR MOUNTED BI-LEVEL WATER COOLER CARRIER WITH HEAVY GAUGE STEEL UPRIGHTS WITH INTEGRAL WELDED FEET, UNIVERSAL STEEL HANGER SUPPORT PLATE, AND PLATED HARDWARE.

PLUMBING SYMBOLS

SYMBOL	DESCRIPTION
CD	CONDENSATE DRAIN PIPING
CW	DOMESTIC COLD WATER PIPING
HW	DOMESTIC HOT WATER PIPING
HWR	DOMESTIC HOT WATER RETURN PIPING
S	SANITARY WASTE PIPING
V	VENT PIPING
ST	STORM DRAIN PIPING
STO	OVERFLOW STORM DRAIN PIPING
G	FUEL GAS PIPING
	HOSE BIBB OR WALL HYDRANT
CO	CLEANOUT PLUG
CO	WALL CLEANOUT
CO	FLOOR CLEANOUT / EXTERIOR CLEANOUT
FD	FLOOR DRAIN
FS	FLOOR SINK
DD	DECK DRAIN
	SHUT-OFF VALVE
	BALL VALVE
	CALIBRATED BALANCING VALVE
	CHECK VALVE (SWING)
	PRESSURE REDUCING VALVE
S	SOLENOID OPERATING VALVE
	GAS COCK
	GAS PRESSURE REGULATOR
4 / P4.101 (DETAIL No. / SHEET No. SHOWN ON)	DETAIL REFERENCE
4" S (PIPE SIZE / PLUMBING SYSTEM)	PIPE TAG
1	REVISION REFERENCE

PLUMBING ABBREVIATIONS

ABBREVIATION	DESCRIPTION
CA	COMPRESSED AIR
AFF	ABOVE FINISH FLOOR
AW	ACID WASTE
AV	ACID VENT
CB	CATCH BASIN
CD	CONDENSATE DRAIN
CFH	CUBIC FEET PER HOUR
CO	CLEANOUT
CONT	CONTINUATION
CW	DOMESTIC COLD WATER
DI	DEIONIZED WATER
DN	DOWN
DS	DOWNSPOUT
DWG	DRAWING
EXIST	EXISTING
°F	DEGREE FAHRENHEIT
FCO	FLOOR CLEANOUT
FD	FLOOR DRAIN
FOF	FUEL OIL FILL
FOG	FUEL OIL GAGE
FOR	FUEL OIL RETURN
FOS	FUEL OIL SUPPLY
FOV	FUEL OIL VENT
FS	FLOOR SINK
FSE#	FOODSERVICE EQUIPMENT NUMBER
G	GAS
GPH	GALLONS PER HOUR
GPM	GALLONS PER MINUTE
GR	KITCHEN WASTE (GREASE)
HB	HOSE BIBB
HD	HUB DRAIN
HW	DOMESTIC HOT WATER
HWR	DOMESTIC HOT WATER RECIRCULATING
IE	INVERT ELEVATION
IW	INDIRECT WASTE
KW	KILOWATT
LBS	POUNDS
MH	MANHOLE
NC	NORMALLY CLOSED
NIC	NOT IN CONTRACT
NO	NORMALLY OPEN
NP	NON-POTABLE WATER
NTS	NOT TO SCALE
OD	OUTSIDE DIAMETER
PRV	PRESSURE REDUCING VALVE
PSI	POUNDS PER SQUARE INCH
PVC	POLYVINYL CHLORIDE PIPE
RD	ROOF DRAIN
RPBP	REDUCED PRESSURE BACKFLOW PREVENTOR
SAN	SANITARY
SD	STORM DRAIN
SF	SQUARE FEET
SHT	SHEET
ST	STORM
STO	OVERFLOW STORM DRAIN
SW	SOFT COLD WATER
V	VENT
VAC	VACUUM
VC	VACUUM CLEANING
VTR	VENT THRU ROOF
WCO	WALL CLEANOUT
WTR	WATER

NOTE: SOME SYMBOLS SHOWN ON THIS LEGEND MAY NOT PERTAIN TO THIS PROJECT

PLUMBING GENERAL NOTES

1. REFERENCE THE SPECIFICATIONS FOR MATERIAL AND EQUIPMENT INSTALLATION STANDARDS.
2. THE PLUMBING INSTALLATION SHALL COMPLY WITH ALL STATE AND LOCAL CODES.
3. UTILITIES AND SERVICES INDICATED ARE TAKEN FROM VARIOUS OLD AND NEW SURVEYS, AS-BUILT RECORDS AND FIELD INVESTIGATIONS. UNFORSEEN CONDITIONS PROBABLY EXIST AND NEW WORK MAY NOT BE FIELD LOCATED EXACTLY AS SHOWN ON DRAWINGS. COOPERATION WITH OTHER TRADES IN ROUTING AND BURIAL DEPTHS, AS DETERMINED DURING CONSTRUCTION, WILL BE NECESSARY.
4. FIELD VERIFY EXISTING INSTALLATIONS. MODIFY EXISTING PLUMBING SYSTEMS, WHICH ARE TO REMAIN ACTIVE, TO FACILITATE RECONNECTION AND EXTENSION OF THE NEW WORK.
5. NOTIFY OWNER AT LEAST 24 HOURS PRIOR TO INTERRUPTING EXISTING SERVICE. SCHEDULE DISCONNECTION AND TIE-INS TO MINIMIZE DISRUPTION OF SERVICES. SERVICES ARE NOT TO BE LEFT DISRUPTED DURING NON-NORMAL CONTRACTOR WORKING HOURS.
6. PLANS ARE NOT COMPLETELY TO SCALE. PIPE ROUTING SHOWN IS SCHEMATIC AND IS NOT INTENDED TO INDICATE EXACT ROUTING. CONTRACTOR SHALL PROVIDE ANY ADDITIONAL OFFSETS AND FITTINGS REQUIRED FOR PROPER INSTALLATION AND TO MAINTAIN CLEARANCES. VERIFY STRUCTURAL, MECHANICAL AND ELECTRICAL INSTALLATIONS AND OTHER POTENTIAL OBSTRUCTIONS AND ROUTE PIPING TO AVOID INTERFERENCES.
7. PROVIDE ALL OFFSETS AND FITTINGS AND MAKE CONNECTION TO SITE UTILITIES.
8. CONCEAL PIPING ABOVE CEILINGS, WITHIN WALLS OR CHASES EXCEPT IN MECHANICAL ROOMS OR AS SPECIFICALLY NOTED.
9. PROVIDE ACCESS PANELS FOR ALL VALVES CONCEALED IN WALLS OR ABOVE NON-ACCESSIBLE CEILINGS.
10. SLEEVE AND/OR FIRESTOP ALL PENETRATIONS THROUGH RATED WALLS, CEILINGS, AND FLOORS WITH UL LISTED ASSEMBLIES. FIRESTOP ASSEMBLIES SHALL BE EQUAL TO OR EXCEED THE RATING OF THE WALL, CEILING OR FLOOR. SEE ARCHITECTURAL DRAWINGS FOR FINAL FINISHES.
11. FLASH AND COUNTER-FLASH ROOF PENETRATIONS.
12. WHEN BEAM SLEEVE PENETRATIONS ARE NECESSARY, COORDINATE PENETRATIONS WITH ALL TRADES, THE ARCHITECT AND THE STRUCTURAL ENGINEER.
13. PROVIDE FOUNDATION PAD PENETRATION SLEEVES. ALLOW 1" MINIMUM CLEARANCE BETWEEN SLEEVE INSIDE SURFACE AND PIPE EXTERIOR.
14. SEE ARCHITECTURAL DRAWINGS FOR FIXTURE LOCATIONS AND MOUNTING HEIGHTS.
15. PROVIDE AUTOMATIC TRAP PRIMERS FOR FLOOR DRAIN TRAP SEALS.
16. PROVIDE AN AIR GAP, WHEN REQUIRED BY CODE, SERVING INDIVIDUAL FIXTURES, DEVICES, APPLIANCES AND APPARATUS.
17. ALL EXPOSED PIPE AND FITTINGS IN FINISHED AREAS SHALL BE CHROME PLATED.
18. MOUNT HOSE BIBBS 24" ABOVE FINISHED GRADE.
19. PROVIDE CLEANOUTS IN ACCORDANCE WITH ALL STATE AND LOCAL CODES. INSTALL CLEANOUT WITH COVER FLUSH TO FINISH SURFACE.
20. COORDINATE EXACT FLOOR DRAIN LOCATIONS WITH ARCHITECTURAL DRAWINGS. SET FLOOR DRAINS BELOW FINISHED FLOOR TO ALLOW FOR FLOOR SLOPING TO THE DRAIN.
21. COORDINATE PIPING WITH ALL ELECTRICAL EQUIPMENT (PANELS, TRANSFORMERS, ETC.) PRIOR TO ANY INSTALLATION. DO NOT ROUTE ANY PIPING OVER ANY ELECTRICAL PANELS UNDER ANY CIRCUMSTANCES. ANY PIPING RUN OVER PANELS SHALL BE RE-ROUTED AT NO ADDITIONAL COST.
22. ALL WALL MOUNTED LAVATORIES SHALL BE ATTACHED TO FLOOR MOUNTED CARRIER DESIGNED TO WITHSTAND A VERTICAL LOAD OF 250 POUNDS ON THE FRONT OF THE FIXTURE.
23. PROVIDE SANITARY WASTE, VENT, DOMESTIC WATER, ETC. ROUGH-IN AND MAKE FINAL CONNECTIONS (TO INCLUDE PROVIDING ALL NECESSARY RELATED STOPS, VALVES, TRAPS, ETC. AND MAKE READY FOR USE) TO ALL EQUIPMENT, WHETHER FURNISHED BY THIS CONTRACTOR OR FURNISHED BY OTHERS.
24. ALL MATERIALS AND EQUIPMENT INSTALLED IN RETURN AIR PLENUMS SHALL BE NON-COMBUSTIBLE AND UL APPROVED FOR USE IN A RETURN AIR PLENUM SPACE. IF MATERIALS ARE NOT NON-COMBUSTIBLE IN RETURN AIR PLENUMS, THEY SHALL BE REPLACED OR WRAPPED WITH A UL LISTED FIRE RATED FIRE WRAP (I.E. FYREWRAP 0.5 PLENUM INSULATION OR APPROVED EQUAL) AND INSTALLED IN ACCORDANCE WITH THE MANUFACTURES UL LISTED DETAILS AND RECOMMENDATIONS AT NO ADDITIONAL COST. (NOTE: REFER TO MECHACAL DRAWINGS FOR RETURN AIR PLENUM LOCATIONS.)
25. PIPING, INSULATION, FITTINGS, MATERIALS, COVERS AND FINISHES IN RETURN AIR PLENUM SHALL HAVE A MAXIMUM FLAME SPREAD RATING OF 25 AND A MAXIMUM SMOKE DEVELOPED RATING OF 50.

P714

BIM 360://Design of Satellite Concourse/VPS-MLM_MEP.rvt

1/22/2020 3:44:50 PM

SCOPE OF WORK:

1. THE SCOPE OF WORK SHALL INCLUDE THE LAYOUT,PROCUREMENT, INSTALLATION AND TESTING OF THE FOLLOWING FOR THE NEW BUILDING:
   A. AUTOMATIC WET-PIPE SPRINKLER SYSTEMS
   B. AUTOMATICALLY ACTIVATED FIXED WATER SPRAY SYSTEMS FOR EXTERIOR GLAZING PER NFPA 15.
2. SCOPE OF WORK BEGINS AT 5 FT. OUTSIDE THE FIRE RISER ROOM OF THE NEW BUILDING.

CLARIFICATIONS:

1. JENSEN HUGHES IS NOT RESPONSIBLE FOR THE WATER SUPPLY OR THE EFFECT EITHER MAY HAVE ON THE FIRE PROTECTION SPRINKLER SYSTEMS.
2. THESE DRAWINGS HAVE BEEN PROVIDED AS A BASIS OF DESIGN. IT IS THE RESPONSIBILITY OF THE FIRE SPRINKLER CONTRACTOR TO PREPARE FULLY COORDINATED SHOP DRAWINGS IN ACCORDANCE WITH NFPA 13 "WORKING DRAWINGS".
3. FIRE SPRINKLER CONTRACTOR SHALL PROVIDE LAYOUT OF THE SPRINKLER SYSTEM TO GIVE FULL CONSIDERATION TO BLIND SPACES, PIPING, ELECTRICAL EQUIPMENT, DUCTS, AND OTHER CONSTRUCTION AND EQUIPMENT. LOCATE SPRINKLERS IN A CONSISTENT PATTERN WITH THE CEILING AND CEILING GRID (WHERE PROVIDED), LIGHTS, AND AIR SUPPLY DIFFUSERS. SPRINKLERS SHALL BE LOCATED IN THE CENTER OF CEILING TILE WHERE TILE IS PROVIDED. DEVICES AND EQUIPMENT FOR FIRE PROTECTION SERVICE SHALL BE FM APPROVED FOR USE IN WET PIPE SPRINKLER SYSTEMS. ALL PARAMETERS GIVEN IN THESE DOCUMENTS SHALL BE STRICTLY CONFORMED TO. ANY ITEMS AND LABOR REQUIRED FOR A COMPLETE FIRE PROTECTION SYSTEM, IN ACCORDANCE WITH ALL APPLICABLE CODES, STANDARDS, LOCAL AUTHORITIES AND THESE CONTRACT DOCUMENTS SHALL BE FURNISHED WITHOUT INCURRING ANY ADDITIONAL COST TO THE OWNER. THE SPRINKLER CONTRACTOR SHALL CAREFULLY REVIEW ALL CONTRACT DOCUMENTS AND THE DESIGN OF OTHER TRADES AND SHOW SCENE PROPS BEFORE PREPARING SHOP DRAWINGS.
4. AFTER COMPLETION, BUT BEFORE FINAL ACCEPTANCE, FIRE SPRINKLER CONTRACTOR SHALL SUBMIT COMPLETE SET OF AS-BUILT DRAWINGS OF EACH SYSTEM FOR RECORD PURPOSES.
5. DESIGN OF THE DETECTION SYSTEM TO ACTIVATE THE DELUGE SYSTEMS IS BY OTHERS.

DESIGN CRITERIA:

1. DESIGN AND INSTALLATION ARE IN ACCORDANCE WITH 2013 NFPA 13, "STANDARD FOR THE INSTALLATION OF SPRINKLER SYSTEMS", 2013 NFPA 14, "STANDARD FOR THE INSTALLATION OF STANDPIPE AND HOSE SYSTEMS", 2013 NFPA 415 "STANDARD ON AIRPORT TERMINAL BUILDINGS, FUELING RAMP DRAINAGE, AND LOADING WALKWAYS", 2012 NFPA 15, "STANDARD FOR WATER SPRAY FIXED SYSTEMS FOR FIRE PROTECTION", FLORIDA BUILDING CODE 6TH EDITION, FLORIDA FIRE PREVENTION CODE 6TH EDITION, LOCAL ORDINANCES, AND AUTHORITIES HAVING JURISDICTION.
2. ALL CONTROL VALVES AND FLOW SWITCHES ON THE FIRE PROTECTION SYSTEM SHALL BE ELECTRICALLY SUPERVISED BY AN APPROVED CENTRAL STATION.
3. LIGHT HAZARD AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .10 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. INCLUDING 100 GPM FOR HOSE. LIGHT HAZARD AREAS SHALL INCLUDE OFFICE, RESTROOM, AND OTHER SIMILAR AREAS.
4. ORDINARY HAZARD GROUP I AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .15 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. AND INCLUDE 250 GPM FOR HOSE. ORDINARY HAZARD GROUP I AREAS SHALL INCLUDE MECHANICAL, ELECTRICAL, COMM., IDF, STORAGE, MAINT., FIRE RISER, HOLD ROOMS, QUEUE, SSCP AND OTHER SIMILAR AREAS. PASSENGER HANDLING AREAS SHALL BE CLASSIFIED AS ORDINARY HAZARD GROUP I PER NFPA 415.
5. ORDINARY HAZARD GROUP II AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .20 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. AND INCLUDE 250 GPM FOR HOSE. ORDINARY GROUP II HAZARD AREAS SHALL INCLUDE: CONCESSIONS AND OTHER SIMILAR AREAS.
6. HYDRAULIC CALCULATIONS SHALL INCLUDE A MINIMUM OF 5-PSI OR 10% SAFETY MARGIN,WHICHEVER IS GREATER AT THE FIRE HYDRANT FLOW TEST.
7. THE REDUCTION OF THE HYDRAULIC REMOTE AREA FOR QUICK RESPONSE SPRINKLERS IS NOT PERMISSIBLE.
8. PROVIDE FIXED WATER SPRAY SYSTEMS FOR ALL OF THE EXTERIOR GLAZING. SYSTEM TO PROVIDE A DENSITY OF .25 GPM/SQ.FT. OVER THE EXTERIOR SURFACE AREA OF THE WINDOW. MINIMUM PRESSURE PER SPRINKLER IS 20 PSI. ALL WINDOW SPRINKLERS TO BE CALCULATED.

CONTRACTOR:

1. THESE DOCUMENTS SHALL SERVE AS A BASIS FOR LAYOUT.
2. SEE CLARIFICATION NOTES ABOVE.
3. SPRINKLER CONTRACTOR SHALL VISIT JOB SITE WITH THESE DESIGN DOCUMENTS, AND THE PROJECT CONSTRUCTION DOCUMENTS, PRIOR TO BID AND BECOME FAMILIAR WITH FIELD CONDITIONS, AND TO IDENTIFY ANY COORDINATION CONFLICTS. NOTIFY ENGINEER OF RECORD WITH ANY CONFLICTS OR DISCREPANCIES OUTSIDE THIS DESIGN INTENT, PRIOR TO BID. ANY CHANGE ORDER REQUEST, AS A RESULT OF FIELD CONDITIONS, OR AS A RESULT OF LACK OF COORDINATION BETWEEN TRADES, WILL BE DENIED.
4. SPRINKLER CONTRACTOR SHALL OBTAIN ALL PERMITS REQUIRED FOR THE INSTALLATION AND TESTING OF FIRE SPRINKLER SYSTEM(S) INCLUDED IN THIS WORK-SCOPE, AND ADHERE TO ALL PERMIT, LICENSE AND GOVERNMENTAL REQUIREMENTS.
5. CONTRACTOR SHALL CONDUCT A WATER SUPPLY TEST PRIOR TO PREPARATION OF SHOP DRAWINGS, AND IMMEDIATELY NOTIFY ENGINEER OF RECORD, IN WRITING, OF THE TEST RESULTS.
6. CONTRACTOR SHALL SUBMIT A COMPLETE INSTALLATION PACKAGE TO THE ENGINEER FOR REVIEW AND APPROVAL, PRIOR TO MATERIAL REQUISITIONING AND FABRICATION. INCOMPLETE PACKAGES WILL NOT BE REVIEWED AND RETURNED AS REJECTED. THE INSTALLATION PACKAGE SHALL INCLUDE:
   A. INSTALLATION DRAWINGS WITH INSTALLATION INFORMATION PER 13;22.1.
   B. SITE PLAN WITH CURRENT UTILITY INFORMATION AND PERTINENT INFORMATION IN 13;22.1.
   C. HYDRAULIC CALCULATIONS.
   D. CURRENT WATER SUPPLY RESULTS (LESS THAN 1 YEAR OLD).
   E. MATERIAL SPECIFICATION BROCHURE.

6.1 AS A PART OF THE SHOP DRAWING PROCESS, DRAWINGS SHALL INDICATE ALL CEILING INFORMATION, INCLUDING, BUT NOT LIMITED TO: CEILING HEIGHTS, LIGHTING, MECHANICAL EQUIPMENT, OTHER CEILING MOUNTED EQUIPMENT. IN AREAS WITHOUT A DROP CEILING THE SHOP DRAWINGS SHALL INCLUDE THE STRUCTURE (INCLUDING IDENTIFICATION OF MEMBERS), LIGHTING, MECHANICAL, PLUMBING, ETC. OF ALL EQUIPMENT INSTALLED EXPOSED THAT IS TO BE COORDINATED WITH.

7. MATERIAL SPECIFICATION BROCHURE SHALL INCLUDE ALL SYSTEM COMPONENTS USED IN THE SYSTEM, TO THE WATER SOURCE, INCLUDING THE BACKFLOW PREVENTER FOR FRICTION LOSS VERIFICATION.
8. THE PROCUREMENT AND INSTALLATION OF NEW SYSTEM PIPING AND COMPONENTS IS PROHIBITED PRIOR TO THE SATISFACTORY REVIEW OF THE INSTALLATION PACKAGE BY THE ENGINEER.
9. FIRE SPRINKLER CONTRACTOR SHALL PROVIDE TO OWNER ALL LITERATURE AND INSTRUCTIONS PROVIDED BY THE MANUFACTURER DESCRIBING PROPER OPERATION AND MAINTENANCE OF ANY EQUIPMENT AND DEVICES INSTALLED, AND A COPY OF NFPA 25, "STANDARD FOR THE INSPECTION, TESTING, AND MAINTENANCE OF WATER-BASED FIRE PROTECTION SYSTEMS PER 10-4.
10. FIRE SPRINKLER CONTRACTOR SHALL INSTALL SYSTEM PIPING AND COMPONENTS IN A WORKMANSHIP LIKE MANNER. CHANGES IN INSTALLATION AS A RESULT OF POOR CRAFTSMANSHIP SHALL BE AS DIRECTED BY THE ARCHITECT, ENGINEER OR OWNER, AND SHALL BE AT NO ADDITIONAL COST TO THE OWNER.
11. THE INSTALLING CONTRACTOR SHALL ENSURE THE SPRINKLER SYSTEM IS COORDINATED WITH ALL OTHER TRADES AND BUILDING FEATURES. SPRINKLERS SHALL BE LOCATED IN ACCORDANCE WITH THE APPLICABLE SECTIONS OF NFPA 13 FOR OBSTRUCTIONS. THIS SHALL INCLUDED OBSTRUCTIONS TO SPRINKLER DISCHARGE OBSTRUCTIONS THAT PREVENT SPRINKLER DISCHARGE FROM REACHING THE HAZARD AND OBSTRUCTIONS TO SPRINKLER DISCHARGE PATTERN DEVELOPMENT. CONTRACTOR SHALL LOCATE SPRINKLERS AS REQUIRED TO ADHERE TO THESE REQUIREMENTS AND / OR PROVIDE ADDITIONAL SPRINKLERS AS NECESSARY TO COMPLY WITH THESE CODE SECTIONS.
12. SPRINKLERS SHALL BE INSTALLED UNDER FIXED OBSTRUCTIONS OVER 4 FT. IN WIDTH.

FDC NOTES:

1. FIRE DEPARTMENT CONNECTIONS SHALL BE EQUIPPED WITH CAPS TO PROTECT THE SYSTEM FROM THE ENTRY OF DEBRIS.
2. FIRE DEPARTMENT CONNECTIONS SHALL BE LOCATED NOT LESS THAN 457 MM (18 IN.) NOR MORE THAN 48 IN. ABOVE THE LEVEL OF THE ADJOINING GROUND, SIDEWALK, OR GRADE SURFACE. (NFPA 14, 6.4.6)

GENERAL NOTES:

1. DO NOT SCALE PLANS FOR THE PURPOSE OF ESTABLISHING DIMENSIONS.
2. NOT ALL PIPING, VALVES AND APPURTENANCES ARE SHOWN ON THE PLANS. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE DETAIL, DESIGN AND INSTALLATION DOCUMENTS. REFER TO PLANS, NOTES AND DETAILS, AND SPECIFICATIONS FOR ADDITIONAL INFORMATION.
3. FLOW AND SUPERVISORY SWITCH CONNECTIONS SHALL BE ACCOMPLISHED BETWEEN THE DIFFERENT RESPONSIBLE TRADES. ELECTRICAL WIRING CONNECTIONS TO ELECTRICAL FIRE PROTECTION DEVICES SHALL BE UNDER THE ELECTRICAL/FIRE ALARM DIVISION.
4. FIRE STOP ALL PENETRATIONS OF SMOKE/FIRE PARTITIONS. FIRE STOPPING SHALL BE OF U.L. LISTED ASSEMBLY.
5. SPRINKLER SYSTEM(S) SHALL BE DESIGNED FOR A MAXIMUM WORKING PRESSURE OF 175PSI PER 13;6.1.3.
6. PROVIDE SYSTEM(S) WITH FLUSHING CONNECTIONS PER 13;8.16.3.
7. SPRINKLER SYSTEM(S) SHALL BE HYDROSTATICALLY TESTED FOR TWO HOURS AT 200 PSI OR AT A PRESSURE OF 50 PSI IN EXCESS OF SYSTEM WORKING PRESSURE, WHICHEVER IS GREATER, PER 13;24.2.1.1.
8. ALL SPRINKLER PIPE AND FITTINGS SHALL BE SO INSTALLED THAT THE SYSTEM CAN BE DRAINED PER 13;8.16.2.1. PROVIDE ADDITIONAL DRAINS AS NECESSARY.
9. INSPECTORS TEST CONNECTIONS SHALL BE PROVIDED SO THAT THE WATER FLOW SWITCH CAN BE TESTED. CONNECTIONS SHALL BE LOCATED IN AN ACCESSIBLE LOCATION AND DISCHARGE TO AN APPROVED LOCATION. REFER TO DETAIL.
10. ALL VALVES SHALL HAVE A PERMANENTLY AFFIXED SIGN INDICATING ITS FUNCTION SECURED BY A SUITABLE CHAIN PER 13;6.7.4.
11. PROVIDE A PERMANENTLY ATTACHED HYDRAULIC NAMEPLATE STATING THE REQUIRED DESIGN CRITERIA FOR EACH DESIGNED SYSTEM PER 13;24.5.
12. PIPE HANGER MATERIAL, SPACING AND METHOD OF ATTACHMENT SHALL BE PER 13;9.1, AND MANUFACTURERS REQUIREMENTS.
13. MAINTAIN A MINIMUM OF 18" CLEARANCE BELOW SPRINKLER DEFLECTOR(S) AND ANY PERMANENT OR TEMPORARY OBSTRUCTION(S) PER 13;8.6.6.1.
14. AT LEAST SIX (6) SPARE SPRINKLER HEADS OF EACH TYPE, TEMPERATURE AND ORIFICE SIZE USED IN THE SYSTEM INCLUDING A SPECIAL WRENCH FOR EACH SPRINKLER HEAD SHALL BE KEPT IN A CABINET WHERE THE AMBIENT TEMPERATURE WILL AT NO TIME EXCEED 100° PER 13;6.2.9.1.

MATERIAL NOTES:

1. ONLY UL LISTED DEVICES AND MATERIALS SHALL BE INSTALLED THROUGHOUT THE SYSTEM.
2. ONLY NEW SPRINKLERS, AS NOTED, OR THEIR EQUAL, SHALL BE USED.
3. ALL WET-PIPE PIPING IN SIZES 1" THROUGH 2" SHALL BE SCH. 40, ASTM A-135 OR ANSI/ASTM A-53 BLACK STEEL PIPE, ASTM A-795, AND THREADED, UNLESS INDICATED OTHERWISE.
4. THE USE OF THREADABLE THINWALL PIPE, SUCH AS ALLIED "XL" OR "DYNA-THREAD", IS PROHIBITED.
5. ALL STEEL SPRINKLER PIPE SHALL HAVE A MINIMUM CORROSION RESISTANCE RATIO (CRR) OF 1.0.
6. ALL WET-PIPE IN SIZES 2-1/2" THROUGH 8" SHALL BE SCH. 10, ASTM A-135 OR ANSI/ASTM A-53 BLACK STEEL, AND/OR ASTM A-795, AND ROLL-GROOVED, UNLESS INDICATED OTHERWISE.
7. ALL THREADED PIPE AND FITTINGS SHALL HAVE THREADS CUT TO ASME B1.20.1, PIPE THREAD, GENERAL PURPOSE PER 13;6.5.1.1.
8. ALL SCH. 10 GROOVED BLACK STEEL PIPE SHALL BE ROLL-GROOVED.
9. PIPE JOINED WITH GROOVED FITTINGS SHALL BE JOINED BY A LISTED COMBINATION OF FITTINGS, GASKETS, AND GROOVES BY THE SAME MANUFACTURER. GROOVES SHALL BE DIMENSIONALLY COMPATIBLE WITH THE FITTINGS PER 13;6.5.3.2.
10. GROOVED FITTINGS SHALL BE MALLEABLE IRON ASTM A-47, DUCTILE IRON ASTM A-635, OR WELDED SEGMENT CARBON STEEL SCHEDULE 40 ASTM A-53. FINISH TO BE FACTORY PAINTED.
11. THREADED FITTINGS SHALL BE CAST IRON CLASS 125 OR 250 ANSI B16.4 OR MALLEABLE IRON CLASS 150 OR 300 ANSI B16.3., AND GALVANIZED WHERE NECESSARY OR REQUIRED.
12. WELDED OUTLETS SHALL BE ANSI B16.11 FORGED STEEL PER NFPA (UL LISTED) FOR WORKING PRESSURE TO 175PSI.
13. GALVANIZED PIPE AND FITTINGS TO BE USED IN ALL AREAS WHERE PIPE IS INSTALLED OUTSIDE OF THE BUILDING, SUCH AS DRAIN PIPING.
14. ALL FIXED SPRAY, DELUGE SYSTEM, PIPING AND FITTINGS TO BE INTERNALLY AND EXTERNALLY GALVANIZED.

INSTALLATION NOTES:

1. THE WELDING OF PIPE OR FITTINGS ON THE JOB SITE PREMISES IS PROHIBITED.
2. ALL PIPE LENGTHS ARE SHOWN CENTER-TO-CENTER UNLESS OTHERWISE NOTED.
3. ALL SPRINKLERS SHALL BE INSTALLED ACCORDING TO THEIR LISTINGS SPACING AND OBSTRUCTION REQUIREMENTS.
4. SPRINKLER DEFLECTORS SHALL BE INSTALLED PARALLEL TO ROOF/CEILING SLOPE PER 13;8.6.4.2.1, UNLESS OTHERWISE NOTED.
5. PIPE OR FITTINGS, AND COMPONENTS, INSTALLED IN CORROSIVE ATMOSPHERES, SUCH AS DRAIN PIPE OR HANGER ALL-THREAD ROD EXPOSED TO WEATHER CONDITIONS, SHALL BE GALVANIZED OR OTHER APPROVED CORROSION-RESISTIVE MATERIAL.
6. LOCATE SPRINKLER HEADS IN A CONSISTENT PATTERN WITH CEILING GRID, LIGHTS, AND SUPPLY AND RETURN AIR DIFFUSERS. FOR SPACES WITH LAY-IN TYPE CEILINGS, LOCATED SPRINKLERS IN CENTER OF TILE. THE DESIGN SHALL GIVE FULL CONSIDERATION TO BLIND SPACES, OTHER SYSTEM PIPING, ELECTRICAL EQUIPMENT, HVAC DUCTWORK, AND ALL OTHER TYPES OF OBSTRUCTIONS WHICH COULD PREVENT THE PROPER INSTALLATION AND OPERATION OF THE SPRINKLER SYSTEM.
7. THE NUMBER OF SPRINKLER SYSTEMS AND CONTROL VALVES SHALL NOT BE REDUCED FROM THAT SHOWN ON THESE DOCUMENTS.
8. SPRINKLERS IN AREAS WITH CEILING TILE SHALL BE INSTALLED CENTER OF TILE.
9. SPRINKLERS SHALL BE INSTALLED IN ACCORDANCE WITH NFPA 13 FOR OBSTRUCTIONS. SPRINKLER PROTECTION SHALL BE PROVIDED BENEATH OBSTRUCTIONS, SUCH AS BUT NOT LIMITED TO; HVAC DUCTWORK OR ASSOCIATED EQUIPMENT.
10. SPRINKLER PIPING LOCATED INSIDE OF ROOMS SUCH AS ELECTRICAL, IDF, SWITCHGEAR, ATS/UPS AND MDF SHALL ONLY SERVE THAT ROOM. MAIN PIPING AND BULK SUPPLY PIPING SHALL NOT BE PIPED THROUGH SUCH ROOMS.
11. EXTERIOR WINDOWS FIXED SPRAY SYSTEM TO BE PROTECTED WITH MINIMUM K2.8 SPRINKLERS. BASIS OF DESIGN IS VIKING K3.0 MODEL C-1 WINDOW SPRINKLERS WITH 4 SPRINKLERS PER EACH SET OF 14FT OF WINDOWS.
12. ALL EQUIPMENT LOCATED OUTSIDE OF THE BUILDING TO BE CLEANED, PRIMED, AND PAINTED. COLOR AS PER ARCHITECT.

HANGER NOTES:

1. THE COMPONENTS OF HANGER ASSEMBLIES THAT DIRECTLY ATTACH TO THE PIPE OR TO THE BUILDING STRUCTURE SHALL BE UL LISTED.
2. HANGERS AND THEIR COMPONENTS SHALL BE FERROUS PER 9.1.1.5.1 UNLESS THE COMPONENTS HAVE BEEN PROVEN BY FIRE TESTS TO BE ADEQUATE FOR THE HAZARD APPLICATION, AND THAT ARE LISTED FOR THAT SERVICE PER 9.1.1.5.2.
3. SPRINKLER PIPING SHALL BE SUBSTANTIALLY SUPPORTED FROM THE BUILDING STRUCTURE, WHICH MUST SUPPORT THE ADDED LOAD OF THE WATER-FILLED PIPE PLUS A MINIMUM OF 250-POUNDS APPLIED AT THE POINT OF HANGING PER 9.2.1.3.1.
4. SPRINKLER PIPING OR HANGERS SHALL NOT BE USED TO SUPPORT NON-SYSTEM COMPONENTS PER 9.1.1.7.
5. BRANCHLINE AND MAIN HANGER LOCATION AND MAXIMUM DISTANCES SHALL MEET 9.2.2, TABLE 9.2.2.1, AND 9.2.4. ADDITIONALLY, THERE SHALL BE NOT LESS THAN ONE HANGER FOR EACH SECTION OF PIPE PER 9.2.3.2.1, UNLESS SPRINKLERS ARE SPACED LESS THAN 6-FT APART (9.2.3.2.2).
6. WALL MOUNTED SIDEWALL SPRINKLERS SHALL BE RESTRAINED TO PREVENT MOVEMENT.
7. THE HANGER CLOSEST TO THE SPRINKLER SHALL BE OF A TYPE THAT PREVENT UPWARD MOVEMENT OF THE PIPE PER 9.2.3.4.4.4., AND 9.2.3.5.2.2.
8. TRAPEZE HANGERS SHALL BE USED WHERE NECESSARY TO MEET THE ABOVE HANGING REQUIREMENTS TO TRANSFER LOADS TO APPROPRIATE STRUCTURAL MEMBERS. TRAPEZE HANGERS SHALL COMPLY WITH NFPA 13. SPRINKLER CONTRACTOR SHALL PROVIDE DETAILS OF SUCH HANGERS.
9. TRAPEZE HANGERS SHALL COMPLY WITH 9.1.1.6.
10. THREADED SECTIONS OF ROD SHALL NOT BE FORMED OR BENT PER 9.1.2.6.

FLORIDA 61-G NOTES

1. THESE DRAWINGS HAVE BEEN PROVIDED IN ACCORDANCE WITH THE FLORIDA ADMINISTRATIVE CODE 61G15-32. IT IS THE RESPONSIBILITY OF THE FIRE SPRINKLER CONTRACTOR TO PREPARE FULLY COORDINATED SHOP DRAWINGS IN ACCORDANCE WITH NFPA 13 "WORKING DRAWINGS".
2. DESIGN AND INSTALLATION SHALL BE IN ACCORDANCE WITH 2013 NFPA 13, "STANDARD FOR THE INSTALLATION OF SPRINKLER SYSTEMS", 2013 NFPA 24, "STANDARD FOR THE INSTALLATION OF PRIVATE FIRE SERVICE MAINS AND THEIR APPURTENANCES", 2013 NFPA 415, "STANDARD ON AIRPORT TERMINAL BUILDINGS, FUELING RAMP DRAINAGE, AND LOADING WALKWAYS", 2012 NFPA 15, "STANDARD FOR WATER SPRAY FIXED SYSTEMS FOR FIR PROTECTION", FLORIDA BUILDING CODE, 6TH EDITION (FBC), 6TH EDITION FLORIDA FIRE PREVENTION CODE (FFPC), LOCAL ORDINANCES AND AUTHORITY HAVING JURISDICTION.
3. THESE DRAWINGS ARE SCHEMATIC IN NATURE AND ARE NOT INTENDED TO SHOW ALL POSSIBLE CONDITIONS. IT IS INTENDED THAT A COMPLETE FIRE PROTECTION SYSTEM BE PROVIDED WITH ALL THE NECESSARY EQUIPMENT, APPURTENANCES AND CONTROLS, COMPLETELY COORDINATED WITH ALL DISCIPLINES. ALL PARAMETERS GIVEN IN THESE DOCUMENTS SHALL BE STRICTLY CONFORMED TO. ANY ITEMS AND LABOR REQUIRED FOR A COMPLETE FIRE PROTECTION SYSTEM, IN ACCORDANCE WITH ALL APPLICABLE CODES,STANDARDS, LOCAL AUTHORITIES AND THESE CONTRACT DOCUMENTS SHALL BE FURNISHED WITHOUT INCURRING ANY ADDITIONAL COST TO THE OWNER. THE SPRINKLER CONTRACTOR SHALL CAREFULLY REVIEW ALL CONTRACT DOCUMENTS AND THE DESIGN OF OTHER TRADES BEFORE PREPARING SHOP DRAWINGS
4. FIRE SPRINKLER CONTRACTOR SHALL PROVIDE LAYOUT OF THE SYSTEM TO GIVE FULL CONSIDERATION TO BLIND SPACES, PIPING, ELECTRICAL EQUIPMENT, DUCTS, AND OTHER CONSTRUCTION AND EQUIPMENT. LOCATE SPRINKLER HEADS IN A CONSISTENT PATTERN WITH THE CEILING AND CEILING GRID (WHERE PROVIDED), LIGHTS, AND AIR SUPPLY DIFFUSERS AND RETURN GRILLS.
5. JENSEN HUGHES' DESIGN RESPONSIBILITY STARTS AT 5 FT. OUTSIDE THE FIRE RISER ROOM OF THE NEW BUILDING. DESIGN OF THE DETECTION SYSTEM TO ACTIVATE THE DELUGE SYSTEM IS BY OTHERS.
6. JENSEN HUGHES HAS NO CONTROL OVER THE WATER SUPPLY'S QUALITY, OR AVAILABILITY, AND CANNOT GUARANTEE THAT THE RESULTS WILL REMAIN VALID FOR ANY LENGTH OF TIME.
7. REASONABLE EFFORTS HAVE BEEN MADE TO IDENTIFY WHETHER OR NOT WATER SUPPLY CONDITIONS EXIST THAT COULD LEAD TO MICROBIAL INFLUENCED CORROSION (MIC). ACCORDING TO THE DISCUSSIONS WITH THE OWNER, LOCAL WATER PURVEYOR AND THE FIRE OFFICIAL NO KNOWN ENVIRONMENTAL CONDITIONS THAT MIGHT BE RESPONSIBLE FOR MIC ARE FOUND IN THE WATER SUPPLY.
8. THE BACKFLOW PREVENTER AND METERING SPECIFICATIONS SHALL MEET OR EXCEED REQUIREMENTS OF THE LOCAL WATER PURVEYOR. THE BACKFLOW PREVENTER SHALL BE LISTED FOR FIRE PROTECTION USE.
9. THE WATER SUPPLY IS AS SHOWN ON THE CIVIL DRAWINGS.
10. THE POINT OF SERVICE FOR THE FIRE PROTECTION SYSTEM IS POINT WHERE THE UNDERGROUND IS USED FOR FIRE PROTECTION ONLY. THIS IS AT THE FIRE PROTECTION BACKFLOW PREVENTER AS NOTED.
11. A FIRE HYDRANT FLOW TEST WAS PERFORMED ON 07/02/2019 BY B&C FIRE SAFETY INC.. THE FLOW TEST HAD A STATIC PRESSURE OF 80 PSI, A RESIDUAL PRESSURE OF 55 PSI, AND A FLOW OF 1186 GPM.
12. ALL MATERIAL AND DEVICES SHALL BE UL LISTED. CONTRACTOR SHALL SUBMIT PRODUCT DATA FOR REVIEW PRIOR TO ANY INSTALLATION OR PROCUREMENT.
13. THE FIRE SPRINKLER SYSTEM CONTROL VALVES AND WATER FLOW SWITCHES SHALL BE CONNECTED TO THE BUILDING FIRE ALARM SYSTEM AND MONITORED BY A UL LISTED MONITORING STATION.
14. LIGHT HAZARD AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .10 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. INCLUDING 100 GPM FOR HOSE. LIGHT HAZARD AREAS SHALL INCLUDE OFFICE, RESTROOM, ENCLOSED STAIRS, AND OTHER SIMILAR AREAS.
15. ORDINARY HAZARD GROUP I AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .15 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. AND INCLUDE 250 GPM FOR HOSE. ORDINARY HAZARD GROUP I AREAS SHALL INCLUDE MECHANICAL, ELECTRICAL, COMM., IDF, STORAGE, MAINT., FIRE RISER, HOLD ROOMS, QUEUE, SSCP AND OTHER SIMILAR AREAS. PASSENGER HANDLING AREAS SHALL BE CLASSIFIED AS ORDINARY HAZARD GROUP I PER NFPA 415.
16. ORDINARY HAZARD GROUP II AREAS ARE HYDRAULICALLY CALCULATED AT A DENSITY OF .20 GPM/SQ.FT. OVER A REMOTE AREA OF 1,500 SQ.FT. AND INCLUDE 250 GPM FOR HOSE. ORDINARY GROUP II HAZARD AREAS SHALL INCLUDE: CONCESSIONS AND OTHER SIMILAR AREAS.
17. PROVIDE FIXED WATER SPRAY SYSTEMS FOR ALL OF THE EXTERIOR GLAZING. SYSTEM TO PROVIDE A DENSITY OF .25 GPM/SQ.FT. OVER THE EXTERIOR SURFACE AREA OF THE WINDOW. MINIMUM PRESSURE PER SPRINKLER IS 20 PSI. ALL WINDOW SPRINKLERS TO BE CALCULATED.

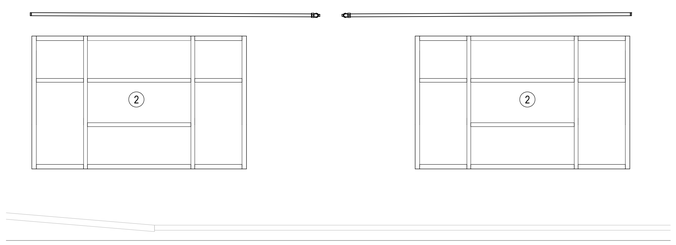
0 1' 2' 4' 8'



4 TYPICAL WINDOW PROTECTION SECTION

1/4" = 1'-0" THIS DETAIL TYPICAL TO ALL WINDOWS

0 1' 2' 4' 8'

WINDOW DETAIL NOTES:
(THIS DETAIL TYPICAL TO ALL WINDOWS)

(1) PIPE TO BE INSTALLED IN WALL CAVITY.

(2) 4 SPRINKLERS PER SET OF WINDOWS. SPRINKLERS TO BE INSTALLED PER MANUFACTURER'S REQUIREMENTS. (FIRE SPRINKLERS NOT SHOWN)

KEY NOTES 21-

21-1	EXTERIOR NON-COMBUSTIBLE CANOPY. NO STORAGE BENEATH. FIRE SPRINKLER PROTECTION NOT REQUIRED PER NFPA 13: 8.15.7.2, 8.15.7.5.
21-2	THIS AREA IS OPEN TO THE SKY. NO FIRE SPRINKLER PROTECTION.
21-3	PROVIDE DELUGE FIXED SPRAY SYSTEM WITH K3.0 SPRINKLERS. 4 SPRINKLERS PER WINDOW. INSTALL AS PER MANUFACTURER REQUIREMENTS.
21-4	WALL MOUNTED FDC.

GENERAL NOTES

1. AUTOMATIC WET-PIPE FIRE SPRINKLER PROTECTION TO BE PROVIDED THROUGHOUT THE ENTIRE BUILDING.
2. ALL SPRINKLERS TO BE OF THE CONCEALED QUICK RESPONSE TYPE IN PUBLIC AREAS INCLUDING: QUEUE, HOLD ROOMS, SSCP, BATHROOMS, CONCOURSE, ENTRANCE VESTIBULE, EXIT VESTIBULE. RECESSED SPRINKLERS ARE ACCEPTABLE IN BACK OF HOUSE AREAS SUCH AS OFFICES AND ELECTRICAL ROOMS WHERE DROP CEILING IS PROVIDED.
3. SPRINKLERS IN AREAS WITHOUT DROP CEILINGS SHALL BE INSTALLED ON BRANCHLINES WITH ONE-INCH OUTLETS AND REDUCERS TO ALLOW FUTURE MODIFICATION.
4. THE FIRE PROTECTION PIPING SHOWN IS DIAGRAMMATIC. THE FIRE SPRINKLER CONTRACTOR SHALL BE RESPONSIBLE FOR THE LAYOUT OF THEFIRE PROTECTION SYSTEMS. CONTRACTOR SHALL BE RESPONSIBLE FOR THE COORDINATION WITH OTHER TRADES AND WITH PROVIDING SUFFICIENT NUMBER OF MAINS IN LOCATIONS COORDINATED WITH OTHERS.

FIRE PROTECTION DETAILS

BID DOCUMENTS

Drawing No.:

FP601

GENERAL ELECTRICAL NOTES:

1. ELECTRICAL INSTALLATION SHALL COMPLY WITH THE FOLLOWING CODES AND STANDARDS:
   - NFPA 70 – NATIONAL ELECTRICAL CODE (NEC 2014)
   - NFPA 70E – STANDARD FOR ELECTRICAL SAFETY IN THE WORK PLACE
   - NESC – NATIONAL ELECTRICAL SAFETY CODE
   - IBC – INTERNATIONAL BUILDING CODE
   - IEEE – NATIONAL ELECTRICAL SAFETY CODE
   - NEIS – NATIONAL ELECTRICAL INSTALLATION STANDARDS
   - AHT - LOCAL AUTHORITY HAVING JURISDICTION
2. CONTRACTOR SHALL IN A WORKMANLIKE MANNER, PROVIDE A COMPLETE OPERABLE SYSTEM. OUTLINE DESCRIPTION AND DIAGRAMMATIC REPRESENTATION OF SYSTEM OPERATION AND EQUIPMENT DOESN'T LIMIT CONTRACTOR LIABILITY FOR INSTALLATION OF A COMPLETE AND OPERABLE SYSTEM.
3. ARCHITECTURAL FEATURES SHOWN ON THESE DRAWINGS ARE FOR BACKGROUND INFORMATION ONLY. REFER TO ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR ACTUAL BUILDING CONSTRUCTION OF WALLS AND CURBS. REFER TO MECHANICAL DRAWINGS FOR ACTUAL LOCATIONS OF MECHANICAL EQUIPMENT.
4. THESE DRAWINGS ARE DIAGRAMMATIC IN NATURE AND INDICATE THE GENERAL ARRANGEMENTS OF THE VARIOUS SYSTEMS AND APPROXIMATE LOCATIONS OF THE EQUIPMENT. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THAT THERE IS ADEQUATE SPACE AT THE LOCATIONS INDICATED FOR ALL EQUIPMENT PRIOR TO INSTALLATION OF SAME. THE CONTRACTOR SHALL BE RESPONSIBLE TO VERIFY ALL DIMENSIONS IN THE FIELD, PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
5. COORDINATE ALL WORK WITH OTHER DIVISION TRADES. COORDINATE AND OBTAIN ELECTRICAL SERVICE WITH LOCALELECTRIC UTILITY (EVERSOURCE); COORDINATE ALL REQUIRED POWER OUTAGES WITH THE RESPONSIBLE ENTITIES.
6. THE ELECTRICAL CONTRACTOR SHALL OBTAIN AND PAY FOR ANY NECESSARY PERMITS PRIOR TO BEGINNING OF WORK. AT COMPLETION OF THE WORK, THE ELECTRICAL CONTRACTOR SHALL ADJUST AND TEST ALL SYSTEMS AT THE DIRECTION OF THE OWNER AND OBTAIN AND DELIVER A FINAL CERTIFICATE OF APPROVAL FROM THE AUTHORITY HAVING JURISDICTION (AHJ).
7. CONTRACTOR SHALL ROUTE CONDUITS TO AVOID OBSTRUCTIONS AND PROVIDE ANY ADDITIONAL SUPPORT NECESSARY TO COMPLY WITH THE NEC.
8. CONTRACTOR SHALL INSTALL ALL ELECTRICAL EQUIPMENT WITH WORK SPACE CLEARANCE PER SECTION 110.26 OF THE NEC.
9. ALL CIRCUITS AND RACEWAYS SHALL INCLUDE AN EQUIPMENT GROUND CONDUCTOR (EGC). METALLIC RACEWAYS SHALL NOT BE USED AS AN EGC.
10. ALL BRANCH WIRING, DEVICES, JUNCTION BOXES, CONDUITS, EQUIPMENT, ETC. SHALL BE GROUNDED IN ACCORDANCE WITH THE NEC ARTICLE 250.
11. ALL EQUIPMENT SHALL BE LISTED BY UNDERWRITERS' LABORATORIES, INC. AND SHALL BEAR THE U.L. LABEL. PROVIDE ONLY NEW, UNDAMAGED EQUIPMENT.
12. CONDUIT INSTALLED INSIDE BUILDINGS SHALL BE ELECTRICAL METALLIC TUBING (EMT); CONDUIT INSTALLED OUTSIDE BUILDINGS SHALL BE RIGID GALVANIZED STEEL (RGS); CONDUIT INSTALLED UNDERGROUND SHALL BE RIGID POLY-VINYL CHLORIDE (PVC), SCHEDULE 40.
13. CONNECTION TO MOTOR COMPRESSOR AND VACCUM, TERMINAL BOXES, SOLENOID DEVICES HAVING ADJUSTABLE MOUNTING FACILITIES SUBJECT TO VIBRATION SHALL BE MADE IN LIQUID-TIGHT FLEXIBLE CONDUIT (LFC). A BONDING JUMPER SHALL BE PROVIDED WHENEVER A FLEXIBLE CONDUIT IS EMPLOYED.
14. ELECTRICAL CONNECTION TO ALL VIBRATING EQUIPMENT, SUCH AS MOTORS, COMPRESSORS, VACCUMES WITH ADJUSTABLE MOUNTING SHALL BE PROVIDED WHENEVER A FLEXIBLE CONDUIT IS EMPLOYED.
15. ALL WIRING METHODS SHALL ADHERE STRICTLY TO THE NEC. MINIMUM CONDUIT SIZE SHALL BE ¾"; MINIMUM WIRE SIZE SHALL BE #12AWG. ALL POWER CONDUCTORS INSULATION SHALL BE TYPE RHW, THW, THHW, THWN FOR 600V 75° TERMINATION AND THHN, THHW,THWN-2,RHW-2 FOR 600V 90° TERMINATION.
16. RACEWAYS IN ELECTRICALLY CLASSIFIED AREAS SHALL BE IN RIGID CONDUIT WITH SEALS.
17. ALL CIRCUITS ARE TO BE CLEARLY IDENTIFIED AND LABELED AT THE PANEL. PANEL SCHEDULES ARE TO BE TYPED AND SHALL BE COMPLETE AT TIME OF FINAL PUNCH LIST WALK THROUGH. ALL MAJOR PIECES OF ELECTRICAL EQUIPMENT SHALL BE LABELED WITH LAMINATE AND ENGRAVED LETTERING.
18. NO FEEDER OR BRANCH CIRCUIT WIRING SHOWN SHALL BE ALTERED OR CHANGED WITHOUT APPROVAL BY THE ENGINEER.
19. ALL CIRCUIT PROTECTIVE DEVICES SHALL HAVE THE REQUIRED RATING AND INTERRUPTING CAPACITY EQUAL TO OR GREATER THAN THE AVAILABLE SHORT-CIRCUIT CURRENT AT ITS SUPPLY TERMINAL; MINIMUM INTERRUPTING CAPACITY SHALL BE 10,000A, SYMMETRICAL A.I.C FOR 120/208V SYSTEMS, 120/240V SYSTEM AND 14,000A, SYMMETRICAL A.I.C FOR 277/480V SYSTEMS. REFER TO PANEL SCHEDULES FOR A.I.C RATINGS.
20. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN A RECORD SET OF INSTALLATION PRINTS. THE CONTRACTOR SHALL RECORD ON THESE PRINTS ALL DEVIATIONS FROM THE CONTRACT DRAWINGS IN CONDUIT SIZING, ELECTRICAL LOADS AND CIRCUITS. AT THE COMPLETION OF TE WORK, THE CONTRACTOR SHALL SUBMIT THESE PRINTS TO THE OWNER FOR INCORPORATION INTO THE FINAL RECORD DRAWINGS.

1 LEVEL 1 - POWER - AREA 1
3/16" = 1'-0"

GENERAL ELECTRICAL NOTES:

1. SEE SHEET E000 FOR ELECTRICAL LEGEND, SYMBOLS, GENERAL NOTES & ABBREVIATIONS.
2. SEE SHEETS E601-E603 FOR SWITCHBOARD AND PANEL SCHEDULES.
3. SEE SHEET E604 FOR LIGHTING FIXTURE SCHEDULE.
4. SEE SHEET E801 FOR ELECTRICAL DETAILS.
5. REFER TO MECHANICAL DRAWINGS FOR MORE DETAILS ON HVAC EQUIPMENT.
6. FOR THE ACTUAL SERVICE ENTRANCE RUNS AND LOCATION OF PROPOSED GULF POWER UTILITY TRANSFORMER PAD, REFER TO THE CIVIL DRAWINGS PACKAGE.
7. ELECTRICAL CONTRACTOR SHALL FURNISH AND INSTALL 480V CABLES FROM THE SECONDARY SIDE OF THE SERVICE TRANSFORMERS TO THE MAIN SWITCHGEAR IN THE MAIN ELECTRICAL ROOM.
8. ALL OUTDOOR ELECTRICAL EQUIPMENT SHALL BE NEMA 3R.

ELECTRICAL - ADD ALTERNATE NOTES:

1. ELECTRICAL CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. INCLUDE MATERIALS AND LABOR COST FOR PANEL PP-2 (LOCATED IN ADD ALTERNATE #2) IN ADD ALTERNATE #1 BID PRICE. IF ADD ALTERNATE #1 IS SELECTED, BUT ADD ALTERNATE #2 IS NOT, ALL CIRCUITING FOR DEVICES WITHIN ADD ALTERNATE #1 SHALL BE CIRCUITED TO SPARE CIRCUIT BREAKERS IN PANELS IN ELECTRIC ROOM W1278.
3. ELECTRICAL CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

8. ALL OUTDOOR ELECTRICAL EQUIPMENT SHALL BE NEMA 3R.

ELECTRICAL - ADD ALTERNATE NOTES:

1. ELECTRICAL CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. INCLUDE MATERIALS AND LABOR COST FOR PANEL PP-2 (LOCATED IN ADD ALTERNATE #2) IN ADD ALTERNATE #1 BID PRICE. IF ADD ALTERNATE #1 IS SELECTED, BUT ADD ALTERNATE #2 IS NOT, ALL CIRCUITING FOR DEVICES WITHIN ADD ALTERNATE #1 SHALL BE CIRCUITED TO SPARE CIRCUIT BREAKERS IN PANELS IN ELECTRIC ROOM W1278.
3. ELECTRICAL CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

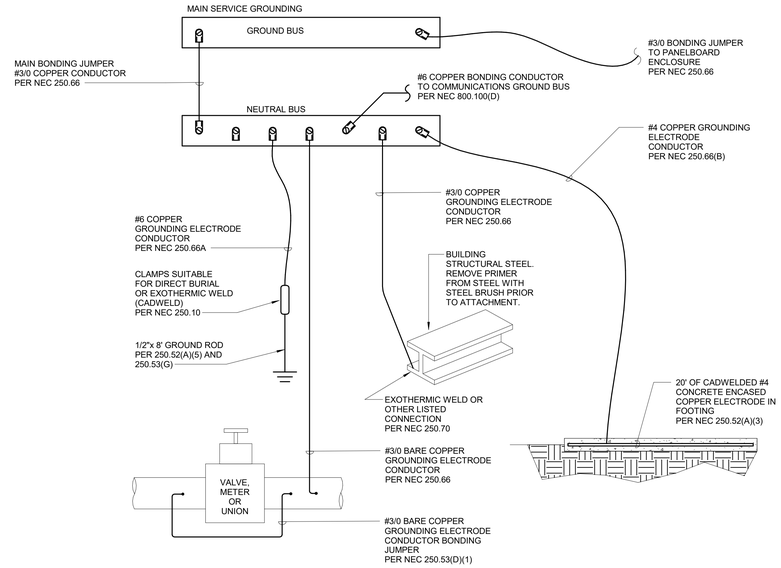
NOTES:

1. FOR SIZE AND NUMBER OF CONDUITS AS WELL AS DUCT BANK FORMATION, SEE PLANS.
2. AVOID OVER-EXCAVATION OF THE DUCTBANK TRENCH. DUCTBANK WALLS SHALL BE FORMED WITHIN 5 FEET OF A MANHOLE, WITHIN A "COMMON" UTILITIES TRENCH, AND IF THE WIDTH OF THE POUR WILL EXTEND BEYOND THE DIMENSION SHOWN ON THE DETAIL.
3. INSPECTION AND SIGN-OFF BY UNIVERSITY REPRESENTATIVE IS REQUIRED AFTER THE DUCTBANK BASE IS POURED AND THE CONDUITS ARE INSTALLED, BUT PRIOR TO FINAL CONCRETE ENCASEMENT.

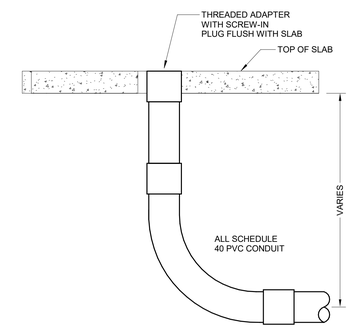
1 CONCRETED_ENCASED_DUCT_BANK_DETAIL
N.T.S.

EXAMPLE:
MAIN DISTRIBUTION FEED IS
FOUR SETS OF (4) 350KCMIL
AND (1)#3/0 GND IN 4" CONDUIT

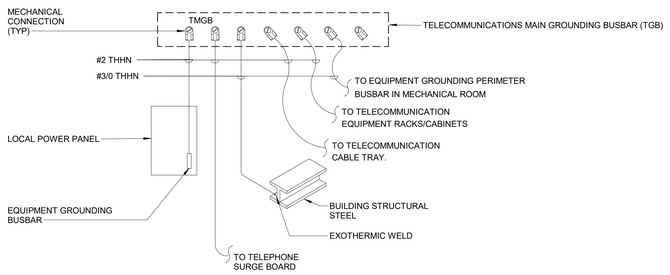
NOTE:
ALL GROUNDING ELECTRODES THAT ARE PRESENT SHALL BE BONDED TOGETHER TO FORM THE GROUNDING ELECTRODE SYSTEM. WHERE NONE OF THESE GROUNDING ELECTRODES EXIST, ONE OR MORE OF THE GROUNDING ELECTRODES SHALL BE INSTALLED. FURTHERMORE, IF THE ONLY ELECTRODE AVAILABLE IS THE WATER PIPE, A SUPPLEMENTAL ELECTRODE IS REQUIRED.

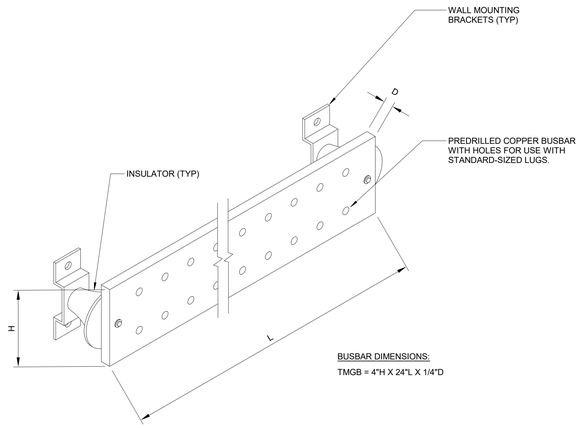


2 GROUNDING_ELECTRODE_DETAIL
N.T.S.



3 CONDUIT_STUB_UP_DETAIL
N.T.S.





4 TELECOMMUNICATIONS_GROUNDING_DETAIL

MOUNTING HEIGHTS

CEILING	SMOKE AND HEAT DETECTORS, 360° SECURITY MOTION DETECTORS, CCTV SURVEILLANCE CAMERAS, PUBLIC ADDRESS AND VOICE EVACUATION SPEAKERS, WIRELESS ACCESS POINTS. TV AND LCD PROJECTOR JACKS
8' A.F.G.	EXTERIOR VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, EXTERIOR PUBLIC ADDRESS SPEAKERS.
7'-5" A.F.F.	CLOCKS, COMBINATION CLOCK/SPEAKERS, TRUMPET SPEAKERS
7'-0" A.F.F.	VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, WALL MOUNTED SECURITY MOTION DETECTORS (CENTER OF DEVICE)
6" ABOVE DOOR JAMB	REQUEST TO EXIT MOTION DETECTORS
5'-6" A.F.F	TOP OF PLYWOOD TELEPHONE BACKBOARD
5'-4" A.F.F.	FIRE ALARM ANNUNCIATOR PANELS, FIRE FIGHTER CONTROL STATIONS, SECURITY ANNUNCIATOR PANELS, VISUAL DISPLAYS, TACTILE DISPLAYS
4'-8" A.F.G. MAX	PEDESTAL MOUNT INTERCOM PEDESTAL MOUNT CARD READER
4'-0" A.F.F.	"PS" TELEPHONE OUTLETS (TOP OF COIN SLOT),(WALL MOUNTED)-TELEPHONE INSTRUMENTS, INTERCOM STATIONS, FIRE FIGHTER TELEPHONE JACKS, FIRE ALARM MANUAL STATIONS, CARD READERS, MANUAL REQUEST TO EXIT DEVICES, WALL MOUNTED DURESS ALARM STATIONS, RESCUE ASSISTANCE PANELS, LCD KEYPADS (CENTER OF DEVICE)
UNDER COUNTER OR DESK	DURESS ALARM BUTTONS, DOOR RELEASE BUTTOMS
1'-6" A.F.F.	DATA/TELEPHONE JACKS, LOW TELEVISION JACKS, MICROPHONE JACKS
0'-0"	IN FLOOR JUNCTION BOXES FLUSH TO FINISHED FLOOR (FF) (DATA, TELEPHONE, MICROPHONE, MEDIA)

1. IN MASONRY CONSTRUCTION THE MOUNTING HEIGHTS SHALL BE USED FOR REFERENCE TO THE NEAREST BLOCK OR BRICK COURSING.
2. THE ABOVE MOUNTING ELEVATIONS ARE TO CENTER OF DEVICE AND SHALL BE ADHERED TO UNLESS SPECIFICALLY NOTED OR DETAILED OTHERWISE ON THE DRAWINGS AND/OR SPECIFICATIONS.
3. COORDINATE THE INSTALLATION AND MOUNTING ELEVATIONS OF ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES WITH ARCHITECT AND ALL AFFECTED TRADES PRIOR TO INSTALLATION. DOCUMENT ALL MOUNTING ELEVATIONS FOR ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES AT THE TIME OF SHOP DRAWING SUBMITTAL

FIRE ALARM - LEGEND, SYMBOLS & ABBREVIATIONS

BID DOCUMENT

Drawing No.:

FA000

ROOM SPACING FOR WALL-MOUNTED VISIBLE APPLIANCES MINIMUM REQUIRED LIGHT

OUTPUT (EFFECTIVE INTENSITY/CANDELA) IN ACCORDANCE WITH NFPA 72

MAXIMUM RM. SIZE	ONE LIGHT PER ROOM	TWO LIGHTS PER ROOM	FOUR LIGHTS PER ROOM
20 X 20	15cd	N/A	N/A
30 X 30	30cd	15cd	N/A
40 X 40	60cd	30cd	15cd
50 X 50	95cd	60cd	30cd
60 X 60	135cd	95cd	30cd
70 X 70	185cd	95cd	30cd
80 X 80	240cd	135cd	60cd
90 X 90	305cd	185cd	95cd
100 X 100	375cd	240cd	95cd
110 X 110	455cd	240cd	135cd
120 X 120	540cd	305cd	135cd
130 X 130	635cd	375cd	185cd

NA = NOT ALLOWABLE.

NOTE: CONTRACTOR WILL PROVIDE REQUIRED CANDELA RATED STROBES IN ACCORDANCE WITH THE ABOVE TABLE FOR ALL VISIBLE APPLIANCES BASED ON LOCATION AS INDICATED ON THE CONTRACT

NFPA 72 PERFORMANCE CRITERIA

ALARM CAPABILITY DURING ABNORMAL CONDITIONS		
TROUBLE INDICATION AT PROTECTED PREMISES		
ABNORMAL CONDITION	5	6
SINGLE OPEN	X	
SINGLE GROUND	X	X
WIRE-TO-WIRE SHORT	X	

NOTIFICATION APPLIANCE CIRCUITS

NFPA - CLASS B - STYLE Y

NOTIFICATION CIRCUITS NOTE:
THE ALARM SIGNAL DEVICES DO NOT HAVE TO BE WIRED SEQUENTIALLY BUT THEY:
-WILL BE INSTALLED IN ACCORDANCE WITH THE SPECIFICATIONS
-WILL HAVE AN EOL
-WILL NOT BE T-TAPPED
-MUST BE IN CONDUIT

ALARM CAPABILITY DURING ABNORMAL CONDITIONS		
TROUBLE INDICATION AT PROTECTED PREMISES		
ALARM		
ABNORMAL CONDITION	X	
SINGLE OPEN	X	
SINGLE GROUND	X	R
WIRE-TO-WIRE SHORT	X	
WIRE-TO-WIRE SHORT & OPEN	X	
WIRE-TO-WIRE SHORT & GROUND	X

LOSS OF CARRIER(IF USED)/ CHANNEL INTERFACE	X	

SIGNALING LINE CIRCUITS (SLC)

NFPA - CLASS B - STYLE 4

INITIATION LOOP (SLC) NOTE:
THE ALARM INITIATION DEVICES DO NOT HAVE TO BE WIRED SEQUENTIALLY BUT THEY:
-WILL BE INSTALLED IN ACCORDANCE WITH THE SPECIFICATIONS
-DO NOT HAVE AN EOL
-MAY BE T-TAPPED
-MAY HAVE UNIQUE ADDRESSES
-WILL BE IN CONDUIT

ADDRESSABLE FIRE ALARM SYSTEM WIRE SCHEDULE

DESCRIPTION	TYPICAL DEVICES	NEC CLASSIFICATION	CABLE	TWISTED	No. OF CONDUCTORS	SHIELDED	NFPA CLASS	NFPA STYLE	IN CONDUIT	NOTES
ADDRESSABLE INITIATING LOOP (SLC)	MANUAL STATIONS, SMOKE/HEAT DETECTORS, INTERFACE MODULES	POWER-LIMITED	16 AWG	YES	2	PER MANUF.	B	4	YES	T-TAPPING PERMITTED, BUT DISCOURAGED, NO EOL'S.
NOTIFICATION APPLIANCE CIRCUIT (NAC)	HORNS, STROBES, BELLS	POWER-LIMITED	14 AWG	NO	2	NO	B	Y	YES	NO T-TAPPING, CIRCUITS FROM FACP'S: REQUIRED EOL, CIRCUITS FROM FCPS: REQUIRED EOL.
NOTIFICATION APPLIANCE CIRCUIT (NAC)	SPEAKERS	POWER-LIMITED	16 AWG	YES	2	YES	B	Y	YES	NO T-TAPPING, CIRCUITS FROM FACP'S: REQUIRED EOL, CIRCUITS FROM AMPLIFIERS/DGPS: REQUIRED EOL.
24 VDC POWER	REMOTE ANNUNCIATORS, CONTROL MODULES, BEAM DETECTORS	POWER-LIMITED	14 AWG	NO	2	NO	B	N/A	YES	T-TAPPING PERMITTED.
PRINTER CABLE	PRINTER	POWER-LIMITED	-	YES	-	NO	N/A	N/A	YES	MAX. 25FT CABLE RUN (GREATER THAN 25FT IN LENGTH CONTRACTOR SHALL PROVIDE APPROPRIATE MODEMS)
RS485-TRANSPONDER NETWORK (SLC)	COMMUNICATION BETWEEN FACP'S AND TRANSPONDERS	POWER-LIMITED	18 AWG	YES	2	PER MANUF.	A	7a	YES	NO T-TAPPING, 5000 FT MAX CABLE RUN,
CONVENTIONAL INITIATING LOOP (IDC)	CONVENTIONAL HEAT DETECTORS, BEAM DETECTORS	POWER-LIMITED	14 AWG	NO	2	YES	B	Y	YES	NO TAPPING, MANUFACTURERS REQUIRED EOL

ADDRESSABLE FIRE ALARM SYSTEM CABLE TYPE

NEC DESIGNATION *	DESCRIPTION	APPLICATION	CONDUCTOR MATERIAL	ACCEPTABLE FOR PROJECT
FPLP	FIRE, POWER LIMITED, PLENUM	SUITABLE FOR USE IN DUCTS, PLENUMS, AND OTHER SPACE USED FOR ENVIRONMENTAL AIR.	COPPER	NO
FPLR	FIRE, POWER LIMITED, RISER	SUITABLE FOR USE IN A VERTICAL RUN IN A SHAFT OR WHEN A WIRE RUN PASSES FROM FLOOR TO FLOOR.	COPPER	NO
FPL	FIRE, POWER LIMITED	SUITABLE FOR GENERAL-PURPOSE FIRE ALARM USE IN CONDUITS, WITH THE EXCEPTIONS OF THE ABOVE APPLICATIONS.	COPPER	YES

* CABLE TYPES ARE LISTED IN DESCENDING ORDER OF FIRE-RESISTANT RATING, PER NFPA 70, TABLE 760-71(h)

GENERAL FIRE ALARM SYSTEM NOTES:

1. THE FOLLOWING GENERAL NOTES AS LISTED BELOW APPLY TO ALL FIRE ALARM SYSTEM SCOPES OF WORK AS INDICATED ON THE FA SERIES DRAWINGS.
2. ALL EQUIPMENT SYMBOLS ARE SHOWN ON DRAWINGS AS CLOSE AS POSSIBLE TO THEIR INTENDED LOCATION. CONTRACTOR WILL COORDINATE IN THE FIELD THE PROPER INSTALLATION OF ALL EQUIPMENT, DEVICES, CONTROLS AND CABLING. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL REQUIREMENTS.
3. DRAWINGS FOR THIS WORK ARE DIAGRAMMATIC AND INTENDED TO CONVEY THE EXTENT, GENERAL ARRANGEMENT AND LOCATIONS OF THE WORK. BECAUSE OF THE SCALE OF THE DRAWINGS, CERTAIN BASIC ITEMS SUCH AS ACCESS PANELS, CONDUITS, CABINET SIZES, PENETRATION SLEEVES, PULL BOXES, BACKBOXES AND JUNCTION BOXES MAY NOT BE SHOWN. INCLUDE ALL ITEMS WHERE REQUIRED BY CODE, MANUFACTURER AND RELATED SPECIFICATION SECTIONS FOR THE PROPER INSTALLATION OF ALL WORK.
4. THE SYSTEM WILL BE INSTALLED IN ACCORDANCE WITH ARTICLE 760 OF THE NATIONAL ELECTRIC CODE. ALL FIRE ALARM CABLE MUST BE INSTALLED IN DEDICATED CONDUITS IN ACCORDANCE WITH THE CABLING REQUIREMENTS SPECIFIED BY THE CONTRACT DOCUMENTS.
5. FIRE ALARM DEVICE MOUNTING HEIGHTS WILL COMPLY WITH ALL ANSI 117, NFPA 72 AND IBC REQUIREMENTS, AT THE MINIMUM INSTALL ALL DEVICES AS FOLLOWS:
   - MANUAL PULL STATION: 48" A.F.F. TO CENTER
   - AUDIBLE/VISUAL: 7'-0" A.F.F. TO BOTTOM OF STROBE LENS OR 6" BELOW CEILING TO CENTER OF STROBE LENS.
   - VISUAL: 7'-0" A.F.F. TO BOTTOM OF STROBE LENS OR 6" BELOW CEILING TO CENTER OF STROBE LENS.
   - EMERGENCY TELEPHONE JACKS: 48" A.F.F. TO CENTER
6. COORDINATE WITH ALL TRADES AND INTEGRATORS ALL CONDITIONS RELATED TO THE INSTALLATION OF ALL DEVICES. THE CONTRACTOR SHALL COORDINATE WITH THE APPROPRIATE TRADES AND SYSTEM INTEGRATORS ALL INSTALLATION REQUIREMENTS IMPACTING THE PLACEMENT OF ALL SYSTEM COMPONENTS TO THE SATISFACTION OF ALL CONCERNED TRADES.
7. ALL EQUIPMENT CLEARANCES WILL BE IN ACCORDANCE WITH NFPA 70 REQUIREMENTS. ARRANGE EQUIPMENT TO FACILITATE UNRESTRICTED ACCESS FOR MAINTENANCE AND SERVICE AROUND ALL EQUIPMENT, COMPONENTS AND/OR CABLE TERMINATIONS.
8. COORDINATE EXACT LOCATION(S) OF ALL CEILING MOUNTED CABLE, CONDUITS, EQUIPMENT AND/OR DEVICES WITH ALL ARCHITECTURAL PLANS, REFLECTED CEILING PLANS AND AFFECTED TRADES PRIOR TO INSTALLATION.
9. WHERE EQUIPMENT AND/OR JUNCTION BOXES ARE INSTALLED ABOVE FINISHED CEILINGS, THE CONTRACTOR WILL PROVIDE ACCESS HATCHES LISTED FOR THE INTENDED APPLICATION. ACCESS HATCHES SHALL BE LOCATED SO THAT SERVICE ACCESS TO THE EQUIPMENT AND/OR JUNCTION BOXES IS UNIMPEDED.
10. THE FIRE ALARM SYSTEM WILL BE INSTALLED IN DEDICATED CONDUITS. ALL CONDUITS SHALL BE INSTALLED IN ACCORDANCE WITH NFPA 70 AND THE CONTRACT DOCUMENTS. ALL CONDUITS SHALL BE SIZED IN ACCORDANCE WITH NFPA 70 AND WILL BE A MINIMUM OF 3/4" UNLESS OTHERWISE NOTED. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION.
11. ALL CONDUITS/RACEWAYS WILL BE INSTALLED IN A MANNER THAT PREVENTS TAMPERING OR REMOVAL WHEN INSTALLED IN AREAS EXPOSED TO THE GENERAL POPULATION. PROVIDE TAMPER-RESISTANT INSTALLATION UTILIZING "TORX WITH PEG" SECURITY-FASTENING DEVICES FOR ALL CONDUITS/RACEWAYS, EQUIPMENT, DEVICES AND APPURTENANCES IN ALL AREAS ACCESSIBLE TO THE GENERAL POPULATION AND/OR AREAS SUBJECTED TO TAMPERING OR VANDALISM. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION.
12. APPROVED EARTH GROUND WILL BE PROVIDED AT FIRE ALARM CONTROL PANEL CHASSIS. A CONDUIT GROUNDING TO BUILDING STEEL SHALL NOT BE CONSIDERED A ACCEPTABLE METHODOLOGY FOR GROUNDING OF FIRE ALARM CONTROL PANEL.
13. ALL SYSTEM WIRING AND EQUIPMENT INSTALLATIONS WILL BE IN ACCORDANCE WITH GOOD ENGINEERING PRACTICES AND BY ALL IEEE, EIA, NEC AND MANUFACTURER'S REQUIREMENTS. WIRING WILL COMPLY WITH ALL STATE AND LOCAL ELECTRICAL CODES. ALL WIRING WILL TEST FREE FROM ALL GROUNDS, SHORTS AND EMI.
14. NO A.C. CARRYING CONDUCTORS ARE PERMITTED TO SHARE RACEWAYS WITH ANY FIRE ALARM INITIATING AND/OR NOTIFICATION CIRCUITS.
15. ALL AC ELECTRICAL CIRCUITS FEEDING THE FIRE ALARM CONTROL EQUIPMENT WILL BE EQUIPPED WITH DEDICATED CIRCUIT BREAKER LOCKOUT DEVICE IN ACCORDANCE WITH NFPA 72.
16. ALL WIRES AND CIRCUITS WILL BE METERED TO ENSURE THEY ARE FREE OF ANY GROUNDS AND SHORTS PRIOR TO COMMISSIONING OF THE SYSTEM.
17. ALL AUXILIARY ALARM RELAYS WILL BE INSTALLED WITHIN 3 FEET OF THE EQUIPMENT TO BE CONTROLLED IN ACCORDANCE WITH ALL NFPA 72 REQUIREMENTS.
18. ALL FIRE ALARM DEVICES AND EQUIPMENT WILL BE LABELED UNIQUE IDENTIFICATION NUMBER. ALL NUMBERS WILL CORRESPOND WITH NUMBERING SEQUENCE AS SUBMITTED ON THE PROJECT SHOP DRAWINGS. LABELS TO BE SIMILAR TO "BROTHER P-TOUCH" BLACK LETTERING ON WHITE BACKGROUND, SELF-ADHESIVE TAPE. ALL DEVICE LABELS WILL BE INSTALLED PRIOR TO SYSTEM CHECKOUT.
19. ALL PENETRATIONS OF WALLS AND FLOORS WILL BE FIRE STOPPED IN ACCORDANCE WITH THE ASTM AND NFPA. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION. INSTALLATION OF FIRE-STOPS SHALL BE PERFORMED BY AN APPLICATOR/INSTALLER QUALIFIED AND TRAINED BY THE MANUFACTURER. INSTALLATION WILL BE PERFORMED IN STRICT ACCORDANCE WITH MANUFACTURER'S DETAILED INSTALLATION PROCEDURES.
20. REFER TO SPECIFICATION SECTIONS 280500 AND 283111 AS WELL AS ALL RELATED SPECIFICATION SECTION FOR PROJECT SUBMITTAL REQUIREMENTS AND ADDITIONAL INFORMATION.
21. ALL EQUIPMENT ENCLOSURES LOCATED OUTSIDE OR IN ALL AREAS WITH HIGH MOISTURE OR A RELATIVE HUMIDITY OF 75% OR GREATER WILL BE NEMA 4X ENCLOSURES RATED FOR THAT APPLICATION.
22. ALL EQUIPMENT EXPOSED TO THE ENVIRONMENT OR INSTALLED IN PROXIMITY TO AREAS WITH HIGH MOISTURE, OR A RELATIVE HUMIDITY OF 75% OR GREATER WILL BE PROVIDED WITH ENCLOSURES AND OR BACKBOXES RATED FOR THE ENVIRONMENTAL CONDITIONS.
23. THE STROBE INTENSITY OF ALL VISUAL NOTIFICATION APPLIANCES WILL BE IN ACCORDANCE WITH NFPA 72 AND UL 1971. STROBE CANDELA RATINGS WILL BE PROVIDED IN ACCORDANCE WITH DEVICE LOCATIONS AND WILL CONFORM TO ALL ICC/ANSI 117 AND NFPA 72 INSTALLATION REQUIREMENTS. CONTRACTOR WILL PROVIDE THE REQUIRED CANDELA POWER AND LOCATE ALL VISUAL NOTIFICATION APPLIANCES AS REQUIRED TO MEET THE REQUIREMENTS OF ALL REFERENCED CODES AND STANDARDS.
24. THE FIRE ALARM CONTRACTOR SHALL FURNISH AND INSTALL A SIEMONS FC2025 DESIGO FIRE CONTROL PANEL WITH RELEASING MODULE XC120001-U1 AS THE LINEAR HEAT DECTECTOR FOR THE FIRE SUPPRESSION DELUGE SYSTEM LOCATED ON THE APRON SIDE OF THE NEW CONCOURSE.. THE FA CONTRACTOR SHALL COORDINATE WITH THE FIRE PROTECTION (SUPPRESSION) CONTRACTOR FOR CONNECTIVITY REQUIREMENTS.
25. THE FA CONTRACTOR SHALL FURNISH AND INSTALL THE JUCTION BOX TO HOUSE THE STRAIN RELEIF CONNECTOR AND THE END OF LINE RESISTOR.
26. THE FA CONTRACTOR SHALL FURNISH AND INSTALL THE HEAT DETECTOR CABLE FOR THE ENITRE LENGTH OF THE BUILDING FOR THE DELUGE SYSTEM.

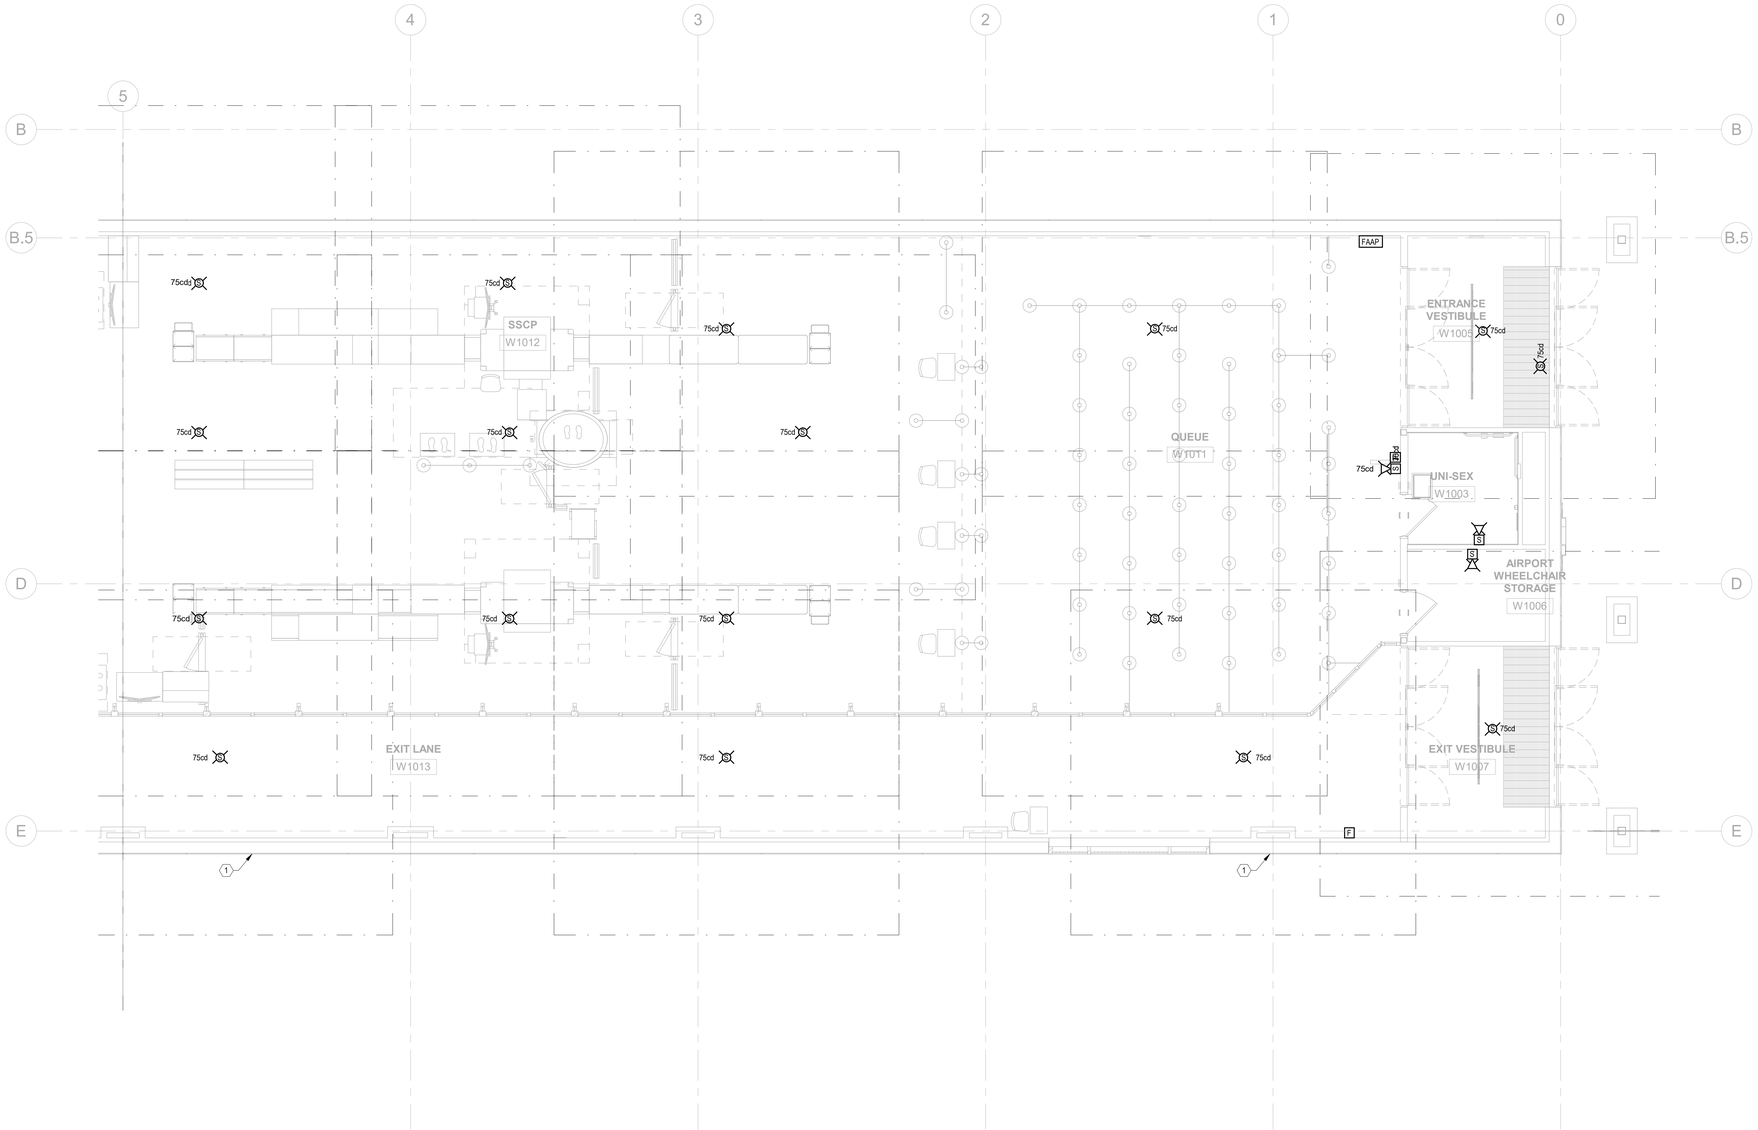
OVERALL FLOOR PLANS

BID DOCUMENT

Drawing No.:

FA110



1 LEVEL 1 - FIRE ALARM - AREA 1
3/16" = 1'-0"

GENERAL NOTES:

1. FA CONTRACTOR SHALL PROVIDE ALL PANELS, EQUIPMENT, DEVICES, AND CONNECTIVITY RELATED TO THE FIRE ALARMS SYSTEM.
2. FA CONTRACTOR SHALL COORDINATE WITH THE FIRE SUPPRESSION CONTRACTOR FOR FLOW SWITCH,TAMPERS SWITCH AND SOLENOID DELUGE VALVE CONNECTIVITY.
3. FA CONTRACTOR SHALL FURNISH AND INSTALL LINEAR HEAT DETECTOR CABLE FOR THE DELUGE SYSTEM
4. FA CONTRACTOR SHALL FURNISH ALL DUCT DETECTORS AND COORDINATE PROVIDE TO THE DIVISION 21 CONTRACTOR.
5. CONTRACTOR SHALL FURNISH AND INSTALL LINEAR HEAT DETECTOR CABLE THE LENGTH OF THE BUILDING AS IDENTIFIED IN DRAWINGS.

KEYED NOTES:

CONTRACTOR SHALL FURNISH AND INSTALL:

(1) LINEAR HEAT DETECTOR CABLE (LHD). LHD SHALL BE STRAPPED DIRECTLY TO THE DELUGE SPRINKLER PIPE USING MANUFACTURE SUPPORT TIES.
LHD CABLE SHALL BE ONE CONTINUOUS RUN FOR THE ENTIRE LENGTH OF THE BUILDING (APRON SIDE).

FIRE ALARM - ADD ALTERNATE NOTES:

1. FA CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. FA CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

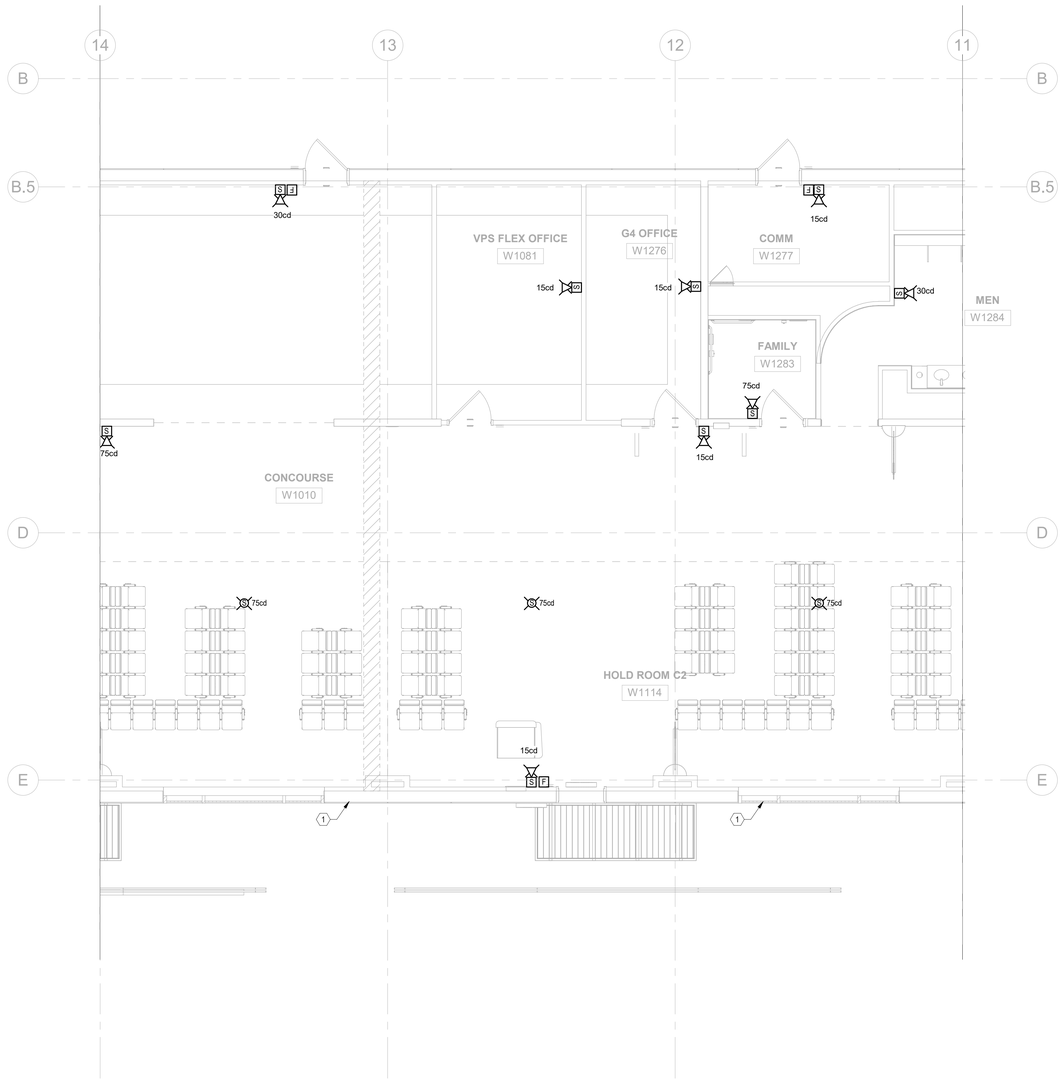
BIM 360://Design of Satellite Concourse/VPS_ETSTCFA.rvt

2/10/2020 4:42:35 PM



1 LEVEL 1 - FIRE ALARM - AREA 3
3/16" = 1'-0"

GENERAL NOTES:

1. FA CONTRACTOR SHALL PROVIDE ALL PANELS, EQUIPMENT, DEVICES, AND CONNECTIVITY RELATED TO THE FIRE ALARMS SYSTEM.
2. FA CONTRACTOR SHALL COORDINATE WITH THE FIRE SUPPRESSION CONTRACTOR FOR FLOW SWITCH,TAMPERS SWITCH AND SOLENOID DELUGE VALVE CONNECTIVITY.
3. FA CONTRACTOR SHALL FURNISH AND INSTALL LINEAR HEAT DETECTOR CABLE FOR THE DELUGE SYSTEM
4. FA CONTRACTOR SHALL FURNISH ALL DUCT DETECTORS AND COORDINATE PROVIDE TO THE DIVISION 21 CONTRACTOR.
5. CONTRACTOR SHALL FURNISH AND INSTALL LINEAR HEAT DETECTOR CABLE THE LENGTH OF THE BUILDING AS IDENTIFIED IN DRAWINGS.

KEYED NOTES:

CONTRACTOR SHALL FURNISH AND INSTALL:

(1) LINEAR HEAT DETECTOR CABLE (LHD). LHD SHALL BE STRAPPED DIRECTLY TO THE DELUGE SPRINKLER PIPE USING MANUFACTURE SUPPORT TIES.
LHD CABLE SHALL BE ONE CONTINUOUS RUN FOR THE ENTIRE LENGTH OF THE BUILDING (APRON SIDE).

FIRE ALARM - ADD ALTERNATE NOTES:

1. FA CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. FA CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

FIRE ALARM - ADD ALTERNATE NOTES:

1. FA CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. FA CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

FIRE ALARM SYSTEM RISER NOTES:

1. THIS RISER DIAGRAM IS BASED ON SIEMENS BUILDING TECHNOLOGIES DESIGO VOICE FIRE ALARM CONTROL PANEL. THIS DIAGRAM IS DIAGRAMMATIC ONLY AND DOES NOT REPRESENT ACTUAL DEVICE QUANTITIES UNLESS OTHERWISE NOTED. IT IS A REPRESENTATION OF THE INTENDED SYSTEM FOR THIS PROJECT. SEE THE FLOOR PLANS FOR EXACT QUANTITIES AND LOCATIONS OF FIELD EQUIPMENT. SEE THE PROJECT SPECIFICATIONS FOR PERFORMANCE AND COMPLIANCE REQUIREMENTS. QUANTITY AND SIZE OF CONDUCTORS TO BE DETERMINED BY SIEMENS.
2. THE SYSTEM SHALL BE UL LISTED FOR FIRE [UL864] AND MASS NOTIFICATION [UL2572] IN ONE (1) FIRE ALARM CONTROL PANEL (FACP). IT SHALL ALSO SUPPORT GAS ALARM EVENTS FOR CO DETECTION, PER NFPA 72.
3. THE SYSTEM SHALL HAVE THE CAPACITY TO NETWORK UP TO 32 FIRE AND VOICE PANELS UTILIZING VOICE-OVER-IP (VOIP) TECHNOLOGY. ALL FIRE AND VOICE SIGNALS SENT OVER THE SAME CONDUCTORS. PEER-TO-PEER NETWORKED PANELS SHALL HAVE THE CAPABILITY OF DISPLAYING LOCAL OR GLOBAL EVENTS. THE NETWORK SHALL ALSO SUPPORT THE ABILITY TO INTERFACE WITH A UL LISTED DESKTOP WORKSTATION.
4. PROVIDE AUXILIARY FIRE ALARM SIGNAL PANEL(S) AND VOICE AMPLIFIERS W/ BATTERY BACKUP AS REQUIRED TO SUPPORT NOTIFICATION APPLIANCE LOADS. THE SYSTEM SHALL HAVE THE CAPABILITY TO SUPPORT A THREE-CHANNEL MESSAGE PLAYER WITH UP TO 300 MESSAGES.
5. PROVIDE A MANUAL VOICE PAGING SWITCHES FOR 'ALL CALL' FOR SIMULTANEOUSLY PAGING THE ENTIRE FACILITY AND SELECTIVE PAGING FOR EACH FLOOR AND FIRE AREA.
6. ALL WIRING REQUIREMENTS SHALL BE AS PER MANUFACTURER'S RECOMMENDATIONS.
7. PROVIDE END OF LINE RESISTERS AS NECESSARY.
8. ALL ADDRESSABLE SLC'S SHALL BE NFPA 72 CLASS B, STYLE 4.
9. ALL NOTIFICATION NAC'S SHALL BE NFPA 72 CLASS B, STYLE Y.
10. STROBE CANDELAS MUST BE SIZED PER NFPA 72 REQUIREMENTS BY THE FIRE ALARM VENDOR AND SHOWN ON THE SHOP DRAWINGS.
11. ALL PANEL BATTERY BACKUP (STANDBY & ALARM) SHALL BE SIZED PER NFPA 72 REQUIREMENTS.
12. A COMPLETE SET FOR FIRE ALARM PRODUCT CUTSHEETS, FIRE ALARM SHOP DRAWINGS, AND BATTERY/ VOLTAGE/ LOAD CALCULATIONS MUST BE SUBMITTED AND APPROVED PRIOR TO INSTALLATION.
13. PRIMARY FACP POWER FED VIA BRANCH CIRCUIT(S) DEDICATED FOR THE FIRE ALARM SYSTEM.
14. ALL EARTH GROUND PANEL CONNECTIONS REQUIRED BY THE MANUFACTURER SHALL BE CONNECTED TO THE BUILDING'S GROUND. PANEL NEUTRAL OR GROUNDING TO CONDUIT/ BUILDING STEEL NOT ACCEPTABLE.
15. FOR EXTERIOR BUILDING MOUNTED LINEAR HEATER DETECTORS, CONTRACTOR SHALL INSTALL SYSTEMS AS RECOMMENDED BY THE FIRE ALARM MANUFACTURER. INCLUDE ALL SYSTEM REQUIREMENTS INCLUDING POWER, CONDUIT AND WIRING FOR A FULLY FUNCTIONING SYSTEM TO ACTIVATE THE EXTERIOR BUILDING MOUNTED DELUGE SYSTEM. COORDINATE WITH FIRE PROTECTION DOCUMENTS FOR ADDITIONAL INSTALLATION REQUIREMENTS.

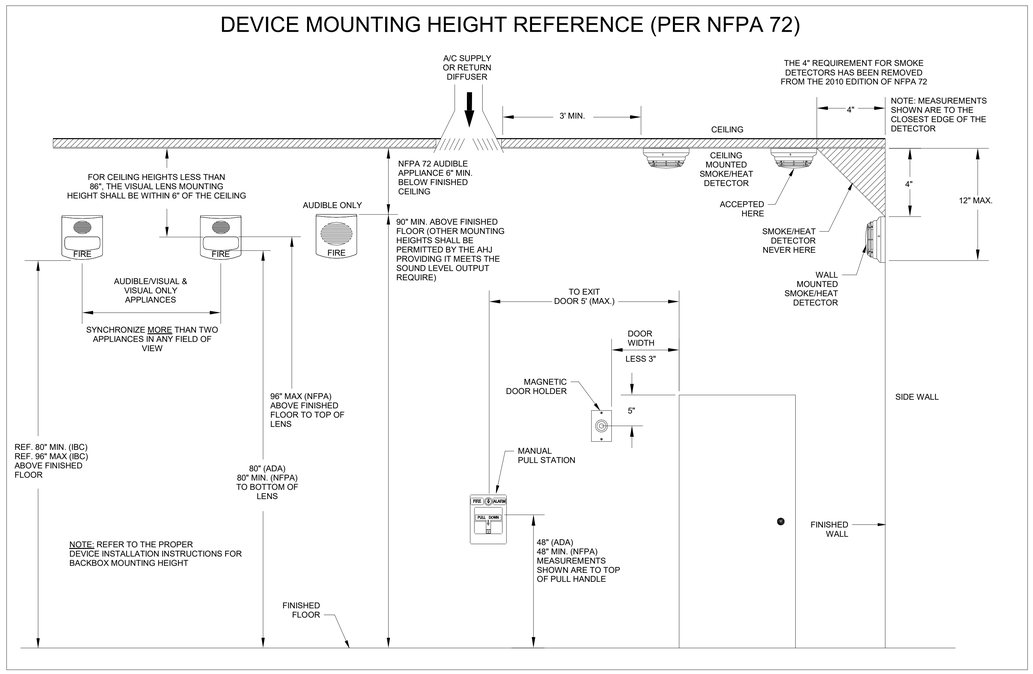
SINGLE LINE DIAGRAM - FIRE ALARM

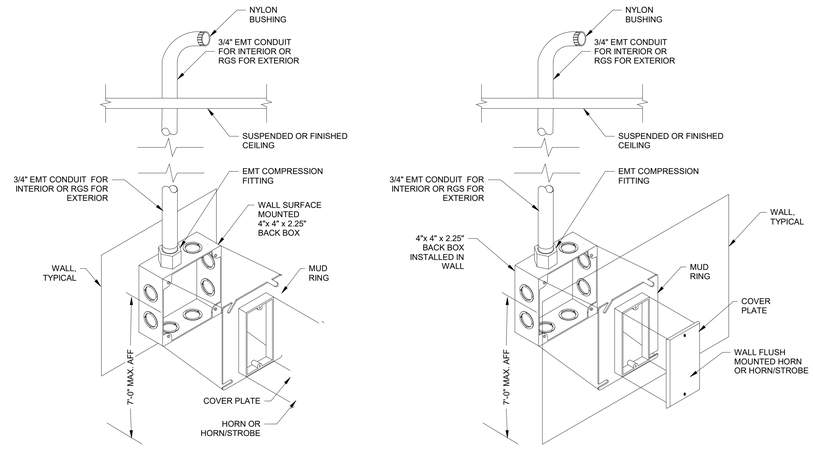
BID DOCUMENT

Drawing No.:

FA511



1 FIRE ALARM DEVICE LOCATION LAYOUTS - TYPICAL
AS NOTED

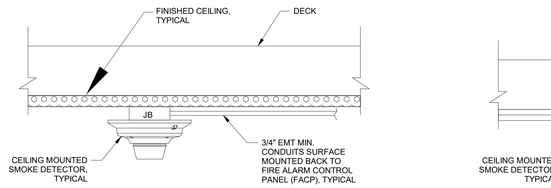


WALL SURFACE MOUNT, TYPICAL

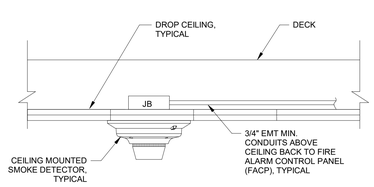
WALL FLUSH MOUNT, TYPICAL

NOTE:
1. TYPICAL STROBE OR HORN/STROBE SHALL USE MANUFACTURER BACBOX FOR ALL DEVICES UNLESS FLUSH MOUNTED.
2. HORN/STROBE SHALL BE WHEELOCK MODEL ET70WP-2475W-FR OR LATEST MODEL.
3. STROBE SHALL BE WHEELOCK MODEL RSS-24MCC-FW & RSS-24MCC-FR OR LATEST MODEL.

3 FIRE ALARM PULL STATION INSTALLATION DETAILS
NONE



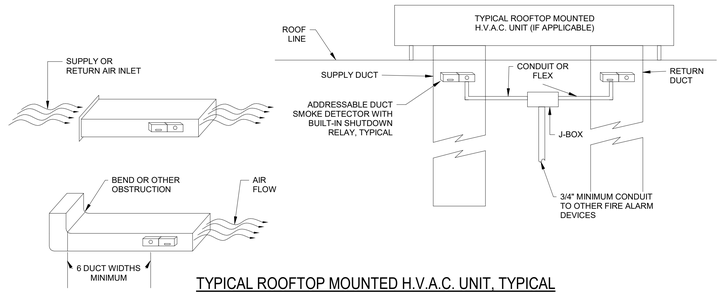
SMOKE/HEAT DETECTOR FOR FIXED CEILINGS, TYPICAL



SMOKE/HEAT DETECTOR FOR DROP CEILINGS, TYPICAL

NOTE:
1. TYPICAL HEAT AND SMOKE DETECTORS SHALL USE MANUFACTURER BACBOX FOR ALL DEVICES.
2. SMOKE DETECTORS SHALL BE 4098-9714 TRUEALARM ANALOG SENSOR WITH ISOLATOR BASE (STYLE 4) OR LATEST MODEL.
3. HEAT DETECTORS SHALL BE 4098-9733 TRUEALARM ANALOG SENSOR WITH ISOLATOR BASE (STYLE 4) OR LATEST MODEL.

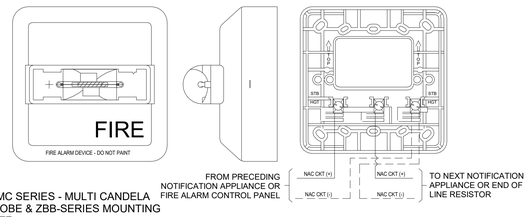
4 FIRE ALARM DETECTOR INSTALLATION DETAILS
NONE



TYPICAL ROOFTOP MOUNTED H.V.A.C. UNIT, TYPICAL

5 FIRE ALARM DUCT SMOKE DETECTOR INSTALLATION DETAILS
NONE

NOTES:
1. STROBES CAN BE SYNCHRONIZED USING THE SIEMENS DSC SYNC MODULE OR WITH THE BUILT-IN SYNC PROTOCOL IN SIEMENS PANELS AND POWER SUPPLIES.
2. FIELD SELECTABLE CANDELA.
3. Z SERIES DEVICES TO BE MOUNTED ON THE ZBB BACK PLATE. REMOVE DUST COVER BEFORE DEVICE INSTALLATION.
4. WHEN TERMINATING FIELD WIRES, DO NOT USE MORE LEAD LENGTH THAN REQUIRED. EXCESS LEAD LENGTH COULD RESULT IN INSUFFICIENT SPACE FOR THE APPLIANCE.
5. REFER TO THE APPLICABLE NFPA CODE AND FIELD DEVICE INSTALLATION FOR CORRECT MOUNTING HEIGTHS.
6. THE Z SERIES UNIVERSAL MOUNTING BACK PLATE CAN BE MOUNTED TO A SINGLE GANG, DOUBLE GANG, 4" SQUARE, 3 1/2" AND 4" OCTAGON ELECTRICAL BOX.
7. SEE INSTALLATION SHEET FOR ADDITIONAL INFORMATION ON MOUNTING AND CONNECTION OPTIONS.



ZR-MC SERIES - MULTI CANDELA STROBE & ZBB-SERIES MOUNTING PLATE
12" = 1'-0"

NOTES:
1. STROBES CAN BE SYNCHRONIZED USING THE SIEMENS DSC SYNC MODULE OR WITH THE BUILT-IN SYNC PROTOCOL IN SIEMENS PANELS AND POWER SUPPLIES.
2. FIELD SELECTABLE CANDELA, HORN TYPE AND dBA SETTING.
3. Z SERIES DEVICES TO BE MOUNTED ON THE ZBB BACK PLATE. REMOVE DUST COVER BEFORE DEVICE INSTALLATION.
4. WHEN TERMINATING FIELD WIRES, DO NOT USE MORE LEAD LENGTH THAN REQUIRED. EXCESS LEAD LENGTH COULD RESULT IN INSUFFICIENT SPACE FOR THE APPLIANCE.
5. REFER TO THE APPLICABLE NFPA CODE AND FIELD DEVICE INSTALLATION FOR CORRECT MOUNTING HEIGTHS.
6. THE Z SERIES UNIVERSAL MOUNTING BACK PLATE CAN BE MOUNTED TO A SINGLE GANG, DOUBLE GANG, 4" SQUARE, 3 1/2" AND 4" OCTAGON ELECTRICAL BOX.
7. SEE INSTALLATION SHEET FOR ADDITIONAL INFORMATION ON MOUNTING AND CONNECTION OPTIONS.

GENERAL COMMUNICATIONS SYSTEM NOTES:

1. THE FOLLOWING GENERAL NOTES AS LISTED BELOW SHALL APPLY TO ALL COMMUNICATIONS SYSTEM REQUIREMENTS AS INDICATED ON ALL TS- SERIES CONTRACT DRAWINGS.
2. DRAWINGS FOR THIS WORK ARE DIAGRAMMATIC AND INTENDED TO CONVEY THE EXTENT, GENERAL ARRANGEMENT AND LOCATIONS OF THE WORK. BECAUSE OF THE SCALE OF THE DRAWINGS, CERTAIN BASIC ITEMS SUCH AS ACCESS PANELS, CONDUITS, CABINET SIZES, PENETRATION SLEEVES, PULL BOXES, BACKBOXES AND JUNCTION BOXES MAY NOT BE SHOWN. INCLUDE ALL ITEMS WHERE REQUIRED BY CODE, MANUFACTURER AND RELATED SPECIFICATION SECTIONS FOR THE PROPER INSTALLATION OF ALL WORK.
3. DUE TO SCALE OF THE DRAWINGS, ALL COMMUNICATIONS DEVICE SYMBOLS ARE SHOWN ON DRAWINGS AS CLOSE AS POSSIBLE TO THEIR INTENDED LOCATION. CONTRACTOR SHALL COORDINATE IN THE FIELD THE PROPER INSTALLATION OF ALL EQUIPMENT, DEVICES, CONTROLS AND CABLING. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL REQUIREMENTS.
4. COORDINATE WITH ALL TRADES AND SYSTEM INTEGRATORS ANY CONDITIONS RELATED TO THE INSTALLATION OF ALL SYSTEMS. THE CONTRACTOR SHALL COORDINATE WITH THE APPROPRIATE TRADE ALL INSTALLATION REQUIREMENTS IMPACTING THE PLACEMENT OF ALL SYSTEM COMPONENTS TO THE SATISFACTION OF ALL CONCERNED TRADES.
5. COORDINATE EXACT LOCATION OF ALL DESK, FURNITURE OR COUNTER MOUNTED EQUIPMENT WITH OWNER AND ARCHITECT AND ALL AFFECTED TRADES PRIOR TO THE INSTALLATION OF ANY EQUIPMENT AND/OR CABLING.
6. COORDINATE EXACT LOCATION(S) OF ALL CEILING MOUNTED CABLE, CONDUITS, EQUIPMENT AND/OR DEVICES WITH ALL ARCHITECTURAL PLANS, REFLECTED CEILING PLANS AND ALL AFFECTED TRADES PRIOR TO INSTALLATION.
7. THE CONTRACTOR SHALL FURNISH AND INSTALL ALL EQUIPMENT, DEVICES, CONNECTIVITY, SOFTWARE LICENSING, SOFTWARE UPGRADES, MOUNTING BRACKETS, SUPPORTS AND APPURTENANCES AND ADHERE TO MANUFACTURER INSTALLATION REQUIREMENTS IN THE CONTRACT DRAWINGS AND WRITTEN SPECIFICATIONS UNLESS OTHERWISE NOTED.
8. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING EXACT LOCATION(S) OF ALL DATA, TELEPHONE AND A/V OUTLETS, ELECTRICAL RECEPTACLES AND EQUIPMENT WITH ALL ARCHITECTURAL PLANS, FURNITURE PLANS AND ALL AFFECTED TRADES PRIOR TO INSTALLATION. FAILURE TO PROPERLY COORDINATE PRIOR TO INSTALLATION SHALL RESULT IN THE CONTRACTOR PROVIDING ALL MODIFICATIONS AT NO ADDITIONAL COSTS TO THE PROJECT.
9. ALL HORIZONTAL CATEGORY 6 UTP CABLE SHALL BE PLENUM RATED CABLE AND SHALL BE BUNDLED AND ROUTED THROUGH THE FACILITY AND SHALL TERMINATE AT THE NEAREST MDF/IDF EQUIPMENT RACKS. ALL HORIZONTAL CABLE BUNDLES SHALL NOT CONTAIN ANY AC CONDUCTING CABLING. ALL HORIZONTAL CABLE DROPS SHALL NOT EXCEED 294' FROM PATCH PANEL TO OUTLET TERMINATION AND SHALL BE TESTED AND CERTIFIED IN ACCORDANCE WITH ALL REQUIREMENTS OF THE CONTRACT DOCUMENTS. REFER TO RELATED SPECIFICATIONS SECTIONS FOR ADDITIONAL INFORMATION.
10. ALL FIBER OPTIC BACKBONE CABLING SHALL BE ROUTED THROUGH THE FACILITY VIA DEDICATED CONDUITS AND VERTICAL PIPE CHASES INSTALLED WITH PROTECTIVE INNERDUCT CONDUIT SYSTEM AND SHALL TERMINATE AT ALL APPROPRIATE MDF/IDF EQUIPMENT RACKS. THE CONTRACTOR SHALL COORDINATE ALL EQUIPMENT, RACK SPACE REQUIREMENTS, WITH THE OWNER APPROPRIATE SYSTEM INTEGRATORS AND ARCHITECT. ALL FIBER OPTIC CABLING SHALL BE TESTED AND CERTIFIED IN ACCORDANCE WITH ALL REQUIREMENTS OF THE CONTRACT DOCUMENTS. REFER TO RELATED SPECIFICATIONS SECTIONS FOR ADDITIONAL INFORMATION.
11. ALL CONDUITS SHALL BE SIZED AND INSTALLED IN ACCORDANCE WITH NFPA 70 AND PROJECT SPECIFICATIONS. ALL CONDUITS SHALL BE A MINIMUM OF 3/4" UNLESS OTHERWISE NOTED.
12. ALL SYSTEM WIRING, CONDUITS AND EQUIPMENT INSTALLATION SHALL BE IN ACCORDANCE WITH GOOD ENGINEERING PRACTICES AND BY ALL IEEE, ANSI/TIA, NEC AND MANUFACTURER'S REQUIREMENTS. ALL WIRING SHALL COMPLY WITH ALL STATE AND LOCAL ELECTRICAL CODES AND SHALL TEST FREE FROM ALL GROUNDS, SHORTS, STRAY VOLTAGES AND EMI.
13. PROVIDE ALL EQUIPMENT CLEARANCES IN ACCORDANCE WITH NEC REQUIREMENTS. ARRANGE EQUIPMENT TO FACILITATE UNRESTRICTED ACCESS FOR MAINTENANCE AND SERVICE AROUND ALL EQUIPMENT, COMPONENTS AND/OR CABLE TERMINATIONS.
14. PROPERLY GROUND AND BOND ALL EQUIPMENT, RACKS, CABINET'S, CONDUITS AND CABLE SHIELDS IN ACCORDANCE WITH ALL REQUIREMENTS OF THE NFPA 70, ANSI/TIA- 607-C AND EQUIPMENT MANUFACTURER. ALL EQUIPMENT AND COMMUNICATIONS CIRCUITS SHALL BE PROPERLY SURGE PROTECTED AND GROUNDED TO MINIMIZE DAMAGE DUE TO LIGHTNING STRIKES, SNEAK CURRENTS AND OTHER TRANSIENT VOLTAGE SPIKES. ALL SURGE PROTECTION AND GROUNDING SHALL BE IN ACCORDANCE WITH ALL REQUIREMENTS OF THE EQUIPMENT MANUFACTURER, NEC, IEEE AND ANSI/TIA.
15. WHERE EQUIPMENT AND/OR JUNCTION BOXES ARE INSTALLED ABOVE FINISHED CEILINGS, THE CONTRACTOR SHALL PROVIDE ACCESS HATCHES LISTED FOR THE INTENDED APPLICATION. ACCESS HATCHES SHALL BE LOCATED SO THAT SERVICE ACCESS TO THE EQUIPMENT AND/OR JUNCTION BOXES IS UNIMPEDED.
16. ALL PENETRATIONS OF WALLS AND/OR FLOORS SHALL BE FIRE STOPPED IN ACCORDANCE WITH THE ASTM AND NFPA REQUIREMENTS. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION. INSTALLATION OF FIRE-STOPS SHALL BE PERFORMED BY AN APPLICATOR/INSTALLER QUALIFIED AND TRAINED BY THE MANUFACTURER. INSTALLATION SHALL BE PERFORMED IN STRICT ACCORDANCE WITH MANUFACTURER'S DETAILED INSTALLATION PROCEDURES.
17. PROVIDE THE PROPER INTERFACES TO BUILDING FIRE ALARM, INTRUSION ALARM AND BUILDING AUTOMATION SYSTEMS IN ACCORDANCE WITH ALL APPLICABLE LIFE SAFETY CODES AND MANUFACTURER IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. COORDINATE WITH THE FIRE ALARM SYSTEM PROVIDER FOR ALL REQUIRED SYSTEM INTEGRATION REQUIREMENTS.
18. ALL EQUIPMENT ENCLOSURES LOCATED OUTSIDE OR IN ALL AREAS WITH HIGH MOISTURE OR A RELATIVE HUMIDITY OF 75% OR GREATER SHALL BE NEMA 4X STAINLESS STEEL AND RATED FOR THAT APPLICATION.
19. ALL DEVICES, COMPONENTS OR EQUIPMENT INSTALLED ON THE EXTERIOR OF THE FACILITY SHALL BE PROVIDED IN ACCORDANCE WITH ALL MANUFACTURERS' REQUIREMENTS TO ENSURE THE PROPER OPERATION WHEN EXPOSED TO THE ENVIRONMENTAL CONDITIONS AND/OR AVERAGE ANNUAL LOWEST TEMPERATURE THAT CAN BE ANTICIPATED FOR THE GEOGRAPHIC REGION OF THE FACILITY.
20. ALL INTERIOR AND/OR EXTERIOR COMPONENTS, DEVICES OR SYSTEMS EQUIPMENT EXPOSED TO THE GENERAL POPULATION SHALL BE INSTALLED IN SECURED EQUIPMENT ENCLOSURES WITH TAMPER SWITCHES AND INSTALLED IN SUCH A MANNER THAT RESISTS TAMPERING AND/OR REMOVAL WITHOUT THE USE OF SPECIALIZED TOOLS.
21. FOR EQUIPMENT INSTALLATIONS REQUIRING COORDINATION WITH OTHER TRADES THE CONTRACTOR SHALL PROVIDE ALL TEMPLATES, BACKBOXES AND EQUIPMENT ANCHOR BOLTS FOR MOUNTING OR FLUSH MOUNTING PREPARATION, (E.G. PEDESTALS OR OTHER DEVICES REQUIRING MOUNTING ON WALLS, CONCRETE PADS OR OTHER MATERIALS). COORDINATE DELIVERY OF TEMPLATES AND EQUIPMENT WITH ALL AFFECTED CONTRACTORS.
22. ALL COMMUNICATIONS EQUIPMENT MUST HAVE TRANSIENT SURGE PROTECTION TO COMPLY WITH UL AND NFPA 70 REQUIREMENTS. WHERE ANY CIRCUITS LEAVE THE BUILDING, ADDITIONAL TRANSIENT PROTECTION MUST BE PROVIDED FOR EACH CIRCUIT. ALL TRANSIENT PROTECTION DEVICES MUST BE UL LISTED UNDER STANDARD #497B (ISOLATED LOOP PROTECTORS).
23. REFER TO ALL RELATED CONTRACT DRAWINGS AND SPECIFICATIONS FOR ADDITIONAL INFORMATION AND/OR REQUIREMENTS RELATED TO THE INSTALLATION, PROGRAMMING, TESTING, COMMISSIONING AND CERTIFICATION OF ALL COMMUNICATIONS SYSTEMS.

2. CONTRACTOR SHALL COORDINATE WITH THE ARCHITECTURAL DRAWINGS FOR MOUNTING OUTLET REQUIREMENTS.
3. COORDINATE WITH ALL OTHER TRADES AND DRAWINGS PRIOR TO INSTALLATION AND PLACEMENT OF WORKSTATION OUTLETS AND EQUIPMENT.

KEYED NOTES:

CONTRACTOR SHALL FURNSH AND INSTALL:

(1) 1 1/4" EMT FROM THE NEAREST ACCESSIBLE CEILING TO PODIUM

COMMUNICATIONS - ADD ALTERNATE NOTES:

1. COMMUNICATIONS CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. COMMUNICATIONS CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

GENERAL CABINET/RACK NOTES:

1. THE CABINET/RACK ELEVATION DETAILS ARE DIAGRAMMATIC ONLY AND HAVE BEEN PROVIDED TO DEPICT THE GENERAL ARRANGEMENT AND INSTALLATION OF THE NETWORK COMMUNICATIONS, RADIO, AND ELECTRONIC SECURITY COMPONENTS. THE CONTRACTOR SHALL PROVIDE ALL COMMUNICATIONS, RADIO, AND SECURITY EQUIPMENT CABINETS/RACKS IN ACCORDANCE WITH THE REQUIREMENTS OF THE CONTRACT DOCUMENTS AND SHALL BE CONFIGURED TO SUPPORT ALL EQUIPMENT, COMPONENTS AND CABLING NECESSARY TO MEET THE PERFORMANCE REQUIREMENTS OF ALL SYSTEMS SPECIFIED. THE CONTRACTOR SHALL PROVIDE ALL ELECTRICAL POWER, GROUNDING, SYSTEM COMPONENTS, EQUIPMENT, AND ALL APPURTENANCES AS REQUIRED TO PROVIDE FULLY OPERATING SYSTEMS IN ACCORDANCE WITH ALL PROJECT REQUIREMENTS.
2. THE COMMUNICATIONS EQUIPMENT ROOMS ARE A SHARED SPACE BETWEEN THE COMMUNICATIONS NETWORKS AND SECURITY ELECTRONIC SYSTEMS. IT SHALL BE THE RESPONSIBILITY OF THE TELECOMMUNICATIONS INTEGRATOR TO COORDINATE WITH THE SECURITY INTEGRATOR FOR ALL SPACE REQUIREMENTS. THE TELECOMMUNICATIONS INTEGRATOR SHALL DEMONSTRATE AT THE TIME OF SHOP DRAWING SUBMISSION THAT THE COORDINATION BETWEEN THE TWO DIVISION INTEGRATORS HAS MET THIS COORDINATION REQUIREMENT.
3. THE CONTRACTOR SHALL REVIEW ALL COMMUNICATIONS, RADIO, AND ELECTRONIC SECURITY DRAWINGS AS WELL AS ALL DIVISION 13 AND 16 SPECIFICATION SECTIONS RELATED TO THE INSTALLATION AND CONFIGURATION OF ALL EQUIPMENT, COMPONENTS, ELECTRICAL POWER AND EQUIPMENT CABINETS/RACKS INCLUDED AS PART OF THIS PROJECT.
4. COORDINATE WITH ALL APPLICABLE TRADES IN SUBMITTAL OF SHOP DRAWINGS AND THE INSTALLATION OF ALL EQUIPMENT CABINETS/RACKS. ALL SHOP DRAWINGS SHALL DETAIL SPACE CONDITIONS IN ORDER TO ACCOMMODATE OTHER CONCERNED TRADES, ALL EQUIPMENT LOCATIONS ARE SUBJECT TO FINAL REVIEW BY THE ARCHITECT.
5. ALL ELECTRICAL POWER SERVING THE RACK MOUNTED UPS UNITS AND ALL ASSOCIATED COMMUNICATIONS, RADIO, AND SECURITY EQUIPMENT SHALL BE PROVIDED FROM DEDICATED EMERGENCY ELECTRICAL DISTRIBUTION PANELS LOCATED WITHIN EACH COMMUNICATIONS AND RADIO EQUIPMENT ROOMS. COORDINATE WITH ELECTRICAL DRAWINGS FOR EXACT LOCATION AND SIZE OF EACH ELECTRICAL DISTRIBUTION PANEL.
6. PROVIDE IDENTIFICATION OF ALL EQUIPMENT CABINETS/RACKS, CONTROL PANELS, SUB-CONTROL PANELS, REMOTE RELAY CABINETS AND SECURITY EQUIPMENT PANELS, SYSTEM INTERFACE CABINETS, AND SIMILAR EQUIPMENT WITH 1-1/2 INCH WHITE LETTERING. ENGRAVED LAMINATED PLASTIC SIGNS SHALL BE USED FOR IDENTIFICATION AND SECURELY FASTENED IN ACCORDANCE WITH THE PROJECT REQUIREMENTS.
7. WORK SHALL BE NEAT IN APPEARANCE, FREE OF ROUGH EDGES, SCRATCHES, BLEMISHES, CRACKS AND EXPOSED GAPS. ALL EQUIPMENT SHALL BE SECURED TO THE MOUNTING SURFACE, AND FASTENED WITH HARDWARE APPROVED BY THE MANUFACTURER AND CAPABLE OF SUPPORTING THE RATED LOAD. ALL CABLES WITHIN ENCLOSURES SHALL BE NEATLY ROUTED AND TIE-WRAPPED WITH VELCRO STRAPS AT 6 INCHES ON CENTER (NYLON TIE-WRAPS ARE NOT ACCEPTABLE), ALL WIRE SPLICES SHALL BE TERMINATED ON TERMINAL STRIPS, SPLICES UTILIZING WIRE NUTS SHALL NOT BE ACCEPTABLE.
8. ALL WIRING SHALL TERMINATE ON FIXED TERMINAL STRIPS, PUNCH BLOCKS OR PATCH PANELS IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS. NO SPLICES SHALL BE PERMITTED IN UNDERGROUND PULL BOXES AND NON-ACCESSIBLE JUNCTION BOXES. ALL JUNCTION BOXES CONTAINING ANY SYSTEM SPLICES SHALL BE UNIQUELY IDENTIFIED.
9. PROVIDE ALL EQUIPMENT CLEARANCES IN ACCORDANCE WITH NEC REQUIREMENTS. ARRANGE EQUIPMENT TO FACILITATE UNRESTRICTED ACCESS FOR MAINTENANCE AND SERVICE AROUND ALL EQUIPMENT, COMPONENTS AND/OR CABLE TERMINATIONS.
10. ALL CONTROL EQUIPMENT MUST HAVE TRANSIENT PROTECTION TO COMPLY WITH UL864 REQUIREMENTS. WHERE ANY CIRCUITS LEAVE THE BUILDING, ADDITIONAL TRANSIENT PROTECTION MUST BE PROVIDED FOR EACH CIRCUIT. DEVICES MUST BE UL LISTED UNDER STANDARD #497B (ISOLATED LOOP PROTECTORS). ALL EQUIPMENT CABINETS SHALL BE PROPERLY GROUNDED AND BONDED IN ACCORDANCE WITH NEC, IEEE AND MANUFACTURERS REQUIREMENTS.
11. ALL SYSTEM CABLING SHALL BE INSTALLED IN DEDICATED RACEWAYS OR CABLE TRAYS UNLESS OTHERWISE INDICATED.
12. ALL PENETRATIONS OF WALLS AND FLOORS SHALL BE FIRE STOPPED IN ACCORDANCE WITH THE ASTM AND NFPA. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION. INSTALLATION OF FIRE-STOPS SHALL BE PERFORMED BY AN APPLICATOR/INSTALLER QUALIFIED AND TRAINED BY THE MANUFACTURER. INSTALLATION SHALL BE PERFORMED IN STRICT ACCORDANCE WITH MANUFACTURER'S DETAILED INSTALLATION PROCEDURES.
13. REFER TO ALL RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION.
14. RACKS ARE SEPARATED FOR CLARITY PURPOSES ONLY. REFER TO FLOOR PLANS FOR EXACT LAYOUT AND QUANTITY.

GENERAL EQUIPMENT NOTES:

1. THE CONTRACTOR SHALL FURNISH AND INSTALL ALL EQUIPMENT, DEVICES, CABLING, CONNECTIVITY, PATCHING, MOUNTS AND SUPPORTS, APPURTENANCES AS INTENDED BY THE DRAWINGS.
2. THE CONTRACTOR SHALL USE THE FLOOR PLANS TO IDENTIFY THE EXACT QUANTIFY OF JACKS/FACEPLATES, AND FIELD DEVICES.
3. THE CONTRACTOR SHALL PROVIDE TERMINATE CCTV DATA ONTO A DEDICATED PATCH PANEL IN CABINET #1.
4. THE CONTRACTOR SHALL PROVIDE CISCO 3850 NETWORK SWITCH TO ACCOMMODATE THE AMOUNT OF CABLES WITHIN EACH IDF.

MOUNTING HEIGHTS

CEILING	SMOKE AND HEAT DETECTORS, 360° SECURITY MOTION DETECTORS, CCTV SURVEILLANCE CAMERAS, PUBLIC ADDRESS AND VOICE EVACUATION SPEAKERS, WIRELESS ACCESS POINTS. TV AND LCD PROJECTOR JACKS
8' A.F.G.	EXTERIOR VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, EXTERIOR PUBLIC ADDRESS SPEAKERS.
7'-5" A.F.F.	CLOCKS, COMBINATION CLOCK/SPEAKERS, TRUMPET SPEAKERS
7'-0" A.F.F.	VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, WALL MOUNTED SECURITY MOTION DETECTORS (CENTER OF DEVICE)
6" ABOVE DOOR JAMB	REQUEST TO EXIT MOTION DETECTORS
5'-6" A.F.F	TOP OF PLYWOOD TELEPHONE BACKBOARD
5'-4" A.F.F.	FIRE ALARM ANNUNCIATOR PANELS, FIRE FIGHTER CONTROL STATIONS, SECURITY ANNUNCIATOR PANELS
4'-8" A.F.G. MAX	PEDESTAL MOUNT INTERCOM PEDESTAL MOUNT CARD READER
4'-0" A.F.F.	"PS" TELEPHONE OUTLETS (TOP OF COIN SLOT),(WALL MOUNTED)-TELEPHONE INSTRUMENTS, INTERCOM STATIONS, FIRE FIGHTER TELEPHONE JACKS, FIRE ALARM MANUAL STATIONS, CARD READERS, MANUAL REQUEST TO EXIT DEVICES, WALL MOUNTED DURESS ALARM STATIONS, RESCUE ASSISTANCE PANELS, LCD KEYPADS (CENTER OF DEVICE)
UNDER COUNTER OR DESK	DURESS ALARM BUTTONS, DOOR RELEASE BUTTOMS
1'-6" A.F.F.	DATA/TELEPHONE JACKS, LOW TELEVISION JACKS, MICROPHONE JACKS
0'-0"	IN FLOOR JUNCTION BOXES FLUSH TO FINISHED FLOOR (FF) (DATA, TELEPHONE, MICROPHONE, MEDIA)

1. IN MASONRY CONSTRUCTION THE MOUNTING HEIGHTS SHALL BE USED FOR REFERENCE TO THE NEAREST BLOCK OR BRICK COURSING.
2. THE ABOVE MOUNTING ELEVATIONS ARE TO CENTER OF DEVICE AND SHALL BE ADHERED TO UNLESS SPECIFICALLY NOTED OR DETAILED OTHERWISE ON THE DRAWINGS AND/OR SPECIFICATIONS.
3. COORDINATE THE INSTALLATION AND MOUNTING ELEVATIONS OF ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES WITH ARCHITECT AND ALL AFFECTED TRADES PRIOR TO INSTALLATION. DOCUMENT ALL MOUNTING ELEVATIONS FOR ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES AT THE TIME OF SHOP DRAWING SUBMITTAL

GENERAL PAGING SYSTEM NOTES:

1. THE FOLLOWING GENERAL NOTES AS LISTED BELOW SHALL APPLY TO ALL PAGING SYSTEM REQUIREMENTS AS INDICATED ON ALL TP SERIES CONTRACT DRAWINGS.
2. THE EXTENT OF THE PAGING SYSTEM WORK FOR THIS PROJECT SHALL CONSIST OF THE GENERAL CONTRACTOR PROVIDING ALL CABLING, CONDUITS, BACKBOXES, DEVICES, COMPONENTS, ACTIVE ELECTRONICS, PROCESSORS, SERVERS, AND APPURTENANCES NECESSARY TO SUPPORT THE COMPLETE INSTALLATION OF THE PAGING SYSTEM IN ACCORDANCE WITH THE CONTRACT DRAWINGS. REFER TO RELATED DIVISION SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION.
3. THE COMMUNICATIONS EQUIPMENT ROOM SHALL BE A SHARED SPACE BETWEEN THE ELECTRONIC SECURITY, THE DATA/TELECOMMUNICATIONS AND PAGING SYSTEMS. IT SHALL BE THE RESPONSIBILITY OF ALL CONTRACTORS TO COORDINATE WITH ALL AFFECTED TRADES FOR PROPER EQUIPMENT SPACE REQUIREMENTS. ALL CONTRACTORS SHALL DEMONSTRATE AT THE TIME OF SHOP DRAWING SUBMISSION THAT THE COORDINATION BETWEEN ALL AFFECTED TRADES HAS MET ALL COORDINATION REQUIREMENTS.
4. DUE TO SCALE OF THE DRAWINGS, ALL PAGING SYSTEM EQUIPMENT SYMBOLS ARE SHOWN ON DRAWINGS AS CLOSE AS POSSIBLE TO THEIR INTENDED LOCATION. CONTRACTOR SHALL COORDINATE IN THE FIELD THE PROPER INSTALLATION OF ALL EQUIPMENT, DEVICES, CONTROLS, CONDUITS AND CABLING. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL REQUIREMENTS.
5. THE CONTRACTOR SHALL COORDINATE WITH ALL AFFECTED TRADES ANY CONDITIONS RELATED TO THE PROPER INSTALLATION OF ALL SYSTEMS. COORDINATION SHALL BE BETWEEN ALL APPROPRIATE TRADES REGARDING ALL INSTALLATION REQUIREMENTS IMPACTING THE PLACEMENT OF ALL SYSTEM CONDUITS, HARDWARE AND COMPONENTS TO THE SATISFACTION OF ALL CONCERNED TRADES.
6. COORDINATE EXACT LOCATION OF ALL DESK OR COUNTER MOUNTED EQUIPMENT WITH OWNER AND ARCHITECT AND ALL AFFECTED TRADES PRIOR TO THE INSTALLATION OF ANY EQUIPMENT AND/OR CABLING.
7. COORDINATE EXACT LOCATION(S) OF ALL CEILING MOUNTED CABLE, CONDUITS, EQUIPMENT AND/OR DEVICES WITH ALL ARCHITECTURAL PLANS, REFLECTED CEILING PLANS AND ALL AFFECTED TRADES PRIOR TO INSTALLATION.
8. ALL EXTERIOR PAGING SPEAKERS SHALL BE RATED FOR THE ENVIRONMENTAL APPLICATION AND BE PROVIDED WEATHERPROOF HOUSINGS AS INDICATED. ALL EXTERIOR PAGING SPEAKERS SHALL MEET IP65 (NEMA 4) SEALING REQUIREMENTS.
9. ALL PAGING SYSTEM CABLING SHALL BE INSTALLED IN DEDICATED CONDUITS PROVIDED BY THE GENERAL CONTRACTOR. ALL CONDUITS SHALL BE SIZED AND INSTALLED IN ACCORDANCE WITH NFPA 70 AND RELATED PROJECT SPECIFICATIONS. COORDINATE WITH THE ESS INTEGRATOR PRIOR TO INSTALLATION. ALL CONDUITS SHALL BE A MINIMUM OF 3/4" UNLESS OTHERWISE NOTED.
10. ALL CONDUITS/RACEWAYS SHALL BE INSTALLED IN A MANNER THAT PREVENTS TAMPERING OR REMOVAL WHEN INSTALLED IN AREAS EXPOSED TO THE GENERAL POPULATION. PROVIDE TAMPER-RESISTANT INSTALLATION UTILIZING "TORX WITH PEG" SECURITY-FASTENING DEVICES FOR ALL CONDUITS/RACEWAYS, EQUIPMENT, DEVICES AND APPURTENANCES IN ALL AREAS ACCESSIBLE TO THE GENERAL POPULATION AND/OR AREAS SUBJECTED TO TAMPERING OR VANDALISM.
11. ALL SYSTEM WIRING, CONDUITS AND EQUIPMENT INSTALLATION SHALL BE IN ACCORDANCE WITH GOOD ENGINEERING PRACTICES AND BY ALL IEEE, EIA, NEC AND MANUFACTURER'S REQUIREMENTS. ALL WIRING SHALL COMPLY WITH ALL STATE AND LOCAL ELECTRICAL CODES AND SHALL TEST FREE FROM ALL GROUNDS, SHORTS STRAY VOLTAGES AND EMI.
12. PROVIDE ALL EQUIPMENT CLEARANCES IN ACCORDANCE WITH NEC REQUIREMENTS. ARRANGE EQUIPMENT TO FACILITATE UNRESTRICTED ACCESS FOR MAINTENANCE AND SERVICE AROUND ALL EQUIPMENT, COMPONENTS AND/OR CABLE TERMINATIONS.
13. PROPERLY GROUND ALL EQUIPMENT, RACKS, CABINET'S, CONDUITS AND CABLE SHIELDS IN ACCORDANCE WITH ALL REQUIREMENTS OF THE NFPA 70 AND EQUIPMENT MANUFACTURER. ALL EXTERIOR CCTV CAMERAS SHALL BE PROPERLY SURGE PROTECTED AND GROUNDED TO MINIMIZE DAMAGE DUE TO LIGHTNING STRIKES, SNEAK CURRENTS AND OTHER TRANSIENT VOLTAGE SPIKES. ALL SURGE PROTECTION AND GROUNDING SHALL BE IN ACCORDANCE WITH ALL REQUIREMENTS OF THE EQUIPMENT MANUFACTURER. NEC, IEEE AND TIA/EIA.
14. WHERE EQUIPMENT AND/OR JUNCTION BOXES ARE INSTALLED ABOVE FINISHED CEILINGS, THE CONTRACTOR SHALL PROVIDE ACCESS HATCHES LISTED FOR THE INTENDED APPLICATION. ACCESS HATCHES SHALL BE LOCATED SO THAT SERVICE ACCESS TO THE EQUIPMENT AND/OR JUNCTION BOXES IS UNIMPEDED.
15. ALL PENETRATIONS OF WALLS AND/OR FLOORS SHALL BE FIRE STOPPED IN ACCORDANCE WITH THE ASTM AND NFPA REQUIREMENTS. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION. INSTALLATION OF FIRE-STOPS SHALL BE PERFORMED BY AN APPLICATOR/INSTALLER QUALIFIED AND TRAINED BY THE MANUFACTURER. INSTALLATION SHALL BE PERFORMED IN STRICT ACCORDANCE WITH MANUFACTURER'S DETAILED INSTALLATION PROCEDURES.
16. ALL EQUIPMENT ENCLOSURES LOCATED OUTSIDE OR IN ALL AREAS WITH HIGH MOISTURE OR A RELATIVE HUMIDITY OF 75% OR GREATER SHALL BE NEMA 4X STAINLESS STEEL AND RATED FOR THAT APPLICATION.
17. ALL DEVICES, COMPONENTS OR EQUIPMENT INSTALLED ON THE EXTERIOR OF THE FACILITY SHALL BE PROVIDED IN ACCORDANCE WITH ALL MANUFACTURERS' REQUIREMENTS TO ENSURE THE PROPER OPERATION WHEN EXPOSED TO THE ENVIRONMENTAL CONDITIONS AND/OR AVERAGE ANNUAL LOWEST TEMPERATURE THAT CAN BE ANTICIPATED FOR THE GEOGRAPHIC REGION OF THE FACILITY.
18. ALL INTERIOR AND/OR EXTERIOR COMPONENTS, DEVICES OR SYSTEMS EQUIPMENT EXPOSED TO THE GENERAL POPULATION SHALL BE INSTALLED IN SECURED EQUIPMENTENCLOSURES WITH TAMPER SWITCHES AND INSTALLED IN SUCH A MANNER THAT RESISTS TAMPERING AND/OR REMOVAL WITHOUT THE USE OF SPECIALIZED TOOLS.
19. FOR EQUIPMENT INSTALLATIONS REQUIRING COORDINATION WITH OTHER TRADES THE CONTRACTOR SHALL PROVIDE ALL TEMPLATES, BACKBOXES AND EQUIPMENT ANCHOR BOLTS FOR MOUNTING OR FLUSH MOUNTING PREPARATION, (E.G. PEDESTALS OR OTHER DEVICES REQUIRING MOUNTING ON WALLS, CONCRETE PADS OR OTHER MATERIALS). COORDINATE DELIVERY OF TEMPLATES AND EQUIPMENT WITH ALL AFFECTED CONTRACTORS.
20. ALL CONTROL EQUIPMENT MUST HAVE TRANSIENT PROTECTION TO COMPLY WITH UL AND NFPA 70 REQUIREMENTS. WHERE ANY CIRCUITS LEAVE THE BUILDING, ADDITIONAL TRANSIENT PROTECTION MUST BE PROVIDED FOR EACH CIRCUIT. ALL TRANSIENT PROTECTION DEVICES MUST BE UL LISTED UNDER STANDARD #497B (ISOLATED LOOP PROTECTORS).
21. REFER TO SPECIFICATION SECTION 274215 AS WELL AS ALL RELATED SPECIFICATION SECTION FOR PROJECT SUBMITTAL REQUIREMENTS AND ADDITIONAL INFORMATION.

1 LEVEL 1 - PAGING - AREA 6
3/16" = 1'-0"

GENERAL NOTES

1. ALL SPEAKERS, AND EQUIPMENT SHOWN ARE DIAGRAMMATICAL IN REFERENCE TO THE FLOOR PLAN. THE DEVICES SHOWN SHALL BE INSTALLED TO REFLECT THE INTENT OF THE DRAWINGS.
2. CONTRACTOR SHALL COORDINATE WITH THE ARCHITECTURAL DRAWINGS FOR MOUNTING REQUIREMENTS.
3. COORDINATE WITH ALL OTHER TRADES AND DRAWINGS PRIOR TO INSTALLATION AND PLACEMENT OF MICROPHONES AND PAGING SPEAKERS.

KEYED NOTES:

CONTRACTOR SHALL FURNSH AND INSTALL:

(1) (1) MICROPHONE AT THE THESE LOCATIONS

PAGING - ADD ALTERNATE NOTES:

1. PAGING CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. PAGING CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

NOTES:

1. FOR GENERAL NOTES, LEGEND, ABBREVIATIONS AND SYMBOLS, SEE DRAWING TP001.
2. RISER DIAGRAM IS DIAGRAMMATIC ONLY AND HAS BEEN PROVIDED TO DEPICT THE GENERAL ARRANGEMENT AND INSTALLATION REQUIREMENTS OF THE PUBLIC ANNOUNCEMENT (PA) SYSTEM. UNLESS OTHERWISE NOTED, ALL HEADEND PUBLIC ANNOUNCEMENT (PA) SYSTEM (PEAVEY MEDIAMATRIX) EQUIPMENT IS EXISTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING ALL NECESSARY CONDUITS, CABLING, CONNECTING HARDWARE, MOUNTING HARDWARE, BACKBOXES, PULL/JUNCTION BOXES, TRENCHING/DUCTBANKS, PAGING SPEAKER MOUNTING BRACKETS, COMPONENTS, DEVICES, COMMISSIONING UNLESS OTHERWISE NOTED, AS WELL AS ALL LICENSES, ELECTRICAL POWER, GROUNDING AND APPURTENANCES AS REQUIRED TO PROVIDE FULLY OPERATIONAL SYSTEM.
3. REFER TO FLOOR PLANS FOR EXACT LOCATION AND QUANTITY OF PUBLIC ANNOUNCEMENT SPEAKERS.
4. ALL EQUIPMENT ARE NEW UNLESS OTHERWISE NOTED.

PAGING - ADD ALTERNATE NOTES:

1. PAGING CONTRACTOR SHALL PRICE WORK FOR ADD ALTERNATES IN AREAS AS CALLED OUT ON ARCHITECTURAL DRAWINGS AND AS DEFINED ON SHEET G211. INCLUDE MATERIALS AND LABOR COST FOR ADD ALTERNATES AS REQUIRED.
2. PAGING CONTRACTOR SHALL COORDINATE WITH ARCHITECT FOR DELINEATION AND DOCUMENTATION TO INCLUDE ADD ALTERNATES.

MOUNTING HEIGHTS

CEILING	SMOKE AND HEAT DETECTORS, 360° SECURITY MOTION DETECTORS, CCTV SURVEILLANCE CAMERAS, PUBLIC ADDRESS AND VOICE EVACUATION SPEAKERS, WIRELESS ACCESS POINTS. TV AND LCD PROJECTOR JACKS
8' A.F.G.	EXTERIOR VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, EXTERIOR PUBLIC ADDRESS SPEAKERS.
7'-5" A.F.F.	CLOCKS, COMBINATION CLOCK/SPEAKERS, TRUMPET SPEAKERS
7'-0" A.F.F.	VISUAL AND AUDIO/VISUAL FIRE ALARM NOTIFICATION DEVICES, WALL MOUNTED SECURITY MOTION DETECTORS (CENTER OF DEVICE)
6" ABOVE DOOR JAMB	REQUEST TO EXIT MOTION DETECTORS
5'-6" A.F.F	TOP OF PLYWOOD TELEPHONE BACKBOARD
5'-4" A.F.F.	FIRE ALARM ANNUNCIATOR PANELS, FIRE FIGHTER CONTROL STATIONS, SECURITY ANNUNCIATOR PANELS
4'-8" A.F.G. MAX	PEDESTAL MOUNT INTERCOM PEDESTAL MOUNT CARD READER
4'-0" A.F.F.	*PS* TELEPHONE OUTLETS (TOP OF COIN SLOT),(WALL MOUNTED)-TELEPHONE INSTRUMENTS, INTERCOM STATIONS, FIRE FIGHTER TELEPHONE JACKS, FIRE ALARM MANUAL STATIONS, CARD READERS, MANUAL REQUEST TO EXIT DEVICES, WALL MOUNTED DURESS ALARM STATIONS, RESCUE ASSISTANCE PANELS, LCD KEYPADS (CENTER OF DEVICE)
UNDER COUNTER OR DESK	DURESS ALARM BUTTONS, DOOR RELEASE BUTTOMS
1'-6" A.F.F.	DATA/TELEPHONE JACKS, LOW TELEVISION JACKS, MICROPHONE JACKS
0'-0"	IN FLOOR JUNCTION BOXES FLUSH TO FINISHED FLOOR (FF) (DATA, TELEPHONE, MICROPHONE, MEDIA)

1. IN MASONRY CONSTRUCTION THE MOUNTING HEIGHTS SHALL BE USED FOR REFERENCE TO THE NEAREST BLOCK OR BRICK COURSING.
2. THE ABOVE MOUNTING ELEVATIONS ARE TO CENTER OF DEVICE AND SHALL BE ADHERED TO UNLESS SPECIFICALLY NOTED OR DETAILED OTHERWISE ON THE DRAWINGS AND/OR SPECIFICATIONS.
3. COORDINATE THE INSTALLATION AND MOUNTING ELEVATIONS OF ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES WITH ARCHITECT AND ALL AFFECTED TRADES PRIOR TO INSTALLATION. DOCUMENT ALL MOUNTING ELEVATIONS FOR ALL EQUIPMENT, DEVICES, CONTROLS AND APPURTENANCES AT THE TIME OF SHOP DRAWING SUBMITTAL

GENERAL SECURITY SYSTEM NOTES:

1. THE FOLLOWING GENERAL NOTES AS LISTED BELOW SHALL APPLY TO ALL ELECTRONIC SECURITY SYSTEM REQUIREMENTS AS INDICATED ON ALL TS SERIES CONTRACT DRAWINGS.
2. THE EXTENT OF THE ELECTRONIC SECURITY WORK FOR THIS PROJECT SHALL CONSIST OF THE GENERAL CONTRACTOR PROVIDING ALL CABLING, CONDUITS, BACKBOXES, DEVICES, COMPONENTS, ACTIVE ELECTRONICS, PROCESSORS, SERVERS, DOOR HARDWARE AND APPURTENANCES NECESSARY TO SUPPORT THE COMPLETE INSTALLATION OF BOTH ELECTRONIC ACCESS CONTROL AND VIDEO SURVEILLANCE SYSTEMS IN ACCORDANCE WITH THE CONTRACT DRAWINGS. REFER TO RELATED DIVISION SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION.
3. THE COMMUNICATIONS EQUIPMENT ROOM SHALL BE A SHARED SPACE BETWEEN THE ELECTRONIC SECURITY AND THE DATA\TELECOMMUNICATIONS SYSTEMS. IT SHALL BE THE RESPONSIBILITY OF ALL CONTRACTORS TO COORDINATE WITH ALL AFFECTED TRADES FOR PROPER EQUIPMENT SPACE REQUIREMENTS. ALL CONTRACTORS SHALL DEMONSTRATE AT THE TIME OF SHOP DRAWING SUBMISSION THAT THE COORDINATION BETWEEN ALL AFFECTED TRADES HAS MET ALL COORDINATION REQUIREMENTS.
4. DUE TO SCALE OF THE DRAWINGS, ALL SECURITY SYSTEM EQUIPMENT SYMBOLS ARE SHOWN ON DRAWINGS AS CLOSE AS POSSIBLE TO THEIR INTENDED LOCATION. CONTRACTOR SHALL COORDINATE IN THE FIELD THE PROPER INSTALLATION OF ALL EQUIPMENT, DEVICES, CONTROLS, CONDUITS AND CABLING. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL REQUIREMENTS.
5. THE CONTRACTOR SHALL COORDINATE WITH ALL AFFECTED TRADES ANY CONDITIONS RELATED TO THE PROPER INSTALLATION OF ALL SYSTEMS. COORDINATION SHALL BE BETWEEN ALL APPROPRIATE TRADES REGARDING ALL INSTALLATION REQUIREMENTS IMPACTING THE PLACEMENT OF ALL SYSTEM CONDUITS, HARDWARE AND COMPONENTS TO THE SATISFACTION OF ALL CONCERNED TRADES.
6. COORDINATE EXACT LOCATION OF ALL DESK OR COUNTER MOUNTED EQUIPMENT WITH OWNER AND ARCHITECT AND ALL AFFECTED TRADES PRIOR TO THE INSTALLATION OF ANY EQUIPMENT AND/OR CABLING.
7. COORDINATE EXACT LOCATION(S) OF ALL CEILING MOUNTED CABLE, CONDUITS, EQUIPMENT AND/OR DEVICES WITH ALL ARCHITECTURAL PLANS, REFLECTED CEILING PLANS AND ALL AFFECTED TRADES PRIOR TO INSTALLATION.
8. CCTV CAMERAS SHALL BE INSTALLED IN SUCH MANOR THAT ALL SURVEILLANCE VIEWS SHALL BE FREE FROM ALL OBSTRUCTIONS IN ORDER TO PROVIDE UNRESTRICTED VIEWING ANGLES.
9. CCTV CAMERAS INSTALLED IN AREAS WITH NON-FINISHED CEILINGS SHALL BE MOUNTED DIRECTLY TO WALLS, STRUCTURAL SUPPORTS OR THE UNDERSIDE OF ROOF DECK OF THE FACILITY. NO CAMERAS SHALL BE MOUNTED TO ANY PIPING AND/OR CONDUITS OR BLOCK ANY ACCESS HATCH'S, EQUIPMENT OR ENTRANCES. COORDINATE WITH ALL AFFECTED TRADE CONTRACTORS PRIOR TO INSTALLATION.
10. ALL INTERIOR CCTV CAMERAS SHALL BE INSTALLED IN LOW PROFILE, MINIMUM FOOTPRINT DETECTION GRADE TYPE ENCLOSURES AND SHALL BE INSTALLED BASED ON THE OPTIMUM CAMERA PLACEMENT TO OBTAIN THE MAXIMUM VISIBLE SURVEILLANCE OF THE AREA AS INDICATED ON THE CONTRACT DRAWINGS. COORDINATE EACH CAMERA LOCATION WITH REFLECTED CEILING PLANS AND AFFECTED TRADES PRIOR TO INSTALLATION. REVIEW ALL SURVEILLANCE COVERAGE AREAS AND ALARM PRE-SETS WITH OWNER AND ARCHITECT PRIOR TO FINAL PROGRAMMING.
11. ALL EXTERIOR CAMERAS SHALL BE RATED FOR THE ENVIRONMENTAL APPLICATION AND BE PROVIDED AS, PENDANT, POLE, PARAPET OR WALL MOUNTED DOME HOUSINGS AS INDICATED. ALL EXTERIOR CAMERAS SHALL BE MEET IP65 (NEMA 4) SEALING REQUIREMENTS AND SHALL BE SUPPLIED WITH AN INTERNAL HEATER AND BLOWER. ALL EXTERIOR CAMERAS SHALL BE INSTALLED BASED ON THE OPTIMUM CAMERA PLACEMENT TO OBTAIN THE MAXIMUM VISIBLE SURVEILLANCE OF THE AREA AS INDICATED ON THE CONTRACT DRAWINGS. REVIEW ALL SURVEILLANCE COVERAGE AREAS AND ALARM PRE-SETS WITH OWNER AND ARCHITECT PRIOR TO FINAL PROGRAMMING.
12. ALL SECURITY SYSTEM CABLING SHALL BE INSTALLED IN DEDICATED CONDUITS PROVIDED BY THE GENERAL CONTRACTOR. ALL CONDUITS SHALL BE SIZED AND INSTALLED IN ACCORDANCE WITH NFPA 70 AND RELATED PROJECT SPECIFICATIONS, COORDINATE WITH THE ESS INTEGRATOR PRIOR TO INSTALLATION. ALL CONDUITS SHALL BE A MINIMUM OF 3/4" UNLESS OTHERWISE NOTED.
13. ALL CONDUITS/RACEWAYS SHALL BE INSTALLED IN A MANNER THAT PREVENTS TAMPERING OR REMOVAL WHEN INSTALLED IN AREAS EXPOSED TO THE GENERAL POPULATION. PROVIDE TAMPER-RESISTANT INSTALLATION UTILIZING "TORX WITH PEG" SECURITY-FASTENING DEVICES FOR ALL CONDUITS/RACEWAYS, EQUIPMENT, DEVICES AND APPURTENANCES IN ALL AREAS ACCESSIBLE TO THE GENERAL POPULATION AND/OR AREAS SUBJECTED TO TAMPERING OR VANDALISM.
14. ALL CCTV SURVEILLANCE CAMERA CABLING SHALL BE CATEGORY 6A UTP INSTALLED IN DEDICATED CONDUITS AND TERMINATED AT THE APPROPRIATE COMMUNICATIONS EQUIPMENT RACKS. ALL CCTV CONDUITS SHALL NOT CONTAIN ANY DATA, TELEPHONE OR AC CONDUCTING CABLING. ALL CCTV CABLE RUNS SHALL NOT EXCEED 295' FROM PATCH PANEL TO CAMERA TERMINATION AND SHALL BE TESTED AND CERTIFIED IN ACCORDANCE WITH ALL REQUIREMENTS OF THE CONTRACT DOCUMENTS. REFER TO RELATED DIVISION 27 SPECIFICATIONS SECTIONS FOR ADDITIONAL INFORMATION RELATED TO THE INSTALLATION AND TESTING OF CATEGORY 6 CABLING .
15. ALL SYSTEM WIRING, CONDUITS AND EQUIPMENT INSTALLATION SHALL BE IN ACCORDANCE WITH GOOD ENGINEERING PRACTICES AND BY ALL IEEE, EIA, NEC AND MANUFACTURER'S REQUIREMENTS. ALL WIRING SHALL COMPLY WITH ALL STATE AND LOCAL ELECTRICAL CODES AND SHALL TEST FREE FROM ALL GROUNDS, SHORTS STRAY VOLTAGES AND EMI.
16. PROVIDE ALL EQUIPMENT CLEARANCES IN ACCORDANCE WITH NEC REQUIREMENTS. ARRANGE EQUIPMENT TO FACILITATE UNRESTRICTED ACCESS FOR MAINTENANCE AND SERVICE AROUND ALL EQUIPMENT, COMPONENTS AND/OR CABLE TERMINATIONS.
17. PROPERLY GROUND ALL EQUIPMENT, RACKS, CABINET'S, CONDUITS AND CABLE SHIELDS IN ACCORDANCE WITH ALL REQUIREMENTS OF THE NFPA 70 AND EQUIPMENT MANUFACTURER. ALL EXTERIOR CCTV CAMERAS SHALL BE PROPERLY SURGE PROTECTED AND GROUNDED TO MINIMIZE DAMAGE DUE TO LIGHTENING STRIKES, SNEAK CURRENTS AND OTHER TRANSIENT VOLTAGE SPIKES. ALL SURGE PROTECTION AND GROUNDING SHALL BE IN ACCORDANCE WITH ALL REQUIREMENTS OF THE EQUIPMENT MANUFACTURER. NEC, IEEE AND TIA/EIA.
18. WHERE EQUIPMENT AND/OR JUNCTION BOXES ARE INSTALLED ABOVE FINISHED CEILINGS, THE CONTRACTOR SHALL PROVIDE ACCESS HATCHES LISTED FOR THE INTENDED APPLICATION. ACCESS HATCHES SHALL BE LOCATED SO THAT SERVICE ACCESS TO THE EQUIPMENT AND/OR JUNCTION BOXES IS UNIMPEDED.
19. ALL PENETRATIONS OF WALLS AND/OR FLOORS SHALL BE FIRE STOPPED IN ACCORDANCE WITH THE ASTM AND NFPA REQUIREMENTS. REFER TO RELATED SPECIFICATION SECTIONS FOR ADDITIONAL INFORMATION. INSTALLATION OF FIRE-STOPS SHALL BE PERFORMED BY AN APPLICATOR/INSTALLER QUALIFIED AND TRAINED BY THE MANUFACTURER. INSTALLATION SHALL BE PERFORMED IN STRICT ACCORDANCE WITH MANUFACTURER'S DETAILED INSTALLATION PROCEDURES.
20. PROVIDE THE PROPER INTERFACE TO THE BUILDING FIRE ALARM SYSTEM AS REQUIRED BY APPLICABLE LIFE SAFETY CODES. COORDINATE WITH THE FIRE ALARM SYSTEM PROVIDER FOR PROPER SYSTEM INTEGRATION REQUIREMENTS.
21. ALL EQUIPMENT ENCLOSURES LOCATED OUTSIDE OR IN ALL AREAS WITH HIGH MOISTURE OR A RELATIVE HUMIDITY OF 75% OR GREATER SHALL BE NEMA 4X STAINLESS STEEL AND RATED FOR THAT APPLICATION.
22. ALL DEVICES, COMPONENTS OR EQUIPMENT INSTALLED ON THE EXTERIOR OF THE FACILITY SHALL BE PROVIDED IN ACCORDANCE WITH ALL MANUFACTURERS' REQUIREMENTS TO ENSURE THE PROPER OPERATION WHEN EXPOSED TO THE ENVIRONMENTAL CONDITIONS AND/OR AVERAGE ANNUAL LOWEST TEMPERATURE THAT CAN BE ANTICIPATED FOR THE GEOGRAPHIC REGION OF THE FACILITY.
23. ALL INTERIOR AND/OR EXTERIOR COMPONENTS, DEVICES OR SYSTEMS EQUIPMENT EXPOSED TO THE GENERAL POPULATION SHALL BE INSTALLED IN SECURED EQUIPMENTENCLOSURES WITH TAMPER SWITCHES AND INSTALLED IN SUCH A MANNER THAT RESISTS TAMPERING AND/OR REMOVAL WITHOUT THE USE OF SPECIALIZED TOOLS.
24. FOR EQUIPMENT INSTALLATIONS REQUIRING COORDINATION WITH OTHER TRADES THE CONTRACTOR SHALL PROVIDE ALL TEMPLATES, BACKBOXES AND EQUIPMENT ANCHOR BOLTS FOR MOUNTING OR FLUSH MOUNTING PREPARATION, (E.G. PEDESTALS OR OTHER DEVICES REQUIRING MOUNTING ON WALLS, CONCRETE PADS OR OTHER MATERIALS). COORDINATE DELIVERY OF TEMPLATES AND EQUIPMENT WITH ALL AFFECTED CONTRACTORS.
25. ALL CONTROL EQUIPMENT MUST HAVE TRANSIENT PROTECTION TO COMPLY WITH UL AND NFPA 70 REQUIREMENTS. WHERE ANY CIRCUITS LEAVE THE BUILDING, ADDITIONAL TRANSIENT PROTECTION MUST BE PROVIDED FOR EACH CIRCUIT. ALL TRANSIENT PROTECTION DEVICES MUST BE UL LISTED UNDER STANDARD # 497B (ISOLATED LOOP PROTECTORS).
26. REFER TO SPECIFICATION SECTION 280500 AS WELL AS ALL RELATED SPECIFICATION SECTION FOR PROJECT SUBMITTAL REQUIREMENTS AND ADDITIONAL INFORMATION.

SECURITY CAMERA NOTES:

1. FINAL LOCATION OF ALL SECURITY CAMERAS SHALL BE REVIEWED AND APPROVED BY THE AUTHORITY.
2. THE CONTRACTOR SHALL PERFORM A FIELD SURVEY TO DETERMINE THE OPTIMAL METHOD OF MOUNTING ALL SECURITY CAMERAS.
3. MOUNT SECURITY CAMERAS A MINIMUM OF 8 FEET AFF/AFG OR AS INDICATED ON THE CAMERA SCHEDULE. EXCEPT WHERE EXISTING ARCHITECTURAL FEATURES AND CEILING DRIVE LOWER MOUNTING HEIGHTS.

ACS EQUIPMENT AT DOOR:

1. DOOR INTERFACE BOX WITH TERMINAL STRIPS
2. SMART CARD READER (NON-EGRESS SIDE)
3. POWER TRANSFER HINGE (DIV. 8)
4. PANIC DELAY / LOCKING HARDWARE (DIV. 8) WITH POWER SUPPLY
5. BALANCED MAGNETIC SWITCH
6. FIRE ALARM INTERFACE AT IFP
7. ACS DOOR CONTROL MODULE WITH POWER SUPPLY AT IFP

2 LEO ACS DOOR DETAIL
NTS

GENERAL ACS DETAIL NOTES:

1. THE DOOR DETAILS ARE DIAGRAMMATIC IN NATURE ONLY TO SHOW EQUIPMENT AND GENERAL WIRING INFORMATION. MOUNTING CONDITIONS, MATERIAL TYPES, DOOR SWINGS, ETC. ARE NOT SHOWN.
2. CONTRACTOR SHALL BE FAMILIAR WITH EACH DOOR AND ADAPT THE EQUIPMENT TO THE FIELD CONDITIONS.
3. SEE ELECTRICAL DRAWINGS FOR 120V POWER LOCATIONS.
4. ACS CABLING SHALL BE ROUTED IN CONDUIT. MINIMUM SIZE CONDUIT SHALL BE 3/4"C FROM ACS DEVICE TO THE DIB. MINIMUM SIZE CONDUIT FROM THE DIB TO THE IFP IN THE COMMUNICATIONS ROOM SHALL BE 1 1/2"C. CONDUIT SHALL BE CONCEALED. PROVIDE PULL BOXES AS REQUIRED BY THE NEC. FIELD ROUTE CONDUIT FROM THE ACS DEVICES TO THE DIB AND IFP. IF THE ACS SYSTEM PROPOSED BY THE CONTRACTOR USES LARGER CABLES THAN INDICATED IN THE CABLE SCHEDULE, THE CONTRACTOR SHALL INCREASE THE CONDUIT SIZE ACCORDINGLY TO MAINTAIN THE SPARE CONDUIT CAPACITY.

ACS CABLE SCHEDULE

TYPE	DESCRIPTION	CABLE TYPE	O.D. MM (IN)	BELDEN #
A	CARD READER CABLE	9 CONDUCTOR 18 AWG SHIELDED	6.91 (0.272)	5307FE
B	BALANCE MAGNETIC SWITCH	2 CONDUCTOR 22 AWG UNSHIELDED	3.25 (0.128)	5500UE
C	AUDIBLE/VISUAL CABLE	2 CONDUCTOR 16 AWG UNSHIELDED	4.67 (0.184)	5200UE
D	ACS DATA CABLE (RS485)	2 PAIR 22 AWG SHIELDED, EACH PAIR SHLD	4.78 (0.188)	5302UE
E	REQUEST TO EXIT / PANIC HARDWARE	2 CONDUCTOR 22 AWG UNSHIELDED	3.25 (0.128)	5500UE
F	MAG LOCK OR POWER CABLE	4 CONDUCTOR 16 AWG UNSHIELDED	5.49 (0.26)	5202UE
G	EMERGENCY MAG LOCK DATA CABLE, ELECTRIC DELAY HARDWARE OR MISC DATA	2 CONDUCTOR 22 AWG UNSHIELDED	3.25 (0.128)	5500UE
H	DIB TAMPER CABLE	2 CONDUCTOR 22 AWG UNSHIELDED	3.25 (0.128)	5500UE
J	DATA CABLE - ETHERNET	4 PAIR #23 AWG CAT6	5.77 (0.227)	
K	DATA CABLE - FIBER	6 STRAND 62.5/125 MICRON INDOOR/OUTDOOR LOOSE TUBE MULTI-MODE FIBER OPTIC CABLE	9.65 (0.38)	M9B810
L	INPUT BACKBONE CABLE	12 CONDUCTOR 22 AWG UNSHIELDED	5.92 (0.233)	5509UE
M	OUTPUT BACKBONE CABLE	7 CONDUCTOR 16 AWG UNSHIELDED	6.63 (0.261)	5205UE

NOTE: CONTRACTOR SHALL VERIFY THE MANUFACTURER'S RECOMMIDED CABLES FOR HIS SYSTEM AND USE THE APPROPRIATE CABLE TYPES. THE CABLES LISTED ARE BASED UPON BELDEN, EQUAL BY WEST PENN IS ACCEPTABLE. ANY INCREASE IN CONDUIT SIZE DUE TO THE SYSTEM CHOSEN SHALL BE THE CONTRACTOR'S RESPONSIBILITY. CABLE TYPES ARE PROVIDED FOR REFERENCE PURPOSES ONLY.
